one particular ship-building commodity; e.g., the island of Tenedos had a pine-wood for the ship-yards of Lemnos; see I. H. Üzünçarşılı, *Osmanlı devletinin merkezi ve bahriye teşkilatı* (Ankara 1948), especially footnote to p. 449), a new fleet was created in so short a time as five months, and with the help of this the Venetians were compelled to make peace and sign a — for them — inglorious treaty. Towards the end of the 16th century, the Ottoman fleet was weakened by the haphazard appointment of men with no naval experience to the *kaptan-ı paşalık*, the command of the naval forces. From the beginning of the 17th century the Venetian fleet replaced its oar-driven galleys by sailing galleons, while the Ottoman navy persisted in the use of oars. Partly for this reason and partly because the ships' crews were pressed men with no interest in seafaring, it had so little success that the islands of Tenedos and Lemnos fell into enemy hands.

Eventually, in 1682, during the grand vizierate of Kara Mustafa Paşa of Merzifon (1676-83), the principle was accepted that sailing galleons should form the basis of the fleet (a principle that had long been applied by the navy of Alexander, an Ottoman dependency). This principle was acted on with the Venetians in the Mediterranean, and in 1706, 1709 the island of Chios was recovered from them. A *şânin* relating to galleons, their commanders and crews, was promulgated in 1707.

During the 2nd half of the 18th century no battle was fought against the Venetians, whose power had weakened, but the main naval activity in the western Mediterranean passed to the French and English fleets. In the course of the Russo-Turkish war which began in 1782/1768, the Russian fleet, which the English had developed in the Baltic, entered the Mediterranean and in 1784/1770 succeeded in virtually annihilating the Ottoman fleet in the harbour of Çeşme. After the treaty of Küçük Kaynarca in 1782/1774, prominence was given to naval matters, and a school of engineering was opened in the Arsenal, staffed by experts brought from Europe. In the reign of Selim III (1789-1807) great importance was attached to equipping the fleet by up-to-date methods, as a result of the zeal of Küçük Hüsnâ Paşa. The school of naval engineering was enlarged, and a school of military engineering founded. In the reign of Mahmud II (1808-39) the navy was not neglected, but a variety of causes, internal and external, impeded its development. Nevertheless training was given at the school of naval engineering to commanders and naval architects. As a result of the revolt of the Peloponnese, and the help afforded to the rebels by Britain, France, and Russia, the Ottoman fleet was destroyed in Navarino Bay in 1827/1827. Despite this disaster naval activity did not cease, and in 1840/1828 a naval academy was opened on Herakleia. The Ottoman navy attained a position of strength during the reign of 'Abd al-'Azîz (1861-76), in consequence of the importance attached to it, as also to the army, by this sultan. In the time of 'Abd al-Hamid II (1876-1909) however, the fleet, that had been built up with great enthusiasm, fell into neglect, as a result of the prevailing sentiment, in the result, the Ottoman empire, which had long coastlines on three continents, suffered severe territorial losses.

In the period of oared vessels, the principal types of Ottoman ships were the *bâdîrğa* (galley), *balîte* (galliot), and *firhate* (frigate). The individual commanders were known as *re'îs*, squadron-commanders as *kaptan*, and the commander-in-chief of the fleet

as *Kapudân-ı deryâ*. The great galley of the *Kapudân-ı deryâ* or *Kaptan Paşa* was called *balîrğa*. The *bâdîrğas* were of two classes: *bâdîrğa bahrî-gâharî* and *bey bahrî-gâharî*. The former were constructed by the government, the latter by the *sandjak beys* of the eyalet of the Kaptan Paşa.

After the introduction of sailing vessels as the basis of the fleet, it was entrusted to three admirals under the *Kapudân-ı deryâ*. They were, in order of seniority, the *bahrî-paşa* (Admiral), the *katrân-ı deryâ* (Vice-Admiral), and the *re'îsle* (Rear Admiral). The principal sailing vessels, in descending order of size, were the *burest*, the *firhateyn*, and two kinds of galley known as the *iki ambarlı bahrî* and the *ül ambarlı*. The crews of galleons were called *balîrğâdîs*, and included *aylâkâdîs* (temporary sailors), *murûrîs* (who were prisoners of war), *zabıyars* (who attended to the sails), *parafârâs* (craftsmen), painters, carpenters, blacksmiths, caulkers, and *sudâğçılar* (gunners).

Next in rank to the Kaptan Paşa in the Istanbul arsenal came the *terâne kethüdâsı* and the *terâne emînî*, and after them officers of the second and third rank. The accountant of the arsenal had the title of *hâşim-ı deryâ*. Till the introduction of sailing, the *terâne kethüdâsı* ranked as Vice Admiral and occupied himself with the discipline of the arsenal. The *terâne emînî* was trained at the Bâb-ı 'Âli and had control of supplies, income, and expenditure for the fleet and arsenal. This office was abolished in 1830 and its duties were entrusted to the Kaptan Paşa.

In 1841 new ranks were instituted for both army and navy. In 1851 the Navy Ministry (*bahriyye nâzîrîsî*) was created, with charge of the financial and administrative functions formerly exercised by the *terâne emînî*. The title of *Kapudân-ı deryâ* was abolished and a fleet command council was set up. In June 1876 the title of *Kapudân-ı deryâ* was restored. Finally, in 1881, the offices of minister and commander-in-chief of the navy were combined in one man, of the rank of *mîrîrâh*. This arrangement continued till the end of the Ottoman empire.

In 1922, after the establishment of the government of the Grand National Assembly in Ankara, the Navy Ministry (*bahriyye vekaletî*) was formed. In 1927, when this ministry was abolished, its duties were made the responsibility of the Ministry of National Defence, and have since been administered by a department headed by a permanent under-secretary (*mîrîrâh*).

**BAHSHAL**, AŞLAM B. SAHL AL-Wâsîlî AL-RAZZÂZ, author of a History of Wâsîl. Nothing is known of his life except the names of some of his authorities, among them Wahb b. Bakîyya (113-239/772-83), supposedly his maternal grandfather, al-Muḥabb al-Baḥdādī, Ṭarīḥ Bughdādī, xiii, 485-4, and the approximate date of his death, between 288/901 and 292/904-05.

The History of Wâsîl has come down to us in an incomplete manuscript in Cairo (Taymūr, *al-Fih* no. 1483) which had an interesting history and possesses considerable ascription value. It is the oldest preserved history intended to serve as an aid for *baḥth* scholars in evaluating the reliability of transmitters. Starting with a rather brief discussion of the early history of Wâsîl and its environs, it deals with the religious scholars who had some connexion with Wâsîl and were also linked to the author by an uninterrupted chain of transmitters. The biographies are arranged chronologically according to generations of scholars (here *bars*, for the more common *tabaka* "class"). They contain little personal information but restrict themselves as a rule to the name of the scholar, his authorities and students, and one (and, occasionally, more than one) of the traditions he transmitted. The work represents, if not the beginnings, at least an early simple stage of what was soon to become one of the most elaborate types of historico-biographical literature in Islam.

Cairo, must. al-baḥth nos. 82, 102; Brockelmann, S. II, 210; F. Rosenthal, *A History of Muslim Historiography*, Leiden 1952, 85, 144 f., 406.

**BAḤṬH**, infinitive of the Arabic root *b-ḥ-ḥ*; from its original meaning, "to rake, to dig, to turn over soil (in order to search for something)", there later developed its meaning of "to look for, examine, consider", in the intellectual and spiritual sense. *Baḥth* became in this respect almost a synonym of *naḥar*, and, in fact, the two terms *baḥth* and *naḥar* are often found in association (e.g., Maṣ'ūdī, *Murūdī*, VI, 368; *ah* al-baḥth wa'l-naḥar, "specialists in philosophic inquiry and controversy"). A *Kitāb al-Baḥth* formed part of the corpus of writings attributed to Ḥijābī b. Ḥayyān, who dates from the 10th century (cf. Brockelmann, SI, 471). Since that time, *baḥth*, with its plural *baḥth*, appears in the titles of numerous works precisely in the sense of "study, examination, inquiry" (also in the form *mabḥaṭh*, pl. *mabḥaṭh*, which denotes not only the object of the inquiry but the inquiry itself) and in this strengthened form it is often used in modern Arabic, in the technical and scientific sense of "study"; e.g., *Mabḥaṭh 'arabiyya* of Bishr Farīs, Cairo 1930. (F. GABRIEL)

**BAḤWIRASIH** (see AL-MADĀ'IR).

**AL-BAḤŪŪŪ**, SHAḤWIR MANṢŪR B. YŪNUS AL-BAḤŪŪ, frequently referred to by the name of AL-BAḤŪŪ AL-MINJĪ, is usually considered as one of the most eminent doctors of Hanbalism in the first half of the 12th/12th century, and also as the last major representative of this school in Egypt. A native of the village of Bahūt in the Muḥriyya Ḥāriyya, al-Bahūtī belonged to a family which gave several

other 'alams', who enjoyed a certain notoriety, to Hanbalism. The following are cited among the best known of his teachers: Muḥammad al-Mardīnī (died 1026/1017) Muḥabbār, 96), also an Egyptian Hanbalī, and the traditionalist and lawyer 'Abd al-Rahmān al-Bahūtī (*Muḥabbār*, 104), who was reputed to be well versed in the four major schools of *fiqh*. Manṣūr al-Bahūtī also counted a Shāfi'ī among his teachers, 'Abd Allāh al-Danawī-shāfi'. Little is known of his life, except that he devoted himself in Cairo to teaching *fiqh* and that he gave numerous legal opinions (*fatāwā*). His biographers praise his devotion and his charitable disposition. His teaching appears to have enjoyed great success: numerous students came to him for their training, in fact not only from Egypt, but from Syria and Palestine as well. Among his chief disciples two members of his own family are cited, Muḥammad al-Bahūtī and Muḥammad b. Abū-Sūrūr al-Bahūtī, and the Syrian Abū Bakr b. Ibrāhīm al-Sālihi. He died in Cairo in Rabi' II/105/July 1141, apparently at a very advanced age, and was buried in the *ṭarba* of the *Muḥabbārīn*.

Manṣūr al-Bahūtī's work, which is still used today in Egypt for teaching Hanbalism, is devoid of any great originality on the part of the author. It stands, in the history of Hanbalism, as a prolongation of the work of Mūsā al-Ḥuḍayrī (died 968/950) (cf. Brockelmann, II, 325 and S. II, 447) and that of Shayḥ Taki al-Dīn al-Futūḥī, better known under the name of Ibn al-Nadīdī (died about 960/952) (cf. Brockelmann, S. II, 447). The Palestinian al-Ḥuḍayrī, who was *mawḍi* in Damascus where he taught at the 'Umayyādiyya and at the Mosque of the Umayyads, had composed a resumé of the *Mabūn* of Muwaffak al-Dīn b. Kudāma (died 620/1222), under the title of *Zād al-Mustanḥa*, and a manual of Law, the *Iḥdā*, which has become a classic in Hanbalism of the late period. Muḥammad al-Bahūtī wrote a commentary on the first of these works with the title *al-Rasād al-Marīf* b-*ḥiḥ* *Zād al-Mustanḥa* (Cairo 1352, 2 vols.). He also left a commentary on the *Iḥdā* (published at Cairo in three volumes). Shayḥ Taḍā al-Dīn al-Futūḥī, who received his training in Cairo, continued the *Mabūn* of Muwaffak b. Kudāma and the *Tamḥīl* of Hasan al-Mardīnī (died 970/1051; *Muḥabbār*, 77-78), in a single manual entitled *al-Mustanḥa*, which speedily achieved considerable success. We are also indebted to Manṣūr al-Bahūtī for a *ṣaḥḥ* on the *Musnad* (Cairo, 3 vol.) and for a *ḥāshiyah*, gloss on the same text.

He also wrote a commentary on the *Muḥabbār* of Muḥammad b. 'Alī al-Makḍī (died 820/1417; *Muḥabbār*, 65), a long poem in which the points of doctrine peculiar to Hanbalism are expounded. This commentary was published at Cairo, by the Salafīyya press, in 1343/1924 (and the actual text was again reprinted by the same publishers the following year, with brief notes taken from al-Bahūtī's commentary). Lastly, a commentary on the *Mabūn* is attributed to him (cf. *R.Ā.D.*, xii, 631).

**BAḤW**, an Arabic word primarily designating an empty and spacious place extending between two objects which confine it, has acquired, in the architecture of the Western Muslim World,

somewhat varied meanings, which are, however, related to the initial meaning of the word.

To this primary sense of the term, the *Lisān al-'Arab* adds the following apparently derivative meaning: *bahw* is a tent or pavilion chamber situated beyond the rest, which suggests the idea of a pavilion differing from that which it precedes both in situation and by its spaciousness and height.

One of the first examples of the use of the word which enables us to determine its meaning, is to be found in the description of the great mosque of al-Kayrawān by al-Bakrī. He speaks of the *Kubbat hīb al-bahw*, which de Siane translates: "Cupola of the door of the pavilion". We have no difficulty in identifying this cupola as the one which rises before the hypostyle chamber, in the middle of the narthex gallery opening on to the courtyard; it would, however, seem more appropriate to translate: "Cupola of the door of the central nave" and to recognise in *bahw* the term designating the axial nave leading to the *mihrāb*, which differs clearly from the others by its spaciousness, its being closed by the largest door and preceded by the cupola. The arrangement of the naves at right angles to the wall of the *bibla* and the adoption of a main nave occupying the centre, an arrangement which we are amply justified in considering as being inspired by pagan and Christian basilicas, is mainly encountered in the West, which explains why *bahw* almost exclusively belongs to the vocabulary of Western Muslim Architecture. Attributed to al-Kayrawān in the 15th century, the term is still used at Tunis to designate the central nave of the great mosque. The name *Bāb al-bahw* given to the door preceding this nave is a most likely corruption of the original term.

In Spain, the term *bahw* seems to be less strictly used. It is to be found in the description given by al-Makkari of the Unayyad palace built by 'Abd al-Rahmān III at Madīnat al-Zahrā'. The main building of the palace comprised 5 naves extending lengthways. The central nave, larger than the other four, was closed by a door called *bāb al-bahw*. The throne of the sovereign was situated at the end of this nave and there he gave audience. There it was that al-Hakam II received King Ordoño IV and caused him to be seated on the throne before him. However, the adjoining naves, also comprised in the ceremonial chamber, seem to have been to some extent confused with the central nave and are also at times referred to by the term *bahw*.

This confusion is emphasised by Ibn al-Baḥḥāwī, quoted by al-Makkari in relation to the great mosque of Cordova. Ibn al-Baḥḥāwī applies the word *bahw* to the 19 naves of the great mosque as an exception, being careful to add that they are normally called *balāḥ*, which is in fact the term most usually applied to the naves of a mosque. Al-Makkari, describing the mosque of Uclés, refers to the central nave by the expression *al-bahw al-aṣṣat*.

The sense of a nave extending lengthways and playing the role of a ceremonial chamber, as suggested by the description of the Unayyad palace, explains the use of *bahw* to indicate an audience chamber. There were two such chambers in the palace of Cordova to which Ibn al-Baḥḥāwī applies this term. According to al-Ḥijāzī, at Gābs, in the castle built by Ibn Makkī, an audience chamber was provided with a *bahw* where the master of the palace seated himself. We thus naturally identify this place of honour with the *bahw*, the central alcove, of Mesopotamian origin, which is to be encountered in the

houses of Fustāt of the Tūlūnid period and which was likewise known to Eastern Barbary from the 10th/11th century. This deep recess, the place of honour, set into the back wall of a large chamber, still exists in Tunisian and Algerian houses; in Tunisia it bears the name *bāḥ*, in Algeria, however, the name *bahw* seems to be not unknown.

**Bibliography:** See especially the very complete work by A. Devos Lamare, *Étude sur le bahw, organe d'architecture musulmane*, in *JA* 1936, II, 529-547. Main sources: Bakrī, *Description de l'Afrique septentrionale*, ed. and trans. de Siane, 1912-1913; Makkari, *Analastes*, ed. Dossy, Dugat, Knehl and Wright, I, 1251 ff.; Ibn al-Baḥḥāwī, *al-Baḥḥāwī*, Cairo, 1319/1901-2. (G. MAERKUS)  
**BAIKAL**, in eastern Turkish (by folk-etymology) *Bai kōl*, 'the rich lake'; in Mongolian *Dalai nor*, 'the ocean lake'; the deepest lake (1741 m.), and the largest mountain lake in the world, between 51° 29' and 55° 40' north, and 103° 44' and 110° 40' east, surrounded by high mountain ranges, 635 km. long, and varying from 25 to 79 km wide, with an area of 32,500 sq. km. Flowing into it are the Selenga, the Barguzin, the upper Angara, and flows out to the Angara at Yenisei. The Lake Baikal railway (307 km. long, with 40 tunnels) — a branch of the Trans-Siberian railway — was completed round the southern part of it (between the Angara exit and the Selenga delta) in autumn 1904.

It appears that Lake Baikal was not known to Muslim geographers in Mongol times. It is mentioned only by Rashīd al-Dīn, *Ḍjīwā' al-Tawarīkh* (ed. Berzin III 186) (Trudl Vost. ed. Imp. Arizhob. Ob-va XIII). Here, the people living on its shores are called Bārkhūt († is the Mongol plural ending), and the region around it Bārkhūtīn (Tūkhūn), which is recalled by the river Barguzin. The lake became known in Russia in the first half of the 17th century, and in western Europe shortly afterwards.

**BAILO** (see BĀLYŪ).

**AL-BĀ'ITH**, nickname of a satirical poet of Baṣra named *Ḥudhāḥ* b. *Ḥijr* al-Muḥallabī. Though held to be the greatest orator of the Tamīm, the Sallīm places him in the second class of the great Islamic poets. The critics, however, consider that his relative obscurity was only due to the renown of *Ḥijr*; al-Bā'ith's activity is in fact associated with that of the two rivals *Ḥijr* and al-Farazdaq; for many years he exchanged invectives with the former, but was obliged to call the latter to his assistance, who, moreover, did not always treat him gently (he also refers to him by the nickname *Im hamaḥ* al-*Ḥijr* 'son of the woman with the red' 'seriseum', an allusion to his mother's humble origin; she was a slave from Sidjastān). Yāqūt places his death in 134/752, but as he adds: "during the Caliphate of al-Walīd b. 'Abd al-Malik" (who reigned from 88 to 98/705-13), this date cannot be given credence.

(CH. PELLAT)

**BAKĀ'** wa-FANĀ'. The Sūfī terms *fanā'* (passing-away, effacement) and *bakā'* (subsistence, survival), refer to the stages of the development of the mystic in the path of gnosis. These categories, partly antithetical and partly complementary, are more or less equivalents of other pairs as *sukr* (intoxication) and *ṣakw* (sobriety), *ḍjām* or *wahda* (unity) and *faiḥra* or *katḥra* (separation, plurality), and *nafy* (negation) and *ḥikāḥ* (affirmation).

The doctrine has been developed especially since the extinction, in Baghdad in A.D. 322, of al-Ḥallāj who declared "I am God", when the Sūfīs turned to the task of a more sober description of the mystic experience in an effort to exonerate al-Ḥallāj from the un-Islamic idea of identifying the human ego with God and to demonstrate that Sūfism was not only truly Islamic but is the true Islam. Even though some Sūfīs, in their moment of ecstasy, have not been able to guard against utterances similar to that of al-Ḥallāj, especially in their poetry, they have usually categorically denied both the incarnation of God in man and the total merging of the individual and finite human ego in God. Two allied definitions have been offered of *fanā'*: (1) the passing-away from the consciousness of the mystic of all things, including himself, and even the absence of the consciousness of his passing-away, and its replacement by a pure consciousness of God, and (2) the annihilation of the imperfect attributes (as distinguished from the substance) of the creature and their replacement by the perfect attributes bestowed by God. It is quite obvious that *fanā'*, unlike the Indian Nirvāṇa, is not a mere cessation of individual life, but the development of a more ample and perfect selfhood afterwards.

Accordingly, *bakā'*, keeping the two definitions of *fanā'* in view, means (1) persistence in the new divinely bestowed attributes (*bakā' ḥiḥāḥ*), and (2) return to the mystic's ordinary consciousness of the creatural world. The second follows from the first, since being with God means also being with the world which has been created by God and in which He is manifested, however imperfectly. The Sūfīs generally regard this state of *bakā'* as being more perfect than that of mere *fanā'* and this is the meaning of their dictum that sobriety supersedes on intoxication. This "return" to the world—which is, emphatically state, not a simple return to the pre-*fanā'* state of the mystic, since his experience has given him an altogether new insight—means to perceive its inadequacies and to endeavour to make it more perfect.

The doctrine of *bakā'* throws into bold relief the distinction between the mystic and the prophetic consciousness. Whereas the ordinary mystic stops at *fanā'* and does not even wish to return to the world, it is the function of the prophet—the mystic par excellence,—to be constantly both with God and with the world, to transmute the course of history through the implementation of the religio-moral divine Truth.

**Bibliography:** Besides the works of the Sūfīs—of which the *K. al-Luma'* of Abū Naḥr al-Sarrāḥ and the *Kaḥf al-Mahḍūb* of al-Hudayrī, are the most important on the subject, the

most helpful account in any Western language is in R. A. Nicholson's *The Mystics of Islam*, London 1914, especially the last chapter. According to al-Ḥujwīrī, the author of the doctrine was Abū Sa'īd al-Kharrāzī, but it was further developed by Ḥunayd and others no doubt under the criticism of the orthodoxy. A radical, forceful and lucid statement was developed, as a criticism of Ibn al-'Arabī, by the 17th century Indian Shāykh Ahmad Sirhindī whose Persian *Makshūb* have not been studied at all in the West. (F. RAHMAN)

**AL-BAK'Ā** (see AL-BĪK'Ā).

**BĀKĀLAMŪN** (see ABŪ KĀLAMŪN).

**BAKĀR**. In medieval Arabic literature, the term is confined to the prevalent meaning of *cattle* (*baḥ*), in contrast to more recent usage and to the application of corresponding forms in other Semitic languages. Arab authors distinguish between the domestic kind, *bahār ahlī* (= cattle), and the wild kind, *bahār waḥshī*, the latter being variously identified, either with the *mahd* (*Oryx capensis*; Newbury ix, 122) or the *ayyil* (*goat*); so according to the description in Kaḥwīl) or with a group of animals (referred to by Lane, 234, as *bovine antelopes*) which comprises, according to Damirī, in addition to these two species, also the *yahmūr* (roe deer) and the *ḥayṭal* (*babale antelope*). The distinctive epithet, however, is not always added, so that *bahār ahlī* or its nom. *baḥār* may also refer for several wild animals. This applies, for instance, to ancient Arabic poetry (see, e.g., *Ḍjāhiz*, v, 218) and its commentaries, to the respective data in the dictionaries (Ibn Sīdā treats *bahār* in the *Kitāb al-Fuḥūḥ*) and even to zoological writings (e.g., *Ḍjāhiz*, ii, 1999; iv, 3993). In works on the solution of dreams, where *bahār* holds an important place, it is difficult to determine the exact meaning in every case. Different traditions seem to have been intermingled also in pharmacological works. Here, the horns of *bahār* are frequently mentioned, while some Arab authors describe the *bahār ahlī* as a hornless animal. In the Kur'ān, where the term mainly occurs in biblical tales, the meaning is always cattle or cow. In addition, the term is found in ancient proverbs and in the *ḥadīṭ*.

**BAKĀR**, 'ID (see BAYRĀM and 'ID).

**BĀKARGANĠ** (Bachergange), formerly a district in East Pakistan with headquarters at Bārsāl, (now itself a district comprising Bākarangan), lying between 21° 54' N. and 91° 2' E; Area 4,091 sq. m., of which 51 sq. m. are covered with water. The

population in 1951 was 3,642,185, of whom 2,597,769 were Muslims. The fertile lands known as Bākā (Bakā) constituted a *sarkār* in Mughal times prior to its occupation by Akbar Bākār, a prominent person at the Mughal Court at Dacca, owing allegiance to the Nawab of Murshidābād, and a land-owner of Burzurgmūndpur, in 1134/1741 when he successfully suppressed a revolt of the local Hindu landlords. He took as his headquarters a flourishing market-town which he named Bākargandj (nearly of Bākār) 13 miles to the south-east of Bīrsāl. On his death in 1167/1753 the entire estate passed on to Rājā Ballabh Rāy of Bīrkampur, a *dewan* [g.s.] of the Nāib Nāzim of Dacca. The area was several times raided by the Mughals, a predatory Burmese tribe, during the 12th/18th century. The Marāṭhīs penetrated into Bākargandj in 1162/1747-9 but were repulsed with the aid of Portuguese settlers. An agriculturally rich area, it supplied Murshidābād with rice during the terrible famine of 1184/1770. It is also famous for its fruit orchards. In 1238/1823-9 the district was visited by Karīmāt 'Alī Dīwānpūrī, a follower of Sayyid Ahmad Beḥlūl (g.s.), who along with Hādīd Shāh 'Alī and his son Dūdā Mīā preached *dīkād* against the foreigner (European). The movement collapsed with the death of Dūdā Mīā in 1279/1862. The bulk of the population speaks a form of Bengālī, known as Musalmānī, with a preponderance of Arabic and Persian words.

The district, in addition to being subject to heavy floods and cyclones, is noted for a strange atmospheric phenomenon, the 'Gunde', sometimes resembling the discharge of cannon and occurring at regular intervals. The occurrence still remains unexplained.

(A. S. BAKER ANSARI)

**BAKHAMRĀ**, a place in medieval 'Irāk, the exact situation of which cannot now be fixed. According to al-Mas'ūdī it belonged to the Taḡf [g.s.], the frontier district between Babylonia and Arabia, and was 16 parasangs (about 60 miles) from Kūfa. Yāhūt says it was nearer to Kūfa than to Wasīt. Bākhāmra is famous in the history of the 'Abbāids for the decisive battle which took place there in 145/766 (while the Caliph was designing the new city of Baghdad) between the army of al-Mansūr, commanded by 'Isā b. Mīnā, and the troops of the 'Alid Ibrahim b. 'Abd Allāh in which the latter, after initial success, fell by an arrow-wound. The campaign thus terminated had represented a severe danger to al-Mansūr's position. The Aramaic place-name means "wine-vaux", and recalls the analogous name of Karayāt al-Nabḥ (grape-town) of a place in Palestine, North West of Jerusalem. Bākhāmra has no other claim to interest.

(M. STRECK-S. H. LÖNNQVIST)

**BAKHARZ** (also known as Gōwākhār), a region in Khurāsān between Harāt and Nīshāpūr (south of

Djān on the river Harāt), regarded as being particularly fertile. In the 10th century it was famous for its export of grain and grapes [and in the 14th century for its particularly good water melons as well]. Mālin (the variants: Mālin and Mālan) was the capital of the region, and in the 10th century it had a population of considerable size. According to descriptions of that time, it was situated on the site of the Shāh-i-Naw of today. The region included 128 villages, Dīwān Bākharz and others. Yāhūt explains the name (probably on the basis of folk-etymology) as Bād-har-hat ('wind in all places').

**Bibliography:** Mukaddasī 319; al-Fakh al-Hamadī 318; Ibn Rusta 171; al-Ya'qūbī 278 (= BGAT III, V, VII twice); Yāhūt, i, 458 (= Caribbe edition 1906: ii, 28), ii, 145, iv, 398 (= Barbier de Meynard, *Dict. de la Perse* 741); Muhammad Hasan Khān, *Muḥd al-Jādī* i, 150; 'Awfī, *Lubb*, i, 68, ii, 156; Le Strange, 357.

**AL-BĀKHARZĪ**, ABU 'L-HASAN (OR ABU 'L-KĀSIM) 'ALĪ B. ḤASAN B. 'ALĪ B. ABĪ 'L-TAYYIB, Arab poet and anthologist, a native of Bākharz. After receiving a good education in his father's house, he studied in particular Shāhī 144 and, at Nīshāpūr, attended the lectures of al-Dīwānī ('Abd Allāh b. Yūnūs [g.s.], where he made the acquaintance of al-Kundurī [g.s.]; the latter, when he became *waṣī*, took him to Baghdad as a secretary; previously, he had for some time been an official at Bagra. Subsequently, he was admitted to the chancellery, and later returned to his native place, where he was killed by a sabre stroke in Dha 'l-Ka'dī 467/June-July 1075.

The most famous work of al-Bākhārī is a letter of solace addressed to his benefactor al-Kundurī, on the subject of his castration. His *diwān* is lost, and only a few *mubattāt* have been published as an appendix to his *Dumayl al-Kar wa 'Uṣṣal al-Aṣr* (Aleppo 1349/1930); the latter work is an anthology which is a continuation of the *Yatima* of al-Tha'libī [g.s.] and comprises seven sections: Bedouin poets and poets of the Hūdūd; Syria; Dīyār Bakr, Ādharbaydān, Dīāra and Maghrib; 'Irāk; Rayy and Dīhāl; Dīwānī, Astarābādī, Dīhānī, Kūmī, Khā'arīm, Transoxania; Khurāsān, Kūhīstān, Sijīstān, Gharnā; *adab* authors. Another selection of his poems, entitled *al-Aḥsan*, is preserved in MS. in London. His poetry, which was but little appreciated at Baghdad despite the flattering opinions of the critics, is on the whole mediocre and artificial.

**Bibliography:** Introd. of the *Dumayl*; Sam'ānī, *Anab*, 57b; Yāhūt, s.v. *Bākhārī*; idem, *Irbād*, v, 121-28 = *Mu'djam*, xiii, 35-48; Ibn Khallikān, *Cairo* 1899, ii, 58-71; Browne, ii, 335 ff.; Brockelmann, S. I, 456; 'Alī 'Alī Tāhīr, *La Perse arabe en Irak et en Perse sous les Seldjūques*, Sorbonne thesis 1954 (unpublished), index.

(D. S. MARGOLIN)

**AL-BAKHRA'**, ancient site of Palmyra, well known in the Umayyad period. Al-Walīd II is known to have stayed there on several occasions and died there in 126/744. The Arab sources describe the military camp (*ḥayḍ*) which the Persians are said to have erected there in former times and the inner castle (*ḥar*) where the Companion al-Nu'mān b. Baḥr lived and in which the Caliph, besieged by the rebels, took refuge. The site has been identified with the ruins of al-Bāghra, standing 25 km. to the south of Palmyra, visited and described by A. Muhl in 1908, and, although the name is frequently deformed in the Arabic texts (especially into al-

Bahrā' or al-Naḡīrā'), the reading al-Bāghra' is not open to doubt since it is 'transmitted by the etymological speculations of the chroniclers, who derive it from the root *bāḥḥara*' (H. Lammens). The traces of a vast walled enclosure, furnished with towers 159 m. by 105 m., are accompanied to the north and the south by remains of dwellings around numerous wells, bearing testimony to the fact that from Roman times here was to be found, if not an 'important capital of the desert' as H. Lammens maintained, at least a 'fortified watering place' (A. Poidebard) on the Eosra-Palmrya desert road, which subsequently became an Umayyad palace. It was not long before the site was abandoned and those mediaeval authors who still indicate the existence of a fortress (849) of al-Bāghra', are no longer able to place it exactly.

(J. SEVERIN-THOMAS)

**BAKHSHĪ**, a word figuring from Mongol times (13th century) in Iranian and Turkish literature, particularly in historical literature. Like the Uighuric original, it begins by denoting the Buddhist priest or monk (= Tibetan: Lamas). During the 14th century the Uighurs (g.s.) were favourably disposed to, or gallant of, Buddhism, the number and influence of the *bakhshī* in Iran was considerable. In Iran, central Asia, India and the Crimea — after the suppression of Buddhism in Iran (in 1295) — *bakhshī* denotes only a scribe who wrote Turkish and Mongol records (which were kept to begin with in Uighur script = generally *bīdāh*). In the 16th century doctors (surgeons) were called by that name. Wherever *lamas* exist, i.e., among the Kalmycks, Mongols, and Manjūrs, the name *bakhshī* retained its original meaning of 'Buddhist priest' up to the 20th century. Amongst the Turkomans — and in the 15th and 16th centuries also amongst the Anatolian Turks — the name *bakhshī* came to mean a wandering minstrel; in Kirghiz it came to mean conjurer (Shaman), as also in the dialect forms *baksh* and *baksh*.

The etymology of the word *bakhshī* is disputed: it used to be almost generally accepted (e.g., by W. Barthold and E. Blochet) as deriving from the Sanskrit word *bhikṣa*, but this view has been opposed by P. Pelliet and others, who would derive it 'indirectly' from the Chinese *po-chi* (*po-chi* 'wise', 'well read').

**Bibliography:** Cf. excursus in Rashīd al-Dīn, *Histoire des Mongols de la Perse*, edited by M. E. Quatremère, i (1836), 184-9; M. F. Köprülü in *LA II* (1944-49), 233-38 (with bibliography); B. Spuler, *Die Mongolen in Iran* 4, Berlin 1955, 184, 347 (with bibliography concerning the etymology); W. Radloff, *Proben der Volksliteratur der türkischen Stämme Südasiens*, vol. iii, text, 46 ff.; R. Karzuz, *Unter Kirgisien und Turkmenen*, Berlin, no date (1928?).

(B. SPULER)

**BAKHSHĪSH**, or *bakhshish*, verbal noun from the Persian *bakhshādan*, 'to bestow', and used not only in Persian but also in Turkish and post-classical Arabic denote a gratuity bestowed by a superior on an inferior, a 'tip', or a 'consideration' thrown into a bargain, and also, though improperly, of bribes, particularly those offered to judges or

officials. A notable application of the term under the Ottoman régime was to the gratuity bestowed by a sultan at his accession on the chief personages of state and the Janissaries and other troops of the standing army—the *dīwān bakhshishī*. This involved the Ottoman central treasury in vast expenditure, which in the period of Ottoman decline it could ill afford.

**BAKHIT KHĀN**, Commander-in-Chief of the 'rebel' native forces, with the unusual and pompous title of 'Lord-Governor Bahādūr General Bakhit Khān', during the military uprising (also known as the Mutiny) of 1857 in India, was born at Salsitpur (Awadh) c. 1212/1797, where his father 'Abd Allāh Khān, a local descendant of Ghulām Kādir Rohilla, had settled after the dispersal of the Rohillas following the death of Hāfiṣ Rahmat Khān [g.s.]. 'Abd Allāh Khān had married a princess of the deposed Awadh ruling family and thus claimed close relationship with Royalty (C. T. Metcalfe, *Two Native Narratives of the Mutiny in Delhi*, London 1898, 146). At the age of 20 (c. 1233/1817) he joined the 8th Foot Artillery, better known as the Bareilly Brigade, as a *Sābdār*, in which capacity he served continuously for forty years until the outbreak of the Mutiny. He has been described as "a most intelligent character" always "fond of English society". The field-battery, of which he was the Commander, had served at Djalābād during the First Afghān War, winning many distinctions and decorations for outstanding service.

He leapt into prominence after the sudden and carefully planned sepoy-rising at Bareilly on 31 May 1857, when all British residences collapsed and Khān Bahādūr Khān, a grandson of Hāfiṣ Rahmat Khān, was proclaimed the ruler of Kohāband as a viceroy of the Mughal Emperor. Bakhit Khān then marched to Delhi at the head of his artillery brigade and practically assumed all power. It was at his instance that a *fatwā* declaring a *dīkād* against the British was signed by the leading 'ulama' of the capital including Sadr al-Dīn Azurda (see AZURDA, 4284-4285) and Fazlī Bakh of Khayrābād [g.s.]. During the siege of Delhi he had some sharp and bitter encounters with the British and loyal forces, which ultimately succeeded in driving the rebels out of the city. With the fall of Delhi in September 1857, Bakhit Khān left the town in disgust, failing to persuade the effete emperor Bahādūr Shāh II [g.s.] to accompany him and his battered battalion to Awadh. His movements thereafter have not been precisely recorded. He is reported to have camped first at Djalābād (Dist. Harḍī), then at Bīlgrām [g.s.] and Mirāḥ Ghāt. He is finally reported to have joined the forces of Bāgham Hadrat Mahāl at Lucknow, and was killed in action on 16 Rabi'ulāwwal 1273/13 May 1859. According to another version, he fled to Nepal, disguised as a religious mendicant, and perished with other leaders of the revolt, now described by patriotic authors as the First War of Independence.

**BAKHTIYÂR KHÂN**, a favourite eunuch, confidant and personal attendant of Awrangzîb [s.v.] who entered his service in 1605/1604 while the latter was still a prince. In 1609/1608 he was appointed *Darîgh-i Khawâssîn*. He died after a short illness at Ahmadnagar on 15 Rabi' I, 1096/1685 after faithfully serving Awrangzîb for 25 years. His death was personally mourned by the Emperor who held the funeral prayers and carried the bier for some paces. His dead body was brought to Delhi where he was buried in a tomb that he had built for himself in a township, named after him Bakhtîyârâpur, now called Basti Nâbî Karm.

Bakhtîyâr Khân was a great patron of art and learning. It was through his good offices that, among others, Shaykh Rafî al-Dîn of Bihârâpur, one of the compilers of the *Fatâwâ 'Alamgiriyya* [s.v.], gained access to the Court.

From his early youth he was an ardent student of history and had cultivated an elegant style of writing. The author of the *Ma'âzî-i 'Âlamgiri*, Muhammad Sâkî Musâ'îd, Khân's personal friend of Bakhtîyâr Khân as his private secretary and accountant.

It was Bakhtîyâr Khân who was entrusted in the year 1083/1674 with the task of ensuring, through legal rules, that the royal astrologers would not prepare horoscopes and almanacs any more.

Towards the end of his *Mir'ât al-'Âlam* (1078/1667), a general history rich in biographical material, the writer, who is none other than Bakhtîyâr Khân, gives a detailed account of his achievements. He claims the authorship of the following: (i) *Car'ânâ* or *Â'mîn-i Dîghî* (1068/1657), containing an account of the four battles fought by Awrangzîb which won him the throne (Brown, *Suppl.* 745); (ii) *Risâlat al-'Asâ'ir* (1061/1759), lives of celebrated divines and mystics, is preserved in the Archaeological Museum of the Delhi Fort. He is also the author of *Tarîkh-i Hindî*, a history of India from Bâbar to Awrangzîb (Princeton 468, Storey 317). A book of

Fatâwâ, a compendium of Hanafî law and a literary *pot-pourri*, called *Hamâm-i Bâgh*, were compiled for him by different authors.

Among the works of public utility founded and erected by him, he mentions the township of Bakhtîyârâpur, a number of mosques, caravanseras, including that of Bakhtîyârâwaraz, on the way to Fathâbâd, some bridges and canals for irrigation. He also laid out gardens, one in Lahore near the Shalâmâr and the other in Agharâbâd, three miles from Shâhjahânâbâd (Dehli).

**Bibliography:** *Ma'âzî-i 'Âlamgiri* (Bib. Ind.) 253 and index; *Mir'ât al-'Âlam*, last *afâyîsh*, *namâ* II (as reproduced in OCMIS Feb.-May, 1954); *Nasbat al-Khawâssîn* v, 89; Storey 137-133; Bîshnîdî, *Day-i Taghîr*, *al-Umâ* 1948; *Rica*, I, 125-6; Bâkîpûr Cat. VI, 477; Elliot and Dowson, VII, 150-3; OCM, Nov. 1948.

(A. S. BAZMEER ANSARI)

**BAKHTI**, Pen-name of Sultân Ahmad I; cf. Gibb, *Ottoman Poetry*, III, 208.

**BAKHTIGÂN**, the largest salt lake in the province of Fars, Iran. It is located ca. 30 km. east of Shîrâz at an altitude of ca. 1550 m. The size of the lake varies with the seasons, but at the greatest it is ca. 100 km. N-S, and 30 km. E-W. The water is very salty and the lake is exceedingly shallow. The lake is the basin of the Kurr or Band-i Anûr River.

In medieval Arabic geographical literature we find several mentions of Lake Bakhtigân. Ibn Khur-rad-dîghib, 53, refers to it as Lake Dîghânâ, Iy-takhtî, 122, gives a variant Badjakân, and an alternate name Badjîr, while Ibn Hawkal (ed. Kramers), 277, has al-Bakhtigân. The five lakes (*bahayrât*) of Fârs province are listed by Istakhrî, Ibn Hawkal and Mukaddasî, 446, as follows: 1. Bakhtigân, belonging to the district (*khra*) of Istakhr; 2. Dasht Arzân in the district of Sâbir; 3. Tawwâr in the Sâbir district at Kâzarûn; 4. Dîghân near Shîrâz, Lake Mûr in Ibn Hawkal; 5. Bâsfâbiyya (Muk.-Bâshfâbiyya, Ibn Hawkal has al-Bâsfâbiyya) in the Istakhr district.

At the present Lake Bakhtigân is called Nîrîz. The other lakes have been identified by Herzfeld as: 2. Lake of Dâgh; 3. the lake of Fârs or Shîrî or Kâzarûn; 4. the Lake of Shîrî or Mahîrî. The name Bâsfâbiyya is probably the name of part of Lake Bakhtigân and perhaps identical with Badjîr. This lake has always had several sections connected by narrow arms of water, and the northern part was called Bâsfâbiyya or Dîghânâ, while the south was properly Bakhtigân or Nîrîz. The lake has been surveyed by Capt. H. L. Wells.

**Bibliography:** In addition to the geographers above, cf. Yâkût (ed. Wustenfeld), 3, 838; H. L. Wells, *Surveying Tours in Southern Persia*, *Proceedings RGS*, 5 (1883), 138; Le Strange, 277-9; Mas'ûd Kayhân, *Dîghîrî-yi mafâsîk-i Irân*, I, Tehran 1932, 59-62.

(R. N. FRYE)

**BAKHTIYÂR**, prince, son, heir apparent (344/955) and successor (350/967) of Mu'izz al-Dawla in 'Irâq, with the *lakhâb* of 'Izz al-Dawla. He appears to have had little talent for government, which, unlike his father, he entrusted to *wazîrs* (chosen without any great discernment) so as to be free to amuse himself, though he still took an interest in affairs by his impetuous verbal or active intervention. At the beginning of his reign he continued his father's policy of hostility to the Hamdânî Abû Taghlib of Mawrid and to the autonomous chieftain

of the Baṭṭiyya, 'Imrân b. Shāhīn. Furthermore, confronted with the new problem of Fātimid expansion in Syria, he drew close to the Karāmīya, who now sought to counter it. Bakhtiyār, however, was incapable of maintaining discipline among his troops, a prerequisite for the stability of the regime. Quarrels between the Daylamites and Turks became unbridled and ended in an open breach between Bakhtiyār and the latter, which was further complicated by popular struggles in Baghdad between Sunnis and Shī'īs, in which the 'ayyārān [s.v.] intervened. He was then obliged to appeal to his cousin in Fars, 'Adud al-Dawla, who noting the incapacity of the prince whom he had saved, conceived the idea of taking his place and was only temporarily prevented from doing so by the opposition of his father, Rukn al-Dawla, head of the Bāyid family; upon the latter's death, he was able to revive his plan and Bakhtiyār, who had ranged himself with Abū Taghlib and 'Imrân b. Shāhīn against him, was defeated and slain (366-2/967-8); the account of their struggles has been given in the article 'Adud al-Dawla. During the course of the struggle, the Caliph al-Mut'ī had been replaced by al-Tā'ī, a protégé of the Turks, for which reason he did not support Bakhtiyār in earnest.

**Bibliography:** cf. the articles BUWAYHIDS and 'ADUD AL-DAWLA. The chief source is naturally Mas'ûdî, *Taghîr al-Umân*, which is based on the lost History of Hib' al-Sâbî; among the sources, however, special mention must be made of Yalîyâ of Antioch, *Patrol. Or. X.XIII*, especially 354 f. An exceptional place, furthermore, is also occupied in our documentation by what has been preserved of the letters of al-Sâbî (Abū Ishâk), partial ed. Shakh' Arslân, Caliphal point of view) and of 'Abd al-'Azîz b. Yûsuf, analysed by Cl. Cahen in *Studi Orientalistici*... *Levi della Vida*, I, 83-95 (point of view of 'Adud al-Dawla); cf. also that of Ibn 'Abbâd, ed. 'Abd al-Wahhâb 'Azzâm and Shawkî Dayf, 1947, I, no. 7.

(CL. CAHEN)

**BAKHTIYÂR KHALDÎ** (see MUHAMMAD BAKHTIYÂR KHALDÎ).

**BAKHTIYÂR-NÂMA**, also known as the *History of the Ten Viziers*, Muslim tradition of the Indian history of Sindbâd or of the seven viziers (see *Sindbâd*). Like its prototype, the book consists of a story in the framework of which other tales are inserted, which are here closely connected with the basic story. The subject is brief; the son of King Âzâdabâgh is abandoned on the road, shortly after his birth, by his parents, who are fleeing; and brought up by brigands, in the end he is taken prisoner by the king's soldiers. The King, who likes him, takes him into his service under the name of Bakhtiyâr. When finally he has raised him to a high position, the King's viziers who are jealous, take advantage of an accident to slander him before the King; whereupon Bakhtiyâr and the queen are thrown into prison. To save himself, the queen explains that Bakhtiyâr wanted to seduce her. For ten days each of the ten viziers in turn tries to persuade the King to have Bakhtiyâr executed; the latter, however, is constantly able to gain respite from execution by means of a story appropriate to his situation. As finally it is to take place on the eleventh day, the leader of the brigands who had raised Bakhtiyâr appears and informs the King that Bakhtiyâr is his son. Thereupon the viziers are executed and Bakhtiyâr becomes king in his father's place, who abdicates in his favour.

Originally the work was composed in Persian. Nöldeke (see *Bibliography*), in the course of examining the various versions and their chronology, which had already been established by R. Basset, published and translated extracts from the oldest known Persian version (MS. dated 695/1296)—composed in a masterly and resounding style, the author of which asserts that he composed the work for a prince of Samarkand, not so far identified, but who lived, according to Nöldeke, during the second half of the 6th/12th century. The later versions, Arabic (one of which is inserted in the *One Thousand and One Nights*) and Persian, more simplified in style, differ in the order of the stories and the narrative details. With these can be placed the Uyghur version (ms. of 830/1433) and the Persian version in verse by Panâhî (6th/15th century; see *Bibliography*; Bertels). The Malay version and the Persian version in verse by Kathludâ Marzubân (1210/1795); Ethé, *Cal. Persian MSS. India Office*, no. 1726) are more recent. The purpose of the stories, taken as a whole, is to demonstrate the disadvantages and dangers of hasty decisions. Magical factors and the supernatural make virtually no appearance. The prose is generally free from excesses and prolixity.

**BAKHTIYÂRI**. The Bakhtiyâris are a conglomerate of mixed races who migrated in the 10th century A.D. from Syria to Irân, where up to the 15th century they were known as the "Gûr Lurs"; they assert that they are not Iranian by origin. Although it is presumed that their ancestors migrated from Bactria, whence the word Bakhtiyâr, there is no confirmation of this hypothesis. They are probably of Kurdish descent.

By persuasion they are Shī'î Muslims and their language is of Iranian origin, yet they speak a patois of their own. Their population has almost reached the 400,000 mark.

Their land is called the Bakhtiyârî country, and extends from Isfahân to Maydân-i Naftûn in Khûzistân, a mountainous region, where rich oil fields are situated.

The Bakhtiyâris are divided into two major groups, the Haft-Lang and the Cahâr-Lang. The most important, the Haft-Lang, consists of 35 sub-tribes, while the Cahâr-Lang group has 24 sub-tribes. There is a sprinkling of Lurs and Arabs among them, for example: Mowri, Talikî, Nawadî,

Gandall, Carbur, Mirzawand, Livsel, Katski, etc. Being a gregarious people, they live "on the country," trekking long distances twice a year in search of grass, and hence they are called also the grass-folk.

The wealthy khāns or chieftains have their own residences in town. They possess also summer resorts where they live during the hot season. Although destitute of any bookish education, they maintain their *miras* or clerks. Nevertheless, they have recently awakened to the great importance of education, and are now sending their sons to Europe for an academic education; this tendency seems to be growing.

The Bakhitiyari woman is unveiled and goes about freely within the tribal area. As a khān's wife, she will attend to certain tribal cases during the khān's absence, and her findings and decisions are lawful and binding.

The tribeswomen weave their tents and also kilims, while their characteristic foot-gear, called *ghes*, is made by the tribesmen. Each tribal subdivision has its own so-called "healing man," who administers some herbs and in certain cases has recourse to incantations.

The Bakhitiyari have their own customs relating to birth, marriage, and death; divorce is practically unknown to them. They have their own particular poems, love songs and dirges, and also interesting games and a great variety of delightful folk-stories.

**Bibliography:** V. Melkonian, *The Bakhitiari*, 2nd ed. Basra 1954; D. L. R. Lormer, *The Popular Verse of the Bakhitiari of S. W. Persia*, in *BSOAS*, xvi, 1954, 542-555, xvii, 1955, 92-102.

**B. BAKI**, MAHMUD 'ABD AL-, Turkish poet. Born in Istanbul of modest family (933/1520). His father Mehmed was a *muḥaddithin* at the Fāṭih mosque. After working as an apprentice to a saddler, Baki began his regular studies in a *madrasa* where he had the good fortune to have as teachers some of the leading scholars of the time and many brilliant fellow students, including the historian Sa'd al-Din. He greatly profited from these invigorating surroundings, and the appreciation and encouragement of the old poet Dīshā'i whose shop was a sort of literary club for men of letters. In 962/1555 the sultan Süleyman returned from his Persian campaign and the young poet submitted a *ḥayḥa* to him. This gave him an entrée into the court and upper-class circles of the capital. His rapid and brilliant academic career and the favour of the Sultan who sent his own poems to Baki to be corrected and asked him to write *nasīb* to them aroused the jealousy of even his best friends and soon he found himself involved in the intrigues of the court. The death of Süleyman profoundly and he wrote the famous elegy which is his masterpiece. After a temporary eclipse, Baki continued his rise in the 'ulama' career, thanks partly to Sokullu's protection, and won the favour of Selim II and his successor Murad III. On his return to Istanbul after a period of office as *kāsh* of Mecca then of Medina, he was made, with intervals of disgrace, successively *kāsh* of Istanbul, *kāsh* of Ankara and later of Ruḥi, and then was retired without becoming *Shaykh al-Islām*, a hope which he had long cherished. The son of sultan Mehmed III appointed him again *kāsh* of Ruḥi, recognising thus his long services and his great reputation as the most distinguished poet, the *Sūfī al-Shā'ir*, of his time. The aging poet, whose ambition grew at the chance of reaching his goal, the highest office of his profession, took part in embittered court intrigues.

The Grand Vezir Khādin Hasan Paşa strongly recommended Baki for the office of *Shaykh al-Islām*, but the Sultan preferred his own tutor Khudja Sa'd al-Din. Baki's death in 1008/1600 was widely mourned and he was given a State funeral, the *Shaykh al-Islām* leading the funeral prayer.

Serious, dignified and with a keen sense of justice in his professional career, Baki was, as a private life, a man of the world, gay, a bon vivant, sociable, extremely witty, fond of jokes, repartee and the exchange of satire, even with friends. These characteristics made him many enemies and rivals, but also secured many powerful friends and protectors, thus smoothing the way to rapid progress in his career.

Apart from a few treatises, mostly on religious matters, Baki's main work consists of his *divān*. Unlike most poets of the classical period he wrote no *mathnawī*. The easy and happy life of the upper classes of the 16th century Istanbul, the colourful landscape, the gay and picturesque scenes of the pleasure resorts in and around the Capital are vividly reflected in Baki's poems. In his *ghazals*, minutely toolled with the care of a jeweller, he turned consistently to a favourite theme of diabolic poets: In this dreamlike and swiftly changing world all is ephemeral: The beauties of nature, youth, happiness, high estate are all doomed to perish. So, love, drink, and be merry while you can. "Forgo not this opportunity, for the pleasures of this world are as fleeting as the season of roses". Unlike Fudālī, Baki's temperament was not inclined towards religious enthusiasm and his lyrics did not lead towards mystical interpretation, although he often makes use of Sūfī terminology. Baki is the unequalled master of form. His perfect versification, meticulous choice of words, skilful use of onomatopoeic effect achieve a fascinating musicality which caused him to be recognised, by both his contemporaries and successors as his greatest *ghazal* writer of Turkish literature. In his hand the Turkish of Istanbul found its best expression in classical poetry. His great popularity and influence never diminished, and his pure and fluent style paved the way for Yahyā and Nedīm. In his prose works Baki avoided fashionable precious and ornate language, producing some of the best specimens of natural, unadorned, well-balanced style.

**B. BAKI a. MAKHLAD**, Abū 'Abd al-Rahmān, celebrated traditionist and exegete of Cordova, probably of Christian origin, born in 201/817, died in 276/889. Like many Spanish Muslims, he visited the principal cities of the Orient, where he frequented the society of representatives of various *madhāhib*, in particular Ibn Hanbal; on his return to Cordova, he displayed such independence in doctrinal matters

(some count him however as a Shāfi'i) and he is regarded as having introduced the Zāhiri doctrines into Spain and opposition to *taḥlīl*, that he soon found himself regarded with hostility by the Mālikī *fuḥah*; he was even nearly condemned to death on a charge of heresy, and owed his escape solely to the intervention of the *amīr* Muḥammad (128-73/852-86), who allowed him freely to dispense his eclectic teaching. His chief works, all of which are lost, are a commentary on the Qur'ān, which Ibn Ḥazm considered superior to that of al-Tabari, and a *muḥḥad* in which the traditions were classified according to their subject under the names, themselves arranged in alphabetical order, of the Companions who had handed them down. Baki's chief biography was written by the prince 'Abd Allāh al-Zāhid, enjoyed at the end of his life a reputation for piety bordering on holiness, and Ibn Ḥazm considered him, in the sphere of the Traditions, the equal of al-Buḥārī and other illustrious traditionists.

**KN'ADJA BAKI B'ILLĀH**, Abū 'L-Mu'AYYID Rāfi' al-Dīn, also called 'Abd al-Baki or Muḥammad Baki b. 'Abd al-Salām Uwaysi Nakshbandi, was born at Kābul on 5 Dhū l-Hijja 971/16 Dec. 1563 and died at Delhi on Saturday, 25 Jumādā II 1012/2 July, 1603. He received his early education from Sādiq Ḥalwālī, in whose company he went to Samarkand to pursue his studies further. It was during his stay there that he cultivated a taste for *tasawwuf*. On the invitation of some of his friends, who held high posts in India, he left for that country, but instead of entering the Imperial army, as intended, he began to search for mystics and *pirs*. After a short sojourn in India he returned to Mā Warā' al-Nahr to receive formal initiation into the Nakshbandi order from Kn'adja Muḥammad Amkang, a great *pīr* of his times. Back in India again in 1008/1599 he decided to settle down at Delhi. His influence soon spread and Ahmad Sarbindi (q.v.) and 'Abd al-Jalāl Dihlawī (q.v.) accepted him as their teacher.

He is the author of: (i) *Silsilat al-Aḥrā*, a collection of his *rubā'iyyāt*, which have been commented upon by Ahmad Sarbindi (*Oriental College Magazine*, viii/4, 41); (ii) *Kulliyāt*, a collection of his poems, including a *mathnawī*, which has been partially reproduced in the *Zuhdat al-Mahabbat* (p. 66), (MS. in the I.O. D.P. 1095). A collection of his letters (I.O. D.P. 10984) has been published: (*Makātibāt-Ṣharīf* *Hadrat* *Kn'adja Baki b'illāh Dihlawī*, Lahore 1923). A commentary on the Qur'ān is also attributed to him, but no MS. seems to exist.

(A. S. HAMMER-ANDER)

**BAKI' al-GHARKAD** (also called *Imām al-Baki'* or simply *al-Baki'*), is the oldest and the first Islamic cemetery of al-Madīna. The name denotes a field which was originally covered with a kind of bramble called *al-gharkad*; there were several such Baki's in al-Madīna. The place is situated at the south-east end of the town, at a short distance from the Prophet's tomb, outside the town-wall, now demolished, through which a gateway, Bāb al-Baki' gave admittance to the cemetery (see the map of Madīna in Caetani, *Annali*, II, 273). The first to be buried in al-Baki', from among the *muhaddithin*, was 'Uḥmān b. Ma'qū'a (a Companion of the Prophet) who died in 3/62-7. The bramble-growth was cleared and the place consecrated to be the future graveyard of the Muslims who died at al-Madīna. The Prophet's daughters, his infant son Ibrāhīm, his wives (*ummal al-mu'minin*) and his descendants, and with the exception of al-Husayn are also buried here. The burial-place of Fāṭima al-Zahra' (q.v.) is, however, disputed. Among the other notables buried here are 'Uḥmān b. 'Affān, Mālik b. Anas (q.v.), his techer Nāṣif, Ḥallima al-Sa'diyya (the Prophet's wet-nurse) and al-'Abbas, an uncle of the Prophet. It gradually became an honour to be granted a last resting-place here among the *ahl al-bayt* (q.v.) the Imāms and Saints. The graves of the famous dead had grand cupolas and domes built over them; the domes of Hasan b. 'Alī and al-'Abbās for example, rose to a considerable height, as Ibn Dīshāwī tells us. When Durrhādī visited the place after the invasion of the Wahhābīs, he found it one of the most wretched cemeteries of the East. Like the grave of Ḥamza at Uhud and the first mosque in Islam at Kubā', a Medinese suburb, al-Baki' is one of the sacred places which the pilgrims to al-Madīna consider it an act of piety to visit.

During the life-time of the 'Prophet al-Baki' was a very small place, the graves of 'Uḥmān b. 'Affān and Ḥallima al-Sa'diyya not being within its precincts. 'Uḥmān b. 'Affān was buried originally in Baḥsh Karākib, which was included in al-Baki' by the Umayyads much later. Even the enclosure where some of those killed during the Umayyad occupation of al-Madīna were buried fell outside its present

boundaries. The domes and minarets destroyed by the early Wahhābīs in 1223/1806 were restored by 'Abd al-Hamid II (g.c.), sultan of Turkey, to be destroyed again in 1926 by 'Abd al-'Azīz Āl Sa'ūd. This action of the Sa'ūdī monarch gave rise to a serious agitation in India, and a deputation was sent to Mecca to lodge a strong protest. The king, however, did not yield and the graves are still without any tombs; they have insignificant head-stones without any inscriptions or epitaphs. Rutter, who saw it in 1926, shortly after the second Wahhābī occupation, compares it with the ruins of a town affected by an earthquake. In 1934 crenelated piers were laid, by the orders of King Sa'ūd b. 'Abd al-'Azīz, all over the cemetery for the use and convenience of visitors.

(A. J. WENSINCK (A. S. BAKRĪ ANSĀRĪ))

**BĀKĪLLĀNĪ**, 'ABRĀHĀM-KULĀ AGĀZ, better known under the Russian form of the name, Bākil'lanov, and his literary pseudonym Kūld, Bākil'lanov, a Russian poet and philosopher, son of Mirzā Mamed Khān, ruler of Bāklā, driven from his throne by his brother Muhammad Kull Khān. He was born on 10 June 1794 in the village of Enur-Hadgīan in the Khānat of Bāklā, and died in 1847 at Kūba. After a thorough education in Persian and Arabic, in 1820 Bākil'lanov was appointed official interpreter at Tiflis in the headquarters of General Ermolov, Commander in Chief of the Russian armies in the Caucasus. There he learned Russian, through which language he became well acquainted with western literature. Shortly afterwards, he undertook a long journey which led him to Shīrwān, Armenia, Daghestān, Georgia, Turkey and Persia. During the Russo-Turkish and Russo-Persian wars, Bākil'lanov, who was a convinced advocate of rapprochement with Russia, was a staff officer at General Paskievich's headquarters. In 1833 he made a second journey, visiting the Northern Caucasus, Russia, the Baltic States and Poland. From 1834 onwards, he devoted himself to literature and published a large number of works in Agharī, Persian and Arabic. His most important work is: *Gulistan-i Irem* (1841) which traces the history of Daghestān and Shīrwān from ancient times down to the treaty of Gulistan. A Russian translation of this valuable work was

published in 1926 by the Association for the Study of Agharībaydīn in Bāklā, with a preface by S. Shosev and a biography of the author by M. G. Bakham; the Agharī text appeared in 1931 at Bāklā (Edition of the Academy of Sciences of the Agharībaydīn SSR).

His other works are: *Kiyād al-Kuds* (in Agharī), abridged biography of the principal Sufī saints, Islāmī, Kūndī, and Kūndī, Persian grammar; *Kaḡh al-Ghāḡh* (in Persian), containing a description of the discovery of America; *Tahḡīb-i Aḥḥab* (in Persian), treatise on Ethics and Moral Philosophy according to Arab, Greek and European authors; *Ḥāḡh al-Mīnā* (in Arabic), treatise on scholasticism and logic; *Asrār al-Malab* (in Persian and Arabic), treatise on astronomy, published at Tiflis; *Narīd-nāma* (in Persian), collection of moral precepts.

Finally several poems in Arabic, Agharī and Persian, some of which have been published in the newspaper *Feyṣal* of Bāklā (no. 28 of 1907), as well as a translation of Krilov's fables into Agharī.

(A. BENSIGER)

**AL-BĀKILLĀNĪ** (i.e. the greengrocer), the kādī Abū Bakr MUHAMMAD b. AL-TAYYIB b. MUHAMMAD b. IḤSĀN b. AL-KĀNĪ, in most of the sources b. AL-BĀKILLĀNĪ, but in popular usage (and Ibn al-Balāḥ) simply AL-BĀKILLĀNĪ, Agharī theologian and Maliki jurist, said to have been a major factor in the systematising and popularising of Agharīsm.

The date of his birth is unknown. He died on 23 Dhū'l-Qa'dā 403/5 June 1013. Born in Bagdad, visits to Shīrāz and the Byzantine court are mentioned, and for a time he exercised the office of kādī outside the capital. He studied *waḥ al-dīn* under disciples of al-Agharī and is said to have attracted many to his own lectures. Various anecdotes are related to illustrate his skill in disputation. Kādī, writer, disputant, lecturer—these headings sum up his life as we know it from our rather inadequate sources.

A list of his works (to which the editors add three titles) is given by the kādī Ḥayyū. Six of these fifty-two works are known to be extant. The *T'adīl al-Kur'ān*, printed several times, is regarded as a classic work on the subject. The *Tamhīd* is the earliest example we have of a complete treatise on theological polemic. The *Tawḥīd* contains two parts: a version of the Sunni creed with brief explanations, and a detailed discussion of the incarnation of the Kur'ān, the *hadār*, the vision of God, and intercession (*shafā'a*). The *Manāḥib* (incomplete) is a defence of the Sunni position regarding the Imamate (Caliphate). The *Intisār* (incomplete) is chiefly concerned with textual integrity of the Kur'ān. The theme of *al-Bayān* (incomplete) is the apologetic miracle which vindicates the claim to prophethood.

Study of these works does not enable us to define precisely the author's contribution to the development of Agharī kalām. For we do not know enough about the work of his contemporaries and predecessors, e.g. Ibn Fīrāk, Abū Ishāq al-Isfārīnī, and others, to do so. This it is now clear that much of what once might have been attributed to al-Bākil'lanī already existed in al-Agharī's *Kuḥ al-*

*Jum'*. Ibn Taymiyya called al-Bākil'lanī 'the best of the Agharī madhābīn, unrivalled by any predecessor or successor' (*Shadharāt*, iii, 169), but this praise is not disinterested. Ibn Khaldūn's assertions (*Muḥabbarāt*, iii, 40), and the affirmations of Macdonald (*Development of Muslim Theology*, etc., 200-201), seem to be exaggerated. Since al-Bākil'lanī certainly did not introduce the doctrines of atomism and accidents. There is evidence of some originality in his discussion of the apologetic miracle. But the main virtues of his works appear to be those proper to careful and industrious compilation. His metaphysics is not profound, but he was clearly aware of the cardinal apologetic importance of such questions as the validity of tradition and the possibility of the apologetic miracle. Undoubtedly he did much to propagate Agharīsm, and he is mentioned fairly frequently by later writers.

*Bibliography:* I. Biography — al-Khaṭīb, *Tarīḥ Baghdad*, v, 379-383; al-Kādī 'Iyād, *Tarīḥ al-madārik*, etc., in Cairo ed. of *Tamhīd*, 428-259; al-Sam'ānī, 618-624; Ibn 'Asākir, *Ḥayyūn kaḡh al-matār*, ed.; Damascus 1347, 1928-9, 217-226; Ibn Khallikān, 580; Ibn Farḥūn, *K. al-dhāḥī*, 244-5; Ibn al-'Imād, *Shadharāt*, a, 403 (III, 168-170). II. Extant Works — 1. *K. al-Tamhīd*, Cl., Brockmann, S. I, 349 (and read: 'Āfīl 1223); ed. by al-Khudayrī and Abū Rīdā, Cairo, 1360/1947, based only on Paris ms., omits several important chapters found in both Istanbul and Cairo. Ed. by Shāykh al-Kawālī, Cairo, 1369/1950, 3; *T'adīl al-Kur'ān*, Cl. loc. cit., for mss. and editions. 4. *Manāḥib al-'A'imma*, Damascus, al-Zāhiriyya, no. 66 under *Tarīḥ*. 5. *al-Bayān 'an al-Farḥ*, ed. Tūbīn, Kara Mustafa Paşa, İstanbul, and Cl. Cairo ed. of *Tamhīd*, 258, note. There is an annotated English translation of the parts of the *T'adīl* which deal with poetry: G. E. von Grunbaum, *A Tenth-Century Document of Arab Literary Theory and Criticism*, Chicago, 1950. III. General — Tritton, *Muslim Theology*, 177-182; Anawati et Gardet, *Introduction à la théologie musulmane*, 154-6; R. J. McCarthy, *The Theology of al-Agharī*, references partial, and useful for comparative study. A full-length study of al-Bākil'lanī is being prepared for publication.

(R. J. MCCARTHY)

**AL-BĀKĪR** (A.) the Splitter, i.e. the Investigator, a name of the Imam Muhammad b. 'Alī (g.c.).

**BAKKĀ'Ā**, pl. bakka'ān, bakka'ā, "weepers", ascetics who during their devotional exercises shed many tears. Older Islamic asceticism and mysticism are characterised by a strong consciousness of sin, by austere penance, humility, contrition and mourning. Laughter was denounced. An outward sign of this attitude is the act of weeping. The Kur'ān (Sūra xvii, 109) and they fall down on their chins, weeping", and Sūra xix, 58: "when the signs of the Merciful were recited before them, they fell down, prostrating themselves, weeping", and then, above all, the *ḥadīḡ* acknowledge and commend the shedding of tears during devotional exercises. The Prophet Muhammad is said to have wept audibly at times in the course of the ritual prayers. A similar behaviour is reported of the first Caliph Abū Bakr and 'Umar. Of weeping ascetics or those who at least imitated the practice of weeping, a long list might be compiled from the *Ḥayy al-Awḡyā* of Abū Na'aym. To this class belonged such well-known names as Ḥasān al-Baṣrī, Ibn Sīrīn, Mālik b. Dīnār, Abū Ḍ-Ḍardā' (who even

wrote a special work called *Kuḥ al-Ribba* or *T-Bakā'*, Ḥarīm al-Nakha'ī, Abū Sulaymān al-Dūrānī, Fudayl b. 'Iyād, Ḥabīb al-'Adjamī, 'Abd al-Wāḥid b. Zayd, Sufyān al-Thawrī, Dhū'l-Nūn al-Misrī, Yahyā b. Mu'adh al-Rāzī, etc. Yet there were but few who in fact bore the by-name of al-bakka' or were at least designated as weepers, amongst them being Yahyā al-Bakka' (in Bayr): *Ḥilya* 2, 247; Abū Sa'ūd Ahmad b. Muhammad al-Bakka' (*Ḥilya* 7, 385); Mutarrī b. Tarīf, Muhammad b. Sūka, 'Abd al-Malik b. Abdujār, Abū Sīnān Dirār b. Murra (these four in *Kūfa*: *Ḥilya* 5, 4 and 5, 91); Sayyār al-Nabāḡī (designated as *bakā'*; *Ḥilya* 10, 160); Ḥayyān al-Bakka' (Sufwīn b. Muḥta *Ḥabīb*, *Ḥadāḡ*, 5); Ḥishām b. Ḥassīn (Wensinck, *Some Semitic Rites of Mourning*, 83 f.), Ḥarīm al-Bakka' (Sulāmī, *Tahḥīḥ*, 87). Famous for their weeping are also Sālib al-Murī, Ghālib al-Djadhāmī, Kahmas, Muhammad b. Wāṣī. These "class", as R. A. Nicholson (*E.R.E.* 2, 100), A. J. Wensinck (*Some Semitic Rites*, 86), L. Massieu (*Essai*, 167), H. Lammens (*L'islam*, 152), Ch. Pellat (*Le milieu basile* à la formation de Ghāḡī, 94) and R. Dorey (*Suppl.*, s.v. bakka') seem to suppose, bakka' continued rather to be an appellative term applicable to all those who wept copiously, and given to an individual only occasionally as a by-name; it is comparable to some degree with the term *hamūd* found in *Ḥilya* 5, 69 as a designation for one who in joy and sorrow sings the praise of God. Therefore mention is also made of bakka'ān amongst the ancient Israelites (Ibn Kutayba, *U'yūn al-Aḥḡāb*, 2, 284; *Ḥilya*, 5, 164). Muhammad b. Wāṣī, himself a great weeper, deemed it absurd to call himself bakka' (*Ḥilya*, 2, 247).

Abū Ḍ-Ḍardā' gives three reasons for his weeping: fear of the fate that awaits us directly after death, the impossibility of striving further towards one's own salvation, and the uncertainty as to the verdict that will be made on the Day of Judgement (*Ḥabīb*, *Ḥilya*, 5, 151; var. Ibn Kutayba, *U'yūn*, 2, 559). Yāzīd b. Mayssara enumerates in general seven reasons for weeping: joy, sorrow, anguish, pain, hypocrisy, gratitude to and fear of God (*Ḥilya*, 5, 235). Abū Sa'ūd al-Kharrāz even names eighteen reasons, all of them subordinate, however, to three kinds of weeping: away from God, towards God, and with God (Sarrāḡ, *al-Lum'* h. T-Tasawwuf, ed. Nicholson, 229).

In the centre of the weeping of the bakka'ān are the fear of God (*Ḥabīb* *Ḥilya*), the Day of Judgement, doubt as to the verdict of God, the tortures of Hell. Often there is weeping over one's own sins, over specific personal weaknesses, over the wasted bygone years or the irrevocable past during the period of probation on earth; it can also arise from compassion for others, for those who err in their religion and for the dead who are no longer able to better their fate, or it arises from yearning for one's abode in Heaven, for God, and so on. They often wept in the expectation — and here too the *ḥadīḡ*, in a certain measure, could be adduced as an authority — of God's indulgence and kindness, of His protection on the Day of Judgement, of safeguard from Hell, of remission of one's own or even of other people's sins, of the attainment of Paradise, and of reward. Just as the beggar who can weep has a greater chance of success (Karl Hadank, *Die Mundarten von Khunūz*, etc., cix), so too the spiritual beggar, through weeping, hopes to arouse the compassion of God and thus, perhaps, to undergo

here and now some part of his future punishment. "Between Hell and Paradise", one text has it (*Hilya*, 7, 140), "there lies a vast desert that only the *bakkā'* traverses".

Prayer (including ritual prayer), thinking of God, reciting *Kur'ān* and *ḥadīth*, sermons, editing stories, pious discourses, meditative contemplation — these constitute the occasions for weeping. We learn that the pious Muslim would pass the night and weep until morning in solitary meditation over one or the other of those passages of the *Kur'ān* that deal mainly with the punishment of the sinner. At times there is weeping in prayers of supplication, often at the *Ka'ba*, clinging to the *ḥisā* or before the Black Stone, frequently too in burial grounds at the sight of the tombs. *Kur'ān* readers (*ḥurūd*), reciters of the *ḥadīth* preachers and narrators of editing stories (*ḥusūd*, sing. *ḥūṣ*) during their performance give free course to their tears, and often incite their audience to weep, or they just make them shed tears. One *hilya* is said to have asked his audience, before each discourse: "Lend me your tears!" (*Hilya*, 3, 112). Special gatherings (*mahdār*, sing. *mahdār*) were held, in which there was much weeping, followed by a meal (*Hilya*, 2, 347). Two pious Muslims, encountering each other, might enter into a discourse about religion and shed tears over it. Muhammad b. Sūka and Dirār b. Murra are said to have met regularly each Friday for this purpose (*Hilya*, 2, 3, and 3, 91). Badīl, Shamsay and Kahlana came together on one occasion in the house belonging to one of them and said: "Let us weep today over the cool water (that we shall be lacking on the Day of Judgement)!" (*Hilya*, 6, 213). The long lament of a weeper (with the characteristic *ḥayyū*) can be found in *Hilya*, 4, 255-260, the much shorter lament of a supposed Israelite in *Uyūn*, 2, 284, and a religious discussion between three weepers in *Hilya*, 10, 103.

The most incredible stories are reported concerning the amount of tears that a weeper was able to shed: one of them wept at times for three days and nights on end, others cried until their beads or their cushions were soaked, others again drowned entire sacks of sand with their tears. The tears of one weeper were heard splashing on his, another, after weeping, sat in such a puddle that he was thought to have carried out his ablutions there. One of them, pouring out tears on the ground, caused grass to sprout; another wept on purpose into a drain (*ṣarāb*). In some weepers the flow of tears furnished deep lines in their cheeks, others had their eyelashes and eyelids fall off, others again had their ribs deformed, and their eyes became weak-sighted or blind. Cases of fainting and even of death are mentioned.

The ability to weep was held to be a special privilege (*ḥudba*) and a sign of true religious fervour and divine grace. "Not every seeker can weep" ('Abd Allāh Anṣārī Harawī, *Rasā'id*, Tebriz 1319, 25). Abū Bakr, at the sight of some Yemenites who were weeping at a recital of the *Kur'ān*, called out: "Thus were we too, until our hearts were hardened" (*Dihāzī, Bayān*, 3, 151). 'Amīr b. 'Abd Kayṣ once struck himself in despair on the eyes and exclaimed: "Dry, paralysed, never to be wet again!" (*Diḥḥāṭ*, 5). For Dārānī, the inability to weep is a sign of abandonment by God (*Sulāmi, Taḥḥāt al-Sāfiyya*, Cairo 1953, 83). Yūsuf b. Husayn al-Kāfi saw in the fact that he no longer wept during the reading of the *Kur'ān* a sign that his countrymen might perhaps be right to call him a *ṣindīḥ* (*Hilya*, 10, 240).

On the other hand, Ṭahīb al-Bunān regards the gift of weeping as a sign that God grants his prayers (*Hilya*, 2, 323). Muḥammad is said to have entreated God to grant him "two raining eyes that weep a flood of tears" (*Hilya*, 2, 296 f. and 2, 280; Wensinck, *Some Semitic Rules*, 89). In this connection, the *ḥadīth* al-ṭahībī, "Weep or at least attempt to weep (or: at least pretend to do so)" enjoys general acceptance.

Among the ascetics four objections or, at least reservations have been raised against the practice of weeping. First of all, weeping was not an action. Secondly, it could be considered as relieving the load of grief and as unburdening of the heart and as such was rejected. In this connection Sūfiyūn b. 'Uyayna is said to have developed the technique of holding back the tears in his eyes by raising his head and thus, he said, retaining his sorrow longer within him (*Hilya*, 9, 327). Thirdly, weeping was something outward and could therefore be simulated. The false tears of Joseph's brothers (*Sūra* 12, 16) are mentioned as an example of this danger. Reference was also made to the supposed *ḥadīth*: "The believer weeps in his heart, the hypocrite in his skull". Since weeping is an outward manifestation, it never receives in the *Sūfi* manuals a chapter to itself, but is treated only in passing in the chapters on sadness (*ḥuzn*), contrition (*dhawā'*) and the like. The 27th chapter of 'Aṭṭār's *Makhlūṣiyya* (aka *ṣifāt ṣarīḥ*) is a special case, where, does not, we need not be told, here. Fourthly, many later *Sūfis* have held it to be a sign of weakness to let themselves be overpowered by their feelings to the point of weeping.

This is not the place for a full account of the weeping of the *Sūfis* in the *ṣawā'* and at the tombs of saints, the shedding of tears amongst pilgrims at the sight of Mecca, in 'Arafa and at the tomb of the Prophet in Medina, the weeping of the *Sūfis* over their Imāms or at their tombs, the weeping of the *ṭawwā'id* (those addicted to repentance) or of the *ḫawā'id*, etc. But it may be indicated here that the weeping of the *bakkā'ān* is one of the most evident links that bind together the pious asceticism of the Muslims with that of the Christians. From the early-Christian *gratia lacrimarum*, through the Coptic and Syriac monks (Isidore, Ephraem, John of Ephesus, Isaac of Nineveh, etc.), a direct line runs to the Islamic *bakkā'ān* — an instance of the well-known bifurcate development: a common root in early Christianity, with, thereafter, one branch in Western Christendom (Augustine, Cassian, etc.), and the other in the East. The eastern current divides thereafter into three branches: one represents the Eastern Christian continuation through Thomas of Marāṭh down to Barhebraeus, etc., the other is the Jewish offshoot (Wensinck) and the third constitutes the weeping in Islamic asceticism. Islam has, it is true, overlaid and indeed absorbed within itself other oriental forms of weeping (cf. the "weeping of the Magians" over Siyāwush, in Nārjakhī's *Ta'rikh al-Ruhānī*, ed. Schefer, at the sight of the weeping over Tammuz I). Nonetheless, the Muslims themselves were well aware that their pious weeping had its origin in the Jewish-Christian sphere and illustrated it with such examples as the tears of Adam, Noah (Nūḥ) etymology *nāḥa*), Jacob, David, Solomon, John the Baptist, Jesus and numerous monks. The *ḥadīth* al-ṭahībī might even go back to an utterance of Isaac of Nineveh (translated by Wensinck, 235): "If thou art no mourner in thy heart, let at least thy face be clad with mourning".

The *bakkā'ān* mentioned by Ibn Hishām, Sira, etc.

Wüstenfeld, 2, 595 f., do not fall into the category of the weepers discussed in this article.

**BAKKĀL**, etymologically "retailer of vegetables", this word has become the equivalent of the present English "grocer" taken in its widest sense. With the latter significance it has passed into Persian and Turkish, and, from Turkish, into the Balkan languages.

In its etymological meaning, the word was known in the Spanish Arabic of Valencia in the 7th/13th century, glossed by *alerum venditor*. But in the dialect of Granada (end of the 9th/15th century), it corresponded to the Castilian *regador* (= *regador* "retailer of foodstuffs in general", which is also rendered by *ḫaddār*).

At the beginning of the 20th century, the *bakkāl* of the Moroccan towns was essentially a retailer of fats: oil, preserved butter, meat preserved in fat; he sold, in addition, honey, soft soap, olives in lemon juice, tea sugar and candles.

It is doubtful whether this extension of the word *bakkāl* is of long standing. Nearly everywhere, before the 20th century, the grocer (*senso lato*) was named either after the basic foodstuff which he sold (with or without vegetables), or after certain methods of his trade.

Algiers had its *sakkāhīn* "sugar-seller"; Tunis its *'atṭā'* (q.v.), literally "perfume-seller". As regards the Cairo of the first half of the 19th century, E. W. Lane only knew the *zayyāl* "seller of oil, butter, cheese, honey, etc.". In Syria, the usual term was *ṣawmān* "seller of preserved butter".

Elsewhere, the grocer of the towns (*senso lato*) was often considered as being the "shopkeeper", the *Encyclopaedia of Islam*

fundamental "seller". At Granada, *bakkāl* and *ḫaddār* were equivalent to *sābī* "market seller"; and the feminine *sābiyya* had as its Arabic synonym *ḫaddāra* and as its Castilian equivalent: *hacera* "seller of beans". In earlier days, in Constantine and Tunis, the *sābī* used to sell oil, preserved butter, honey, dates, pickled olives, etc.

Considered as being the "shopkeeper" *par excellence*, the grocer also received the name of *ḥawāṣī* (with variants) among the rural populations of Algeria and Constantine. The East, sporadically, used the terms *dakhānī* and *dakhānī*.

Arabic-speaking Spain had *wa'āḍī*, lit. "treating, developing", with the sense of "retailer of fruit and vegetables". Dozy's translation, in his *Supplément*, should be corrected on this point.

The retailer of vegetables is called, according to the country, *ḫaddār*, *ḫaddār* or *ḫaddār*. Spices are, in general, sold by the *'atṭā'*, in addition to perfumes (*'atṭā'*) and drugs; his trade comprises also small items of stationery, haberdashery and hardware.

For various reasons, the calling of grocer is often followed by people having the same ethnic origin.

In the towns of Morocco (except at Tetuan, until recently), the *bakkāl* is almost exclusively a Berber (pl. *ghulāl*) of Sūs, of the Ammāl tribe. In Algeria, the people of the Mārah enjoy the same *de facto* monopoly. In the East, the modern *bakkāl* is often a Greek.

**Bibliography:** W. Marçais, *Textes arabes de Tanger*, 333; Dozy, *Suppl.*, under words mentioned in the article. (G. S. COLIN)

**BAKKAM** (a.) Sappan wood, an Indian dye-wood obtained from the *Caesalpinia Sappan* L. Al-Dīnawarī remarks that the word frequently occurs in ancient Arabic poetry, although the tree concerned (in Lewis's ed. read *ḫabbab* *ḫaddar* instead of *ḫaddar* according to later quotations) is not found in Arabia. It is a native of India and the country of the Zandj. Its stem and branches are red being used, in decoration, as a dye.

The word is said to derive from Sanskrit *paṭṭana* and probably entered Arabic through the Persian. Its foreign origin was recognised by the Arab philologists who based their view on the assertion that the paradigm concerned was not otherwise attested in the language. As an Arabic equivalent they generally indicate *'andam* which, however, rather denotes the dragon's-blood, a red gum exuding from certain trees. The wrong identification can be attributed to the fact that both *bakkam* and *'andam* were used as a red dye.

Muslim pharmacologists indicate several medicinal applications of the sappan wood. It brings about the cicatrization of wounds, desiccates ulcers and stops bleeding. Its juice makes the skin tender and embellishes its colour. The root yields a poison which works quickly.

**BAKKĀR**, a fortified island in the river Indus lying between the towns of Sukkur and Rohri. Its importance was noted by Ibn Baṭṭūṭa who visited it during the reign of Muḥammad b. Tughluk. In 1522, Shāh Beg, the founder of the Arghūn dynasty, made

its capital. When, in 1549, his son, Shāh Husayn, refused to grant an asylum to the fugitive emperor, Humayūn the latter unsuccessfully attempted to capture this island fortress. In 1574, in the time of Akbar, it was annexed to the Mughal empire. The best and fullest account of the Mughal conquest of Sind is to be found in the *Tārīkh-i Ma'āsim* of Mir Muhammad Ma'āsim, an inhabitant of Bakkāra. In 1736 Bakkāra was captured by the Kalhor rulers of Sind. It later fell into the hands first of the Afghāns and then of the ruler of Khayrpur. It was occupied by the British in 1839 and became their chief arsenal in Sind during the First Afghan War (1839-42). From 1865 to 1876 it was used as a jail.

**BAKKĀRA.** Arabic-speaking nomads of the Sūdān, occupying territories from Lake Chad to the White Nile between 9° and 13° N. Their livelihood is the herding of cattle (*bakur*), whence their name. The dry season is spent in the southern river-lands. With the rains, they move northwards to the seasonal grasslands. Grain sown on their journey is harvested on the return. Bakkāra origins are obscure; the genealogies reflect existing groupings rather than give evidence of descent. They are probably connected with the Djabayna, who erupted into Nubia from Egypt in the 14th century. From the Nile, nomadic groups apparently made their way by the 17th century to the lands between Waddī and Lake Chad. Fusion with other elements in northern Africa may account for the tradition of a Hūlāt origin among some Bakkāra. Penetrating southwards into regions unsuitable for camel-breeding, they turned to cattle. Groups pushing eastwards, to the south of the cultivated areas of Waddī, Dār Fūr and Kordofān, (which were under Islamised dynasties) formed an Arab wedge between these sultanates and the pagan tribes who retreated southwards. The Bakkāra were uneasy vassals of these sultanates to which they paid tribute, migrating on occasion beyond the power of their overlords. Slave-raids on the southern pagans and consequent intermarriage have affected the physical type of the Bakkāra. During the 18th and 19th centuries, the powerful Riraykāt Bakkāra were under the suzerainty of Dār Fūr. Their quarrel with the Sudanese slave-trader, al-Zubayr Kalām Maṣrūṭ, led to the Egyptian conquest of Dār Fūr in 1874. The Bakkāra assisted Muhammad Ahmad al-Mahdī (*q.v.*) to overthrow Egyptian rule but proved refractory to the Mahdist administration. The Khalifa 'Abd Allāh b. Muhammad (*q.v.*), himself a Bakkārī of the Ta'āghib tribe, used the Bakkāra as troops and selected from them his chief assistants. In 1888-9 he compelled the Bakkāra of Dār Fūr to migrate to Omdurman and its vicinity, both to support his power against the *awlad al-balad* (*q.v.*) and to bring them under closer supervision. This migration and their losses in fighting and epidemics weakened the Bakkāra. During the Reconquest (1896-8) many regained their old homelands as broken tribes. They gave little trouble to the Condominium government (1899-1955) and this regime saw the gradual resettlement of the Bakkāra and their integration into the administrative system.

**BAKLIYA.** name given to a group of Muslim dissenters in the Sūdān of Lower Nīl, associated with the Karmatians. A certain Abū al-Ḥusayn, 295/907-8, is said to have forbidden them garlic, leeks, and turnips, as well as the slaughtering of animals, and to have abolished religious observances. They rose in the area of Kūfa and Wādī under several leaders, notably Ma'ūd b. Hurayth and 'Isa b. Mūsā nephew of 'Abdallāh, at the time of Abū Ḥāshim's Euphrates expedition in 315/928-9. Their white banners bore Karmatian inscriptions recalling the liberation of the Israelites from Pharaoh's oppression. After initial successes they were put down by Muḥtadir's general Ḥārūn b. Ghārib. They were evidently also called Būriyāna.

**BAKR**, the Šū'ī Bāghl. A military commander and district-governor in central 'Irāk. Bakr achieved by 1029/1020, by unscrupulous brutality, an outstanding personal military and civil position under a weak Pasha of Baghdad. Successful in the field, he repudied to a conspiracy of his enemies in the capital by strong counter-action, established effective control of the province, and petitioned the Sultan for official investiture as Beylerbeyi, which title he now assumed. It was refused, and an army from the nearest loyal province, Diyarbakr, marched on Baghdad to restore legitimacy and order. Fierce exchanges took place for some weeks between the loyalist and the usurping forces, after which Bakr decided to withdraw his army to the river Shāh.

'Abbas of Persia to re-occupy 'Irāk, thus compelling Ḥāfiz Ahmad, of Diyarbakr, with great reluctance, to confirm him as Pasha of the province, since he alone could now prevent a shameful cession of Ottoman territory. The loyalist forces withdrew, those of Persia approached the city. Bakr refused to open the gates, and after negotiations full of calumnies by the Shah reduced it by siege. This was ended by the treacherous surrender of the city by the Šū'ī Bāghl's own son. Baghdad was sacked, hundreds massacred and Bakr put to a terrible death; 'Irāk remained under Persian rule until its reconquest by Sultān Murād in 1048/1038.

**BAKR s. WÄ'IL.** Ancient Arabic group of tribes in Central, East, and (later) Northern Arabia. The Bakr belonged to the same people—later known as Kalbās—as the 'Abd al-Kays (*q.v.*). Their place in the tribal genealogy is three grades lower than that of these. The Thā'labā (b. 'Ukāba) are to be re-

garded as the core of the Bakr. Joshua Stylites (8 57) mentions them under the year 593 as being the leading tribe of the northern Arabian Kinda Empire, and shortly afterwards they appear in a South Arabian inscription (Ryckmans 510. *Le Muséon* 1953). In the genealogy of Bakr, the Thā'labā are on a level with the tribes of 'Idjl and Hanifa b. Luḡaym, with the Yaḥṣuk b. Bakr three grades above them. The Thā'labā were themselves subdivided into the Banū Shaybān, Dhūb, Taymālīt (Taymālīth), and Kays. The Bakr tribes lived in the area of al-Yamāma. At that time, this embraced al-'Irā = Wādī Hanifa, and its tributaries Luḥā (Shaib Ha on the maps), Nisāb, and al-Sulayr, the district of al-Kharj to the south, and the district of al-Witr with its tributaries north of the watershed. Al-Haḍir, the capital of al-Yamāna (near al-Riyāḍ of today) was originally in the hands of the Hanifa. Later on, members of other Bakr tribes settled there too. The second largest town, Dījaww (Dījaww al-Yamāna, later al-Khidrīma), south-east of al-Haḍir, was also largely inhabited by the Hanifa, who likewise owned the oases Kurra and Maḥam on the far side of the watershed. Colonies of the Hanifa could be found further to the north-west in the regions of al-Waḥm and al-Sudayr. The Dhūbā b. Thā'labā lived, in (Karyat Banū) Sādās, named after one of their sub-tribes, on a wādī which runs into the Witr, the Kays b. Thā'labā among other places, in Manfūba, to the south of Riyāḍ. There is also evidence of villages of the Yaḥṣuk, Dhūb and Shaybān, and of al-Haḍir, in the region of an ancient culture, which is linked with the vanished tribes of Tasm and Dīdās in later legends. epics. Baityles (obelisks) could still be seen in Haḍir in early Islamic times, but in Dījaww these had been destroyed during the raid by a member of the southern Arabian dynasty of Ḥaṣān (al-A'ḡhā, no. 13, 16-21).

Date palms were cultivated in all oases, but in the 'Irā valley and in al-Kharj grain was grown. In good years corn was sent to Mecca, but in bad years it was not even sufficient for local consumption (Mutallamīs, ed. Vollers, no. 5, 8; al-A'ḡhā, no. 19, 24; 23, 22-23; Ibn Hishām, 997 f.). As the Bakr villages were rather close together, there were sometimes feuds between them, but the date and the palm groves were burned down (al-A'ḡhā, no. 15, 56-57; 38, 9-11; Yāḥūt, s.v. al-Muharraka, (below Sādās). Some Bakr escaped these conditions by leaving and becoming mercenaries (Aws b. Ḥaḍjar, ed. Geyer, no. 14; *Mutaḍḡaliyyāt*, ed. Lyall, no. 119), many took up the nomadic life—which was later on embraced by considerable parts of their tribes.

It is possible that this movement was started by the appearance of the Kinda in the second half of the 5th century (amend art. 'ABD AL-KAYS, line 13; from 6th to 5th century). We have no definite information about the routes which the nomadic Bakr followed at that time, although later sources (Ryckmans 510; *Mutaḍḡaliyyāt*, (no. 13) indicate that they went to the west (and east?) of al-Yamāna. During this period there was a long feud between the Bakr and their brother tribe, the Taghlib, which only came to an end in the middle of the 6th century, in a peace concluded under the patronage of Mecca, in Dhū 'l-Maḡīz, outside the Haram (al-Hārith b. Ḥilliza, *Ma'sā'ib*, ed. Arnold, 66). The Yemen Kalab I is a battle between two heirs of the Kinda empire, in about 530, at Thāblān, S.-W. of Duwādān) is rightly regarded as an episode in

that feud. Shortly afterwards, the Taghlib—whose zone of migration was then from Sāḍir in the upper Sirr, to Naḥā near the Persian Gulf (*Mutaḍḡaliyyāt*, 430, 13; Hārith, *Ms* 5, 79)—left central Arabia, and settled in the steppes on the near side of the lower Euphrates, where, possibly, some of them had already settled earlier on. The Bakr followed them, but they stopped before Baṭn Fāḡl. Place names mentioned then and afterwards by the poets seem to show that the routes taken by the nomadic Bakr in the following decades ran from north to south. The area which was later vacated by the Taghlib and Bakr on the near side of the Tuwayk head was probably about 530 interspersed with Tamīm, whose home was along both sides of the Tasrīf. After 530, they spread over the Tuwayk to eastern Arabia. Since the nomadic routes of both groups crossed, there had somehow to be maintained, and there is in the next decades in fact little mention of fights between the Bakr and the Tamīm.

A number of outstanding Shaybān families emerged in the period in which the changing relationships between the Bakr and the Taghlib, the Tamīm, and the kings of the Kinda and of al-Hira, demanded leaders of political experience. The hero of E. Brāunlich's *Biṭām shā Qais* (Leipzig 1923) is a member of one of these families, the Dhū 'l-Dhaddayn. Connections with al-Hira were responsible for an early development of poetry, especially amongst the Kays b. Thā'labā, as witness the works of al-Murakkibūh (the legend concerning him appears for the first time in Tarafa, *Six Poets*, no. 13, 14-16, an imitation by a later poet of al-Hira; N.B. the 'younger Murakkibūh' never existed, as is evident from al-Farāḡdī, *Nabā'id*, 200, 15, to mention only one witness), those of 'Amr b. Kamāl's (*q.v.*), who never journeyed to Byzantium with Inra' al-Kays, those of Tarafa, and those of al-A'ḡhā, who lived on into the 7th century. Poetry also flourished among the Yaḥṣuk, to whom al-Hārith b. Ḥilliza belonged.

The nomadic Bakr entered a new period when the Taghlib vacated the steppes on the lower Euphrates, migrating up the river, after their chief, 'Amr b. Kulḥūm, had killed the king of al-Hira, 'Amr b. al-Hind in 567-70. About 580, a poet says (*q.v.*, no. 41, 11): "And Bakr—all 'Irāk's broad plain is theirs; but if so they will, a shield comes to guard their homes from lofty Yamāna's dales". Some ten years later, the Tamīm, and especially the Yarbūḥ, began to press forward, in order to pitch their tents in al-Harr during the spring. This gave rise to mutual raids, some of which, taking place between 605 and 645 (have been followed by Brāunlich in the above mentioned book). A great deal is known concerning the tribes of the nomadic Bakr at this period, and also something about the area they covered. The tribes concerned were the Shaybān, 'Idjl, Kays, and Taymālīt b. Thā'labā. The 'Idjl went as far as what later became the Kufan pilgrim route in the west, and as far as Tukayyid in the east; the Shaybān pitched their tents to the north and south of the line al-Kirzina (near the Bay of Kuwayt)—Ra's al-Ayn = al-Busayya (?)—Salmān, and the Kays b. Thā'labā south-east of these, between al-Musannāh (Yāḥūt, erroneously al-Muḥannāh) and Ra's al-Ayn (al-A'ḡhā, no. 14, 20; 29, 24). The Taymālīt, Kays and 'Idjl formed the confederation of Lahzīn, in order not to be overwhelmed by the Shaybān. It is not exactly known where the northern Bakr wintered, but the Kays b. Thā'labā appear

to have alternated—at least in the eighties—between al-Yamūna and the north (al-A'shā, no. 32, an early poem, especially v. 48). The Shaybān occasionally went as far as the oases of Bahrayn in eastern Arabia, whilst the 'Idlī appear to have remained in the north. During the summer, the tribes congregated where water could be found on this side of the Tāf between 'Ayn Sayd and Abū Ḥajar. It is in this area that the famous battle of Dhu Kār, in which the Dhūhī b. Shaybān repelled the advance guard of the Persian knights of Hamaṣ [q.v.], was fought around the year 605 (al-A'shā, no. 40). In spite of this, Bakr soon came under Persian influence again. At the same time, the hostility between Bakr and Tamīm in the north spread to Central Arabia, where the Dhūhī, Hawḍha b. 'Alī, of the Banū Ḥaṭṭā, a vassal of the Persians, was hard pressed by the Tamīm, until the Persian governor of Bahrayn drastically broke their valour (see al-A'shā, no. 13, 62-66). This brings us up to Islamic times.

Christianity was accepted by some of the Bakr in the north as well as in the south, particularly among the 'Idlī, and (within the Shaybān) among the Dhū Ṭ-Ḥaddayn. Al-A'shā and Hawḍha b. 'Alī were also Christians. The adherence of Yamūna to Musaylima [q.v.] shows that Christianity had not taken root there, but the position in the north was quite different: the case of the former Ghaz leader, Abjār b. Ḍāḥir, who died a Christian in Kūfa in 641, can hardly have been exceptional among the 'Idlī. The Dhū Ṭ-Ḥaddayn also retained their Christian faith. The paganism, about which there is an interesting passage in 'Amr b. Kānā, no. 2, 9-15, is hardly mentioned by the later poets, unless one counts al-A'shā, no. 39, 47, whilst the idol Muḥarrīk in Salmīn (Yāqūt iv, i.e. Muḥarrīk) is not mentioned in Ibn al-Kalbī's *K. al-Aṣṣam*.

Muhammad had tried to get in touch with Hawḍha b. 'Alī even before the conquest of Mecca, but his message met with a cool and haughty reception. His successor in al-Ḥaḍra was Musaylima. Thumāma b. Uḥayl of the *sira* and the *rida* is, strangely enough, missing in the genealogy of Ibn al-Kalbī, which is based, in this respect, on a Bakrite authority. Information on the *rida* in eastern Arabia, which spread from the Kays b. Thā'aba, can provisionally be found in Wellhausen, *Skizzen und Vorarbeiten*, vi, 20 ff. Meanwhile the Bakr in the north had taken advantage of the disputed succession in Ctesiphon (628-632) in order to raid the cultivated land (as they had done before Dhu Kār). A leader of the Dhūhī b. Shaybān, al-Mughannī b. Hattifa, distinguished himself on this occasion, and when he heard of the defeat of the *rida*, he joined Islam, thereby consolidating his leadership. Together with Khālīd b. al-Walīd he brought about conditions which later led to the capitulation of al-Hira. When the Muslims were placed on the defensive, after Khabī's departure to Syria early in 634, he covered the retreat in the battle of the Bridge, in the autumn of 634. His last great deed took place a year later at Buwayh, after which he succumbed to his wounds. Bakr (and Tamīm ?) also prepared the ground for the conquest of what later became the province of Baṣra. 'Idlī and Hanīla took part in the battle of Nihāwān in 642. The Bakr reached Khurāsān with troops from Baṣra, and in 715 there were 7000 of them there (Tabarī, ii, 1207). In both places they were partly responsible for the extension of the ancient tribal feuds, which continued there

on a larger scale. Together with the 'Abd al-Kays, they formed the Rabi'a group in Baṣra, and later they joined the Azd 'Uṣayn who immigrated around 650. As the Tamīm in Baṣra were associated with the Kays group (ahl al-'Alīya), a rift again occurred. Hostility subsided, however, after some fighting between the two parties on the occasion of the death of Yazīd I in 684, and after Mūlik b. Misna' (a member of the leading family of the Kays b. Thā'aba) had declared himself in favour of the caliph 'Abd al-Malik, in 690, the Bakr kept the peace. The position was rather different in Khurāsān, where a bloody feud broke out in 684 between Bakr and Tamīm, followed by permanent friction between the Rabi'a-Azd and the Kays-Tamīm, which continued until 700, 705. The Bakr produced a sensible leader (Yahyā b. Hudayn). Their last remarkable personality was the general and statesman Ma'n b. Zaydā [q.v.], of the Dhūhī b. Shaybān.

Whilst the Bakr disappeared early from the steppes of Baṣra, they remained for a longer time near Kūfa. The 'Idlī retained their nomadic area, and later extended it towards the Tāf; east; the Shaybān, however, migrated towards the north-west, as far as the waters of al-Lajāl, not far from Kūfa, and later moved largely to the area of Mosul, in the north, where they settled along both banks of the Tigris. Three verses that have strayed into the *diwān* of 'Amr b. Kānā (no. 16) describe the romance of a girl on Khirān in the foreign lands, to the Sāṭidān (possibly the Diabāt Makhlīf, opposite the town); and reports of Abū Mikhnaf (Tabarī, ii) concerning the noble leader of the Khāridjites, Shāhib b. Yazīd (of the Dhūhī b. Shaybān; killed in 697) describe the curious vacillation between Bedouin life and urban civilization at that time. The Bakr spread thence to the north as far as Dīyar Bakr (a late name) and al-Jayḥarjīn. The Shaybān developed once again into a large nomad tribe. In spring and summer, they pitched their tents between the Upper and the Lower Zab, in winter they moved as far as the area below Kūfa. During the 9th century, they carried out frequent raids into the plain of Mosul, which resulted in a campaign against them in 931, led by the caliph al-Mu'taḍī. In the 11th century, they appeared again in the cultivated land of 'Irāq, but disappeared at the beginning of the next century. The name Rabi'a began to supplant the tribal names Bakr and 'Abd al-Kays in Baṣra and in Khurāsān, and the names Bakr and Taghīb in the eastern Dīyār = Dīyār Rabi'a. This also happened in Arabia. The royal family of 'Alī Sa'īd traces its family tree back to the Rabi'a.

**AL-BAKRĪ** [see BAKRIYA and ZIDIDĪ].  
**AL-BAKRĪ**, 'ABD ALLĀH (see ABU 'UDAYN).  
**AL-BAKRĪ**, ABU 'L-HASAN AHMAD B. 'ABD ALLĀH B. MUHAMMAD, appears to be the most acceptable form of the name of the alleged author, or final editor, of the historical novels dealing with the early years of Islam, who is credited with a *maṣnū'ā* and a fictional life of Muhammad. The

earliest biography devoted to him is to be found in al-Ḥababī, *Al-Man*, Cairo 1325, i, 53. Al-Ḥababī indistinctly describes al-Bakrī as a liar and inventor of untrue stories, whose books were available at the booksellers (and, presumably, enjoyed good sales). Considering the additional facts that a MS. of one of his works (Vatican Borg. no. 125) is dated in 694/1295 and that authors who lived as late as the end of the thirteenth century are quoted in the biography of the Prophet (Alwardi, *Vorarbeiten der arab. Hist.* ... 22, Berlin, no. 6242), al-Bakrī would seem to have lived in the latter half of the thirteenth century. While this conclusion must remain highly speculative for the time being, there exist no cogent reasons for doubting the historicity of al-Bakrī's elusive personality. If the occasional epithet of "Bakrī the Preacher" can be relied upon, he was active in 'Irāq.

It is by no means certain that all the works attributed to al-Bakrī go back to one and the same author. For instance, the biography of Muhammad quotes actual books and authors, while the other works are vague and confused in their references to sources and prefer fictitious names in the rare cases where transmitters are mentioned. Furthermore, it apparently was not yet known to al-Ḥababī, and a reference to it was added by Ibn Ḥudjar, *Lisān*, i, 202, in the biography he copied from al-Ḥababī. The relationship of the various works or recensions to each other has not yet been investigated, and in order to reach safe conclusions, it will be necessary to study all the numerous MSS. preserved in widely distributed libraries.

**Bibliography:** Knowledge of al-Bakrī in the West begins with L. Marracci, cf. C. A. Nallino, *Raccolta di scritti*, ii, 115. Cf., further, R. Paret, *Die legendäre Maghāzī-Literatur*, Tübingen 1930, 155-58; Brockelmann, I, 445; S I, 616 (basic but disfigured by many mistakes). A false forbidding the reading of his biography of Muhammad, by Ibn Ḥadjar al-Haythamī, al-Fatāwā al-Ḥadīṣiyya, Cairo 1353/1934, 216. See further MAGHĀZĪ and TA'NĪGĪ.

(F. ROSENTHAL)  
**AL-BAKRĪ**, B. ABI 'L-SURŪR, name of two Arab historians of the notable family of Egyptian origin of the Bakriyya *tarīqa* (of the Shāhīdī order).

1. MUHAMMAD B. ABI 'L-SURŪR B. MUHAMMAD B. 'ALĪ AL-SIDDĪQĪ AL-MIṢRĪ, d. 1028/1619. His works include, in addition to a universal history in two parts (*Uṣūn al-Aḥbār*, *Nuṣaṭ al-Aḥbār*, also abridged under the title of *Taḥlīl* (or *Tadhkirat al-Zurāfi*), several histories of the Ottoman Turks (*Ḥayāt al-Manānīn*, *al-Durar al-Ḥimnī* by Ḥafīz Maṣṣaf *al-Uḥḍān*, and *al-Mināṣ al-Fahmāniyya* with an appendix on Egypt entitled *al-Latā'if al-Rabā'iyya*), one on the Ottoman conquest of Egypt (*al-Fatāḥ al-'Uḥmāniyya*), and a work on the attempt of Muhammad Paṣhā, wālī of Egypt, in 1071/1668-9 to suppress the tax called *ḥabṣ al-ḥalī* (*al-Taḥlīl al-Kubrī fi Dār* (or *Raf*), *al-Talab*).  
2. 'ABD ALLĀH B. MUHAMMAD B. ABI 'L-SURŪR, d. 1127. Wüstenfeld, *Geschichtsschreiber*, no. 352; Bahlinger, 147; Hadjidi Khallāf, ed. Flügel, nos. 2619, 4981, 8458, 9325, 13752; Ismā'īl Paṣhā Baghdādī, *Hadīṣat al-'Arifin*, Istanbul 1935, ii, 216. For his father Abu 'L-Surūr (d. 1071/1598-9) see Muhibbi, *Khulāṣa*, i, 117.

3. MUHAMMAD B. MUHAMMAD B. ABI 'L-SURŪR, *al-Dīn* and *al-Nuṣaṭ al-Aḥbār*, son of the above, b. ca. 1003/1596, d. ca. 1060/1650. In addition to a universal history (*Samīr al-Aḥbār*) and two general

histories of Egypt (*al-Rawda al-Ma'nūna*, and *al-Rawḍa* (or *al-Nuṣaṭ*) *al-Aḥbār* fi *Wāḥid Mīr al-Kubrī al-Ma'nūniyya*), a third history of Egypt entitled *al-Kawāḍib al-Sā'ira* covers in fuller detail the Ottoman period down to 1045/1634. This work, unpublished as yet, was translated by S. de Sacy (*Le Livre des Étoiles errantes*) in *Notices et Extraits des Manuscrits de la Bibliothèque du Roi*, i, 1798, 165-280 (a German translation from the French was published by G. Haase, Hildburghausen 1791), and was used extensively by J. J. Marcel for his *Histoire d'Égypte* (Paris 1848), together with a continuation of the work to 1168/1754 by Mustafā b. Ibrāhīm (cf. Marcel, *op. cit.*, XXV). His other works include a history of the Ottoman conquest of Egypt (*al-Taḥf al-Bakriyya*), an abridgement of al-Makrī's *Kubrī* entitled *Kubrī al-Aḥbār* (this work is sometimes attributed to his uncle Muhammad b. Zayn al-'Aḥdīn b. Muhammad b. 'Alī, *Shams al-Dīn* Abu 'L-Ḥasan, d. 1087/1676; cf. Muhibbi, *Khulāṣa*, iii, 465), a biography of the Sūfī shaykh al-'Adjamī al-Kurānī (*al-Durr al-Dīwānī*) and a Sūfī treatise (*Durr al-Aḥdī*).

**Bibliography:** Brockelmann, II, 383; S II, 409; Wüstenfeld, *Geschichtsschreiber*, no. 352; Bahlinger, 188; works mentioned in the article.

(STANFORD J. SHAW)

**AL-BAKRĪ**, MUHAMMAD B. 'ABD AL-RAḤMĀN AL-SIDDĪQĪ AL-SHĀRĪ AL-AḤMĀRĪ ABU 'L-MAKRĪM SHĀMS AL-DĪN, Arab poet and mystic, born 868/1492, lived a year alternately in Cairo and Mecca, and died in 927/1525. Besides his *Diwān* (Bibl. Nat. Paris, *Catalogue des mss.*, ar. by de Slane, no. 3229-3233; *Descriptive Catalogue of the Arabic, Pers. and Turk. Mss. in the Library of Trinity College*, Cambridge, 1870, no. 55-7), a collection of mystical poems entitled *Tarjūmān al-Aṣṣar* (Volles, *Katalog der islam. u. pers. Hss. der Universitätsbibliothek zu Leipzig*, no. 573; Derenbourg, *Les mss. ar. de l'Escurial*, no. 430), and several small Sūfī treatises (of which the MS. Gotha no. 865 contains a collection) he composed a romantic history of the conquest of Mecca in verse, called *al-Durr al-Mukallāṭa fi Fath Makka al-Mubaddila*, (Cairo 1278/1861, 1282/1865, 1293/1876, 1297/1879, 1300/1882, 1301, 1303, 1304); as well as a work of substantially historical content entitled *Ḍiḥāḥ al-'Uṣūn wa Nafāḥ al-Fahām* (Pertsch, *Die ar. Hss. zu Göttingen*, no. 1378).

**Bibliography:** 'Alī Pāshā Muḥarāk, *al-Kubrī al-Tamīḥiyya al-Dīwāniyya*, Būlak 1306, iii, 127; Wüstenfeld, *Die Geschichtsschreiber der Araber*, no. 520; Brockelmann, II, 334, 382, S II, 412.

**AL-BAKRĪ**, MUṢṬAFĀ B. KAMĀL AL-DĪN B. 'ALĪ AL-SIDDĪQĪ AL-HANAFĪ AL-KHAWATĪ MUḤYI 'L-DĪN, Arab author and mystic, born in Dhū 'l-Ka'da 1099/Sept. 1688 at Damascus, being left an orphan at an early age, was brought up by his uncle and entered the Dervish order of the *Khalwatīya*. In the year 1122/1710 he made his first pilgrimage to Jerusalem; there he wrote his prayer-book *al-Faḥ al-Kawāḍib* and procured a certificate from 'Abī Kāḥish of Adrianople, that it was not a *bid'a*, as one of his opponents had said, to read this book aloud at the end of the night. He returned in Shā'ban of the same year (October 1710) to Damascus, but repeated this pilgrimage more frequently in succeeding years and made the acquaintance in Jerusalem of the journey Rāghib Paṣhā, whom he accompanied on a journey to Cairo. Under the protection of this patron he set out from Jerusalem early in 1735

(Oct. 1722) to Istanbul and reached it on 17 Shabwān 1142. Four years later he returned to Jerusalem. After making the pilgrimage to Mecca in 1148/1735 which he had planned as early as 1129/1717 but had given up on account of a quarrel with his uncle, he went to Istanbul for the second time in 1148/1735. From there he returned by ship, via Alexandria and Cairo. In the following year, in connection with a second pilgrimage, he went to Dīyar Bakr which he stayed eight months. After spending other eleven months in Nābulus, he again returned to Jerusalem in Shawwāl 1152/Jan. 1740. He died on 18 Rabī' II 1162/April 1749 in Cairo when on his third pilgrimage. His numerous mystic treatises, prayers and poems which are given by Brockelmann (see *infra*, cf. also al-Hikam al-Talīhiyya wa'l-Mawā'id al-Bakīyya, see Völkers, *Katalog der islam. wiss. Hds.*, der Universitätsbibliothek zu Leipzig no. 850 ii, and al-Wasiyya al-Dalīla li'l-Sālikin Tarīḥat al-Khawāṭiriyya, *ibid.* iv; E. Littmann, *A List of Arabic Mss. in Princeton University Library*, no. 351 b.) are all still unpublished except a *Madīnaṣṣa Salawāt wa' Aḥādī* (Cairo 1308). He also wrote an account of his first journey from Damascus to Jerusalem in 1121/1710 entitled *Ḥawāṣir al-Hadīya fi 'l-Rihla al-Kubayya* (Albwardi, *Verzeichnis der Hds.*, zu Berlin, no. 6149). A journey to Damascus and his stay there were described in his al-Mukāṣṣa al-Sha'miyya fi 'l-Mahāṣin al-Sha'miyya (*ibid.* 6148).

**Bibliography:** al-Murādī, *Silāh al-Durar fi 'l-Ḥayāt al-Karā al-Ḍā'ira*, 1297-1301, iv, 129-307; al-Dīharī, *ʿAḍḍ*, 1297-1301, iv, 129-307; al-Dīharī, *ʿAḍḍ*, 1297-1301, iv, 129-307; 'All Pasha Mubārak, al-Ḥikāh al-Tawfiqiyya al-Dalīda, Bālik 1306, ii, 129; Brockelmann, II 348, s II, 477.

(C. BROCKELMANN)

**BAKRĪYYA**, a Dervish order which, according to Ḍ. Ohsen, took its name from Pīr Abū Bakr Wafāʾ, who died in Aleppo in 902/1496 or 909/1504. According to Rīmī, *Marāḥiṭ al-Khawāṭiriyya*, 271, they are a branch of the Shādhilīyya [q.v.].

**BAKRĪYYA**, a collective noun denoting all those who claim descent from Abū Bakr. In Egypt, the head of this family, the Shaykh al-Bakrī, has, since 1811, been the *naib* of the descendants of the Prophet (*agāh*), and, since 1906, the *shaykh al-maḥfūz*, that is to say, the *shaykh* of all the religious orders. See *RMF*, iv, 242 ff.; L. Massigne, *Annuaire du Monde musulman*, 1954, 274.

**BAKT**, lat. *pactum*, hell. *πάκτης*. In the Hellenistic world used both for a compact of mutual obligations and its connected payments. The Arabs designated with this expression what they regarded a tribute yielded by Christian Nubia to the country, because of its geographical situation and the bellicosity of its inhabitants, withstood the first impetus of the Muslim conquest, and after hard fighting under 'Amr b. al-'As (20 or 21/642-3), who ultimately had to recall his troops, his successor, 'Abd Allāh b. Sa'd b. Abī Sarh, 'Uthmān's governor over Egypt, made a treaty with Nubia (31/652) on a bilateral basis, falling outside the normal *ṣāḥ* treaties known by the jurists. The two contracting parties agreed on bestowing free passage through the respective countries, while the right to take up fixed abode was to be prohibited. The Nubians bound themselves to repatriate fugitive *coloni*, slaves, and poll-tax paying *dhimmīs*. Besides the treaty agreed to defray the costs of the maintenance of a mosque to be built in Dinkūla (Dongola). Moreover they were to deliver

annually 360 slaves, originally at least their own prisoners of war, and the custom developed that they paid a further 40 head for the Arab officials, taking care of the transaction. The Muslims, on the other hand, were obliged to yield a corresponding amount of wheat and other cereals, and textiles. The Muslim jurists of a later time could not fit this into the frame of the system, and a tradition—or at least an interpretation of an existing one—sprang up that the Muslim quota originated from the restitution of the 40 slaves, after having been exchanged for wine and other supplies, as appears from the exposition of Ibn 'Abd al-Hakam (*Futūḥ Misr*, ed. C. C. Torrey, 189). The political state is otherwise called a *hudna*, truce. Mālik b. Anas thought it a juridical *ṣūb*, but a majority of his colleagues knew that it was only a treaty of non-aggression, and that the Muslims were not bound to defend Nubia against any third party. The treaty was confirmed by successive rulers; al-Taharī makes special mention of 'Umar II (*Annalen*, Ser. 1, v, 2593). Later the Nubians seem not to have paid their part very punctually, probably because of lack of prisoners of war, with the consequence that they had to replace the wanting number with their own countrymen. The animals for zoological gardens and for medical experiments which are included in the quota in later times may have made up for such deficiencies. Under al-Mahdī and al-Mu'taṣim we hear of readjustments; under the latter, when Nubia was on the verge of breaking the contract, it was found out that the tribute of the Nubians fell below what was paid by the Arabs. That the latter could not later demand a higher altering this radically is seen from the fact that a lenient course was followed, allowing the Nubians to pay the stipulated quota every third year only. On the other hand, the request to have the garrison in al-Kaṣr on Nubian territory withdrawn was not granted. That was the place where the quotas were handed over. It was only under Baybars al-Bunduqdārī (674/1276) that Nubia was subjugated for good, and part of it came fully under Muslim rule, while native petty princes maintained a more or less free position. After that time Islamisation went on rapidly, and no doubt the town *baḥī* fell into desuetude, having lost its meaning under the altered circumstances.

(F. LÖWENGAARD)

**BĀKŪ**, a town and district on the W. shore of the Caspian Sea, on the peninsula of Apscheron (Aḥsharīn). The name is currently said to be from Persian *bādūba*, 'wind-beaten', which is appropriate to the local conditions, but this derivation is not certain. The form *Bākū* appears already in the 4th/10th century (*Hudūd al-'Ālam*). Another early, authentic pronunciation is Bākūyah (Abū Dulaf, al-Bakūwī). Other forms (Bākhū, Bākū) are found in the Arabic geographers.

The early history of Bākū is obscure, though the locality seems to be mentioned in antiquity (cf. J. Marquart, *Erldshahr*, 97). It is perhaps to be identified with the *Gangara* or *Gaetara* of Ptolemy (*Geographia*, ed. C. Müller, I, ii, 929). Bākū is not apparently mentioned in accounts of the early Muslim conquests, nor by Ibn Khurādādhbih (3rd/9th century), but thereafter it comes fairly into view

and is known by name to the 10th century Muslim geographers, being mentioned by Abū Dulaf in his *Kisāl al-Ḥudūd* (cf. V. Minorsky in *Oriens*, v, 1952, 25). Abū Dulaf claims to have reached Bākūyah, as he calls it, from the S. and found there a spring of petroleum, the lease (*habāla*) of which was 1000 *dirhams* a day, with another well adjacent producing white petroleum, which flowed ceaselessly day and night and whose lease (*dawāb*) was also 1000 *dirhams*. These details are repeated in several much later accounts, notably those of Yāqūt, i, 477, and al-Karwī, *Aḥḥār al-Būdā*, 389. About the same time as Abū Dulaf, al-Mas'ūdī several times mentions Bākū. He gives an account of a Russian raid on the Caspian littoral circa 301/913-914, in the course of which the invaders reached the naphtha (or petroleum) coast in the country of Shirwān, which is known as Bākūh (*Murūgh*, ii, 21). Al-Mas'ūdī also speaks of Bākū as a place to which ships went back and forward from Dūl (Dūlān), Daylam, etc. on the Caspian, if not also from Atīl [q.v.], the Khazar capital on the Volga (*ibid.*, 25). In the *Tanbih*, a later work (written in 345/956) he again speaks of Bākū, its 'twelve naphtha' and its volcanoes (*dāwā*) (*BDG*, vii, 60).

The *Hudūd al-'Ālam* (written in 372/983 but making use of earlier sources) knows of Bākū as a borough or small town, lying on the sea-coast near the mountains. All the petroleum in the Daylamān country came from there (*Hudūd al-'Ālam*, 145, cf. 471); the naphthas used it for a kind of 'bathing'. In another passage (*ibid.* 272) the waters of the Kur and Aras rivers are said to 'flow between Mākān and Bākū to join the Khazar sea (Caspian)', where regions rather than cities are perhaps intended. Since it lay N. of the Aras, Bākū was usually reckoned as in Shirwān, but according to al-Mukaddasī, 376, in 372/989, who appears to be the first to mention its excellent harbour, Bākū was distinct from Shirwān and both were included in Arrān, to which al-Makaddasī gives a much greater extension than most Muslim writers (*ibid.*, 37, 374). Al-Isfahānī (circa 340/951) mentions Bākū and already knows of its petroleum (190).

The best description of mediaeval Bākū is by a native of the place, 'Abd al-Raḥīm b. Sāḥ al-Bakūwī, who wrote in 866/1462, shortly after the campaigns of Timur in this region. The town was built of stone, actually on rocks, close to the sea, which at the time of writing had carried away part of the walls and reached the vicinity of the principal mosque. The air was good, but there was shortage of water. Since in consequence the district was infertile, provisions had to be brought from Shirwān and Mākān, though there were gardens situated at a distance from the town, producing figs, grapes and pomegranates, to which the inhabitants went in summer. There were two well-built fortresses in the town, of which the larger, on the seaward side, had resisted the attacks of the Tatars, although the other, which was very high, had been partially destroyed during the sieges. Day and night, in winter, high winds blew, sometimes so strongly as to sweep men and animals into the sea. At Bākū there were petroleum wells from which daily more than 200 mule-loads were drawn. A by-product in the form of a hard yellow substance was used as fuel in private houses and baths. At a *farṣakh* from the town was a perennial source of fire, said to be a sulphur mine, near which was a village inhabited by Christians, who made and sold lime. There were also salt-mines, the produce of which was exported to other countries. Nearby

was an island to which people went to hunt sharks. The skins when suitably prepared were filled with petroleum, after which they were loaded on ships to be taken to the different countries. There was also a considerable trade in silk. In some years a great fire was seen emerging from the sea, visible for a day's journey. The inhabitants were Sunnī Muslims.

Politically, Bākū at most times appears to have been subject to the Shirwān Shāhs. The last dynasty of Shirwān Shāhs came to an end only in 957/1550, when the Safawid Shāh Tahmasp occupied Shirwān. After vicissitudes in the course of which it belonged for a short time (1583-1606) to the Ottoman Turks, Bākū finally became a Russian possession in 1806. **Bibliography:** V. Minorsky, *Abū Dulaf Mas'ūdī, al-Maḥallī's Travels in Iran* (containing the Arabic text and translation of his *Second Kisāl*), Cairo 1935, 35, cf. 72; al-Bakūwī, *Talḥīq al-Aḥḥār wa' Aḥḥār al-Malik al-Kāḥar*, transl. De Guignes, *Notices et extraits*, ii, 509-510; Le Strange, 180-1.

(D. M. DUNLOP)

Bākū under Russian domination, was at first very slow to develop. In 1807 the town had only 5,000 inhabitants, grouped in the old citadel.

The naphtha deposits, the exploitation of which was a monopoly of the former masters of Bākū, became Crown property and the first drilling took place in 1842 on the Apscheron peninsula. In 1872 exploitation became free and the deposits were sold by auction.

This period marks the beginning of the town's rapid growth. This development was favoured by the building in 1877-78 of the pipe-line connecting Bākū with the oil fields of the Apscheron peninsula. In 1883 the town was connected by railway with Transcaucasia and the interior of Russia. Finally in 1907 the pipe-line was completed linking Bākū with Batumi on the Black Sea. In 1859 Bākū had still only 13,000 inhabitants, but in 1879 the 'oil rush' brought the number up to 112,000. On the eve of the Revolution, Bākū, which provided 95% of all Russia's oil, had already a population of 300,000.

During the Revolution, Bākū achieved the status of capital of independent Aḥdabardjān (31 July 1918 to 28 April 1920). Taken by the Red Army on 28 April 1920, it was henceforth the capital of the Aḥdabardjān Soviet Socialist Republic. Under the Soviet régime, the town continued to grow. In 1939 it was the fifth town of the Soviet Union with 809,300 inhabitants (about a third of whom were Russian and a third Armenian). It is now a great modern industrial city, centre of the oil industry. Bākū is also an important University centre, the seat of the State University and of the Aḥdabardjān Academy of Sciences.

(A. BERNARDINI)

**BA'KŪBA**, more correctly (but not now currently) BA'KŪBĀ, from the Aramaic Bāya'kūbā, or Jacob's House, a town situated 40 miles N.E. of Baghdad (40° 37' E, 33° 42' N), on the site of a very ancient pre-Islamic settlement, was in Caliphate times described as on the west bank of the Nahrāwān-Diyālā (q.v.) main canal. It formed an important station on the Baghdad-Kurān trunk road, and served as chief town of the Upper Nahrāwān district. Under 'Abbasid rule the place was highly prosperous, its date and fruit gardens famous, and the surrounding country fertile and populous, with scores of villages.

Modern Ba'kūba is an 'Irāqī provincial town with an Arab mixed Sunnī and Shī'ī population of some

5,000. It is the headquarters of the *liwā* of Diyāla with dependent *badā* of Mandali, Khālī, Khānīn, and Ba'kiba itself; the last-named *badā* contains the important *ahkīyah* of Kīn'ā and Makādīyah (formerly Shahrūbīn). The town is prosperous, partly transformed by modern buildings, streets and services, and good communications; the Baghdad-Irbil line of Iraqi Railways here crosses the Diyāla by a high-level bridge.

**Bibliography:** Yāqūt, i, 472, 672; Abu 'l-Fidā', *Tahkīm*, 294; the same, *Annal. modern.*, ed. Reiske, iv, 690; Rashīd al-Dīn, *Hist. des Mongols*, ed. Quatremère, 278 ff.; V. **BAKUSĀYĀ**, a town and lesser administrative district under the 'Abbāsids. With four others it formed part of the rich and populous circle (*ardā*) east of Tigris, that of Bākūsāyā, in which the town of Bāndandīn (now vanished without trace) was a principal headquarters. Bākūsāyā is usually grouped with the adjacent district of Bādāyā (*q.v.*) (the modern Badra) by the Arab geographers, and like it enjoyed good water from the hills which mark the present Persian frontier. A modern village, within Persia, known as Bākūsāyā, a few miles S.E. of Badra, almost certainly marks the site of Bākūsāyā. The latter name strongly suggests the Syriac Bā-Kussāyā, and would indicate the home or district of the Kussāyā, the Greek *κουσσάιοι* and the Kāssū (modernised into Cassites) of the Babylonian inscriptions. The domicile of these people was entirely in the Zagros range, and the identification is tempting. Nothing remarkable is recorded regarding the town or its inhabitants, in which (as in modern Badra) Larish or other Iranian strains doubtless prevailed. The district is malarial, but in modern times produces a race of famous weight-lifting porters.

(M. STRECK (S. H. LONGRIGG).)

**BA'L** is an old Semitic or even Proto-Semitic word with the central meaning of "master, owner" and has been widely used in the sense of "local god" (fertiliser of the soil) and "husband" (in a society predominantly masculine). In the last century attention was vigorously drawn to the importance of this last meaning by W. R. Smith, *Kinship and Marriage in early Arabia*, Cambridge 1885 (2nd ed. London 1903); but his thesis that the term itself had been borrowed by the Arabs from the Northern Semites could not be substantiated. The various meanings of the word have continued to exist in Classical Arabic with, however, a very variable vitality according to some, perforce areas.

1.—In the sense of "master (of)", ba'l was ousted in Arabic by various synonyms, so that, unlike the Hebrew *ba'al*, it does not make an appearance in

numerous compounds. It is survived better in the sense of "husband, spouse (of)", thanks most probably to the use made of it in three Kur'ānic passages (ii, 228; xi, 72; xxiv, 31 twice) in the singular and in the plural (*ba'ala*; subsequently Classical Arabic usually uses *ba'al* or *ba'āl*). The meaning "master" was still strongly felt: *ba'al* "my spouse", in i, 72, renders the Biblical *adoni* (in the mouth of Sarah, Genesis, xvi, 12; Targum Onkelos *ribboni*); for the feminine, Classical Arabic has the forms *ba'at* or *ba'at*. Several verbal forms developed from this conubial meaning.

2.—The Kur'ān, xxxvii, 125 (story of Elijah; cf. I Kings xviii, and the art. *Isyās*) has contributed most definitely to perpetuating the memory in Islam of *ba'al* as a pagan deity, in spite of all the confusion and reticence of the commentators. This meaning of the word, it is true, could not hope to enjoy much success in Muslim thought as such; it is to be encountered incidentally in the medieval authors in connexion with the etymology of Ba'al-bakk (*q.v.*) with fictitious details concerning an ancient idol at this place. What is more remarkable is the unqualified revival of the idea of the god *ba'al* in the two following cases:

a) The verb *ba'ala* and the adjective *ba'al*, "(to be) lost in astonishment", that is to say originally, as Nöldeke has shown (ZDMG, 1886, xi, 174), "(to be) possessed by Ba'al".

b) The terms *ba'al* and *ba'il* to convey the idea of unwatered tillage in a verse attributed to 'Abd Allāh b. Rawḥa, a companion of the Prophet, (LA, xii, 60), we read: *harrāḥa lā aḥdī maḥāla ba'ilin, wa lā shayn . . .* In an expression of this kind, *ba'il* may retain something of the original meaning, not understood by the author of the *Lisān*: that of the god (male) fertilising the land (female) by rain or sub-soil water. The contrast between watered land (with terms from the same root as *shayn*) and "dwelling or field of Ba'al" is well attested in the Targum and the Talmud (Jastrow, *Dict. of the Talmud*, b 'l and ḡ b y; W. R. Smith, *Lectures on the Religion of the Semites*, London 1927, see Index; G. Dalman, *Arbeit und Sitt in Palästina*, Gütersloh 1932, ii, 32-33).

In Classical Arabic of the early centuries of the Hijra, however, the term *ba'il* was to be encountered on several occasions meaning on its own—and not in a compound expression open to several interpretations—"unwatered cultivated land". In the works on jurisprudence, it is to be found with this meaning, mainly in relation to the prescribed tithe (*zakāt, sadaqa*) on agricultural produce. Muslim Law, both *Shāfi'i* and *Sunni*, does in fact reduce this impost to a half title or a twentieth when the crop is dependent on artificial irrigation requiring some exertion; in contrast, the *zakāt* is actually a tenth when the produce of a *ba'il* is involved. In this connexion, the term appears in various recorded *hadīths* from the *Muwatta'* of Mālik (2nd/8th century) onwards (see Bājī, *Musnad*, ii, 157-158), repeated in the 10th/6th century in works on *fiqh*, such as the *Shāfi'i K. al-Umm* (ii, 32) and the *Maliki Madhāwara* of Sahnūn (ii, 99, 108). In an almost identical form, these *hadīths* are to be found in Abū Dawūd (*Sunan*, no. 1596-1598) and in the early specialists on fiscal and land law (3rd-4th/9th-10th centuries): Yahyā b. Ādam (*K. al-Kharīd*, Cairo ed. 1347 AH, no. 364-365, where an illuminating variant, no. 381, has "that which Ba'il has watered", thus reproduced in Balādhuri, *Futūḥ*, 70), Abū 'l-Ya'ay b. Sallām (*K. al-Amāl*, Cairo ed. 1353 AH, no. 1410-1421),

Kudāma b. Dja'far (*K. al-Kharīd*, part 7, ch. VII, *apud* De Goeje, *Glossaire* to Balādhuri, *Futūḥ*, 14; the *Maḥāṣin al-Ulūm* of al-Kh'arizmi on that point is merely a résumé of this work). Likewise in the Fātimid *fiqh* already established in Ifrīqiya (4th/10th century): *ḥādī al-Nu'mān, Da'ā'im al-Isām*, Cairo ed. 1951, i, 316; and naturally also in many later books.

These texts evoke, as regards the use of *ba'il*, the author's conviction of the word's being to be linked with Madinese and perhaps also Yemenite traditions, but appears to be unknown to the oldest 'Irāqī traditions (probably because 'Irāk is primarily a land of irrigation); Hanafism, of 'Irākī origin, does not normally employ the word, though on this point it states the same rule as the other *madhāhib*.

b) The *hadīths* containing this term insert it in an enumeration in which the *ba'il* appears to be distinct from lands watered by spring water, rain or surface drainage. Among the commentators and lexicographers, some nevertheless maintain that *ba'il* applies to all unwatered cultivated lands; others, influenced by the letter of the *hadīths* and perhaps by dialectal usages, offer a series of rather more restrictive interpretations revolving round the idea of unwatered land under dry cultivation: for some, it only applies to cases where plants obtain water through their roots beneath the surface alone (detailed argument in LA, loc. cit.; see also W. R. Smith, *Lectures*, . . . 98-99 and Løkkegaard, *Islamic Taxation*, Copenhagen 1950, 141).

Among works possessing the same or an adjacent meaning which frequently replace or accompany *ba'il* in the enumeration mentioned above, particular attention should be paid to the term *'aṭṭḥārī* (for example in the *Sahih* of al-Bukhārī, *K. al-Zakāt*, chap. 55), which it would be difficult to refrain from explaining by the name of the deity 'Aṭṭar (= Astarte, Ishtar): a male stellar god in the Arabian and South Arabian pantheons, 'Aṭṭar exercised an influence on the fertility of the land and was at times qualified by the name *ba'al* (Lagrange, *Études sur les religions sémitiques*, Paris 1903, 133-136; Nielsen, *Handbuch der altarab. Altertumskunde*, Copenhagen 1927, i, Index; Janme, in *Le Muséon* 1947, 85-100; G. Ryckmans, in *Ann. Acad. Scienc* 1948, 267; idem, *Les religions arabes préislamiques*, 2nd ed., Louvain 1951, . . . and passim; Janme, in Brillant and Aigrain, *Hist. des Religions* 1950, iv, 264-5). The assimilation *'aṭṭḥārī* is attested in Classical Arabic and the semantic parallelism with *ba'il* here is striking.

The occurrence of *ba'il*, still with the same meaning, must also be noted in some versions of the stipulations which the Prophet is stated to have imposed as a land code in the year 9 AH, either on the oasis of Dumat al-Djandal (through its leader Ukaydir b. 'Abd al-Malik), or on the neighbouring Kalbīte tribes (through their leader Hāritha b. Kaṭan); see Caetani, *Annali*, ii, 1, 259-269 (event discussed by Musil, *Arabia Deserta*, New York 1927, appendix VII, and by W. M. Watt, *Muhammad at Medina*, Oxford 1956, 364-5).

It is again to be met with, in connexion with the land tax (*khārāj*), in the great treatise on public law of the 3th/9th century: *al-Ulūm al-Sultaniyya* by the Hanbali Abū Ya'la (Cairo ed. 1938, 251) and by the *Shāfi'i* Mawardi (trans. Fagnan, Algiers 1915, 114). In calculating this tax, they recommend that account be taken of the source of the water: this envisages four categories of cultivated land, among which the *ba'il* is very closely defined, approximately

as above, in contrast to land irrigated or adequately watered by rainfall.

The geographer al-Mukaddas, in the 4th/10th century, uses the term on three occasions (BGA, iii, 197, 474), dealing with agricultural production near Ramla, Alexandria and in Sind, always in the phrase (*ṣāḥa'*-*ba'il*), this, however, does not suffice as a proof of the use of the term outside Syria-Palestine, the author's country of birth. In this geographical area where, "in spite of the illusion of an abundance of water, dry cultivation constitutes the basis of traditional agricultural exploitation" (J. Woulesse, *Paysans de Syrie*, Paris 1946, 144), at the present day we find: *ard ba'il* contrasted as in former times with *ard shayn* (G. Dalman, *op. cit.*, 30; already mentioned by E. Meier in ZDMG, 1883, xvii, 607).

Here is a special case of the use of this term in medieval Egypt: in Cairo under the Manikids, perhaps already under the Fātimids, a park near the Khālīj, which subsequently became a public promenade, was called *baṣṭān al-ba'il*, then *ard al-ba'il*; see Makrizi, *Khitat*, Būlak ed. 1270 AH, ii, 129, who takes *ba'il* here expressly in the geographical sense.

The Muslims of Spain, "exactly like the Spanish peasants of today . . . make a distinction between *secano* (Ar. *ba'il*) land and *regadío* (Ar. *shayn*) land, the former being especially reserved for cereal cultivation" (Lévi-Provençal, *Hist. Esp. med.*, Paris 1953, iii, 270). The famous agronomist of Seville Ibn al-Awwām (6th/12th century) confirms this distinction (*K. al-Filāḥ*, ed. Banquer, Madrid 1902, i, 5). It appeared in contracts, especially those of plantation leases or *mughāra*: the notarial formula of Ibn al-Salām for example, *K. al-'Iḥā al-Munazzam*, Cairo ed. 1302 AH, ii, 21-22, in the 8th/14th century, has the two adjectival forms *ba'il* and *shā'ia*.

These two forms do in fact appear to have had a tendency in modern times to become nouns, perhaps in certain regions because of the model provided by *'aṭṭḥārī*. *Ba'il* has been noted alongside *'aṭṭḥārī* in the dialects spoken in Southern Arabia: Landberg, *Glossaire Dictionnaire*, Leiden 1920, i, 186, where *'aṭṭḥārī* must almost certainly be emended to *'aṭṭḥārī*. At a first glance it is not always easy to determine whether *ba'il* is at present used as an adjective or a noun in the East and in North Africa: it is frequently attached—more so than its opposite *sabū'*—to the name of a vegetable or a fruit: in such a case it stresses the good quality. At Fez, the feminine *ba'iyya* is applied to a succulent fig, whereas *ba'il* describes a man, avaricious, dry and hard as the land bearing the same name (information by L. Brunot).

As in the case of so many other elements of the vocabulary of spoken Arabic, it is to be regretted that we are far from knowing with sufficient exactitude the areas in which the words *ba'il* and *ba'il*, unknown to extensive Arabic speaking districts, are in fact used. The precise distribution of these words would be informative from various points of view.

**BALA** (Persian "bright, high") I.—Since 1262/1846 the term for a grade in the former Ottoman Civil Service, to which the Secretary of State (*mustaḥṣar*) and other senior officials belonged; he was addressed in correspondence as *'aṭṭḥārī efendi ḥakrī* (Further details in the article by M. Cavid Bayun in LA, ii, 262 ff.).

**Bibliography:** in M. C. Bayun (see above). (FR. TIESCHNER)

Egypt, and the Maghrib, and lastly, the occupation of 'Irāq and Persia. Remarks of importance for the history of culture and social conditions are interwoven with the historical narrative; for instance, al-Balādhurī discusses the change from Greek and Persian to Arabic as the official language in government offices, the quarrel with Byzantium concerning the use of Muslim religious formulas at the head of letters originating in Egypt, questions of taxation, the use of signet-rings, coinage and currency, and the history of the Arabic script. The work, one of the most valuable sources for the history of the Arab conquests, was edited by M. J. de Goeje, *Liber expugnationis regionum*, Leiden 1863/66, and reprinted repeatedly later on. English translation by P. K. Hitti and F. C. Murgotten, *The Origins of the Islamic State*, New York 1916 and 1921; German translation (continued to p. 239 of de Goeje's edition) by O. Roscher, Leipzig 1917/23.

2. His *Ansāb al-Aghlāf*, a very large work which was never completed, is genealogically arranged and begins with the life of the Prophet and the biographies of his kinsmen. The 'Abbāsids follow the 'Alīds. The 'Abd Šams, among whom the Umayyads claim a disproportionate amount of space, follow the Banū Hāshim. Next, the rest of the Quraysh and other divisions of the Muḥarrir are dealt with. The Kays, in particular the Ḥakīm, occupy the closing portion of the work; the last biography of any size is that devoted to al-Ḥajjāj. Though a genealogical work in outward form, the *Ansāb* are really *Ishtihād* in style, the *Ishtihād* arranged genealogically. This method of arrangement is not rigidly adhered to; for the most important events of the reigns of individual rulers are always added to the corresponding chapters. The *Ansāb* thus are one of the most valuable sources for the history of the Khawāridj. A portion of the work was discovered in an anonymous MS. and identified and edited by W. Ahlwardt, *Anonyma arabische Chronik*, *Id. XI*, Leipzig 1883. A complete MS. of the work was discovered by C. H. Becker in Istanbul, MS. 'Aghlī Efendi 597-98 (table of contents by M. Husnīdullah, in *Bull. d'Ét. Or. xiv*, Damascus 1934, 297-311). Of the edition of the work sponsored by the Hebrew University in Jerusalem, Vol. IVB (ed. M. Schlossinger, 1938-40) and Vol. V (ed. S. D. Goitein, 1936, with an important introduction) have been published. O. Pinto and G. Levi Della Vida have translated *Il Califato Mu'awīya I secondo il "Kātib Ansāb al-Aghlāf"*, Rome 1938. Cf. also F. Gabrieli, *La Rivista dei Muhallabī nel 'Irāq e il nuovo Baladīfuri*, in *Rendiconti, R. Accad. dei Lincei, Cl. sc. mor., stor. e filol.*, vi, 14, 1938, 199-236.

In spite of all al-Balādhurī's merits, his value as a historical source has been occasionally overestimated in certain respects. It is not correct to say that he always gives the original texts, which later writers embellished and expanded; it may be with much more truth presumed, from the agreement of essential portions of his works with later more detailed works, that al-Balādhurī abridged the material at his disposal in a number of cases, though he often remained faithful to his sources. Al-Balādhurī's style aims at conciseness at the expense, at times, of the artistic effect. We seldom meet with fairly long stories, though they do occur. In the *Futūḥ*, al-Balādhurī continued the old method of dividing up the historical narrative and presenting it in separate articles, but in the *Ansāb*, he attempted to combine the material of the books of conquests (Ibn Sa'd) and of the older chronicles (Ibn Isḥāq, Abū

Muḥammad, al-Maḥallī), with a third sort of style, namely, the genealogical literature (Ibn al-Kalbi). *Bibliography*: The oldest biographical source is the historian of Baghdad, 'Ubayd Allāh b. 'Abd Allāh b. Abī Ṭāhir Tayfur (not preserved). 'Ubayd Allāh and all the other old Arabic sources were utilised by Yāqūt, *Irbid*, ii, 127-32; some additional references can be found in the late compilation published in the introduction of *Shihir Komiya*, the edition of the *Futūḥ*. Cf. Brockelmann, I, 147 f.; S. I, 216.

(C. H. BECKER-F. ROSENTHAL.) **BALADIYYA**, municipality, the term used in Turkish (*belediye*), Arabic, and other Islamic languages, to denote modern municipal institutions of European type, as against earlier Islamic forms of urban organisation (see *MADINA*). The term, like so many modern Islamic neologisms and the innovations they express, first appeared in Turkey, where Western-style municipal institutions and services were introduced as part of the general reform programme of the *Tanzimat* (q.v.).

#### (1) TURKEY.

The first approaches towards modern municipal administration seems to have been made by Sultan Mahmūd II, among the reforms following the destruction of the Janissaries. In 1242/1827 an inspectorate of *ishākh* (*Ishākh Nizāret*) was set up, which centralised certain duties, connected with the inspection of markets, weights and measures, etc., hitherto performed by the 'Ulamā' class (see *MUTARRIF*); in 1243/1829, with the same general aims of centralising control and ending the laxness of the Imāms (in Lutfi's words: "*ve-mimārī mülümah edememi ilim*"), the system of headmen (*Muḥbīr* (q.v.)) was introduced in the town districts of Istanbul. Until then, there had been headmen in villages (*Köy Kāhāddā*) in Muslim villages, *Köfya* bagh among the Christians, but not in towns, where the duties of keeping the registers of the male population and recording movements, transfers and the like were the responsibility of the *kādis* and their deputies, or the Imāms. Under the edict of 1243/1829, these duties were transferred to the *muḥbīrs*, of whom two, first and second, were to be appointed to every town quarter (*mahalle*). Lutfi tells us that this innovation aroused some comment among the populace of Istanbul, who said: "Village headmen have been set up in the quarters of the town. Next thing we shall have *salāyine* registers." (Lutfi, ii, 173). A little later, the *muḥbīr* was reinforced by committee of elders (*ihyāyeh* *ihyāy*) of 3-5 persons; in time, this system was extended to other cities of the Empire.

In 1247/1831 the office of Commissioner of the City (*Shihir-kimī* (q.v.)) which had existed since the Ottoman conquest of Constantinople, was abolished; some of its functions, relating to the care of public buildings, were transferred to the newly established Directorate of Buildings of the Domain (*Emīyeh-i Kāḥṣa*), (Lutfi, iii, 102; *Mafāḥih-i Unvān-i Baladīyeh* I, 98 and 196, quoting the decree in the official gazette, *Takvīm-i Vahā's* vii, 1247, no. 2).

The next phase began in the year 1271/1854, when two changes were initiated. The first of these was the creation of a new *Shihir-kimī* for Istanbul. Despite the name, this bore little resemblance to the earlier institution; it was rather an adaptation of the French *prefecture de la ville* and was chiefly concerned with the supervision of the markets, the control of prices, etc. The prefect was to be assisted by a City

Council (*Shihir Medjles*) drawn from the guilds and merchants. The *Ishākh Nizāret* was abolished and its duties handed over to the prefecture. This change in nomenclature seems to have had little immediate effect, and complaints were made about official neglect of municipal problems. A few months later, therefore, another decision was taken by the High Council of Reform (*Medjlis-i 'Alīa-Tanzimat*), to establish a municipal commission (*Medjlis-i Shihir Komīyeh*). A leading spirit in the commission was Antoine Allon, a member of a rich French banking family that had settled in Turkey at the time of the French Revolution. The other members were drawn chiefly from the local Greek, Armenian and Jewish communities, together with some Muslim Turks, including the *Hakim* Mehmed Sāliḥ Efendi, one of the first graduates of Sultan Mahmūd's medical school. The Commission was instructed to report on European municipal organisation, rules and procedures, and to make recommendations to the Sublime Porte.

A number of factors had combined to induce the Ottoman government to take these steps. European financial and commercial interests in Istanbul had been growing steadily, and a new quarter was developing in Galata and Beyoğlu (Pera), with buildings, apartment houses, shops, and hotels, in European style, and with increasing numbers of horse-drawn carriages of various kinds (see *ARABIA*). All this created a demand, which was put forward by the European residents, with the support of the Imperial Government, for the improvement of the town, and the improvement of the roads, the improvement of the streets, for proper roads and pavements, street-cleaning and street-lighting, sewers and water-pipes. The presence in Istanbul of large allied contingents from the West during the Crimean War gave a new impetus and a new urgency to these demands, and in the new phase of reform that began in 1854 some attention was given to the problems of municipal organisation and services in the capital. A good example of the attitude of the Turkish reformers to these questions will be found in an article, published in the newspaper *Tayyir-i Efkār*, by the poet and publicist İbrāhīm Şināid (q.v.) on the lighting and cleaning of the streets of Istanbul (reprinted in Abū 'Aḍya [Ebu-azra] Twfik, *Nusmeh-i Edhiyā'at-i 'Oḥmīyeh*, [1st ed. Istanbul 1296/1878], 3rd ed. Istanbul 1306, 227-233).

The record of the proceedings of the High Council of Reform on these matters reflect clearly the various preoccupations of the Ottoman government. The creation of a city prefecture, under the recently created Ministry of Commerce, was done, but an attempt to meet real need by installing the relevant European apparatus. There was also the usual desire to impress Western observers.

The Commission sat for four years, and reported to the High Council of Reform. Its chief recommendations were for the construction of pavements, sewers, and water-pipes, regular street-cleaning, street-lighting, the widening of the streets, where possible, the organisation of separate municipal finances, the imposition of a tax for municipal purposes, and the appointment of the commission to apply municipal laws and regulations (*madbata* of 27 Salar 1274/17 Oct. 1857, in *Medj. Um. Bul. i*, 1400-3).

In 1274/1857 the High Council decided to accept these recommendations, but to limit their application, for the time being, to an experimental municipality, to be established in Beyoğlu and Galata. This district, though the first to be organised, was officially named the sixth district (*ahāḍīḡ dā'ire*),

possibly, as 'Oḥmīn Nūrt suggests (*Medj. Um. Bul. i*, 1475, n. 93), because the sixth *arrondissement* of Paris was believed to be the most advanced of that city. The reasons for this step are set forth in a *madbata* of 21 Rabi' I 1274/9 Oct. 1857 (*Medj. Um. Bul. i*, 1416-8). Municipal services and improvements were badly needed, and should be provided; the cost should not fall upon the state treasury, but should be met by a special levy from the townspeople who would benefit. It would be excessive and impracticable to apply the new system to the whole of Istanbul at once, and it was therefore decided to make a start with the sixth district, consisting of Beyoğlu and Galata, where there were numerous properties and fine buildings, and where the inhabitants were acquainted with the practice of other countries and were willing to accept the expense of municipal institutions. When the merits of these institutions had been demonstrated by this example and had been generally understood and recognised, a suitable occasion would be found to apply them generally. The *madbata* refers explicitly to the large number of foreign establishments and the preponderance of foreign residents in the district.

The constitution and functions of the municipality of the sixth district, also known as the model district (*numūnah dā'ire*) were laid down in an *irade* of 24 Shawwāl 1274/7 July 1858. The Municipal Council was to consist of a Chairman and twelve members, all appointed by Imperial *irade*, the Chairman indefinitely, the others for three years. The Council would elect two of its members as vice-Chairmen and one as treasurer. All were to be unpaid. The permanent officials were to be an assistant to the Chairman, a Secretary-General, two interpreter-secretaries, a civil engineer, and an architect. All these were to be appointed by the Council and receive salaries. The terms of reference of the Council were defined generally as "all that concerns cleanliness and public amenities (*neḍāfah wa mīḥet-i 'umūmiyyeh*), and more specifically as roads and streets, sewers, pavements, street-lamps, sweeping and watering the streets, widening and straightening the streets, water-supply, gas, inspection and condemnation of ruinous and dangerous buildings, inspection and control of food supplies, control of prices, inspection of weights and measures, supervision of public places such as theatres, markets, hotels and restaurants, schools, dance-halls, coffee houses, taverns, etc. The Commission was further given the right to assess, impose, and collect rates and taxes, and raise loans, within limits laid down, and also to expropriate property in certain circumstances. The Chairman was to submit his budget to the Commission for discussion and inspection, and then to the Sublime Porte for ratification, without which it would not be valid.

From this it will be seen that the measures of 1271-4/1854-8, while accepting and providing for the discharge of certain new responsibilities in relation to the town, hardly represent an approach to the European conception of municipal institutions. There is still no recognition of the city as a corporate person, for such an idea remained alien to Islamic conceptions of law and government; nor was there any suggestion of election or representation. What was created was a new kind of administrative agency, appointed by and responsible to the sovereign power, but with specified and limited tasks and with a measure of budgetary autonomy. Such special commissions were by no means new in Ottoman administration (see *EMM*). The novelty lay in the kind of function entrusted to it.

The municipal commission of the model sixth district seems to have done good work. Among other achievements, it made a land survey of the district, laid out two municipal parks, opened two hospitals, and introduced many improvements for the health, security and convenience of the residents. All of which did not prevent the official historiographer Laflı Hüsni from condemning it in the most scathing terms cited by Özgün Şirî in *Şehircilik*, 127. The movement towards the introduction and extension of Western-style municipal services continued, however. In 1285/1868 a municipal code of regulations (*hukûmîye nizamnamesi*) was issued, the intention of which was to extend the commission system to the rest of the 14 districts of Istanbul. Each was to have a municipal committee of 5-12 members, who would choose one of their selves as Chairman. A general assembly for all Istanbul (*Umûmîye-i 'Umiyye*) of 56 members was to be formed, consisting of 3 delegates from each district, as well as a Council of the Prefecture (*Majlis-i Emlinî*) of six persons, appointed and paid by the Imperial government. These two bodies were to function under the Prefect (*Şehreminî*), who was to remain a government official. The elaborate provisions of this code seem to have remained a dead letter until 1293/1876-7 when, under the impetus of the constitutional movement, new codes were issued for the capital and for provincial towns. The Istanbul code of 1293/1876 was in effect a rearrangement of the earlier one, with a few changes, the most important of which were the increase in the number of districts from 14 to 20, and the change in the property qualification of members from an annual income of 5,000 piastres to an annual tax payment of 250 piastres. Perhaps the most significant innovation in the new code was less in its provisions than in the fact that it was promulgated, not by the Sublime Porte, but by the short-lived Ottoman parliament. However, the laws and codes that followed seemed to be as ineffectual as its predecessors. (An exception was the Princes Islands, where a seventh district was constituted: Sa'îd Paşa, *Şahîrî*, Istanbul 1328, I, 5; *Majl. Um. Ed.* I, 1457). Finally, in 1296/1879, a new and more realistic version was published, which in time was put into operation. This divided the city into ten municipal districts. The elaborate apparatus of councils and committees provided by the earlier codes was abolished. What was left was an appointed Council of Prefecture to assist the Prefect, and a government-appointed director (*muhtar*) for each of the 10 districts. This system remained in force until the revolution of 1324/1908.

In the provinces the policies of the reformers were much the same. The earlier authority of the *şeyh* and the *şehîr kethüdâsı* [92c] had been abolished. The *muhtar* system, inaugurated by Mahmud II, was introduced into the urban districts of most of the larger towns, and the *vildâd* law of 1281/1864 laid down regulations for their election (chapters iv and vi). In the *vildâd* law of 1287/1870, provision was made for the establishment of municipal councils in provincial cities, along the same general lines as in the code for Istanbul. There is no evidence that anything much was done about this. Some attempt, however, seems to have been made to implement parts of the provincial municipal code (*vildâdî hukûmîye nizamnamesi*) of 1294/1877. According to the law, every town was to have a municipal council, consisting of 6 to 12 members, according to the population. They were to sit for four years, with elections every two years to choose half the members.

The doctor, engineer, and veterinary surgeon of the region were *ex officio* advisory members. Membership was restricted to those paying 100 piastres a year in tax. One of the members of the Council became mayor (*hukûmîye reisî*), not by election but by government appointment. The budget and estimates were to be approved by a municipal assembly (*Umûmîye-i Baladîyye*) meeting twice yearly for this purpose. The assembly was responsible to the General Council of the province (*Majlis-i 'Umiyye-i Vâlîyye*) (*Majl. Um. Ed.* I, 1664 ff.).

After the Young Turk Revolution a new attempt was made to introduce democratic municipal institutions. The law of 1293/1876, with some amendments, was restored, and a serious attempt made to put it into effect. The experiment was not very successful. The personnel of the district committees, though enthusiastic, were inexperienced, and there was little co-operation between districts for common purposes. In 1328/1912 a new law finally abolished this system. In its place a single Istanbul municipality, called *Şehreminî*, was established, with nine district branch offices (*Şub'â*), each directed by a government official. The Prefect was assisted by a 14 man general assembly, of which 6 delegates were elected from each of the nine districts. In this as in so many other respects, the new régime was returning to a more centralised system of government. Despite many difficulties, some important progress was made by the Young Turks in improving the amenities of Istanbul. A new drainage system was planned and constructed, improvements were in policing and fire prevention, and the famous parks of days that had for long infested the Turkish capital were finally removed.

The first municipal measure of the republican government was a law of 16 Febr. 1924, setting up a prefecture (*Şehreminî*) in Ankara (*Konânî* *Majlis-i Ed.* II, 218). The first prefect was Ali Haydar, and he was assisted by a general assembly of 24 members. The constitution followed broadly that of Istanbul, but with some changes, the general purport of which was to restrict the autonomy of the municipality in financial and security matters and place it more strictly under the control of the Ministry of the Interior.

On 3 April 1909, a new law of municipalities was passed (*Resmî Gazete* 127, 1380; *ÖM.* 1910, 355). The old names of *Şehreminî* and *Şehreminî* were abolished, and replaced by *Beladîye* and *Beladîye reisî*, usually translated mayor. Under Sultan 'Abd al-Hamîd, the offices of Prefect and Governor of Istanbul had in fact been exercised by the same person. The Young Turks, by a law of 1325/1909, had formally separated the prefecture from the governorship. The new law laid down that in Istanbul, though not elsewhere, the office of mayor should be combined with that of Vali, the *vildâd* and *beladîye* administrations, however, remaining separate. Under the law, municipalities, like villages, have corporate legal identity and legally defined boundaries. The 116 articles of the law provided a systematic code of rules for the election and functioning of municipal bodies, and with some modifications remained in force to the present day. Under these rules, municipalities are administered by a Mayor, a Permanent Commission, and a Municipal Council. The Mayor is elected by the Council, which itself is elected directly by universal suffrage for a term of four years. Towns with from 2,000 to 20,000 inhabitants are called *kazas*, those with more than 20,000 are called *şehir*. The size of the

Council depends on the number of inhabitants, the minimum being 12 members, for fewer than 5,000 inhabitants. The Council meets three times a year, at the beginning of February, April and November. At other times it is replaced by a permanent commission (*daimî encümen*) consisting of three of its own members reinforced by the permanent officials of the municipality. The functions of the municipality include public health (hospitals, dispensaries, preventive medicine, sanitary and food inspections, etc.), public services (trams, buses, gas, electricity), town planning and engineering (roads and bridges within the town, public parks and gardens, street-lighting and cleaning, sewage, water-supply, etc.); in times of shortage, it is also entrusted with the distribution of commodities in short supply. It has its own enforcement agency (*sâdâ*). The municipality imposes taxes and has its own budget; its permanent staff, however, are civil servants.

**Bibliography:** the richest collection of material for the history of municipal institutions in Turkey will be found in 'Öğün Nûrî (= Osman Ergin), *Majlis-i Umûmîye-i Baladîyye*, 5 vols., Istanbul, 1330-1335; the first volume contains an elaborately documented history of municipal institutions in Islam and in Turkey, the second reproduces the texts of Ottoman laws and edicts on municipal matters, the remaining three deal with specific topics such as municipal contracts and privileges, health, public works, etc. For a brief general introduction to the subject by the same author, see Osman Ergin, *Türkiye Şehirciliğinin Tarihî Lihâzı*, Istanbul 1936. The texts of laws relating to municipal matters will be found in the *Düstur*, Istanbul 1872-1928, in the *Konânî* *Majlis-i Ed.* and *Konânî Dergisi* (1920 ff.), and in the *Resmî Gazete*, (French translations in G. Young, *Corps de droit ottoman*, Oxford 1905-6; Aristarch, *Législation ottomane*, Constantinople 1874-8; *La Législation turque*, Istanbul 1923 ff.). Descriptions of the organisation of the *Şehreminî* and the provincial municipalities will be found in the general and provincial yearbooks (*sâlmame*) of the Ottoman Empire, the last of which appeared in 1328/1912. On the municipal laws of the republic see *La Vie Juridique des Peuples*, vii, *Toulon*, Paris 1939, 37 B; Albert Gorvine, *An Outline of Turkish Provincial and Local Government*, Ankara 1936. (B. Lewis)

## (2) ARAB EAST.

Town councils of the earlier period of reform, such as the *majlis* *Dimashq*, which had been established during the Egyptian occupation of Syria, 1832-40 (A. J. Rustum, *al-Mahfûz al-Malahîyya al-Misriyya: Bayân bi-Wahîd al-Shâm Beirut 1940-43*), and a council appointed by Nûr al-Dîn Paşa, a reforming *muhtar*, at Sawâkin in 1254 (J. Hamilton, *Sinai*, 1857), were unrelated to any legislative policy and were short-lived. The Ottoman municipal legislation of 1281-94/1864-77 was applied throughout the Arabic-speaking provinces of the Empire except in certain frontier regions and in Egypt where municipal development was following a different course. The new municipalities flourished where the will of the province was sympathetic to the *tasfiha*, and languished where it was not. Thus, under the guidance of Ahmad Mîshat Paşa, Baghdad in 1860-72 and Damascus in 1875-80 experienced an intensive if brief period of urban development involving the demolition of city walls, re-alignment of streets and construction of

covered markets and other public buildings. Participation of public-spirited local notables furthered urban reform. Mosul under its seigniorial families has had a continuous municipal history since 1869. Sectarianism hindered the smooth working of several municipalities in the communities (*nahîya*) of the autonomous *sandîsh* of Mt. Lebanon, and in Jerusalem where the complicated religious situation demanded that the chairman of the municipal council should be a Muslim. A weakness in all Ottoman provincial municipalities was the ineffectiveness of the municipal police (*beladîyye ta'ashîrât*, Ar. *shurât al-baladîyya*).

In spite of its shortcomings, which the consuls of the Powers were quick to report in their despatches, the Ottoman municipal organisation showed a remarkable ability to survive the disintegration of the Empire after the world war of 1914-18 when the withdrawal of Ottoman rule left a vacuum in local government in the Arab lands. To preserve continuity during the transitional period, the British in 'Irak, Palestine and Transjordan, and the French in Syria and Lebanon, continued to administer the Ottoman municipal code for several years until they introduced changes which reflected the influence of the Mandatory Powers. In 1922 a *muhtar* was appointed for Baghdad who was at once executive head of the *hiss* of Baghdad and chairman of the city municipal council; the two offices were separated in 1923. The Ottoman Law (*vildâdî hukûmîye Kâdîna*) of 27 Ramadan 1294/1877 was not however repealed until the promulgation of Law no. 84 of 1935 (*Idârât al-baladîyyât*). The Palestine Government did not finally break with the Ottoman system until the issue of the Municipal Corporations Ordinance of 1934. Conditions in Transjordan limited the councils to consultative functions, and the Municipalities Law of 1925 permitted the head of the municipality of the capital to be appointed from outside the municipal council, a situation existing also, and more recently, at Damascus.

In Lebanon the Ottoman Law of 1877 was replaced by a Municipal Decree of 1922 under which the minister of the interior took over the supervisory duties of the former Ottoman wali. In 1924 Beirut was given special status as a capital city and an organisation based on that of Paris though, from that year until the end of the French mandate, chairman and council continued to be appointed by the minister. By Legislative Decree no. 5 of 1954 the special status of Beirut was abolished and a municipal council of twelve members, of whom half were elected, was set up. The chairman, appointed from its members, is head of the municipal legislature, the *muhtar*, representing the state, is head of the city executive. The Syrian municipalities, including that of Damascus, are governed by a *Kâdîn al-baladîyyât* promulgated by Decree no. 172 of 1936.

The chairmen of the municipalities of Damascus, Beirut, Baghdad and Amman are styled *amin al-'ashima* to emphasise their particular importance in relation to the seat of the government; elsewhere the original designation, *ra'is al-baladîyya*, is retained. In the capitals the chairman is appointed by the council of ministers. In other municipalities he is chosen either by the municipal council or by the minister of the interior who usually has a department (*mislahat*, *nadiriyya*) in his ministry which supervises municipal affairs. In Egypt and the Sudan special ministries of towns and rural affairs have been created.

Egypt developed its own local government tradition. Owing to the presence of the European consuls and a European merchant community, Alexandria possessed the beginnings of municipal government as early as about 1835 when a consultative *majlis al-ta'lim* (council of the formal in Levantine parlance) was formed. This was followed in 1860 by a municipality having an appointed president and a partly elected council. The Khedive Isma'ili and his successors withheld municipal privileges from Cairo until 1949, though municipal commissions with restricted powers had long existed in the Egyptian provinces.

An ordinance of 1901 empowered the governor-general of the Sudan to establish municipal councils, but this measure was not implemented. In 1921 a consultative council was founded in the neighbouring towns of Khartoum, Omdurman and Khartoum North, with regional committees in each town. The formation in 1942 of the first municipal council at Port Sudan was followed in other towns. In 1945 the three regional committees at the capital were replaced by municipal councils, and a bill containing provision for further decentralisation became law in 1951.

In Arabia municipalities were established by the Ottoman Government in Medina, Jeddah, Ta'if and Yanbu' about 1870. In Mecca the maintenance of the simple public services was divided between the 'Ayn al-Zubayr water board (*al-majlis al-hamiyuna*) and a general-purpose council. These institutions had no roots in the Hijaz and disappeared in the year of 1925-26. In 1926 the Saudi Government issued an administrative instruction providing for elected municipal councils of notables and merchants in Mecca, Medina and Jeddah, with technical management boards in each of these towns composed of the director of the municipality and his heads of department.

A municipal authority was in existence in Aden by 1855, and an Aden local authority was established in 1900, though the elective element was not admitted to the Fortress until 1947. In 1953 the Fortress township authority was reconstituted as the Aden municipality with an appointed president and an official majority on the council, but with a broadened electoral base and control over its own budget. Bahraini municipalities have each a *ra'is al-majlis al-baladiyya* appointed by the Ruler, a partly-elected council, and a permanent director (*mu'dir al-wisay*, *shiriyat*). Kuwait municipality is managed by a *mu'dir* responsible to the *ra'is al-baladiyya*, a member of the ruling family. The Arabic-speaking communities of Musawa' and Harar have taken only a small part in town management. By decree of 1893, rescinded in 1907, the Italian Government instituted a municipal board at Musawa' with an insignificant representation of appointed natives and a narrowly limited competence. Two measures passed by the Ethiopian Government: Administrative Decree no. 1 of 1942, extended by Municipalities Proclamation no. 74 of 1945, provided for elected town councils.

Municipalities in the Arab East do not usually exercise direct control over electricity and water supply, and rarely over urban transport, undertakings which are operated either by concessionary companies, now mostly in process of nationalisation, or by boards under the authority of the central government, with or without municipal representation. Municipal councillors are chosen by direct suffrage of the electors, not by inferior councils in

town wards as in two-tier systems of municipal representation. Municipalities vary in the degree of publicity in which they pursue their activities. Those in the more politically advanced centres, such as Damascus, Beirut, Baghdad, Cairo and Alexandria, disclose their budgets and explain their policies; others are less communicative. The press is excluded from council meetings, and the somewhat negative attitude of the citizens to local, in comparison with national, affairs results in relatively small polls at council elections, though the inhabitants of Palestine under British mandate, denied an active part in national affairs, frequently vented their feelings in municipal politics. Municipalities also differ in the strictness with which they enforce building restrictions and traffic control, and in the importance which they attach to welfare and public amenities. Only in Egypt have women the right to be municipal electors and to be elected on municipal councils; women municipal employees are everywhere few.

In no state is there a nation-wide local government service with its own traditions existing parallel with the national civil service. Local government is considered as a regional branch of the central government, having no juridical or real financial independence. Yet the growing wealth and technical complexity of the larger municipalities, as well as their record of administrative maturity and good government, have in practice increased their civic autonomy.

### (5) NORTH AFRICA — (i) TUNISIA

In Tunisia the first *baladiyya* appeared in the reign of Muhammad Bey, who set up by a decree of 30 August 1838 a municipal Council to administer the affairs of the town of Tunis, composed of a president, a secretary and twelve members chosen from among the foremost people in the land, a third of whom gave up their seats each year. The chief responsibilities of this council were to do with public money, roads, the acquisition for the public benefit of land needed for widening roads, and the issuing of building permits. The council received its administrative authority, which was only vaguely defined, from the sovereign. The constitution of the Tunis municipal council was altered after the setting up of the French protectorate, by a decree of the bey dated 31 October 1885. Two years later a decree of 1 April 1887 promulgated a municipal charter for the whole of Tunisia, and was soon followed by another decree (10 June 1889) which determined that all municipal councillors in Tunis were to be appointed by the government, listed the matters the municipal councils were competent to deal with, and organised the administration of the country through these bodies. Two subsequent reforms have been made, one by a decree of 10 August 1917 which relaxed the rule whereby consent had to be granted for all deliberations by the municipal councils, and the other by a decree of 15 September 1945, which provided for an elected municipal council in Tunisia, composed of an equal number of Tunisians and Frenchmen.

But the institution as a whole was profoundly modified by the bey's decree of 10 December 1917, which defined the commune: a collective body under public law, with civil status and financially autonomous, responsible for the conduct of municipal affairs. The deliberating body of the commune is the municipal council, elected for six years by direct suffrage by two electoral bodies, who appoint the Tunisian and the French councillors respectively. Half the members vacate their seats every three years. Of 64 communes in all, 39 appoint an equal number of Frenchmen and Tunisians to their municipal councils, the others appointing a majority of Tunisians, or Tunisians alone. The elections are held on a general basis of universal suffrage, with the proviso that Tunisian women, unlike Frenchwomen, do not have the right to vote. The municipal council holds four ordinary sessions annually. Its competence is restricted and does not extend to all the business of the commune. There is still administrative supervision centrally by the Minister of State and locally by the *Ka'id*, who has now taken the place of the French civil inspector. The executive body of the commune is made up of a president appointed by decree from among the *Ka'ids* other than the *Ka'id* responsible for the commune concerned, as a vice-president and deputies elected by the municipal council from among its members. This arrangement preserves the earlier relationship vis-à-vis the Tunis municipal council, elected for six years. The executive body of the commune is the *Shaykh al-Madina*, president appointed by the *Ka'id* of the town of Tunis, and assisted by two vice-presidents, one French and one Tunisian. Tunisia's communal organisation was changed after it became independent, under the municipal law of 14 March 1957. This new statute raised the number of communes to 94. The municipal councils are now elected directly in one ballot from a list of

Encyclopaedia of Islam

candidates, for three years, the electors being Tunisians of both sexes aged twenty and over. The minimum age for candidates is 25. Frenchmen can no longer be members of the municipal councils, but the law provides that Frenchmen and foreigners who have the right to vote may be appointed by the Tunisian government, which will fix the number of such persons for each commune.

Administrative supervision is exercised by the Minister of the Interior, and by the governors centrally and locally.

Two other important innovations must be mentioned: the president and deputies are now elected by the council. But the president of the commune of Tunis is still appointed by decree of the Prime Minister, the president of the council, on the nomination of the Minister of the Interior. On the other hand the municipal councils now deal with all the business of the commune. (CH. SAMARAN)

### (3) NORTH AFRICA — (ii) MOROCCO

Before 1912 there were no municipalities nor municipal life in Morocco in the sense these words have had in some European countries since the Middle Ages, a sense inherited from Roman tradition. The towns had no finances of their own; the expense of public services was met in large measure by the revenue of religious foundations or *hubs*, and building or improvements were dependent on the good will of the prince, who would levy the required sums on the public treasury. Nor were there any representative assemblies of citizens; the governor or *šaykh* held his power directly from the sultan, and the *mukhtasib* was not "the merchants' provost", as is often stated, as they did not elect him. A wise governor would take the advice of prominent people in his area, but was not bound to do so. The first modern municipal body set up by the French Protectorate was that of Fes (*al-majlis al-baladi*), instituted by the *dahir* of 2 September 1912. It comprised a council of fifteen members with right of vote, seven officials appointed on special grounds and eight other prominent men elected for two years. This organisation survived until the municipal charter of 1927.

A *dahir* of 1 April 1917 set up "municipal commissions in the ports of the Sharifian empire". It was recapitulated and clarified by the *dahir* of 8 April 1917. Nineteen towns were given the status of municipalities (1,822,746 inhabitants according to the census of 1911-12). The *dahir* determines the municipal authorities: the *paşa* or governor, still appointed by the central authority, and under the direction of a senior municipal services official, then from 1947 of an urban affairs delegate; and a municipal commission with right of discussion only, appointed and not elected, and made up of one French and two Moroccan sections (one Muslim, one Jewish). The municipalities provide services under the direction of the Head of municipal services: administrative, public works, sanitary and fiscal. They have budgets drawn from their own resources (direct and indirect taxes, revenues from land and excise, a share in the profits from services given).

Casablanca, like Fes, was given a special organisation, but only in 1927. The municipal commission, though still appointed, now had power to vote, and the French section now elected a French vice-president with special powers.

The system of municipalities was reformed in 1953 by the *dahir* of 18 September, which abolished the special organisations at Fes and Casablanca. The

main change it introduces is to set up elected, not appointed, municipal commissions, still of Moroccans and Frenchmen equally. The commission manages the affairs of the city, though approval of its decisions by the central supervising authority is required.

The administrative provisions of this statute have been given effect, but not those relating to elections. This was prevented by the political crisis of 1953. The old appointed commissions remained, and were dissolved when Morocco became independent.

The government of independent Morocco has made no change in the legislation on municipalities. Only French control and the commissions have gone, naturally enough. A new representative system is being prepared. It will relate not only to the towns, but envisages the setting up throughout the country of rural communes which would replace the old tribes or divisions of tribes, and would be run by elected councils. At the time of writing this law has not yet been promulgated. It seems to be inspired in large measure by the *daïr* of 6 July 1951, which set up elected '*djama'as*' with power of vote, usually within the framework of the tribe or tribal division.

In Algeria, the municipal organisation reproduces, in the towns and villages, the system in force in France. The old '*mixed communes*' administered by officials appointed by the government and subordinate to the sub-prefects have everywhere been replaced by '*communes with full powers*'.

#### (4) PERSIA

In the 19th and early 20th century the chief city official after the governor was the *beglarbegi*; under him were the *dirvisha* and *haldar*; and over each of the quarters in the larger cities was a *haldiband*. In the bazaar the craft guilds enjoyed a considerable degree of autonomy in internal affairs. The streets of the city were narrow, mostly unpaved, muddy in winter, dusty in summer, and unlit at night. There was, however, little demand for municipal reform and even after the grant of the constitution in 1906 scant attention was paid to the establishment of municipalities on modern lines. A Municipal Law was passed on 20 Rabi' II 1325/6 June 1907 but remained largely in abeyance owing to the fact that inadequate financial provisions had been made for municipal development. In 1919 during the premiership of Sayyid Dīyā' al-Dīn Tabataba'ī a commission was set up to prepare a scheme for a municipality for Tehran on modern lines but proved abortive (J. M. Ballour, *Recent Happenings in Persia*, London 1922, 240). In 1922 Dr. Ryan, an American, was engaged as municipal adviser to Tehran; he died in 1923 and was not replaced (A. C. Millspaugh, *The American Task in Persia*, New York and London 1925, 21, 212). During the reign of Rida Shāh (1925-41) considerable development took place in municipal affairs, and by 1927-8 there were some 134 municipalities in existence. By the Municipal Law of 1309 P./1930 the head of the municipality (*ra'is-i baladīyya*) was designated by the Ministry of the Interior. He was responsible for the execution of projects for municipal development and municipal administration; his duties included the supervision of weights and measures, control of the guilds, and the regulation of food supplies, prices and rents. The law also provided for an elected municipal council of 6-12 members. Its term of office was two years; its duties were to supervise the activities of

the municipality, approve the municipal budget, and propose through the head of the municipality to the Ministry of the Interior the levy of municipal dues. Much progress was made in the field of town planning under Rida Shāh but the high degree of centralisation and the close control of the Ministry of the Interior over municipal affairs meant that the local communities had little real responsibility for or control over municipal affairs. In 1328 P./1949 new legislation increased the size of the municipal council so that it was composed of 6-30 members and extended its term of office to four years. Its main functions were unchanged but its powers were somewhat increased. The head of the municipality was appointed by the Ministry of the Interior from among three candidates submitted by the council; he was dismissed in the event of the municipal council passing a vote of no confidence in him. The increase in the power of the municipal council was, however, offset by the fact that in the event of a disagreement between the governor-general and the municipal council the former could have recourse to the Ministry of the Interior whose decision in such a case was final. Subsequently modifications were made in the position of the municipality and the municipal council by Administrative Orders (*Idāra-i Idārat*) dated 11 Abān 1331 P./1952 and 25 Khordād 1332 P./1953 issued during the premiership of Dr. Musaddiq, and the Law of 13 Tir 1334 P./1955. In some respects the position of the municipal council was strengthened, but its freedom of action was limited by the fact that its dissolution could in certain circumstances be demanded by the Ministry of the Interior; in the event of there being no municipal council the Ministry of the Interior was deemed the council's successor. Under the Second Seven-Year Plan Law, approved in March 1956, Persia was divided into three areas for municipal development, for each of which a firm of consultants was allotted responsibility (F. C. Mason, *Iran, Economic and Commercial Conditions in Iran, August 1957*, HMSO 1957, 74-5). The *baladīyya* became known during the reign of Rida Shāh as the *ghabardī* and the *ra'is-i baladīyya* as the *ghabardī*.

(A. K. S. LAMSTON)

#### (5) INDIA

The indigenous village communities of India controlled by village councils or *panchayats* represented a form of local self-government but they had practically ceased to function during the anarchy accompanying the decline of the Mughal empire. Albuquerque, the Governor of the Portuguese possessions in India between 1509 and 1515, had retained the existing village communities in his administration of Goa. In 1674 Gerald Aungier had also made use of the ancient *panchayats* in Bombay. To a certain extent the *panchayat* system had survived in the territories of the Maratha Peshwa and traces were discernible elsewhere. This led Mountstuart Elphinstone in Bombay and Thomas Munro in Madras to advocate the preservation of these village councils where possible. Their representations however were little attended to and the institutions of local self-government introduced by the British in the middle of the nineteenth century were of a foreign type. Until the introduction of the Montagu-Chelmsford reforms in 1919 they resembled the French rather than the British system, for the district officer of British India like the French prefect of a department, rigorously controlled the provincial authorities.

There was far too much official interference and British administrators aimed more at efficient local government under official control than any genuine system of local self-government under popular control.

The development of municipal institutions under British rule began in the three Presidency towns of Madras, Bombay and Calcutta. As early as 1687, by order of the Court of Directors of the East India Company, a municipal corporation and mayor's court were established in Madras. Similar bodies were set up in Calcutta and Bombay in 1726. These courts however were intended to exercise judicial rather than administrative functions. By the Charter Act of 1793 the governor-general was authorised to appoint justices of the peace for the municipal administration of the Presidency towns. In addition to their judicial duties they were to appoint watchmen and scavengers and levy a sanitary rate for this purpose. This worked with a certain amount of success in Bombay but not in Calcutta or Madras. The justices of the peace were government nominees and it was not until 1872 that the ratepayers of the Presidency towns were allowed to elect their own representatives.

Between 1842 and 1863 a series of regulations extended municipal institutions to other towns. After the 1861 Councils' Act municipal government was remodelled by the local legislatures. The need for associating Indians in local self-government was laid down by a resolution of Lord Mayo's government. The governor-generalship of Lord Ripon (1880-84) witnessed a great extension of local self-government which it was hoped would be a means of political education for Indians. At the same time rural boards, similar to the municipal boards, extended the system to the rural areas. It was not until the introduction of dyarchy under the Montagu-Chelmsford reforms that local bodies were handed over to popular control and elected ministers became responsible for the administration of local self-government.

#### (6) MALAYA AND SINGAPORE

The municipalities in Malaya, as in other parts of the British Commonwealth, are adapted from the local government system of England. The first appearance of such institutions in the area took place in the Straits Settlements of Malacca, Penang and Singapore. In 1827 the genesis of municipal institutions in the Straits Settlements was introduced in the form of a Local Committee concerned with the management of roads and drainage in Penang. This was soon followed by similar Committees in Singapore and Malacca. In 1836 the Government of India (East India Co.) enacted a law for the establishment of Municipal Commissioners of the three 'stations' of Singapore, Malacca and the Prince of Wales Island (Penang). In 1838 the meetings were

held twice monthly and were open to the public. The Municipal Commissioners of the station of the Prince of Wales Island (Penang) became the Municipal Commission of George Town in 1858. By the turn of the century there were three Municipal Commissioners for the town of Singapore, George Town in Penang and the town and fort of Malacca. Each Commission had a full time president appointed by the governor and a number of official members and non-official members who were chosen in the early stages by electoral procedure. This procedure was later restricted to only half the commissioners leaving the other half to be nominated by the governor. By 1913 when the Municipal Ordinance of the Straits Settlements was enacted electoral procedure was completely abandoned and all the commissioners were nominated to represent local opinion, business associations, religious or racial groups. The system of nomination continued until after the Second World War when the electoral procedure was re-introduced first in Singapore (1949) and later in Penang and Malacca. At this stage only two thirds of the commissioners were elected by general adult suffrage. By 1957 the Municipal Commissioners became City Councils (*Madgiti Bandar Ra'aya*) in Singapore and George Town which had become cities with fully elected councillors who in their turn elected their president who is styled '*mayor*' (*dati bandar*).

The Municipal Ordinance of the Straits Settlements stipulated that a member of a Municipal Commission must be able to speak at least English, since it was the language officially recognised. This stipulation together with the system of nominating commissioners tended to reduce public interest in the affairs of the Council. After 1957 the Chinese, Tamil and Malay languages were recognised as official languages together with English for the purposes of the Singapore Council meetings. In Malacca and Penang Malay, the national language of the Federation of Malaya, was also recognised with English. This helped to break the barriers between the public and the Council and it opened the door to the non-English educated members of the community to stand for election with accompanying tendencies towards radicalism.

The Municipalities of Singapore, George Town and the town and fort of Malacca have always exercised all functions expected of a local authority. In addition to this they were allowed to own undertakings for the supply of water, gas and electricity.

With the spread of British administration into the Malay States and the peninsula another type of local government emerged. This was called the Town Board. It was first established in the Federated Malay States of Perak, Negri Sembilan and Pahang. The non-federated Malay States adopted similar institutions with local modifications in nomenclature and powers. It must be noted that the Town Boards were less of a local government and more of a central government functioning locally. They were totally dependent upon the authority of the State and all their employees were officers of the State. Unlike the Municipal Commission they were not legally independent of the central government but agents of it. The president and the members were appointed by the central authority for an indefinite period and not for four years as was the case with the Municipal Commission. Again at variance with the Municipal Commissions Town Boards extended their authorities beyond the boundaries of the towns to the neighbouring villages.

The first attempt at the creation of municipalities

in the true sense within the Malay States came after the establishment of the Federation of Malaya in 1948. The Municipal Ordinance of the Straits Settlements was enacted for the whole Federation which by now comprised the nine Malay States together with the Settlements of Penang and Malacca. Singapore was left out of the Federation. In the same year the Town Board of Kuala Lumpur, the Federal capital, was transformed into a municipality. It retained its former responsibilities including those of the administration of the outlying villages around it. A distinction however was made between an inner municipal area and an outer municipal area. The former referring to the town proper and the latter to the villages around it. From then onwards changes began to take place. Town Boards became Town Councils (*Madjlis Bandar*). Electoral Procedure was introduced. Greater authority was vested in these Councils and great interest in local affairs became apparent. In fact local elections in Malaya have become equal in importance to their counterparts in other highly developed countries in the sense that they have become a testing ground for the opposing national political parties.

At present Municipalities (Berbandaran) in the Federation of Malaya are still in a state of transition. The Municipal Ordinance is not fully implemented all over the Federation. (Apart from George Town City Council and the Municipalities of Kuala Lumpur and Malacca 27 of the larger towns in the Federation have elected Town Councils, 12 of which are financially autonomous and the others are moving in the same direction.) It is expected that the Ordinance will be amended to give greater scope for local variations retaining however the basic essentials of a modern municipality.

#### (7) INDONESIA

We do not know much about political life or the kind of government in the ancient pre-Islamic cities and towns of Indonesia, either in such royal centres as the capitals of old Mataram or later Majapahit, or in commercial urban centres like Tuban, Gresik or Palembang.

There is no evidence, up to now, that there ever was any form of really local government or autonomy vested in locally-rooted public institutions. When, from the 7th/13th century onwards, Islam gradually penetrated almost the whole of Sumatra and Java and in many other regions of the archipelago, this lack of local public institutions in the towns and cities (neither big nor numerous) continued. Both European and non-European sources of the 16th and 17th centuries tell us that the inhabitants of cities or urban emporia were ruled by servants of the sultans or princes and that their towns never were considered to be a juridical entity. Neither in remote past nor in more recent times did the indigenous towns of Indonesia have any creative influence on the development of law as did the towns and cities of Western Europe through their law-giving authorities or special municipal courts.

In towns that came to be ruled by the Dutch East India Company or were founded by this chartered body (as Batavia) some urban institutions of 17th century Western type were created, of which the *weeskamer* (council for the affairs of orphans) perhaps may be mentioned because it has survived the Company itself. It reappears in the general legislation of the 19th and 20th century on the civil law of Europeans and non-Indonesian inhabitants of the archipelago.

When after the downfall of the Company and after the end of the British interregnum these islands became a part of the new kingdom of the Netherlands (1816) a highly centralised and exclusively official system of government was introduced. This system remained unaltered until the end of the 19th century, when under the influence of prominent colonial specialists some ideas of "decentralisation" began to carry the day. Though in 1894 and in following years several bills were conceived—which did not pass the parliament—it was not before 1903 that the so-called *Indische decentralisatie* (Act for decentralisation) was promulgated.

This act had a double aim: first, to pave the way for the creation of local and regional public councils; secondly to procure the financial means to be used by these councils. (The regional councils will not be dealt with here). So this act did not aim at reforms in the great diversity of Indonesian rural and truly indigenous institutions: in that field everything continued to be founded on customary law (*adat*) and special legal regulations made for it. This new chapter of the legislation prescribed (*inter alia*) how to set up urban municipalities.

Large cities, like Batavia (now Jakarta, Djakarta), Surabaya, Semarang, Bandung and many other places of urban character as well, were westernised in many respects. The great majority of Europeans and Chinese, and several other non-Indonesian groups lived there; even the Indonesian inhabitants often were of different origin, *adat* and language. Western business and industrial activity had its headquarters there. In these great half-western, half-eastern agglomerations the usual problems that are to be found in big cities everywhere were encountered. They

could be better served and solved by municipal authorities and services than by the general civil service officials of the central government. Further legislative measures, issued by the governor general in 1903, carried out what the fundamental act aimed at, and Batavia became a municipality. In its initial phase the members of its municipal council were appointed by the governor-general and not elected.

The resident of Batavia was officially the council's chairman. Meester Cornelis and Buitenzorg (now Djatinegara and Bogor) also obtained municipal councils in 1905. This new system gradually developed so that all the cities and big towns in Java as well as many towns elsewhere (Medan, Pangkajene, Padang, Makassar, Manado, etc.) became municipalities, while since 1918 the members of these councils could be elected by qualified inhabitants.

Since 1925 every male citizen of an urban municipality in Java who had attained his majority, had a yearly income of at least 300 guilders, and could read and write in Dutch, Malay or any vernacular, was given the vote. In the outer provinces, rules might be in force. These new urban municipalities were made corporate bodies. The rather limited activities of urban municipalities comprised such items as roads, streets, parks, sewage-systems, fire-service, public utility works, public health service and so on. Municipal regulations could be made.

In 1916 a new ordinance enabled the government to appoint burgomasters (*burgemeesters*) for those cities or towns that were deemed to need such an official (as in the Netherlands, the burgmaster was to be appointed by the central government). Their salaries were paid by the central government; a percentage of it was to be reimbursed by the municipal treasury. As these urban municipalities were considered western-type enclaves in the territory of *adat* law it seemed convenient, at least during the first two decades of their existence, to appoint only European burgomasters. The *weethouders* (aldermen) were chosen by the council from among its own members. They formed under the chairmanship of the burgmaster the executive committee of the council. Only in the last decade before the second world war did the government start appointing Indonesians as burgomasters.

In the present Republic of Indonesia the principle of decentralisation as well as that of autonomy and local government is maintained in article 131 of its provisional constitution. New legislative measures however to give practical effect to this principle are not yet in force. For Java at least, an act of 1948 (no. 21) promulgated by the former republic of Indonesia (*republic*: the Jogja-republic) has systematised the autonomous parts of the territory in three ranks: 1) provinces, 2) *kabupaten* or regencies and big cities 3) small urban municipalities and rural units. As a consequence of article 142 of the above-mentioned provisional constitution (*landelijk-ouding* *Republiek Indonesia*, promulgated 27 August 1950) all earlier regulations not explicitly abolished or altered are to be considered as decrees or regulations of the republic. So the essentials of the pre-war legislation as to urban municipalities are still in force, although the burgomasters are now officially called *walidha*, and the municipal council has influence on the appointment of these magistrates while the members of the councils are to be elected by all inhabitants of both sexes who have passed their 18th birthday or married at an earlier date.

(The special and temporary situation in Jakarta where the 24 members of the council are appointed by the government, need not be discussed here.)

**BALĀGHA** (بَالَاغَة), Abstract noun, from *halāgh* effective, eloquent (from *halāgha* "to attain something"), meaning therefore eloquence. It presupposes *fasāḥa*, purity and euphony of language, but goes beyond it in requiring, according to some of the early definitions, the knowledge of the proper connexion and separation of the phrase, clarity, and appropriateness to the occasion. Even though those definitions are not infrequently attributed to foreign nations such as the Persians, Greeks or Indians, the demand for skill in improvisation and the recurring references to the *balāgh* (or orator) in connexion with the discussion of the concept make it abundantly clear that it originated in the Arabian milieu. The transfer of the concept to the written word and hence to literary criticism and, beyond this, its widening to denote a three-pronged science are the essential facts in the rather complicated history of the term.

Grammar and lexicology, the primary concerns of the early critic, became in the course of the sixth century, when stylistic perfection had been accepted as a desideratum in official pronouncements, integral parts of the education of the *balāgh*. The period appreciated systematisation not excluding the analysis of aesthetic experience. Acquaintance with the conceptual apparatus of Greek thought assisted in the articulation of critical insights even though the impulse toward a theory of *balāgha*, or aesthetic effectiveness on the verbal level, seems to have been germane to the Arab tradition which was then stimulated by an increased interest in structure and development of poetry and by the need to rationalise the aesthetic implications of the theological postulate of the uniqueness (*uḥūd*) of the Qur'an. The motivation for the first work exclusively devoted to certain formal characteristics of artistic expression, the *Kubāh al-Balāgh* of Ibn al-Mu'tazz (written in 887/88; ed. I. Kratchkovsky, London 1935), was the justification of the 'new' or 'modern' style, *al-balāgh* (q.v.), of which the second half of the ninth century had witnessed the victorious surge. This justification Ibn al-Mu'tazz sought to accomplish by means of the proof that the figures of speech whose generous employment appears to have been the most prominent (and hence the most frequently criticised) feature of the modernistic style in the eyes of the public, were without exception traceable in the Holy Book as well as in classical literature. The reason why Ibn al-Mu'tazz divided the eighteen figures of which he furnishes examples into the two categories of *balāgh* (five kinds) and *maḥāsin* (thirteen) still eludes us. We know, however, that the second part of his work (which deals with the *maḥāsin*) was added by the author after the first had encountered a certain amount of criticism. (W. Caskel, in *OLZ*, 1938, 146-47, sees the rationale for the distinction in the fact that it was only in the employment of the *balāgh* figures that 'modern' poetry differed from the classical tradition.)

The use of the notion of the 'rhetorical figure' in the interpretation of the Qur'an antedates the work

of Ibn al-Mu'tazz; the method is fully developed in the Kutayba's (d. 890) *Ta'wīl muḥall al-ḥurūf* (ed. A. Saqr, Cairo 1373); this fact may help us to understand why the doctrine of tropes and figures was the earliest aspect of *balāgha* to attract systematic investigation.

Kudāma b. Dja'far's (d. 922?) *Nahd al-Shi'r* is inspired by another tendency; Kudāma searches for an objective standard in the evaluation of poetry. Rhetorical figures are only one of the elements with which the poet and his critic have to deal. Like many of his Arab and Greek predecessors Kudāma was led, especially in his discussion of the defects of poetry, into problems that to our mind come within the purview of grammar and logic. The orderly fashion in which he coordinates the several viewpoints may have contributed to the three-fold structuring of the *'ilm al-balāgha* at which the scholastic age of Muslim critical thought was to arrive. Not much later than Kudāma one Ishāk b. Ibrahim b. Wahb, a *ḥadīth*, wrote (in or after 335/946-7) the *Kitāb al-Balāgha fi madkāt al-shi'r* (identical with the *Kitāb Nahd al-Shi'r* that had been attributed variously to Kudāma and to Abū 'Abdallāh Muḥammad b. Ayyūb al-Ḥafḥāfi, d. 1262; it awaits publication; it is known only through an article of 'Alī Ḥasan 'Abd al-Kādir, *R.A.D.*, 1949, 73-81; cf. the discussion of the problem by S. A. Bonebakker in the introduction to his edition of *Nahd al-Shi'r*, Leiden 1967, 13-20). Ishāk continues the discussion of the various ways of expressing things which Dībhi, *Kitāb al-bayān wa'l-tabyīn*, had initiated; he criticises the limitations of his predecessors and, from our point of view, indicates one of the directions in which the final systematisation of *balāgha* was to occur. This system slowly takes shape in works like the *Kitāb al-jawāmi'at* of Abū Ḥilāl al-'Askarī (d. 1095).

The struggle between the Ancients and the Moderns which dominates literary life from the middle of the ninth to the close of the eleventh century kept the interest in stylistic analysis alive. Toward the end of this period, 'Abd al-Kābir al-Djurdjānī (d. 1078) refused to a degree never reached by any Arab (or Persian) critic before or after him the comprehensibility of the psychological roots of the aesthetic effect. In his *Asrār al-Balāgha* (ed. H. Ritter, Istanbul 1954) his principal concern was with simile, metaphor and analogy—later to become the domain of the *'ilm al-bayān*. Djurdjānī succeeded in explaining the (logical and) psychological foundations of the aesthetics implicit in the aspirations especially of the later phases of Arabic (and Persian and Turkish) poetry. His is the merit of having been the first to investigate the 'fantastic aetiology', the very life of Persian poetry in particular (although its technical designation, *ḥusn al-ta'wīl*, is found only more than a century later in Sakkākī; Djurdjānī's other important work, *Dala'il al-shi'r*, unquestionably spurred the rise of the *'ilm al-ma'nawī* as an integral part of rhetoric).

After Djurdjānī the scholastic held the field. In the third part of his encyclopaedia of the sciences, *Miftāḥ al-salām*, Sakkākī (fl. 1220 or 1229), gives the *'ilm al-balāgha* the organisation which it was to retain to the present. In his treatment it comprises three branches: the *'ilm al-ma'nawī*, 'notions', dealing with the different kinds of sentence and their use; the *'ilm al-bayān*, 'modes of presentation', with the art of expressing oneself eloquently and without ambiguity—both are concerned with the relation of thought to expression and with the different ways to

express the 'same' idea which the poet or writer has at his disposal; one must never forget that the *'ilm al-balāgha* as all Arab literary theory is primarily a *Kunstlehre*, an *ars dicendi*, and not an aesthetics in Plato's or our own sense, i.e., a *Schönheitslehre*. (At this point a distinct analogy may be drawn to Muslim treatment of political theory which, conversely, excepts such as Māwānī's (d. 1058) *al-Aḥkām al-sulṭāniyya* notwithstanding, is concerned with the conduct of the ruler and his administrators rather than with the nature of kingship and administration). The third branch is the *'ilm al-ba'dī* which deals with the embellishment of speech and defines a large number of tropes classifying them in general on the ancient model in *ḥay'at al-kawā'id*, *ma'nawī*, and *al-ḥay'at*, *lāfzī*.

A tendency to proliferation of the figures identified is unmistakable. Where Sakkākī and his commentators al-Karwīnī, better known as *ḥadīth Dimaḡhī* (d. 1338), and al-Taftāzī (d. 1390), whose works *Talḥīṣ al-Matālib* and *Muḥṣaṣar al-Talḥīṣ*, have come to supersede Sakkākī's as the standard textbooks of rhetoric (but thirty *ma'nawī* figures (some subdivided further) and seven *lāfzī*, Ibn Kayyis al-Djawiyya (d. 1350), *Kitāb al-Fawā'id* has eighty-four *ma'nawī* alone.

The *Ma'nawī* *fi ma'yir aḥṣār al-'Adām* of the Persian Shamsi Kays (fl. 1204-30) is the first and a fairly successful attempt to apply Sakkākī's system to a literature other than Arabic.

A contemporary of Sakkākī's commentators, Ṣafī al-Dīn al-Hillī (d. 1349), inaugurated the fashion of the so-called *ba'dīyya*, a poem composed to illustrate the various figures of speech. The genre whose most celebrated representative is perhaps the *Ba'dīyya* of Ibn al-Hillī al-Hanawī (d. 1434) has been cultivated down to quite modern times.

It is difficult to find the Hellenising strain in the theory of *balāgha* its proper place in this presentation; but with the significant exception of Kudāma (cf. Bonebakker, *op. cit.*, 36-44) it has always remained on the edge of the developmental sequence. Both the *Poetics* and the *Rhetoric* of Aristotle found translators; the translation of the *Poetics* by the Nestorian, Abū Biḡr Mattā b. Yūnus (d. 940), has found several editions (philological: Oud 1857; Istanbul, Vienna 1928-32; 'Abd al-Rahmān Badawī, Cairo 1953), that of the *Rhetoric* has remained unpublished. Concern for these works has been confined to the *faṣiḥa*. Averroes included an abridgement of the *Rhetoric* in the section on logic of his *Shifā'* (ed. S. Sālīm, Cairo 1954) and Averroes summarised the *Poetics* (ed. F. Lassus, Paris 1872; 'Abd al-Rahmān Badawī, Cairo 1953). But the literary background that served as the vantage-point for Aristotle's ideas remained alien to the mediaeval Muslim. Respect for the protophilosopher rather than a desire to influence Arab literature or the reduction to theory of its techniques and aspirations motivated such occasional studies as were accorded those much-misunderstood works.

What Averroes observed with regard to Greek epic narrative in metrical form (in connection with *Poetics* xxi), that "all this is peculiar to them (i.e., the Greeks) and nothing like it is to be found among ourselves", could fairly be extended to the tradition of Greek literature and its theory as a whole—even though a good many motifs, conventions and definitions of tropes did find their way (in contrast to other Greek bequests apparently not through the mediation of the Syriac tradition) into Arabic literature and theory.

**BALAK**, Nūr al-Dawla BALAK b. BAHKĀM b. ARTUQ, one of the first Artukids, known chiefly as a tough warrior. He appears in history in 489/1096 as commander of Sarūj on the Middle Euphrates. This locality being taken from him by the Crusaders in the following year, and his uncle Ighāzī having been appointed governor of 'Irāq by Sultān Muḥammad, he accompanied him, and is found in the following years struggling vainly for the little towns of 'Ana and Hādīḥa, against Arabs, or protecting the Baghdad-Iraq road from the attacks of Kurds and Turkomans. After Ighāzī's disgrace in 498/1105 he returned to the city of Balak, the head-quarters of his family, as did his uncle, and in 1110 accompanied him on an expedition in Syria in which Sukmān al-Kuṭbī of Aḥlāt also took part. On Ighāzī and Sukmān's quarrelling he was carried off a prisoner by the latter. He was soon set free on the death of Sukmān, and in 1113 took advantage of the death of the Turkoman chief Iḡlāzī to occupy Pān on the eastern Euphrates (Murūd Sū). The princess mother of Tuḡhril-Arslan, the young Salḡūkid of Malatya, who had used of a protector against the Salḡūkid of Konya Ma'sūd, married Balak, making him the young prince's *ataḡe*. Strengthened by this alliance, Balak was now able to take the Ḳhāziri with its chief settlement the stronghold of Khartpert, which remained his chief residence (about 1113).

The encroachments which he made on the territory of Mengüçkīn in the north led him into a war against the latter and his ally Gavras, the Byzantine duke of Trebizond; with the help of the Dāniḡmandid Gümüşṭakīn he crushed them (1118), and incorporated in his principality the little tributary valleys on the right of the Murūd Sū as far as Tāyınḡhōz, and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In 516/1122 he attacked Gerger on the Euphrates, and won military glory by capturing in quick succession Count Joscelin of Edessa and King Baldwin I. of Jerusalem and Murgard, while in the meantime his protégé Tuḡhril-Arslan had taken the province of Dījhān, towards Mar'ash, from the Armenian vassals of the Franks of Edessa. In

formed a battalion of their own from 1795 to 1859. An engagement was fought near Balaklava on 25 October 1854, during the Crimean War. Today Balaklava is a small market-town occupied with fishing and vine-growing.

**BAL'AMĪ** b. BA'ŪNĀ, Bal'ām b. Bē'or of the Hebrew Bible. The Qur'ān does not mention him, unless perhaps in an allusion in vii, 175 (174), 176 (175). The commentators and historians keep the main elements of the Biblical story in their accounts of him. (Numbers xxi-xiv, xxxi, 8) and following the Jewish legends which have given other features of his portrait, make him responsible for the fornication of the Israelites with the daughters of Moab and Midian (Numbers xxv); note that he tends to absorb the figure of Balak, who appears rarely in the Muslim sources. Some traditions deviate from the Hebrew sources in making Bal'ām an Israelite or in dating him in the time of Joshua, an anachronism which despite Sidersky does not go back to a Samaritan tradition. — The statements of the *tafsir* on Qur'ān vii, 175 (174) are used by the mystics, at least since Muḥāsibī, to make of Bal'ām the prototype of the spiritual man led astray by lust and pride. — The *Balghit* attributes to Bal'ām somewhat confused philosophical views on the eternity of the world. — On the identification of Bal'ām with Luḥmān (a tradition taken up by Petrus Alphonsi) see *EP*, s.v. Luḥmān.

**BAL'AMĪ**, the *balā*, i.e., generic name, of two Sāmānid warriors, father and son, of whom the latter, as translator of the famous History of Tabarī, is at present better known. The reference of the name is uncertain. Sam'ānī (*Kitāb al-Ansāb*, fol. 90 r.) mentions the explanation of Ibn Mālikū (Broekelmann, i, 354) that it is from Bal'ām, 'a town in the land of the Greeks' (*balād min diyār al-Rūm*), not otherwise known, but which is perhaps the same as 'Balān', mentioned by Ptolemy (*Geographia de Legationibus*, ed. Bonn, 165) in A.D. 472, or that it is from Bal'āmān, a locality at Balāgherd near Marw, the opinion of al-Ma'dānī (cf. Sam'ānī, fol. 536 r.). Both authorities indicate that the ancestor of the

Bal'āmīs was an Arab tribesman of Tamīm in the early days of Islam, but by the former he is said to have accompanied Maslama b. 'Abd al-Malik and by the latter, Kutayba b. Maslam.

(1) The father, ABU 'L-PAUL MUHAMMAD B. 'UBAYD ALLAH (sometimes 'ASMA ALLAH AL-BAL'AMĪ AL-TAMĪMĪ, issued by Sam'ānī more than once (fol. 90 r. and 262 v.) to have been *wasir* to the Sāmānid Ismā'īl b. Ahmad (279-295/892-907), but there appear to be no notices of his activity until the reign of Naṣr II b. Ahmad (301-331/913-942). He became *wasir* to Naṣr probably about 310/922 (cf. Barthold, *Turkistan*, 241), his immediate predecessor having been, according to Mukaddasī (337), Abu 'L-Faḍl b. Ya'qub al-Nuwaymir. In this year he was at Astarābād (Ibn al-Aḥḍir, vii, 96), and is thereafter mentioned repeatedly (Ibn al-Aḥḍir, viii, 196, 207, cf. Mukaddasī, 337), till he was replaced by the younger Ḍiyā'īd in 326/937-938 (Ibn al-Aḥḍir, viii, 283, but cf. Mukaddasī, 337). Istakhrī (286) mentions his houses at Marw, and a gate in Buḡhārā was named after him, Bāb al-Shaykh al-Diyālī (ibid., 307), the same apparently as that which in later times was called 'Shaykh Ḍiyālī'. The sources agree as to his capacity, and he was a patron of men of learning. He is said by Sam'ānī (fol. 262 verso) to have considered the poet Rūdāq without a peer among the Arabs and Persians. He died, according to Sam'ānī (fol. 90 r.), in the night of 20 Safar 329/14 November 940.

(2) ABU 'ALI MUHAMMAD b. MUHAMMAD AL-BAL'AMĪ, son of the foregoing, was appointed *wasir* to 'Abd al-Malik I b. Nūḥ (345-350/954-961) towards the end of his reign through the influence of the *khāḍiḡ* Alptāḡin (Gardizī, *Zayn al-Aḥḍār*, ed. M. Nāṣir, E. G. Browne Memorial Series, 1928, 42). He did not inherit his father's practical ability. Mukaddasī (138) calls him Amirak Bal'āmī, with the diminutive, and mentions that he was twice *wasir* to 'Abd al-Malik's successor al-Manṣūr I b. Nūḥ (350-366/961-970), from whom he received instructions in 352/963 (cf. Rieu, *Catalogue of the Persian MSS. in the British Museum*, i, 69) to compose the translation of Tabarī which has made him famous. This is one of the earliest prose works in modern Persian and inaugurates the long and brilliant series of Persian historical writings.

Bal'āmī did not attempt to bring the history down to his own time. He omits the *ṣināds* (chains of authorities) and alternative versions of the same event characteristic of Tabarī, presenting a continuous account derived from these. The same method was followed by later Arabic historians such as Ibn al-Aḥḍir (cf. G. Weil, *Geschichte der Kalifen*, iii, N. E.). The result is a work substantially shorter than the original (4 volumes in Zotenberg's French translation and one volume in the Lucknow edition, as against the 15 volumes of the Leiden Tabarī). Yet Bal'āmī's History is not simply an abbreviation of Tabarī. Occasionally he gives substantial additional information, as in the case of a series of episodes in the fighting between the Arabs and Khazars in 104/722 onwards (text in B. Dorn, *Nachrichten über die Chasaren*, see *Bibliography*), the source of which appears to be the *Kitāb al-Futūḥ* of Ibn A'ḡham al-Kūfī (cf. Akdes Nimet Kurat, *Abū Muḥammad Ahmad bin A'ḡham al-Futūḥ kitāb al-futūḥ*, Ankara Üniv. İkt. ve Tarih-og. Fak. Dergisi, 1949, 255-284; D. M. Dunlop, *History of the Tenth Khazar*, 58). Most surviving MSS. of Bal'āmī represent a later redaction, the approximate date of which is indicated by a short appendix, giving a cursory account of the 'Abbasid Caliphs down to the death of al-Mustaqhir and accession of al-

Mustarhid (312/1118). According to B. Spuler (*The Evolution of Persian Historiography*), the translation of Tabarī into Persian under the Sāmānids served no mere cultural purpose, but was intended to show the Persians that the destiny of their nation was linked with orthodox Islam.

Bal'āmī died, according to Garfild (ed. M. Nāṣir, 40), in Dīmāndī II, 363 (February 27th-March 27th, 974). The much later date for his death indicated by 'Uṭh ('Ta'rikh-i Yamīnī, ed. Cairo, A.H. 1286, i, 170), who says that he was appointed *wasir* by Nūḥ II b. Manṣūr for a short time after the fall of Buḡhārā in Rabi' 1382 May 992, seems less likely.

**BĀL-'ANBAR** [see TAMĪD].

**BALANDJAR**, an important Khazar town, lying on a river of the same name, N. of the pass of Darband, i.e., Bāb al-Aḥḍar [g.e.], at the mouth of the Caucasus. Its site is probably to be identified with the ruins of Endere near Andreyevka. Balandjar appears to have been originally the group-name of its inhabitants (cf. Tabarī, i, 894-896, and 'Barandjār' below). According to Ma'sūdī (*al-Tamīm*, 62), Balandjar was the Khazar capital before Atīl [g.e.] on the Volga, but in the accounts which we have there is no evidence that this was so. Balandjar was the subject of repeated attacks by the Arabs in the first Arab-Khazar war, and in 32/652 underwent a full-scale siege, which ended disastrously for the assailants. It was again besieged by the Arabs under Ḍiyārī b. 'Abd Allāh al-Hakām in 104/722-723, and this time was captured. Most of the inhabitants are said to have emigrated. It is a well-known standstill that many of them moved N. Two hundred years after this the traveller Ibn Faḍlān (310/922) came across thousands of 'Barandjār' among the Volga Bulgars. According to the figures given by Ibn al-Aḥḍir (366 anno 104) for the amount of the booty distributed after the siege—300 *dirhams* per horseman in an army of 30,000—Balandjar was at the time of its fall and capture have been a place of great wealth. From this point its importance appears to have declined, and after the close of the second Arab-Khazar war in 110/737 it is scarcely mentioned.

**BALANSIYA** (VALENCIA), a town in Spain, the third in size as regards population, which exceeds 500,000, lying on the east of the Peninsula, 3 miles from the Mediterranean and from its port, el Grau. It is connected with Madrid by two railway lines, one via Albacete, 306 m. (490 km.) in length, the other via Cuenca, 251 m. (402 km.) in length, and by road (218 m. = 350 km.); the distance as the crow flies is, however, only 188 miles.

Valencia is the capital of the province of the same name and the diocese of an archbishop. Its situation is a striking one, in the centre of the fertile Huerta de Valencia, which is watered by the Turia or Guadalquivir (Ar. *Wādī 'I-bayyad*, the "White River") and is the site of part of the lake of Albufera (see *enxarsa*), Ulluc Cordova or Toledo, the old capital of Valencia has seen its importance grow with the years and it remains the capital of the Spanish Levante, the *Sharḥ al-Andalus* of the Muslim period. It is still known officially as Valencia del Cid in memory of the part played in its history by the celebrated Castilian hero.

Valencia was founded by the Romans in 138 B.C. After the death of the rebel Viriathus, the consul, D. Junius Brutus established a colony there of veterans who had remained faithful to Rome. The inhabitants later took the side of Sertorius and in 75 B.C. Pompey partially destroyed the town which began to return to prosperity under Augustus. It was taken by the Visigoths in 413 and became Muslim in 714, when Ṭārik [g.e.] established himself there and at Saguntum, Játiva and Denia.

In the political history of Umayyad Spain, Valencia seems only to have been a place of minor importance. The country of which it was the capital soon became arabised by the settlement of Kayṣī colonies: the capital of Spanish Levante thus was one of the most active centres of Arab culture throughout the whole period of the Muslim occupation; on the other hand in the mountains along the Valencian littoral there were little islands of people of Berber origin. Valencia at this time was the capital of a province or *hāra*, as we know from the eastern writer al-Mukaddasī and the Spaniard al-Rūz (see Yāḡūt, s.v.) and the residence of a governor (*waḥīd*) appointed by the caliph of Cordova. It is only from the 9th/11th century, with the break up of the caliphate, that becoming the capital of an independent Muslim state and very soon one of the principal objectives of the Christian *reconquista*, Valencia began to occupy a more and more important place in the Spanish and Arabic chronicles of the mediaeval history of Spain that have come down to us.

The Muslim kingdom of Valencia was founded in 401/1010-11 by two enfranchised 'Amirids, Muḥarrak and Muḥaffar, previously in charge of the irrigation system of the district who declared themselves independent and shared the power. After a very short reign Muḥarrak died and Muḥaffar was driven from Valencia; the inhabitants of this town then chose another 'Sīd' (cf. *enxarsa*) to rule them, called Labi, who placed himself under the suzerainty of the Christian count of Barcelona. The principality of Valencia soon passed into the hands of a grandson of al-Manṣūr Ibn Abī 'Amir [g.e.], 'Abd al-'Azīz b. 'Abd al-Rahmān who, like his grandfather, assumed the *lubb* of al-Manṣūr; he had previously been a refugee at the court of the Ṭaḡhībī Muḥallī b. Yahyā at Saragossa. The reign of 'Abd al-'Azīz, which lasted till his death in 452/1061 brought an era of peace and prosperity to Valencia. He recognised the authority of the caliph of Cordova, al-Kāim b. Hammūd, who gave him the right to bear the titles al-Mu'tamin and *Lḥu* 'l-Shihkātayn, and kept on good terms with the Christian kingdoms of Spain. His son 'Abd al-Malik succeeded him and took the title al-Muḥaffar. He was still a youth at his accession and the viceroy Ibn 'Abd al-'Azīz acted as regent. Very soon afterwards, Ferdinand I of Castile and Leon attacked Valencia and almost captured the town, after

inflicting a severe defeat on the Valencians who made a sortie to attempt to drive off the besiegers. 'Abd al-Malik sought the assistance of the king of Toledo al-Ma'mūn b. 'Iḥu 'l-Nūn [q.v.] but the latter came to Valencia and soon dethroned the young king (457/1065). The principality of Valencia was then incorporated in the kingdom of Toledo and al-Ma'mūn left the vicar Abū Bakr b. 'Abd al-'Azīz there to govern it. When al-Ma'mūn died in 467/1075 he was succeeded by his son Yahyā al-Kādir, whose great incapacity soon became apparent. Valencia then gradually recovered its independence. al-Kādir sought the help of Alfonso VI, king of Castile, to bring the town under his authority again but he ended by having to surrender his own capital to him in 478/1085. For the course of events and part played in them by the great Castilian hero Rodrigo Díaz de Vivar, the Cid of history and legend, cf. the article *al-Ḥif*.

On their arrival in Spain, the Almoravids tried to regain the kingdom of Valencia for Idmān but their efforts against the Cid were fruitless. When he died in 494/1099 his widow Ximena was still able to offer some resistance to the attacks of the Almoravids, led by Mazdālī. But in the end she abandoned Valencia after first of all setting it on fire and the Muslims entered it on 15 Rajab 495/5 May 1102.

Governors appointed by the Almoravids succeeded one another at Valencia until the middle of the 6th/12th century when the town gradually began to resume its independence in the troubled period which preceded the coming of the Almohads into Spain, and it linked its fortunes with those of Murcia whose series of ephemeral rulers it recognised. In 547/1157, Ibn Mardānīsh was proclaimed king of Valencia but four years later his subjects rebelled against him. Under the nominal suzerainty of the Almohads, Valencia continued in the hands of local princes until it finally fell into Christian hands, two years after Cordova, when James I of Aragon took it on 28 Sept. 1238.

(E. LÉVI-PROVENÇAL)

**BALARM**, Palermo, surrendered to the Arabs after a short siege in Rajab 126/August-Sept. 831, four years after their arrival in Sicily, and straight away it appears as the strong point of Muslim domination in the island. It was there that the governors made their seat in the name first of the Aghlabids, and then of the Fātimids of Africa, who,

however, had to send expeditions more than once to re-establish their authority over the rebel colonies; such were the expedition of 'Abd Allāh b. Ibrahim b. al-Aghlab in 267/900, sent by his father, and that of Abū Sa'īd in 304/916-17, which was sent by the Fātimid Maḥdī, who built the citadel of Qalā'ia (Cala) opposite the old town. In 316/928 the Fātimid governor al-Ḥasan b. 'Alī al-Kalbi seized power in Palermo, and established a genuine local dynasty under Fātimid suzerainty, which lasted till about 442/1050. The period of Kalbite supremacy is for Palermo as for the whole of Sicily the most brilliant of the Arab era. In 445/1053 the last Kalbite, Saṣāḥīn, who had climbed to power after a period of turbulence and unrest and a direct intervention by the African Zirids, was driven from the town, which thenceforward managed its affairs through its *ḡama'a* or municipal council. During this time the ties between the capital and the rest of the country loosened, and finally disappeared. It was thus that Palermo played no special part in the defence of Muslim Sicily against the Normans, and awaited more or less in apathy the arrival of her conquerors beneath her walls, where, however, she defended herself vigorously. She surrendered at last to Robert and Roger d'Hauterville after a five months' siege, at the beginning of Rabī' II 464/January 1072, thus becoming Christian again after one hundred and forty years of Muslim domination. But the Arab character of Palermo was only very gradually obscured; although the great mosque was straightaway given over to Christian worship and the Muslims lived from then on as subjects of the Normans, it was more than a century before every trace of an Arab population and Arab monuments and customs disappeared. As late as 560/1164 the traveller Ibn Dūbayr, saw at Palermo districts reserved for Muslims, and mosques, schools and markets frequented by them, and heard much Arabic spoken. The condition of these Muslims in the capital of the Norman kingdom, which had been reasonable enough under the tolerant rule of the two Rogers, grew worse under their successors (there was an anti-Muslim riot or pogrom in 556/1161) and became intolerable in the circumstances which followed the death of William II (1190). By the end of the 6th/12th century the Arab colony in Palermo had almost ceased to exist, although some Muslims of rank managed to remain there in the court of Frederick II.

For the description of Arab Palermo we have the precious account of Ibn Hawkal, who visited the town in 361/972, and those of Ibn Dūbayr and al-Idrīsī, two centuries later during the period of Norman supremacy. The Kalbite capital as Ibn Hawkal knew it was divided into five parts: the Kaṣr (Cassaro), the old town surrounded by walls, the Qalā'ia (Calsa), founded by the Fātimids and also walled, and the open districts of the Ḥārāt al-Maḥdī and the Ḥārāt al-Jadīda in the south, and the Ḥārāt al-Kalbiya in the north. The population of Palermo in the days of the Kalbitēs is estimated by Amari<sup>1</sup> at three hundred or three hundred and fifty thousand. The remains that we have from the period of Arab domination (not counting the famous monuments of Norman-Saracenic art) are very scanty: the site of a mosque beside the church of S. Giovanni degli Ebrei, and some old work inside the royal palace (Torre pisana) which has recently been brought to light.

(F. GARIBOLDI)

**BALĀSĠHŪN** or BALASAGHŪN, a town in the valley of the Ču, in what is now Kirghizia. The medieval geographers give only vague indications as to its position. Barthold, *Öldē o poyssidie v Sredneya Aziyi*, St. Petersburg 1897, 39, suggests its identity with Ak-Peshin in the region of Frunze. A. N. Bernsham, *Chuyshaya dolina in Materiali s' isledovaniya arkheologii S.S.S.R.*, No 14 (1950), 47-55, agrees with Barthold and gives a description of the site. The town was a Soghdian foundation and in Kāshghar's time, i.e. in the second half of the 11th century, the Soghdian language still survived alongside Turkish. According to Kāshghari Balāsaghūn was also known as Kuz-Ordu or Kuz-Uluḡ. The former name is also found in the Chinese account of the Kara-Khitay, and a variant of Kuz-Uluḡ — Kuz-Baligh or Ghuz-Baligh, *baligh like ulugh* meaning "town" — was according to Djuwaynī still current in the 7th/13th century.

According to a story in the *Siyasat-nāma* (ed. Schefer, 196) a religious war was planned about 330-1/942-3 against the "infidel Turks" who had conquered Balāsaghūn. These must have been the Kara-Khānids immediately prior to their conversion to Islam. Balāsaghūn afterwards became the head-quarters of the first Kara-Khānid invasion of Mā warā' al-Nahr under Bughra Khān b. Mūsā (d. 382/992-3). Shortly after 416/1025-6 the ruler of Balāsaghūn, Toḡhan Khān, brother of the Kara-Khānid ruler of Mā warā' al-Nahr, 'Alī Tegin, was driven out of his territory by other members of the dynasty ruling in Kāshghar (Bayhaki, ed. Morley, 98 and 651, ed. Ghani and Fayyad, 91 and 526). Balāsaghūn seems afterwards to have belonged to the same ruler as Kāshghar. The poet Yūsuf Khlop-Hādij, author of the *Kutadghu Bilik*, the oldest poem in the Turkic language, was born in Balāsaghūn (462/1069-70); the Bughra Khān to whom it is dedicated must be Bughra Khān Hārūn, who ruled over Kāshghar, Khorān and Balāsaghūn, first with his brother Toḡhril Khān and then, for 29 years till 496/1102-3, alone.

About 1130 Balāsaghūn was conquered by the Kara-Khitay [q.v.] and the ruler of the town, who had appealed to their leader (the Gūr-Khān) for help against the Kanghli and Karḡh nomads, was deposed. The real seat of the Kara-Khānids still remained the territory on the Ču while native princes ruled as vassals of the Gūr-Khān in Mā warā' al-Nahr and Kāshghar as well as in the districts of Semirechye north of the Il.

When the army of the Gūr-Khān was defeated by Muhammad Khwāram-Shāh in Rabī' I 607/August-September 1210, on the Talas, the inhabitants of Balāsaghūn, expecting the speedy arrival of the victor, refused the defeated army admittance to the town. After a 16 days' siege it was taken by the Kara-Khitay and plundered for three days, during which time, according to Djuwaynī, "42,000 of the chief notables were counted among the slain."

Balāsaghūn is seldom mentioned during the Mongol period. Barthold's assumption that it was taken without resistance by Gengiz-Khān's general Djirbe in 1218, in the course of his operations against

Küling, the Nayan ruler of Kara-Khitay, is based on a misreading of the name Ghuz-Baligh as ghuz baligh "good town". In the account of Timur's campaigns Balāsaghūn is never mentioned; like all the towns on the Ču, Il and Talas it must have been destroyed during the endless wars and struggles for the throne in the 8th/14th century. Muhammad Haydar, writing about the middle of the 17th/16th century, knew about Balāsaghūn only from books; of the town itself no trace was then to be found.

(W. BARTHOLOLD [J. A. BOYLE])

**BALĀT** (Ar.), a word with a number of varied meanings due to its dual etymology, Latin or Greek as the case may be. Deriving from *palatium* it means "palace" (Mas'ūdī, *al-Tanbih*, 167; Ibn al-'Adīm, *Zuhd*, ed. Dahan, i, 142 and 145; Mukaddasī, 147, and Ibn Hawkal<sup>1</sup>, 195, mention in the *Dār al-Balāt* at Constantinople; cf. M. Canard, *Extraits des sources arabes*, ap. A. A. Vanier, *Études de la Arabie*, ii/2, Brussels 1950, 412, 423 and n. 2). Deriving from *πάτρα* (through the intermediary of Aramaic), it has two principal meanings corresponding to those of the Greek term, denoting "a paved way", an old Roman road for example (see Ibn al-'Adīm, *Zuhd*, i, 164), "flagging" or, in the form of the noun of unity *balīṭa*, a "flag-stone" of any kind of material serving to pave the ground or to bear a monumental or memorial inscription (see for example, Muḡīr al-Dīn al-'Uyaynī, *al-Ḥas al-Djāhī*, Cairo ed. 1253 AH., 372), whence the meaning of "steele", or "portico" or "colonnaded gallery", more especially the "nave" of a mosque (see for example Ibn Dūbayr, *Rihla*, ed. De Goeje, 190).

The word *balāt* occurs in various rural and urban toponyms, both in the Muslim West (see infra) and East, where it is especially frequent in Syria-Palestine. The following are the main occurrences: the town of al-Balāt in Northern Syria, which was adjacent to a Roman highway (M. Canard, *Histoire des Hamānides*, i, Algiers 1951, 218),—the al-Balāt quarter of Aleppo, the name of which recalled the old monumental thoroughfare (J. Sauvaget, —the former village of Bayt al-Balāt, the *ghāṭa* of Damascus,—the village of Balāṭa or Balāṭa in Palestine (the name of which could also derive from the Latin *platanus*),—the Bah al-Balāt in Jerusalem (cf. J. Sauvaget, *Les perles choisies*, Beirut 1935, 99 n. 1),—the paved square of al-Balāt in Medina,—the quarter of Balat in Istanbul [q.v.],—the village of Balat, adjacent to the ruins of Ancient Milet in Asia Minor and corresponding to the Salḡidkāt town of Palatia (see Paulys-Winsowa, under *Miletos*).

**Bibliography:** E. Quatremère, *Histoire des sultans mamelouks*, ii/1, Paris 1845, 277 n. 3, to be supplemented by J. Sauvaget, *Alep*, Paris 1941, n. 112 and *La mosquée omeyyade de Méloé*, Paris 1947, 69, n. 2. For the toponyms, see Yāqūt, i, 709.

**BALĀT**, now a small village on the site of the ancient Miletos in Caria. The word Balāt derives from "Balāṭra", the name used for this locality at least from the first years of the 13th century. Balāt

came under the control of the Begs of Menteşe [g.n.] towards the close of this century and, because of its favourable situation near the mouth of the river Melaendros (Büyüç Mendere), served them as a point of departure for their raids into the Aegean Sea and, later, as a commercial centre of some importance. The Venetians had a church and a consulate there by 1355. Balāt flourished at this time on the traffic in such commodities as saffron, sesame, wax, alum from Kutahya, slaves from the islands of the Archipelago, etc. The Ottoman sultan Bâyezîd I confirmed to the Venetians their privileges at Balāt, when, in the winter of 791-213/1389, he took over the coast-lands of Menteşe. Tufur Beg, after his defeat of the Ottomans at Ankara in 804/1402, set on the throne İlyas, a member of the local dynasty. This prince was forced, however, to become a vassal of Sültân Mehmed II in 818/1415 and by 829/1426 Menteşe had been absorbed once more, and this time definitively into the Ottoman state. Balāt, during the course of the 15th century, began to sink into a long and slow decline, due in no small measure to its fever-ridden climate and to the gradual silting of the river estuary. None the less, an active, although no doubt diminishing commerce was still associated with Balāt, when Ewliyâ Çelebi passed through this region in 1071-1072. Balāt, now assigned to the *aza* of Söğüt in the province of Aydin, lies today approximately 9 km. from the sea and had in 1945 a population of about 700 people.

**BALĀT.** In Spain, the most general sense of the word *balāt*, the most general sense of the word "pavement"; it was thus used to denote the Roman roads of the Peninsula, as witness the vocabulary attributed to Raimundo Martín. The now ruined town of Albalat, on the border of Romanagordo, adjoining a ford across the Tagus, near the Almaraz bridge, must take its name from one of these roads. The battlefield of Tours and Poitiers, called Balāt al-Shuhadā' [g.n.] after the Roman road, would seem to confirm this meaning. But it is extremely doubtful whether such a concrete meaning applied to the whole *blām* which, according to al-Idrīsī, comprised a large part of present-day Spanish Estramadura, with Alange, Medellín, Trujillo and Cáceres, in addition to the Albalat already mentioned. On the other hand, the numerous Spanish place-names, Albalat, Albalate and their derivatives and diminutives, Albaladejo, Albalatillo, could better be explained by *al-balad*, or *al-balād* "place, terrain or locality"; thus, Albalat de la Ribera, near the river Júcar, Albalat dels Sordells, near Valencia, and Balat dels Tarongers, in the Sagunto region, do not seem to have any connexion with Roman roads and seem only to be names of hamlets or villages; the numerous Albalate, which exist in the provinces of Teruel, Huesca, Guadalajara, Ciudad-Rodrigo, Toledo and the Aljarafe of Seville, must be interpreted in the same way. The

derivation from *platea* or *palatium*, applicable to place-names in Jerusalem, Syria and Medina, is not found in al-Andalus.

In addition to the *blām* of al-Balāt in Muslim Spain, there was another *blām* in the Portuguese zone, al-Ballāta, situated in the Faixs Ballāta, a huge plain between Lisbon and Santarém; this *blām* contained, apart from these two towns, the town of Cintra, and its territory corresponded to present-day Ribatejo. The name given to it by al-Idrīsī coincides with that of Vallada, a small town in the commune of Arambujá; el-Campo de Vallada, a translation of Faixs Ballāta, is also quoted, although its extent is less than that attributed to it by al-Idrīsī; its etymological derivation from *platea* or *vallata* appears to be neither well-founded nor acceptable.

(A. HUCI MIRANDA)

**BALĀT AL-SHUHADĀ'**, an expression used by the Arab historians for the Battle of Poitiers, which was fought between Charles Martel, at the head of the Christian Frankish armies, and the governor of Muslim Spain 'Abd al-Rahmān b. 'Abd Allāh al-ḡhāḡibī in Ramaḍān 114/October 732.

Neither the name of Poitiers nor that of Tours are mentioned by the Arab authors of the Middle Ages. As for the expression *Balāt al-Shuhadā'*, its occurrence is only recorded from the 15th/16th century onwards and only in Andalusian historians: Ibn Ḥayyān (died 469/1075), quoted by al-Makkārī, *Nafḥ al-Tib*, Leiden, II, 9, l. 15-16; Cairo 1949, IV, 15, 1-4 (the same author also called it *Waḡat al-Balāt*; Leiden, II, 9, l. 1-4; Cairo 1949, IV, 14, 1-9); the Anonymous Chronicle entitled *Ḍiḡḡirīyānī*, which dates from the 15th/16th century (ed. Lafuente y Alcantara, Madrid, 1868, text, 25; Spanish trans. 36 and no. 2); and subsequently in Ibn Baḡhwalī (died 578/1183), quoted by al-Makkārī, *op. cit.*, Leiden, II, 9, l. 16-17; Cairo, IV, 15, l. 5, but with the variant: *ḡhawāt al-Balāt*; Ibn 'Idhrī (died end of the VII/X century), *al-Bayān al-Muḡrib*, ed. Dorey, I, 371; ed. Colla, *op. cit.*, Leiden, 1902, 31; trans. Fagnon, I, 49, but the historian dates the event from 115, instead of from 114; Ibn Ḳhalḍūn (died 808/1406), *al-Ṣihar*, Būlak, IV, 119, l. 6, with lacunae which can be supplemented from the MSS. of the Bibliothèque Nationale de Paris and from the integral quotation by al-Makkārī, *op. cit.*, Leiden, I, 146, l. 37; Cairo 1949, I, 220, l. 15; Ibn 'Idhrī (died 1042/1632, supra under Ibn Baḡhwalī) and Ibn Ḳhalḍūn: the first passage has been translated by Lafuente y Alcantara, *Apéndices to Aḡhar Maḡmūna*, 198, and the second by Pascual de Gayangos, *The History of the Mohammedan Dynasties in Spain*, vol. II (London 1843), 37 and note 27.

In the other Arab historians of the Middle Ages, a simple allusion is made to the effect that the Muslims and their leader 'Abd al-Rahmān 'id a martyr's death there [for Islām] (*yusāḡḡadu or usūḡḡhidu*): Ibn 'Abd al-Hakam (died 257/871), *Faḡḡih Iḡḡriya wa' l-Andalus*, ed. A. Gateau, Algiers 1948, text 120, l. 11; French trans. 121, l. 22; al-Dabbī (died 999/1202), *Buḡḡat al-Muallim*, ed. Codera and Ribera, Madrid 1885, no. 1021, 353, l. 2 (with 113 at the end); Ibn al-Aḡḡir (died 1293/1351, v. 139 and 374) trans. Fagnon, *Annales*, Algiers 1902, 60, l. 6 and 94, l. 1-2.

The task confronting the modern historians, both

Arab and especially European, has mainly been to explain the term *Balāt al-Shuhadā'* and to determine the exact site of the battle. *Balāt* [g.n.] is borrowed from the Graeco-Latin and appears to render both *platea*: "wide paved road, paved public square", and *palatium*: "palace". It has been rendered, as regards the Battle of Poitiers, by "pavement" and by "highway". *Paḡḡ* [id. in: martyrs]; Reinaud, *Invasions des Sarrazins en France, et de France, en Saranie, en Pimont et dans la Suisse, pendant les 8<sup>e</sup>, 9<sup>e</sup> et 10<sup>e</sup> siècles de notre ère*, Paris 1836, 49; Pascual de Gayangos, *op. cit.*, II, 33 and 37: "pavement of the martyrs"; Cf. Huar, *Histoire des Arabes*, 1913, II, 136; H. Fournel, *Les Berbers*, . . . (1875), 280, n. 3; M. Mercier and A. Seguin, *Charles Martel et la bataille de Poitiers*, 1924, 17, 26, 27, 29; C. F. Seybold, in *EJL*, 1935, 83; 'Abd al-Rahmān . . . al-ḡhāḡibī, *Chausée* [of the martyrs]; Dorey, *Histoire des Musulmans d'Espagne*, 1861, I, 252; 2nd. ed. by E. Lévi-Provençal, 1932, I, 158 and n. 1; Lafuente y Alcantara, *op. cit.*, 36; Calzada; Fr. Codera, *Narbona, Gerona y Barcelona*, . . . 1909-1920, 191; Calzada; Ballesteros y Beretta, *Histoire de l'Espagne*, . . . II (1920), 9-10; Calzada; G. Marçais (and Ch. Diehl), *Le monde oriental de 395 à 1081*, 1936, 340 and n. 1; E. Lévi-Provençal, *Hist. Esp. Mus.*, 1930, 62: "Highway" (or Roman road) of the Martyrs for the Faith".

Study of the texts and examination of the terrain in the region lying between Poitiers and Tours have led the investigators to the largely consistent conclusions, admirably summed up by Professor Lévi-Provençal in the following words: [the battle took place] "near to a Roman road which linked Châtelleraut with Poitiers, about twenty km. north-east of the latter town, probably at a place which is today still called Moussais-la-Bataille . . . in October 732 or Ramaḍān 114 . . . more exactly . . . between the 25th and the 31st of October 732" (*Hist. Esp. Mus.*, I, 61-62).

**Bibliography:** In addition to the works and studies mentioned in the body of the article, the references should be consulted which are given by E. Lévi-Provençal in the 2nd. ed. of the *Histoire des Musulmans d'Espagne* by Dorey, Leiden, 1932, I, 158, note 1, and in his own *Hist. Esp. Mus.*, Paris-Leiden 1930, I, 59-60. To this must be added: H. Zotenberg, *Note sur les invasions arabes dans le Languedoc d'après les sources chrétiennes et les historiens musulmans*, in Dom Cl. Devic and Dom J. Vaissette, *Histoire générale du Languedoc*, Toulouse 1875, II, 549-558 (Christian sources: 549-554; Arabic sources: 555-558). The bibliography given by M. Mercier and A. Seguin, at the end of *Charles Martel et la bataille de Poitiers*, Paris 1924, 93-99, containing 133 references, should also be consulted. See also the following modern Arab authors who base their studies almost exclusively on Reinaud, *Invasions des Sarrazins*, . . . (Paris, 1836; English tr. by H. K. Sherwani in *IC* iv/1930 and v/1931), which is well over a century old: Shuḡlū Aslān, *Taḡḡīḡ ḡhawāt al-Ṣihar al-Balāt al-Muallim*, Cairo 1332/1913, 48, 56, 57, 84, 85, 92-103; Wāḡīḡ, *al-Balāt al-Shuhadā'*; M. 'Abd Allāh 'Inān, *Taḡḡīḡ al-Ṣihar fi ḡḡāḡiyyā*, . . . Cairo 1924, 35-59; idem, *Mawḡib ḡḡāḡiyyā fi Taḡḡīḡ al-Ṣihar*, Cairo 1347/1929, 16 and 214; idem, *al-Balāt fi ḡḡāḡiyyā wa Suḡḡar*, in the Cairo review *al-Risāla*, no. 72 (10 November 1934), no. 73 (26 November 1934), no. 74 (3 December 1934); Husayn Murād, *Taḡḡīḡ al-Ṣihar fi ḡḡāḡiyyā*, Cairo 1348/1930, 27

(does not use the Arabic term); Durrus al-Bustānī, *Maḡārib al-Ṣihar fi ḡḡāḡiyyā wa ḡḡāḡiyyā*, Beirut 1944, 55-56; Husayn Muḡnis, *Aḡḡar Zukūr al-Islām fi ḡḡāḡiyyā al-Siyāḡiyyā wa ḡḡāḡiyyā*, published by the Société Égyptienne d'Études Historiques, Cairo, iv, fasc. I (May 1935), 67-68, with Bibliography, 68, etc.

Lastly, the following two works should be noted: the Arabic translation by 'Alī al-ḡḡirī, under the title of: *al-Ṣihar fi ḡḡāḡiyyā*, Cairo 1366/1947, 27-28, of S. Lane-Poole's *The Moors in Spain*, London 1887, 2nd. ed. 1920; and the historical romance of ḡḡurḡī Zayḡīn (d. 1312/1914), *Sharḡ wa 'ḡḡad al-Rahmān*, Kūḡḡyā Taḡḡīḡiyyā ḡḡāḡiyyā, Cairo 1904, 4th. ed. 1926, 181, 185, 218, 219, 221, 230.

In conclusion, it is perhaps of interest to note that al-Taharī (d. 310/923), is absolutely silent on the Battle of Poitiers (there is nothing in his *Taḡḡīḡ al-Uḡḡā wa ḡḡāḡiyyā* [Annals], vol. anno 114, or in the two or three preceding or following years); likewise Ibn al-Ḳūḡḡiyya (died 657/1077), in his *Iḡḡāḡ al-Andalus*. (H. PERES)

**BALĀTUNUS**, mediaeval name of a Syrian fortress now in ruins and called Kaḡ'at al-Muḡḡāḡ, which was built on one of the first spurs of the ḡḡāḡiyyā Anḡḡiyyā, and, with the castle of ḡḡāḡiyyā, commanded the plain of al-ḡḡāḡiyyā and guarded the road from the Ottomans to ḡḡāḡiyyā, "its port" according to al-Dīnawarī.

According to the Arabic sources, it is supposed to have been begun by the clan of the Banu ḡḡāḡiyyā, then continued by the Byzantines who obtained possession of it and, in the time of Basil II, based the protection of the coastal region, in which they had taken up their quarters, partly upon it. It again passed under Arab control, but after the First Crusade, was to fall into the hands of Roger of Antioch, who bestowed it on the lord of Saḡḡa as a fief, and it remained in the hands of the Franks from 312/1118 to 584/1188. At this latter date, Salāḡ al-Dīn made himself master of it and in the ayūdḡūn period it became temporarily part of the Kingdom of Aleppo of al-Malik al-Zāḡir. After the Mongol invasion which had encouraged the efforts of a local family to establish their independence, it was obliged to surrender to Baybars in 667/1269 and became in the Mamūḡḡ period the centre of one of the six districts of the *niḡāḡa* of Tripoli.

It is not known when it fell into ruins and relinquished its ancient name (derived from the Latin *Platanus*) for the present term, which for a long time prevented its identification.

(J. SOURDEL-THOMAS)

**BALĀWĀT.** This is a small village lying some 16 miles south-east of Mawḡil on the Dayr Maḡḡān-Kara Kūḡḡ road. It is mentioned by Yāqūt under "Balāḡḡḡ", which he describes as follows: "It is a village situated east of Mawḡil in the province of Nineveh and can be reached by a short journey

from Mawṣil. It is frequented by caravans and there exists in it a *khan* for travellers. It lies between Tigris and the Zab rivers'. Balāwāt is one of the villages in the Ḥamdāniyya *ṣūfiyya* in the Mawṣil *Liwa'* of 'Irāq. The majority of its inhabitants are of the Shābak faith (cf. Ahmad Ḥamid al-Sarāfi, *al-Shabak*, 10). Balāwāt's only claim to fame is the existence of a historical mound some few steps from it. This mound is known as 'Tell Balāwāt', and is one of the Assyrian historical sites excavated in the 19th century; Hormad Rassam, of Mawṣil, discovered there in 1878 the bronze gates of the palace of the Assyrian king Shalmaneser III (859-824 B.C.). These gates were taken to the British Museum, London. The inscriptions and scenery contained thereon illustrate the first third of the reign of this king, and also clarify some of the conditions prevailing in the 9th century B.C. From some of the Assyrian texts, it appears that the ancient name of Tell Balāwāt was Inqur-Eulil.

**BALAWHAR** [see BILAWHAR wa YŪDĀSĀF].

**al-BALAWĪ**, ARB. MUḥ. 'ABD ALLĀH b. MUḥ. al-MADINĪ, Egyptian historian; the dates of his birth and death are not known, but we can reasonably assume that he lived in the 14th/15th century. He belonged to the Arab tribe Balāwī, a branch of the Kudā'a, who were scattered in different parts of the Ḥijāz, Syria and Egypt.

The earliest biographical notice is that given in the *Fihrist*, which names several books. All of them are lost, but al-Balawī's *Sīrat Ahmad b. Tulūn* was discovered in about 1935 by the late Muḥ. Kurd 'Alī. He edited it with a long introduction and useful commentary (Damascus 1939). Kurd 'Alī took al-Balawī for an Isma'īlī writer, a point of view which has been wronged by Ivanov, by Abū 'Abd-Allāh al-Zinjānī, and by the late 'Abd al-Ḥamid al-'Abbādī.

There are other short biographies of al-Balawī in the later books of biography such as al-Tūlūn's *al-Fihrist*, al-Nadīd's *Kiṭāb al-Riḡāl*, al-Dhahabī's *Mizān al-Fidāl* and Ibn Ḥaǧǧar's *Lisān al-Mizān*. These all agree in saying that he was a 'hār' (he relating *ḥadīth*) and that he cannot be relied upon because he forges *ḥadīth*. Ibn Ḥaǧǧar adds that he is 'the author of al-Shāfi'ī's journey which was elaborated and beautified by him, but most of its contents were invented'.

His book *Sīrat Ibn Tulūn* is now considered the most important source for the study not only of the history of this great ruler but also of the history of Egypt, the 'Abbasid Caliphate and the Near East in general in the second half of the 10th century. It is more detailed than other sources on the same subject, such as *Sīrat Ibn Tulūn* by Ibn al-Dāya (abridged by Ibn Sa'd in *al-Maǧrib*), *Kiṭāb al-Maǧrib* by the same author, *Abḥār al-Salāwī* al-Muḥ. by Ibn Zillāl and *Kiṭāb al-Walī* wa *T-Ḥuǧūl* by al-Kinī.

Al-Balawī says in the introduction that he was asked to write a history of the Tulūnids in greater

detail than the earlier work by Ahmad b. Yūsuf Ibn al-Dāya, but he does not name the person who asked him to write this book. There are indications, however, that he was a statesman or a man of letters of the Ḥijāzīd period. For instance, al-Balawī mentions in his book the 'Abbasid Caliph al-Muqtadir, who was killed in the year 320/932, and this means that the book must have been written after this year (al-Ḥijāzīd began his rule in Egypt in the year 323/935-5). It is obvious too that al-Balawī wrote his book after the death of Ibn al-Dāya, and we know that the latter died in the year 330/942-2. The manuscript which was discovered by Kurd 'Alī bears the title *Kiṭāb Sīrat Ḍī Tulūn*, but only contains the biography of Ahmad b. Tulūn.

There is great resemblance between al-Balawī's work and that written by Ibn al-Dāya, although the former is more detailed. Kurd 'Alī says that al-Balawī copied from his predecessor but it seems more likely that both of them depended mostly upon the same main source, which was the official documents preserved in the first chancery office (*Diwān al-Inḡā'*) founded in Egypt by Ahmad Ibn Tulūn (see the *Sīrat* of al-Balawī, 100-1, 111, 122, 224, 228-9).

The *Sīrat* of al-Balawī is an invaluable source for many reasons. One of the oldest Muslim historical works written in Egypt, it sheds new light on the history of institutions, such as the *ḥijāzīd*, the police, justice, espionage, the post, etc. It also contains a number of official documents relating to that period.

**Bibliography:** Ibn Sa'd al-Andalusī, *al-Maǧrib* fi *Ḥudā al-Maǧrib*, vol. i of the part concerning Egypt, ed. Zakī Muḥ. Ḥasan, Shawki Dayf and Sayyida Ism'īl Kūhūl, Cairo 1935; Ibn al-Nadīm, *al-Fihrist*, Cairo (no date); al-Tūlūn, *Fihrist* *Kiṭāb al-Ḥijāz*, Calcutta 1853; al-Nadīd, *Kiṭāb al-Riḡāl*, Bombay 1317/1899-1900; al-Dhahabī, *Mizān al-Fidāl* fi *Nabā' al-Riḡāl*, Lucknow 1884; Ibn Ḥaǧǧar, *Lisān al-Mizān*, Haydarābād 1320-31 A.H.; 'Abd al-Ḥamid al-'Abbādī, *Sīrat Ahmad b. Tulūn* *bi-Abi Muḥ. 'Abd Allāh*, . . . . . *al-Balawī* (review in *Bulletin of the Faculty of Arts, Alexandria University*, vol. i, 1943, 1-9).

(G. E. SHAYYAL)

**BALBAḤ** [see DEHĪ SULTANĀT].  
**BALDJ n. BISHR** b. 'IYĀD al-KURĠAYK, an Arab military leader, of a brave but haughty disposition, commanded the Syrian cavalry in the army sent against the Berbers in 123/741 by the Caliph Ḥaǧǧar b. 'Abd al-Malik, under the leadership of Kulūthūm b. 'Iyāḍ, Baldj's uncle. After his arrival in Ifrīkiya (in Kamādīn 123/20 July-15 August 741), the violence and arrogance Baldj and his Syrians earned them the bitter hostility of the African Arabs, especially the Anṣār, who had fled westwards in a body after the battle fought in the Hara in 63/685. So it was that when near Tilmisān the Syrian army was united with the African army (together amounting to some 60,000 men), they all but came to blows through the arrogance of the Syrians and a quarrel which arose between Baldj and the commander of the African troops Ḥabīb b. Abī 'Ubayda. The Berbers, however, so as to exhaust the enemy, withdrew right up to the river Sebā, at the extreme limit of the Maghreb. Just before the encounter with the Berber army, Kulūthūm withdrew the command of the African contingent from Ḥabīb, who was well-versed in Berber fighting methods, but whose counsel was arrogantly rejected

by Baldj, and entrusted it to two Syrian officers, a measure which still further increased the resentment of the Africans. As a result, the Arabs suffered a complete defeat at Balḡāra (or Nabḡāra on the Sebā to the North of Fās, comp. Fournel, *Les Berbers*, i, 294, rem. 1). Baldj himself, by his overconfidence and the impetuosity of his attack, which resulted in his becoming separated in the action from his foot-soldiers, was the real cause of the disaster (in *Ḥudūd al-Maǧrib*, 12-13, October-14 November 741). At the head of some 7,000 horsemen, he fought his way through to Ceuta, where he withstood a protracted siege by the Berbers, until the day when the governor of Cordova, 'Abd al-Malik b. Katān (q.v.), an Anṣārī, brought him over to Spain with his Syrians to use him against the Berbers who were in revolt there. Precautions, moreover, were taken on both sides; Baldj undertook to leave Spain as soon as the Berber revolt had been repressed; he was to give hostages as a guarantee. On his part, the governor 'Abd al-Malik promised the Syrians that when the time came for them to depart, they would be taken back to North Africa all together and not in separate groups, which would make them extremely vulnerable; and that, furthermore, they would be landed at a point on the coast of the Maghrib, where the hinterland was effectively under Arab control. The intervention of Baldj and his horsemen was decisive; the Berber rebels had formed themselves into three columns. Baldj countered swiftly and scattered the first group in the direction of Medina-Sidonia. The second was dispersed in the Cordova region. The third and most numerous column, engaged in laying siege to Toledo, was severely defeated at the battle of Wādī Salūt, (the arroyo of Guazalet, a small tributary of the left bank of the Tagus). Thereafter, the governor 'Abd al-Malik's only desire was to send his too burdensome auxiliaries back to Africa. But he did not adhere to his word, and tried to interpret the stipulations of the agreement contracted with him in the manner less favourable to the Syrians. When he sought to re-embark them for Ceuta the enraged *ghundis* swiftly surprised the weak garrison of Cordova, expelled the governor 'Abd al-Malik from his palace and installed Baldj in his place. In spite of his predecessor's advanced age, he made the mistake of having him put to torture. An encounter between the two parties took place a little later, in Shawwāl 124/August 742, at Aqua Portora, a few leagues to the north of Cordova, where the Syrians were the victors, in spite of the bravery of the governor of Narbonne, who mortally wounded Baldj with his own hand.

**BALEARIC ISLANDS** [see MAYURKA].

**BĀLFURŪSH** [see BĀRBUŪSH].

**BALHĀRA** (al-Balḡhar or Balḡārah < Balḡah-rā, Prakrit form of 'Vallabha-rā', meaning 'the beloved king') represents the title of the kings belonging to the Rāḡhītrakūṭa dynasty of the Deccan (c. A.D. 753-975), whose capital was at Mānyakheta, now Malkhed (Ar. *Māshir*), south of Gulbarga

(Mysore). Ibn Khurraḍādhbih and Ibn Rusta's information that Balḡhar meant 'the king of kings' or 'the king of the kings of India' is incorrect. Ibn Khurraḍādhbih's Balḡhar almost certainly pertains to Govinda III (A.D. 793-814); Sulaymān's to the same prince or to his son Śarva or Amoghavarsha (A.D. 814-878); al-Mas'ūdī's to Indra III (A.D. 914-922); and that of Ibn Hawkal also to Amoghavarsha. The later references are mostly repetitions of the information supplied by the earlier authorities. Arab writers generally acclaim these rulers as 'the greatest king of India' or 'the most illustrious', and epithets like 'the king of kings' or 'the supreme king of India' seem to reflect the glory and political supremacy of princes like Govinda III or Indra III. However, some authors present an exaggerated account of the extent of the Rāḡhītrakūṭa kingdom (e.g., *Abḥār al-Sin* 'beginning from the sea-coast called Kumkham (Konkan) and continuing onward up to China'; some authors 'have somewhat misunderstood Sulaymān [i.e. the *Abḥār al-Sin*] in saying that Kumkham was the name of Balḡhar-rā's country', see *Ḥudūd al-'Ālam*, 238 n. 2). But generally the descriptions of the kingdom are confined to the coastal towns of Bombay, with which Muslim merchants and travellers were familiar, and in which large numbers of Muslims had settled. Arab writers are unanimous in stating that the Balḡhār loved the Arabs more than any other prince of India did, and that Islam was protected and openly practised in their kingdom. They even appointed Muslims as governors or heads of Muslim communities living in their kingdom. From their accounts it appears that the Arabs were aware, though not fully, of the sanguinary wars that took place between these princes, the Gōrjāra-Pratīhāras (al-Djura) of the North and the Pālas (Dhomy) of Bengal. The love of the Rāḡhītrakūṭas for the Arabs and their liberal attitude towards Islam, as well as the immense praise and glorification of the Rāḡhītrakūṭas by the Arabs, must have arisen from the Rāḡhītrakūṭas' considering the Muslims as allies against the Gōrjāra-Pratīhāras, who were inimical to the Arabs of Sind, and from the presence of large numbers of Muslims living in their kingdom.

**BAL-HĀRĪTH** [see HĀRĪTH wa KA'SĀN].

**BĀLĪ**, one of the Muslim trading states in southern Ethiopia. It lay to the east of Lalḡ Awasa and the Ganale Doria, and extended to the Webi Shabelle near longitude 40° E., with a narrow piece stretching north of the Webi Shabelle to the edge of the Danakil lowlands, the railway marking approximately the northern boundary. The first mention of Bālī seems to be in the epikina in honour of 'Amāya Syon king of Ethiopia, 1312-42 (I. Guidi, *Rend. Lin.*, 1889, nos. viii and ix) where Bālī is described as part of the king's dominions. In the middle of the 14th century al-Umārī described Bālī as being 20 days' journey in length and six days in breadth, under a king who was tributary to the king of Ethiopia and possessed an army of 40,000 horsemen. A century later al-Makrīdī repeats al-

from Mawṣil. It is frequented by caravans and there exists in it a *khan* for travellers. It lies between Tigris and the Zab rivers'. Balāwāt is one of the villages in the Ḥamdāniyya *maṣāʾir* in the Mawṣil *Liwaʾ* of 'Irāq. The majority of its inhabitants are of the Shābak faith (cf. Ahmad Ḥamid al-Sarāfi, *al-Shabak*, 10). Balāwāt's only claim to fame is the existence of a historical mound some few steps from it. This mound is known as 'Tell Balāwāt', and is one of the Assyrian historical sites excavated in the 19th century; Hormuzd Rassam, of Mawṣil, discovered there in 1878 the bronze gates of the palace of the Assyrian king Shalmaneser III (859-824 B.C.). These gates were taken to the British Museum, London. The inscriptions and scenery contained thereon illustrate the first third of the reign of this king, and also clarify some of the conditions prevailing in the 9th century B.C. From some of the Assyrian texts, it appears that the ancient name of Tell Balāwāt was Inqur-Enlil.

**al-BALAWĪ**, ARB. MUḥ. 'ABD ALLĀH b. MUḥ. al-MADINĪ, Egyptian historian; the dates of his birth and death are not known, but we can reasonably assume that he lived in the 14th/15th century. He belonged to the Arab tribe Balāwī, a branch of the Kudāṣa, who were scattered in different parts of the Ḥijāz, Syria and Egypt.

The earliest biographical notice is that given in the *Fihrist*, which names several books. All of them are lost, but al-Balawī's *Sīrat Ahmad b. Tulūn* was discovered in about 1935 by the late Muḥ. Kurd 'Alī. He edited it with a long introduction and useful commentary (Damascus 1939). Kurd 'Alī took al-Balawī for an Isma'īlī writer, a point of view which has been wronged by Ivanov, by Abū 'Abd-Allāh al-Zinjānī, and by the late 'Abd al-Ḥamid al-'Abbādī.

There are other short biographies of al-Balawī in the later books of biography such as al-Tūṣī's *al-Fihrist*, al-Nadīm's *Kitaḥ al-Riḡāl*, al-Dhahabī's *Mizān al-Fidāl* and Ibn Ḥaǧǧar's *Lisān al-Mizān*. These all agree in saying that he was a 'hār' (he relating *ḥadīth*) and that he cannot be relied upon because he forges *ḥadīth*. Ibn Ḥaǧǧar adds that he is 'the author of al-Shāfi'ī's journey which was elaborated and beautified by him, but most of its contents were invented'.

His book *Sīrat Ibn Tulūn* is now considered the most important source for the study not only of the history of this great ruler but also of the history of Egypt, the 'Abbasid Caliphate and the Near East in general in the second half of the 10th century. It is more detailed than other sources on the same subject, such as *Sīrat Ibn Tulūn* by Ibn al-Dāya (abridged by Ibn Sa'ūd, *al-Maǧrib*), *Kitaḥ al-Maḥdī* by the same author, *Abḥār al-Salawī* al-Muḥī by Ibn Zillāl and *Kitaḥ al-Walī* wa *T-Ḥaǧǧat* by al-Kinādi.

Al-Balawī says in the introduction that he was asked to write a history of the Tulūnids in greater

detail than the earlier work by Ahmad b. Yūsuf Ibn al-Dāya, but he does not name the person who asked him to write this book. There are indications, however, that he was a statesman or a man of letters of the Ḥijāzī period. For instance, al-Balawī mentions in his book the 'Abbasid Caliph al-Muḥtadīr, who was killed in the year 230/932, and this means that the book must have been written after this year (al-Ḥijāzī began his rule in Egypt in the year 323/935-5). It is obvious too that al-Balawī wrote his book after the death of Ibn al-Dāya, and we know that the latter died in the year 330/942-2. The manuscript which was discovered by Kurd 'Alī bears the title *Kitaḥ Sīrat Ḍī Tulūn*, but only contains the biography of Ahmad b. Tulūn.

There is great resemblance between al-Balawī's work and that written by Ibn al-Dāya, although the former is more detailed. Kurd 'Alī says that al-Balawī copied from his predecessor but it seems more likely that both of them depended mostly upon the same main source, which was the official documents preserved in the first chancery office (*Diwān al-Inḡāḡ*) founded in Egypt by Ahmad Ibn Tulūn (see the *Sīrat* of al-Balawī, 100-1, 111, 122, 224, 228-9).

The *Sīrat* of al-Balawī is an invaluable source for many reasons. One of the oldest Muslim historical works written in Egypt, it sheds new light on the history of institutions, such as the *ḥijāzī*, the police, justice, espionage, the post, etc. It also contains a number of official documents relating to that period.

**BALBAṢ** [see DEHI SULTANATE].  
**BALDJ n. BISHR** b. 'IYĀD al-KURĠAYK, an Arab military leader, of a brave but haughty disposition, commanded the Syrian cavalry in the army sent against the Berbers in 123/741 by the Caliph Ḥaǧǧan b. 'Abd al-Malik, under the leadership of Kulthūm b. 'Iyāḍ, Baldj's uncle. After his arrival in Ifrīkiya (in Kamādīn 123/20 July-15 August 741), the violence and arrogance Baldj and his Syrians earned them the bitter hostility of the African Arabs, especially the Ansār, who had fled westwards in a body after the battle fought in the Hara in 63/685. So it was that when near Tilmisān the Syrian army was united with the African army (together amounting to some 60,000 men), they all but came to blows through the arrogance of the Syrians and a quarrel which arose between Baldj and the commander of the African troops Ḥabīb b. Abī 'Ubayda. The Berbers, however, so as to exhaust the enemy, withdrew right up to the river Sebā, at the extreme limit of the Maghreb. Just before the encounter with the Berber army, Kulthūm withdrew the command of the African contingent from Ḥabīb, who was well-versed in Berber fighting methods, but whose counsel was arrogantly rejected

by Baldj, and entrusted it to two Syrian officers, a measure which still further increased the resentment of the Africans. As a result, the Arabs suffered a complete defeat at Baddūra (or Nabdūra on the Sebā to the North of Fās, comp. Fournel, *Les Berbers*, i, 294, rem. 1). Baldj himself, by his overconfidence and the impetuosity of his attack, which resulted in his becoming separated in the action from his foot-soldiers, was the real cause of the disaster (in *Ḍi* 1-Ḥijāzī, 12, 117, October-14 November 741). At the head of some 7,000 horsemen, he fought his way through to Ceuta, where he withstood a protracted siege by the Berbers, until the day when the governor of Cordova, 'Abd al-Malik b. Katān (q.v.), an Ansārī, brought him over to Spain with his Syrians to use him against the Berbers who were in revolt there. Precautions, moreover, were taken on both sides; Baldj undertook to leave Spain as soon as the Berber revolt had been repressed; he was to give hostages as a guarantee. On his part, the governor 'Abd al-Malik promised the Syrians that when the time came for them to depart, they would be taken back to North Africa all together and not in separate groups, which would make them extremely vulnerable; and that, furthermore, they would be landed at a point on the coast of the Maghrib, where the hinterland was effectively under Arab control. The intervention of Baldj and his horsemen was decisive; the Berber rebels had formed themselves into three columns. Baldj countered swiftly and scattered the first group in the direction of Medina-Sidonia. The second was dispersed in the Cordova region. The third and most numerous column, engaged in laying siege to Toledo, was severely defeated at the battle of Wādī Salūt, (the arroyo of Guazalet, a small tributary of the left bank of the Tagus). Thereafter, the governor 'Abd al-Malik's only desire was to send his too burdensome auxiliaries back to Africa. But he did not adhere to his word, and tried to interpret the stipulations of the agreement contracted with him in the manner less favourable to the Syrians. When he sought to re-embark them for Ceuta the enraged *ghundis* swiftly surprised the weak garrison of Cordova, expelled the governor 'Abd al-Malik from his palace and installed Baldj in his place. In spite of his predecessor's advanced age, he made the mistake of having him put to torture. An encounter between the two parties took place a little later, in Shawwāl 124/August 742, at Aqua Portora, a few leagues to the north of Cordova, where the Syrians were the victors, in spite of the bravery of the governor of Narbonne, who mortally wounded Baldj with his own hand.

**BALEARIC ISLANDS** [see MAYURKA].

**BĀLFURŪSH** [see BĀRĠURŪSH].

**BALHĀRA** (al-Balharay or Balahārā < Balahārā, Prakrit form of 'Vallabha-rāṣa', meaning 'the beloved king') represents the title of the kings belonging to the Rāḡhtrakūṭa dynasty of the Deccan (c. A.D. 753-975), whose capital was at Mānyakheta, now Malkhed (Ar. *Māshir*), south of Gulbarga

(Mysore). Ibn Khurraḍādhbih and Ibn Rusta's information that Balhārā meant 'the king of kings' or 'the king of the kings of India' is incorrect. Ibn Khurraḍādhbih's Balhārā almost certainly pertains to Govinda III (A.D. 793-814); Sulaymān's to the same prince or to his son Śarva or Amoghavarsha (A.D. 814-878); al-Mas'ūdī's to Indra III (A.D. 914-922); and that of Ibn Hawkal also to Amoghavarsha. The later references are mostly repetitions of the information supplied by the earlier authorities. Arab writers generally acclaim these rulers as 'the greatest king of India' or 'the most illustrious', and epithets like 'the king of kings' or 'the supreme king of India' seem to reflect the glory and political supremacy of princes like Govinda III or Indra III. However, some authors present an exaggerated account of the extent of the Rāḡhtrakūṭa kingdom (e.g., *Abḥār al-Sīn* 'beginning from the sea-coast called Kumham (Koukan) and continuing overlaid up to China'; some authors 'have somewhat misunderstood Sulaymān [i.e. the *Abḥār al-Sīn*] in saying that Kumham was the name of Balahār-rā's country', see *Ḥudūd al-'Ālam*, 238 n. 2). But generally the descriptions of the kingdom are confined to the coastal towns of Bombay, with which Muslim merchants and travellers were familiar, and in which large numbers of Muslims had settled. Arab writers are unanimous in stating that the Balhārās loved the Arabs more than any other prince of India did, and that Islam was protected and openly practised in their kingdom. They even appointed Muslims as governors or heads of Muslim communities living in their kingdom. From their accounts it appears that the Arabs were aware, though not fully, of the sanguinary wars that took place between these princes, the Gūjara-Pratīhāras (al-Djura) of the North and the Pālas (Dhomy) of Bengal. The love of the Rāḡhtrakūṭas for the Arabs and their liberal attitude towards Islam, as well as the immense praise and glorification of the Rāḡhtrakūṭas by the Arabs, must have arisen from the Rāḡhtrakūṭas' considering the Muslims as allies against the Gūjara-Pratīhāras, who were inimical to the Arabs of Sind, and from the presence of large numbers of Muslims living in their kingdom.

**BAL-HĀRĪTH** [see HĀRĪTH wa KA'SAN].

**BĀLĪ**, one of the Muslim trading states in southern Ethiopia. It lay to the east of Lalḥ Awasa and the Ganale Doria, and extended to the Webi Shabelle near longitude 40° E., with a narrow piece stretching north of the Webi Shabelle to the edge of the Danakil lowlands, the railway marking approximately the northern boundary. The first mention of Bālī seems to be in the epikina in honour of 'Amāya Syon king of Ethiopia, 1312-42 (I. Guidi, *Rend. Lin.*, 1889, nos. viii and ix) where Bālī is described as part of the king's dominions. In the middle of the 14th century al-Umari described Bālī as being 20 days' journey in length and six days in breadth, under a king who was tributary to the king of Ethiopia and possessed an army of 40,000 horsemen. A century later al-Makrīzī repeats al-

'Umar's account, including the statement that the people of Bali were Hanafis. Till about 1542 the state remained tributary to Ethiopia, when 'Abdā the ruler made himself independent of Gāllawēwos king of Ethiopia.

**BALI** (see BALIWA).

**BALIABADRA**, Turkish name for Pátrai, Patras (fourth largest town on the Greek mainland and the largest on the Morean peninsula), situated on the gulf of the same west of the entrance to the Gulf of Corinth (Turkish *Kardos*, [g.r.]), capital of the Nomos Achaia, seat of a bishop. It had about 85,000 inhabitants in 1951. The name Baliabadra comes from Παλαιά Πάτρας, or rather Παλαιά Πάτρα (Pátra is even today the colloquial name for the town), i.e., Old Pátrai, apparently because from the 14th century onwards New Pátrai denoted the fortress under whose protection the old settlement was. Nikiphoros Gregoriás (IV.9.4) describes it explicitly as *προσφύγον τὸ τῶν Νέων Πατρῶν ἐπιτελευλήτων*. The adjective would not, therefore seem to have been added to distinguish Old Pátrai from Nέα Πάτρα, a place near Lania (Turkish Zitrū, conquered by the Ottomans in 1393, which was itself more usually known as Patrazh [Πατράζης, from the Turkish Badradjik] although today, as in antiquity, it is once again known as Hyptai. In the west, Old Pátrai is known as Patras (from 'c 742 Πάτρας, compare the Italian Patrasco).

Additional data concerning its pre-Ottoman history can be found in the works of A. Bon, E. Gerland, Wm. Miller, D. A. Zakythinos, cf. bibliography at the end of the article. Only the following facts need be mentioned here: at the division of the Byzantine Empire in 1204, the town became the seat of the Latin duchy of Achaia, and also the seat of an archbishop. In 1408, it became Venetian. On 1 July 1428, the town was threatened—but not captured—by Palaeologus princes who were quarrelling amongst themselves. On 20 March 1429, the despot Constantine repeated the attack on the town. During the course of this attack, the population turned away from the Latin archbishop Pandolfo Malatesta, and their notables swore an oath of allegiance to the Greek despot on June 5th in the Church of St. Andrew. The fortress continued to hold out, and did not succumb to the Greeks until May 1430 (Zakythinos, i, 206 ff.). At the time, Sulhān Murād II objected to the taking of Pátrai, asking the Greeks to refrain from occupying it, as the inhabitants desired to pay their tribute to him. Sphrantzīs, the first governor of Pátrai (later a historian), negotiated with the Porte, and eventually succeeded in obtaining the Sultan's consent (Sphrantzīs, 152-3). It was, apparently, not until 17 years later that Murād II made an attempt to gain Pátrai for himself. According to Dukas (ed. Vas. Grecu [Bucharest 1958], 278, 13), he advanced in the winter of 1446/7 "as far as Pátrai and Klarentza" (the Kyllini to today), on which occasion he may have succeeded in taking the open town by a surprise attack, but it is hardly likely that he also overcame the almost impregnable fortress above. Cf. however Hammer-Purgstall, i, 473. The country all around was laid waste at the time, and some 60,000 people were led off into slavery. When the despot Constantine

became Emperor of Byzantium in 1448, his brother Thomas took possession of north-western Morea, that is to say, of the whole of Achaia, including Pátrai and Klarentza, where he may well have held court (cf. Zakythinos, i, 242). Mehemmed II, the Conqueror, went in person to Pátrai, in summer 1458, arriving from Mouchli (cf. E. Darlo in the Πρακτικά of the Academy of Athens, vi, Athens 1931, 22-29). He found it deserted and derelict. The inhabitants had fled to Venetian possessions on the Morean peninsula. This time, the fortress surrendered after a short resistance (cf. Kritoboulos, in the edition of G. Müller, Hildesheim, V, Paris 1870, 123, also F. Babinger, *Mémoires des Evénements et des Zéts*, Munich 1953, 176 ff. (French edition 1954, Italian edition 1957). The sultan considered Pátrai a suitable place for his commerce with the West, and he therefore invited the population to return, granting special privileges and tax reductions (cf. Kritoboulos, in the above mentioned book, 123; and Zakythinos (see above), i, 258). Later, early in 1459, there were Greek attempts to regain the town, but these failed (cf. Chalkokondyles, ed. I. Bekker, 457 f.). Pátrai remained, now as Baliabadra, an Ottoman possession for more than 350 years, without, however, regaining the great position it had once held in the times of the Roman Emperors, when there was a flourishing trade with Italy. Baliabadra became a Turkish provincial town and administrative centre, but was without any commercial significance. Attempts made by Venice to regain the town repeatedly failed. In summer 1464, Jacopo Barbarigo, Provveditore of Morea, made an ill-fated attempt on the town, which was successfully repulsed by Turakhan-oghlu 'Umar-Beg (cf. s.v. and also Hammer-Purgstall, ii, 84 f.). In September 1532, however, the imperial admiral Andrea Doria captured the practically unprotected Pátrai without fighting, but the re-occupation was only temporary (cf. J. W. Zinkeisen, *Geschichte des Osmanischen Reiches*, ii, 734 f.). In 1685, the Venetian general landed in Pátrai (with an army which largely consisted of German mercenaries) in order to drive the Turks from Morea. On 24 July 1687, Baliabadra (abandoned by the Ottomans and partly by the Turks) fell into the hands of F. Morosini's troops after a heated battle (cf. Zinkeisen, v, 132); but this re-occupation, again, did not lead to any permanent re-establishment of Venetian rule in Morea. In the middle of April 1770, the town was taken by surprise by a horde of Greeks, who were shortly afterwards either killed or taken as slaves by the Albanians and Turks. At that time, Baliabadra once again went up in flames, and only a few families saved themselves and their possessions, fleeing to the Ionian islands (cf. Zinkeisen, v, 931). The first big Greek rebellion against Turkish rule in Pátrai started on 6 April 1821. On this occasion, the archbishop of Pátrai (since 1806) Germanos (1771-1826) led the battle for liberation. On 15 April 1822, the Ottomans stormed the town for the last time under the leadership of Yusuf and Muhibb Pasha (from Serres), who razed the town to the ground. French troops came to the assistance of the Greeks and took possession of Pátrai in 1828, being relieved by the Bavarians in 1833. Since then, the town has been rebuilt in a regular checkerboard plan and has once again developed into a flourishing port, linked more recently with Athens (cf. Pátrai) overlaid by the Islanopolis Katas (130 km.).

Until the middle of the 18th century, whilst Baliabadra was under Ottoman rule, it had only once been described by a western traveller, viz.

Master Thomas Dallam (1599-1600), see *Early Voyages and Travels in the Levant*, ed. by I. Theod. Bent (London 1891; Hakluyt Society, vol. LXXXVII), 86. The first such description dates from 1740, when Richard Pococke (*A Description of the East*, ii/2, London 1745, 176 f.) mentions it as an unhealthy town in a swampy plain, seat of a Greek archbishop, with 12 parish churches, such with 30 Christian families, some 10 Jewish families and roughly 250 Turkish ones "who are not the best sort of people". At that time there were an English Consul General, a French Vice-Consul (the Consulate was in Modon), and a Venetian and a Dutch Consul in Pátrai. The description of the town by Dr. Richard Chandler (*Travels in Greece*, Oxford 1796) in 1795 is much the same. The description by the Ottoman globe-trotter Ewilyā Celbi (*Seyahatnâme*, viii, Istanbul 1928, 288-292), who was there in 1680/1669, is much more extensive. He noted a mosque near the market (*çarşı*), donated by Mehemmed II, and one of Bāyazīd II in the citadel (*cf. ba'la*), also the mosque of the Kaya (Ketikhudā Dī), and not far from this, the mosque of Şeykh-Efendi; that of Ibrahim Cavus, and finally the mosque at the Dabblagh-khāne (i.e., tannery). Furthermore there were at that time three smaller houses of prayer (*masjid*), four Dervish monasteries (that of Şeykh-Efendi amongst them), and three baths (*hammam*). Ewilyā Celbi mentions places of pilgrimage near Baliabadra, amongst these the one of Şarī Saḥib Baba (i.e., i.e., 'Arrested Nicola', the one of 'Jovand-Baba'—doubtless old Christian places of pilgrimage. In his description, Ewilyā Celbi calls Baliabadra "ballu (balli) Baliabadra", i.e., "Baliabadra rich in honey"; compare "ballu Badra" (*Anonymous Giese*, 141, 6). Hādījī Khālifa (*Rumelt und Bosna*, translated by J. v. Hammer, Vienna 1812, 124 f.) gives only a few details concerning the port and administration in Baliabadra. The fever-ditch, swampy plains to the north, east and south-east of the town (cf. R. Pococke, in the above mentioned book, ii/2, 176), have long since been dried up. Commerce is largely concerned with currants, oil, and wine, as well as silk (which was already cultivated in Ottoman times, as is also described by Pococke), and this has made Pátrai into a flourishing trading centre. According to Ludwig Steub, *Bilder aus Griechenland*, Leipzig 1885, 236, in 1822, Pátrai consisted solely of the ruins of five mosques, fallen down churches, derelict houses, and only a few repaired and inhabited dwellings.

Steub, see above, gives a vivid picture of Pátrai and its inhabitants in the year 1846 on page 249.

**BALIGH** (ā), major, of full age; *baligh* puberty, majority; opp. *paghir*, minor, *jahil*, boy, Encyclopedia of Islam

*paghir*, minority. Majority in Islamic law is, generally speaking, determined by physical maturity in either sex (the *Shāfi's* explicitly lay down a minimum limit of nine years); should physical maturity not manifest itself, majority is presumed at a certain age: fifteen years according to the Hanafis, *Shāfi's* and Hanbalis, eighteen years according to the Mālikis (various other opinions are ascribed to the old authorities). Within these limits, the declaration of the person concerned that he or she has reached puberty, is accepted. Majority is one of the conditions of full legal capacity; the minor is subject to a legal disability (*hadhr*) and to the guardianship of his father or other legal guardian (cf. *walāya*). The major who is of sound mind (*ʿāqil*), is *mukallaf*, i.e., obliged to fulfil the religious duties, and therefore also responsible in criminal law. But majority (together with soundness of mind) does not by itself produce contractual capacity, the capacity to dispose of one's own property; in order to have this effect, it must be accompanied by *ruḥd*, discretion or responsibility in acting. The father or other legal guardian must not only encourage the minor to fulfil his religious duties regularly, but test his *ruḥd* when he approaches puberty, and hand over his property to him only when he shows that he possesses it (cf. *Kur'ān* iv, 6). The other schools of religious law do not lay down a time limit for this, but the Hanafis fix the age at which his property must be handed over to him in any case, at 25 years, an obvious adoption of the *legitima aetas* of Roman law. The Mālikis, in the case of a woman, make this kind of capacity dependent, in addition to majority and *ruḥd*, either on the consummation of marriage, or on a formal act of emancipation by the father or other legal guardian, or on becoming an "old spinster" (*ʿāṭa*); a somewhat similar opinion is also held by some Hanbalis. Islamic law envisages a gradual transition from the status of minor to that of major, as exemplified by the *munayyis*, the "discerning minor", and the *murūḥ*, the "minor on the point of reaching puberty".

Millot, *Introduction*, 415 ff.; the works on *fiqh* and *shāfi*, in the section on *hadhr*; A. von Krenner, *Culturgeschichte*, i, 537 f., 532 f.; O. Pesle, in *Revue Internat. des Droits de l'Antiquité*, II, 157 ff.; the same, in *Studia Islamica*, III, 64. (Ed.)

**BALIK**, Turko-Mongol word for "town" = or "castle" (also written *BALIK* and *BALIGH*); appears frequently in compound names of towns, such as Balikhli ("Five Towns"), at the present day in ruins at Gücen in Chinese Turkistan), Khānbalik (the "Khān's Town"), Turko-Mongol word for Peking (also frequently used by European travellers in the middle ages in forms like Cambalo), Ribalik (on the River Hsi, the modern Hsiang) etc. As the town of Balikhli is mentioned as early as the Orkhon inscriptions (mid-8th century), Balik, in the meaning of town, is one of the oldest of Turkic words, as is the word Balik "fish", which is similarly pronounced and is common to all Turkic dialects.

**Bibliography:** R. Rahmeti Arat, *IA* (s.v.). (W. BARTHOLD)

**BALIKESIRI**, Balikesir, a town of north-west Asia Minor, in the region known in ancient times as Mysia. The name Balikesir derives from the Greek "Πίζαλιος ἄστρον", Al-'Umarī, in his *Masālik al-*

*Ahiya*, refers to this locality as "Akira" (= "Oyupşa", a name current in the period of the Commens). The Roman Hadrianouthera is believed to have been situated in this same district. Balikeski was one of the chief towns in the emirate of Karasi (etc.), which came into being when the Turks wrested this area from the Byzantines in the years around 699-700/1300. Ibn Battuta, who travelled through Asia Minor c. 730-1330, judged Balikeski to be a beautiful and well-populated place. The emirate of Karasi was soon absorbed into the Ottoman state, a process which began in about 715-1335 and appears to have been gradually completed during the reign of Orhan Gazi. Ghazi, Karasi, under Ottoman rule, long remained a *sandjak* in the *eyalat* of Anadolu, until in the reign of Mahmud II it was attached to the *vilayet* of Kütahya. It is now a separate province with Balikeski as its administrative centre. Balikeski, situated at the foot of the Villan-dag ("mount of the serpent"), confronts a fertile plain noted for its production of cereals, vegetables and fruit. Its population was estimated in 1935 to be a little less than 34,000.

(J. V. PARVEY)  
**BALINOS.** Silvestre de Sacy was the first to state that this name means Apollonius. The above form and Ballade are the most frequently used ones. Other forms are Abulliniyus (*Fihrist*, 266, Ibn al-Kifri, 61), Abulliniyus (Cheikh's personal MS. of Ibn Sa'd, *Tabakāt al-Umam*, 1912, 26), Abulliniyus (*ibid.*, 29, 31), Abulliniyus (Barhebraeus, ed. Salhani, 118), Abullinus (*Fihrist*, L.), 'Abū al-Ḥakīm, 26, 41, cf. Plessner, *Die astronomischen und astrologischen Schriften des Neuplatonikers 'Ibrāhīm*, 1928, 41; P. Kraus, *Jābir ibn Ḥayyān, Contribution*, ii, 273 n. 3), Abūlūs (Ya'qūbī, i, 165) Abūlūs (Ps. Magrīfī, *Ghāyat al-Ḥakīm*, ed. H. Ritter, 1933, 107 ff.), the meaning Apollonius is proved by the fragment of a Hebrew translation in Cod. Adler 1920). For other forms see Kraus, *op. cit.*, 270, n. 6.

In Islam, two persons named Apollonius are known, the famous mathematician Apollonius of Perge in Pamphylia (ca. 200 B.C.) and a sage whose personality is based on the Greek tradition about Apollonius of Tyana in Cappadocia (1st cent. A.D.).

Apollonius of Perge appears in the biographical sources (not in the MSS. of his works) almost invariably with the epithet al-Naḍḍār (the carpenter), the origin of which has not yet been explained satisfactorily. Since G. Flügel, *al-Kindī*, 1857, 53 it has been customary to render this by "the geometer", and as a matter of fact, Apollonius was already in antiquity called "the great geometer".

Also Euclid was called the geometer, and Ibn al-Kifri, 62 (E. Kapp's quotation *al-muḥaddith*, in *Isis*, xlii, 1934, 161 n. 20 is wrong) calls him al-Naḍḍār in the heading of his article, but states afterwards that Euclid was a carpenter by vocation. However, no other place is known where al-naḍḍār appears as the translation of geometer, and no dictionary gives this translation.

A detailed discussion of the Arabic translations of, and commentaries on, Apollonius' famous *Conica* and his other works has been given by M. Steinschneider, in *ZDMG*, i, 1896, 180-187; cf. also G. Sarton, in *HES*, i, 173-175 and indexes of all three volumes; Brockelmann, index s.v. *Apollonius v. Perge* (instead of 852 read 850); M. Krause, *Stambuler Handschriften islamischer Mathematiker*, 1936.

With regard to Apollonius of Tyana, there are considerable contradictions in the various sources, and the tradition about the *al-shāh al-islāmī*, as he is usually called (beside *al-kāshān*) has even, to a certain degree, influenced the reports concerning Apollonius of Perge. Our oldest source, Ya'qūbī, i, 165 rightly relates that Apollonius lived under the reign of Domitian (81-96), and the same is related by Ibn Abi Usayb'a, i, 73, and Barhebraeus, *Le*. But the same Ya'qūbī speaks on p. 134 of "Ballinūs al-naḍḍār" who is called the orphan, and he is the *al-shāh al-islāmī*, etc. The confusion lies not only in the use of the epithets of both Apollonius for one and the same person, but also in the addition "the orphan": in the preface of the *Sirr al-Khalīfa* (see below) Ballinūs calls himself "an orphan inhabiting Tyana" (cf. Kraus, *op. cit.*, 273 n. 3). In the *Ḥabshat al-Ishādar* (see below) Aristotle tells Alexander that he had received the book from Apollonius (the text in J. Rusk, *Tabakāt Sūwāqīna*, 1926, 72). Here Apollonius appears as a contemporary of Philip and his son Alexander, and so he does in al-Bal'ān's Persian version of Tabari (cf. Zotenberg's French translation, i, 510 f.; the whole passage is missing in the Arabic Tabari) and in Niḡmā's *Ishādar-nāma* (cf. W. Bacher, *Niḡmā's Leben und Werke*, 1912, 67 ff. and Persian text, 21; W. Hertz, *Gesammelte Abhandlungen*, 1903, 43). This anachronism with regard to Apollonius the talisman-maker has, in its turn, influenced Ibn al-Kifri's dating of Apollonius of Perge; his article about the latter begins (p. 61): "Apollonius the carpenter, mathematician of ancient time, much earlier than Euclid; he wrote the book *Conica*". And in his article on Euclid, 62, Euclid, a carpenter, Trye explains and accomplishes for an unnamed Greek king two books of Apollonius on irregular polyhedra (this is in fact the subject of Euclid's *Elementa*). On 63 he speaks, on the contrary, of a commentary on Euclid's 10th book by an ancient (*hadim*) Greek man named Ballā (the variant readings show with almost absolute certainty that he speaks of Apollonius). Now, Apollonius of Perge lived about 80-100 years after Euclid's. (Kapp, *op. cit.*, 163-168 does not even point out this confusion!).

In Hunayn b. Ishāq's *Adab al-Falāsifa*, an Apollonius appears in two places: in part i, ch. 5 the saying engraved on his seal is reported, and of part ii the whole ch. 17 is dedicated to his apophthegms. None of these dicta is characteristic of either of the two Apollonius, but Abū Sulaymān al-Ma'arrī points to Apollonius of Tyana, when he, in the first paragraph of ii, 17 ("The pen is the most powerful sorcerer") substitutes "talisman" for "sorcerer". Also the six *sermons* in the *Turba Sulaymān*

attributed by Steinschneider (*Europ. Übers.*, aus dem Arab., II, SBAK, Wien, 1905, 67 ff.) and Rusk (T. Ph., 1932, 23 ff.) to Apollonius of Tyana are no more characteristic of him than do the other alchemistic *sermons* of their respective orators.

Of the Arabic books connected with the name of Apollonius of Tyana the following are preserved in this language either in full or partly or in quotations of some length:

1. K. al-'Ilal or *Sirr al-Khalīfa*, parts of which were edited and translated by Silvestre de Sacy (*Notices et Extraits*, iv, no. 71798-99, 108 ff.) and J. Rusk (*Tab. Sm.*, 124-163). The latter also proved that the famous alchemistic text known as *Tabakāt Sūwāqīna* has its original place at the end of this book; and P. Kraus, *op. cit.*, 303 has shown that the whole book is to be a commentary of that text. About the Latin translation by Hugo Sanctallensis, cf. Rusk, 177 ff. The analysis of the book by Kraus, 270-303 led to its dating in the time of the Caliph al-Ma'mūn and show its close relation to the Syrian *Book of Transcendence* by Job of Edessa (ca. 817 A.D.), ed. Mingana, 1935, as well as to the Greek *ἡρώδης ἀντίδοτρου* by Nemesios of Emesa (5th cent. A.D.). Cf. now also L. Massignon, in A.-J. Festugiére, *La Révélation d'Hermès Trismégiste*, i, 1944, 395 f., and the additions in the 2nd ed., 1950: A. E. Affifi, *BSOAS*, xlii, 1949-51, 847 ff. Kraus also showed the great influence of this book on Ḥabshat al-Hayyān; the latter wrote a considerable number of books on different subjects 'alā 'ay' Ballinūs, cf. Kraus, i, index, s.v. Ballinūs; J. W. Fück, *Ambis*, iv, 1951, § 12 and Commentary), parts of them were edited by Kraus, *Jābir ibn Ḥayyān, Textes choisis*, 1935.

2. *Riḍāla fī Ta'ḥīr al-Rūḥāniyyāt fī 'l-Ma'rakhabāt*, MS. Istanbul, A's'ad 1987 (Plessner, in *Islamica*, iv, 1931, 551 f.), Wehli 892 (courtesy of H. Ritter), Chester Beatty (cf. J. Bowman, *Glasgow Univ. Or. Soc., Transactions*, xiv, 1930-32); for other MSS., see Kraus, ii, 293 n. 5.

3. *al-Muḥallāt al-Kabīr dī 'l'im Af'āl al-Rūḥāniyyāt*, in all MSS. following no. 2. Hebrew translation in Paris, MS. Hebr. n. 1014 and Persian text, 21; W. Hertz, *Gesammelte Abhandlungen*, 1903, 43). This anachronism with regard to Apollonius the talisman-maker has, in its turn, influenced Ibn al-Kifri's dating of Apollonius of Perge; his article about the latter begins (p. 61): "Apollonius the carpenter, mathematician of ancient time, much earlier than Euclid; he wrote the book *Conica*". And in his article on Euclid, 62, Euclid, a carpenter, Trye explains and accomplishes for an unnamed Greek king two books of Apollonius on irregular polyhedra (this is in fact the subject of Euclid's *Elementa*). On 63 he speaks, on the contrary, of a commentary on Euclid's 10th book by an ancient (*hadim*) Greek man named Ballā (the variant readings show with almost absolute certainty that he speaks of Apollonius). Now, Apollonius of Perge lived about 80-100 years after Euclid's. (Kapp, *op. cit.*, 163-168 does not even point out this confusion!).

4. K. *Talīzin* Ballinūs al-Akhar li-Waladīh 'Ahd al-Rahmān (I), Paris MS. 2250, fol. 84-134, identical with K. Ballinūs li-Ibnī fī 'l-'Ilāmāt, Berol. Pet. I 66, fol. 41v-72v (Ahlwardt 5908).

5. A *Kutub Atlas* (vocalization uncertain) *al-Ḥakīm* is one of the sources of the lists of images to be engraved on the stones of the planets, *Ghāyat al-Ḥakīm*, 107-124. Whether this book is the *Liber de imaginibus* quoted by Albertus Magnus, *De liberis libris* (cf. F. J. Carmody, *Arabic astronomical and astrological sciences in Latin translation*, 1936, 58 ff.), is still an open question.

6. The Hermetic book *Ḥabshat al-Ishādar* given to Alexander by Aristotle who received it from Apollonius has been elaborately discussed and partly edited and translated by Rusk, *Tab. Sm.*, 68-107; it contains also some of the talismans located by Apollonius in several towns. The connection between the prologue and the Babylonian report on the Flood has been stated by Plessner, in *Studia Islamica*, ii, 1954, 51 ff.

(For the Arabic texts belonging to the above nos. 1 and 6 as published by Rusk, cf. Plessner, in *Islamica*, xvi, 1927, 83 ff.).

7. In no. 3, the author alludes several times to his *Riḍāla Sal-sir*, which is as yet unknown in Arabic;

but perhaps the Hebrew *Miḥḡet muskelet* (Steinschneider, *Hebr. Übers.*, 848, cf. also *ZDMG*, xiv, 1893, 444) has something to do with it.

8. Al-Karwīn quotes in many places of his *'Aḡā'id al-Maḥḥabāt* (see the list in Bacher, *op. cit.*, 70 n. 20) a *Kutub al-Khawāṣṣ* by Ballinūs, which has not yet been traced. Steinschneider judges the title to be a fiction (*Hebr. Übers.*, 843 n. 7).

The vast number of medieval Latin and vernacular texts ascribed to Ballinūs (Bolesius and the like) cannot be dealt with here, cf. Steinschneider, *Europ. Übers.*, Index, and Carmody, *op. cit.*, index. But there is no doubt that some of the authors whose books are published or analysed in the *Laplatina del rey D. Alfonso X*, reproduced and partly edited by J. F. Montaña, 1881, are translations of Arabic books attributed to Apollonius; the full list in Sarton, ii, 837. Here belong: 1. Abolās (never deciphered, cf. G. O. S. Darby, in *Osiris*, i, 1936, 251 ff.), 2. Yluz, 3. Belyenus and Yis, 6. Plinius and Hermus (Hermes). A comparison of these names with the forms of the name of Apollonius in Arabic at the beginning of this article will furnish sufficient evidence.

The Greek *Apotelesmata Apolloniū Tyanensis*, simultaneously used by P. Nau, *Patrologia, Syriaque*, i, 1, 1907, 1363 ff., and F. Boll, *Cat. Codicum astrologorum Graecorum*, vi, 1908, 175 ff. contains passages which in the Latin translation from the Arabic can be traced in *Brit. Mus. MS. Royal 12 C XVIII* (Carmody, 73), and even an English translation in Sloane 3826. For another Latin (Vatican) MS. cf. Carmody, *Le*. Similar texts, also translated from Arabic, in Sloane 3848. The name of the disciple of Apollonius to whom the Greek text is dedicated has been identified with that of the author of a text edited in Syriac and Arabic by G. Levi Della Vida, *La Dottrina e i Dodici Legati di Stomathalassa*, *Abi Acc. Naz. Lit.*, (Cl. Sci. mor. stor. fil., viii/ii, fasc. 8, Rome 1951).

Another pupil of Apollonius is the famous Artemus (not Artelius, as in Brockelmann, S I, 429, nor Artorius, as in the additions in vol. ii, 1208), the author of *Classica sapientiae*, the Arabic original of which, *Miftāḥ al-Ḥikma*, has been discovered by Levi Della Vida, and described in *Speculum*, xiii, 1938, 80-85; cf. Kraus, 208 f.

**Bibliography:** On Apollonius of Perge, see also H. Suter, *Die Mathematiker und Astronomen der Araber und ihre Werke*; M. Krause, *Stambuler Handschriften islamischer Mathematiker*; M. Steinschneider, *Islamische Astronomie und Astrologie*; *Handbuch der Mathematik und Physik, Historisch-Literarische Abteilung*, vol. xxxi, 1886). (M. PLESNER)

**BALIS**, former town in northern Syria, which was both a port on the Western bank of the Euphrates and an important stage, 200 km. from Aleppo and at the entrance to the *Dajra*, of the road from Antioch and the Mediterranean leading, via al-Rakha, to Bagdad and 'Irāq. The commercial and agricultural prosperity of the town was doubtless due to its situation at a point of intersection of river and land highways, and in a warm valley where the irrigation possibilities favoured the development of husbandry.

Known in antiquity under the Aramaic and Greek names of BYT BLS and Barbalissos, indicated both in the *Table de Peutinger* and the *Notitia Diocletiana*, and after the administrative division of the province of Syria which took place towards the middle of the 11th century A.D., belonging to the *Augeia Eparchatus*, it played the rôle of a

frontier town which was to continue in the Byzantine period, when it was several times pillaged by the Persians. It suffered particular damage during the campaign of Khuraw II Anaghriwan and was rebuilt by the efforts of Justinian. Previously, the hagiographers had made it the site of the martyrdom of Blachius, a famous saint of the area, whose relics are said to be preserved there.

Occupied by the Arabs as the result of a treaty concluded with Abū 'Ubayda after the capture of Aleppo and abandoned at that time by certain elements of the population, in the Umayyad period Bális formed part of the *dhimā* of Kinnasra and was subsequently, under al-Kashir, attached to the territory of the 'Awāsim (q.v.). It continued to retain its strategic importance for a long time in the vicinity of the Byzantine territories. The famous general Maslama b. 'Abd al-Malik took an interest in it to the extent of having a canal excavated and improving the production of the land. He established himself there and it was to remain the property of his descendants. In 245/859, the town suffered from an earthquake which affected the whole of Northern Syria; subsequently it shared the fate of the cities of the area, escaping from Caliphal control and entering the orbit of the Tūlūnids, then that of the Hamdānids, until the Saljūqids, in their turn, extended their authority to the region. Its economic decline, according to the Hekwai, who, however, still mentions rich grain harvests, dates apparently from the end of the reign of the Hamdānī Sayf al-Dawla; but the brief information given by the geographers should not make us forget the signs of prosperity, borne out by archaeological remains, right into the Ayyūbid period. At the time of the Crusades, it was subject especially to indecisive incursions by the Franks, after which it continued to pass from hand to hand of various Muslim masters, among whom can be cited at the end the Ayyūbids al-Malik al-Zāhir Ghāsi and al-Malik al-'Adīl Abū Bakr (who seems to have held it at least from 607/1210-11, the date inscribed on the minaret which he had erected).

At this time various indications seem to show that the population of Bális, whereas several *magāzīn* were venerated in connection with the memory of 'Alī and al-Husayn, was mainly Shī'ite. Subsequently the destruction wrought by the Mongol invasion destroyed the locality, which did not even appear in the administrative organisation of Mamlik Syria.

At the present day the ruins of Bális lie five km. from the small modern village of Miskat on a plateau overlooking the valley of the Euphrates, which flows at quite a distance from the site. The fortified enclosure can still be identified, with its monumental doors, the remains of a brick praetorium doubtless dating back to the times of Justinian and the site of the great mosque, indicated by the beautiful octagonal brick minaret, erected on a rectangular base and bearing four series of ornamental inscriptions. The numerous moulds where abundant potsherds are to be found have never been systematically excavated, but trial soundings carried out about 1925 revealed interesting sculptured plaster decorations with inscriptions dated 464/1072 and 469/1076-77.

**BÁLISH** (Persian: "cushion"; Turkish: *yastak*, a 13th century Mongolian monetary unit, which was in use particularly in the eastern part of the Empire. It is, however, also mentioned frequently by the Bāghis [q.v.] in Irān. In China it appears as late as the 14th century. The *bālīsh* was coined in gold and in silver, and (according to Djuyayni, GMS, I, 16, and Wassaf, lthb. Bombay, 22), corresponded to 500 *mithāl* (according to W. Hiniz, *Islamische Masse und Gewichte*, Leiden 1955, 1-8, on the basis of numismatic observations: 4. 3 g. each; Djuyayni, trans. J. A. Boyle, I, 22, writes *inc. ut.* of 50, instead of 500 *mithāl*). According to this assessment, a *bālīsh* would weigh 2.55 kg., and this would agree with a Western report by William of Rubruck, ed. Rochhill, 156, which states that one silver *bālīsh* corresponds to 10 (Cologne) marks, i.e., 2.538 kg.

W. Hiniz assesses the gold value (taking 2 g. of gold at a price of 2.88 gold marks) at 6,192 gold marks. If we assume the relative value of gold to silver (according to Ahmet-Zeki Validi (now Togan), *Mongoliar derivate Asasiyalar* [sic] *ölkisi*, *Türk hakik ve ulkati tarihi mecmu'i*, I, 1931, 142), to be 12:1 (cf. also B. Spuler, *Die Mongolen in Iran*, 1955, 556 corresponding to 303), then one silver *bālīsh* corresponds to 516 gold marks.

According to Djuyayni (loc. cit.) a silver *bālīsh* has the value of 75 Rukhī dinars of 2/3 standard (so-called after the Bayid Rukh al-Dawla, 934-970); thus the value of one *bālīsh* would be 100 DM.

Other statements of the same period do not indeed agree with Djuyayni, but this may be due partly to fluctuations in value. According to Džūzjānī (Djauzjānī), *Tahabāt-i Nāṣiri*, trans. Raverty, 1110, the *bālīsh* corresponded to 60 1/3 dirhams; Wassaf, lthb. Bombay, 22, quotes the gold *bālīsh* at 2,000, the silver *bālīsh* at 200 dirhams (which corresponds to a proportion of 10:1 for gold: silver at that time). One *bālīsh* in paper money (*ṣao*) was worth 30, or (according to Wassaf, 506) only 6 dirhams (this is an indication of the rapid fall in value of the *ṣao*). W. Barthold assumed that here the silver dirham worth 3 *mithāl* is meant (cf. also d'Ohsson, *Histoire des Mongols*, IV, 464).

**Bibliography:** Rashid-Dīn ed. Quatremère, I, 320 f., note 120 (compilation of relevant parts of sources, although seen from the erroneous point of view that the *bālīsh* does not denote a definite sum of money but a "great quantity" of money); B. Spuler, *Die Mongolen in Iran*, Berlin 1955, 504 f., with notes; W. Barthold/W. Hiniz, *Die pers. Inschrift . . . zu Ani*, in *ZDMG*, 101 (1951), 241-269; W. Hiniz, in *Islam*, 1959, 1; W. Hiniz, *Boyle's translation of Djuyayni*, concerning *yastak*, cf. P. Pelliot in T'oung-Pao, 27 (1930), 190-2, *ibid.*, 32 (1936), 80; idem, *Notes sur . . . la Horde d'Or*, Paris 1959, 8. (B. SPULER)

**BÁLISH**, Belegb, Span, Vélez, a toponymic of Berber origin encountered on the coast of the Rif and at various places in the Iberian peninsula with the spellings بَالِش, بَالَش, بَالَش. Al-Bakri mentions the port of Bálīsh after those of Bādis and Bāqura, opposite Peñon de Vélez de la Gomera, on the Rif coast. Another Bálīgh, unidentified, is to be found beside the Guadalquivir after leaving Cordova in the direction of Tudmir and Murcia. Al-Idrisi gives the name Bálīsh to the Mar Menor of Murcia, a large lake formed by the waters brought down by various swift streams, situated 57 miles from Alicante and which is navigable by shipping. The Vélez, which the same author includes in the *ihlām* of Badjijāna (Pechina), with Almería, Berja and Purchena, is Vélez-Rubio, 105 km. from Almería and 12 km. from Lorca, in the valley of the Guadalquivir, a tributary of the Sangonera. A prehistoric cemetery, rock paintings and numerous coins, art objects and Roman inscriptions have been found amongst the ruins of its fortifications. It formed part of the *hara* of Tudmir and revolted with Ibn Hafṣūn (q.v.) against the amir 'Abd Allāh, being subsequently subdued by 'Abd al-Rahmān III in 113/925. When the Infante, the future Alfonso X, the Wise, took Lorca, it marked the frontier of the Kingdom of Granada. It was taken by Alonso Yáñez Fajardo in 1437, but again passed into the hands of the rulers of Granada in 857/1447, and the Nasrid ruler al-Zaghāl Abū 'Abd Allāh Muḥammad XII resided there: it was finally taken by Ferdinand III in 891/1481, who, at the beginning of the 10th/16th century, ceded his overlordship to Pedro Fajardo, the first Marquis of both the towns of Vélez, el-Rubio and el-Blanco. Situated 5 1/2 km. from Vélez-Rubio is Vélez-Blanco, a town of some 10,000 inhabitants, belonging to the same marquise of the Vélez; on the ruins of the Roman citadel and the Moorish alcazaba rising on the hill above the two towns of Vélez, Pedro Fajardo erected a magnificent castle of imposing proportions and elaborateness, the shell of which is still preserved.

Another Vélez is that of Benadulla (Ibn 'Abd Allāh), in the province of Granada (ward of Motril), on the left bank of the Guadalquivir river, on the side of a small hill called el-Castillo, and possessing some 5,000 inhabitants.

Finally in the province of Málaga, 34 km. from the capital and three km. from the sea, on the left bank of the river Vélez or Benamargosa, is the town of Vélez-Málaga, with some 30,000 inhabitants. Very little is known to us, however, of its history in the Muslim period. Alfonso of Batañol, in his expedition through Andalusia in 119/1216, after reaching Granada and crossing the Sierra Nevada, advanced up to Vélez-Málaga, without being able to take it.

When in 283/896, the amir 'Abd Allāh was besieging one of these Vélez—it is not known which one—a number of infantrymen and cavalrymen of the regular Umayyad army, attracted by the inducement of better pay held out to them by Ibn Hafṣūn, went over to the rebel's service. Dory, who refers to this event without citing his source, confuses Bādi (now Vilches) with Belegb (Vélez), and situates it at Vélez-Rubio. The toponymic has passed to Latin America and is to be found at various places in Colombia, Uruguay and the Argentine. It is also a fairly common surname in Spain.

**Bibliography:** Idrisi, 175, 194 of the text, 209, 213 of the trans.; Bakrī, 90; Makkarī, *Analekta*, I, 103, 843; Ibn 'Idhārī, *Bayān*, II,

185; al-Idrīsī al-Maughīyya, 78 of the text, 174 of the trans. Huici; F. Palanques, *Hist. de Vélez-Rubio*. (A. HUICI MIRANDA)

**BALYYA** (Ar. pl. *balayā*), a name given in the pre-Islamic era, to the camel (more rarely the mare) which it was the custom to tether at the grave of its master; its head turned to the rear and covered with a saddle-cloth (see al-Būḥārī, *Tarikh*, ed. Pellat, index), and to allow it die of starvation; in some cases, the victim was burnt and, in other cases, stuffed with *ghumām* (Ibn Abū 'I-Ḥadīd, *Sharḥ Naḥḥ al-Balgha*, IV, 436). Muslim tradition sees in this practice proof that the Arabs of the *ghāzīyya* believed in the resurrection, because the animal thus sacrificed was thought to serve as a mount for its master at the resurrection, while those who rose from the dead without a *balayya*, and were therefore of inferior status, went on foot. According to another tradition, however, the same term also denoted a cow, a camel or a ewe which was hamstring at the grave of the deceased and allowed to die of hunger; in this way, it appears, the primitive symbol of belief in the resurrection seems to have become a funeral sacrifice, which paved the way for the funeral feast (*wadima*).

(J. HELL-CH. PELLAT)

**AL-BALKĀ'**, name given by the Arab authors either to the whole of the Transjordanian territory corresponding approximately to the ancient countries of Ammon, Moab and even Gilead, or to the middle part of it, having, depending on the period, 'Ammin, [q.v.], Hushān or al-Salt as its chief town. Although a certain lack of precision still persists to-day in the use of the term, its geographical meaning is usually restricted to the limestone plateau (average altitude from 700 to 800 m.), comprised between the Wādī 'Zarqā' (the 'Jabbok') in the North and the Wādī 'Mudjīb (or Arnon) in the South. This is a region of tabular relief on the desert side, but the ground is considerably broken along the subsidence zone of the Dead Sea and the Jordan (peak of Nabl 'Usha' (1,096 m.) near al-Salt in the North, Mount Nebō (835 m.) in the vicinity of Mādābā), where the erosive action of rain has promoted the escarping of especially deep ravines; as a whole it is an arid land, but at the bottom of depressions and on the plains it affords possibilities of cultivation, which explain the praise bestowed on its fertility and the abundance of its villages in bygone times.

In the Hellenistic period the principal divisions were Peraea, on the Western fringe, with Gadara (near al-Salt) as its metropolis, the territory of Philadelpheia ('Ammin), a zone attached to the Decapolis, and the northern end of the Nabatean kingdom. Under Trajan, in 106 AD., the new province of Arabia extended over it, taking in Nabataea, which had also extended northwards to Bostra. On the other hand in the Byzantine period, the Arnon acted as the boundary between the province of Arabia, which then included the bishoprics of Philadelpheia, Ebus (Hushān) and Mādābā, and the new Palestina Tertia, created in the Southern part of the country.

This region, conquered by Yazīd b. Abī Sufyān

shortly after the fall of Damascus and the peaceful surrender of 'Ammā, retained its former prosperity under the Umayyads, and numerous caliphal and princely residences were situated there (al-Miḥṣṣī, al-Zīla, al-Kaṣāl, Um al-Walid, for example, without counting the castles scattered further towards the East such as Kusayr 'Amr, al-Kharīne, Kaṣr al-Hallabāt or Kaṣr al-Tūba). At this period the term al-Balā' had a wide connotation, still attested later by Yāqūt, and the reports of the chroniclers also included in it towns of the 'Ajlūn like Arḥad (Irbid), where Ya'fīd II died (al-Taḥrīr, II, 1474), or of the Ma'āb like al-Ma'āb (q.v.), the corresponding administrative district was provided with its own 'amīl and was in direct dependence on the *diwan* of Damascus before experiencing a variety of fortunes throughout the Middle Ages. The testimony of al-Yā'qūtī, who distinguishes two sections, the *ghāṣr* (main town: Jericho) and the *Zāḥir* (main town: 'Ammā), in this "canton of the colony of Damascus", may in fact be contrasted with that of al-Mukaddasī, a century later, for whom al-Balā' is dependent on the territory of Filastin; likewise, in the Ayyūbīd period, Abu l-Fida' connects it with the *Sharīf*, whilst al-Harazī deals separately with this country and the Balad Ma'āb. Finally, during the period of Mamlūk domination, the district of al-Balā' (main town: Ḥusban) belonged in principle to the southern march of the province of Damascus, though sometimes it was recognised as possessing a second *waḥda*, that of al-Salt, and it appears to have depended temporarily, in entirety or in part, on the *naḥḥ* of al-Karak.

The favourite etymology of the Arab geographers, who link the name of al-Balā' with that, however, the feminine of the adjective *ablah* "variegated" can be perceived, with that of an eponymous hero, a descendant of the Banī 'Ammān b. Lūṭ, evokes the Ammonites of Biblical tradition and the memories of Lot, localised in a region where the "town of the Giants" of the Qur'ān, v. 25/22, (identified with 'Ammā) and the Cave of the *Aḥḥāb al-Kaḥf* (q.v.), were also placed.

**BALKAN**, the Balkan peninsula. The word *Balkan* means mountain or mountain range and, in the form of *Balkanli*, rugged zone in Turkish. The etymology of the word is now linked with *balā*, mud, and the diminutive suffix, -an in Turkish (according to H. Eren). There is a mountain called *Balkan* in Turkmenistan. The word *Balkan* was used first by the Ottomans in Rumeli in its general meaning of mountain, as in Kelle-Balkan, Catal-Balkan, and Uzunçere-Balkan (the Carpathians). But specifically it was applied to the Haemus range of the ancient and mediaeval geographers, who thought that it separated the barbaric north from the civilised south. When considered as a historical and cultural entity the Balkans can be given different boundaries in the north. The

Romans built their main defence line on the Danube with the extension of Trajan's walls between Carna-Voda and Constantia in the Dobruja. The boundary of the Byzantine empire in the north reached as far as the Danube and the Drava rivers (under Justinian I and Basil II). Finally by the Treaty of 843/844 the Ottomans and the Hungarians agreed reciprocally not to cross over the Danube, and up to the 17th century this river remained as the northern boundary of the Ottoman province of Rumeli, which included the whole peninsula south to this river. Both the Roman and Ottoman empires tried also to establish their control over the flat country on both sides of the Danube. Its lower part always became a passage for the Turco-Mongol peoples who invaded the Balkans one after another from the 5th up to the 13th century A.D., namely the Huns, Avars, Bulgars, Pečenegs, Kumans and Tatar-Kipčaks. The Avar invasions are thought responsible for the penetration and settlement of the Slavs in the Balkans in the 6th century. Then the native Vlachs and Albanians had to retire to the mountains and lived there a pastoral life for many centuries to follow. Toward 680 A.D. the Bulgars, a Turkish people from north of the Black Sea, settled on the lower Danube and, as a military aristocracy ruling over the Slavs, they created the first powerful state to rival the Byzantine empire in the Balkans. Their conversion to Christianity (864) had far-reaching consequences for the history of the peninsula because the Byzantine church and the Byzantine concept of the state gave definitive shape not only to Bulgarian Caesarea but also through it to the states that emerged subsequently in the Balkans (see F. Dölger, *Byzanz und vorbyzantinische Staatenswelt*, 262-282).

The first Muslim geographers who spoke of the Balkans are contemporary with these important developments. Ibn Khuradādhbih, whose information, like that of others, was derived from the reports of the three observers of the end of the 3rd/9th and the middle of the 4th/10th centuries (see Z. V. Toqan, *Balkan*, in *IA*) said that the country west of the Byzantine thence of *Tafila*, *Talabuya* and *Mahadunuya* was the *bilad al-Sakabiya* and that it lay north the *ard Burjān* (Bulgars). In the *Uḥūd al-ʿAlam* the Danube is called *Rūd al-Bulghārī* and the Balkan range *Kāh-i Bulghārī*.

It seems that Islam first appeared in the Balkans with the Anatolian saint Sari-Saltūk (q.v.), in 662/1264. After the incursions of the Anatolian Turks of the *ghāṣr* principalities in Western Anatolia in the first half of the 8th/14th century, the Ottomans finally settled firmly on the European shores of the Dardanelles in 755/1354. Even in the first period of the Ottoman expansion distinction must be made between the activities of the *ghāṣr* leaders who made continuous warfare in the *Uḡd*, the frontiers, and the Ottoman central government which was also concerned with the welfare of its subjects.

Perhaps the most important factor of the Ottoman conquest was the strong immigration movement into the Balkans from Anatolia in the 14th century which turkicised Thrace and Eastern Bulgaria (see *Studia Islamica*, II, 105-129). At that time the small Ottoman state was regarded rather as a useful ally in the complicated struggle among the small Balkan states, but, growing in power, the Ottoman sultan soon became the suzerain of his former allies. When later these attempted to form a common front or called on Western Christendom for help, they were disappointed (Cernoman 777/1374,

Kosova 791/1380). Bayezid I inaugurated a new policy by establishing direct control over the vassal countries. He had the ambition of establishing a unified empire in the Balkans. He conquered the whole of Bulgaria, Macedonia and Thessaly between 1393 and 1396, and attempted to seize Constantinople, the traditional capital. The victory of Timur over Bayezid (804/1402) had important consequences for the Balkans. Abandoning most of their Anatolian possessions, the Ottomans then considered the Balkans as their real home, and, Adriano (Eldir) became the real capital city of the sultans from then on. A fresh assault of the Anatolian Turks into the Balkans followed Timur's invasion. The successors of Bayezid I abandoned his imperial policy and Serbia and Byzantium enjoyed some freedom of action until Sütlü Mehmed II conquered Constantinople (857/1453), and resumed the policy of unification with energy and success. In 864/1459 Serbia, in 864/1460 Morea and in 867/1463 Bosnia came under direct Ottoman rule. But these Ottoman successes were due to more important factors than the military ones.

In the struggle against the Ottoman conquest and centralisation policy, the feudalised princes and local lords in the Balkans had turned their eyes to the West, with a readiness to make concessions not only from their territories but also on religious matters. Thus in the first half of the 15th century, while Hungary was establishing its suzerainty over Bosnia, Serbia and Wallachia, Venice had seized the most important points on the Albanian coasts, in the Aegean Sea and the Morea, and, after taking Salonica, she coveted Constantinople. Representing Catholicism and seeking political and economic domination, the Western powers and their feudal sympathisers in Byzantium and the Balkans were regarded with hostility by the masses at large and by the Orthodox clergy. The Ottomans profited from the alienation of the common people from their Western or native lords. They assumed the role of protector of the Orthodox church and tried to drive Catholicism out of the Balkans. Even before the institution of Genadius as oecumenical patriarch in Constantinople in 1454, the Orthodox priests were recognised and granted pensions and even *timārs* by the Ottoman state everywhere. On the other hand when the Latins were driven out of the Balkans in the second half of the 13th/15th century the native merchants, Muslims, Greeks and Ragusans, as well as Jews, replaced them in trade and financial Ragusans under Ottoman protection surpassed its mediaeval importance in the Balkan trade. Perhaps most important of all was the fact that the Ottoman land and tax system (see *DAFTAR-I KHAḲĀNĪ*) brought about a real change in the life of the Balkan peasantry. The Byzantine emperors in the 10th century had made great efforts to uphold the central power by protecting the peasantry against the magnates in the provinces who were constantly trying to enlarge their lands and power. With the Comneni, this struggle had ended in favour of the landed aristocracy, and under the Palaeologi, the central government had lost all its authority. But with the Ottoman state a strong centralised government was established again in the Balkans and this government tried to abolish feudal practices and to reconvert any local control over the peasantry. For example the old feudal services such as three days of forced labour, and the obligation to provide wood, hay and straw for the seigneur, were all converted by the Ottomans to one simple tax called *ḡit-ḡesmi* (q.v.). As the

direct agents of the sultan, the *ḡāṣr* (q.v.) and the *ḡāṣr-bulus* (q.v.) in the provinces secured the strict application of the laws. Thus it was no wonder that the Christian peasantry remained indifferent to the fate of their lords in their struggle against the Ottomans and until the 11th/17th century no serious rebellion is recorded among the Balkan peasants. It must also be noted that the Ottomans followed a conservative policy towards the previous social classes in the Balkans by adapting their status to the Ottoman system. The pre-Ottoman upper aristocracy, who mostly possessed *promēti*, were included by the Ottomans in the *timār* system or, later, taken into the sultan's court to become high officials. The members of the lower aristocracy, especially *voivods* (in Turkish *voynak*), who previously were the backbone of the empire of Stephen Dushan, were reorganised in *bēliks* (q.v.) in the greater part of the Balkans by the Ottomans and formed a section of the Ottoman army up to the 16th century, when they lost their usefulness and were made simple *reʿāyā*. Other military groups, nomad *Eflaks*, and *Mardos* were incorporated into the Ottoman forces in the provinces (see my *Fatih Deri*, I, Ankara 1954, 145-184). Even the *ghāṣr* had access to the ruling class through the *Dervişime* institution. In the classification of the *reʿāyā* (q.v.)—that is, the peasants, Muslim or Christian, a system similar to the pre-Ottoman system seems to have been followed and the Byzantine *paroikoi*, who were divided into *zeugurate* and *boldini* as well as the *cleutheroi*, appear to have survived under the Ottomans with different names, and several Byzantine taxes actually continued in the Ottoman taxation system as *ruḡḡat-i Sarfīyya* or *Sāde-i halifasna*. These taxes were assigned to the *timār*-holders, and the Ottoman *timār* system which was the foundation-stone of the empire in the first period acquired its final form in the Balkans. In conclusion we can speak of a continuity of Balkan history in its basic forms under the Ottomans. It was true that national cultures lost their former centres of development, but the peasantry and the church remained in existence and became the foundations of the national states in the 19th century.

During the 10th/16th century the Balkan peninsula enjoyed one of the rare periods of peace and prosperity in its history; everywhere new lands were brought under cultivation, the population increased (5 million about 1335), cities developed, as we can observe in the regular Ottoman land and population surveys, *defters*, preserved in the Turkish archives (see *İhtisat Fihristi Mecmuası*, Istanbul, no. 4, 11, 15). After Greek, Turkish became a common language of civilisation in the Balkans.

As Sir T. W. Arnold has already emphasised (*The Peaching of Islam*, London 1<sup>st</sup> ed. 1890, 1<sup>st</sup> ed. 1935, 145 ff.) conversion to Islam in the Balkans were not in general the result of a state policy or use of force. However, three periods in this respect should be distinguished. Up to Bayezid II's time the Ottoman state followed a very liberal policy in the matter of religion. In this period voluntary conversions took place among the nobility especially among the Ottoman *askari* (q.v.) class incorporated in the Ottoman army in Bosnia. After Bayezid II, the Ottoman state became more conscious of being a Muslim state and more careful in the application of the *gharʿa*. From the 11th/17th century onwards, to begin with as a result of the activities of the Franciscan missions in the Balkans, which were supported by the Hapsburgs and the Venetians

for political purposes, the Ottomans had recourse to certain coercive measures against the Christians in Serbia, Albania and Danubian Bulgaria. This brought about some mass conversions in these countries. In 1900 the Patriarch of Peč took refuge in southern Hungary with 37,000 Serbian families. Large-scale conversions took place among the Albanians during the subsequent centuries (see ARNAVUTLUK). The third important islamised area is found on the Rhodope region where Bulgarian-speaking Muslims are called *Pomaks* [20].

For further developments in the Balkans under the Ottomans in the subsequent periods see RUMELI.

(HALLIE ISALCHI)

**BALKAR**, a Muslim people of the Central Caucasus whose origins are the subject of contradictory hypotheses. For some the Balkars are descendants of Bulghar driven back towards the mountains in the 12th-13th century; according to others, their ancestors were the Khazar pushed back towards the upper Terek in the 11th century; finally, others see in the Balkar Ibero-Caucasians or indeed Turkicised Finns. The Balkar traditions say that their ancestors, once living on the steppes of the Kuban, were driven back towards the mountains by the Cerkas tribes (Adighes), whence in turn they drove away and partially absorbed the Ossets.

Prior to 1946, the habitat of the Balkar, on the northern slopes of the main range of the Caucasus, included the high valleys of the tributaries of the Terek lying between the Elbruz in the West and the Ossete country to the East. The Balkar people (numbering 31,307 in 1926, of whom only 2% were urban dwellers, 42,666 in 1939), are divided into 5 tribes.

In the 16th century the Balkar were subdued by the Kabard and thenceforth adopted the forms of material civilisation of their sovereigns, copying their feudal structure, which persisted practically intact until the Russian conquest. It had five classes: 1. the princes, *naebi* (analogous to the *paši* of the Adighes); 2. the nobles, *udages* (*urukh* among the Adighes); 3. the free peasants, *karakash* [*l'fakhash* among the Abzars]; 4. the serfs liable to corvée duties, *zagar* (or among the Kabard); and 5. the slaves, *kashah* (*wanat* among the Kabard).

Sunni Islam of the Hanafī rite was introduced among the Balkar at the end of the 18th century by the Crimean Tatars and the Nogai of the Kuban, but pre-Islamic survivals (Christian and animist) still persisted at the beginning of the 20th century.

Russian penetration of the high valleys of the tributaries of the Terek, begun at the end of the 18th century, was completed in 1827 by the conquest

of the Balkar country, but was not followed, as in the case of the Adighes, by rural colonisation; the Russian authorities preferred to favour the setting up of villages of Kumik, Ossets and mountain Jews in the midst of the Balkar country.

**Soviet Balkaria.** — The Soviet regime, temporarily proclaimed in December 1918, was finally established in March 1920. By a decree of the All-Union Central Executive Committee dated 21 January 1921, the Balkar *okrug* was attached to the Soviet Socialist Republic of Mountain-dweller (Gorskaya ASSR). On 1 September 1921, the Balkar country, joined to the Kabardinia, became the Autonomous Kabardino-Balkar Region of the RSFSR, and on 1 December 1936 became the Kabardino-Balkar Autonomous SSR. Balkaria was briefly occupied by the German armies during the second world war, was suppressed as an administrative formation by decree of the Presidium of the Supreme Soviet of the USSR of 25 June 1946, and the Balkar people was deported to Central Asia. A part of it (the valley of the Balkan) was attached to the Georgian SSR and the remainder to the Kabardinian Autonomous SSR. A new decree of the Supreme Soviet of the USSR of 9 January 1957 re-established the Kabardino-Balkar Autonomous SSR and authorized the deported Balkars to return to their country.

The Balkar language, which is simply a dialect of Karadag [21], belongs to the Kipčak group of Turkish languages. It has been strongly influenced by Ossetic and the neighbouring Tatar-Caucasian languages: Kabard, Čečen and Abaza.

Balkar-Karačai, previously not a written language, was endowed in 1920 with a slightly modified Arabic alphabet (ع = 1, 5 = 0), replaced in 1925 by the Latin alphabet; the first works were published in Balkar-Karačai in the following year: a collection of poetry by 'Unar 'Aliev and a Chrestomathy (*Bilim*) by Akhbat Bilgiev. Also in 1926 the first newspaper, *Karakhalik*, of the Kabardino-Balkar Autonomous Region made its appearance at Nažik, with alternate pages in Adighie and Balkar-Karačai. In 1937 the first daily, *Tavels-Dzaghaz*, in Balkar-Karačai was published at Mikoyan-Shakhlar, the administrative centre of the Karačai Autonomous Region (now Klugher). Finally in 1938 the Latin alphabet was replaced by the Cyrillic alphabet.

**BALKAYN** [see KAYN].

**BALKH**, an important city in ancient and mediaeval times, now a village, located in what is today northern Afghanistan, ca. 67° E. Long. (Greenw.) and 36° 45' N. lat. It was located on the Balkh river, now dry.

Ancient Bactria was the name of a province of the Achaemenid Empire as well as its chief city.

In the Old Persian inscriptions of Darius we find the form *Baktrik* in the Avesta *Baktri*, and in Greek *Baktria*. Perhaps the original form was \**Bāgdrī*, from the name of the river (cf. Markwart, *Catalogue*, 54). Balh after the conquests of Alexander the Great was a centre of the Greco-Bactrians, then of the Kushans and Hephthalites. In pre-Islamic times the city was a Buddhist centre with a famous stupa, the Nawbahār, the head of which, Barokh [22], seems to have exercised political control over the city. Balh was also famous in Zoroastrian tradition and there must have been five temples there before Islam. The city, at least from the time of Alexander the Great, was protected by great walls. The various traditions on the founding of Balh, as found in Arabic and Persian sources, are discussed by Schefer and Schwarz (refs. below), where it is apparent that the Arabs knew of the antiquity of the city.

In 32/653 the Arab commander al-Ahnaf b. Kays [23] raided Balh and obtained tribute (Balādhuri, 408). The area was not conquered until the war between 'Alī and Mu'awiya was decided in favour of the latter in 40/641. Balh was reconquered by Kays b. al-Haytham or 'Abd al-Rahmān b. Samura (cf. J. Marquart, *Eréndaher*, Berlin 1907, 60). On this expedition, or the first one of al-Ahnaf, the Nawbahār shrine is said to have been destroyed by the Arabs (Le Strange, 422). During part of this period a local prince, called *Nēzak Tarighān*, occupied Balh and caused trouble to the Arabs (cf. Markwart, *Weber und Arang*, 47-2). Unfortunately, the events and chronology of this area under the early Umayyads are confused in the Arabic sources. There were frequent revolts against Arab rule and it is not until the time of Kutayba b. Muslim (d. 96/715) that Balh could be considered subdued. The city seems to have suffered considerably from warfare, and there are indications in Tabari that the city was in ruins about 705 A.D. (Schwarz, 436). The Arabs did not reside in Balh but maintained a garrison at Barokhān, two farsakhs from Balh until the governor of Khurasān Asad b. 'Abd Allāh al-Ka'bi moved the garrison to Balh rebuilding the city in 107/725. In 118/736 Asad transferred the capital of Khurasān from Merv to Balh with the result that Balh prospered. Abū Muslim had to capture and recapture Balh from the Syrian troops of the garrison loyal to the Umayyads who were helped by local troops, but his lieutenant Abū Dā'ūd al-Bakri finally secured Balh and Tughristān for the 'Abbāsids.

Under the 'Abbāsids the governors of Khurasān became practically independent, and in Balh the descendants of the princes of Khuttal held sway (cf. *Eréndaher*, 301). One of them, Dā'ūd b. 'Abbās al-Bāndjīrī, succeeded his father as governor of Balh, and was driven from his capital by Ya'qūb b. Layth in 256/870. In 287/900 'Amr b. Layth was defeated and captured near Balh by Ismā'īl b. Ahmad, and Balh passed under Samanid rule. It is Balh in the 4th century which is described by the geographers in Arabic as *wasn al-bīdā* 'the mother of cities'. The later Samanid governors of Balh such as Fā'ik, Alptakin and Subuktakin were virtually independent. During the rule of Mahmūd of Ghazna 387-421/997-1030, Balh was captured once by Ilak Khan in 397/1006, but Mahmūd shortly recaptured it. Although Balh was in the centre of the arena of warfare between the Saljūqs and the Ghaznavids,

and was threatened with capture by the former after their victory at Dandankān in 431/1040, it was not until 431/1050 that they definitely occupied the city. The city changed rulers several times during Saljūq rule and at the end of Saljūq's reign it fell into the hands of the Ghuz Turks, and was destroyed by them in 550/1155. The Karā Khānīy rulers then included Balh in their domains from about 560-1/1165 A.D. In 594/1198 Balh' al-Dīn Sām of Hāmāniy occupied Balh for the Ghūzids and in 603/1206 Muhammad Kh'irānshāh captured it. Shortly thereafter, in 617/1220, although Balh surrendered to Čingiz Khān, the city was destroyed and its inhabitants massacred. It took long to recover from this blow, for Ibn Batūta in the early 8th/14th century describes the ruins of the city.

Balh regained some of its past splendour under the Timurids, and some of the masterpieces of Timurid architecture were erected in Balh. The citadel of Balh which had been razed by Timur was rebuilt by his son Shāh Rūkh in 810/1407. The end of Balh as a great centre, however, was forecast by the discovery (ca. 1480 A.D.) of the 'so-called' grave of 'Alī in the vicinity of Balh. In 886/1481 a shrine was erected at the site ca. 20 km. to the east. By the 16th century around this shrine had developed the present city of Mañr-i Sharīf at the expense of Balh. In 912/1506 Shāhīn Khān of the Ōzbekk conquered Balh. Bābūr held the city for a short time as did the Safawids under Shāh Isma'īl, but most of the time Balh remained in Ōzbek hands. The Ōzbekk controlled the area until the rise of Nadir Shāh, except for a short period when Shāh 'Abbās and the Safawids obtained the allegiance of the local khān, and from about 1647 to 1647 when the Mughals occupied it. In 1737 Nadir Shāh suppressed a revolt against his rule by the Ōzbekk of Balh, but after Nadir's death the district passed again under local Ōzbek rule. This was soon followed by submission to Ahmad Shāh Durrān and the Afghāns about 1754. In the early 19th century the area of Balh was raided several times by the Ōzbek Khān of Bukhārā, but from 1841 it remained in Afghān hands.

The importance of Balh came in great measure from its geographical position on a fertile plain, the meeting place of trade routes from India, China, Turkistan, and Iran. It was natural that a great centre should exist between the Oxus River and the Hindu Kush Mountains. At the present time the ruins of Balh occupy a large area, and the site of so much promise actually has been very disappointing to archaeologists. At the present day the village of Balh has only a few thousand inhabitants. The visible monuments of Balh include the ruins of extensive walls (ca. 10 km. perimeter) enclosing the modern village, and two shrines on the square of the present village. One is the Green Mosque in Timurid style but probably built at the end of the 16th century A.D. by an Ōzbek Khān, 'Abd al-Mur'min. Facing it is the tomb-shrine of Kh'ajā Abū Nāṣir Parsā, a Sufī of the 16th century. A nearby *madrasa*, erected by Sa'id Subhān Kūll Khān (d. 1702), has only one left. In the northwest section inside the walls, are the ruins of the shrine of Kh'ajā 'Akkaḡhāh Wālī from the late Timurid period. In summer the area of Balh is very hot and dusty, in the winter the area is almost a swamp.

(R. N. FEYR)

**BALKHĀN**, two mountain ranges east of the Caspian Sea, which enclose the dried-out river-bed of the Ōbsoi (cf. Abū Dāwūd). To the north of this river lies the Great Balḫān, a high plateau of limestone, difficult of access, with steep slopes; the highest elevation is at the Dūnagh Kal'e, about 1880 metres. The Little Balḫān, south of the Ōbsoi and cut with numerous ravines, attains (in the west) a height of no more than 800 metres. These mountains, where according to Mukaddas, 285, l. 14 ff., wild horses and cattle lived, were once searched for iron by the surrounding peoples. The area became, in about 420-2/1029-31, a place of retreat for Turkmen tribes coming from Khurāsān (cf. Ibn al-Aṭfīr, ed. Tornberg, ix, 267). During the following centuries the region was thickly settled with Turkmen and lost more and more its economic importance. The establishment of Russian harbours in the Balḫān Inlet of the Caspian Sea (after 1869) and the construction of the Trans-Caspian railway (after 1881) restored to this area a certain importance, which declined, however, after the building of the Orenburg-Tashkent line (1905).

*Bibliography:* Brockhaus-Yefron, *Enciklopediĭskiy Slovar*, vol. 4, St. Petersburg 1894, 834; *Islāḡiyya Sovetskaya Enciklopediyya*, IV (1950), 167 ff.

**BALKHĀSH**, after the Aral (q.v.), the largest inland lake of Central Asia (18,432 sq. km.), into which the Ili and several other less important rivers flow. The lake's existence was unknown to the Arab geographers of the Middle Ages. The anonymous author of the *Ḥudūd al-'Alam* (372/982-983; comp. J. Margart, *Osteuropäische und asiatische Streifzüge*, xxx, makes the Ili (Ili) into the Irdū-Kul. Of all the Muslim authors, Muḥammad Ḥaydar is the only one, to our knowledge, who, towards the middle of the 10th/16th century (*Tarīkh-i-Raḡhāt*, trans. by E. D. Rosa, 366) describes lake Balḫāsh. The author gives the lake, which then marked the boundary between the country of the Ōghuzs (Chaghatāi) and that of the Mongols (Mughlīstān), the name of *Rūkhā-Teniz* or blue lake, and describes it as a body of fresh water. But he greatly exaggerates its length and breadth and considers the Volga (Iḍl) as a derivative of Balḫāsh. Nevertheless, Muḥammad Ḥaydar's statement on the taste of the waters of the lake is important. In point of fact, all the modern geographers have looked upon Balḫāsh as a salt lake. It was only in 1905 that the investigations undertaken by the Turkestan section of the Imperial Russian Geographical Society, completed in 1931 by the works of the State Institute of Hydrology and in 1941 by those of the Institute of Geological Sciences of the Academy of Sciences of the

USSR, established that a part of the waters of the lake is fresh water.

The Kalnaks were the first to give the lake its Mongol name of Balḫāsh. They did in fact dominate in these regions in the 17th and the first half of the 18th century. The name 'Balḫas' occurs with a reproduction of the lake, very exact for the period, on a map by the Swedish non-commissioned officer J. G. Renat, who spent seventeen years in the country of the Kalnaks, from 1716 to 1733. Comp. *Carte de la Dismarchie dessinée par le seldois Renat pendant sa captivité chez les Kalnaks de 1727 à 1733*, ed. Russ. Imp. Geog. Society, St. Petersburg 1881.

The appearance of the neighbourhood of Balḫāsh is extremely desolate and arid and until the October Revolution the lake had never played a rôle of any economic importance. Its development began in 1936 with the building of a large industrial city, Balḫāsh, on the bay of Bertis on the Northern shore of the lake.

**AL-BALKHĪ**, ABŪ-BALKHĪ (ABŪ ALLĀH B. AHMAD b. MAHMŪD), also known as Abū'l-Kāsim al-Ka'fī al-Balḫī, the Mu'tazilite, born at Balḫ, he lived for a long time at Baghdat, where he was the disciple of the Mu'tazilite Abū'l-Ḥusayn al-Kharrāṣī. He founded a school at Nasaf, converted to Islam a number of the inhabitants of Khurāsān, and died at Baghdat at the beginning of 324/936 325/August 321. Among his disciples were Ibn Sijbāh (Abū'l-Tayyib Tharīḥ b. Muḥammad), who died after 350/962, and al-Abḡah (Abū'l-Ḥasan). Among his works are mentioned the *Kitāb al-Maḥallāt* and the *K. Maḥāsin Khurāsān*, in which he speaks of Ibn al-Rawandī.

He defended the optimistic Mu'tazilite thesis which states that God cannot abandon the better for that which is less good. Man, he says, can and must do that which is better, whereas God cannot, because there is nothing superior to Him to oblige Him to do better than that which He has done. In agreement with the Mu'tazilite, he did not recognise in God attributes distinct from His essence. He held that non-existence capable of existing is a well-determined entity, existing as such, in a single essence. He considered the atom as inextensive and devoid of qualities of its own; the qualities of the body derive from the aggregate of the atoms, which are therefore not essential but accidental. He distinguished between sensation and impression: man, he says, perceives by his reason the sensible objects which affect his different senses; but the reason by themselves can perceive nothing; they are the routes by which organic impressions reach the reason. The voluntary act, he says, presupposes hesitation and decision, which are characteristic of Man, an imperfect being, whereas in God such an act is totally absent. —The inanimate, he says, must return to the Kurayyah, but if a conspiracy is suspected, a non-Kurayyah it can be elected instead.

**AL-BALKHĪ**, AḤMAD ZAYD AḤMAD b. SAḤ, a famous scholar known today principally for his geographical work, was born at Shāhīstūyān, a village near Balḫ in Khurāsān, about 236/850. He died upwards of 80 years old in Dhū T-Ka'da 322/October 934. His father was a schoolmaster from Sijistān. As a young man, wishing to study the doctrine of the Imānīyya sect to which he belonged, al-Balkhī travelled on foot to ḡrak with the pilgrim caravan. He remained there for eight years, becoming a pupil of the celebrated Al-Kīndī and visiting the neighbouring lands. In later life he refused to cross the *ḡjayhūn* (Oxus) to go from Balḫ to Buhārā, when invited by the *amir* of the latter place.

During the years which al-Balkhī spent in ḡrak his studies included philosophy, astrology and astronomy, medicine and natural science (*Yāḡūḡī Irḡād*, I, 143-45). For a time he was torn between his earlier sectarian religious allegiance and the tenets of judicial astrology, then much in vogue, but he finally became strictly orthodox in his opinions, and pursued the study of the religious sciences side by side with 'philosophy'. He is cited as an almost unique example of one who was equally expert in both fields, as named by Shahrastānī (*Mīḡal*, ed. Cureton, 348) among the philosophers of Islam. He himself relates that he lost his patron, the general Ḥusayn b. 'Alī al-Marw-al-Rūḡī, through the publication of one of his books and Abū 'Alī al-ḡjayhānī, also his patron, the *wasir* of the Sāmānīd Nasr b. Aḡmad, through the publication of another, though the general was a Karmāṭite and the *wasir* a Duāḡlī. (This Abū 'Alī was the son of Abū 'Abd Allāh al-ḡjayhānī, [q.v.], the geographer, who is perhaps here meant, cf. Barthold, *Turkestan*, 12). Yet the works of al-Balkhī on religious subjects were much praised by competent judges, especially his *Nasḡ al-Ku'ḡlīn*, evidently a work of *Isfār* (*Irḡād*, I, 185). Yāḡūḡī (*Irḡād*, I, 142-3, cf. 150) gives the titles of 69 out of about 67 works of al-Balkhī, i.e., he added 13 titles to the 43 listed in the *Fihrist* (ed. Flügel, 135). Of these Ḥadḡḡī Khālifa mentions less than half-a-dozen, and in our own time, apart from a *Kitāb Maḡlīḡ al-Abḡdān wa'ḡ T-Anḡus* (for which see Brockelmann, S I, 408), al-Balkhī is known by a single work, apparently no longer extant as such.

This is the so-called *Suwar al-Abāḡim*, otherwise *Taḡḡim al-Bulāḡin* (neither title in the list of his works in Yāḡūḡī), which is generally admitted, since De Goeje's monograph appeared (see *Bibliography*), to be the basis of the geographical works of al-ḡḡakhrī and Ibn Ḥawḡal, and thus to mark the beginning of what has been called the classical school of Arabic geography. It seems to have been a world-map divided into 20 parts, with short explanatory texts (Mukaddas, 4). It has been suggested by Barthold (*Ḥudūd al-'Alam*, preface, 18, n. 5, cf. V. Minorsky, *ibid.*, xv) that al-Balkhī in his book may simply have added an explanation to maps by Abū *ḡḡafar al-Khāḡin* (Brockelmann, SI, 387). Al-Balkhī's fame as a geographer depends solely on this work, which in any case

can scarcely be said to have been completely original, in view of the *ḡira Ma'āḡinīyya*, also apparently a series of maps, mentioned by Ma'āḡī *ṭempore* al-Ma'āḡinī (Caliph 108-218/113-83) (*Tan-Mā*, 33). Al-Balkhī's interest in geography may have been due to his teacher al-Kīndī, for whom a translation of Ptolemy's treatise on the subject was specially made (*Fihrist*, 268), and another of whose pupils, Aḡmad b. al-Tayyīb al-Sarāḡḡī, wrote a *Kitāb al-Maḡlīḡ wa'ḡ Maḡlīḡ* (*Tanbīḡ*, 67), apparently the first of several geographical works in Islam with that title. Though Mukaddas (88, 260) observes that al-Balkhī did not travel widely, he admits that he was an expert, especially for his own province, mentioning in particular his familiarity with the *ḡivās* (i.e., registers of taxes) of Khurāsān (*ibid.*, 307). This is consistent with what we read elsewhere of al-Balkhī having acted as a secretary (*kāḡib*) to one of the Sāmānīds (*Irḡād*, I, 147). His work is cited also by Makrīḡī (*Khāḡid*, ed. Būlāḡ, I, 115).

DUNKER)

**BALKUWĀRĀ** (see SĀMARRĀ).

**BALTA LIMĀNĪ**, situated on the European shore of the Bosphorus between Boyač-Köyü and Rumelī Hisar, takes its name from Balḡa-oghlu Sulaymān Beg, the commander of the Ottoman fleet at the time of the conquest of Constantinople in 1453. It is in fact the ancient Phalaea and was also known as Gynaikōn Limnē (Portus Mulierum). Gyllius (mid-16th cent.) refers to it as the "... sinuum Phalaeae, et portum mulierum ...", which the Greeks called Sarantacopa from the maiden bridge there across the marshlands ("... quon Graeci nostrae aetatis appellant Sarantacopam ... ita nuncupatus a ponte limon ... quo paludes transeuntium canis plene ..."). Balta Limānī, in the 18th and 19th centuries, was a resort popular with the wealthier classes of Istanbul. Several international treaties were signed at Balta Limān in the first half of the 19th century: the Anglo-Turkish agreement of 25 August 1818, which accorded to England large commercial privileges with a most-favoured nation clause and also decreed the abolition of trade monopolies in all the territories under Ottoman suzerainty, the pact of friendship, commerce and navigation (3 August 1839) between Belgium and the Porte, and the Russo-Turkish convention of 3 May 1849, which modified the organic regulations of 1813 relating to the Danubian principalities of Wallachia and Moldavia.

**BALTADJĪ**: a name given to men composing various companies of palace guards under the Ōtō-

man regime down to the beginning of the nineteenth century. The term was used alternatively with the equivalent Persian *bahadūr*, both words meaning, literally 'ase-man', and hence 'woodcutter', 'pioneer', 'halibearer'.

It would appear that originally the *bahadūjs*, whose corps was recruited from the *ʿAdīmī Oghlans* [q.v.], were employed in connexion with the army in the felling of trees, the levelling of roads, and the filling of swamps, but that even before the conquest of Constantinople some of them were posted as guards to the imperial palace at Adrianople. Thereafter, with the foundation at Istanbul in turn of the 'Old' and 'New' Sarays, Galata Saray, and the saray of Ibrahim Paşa, other companies of *bahadūjs* were formed for each. The men of all these companies except that of the New, later called the Topkapı Saray, were admitted, after a certain length of service, to the *ođah* of the Janissaries, whereas those of the Topkapı Saray enjoyed the privilege of entry into the *Sipah* and *Sildāhār* *idimsi* [q.v.] of the standing cavalry. The men of this privileged company were known as *sūlūfī bahadūrs*—that is to say "blinkerered" *bahadūrs*—for the curious reason that, since one of their duties was to carry the wood required for heating the imperial *harem* into that forbidden precinct, on the occasions of their performing this duty, in order to prevent them inadvertently catching sight of the ladies of the establishment, they were "blinkerers" made of cloth or gold lace hanging down on either side of their faces from their tall pointed caps (the Persian *sal* signifying 'a lock of hair'), as well as special jackets furnished with exceptionally wide upright collars.

Upon the closure in 1673 of the sarays of Galata and Ibrahim Paşa, their *bahadūr* companies were abolished. By this time also recruitment by *devşirme* had all but ceased. The remaining companies were mostly recruited therefore from free-born Anatolian Muslims, though the relatives of palace servants were also sometimes admitted into them. The *Sūlūfī Bahadūrs* were suppressed by Mustafa III but revived by ʿAbd al-Hamid I, and remained in being until the palace service as a whole was reorganised by Mahmūd II. They were commanded by a *kāhya* (*höđhādā*) responsible to the sultan's principal page, the *Sildāhār Ađha*.

Twelve *hājas* of the *Sūlūfī Bahadūrs*, distinguished by their literacy, had various special duties. Thus they would bring out, and stand behind, the sultan's throne at his accession and upon *bayram* [q.v.]; guard the Prophet's Standard (*standārd-i šarīf*) and read the Qurʾān beneath it on campaign; take charge of the belongings of the *harem* ladies every year when they and the sultan returned to one of the summer *hökkes*; and—from the seventeenth century—present officials of the Sultan Ahmed mosque with sherbet, rose-water and incense at the yearly celebration of the Prophet's Birthday (*Mawlid*).

Each of the chief officers of the palace, moreover, had one or more *Sūlūfī Bahadūrs* in attendance on him; and two important offices in the palace service were filled by *hājas* of the corps: that of the head cook of the *Kash-khāne* (the imperial kitchen) and his second in command.

The *bahadūrs* of the Old Saray, which from the late fifteenth century was the residence of the sultan's mothers, were responsible down to the seventeenth century to the *Kāpı Ađhās* [q.v.] and thereafter to the *Kizlar Ađhās* [q.v.], to whom those who could acquire enough learning in the Baykād *ma-*

*drises* might act as confidential secretaries or as clerics for the *awāsh* of the Holy Cities, whereas other senior members of this corps might serve the Wālide Sultān and other princesses as chief coffee-makers (*bahadūji-kađh*).

A number of Grand Viziers were *keten* *bahadūjs*, of whom perhaps the best known are Baltajī Mehmed Paşa, who defeated Peter the Great on the Pruth in 1711, and Newshahīdī Ibrahim Paşa, the last minister of Ahmed III.

**BALTIŠTĀN**, known to Muslim writers as Tibbat-i ġhur or Little Tibet, lying between 34° and 36° N and 75° and 77° E between Gilgit and Ladākh, extends some 120 miles on either bank of the Indus, covering an area of 8,522 sq. miles. A mountainous country, it has some of the highest peaks in the world: Godwin Austen (K 2), 28,239 ft., conquered in 1935; Gasherbrum, 26,470 ft., conquered in 1938, and Haramosh, 24,000 ft. Skardu the chief town, was electrified in 1951. It has an airstrip, a modern hospital and a number of schools. A new bair has been recently built.

The Balts were converted to Islam in the thirteenth century partly by Sayyid ʿAlī Hamadān of Srinagar (Kashmir) and partly by his *khālifa*, Sayyid Muhammad Nūr Baksh. They are polygamous and of the Shīʿite persuasion. Their neighbours, the Hunzas, are followers of the Ađhā Khān. The language used by the Balts is a mixture of Ladākhī and Tibetan but has a sprinkling of Arabic and Persian words, indicative of the influence of Islam.

The old rulers of Baltištān are known as Rājās or Gūlās, the most famous being ʿAlī Shīr Khān who flourished in the thirteenth century and also built a fort at Skardu. His expeditions to neighbouring regions still form the theme of many a native folk-song. In the early thirteenth century another Gūlāp, ʿAlī Mir, chief of Skardu, invaded and conquered the lower-land of the Balts. The last of the Gūlās, Ahmad Shāh, lost his independence to the Dogra general, Zōber Singh in 1840, when Baltištān was annexed to the Kashmir State, then ruled by Gulāb Singh. It came under the British sway in 1846 by the Treaty of Amritsar when it was placed under the Wazir Wazīrat of Ladākh.

In February 1948, the people of Baltištān rejected the suzerainty of the Maharaja of Kashmir and requested the Pākistān Government to take over control of the area. Since then it is being administered by the Chief Adviser, Kashmir and Baltištān. It has made general progress; almost the entire area now has a net of pony tracks. Skardu is linked with Rawalpindi by air. An annual service has also been introduced between Baltištān and Pākistān. Improved educational, medical and other facilities have been provided raising the standard of living of the people. Large amounts have also been sanctioned for the economic development (specially the construction of roads) of the area.

**BALŪĀ** (Balŭc) of the USSR, elements who emigrated from Khurāsān at the end of the 19th and the beginning of the 20th century, whose emigration in fact continued after 1918. They are sometimes erroneously confused with the Gōsies of Central Asia (see 1,014). At the 1926 census, 936 Balŭc were counted; this figure underestimates their true number, as some of them were reckoned with the Turkmen and others with the Čingāns; on the other hand, the estimate made by Grande (*Spisok narodnostey SSSR, in Revolyutsiya i Natsionalizm*, no. 4 of 1936, 74-83), who assessed them at 10,000 in 1933, is excessive. The Balŭc inhabit the SSR of Turkmenistan, in the region of Mard. They are Sunnī Muslims of the Hanafī rite and speak the Makrānī dialect of Balŭc; this, however, is disappearing, gradually ceding ground to Turkmen, which is used as the literary language, and to Tadjik. Until 1928, the Balŭc were nomads, but between 1928 and 1935 they were settled and grouped in stock-rearing kolchozes. Their carpets, the manufacture of which is a craft, are locally famous. (A. BENVENISTE)

**BALŪCISTĀN** (BALŪCISTĀN), land of the Balŭc. A. Geography and History. The exact boundaries of Balŭcistān are undetermined. In general it occupies the S.E. part of the Iranian plateau from the Kirmān desert east of Bam and the Baghagird Mts. to the western borders of Sind and the Pandjāb. This arid and mountainous country contains a predominantly nomadic population. It is divided between Iran and Pākistān. At present Balŭc are also found in Sind and the Pandjāb, in Sīstān and a few nomads in the USSR near Marw, [see above].

The rivers of Balŭcistān are small and unimportant. One may consider the country a plateau with the rugged Solaymān range in the East and several mountain ranges in the West, the most spectacular peak of which is the volcano Kūh-i Tāftān (13,500 ft.). The town of Irānshahr (formerly Fāhrād) is the capital of Persian Balŭcistān with Kalāt the most important centre in the East. The seaports, such as Tiz, Pānd and Gwādar, formerly active, now have lost their importance.

The population of the area, including Brahōis, is uncertain, hardly more than two million today. Although the Balŭc are the majority of the population, with the Brahōis the largest minority, there are also Džats and other Indian elements on the eastern coast, and negroid people in the port towns especially in Persian Balŭcistān. The Balŭc are divided into two groups separated from each other by the Balŭc in the Kalāt area which accounts for the two major dialects.

The earliest mention of the area, called Maka, is in the Old Persian cuneiform inscription of Darius at Behistun and Persepolis. Other names occur in classical sources, but very little is known of the country in pre-Islamic times. It is probable that Iranian speakers were late in coming to Balŭcistān and the southern and eastern parts of Balŭcistān were predominantly non-Iranian until well after the Islamic conquests. The Balŭc probably entered Makrān (i.e., western Balŭcistān) from Kirmān about the time of the Sāldjūq invasion of Kirmān.

Kirmān was conquered by the Muslims in 236/44 in the caliphate of ʿUmar. In the mountains of Kirmān they met Kufi or Kōf and Balŭc or Balŭc

who were marauding nomads. At this time the Zuff or Džats were in Makrān, which was not conquered by the Arabs. In the time of Muʿawwya, ca. 41/64, the towns of Makrān were occupied and war was waged with the Māda of the coast, while raids extended as far as Sind.

In the time of al-Hādīdī b. Yūsuf (86/705) in the inter-Arab struggles the ʿAlīdī Arab faction was driven into Sind to be followed in 89/707 by Muḥ. b. Kāsim with an Arab army. It is difficult to identify the places he captured, but Muslim rule was extended by him through Balŭcistān to Sind. It is probable that the Arabs maintained their influence only on the coast, but we have very little information about the entire area throughout the ʿAbbasid caliphate. Mahmūd of Ghazni maintained authority over Kūsdār (the Kalāt plateau) acc. to the *Tahakāt-i Nasiri*.

The Balŭc and the Kōf tribes during the Umayyad and ʿAbbasid caliphates raided from Kirmān, spreading into Sīstān and Khurāsān. According to Yāqūt the Balŭc were decimated by ʿAdud al-Dawla the Būyīd (338-372/949-982). They continued their depredations until Mahmūd of Ghazni sent his son Masʿūd against them, who defeated them near Kāshāb. Shortly after this time the eastward movement of the Balŭc began, for they left Kirmān and went into Makrān. It is possible that the strong centralised government of the Sāldjūks made raiding unprofitable for the Balŭc who consequently moved eastward. Two centuries later the Balŭc are found in Sind. In the Kalāt highlands the Brahōi confederacy, including some Balŭc and Ađghān tribes, kept the main body of Balŭc from invading the area, and the Balŭc then moved into Sind and the Pandjāb. No permanent kingdom was established but each tribe was under its own chief and inter-tribal fighting was common.

The first tribes of which any records have survived are the Rinds under Mir Čākur and the Dōdāis under Mir Sulayb who appeared at the court of Shāh Husayn Langāh at Multān, who ruled from 874-908/1467-1502. The tradition is that Mir Čākur and his Rinds came from Sīst and took service with Shāh Husayn. Other Balŭc followed and, according to ballads, there was war between the Rinds and Dōdāis. In these legends the memory of the migration of the Balŭc to India is preserved.

The Dōdāis and Hōs, another Balŭc tribe, spread up the Indus valley and Bāhar met them as far north as Bhēra and Khushāb in 1519. The towns of Dera Ismaʿīl Khān and Dera Ghāzī Khān were founded by the sons of Sohrāb Dōdāi in the time of Shēr Shāh, who confirmed their possession of the lands of the lower Indus valley. According to tradition these Balŭc aided Humāyūn in his reconquest of Dīlī and were in the good graces of the Mughal rulers.

The only history we have of Balŭcistān in the later period concerns the Brahōi confederation. The Brahōi confederation began to expand in the 17th century on the basis of these rulers. Mir ʿAbd Allāh extended his power west throughout Makrān and south to the sea. Nadir Shāh of Persia regarded the Brahōi Khāns with favour, for after his Indian conquests he awarded them lands in Sind taken from the Indian Kalbāfcs.

Almad Shāh Durranī established his authority over Makrān, and the Brahōi Khān recognised him as his suzerain. This Brahōi, Nadir Khān, extended his rule over Las-Bēla including Karāčī. He organised

founders in the Turkish service. It passed also, from the Turkish, into various languages of south-east Europe. The nickname Balyemez, occasionally given to Ottoman army commanders, is a secondary derivation from the name of the gun.

**Bibliography:** H. J. Kissling, *Italiencz*, in *ZDMG*, 101 (1951), 333-340, where further bibliographical references will be found (see also *MAT* and *Tor*). (H. J. KISSLING)

**BÄLYÖS**, Bälýo (originally Baylô), the Turkish name for the Venetian ambassador to the Sublime Porte—in Italian, *bailo* (Venetian ambassadors at Byzantium had borne this title since 1082; other *baili* were at Tyre and Lajazzo/Payaz near Alexandretta). The Venetians, immediately after the conquest of Constantinople, sent off as *bailo* Bartolomeo Marcello, who on 18 April 1454 made with the Porte a commercial treaty which renewed the agreement already existing with the Ottomans since 1408. Under this new treaty Venice had the right to maintain at the Sublime Porte a bailo with his seat in Pera and with the power to issue passes for Venetian merchants and to exercise in relation to those merchants certain legal functions. The representatives of Venice sat in Constantinople, except in time of war, until the fall of the Republic in 1797; their tenure of office lasted, during the 17th and 18th centuries, in principle for three years. There were also turnover special ambassadors to the Porte who also bore the name of *bailo*. The *baili* played, in the 16th and 17th centuries, an important rôle politically; several amongst them, in times of tension or of war, were thrown into prison (as a rule in Yedikule). The reports (*relazioni*) which they submitted to the *Signoria* bear witness to their perspicacity. These reports have been published in two series: (i) E. Alberti, *Relazioni degli Ambasciatori Veneti al Senato*, ser. II: Turchia, 3 vols., Florence 1840-1855; and (ii) N. Barozzi and G. Berchet, *Le Relazioni degli Stati Europei lette al Senato dagli Ambasciatori Veneti nel secolo diciannovesimo*, ser. V: Turchia, Venice 1866, 1872.

**List of the Bails:** Cf. (i) Barozzi and Berchet, *op. cit.*, I, 9 ff.; and (ii) B. Spuler, *Die carpathische Diplomatie in Konstantinopel*, Pt. IV, in *Jahrbuch für Geschichte Osteuropas*, I, (1936), 229-247 (with additional references).

With the generalised meaning of European diplomatic or consular agent, the word is also encountered in some Arabic dialects and in Swahili.

**BAM** (Arab. Bāmīn). District and town in the VIIth *asān* of Persia. In the middle ages the district was one of the five into which the province of Fārs was divided. The town is situated in an oasis on the south-western fringe of the great desert of Dādā-tā. Lāt, Bam is 1257 km. from Teheran and 193 from Kirmān; Zāhidān, on the further side of the Dādā-tā Lāt, is 324 km. distant. Standing at an altitude of 2,100 metres, Bam is hot in summer, but the winter climate is temperate. Situated as it is on the most practicable of the routes linking south-west Persia

with Sīstān, Afghānistān and Balūchistān, the town has, ever since its foundation in Sāsānid times, been a place of some strategic and commercial importance. Since the 17th/18th century Bam has been noted for its citadel, which was for long regarded as impregnable; this citadel has often served as a bastion against invaders and marauders from the east. During the war between the Safāwīd Ya'qūb b. Layth (d. 81) and the Tāhirids in 260/875, the fortress was used as a prison. The *Hudūd al-'Alam*, 125, describes Bam as it was in the latter part of the 10th/11th century: "Bam, a town with a healthy climate ... in its gables stands a strong fortress. It is larger than Jirūt and possesses three cathedral mosques ... one belongs to the Khārijites, another to the Muslims, and the third is in the fortress. From it come cotton stuffs (*karbās*), turbans (*'amīma*), Bam-turbans (or *kerchiefs*, *dastār-i bāmī*) and dates". Similar details are given by Istakhfī, Ibn Hawkal and al-Muqaddasī. In those days the citadel, which was in the centre of the town, contained part of the bazaars. The houses were of sun-dried brick. There were a number of baths, the best known being in the street or lane of the willows (*zāhid al-bigh*).

In 1131/1719 Mahmūd, the Ghaznavī ruler, captured Bam, but abandoned it some months later owing to a revolt in Kandahār. In 1234/1271 he captured the town again and it remained in Afghān hands until their power was shattered by Nādir (q.v.) in 1747/1749-50. It was doubtless in order to guard against any possible future attack from the east that Nādir greatly strengthened the defences of the town.

It was at Bam that Aghā Muhammad Khān captured the gallant Lutf 'Allī Khān, the last of the short-lived Zand dynasty, in 1220/1795: in order to celebrate his success the Khādjā erected a pyramid there consisting of the skulls of 600 of his adversary's followers (R. G. Watson, *A History of Persia from the beginning of the XIXth Century to the Year 1858*, 25). In 1256/1840-1 Bam came into prominence again, when Aghā Khān Mahallāt occupied it during his revolt. In the old town, which is now almost entirely in ruins, the only building of interest, apart from the striking citadel, is the shrine of the Imām Zayd b. 'Allī Zayn al-'Abīdīn. The modern town, which is some 500 m. to the south-west of the old one, has a population of 13,500; it is divided into four quarters by two broad avenues (*āghāyān*) which intersect in the centre. As in former times, the principal products of Bam and the surrounding district are dates and cotton-stuffs.

**BAMAÑO**, chief town of the territory of the Sudan (French West Africa), on the Niger, at the

junction of the two navigable stretches of the river, at the end of the Dakar-Niger railway, served by an important aerodrome. Formerly a trading post on the routes between the Sahel and the Southern region, and between the Sudan and Senegal, Bamaño occupies a central position in French West Africa which is the reason for its flourishing state; the population of the town, numbering 800 in 1883, had risen to 37,000 in 1945, and today (1958) has reached 100,000 (of whom 4,000 are Europeans). It owes its importance to its administrative and political rôle.

Bamaño was founded by a Bama hunter and named by his Niaré successor, who came from Kaarta, Bama-ko = "after Bama" (the etymology "river of the crocodiles" is incorrect). The size of the original village increased as there came to it first fishermen, and then men from Draa (the Dravé) and Touat (the Tawdi) who brought with them slaves; the town thus comprised four quarters: Niaré, Touré, Bozola, and Dravé, the basis of the present city.

In a short time Bamaño, a bridgehead on the Niger, became a French political objective; after the war of 1870, a move was made in its direction, and it was occupied in 1883 by Col. Bornis-Desbordes. From then on, as a base for French operations in the Sudan, its population was constantly swelled by groups of Senegalese and Sudanese. In 1904, the railway reached the town, which became in 1907 the chief-town of Upper Senegal and Niger: a large administrative, military and medical (Institute of Leprosy and Tropical Ophthalmology) centre grew up, and the town also tended to become a university (Federal School of Public Welfare and cultural (French Institute of Black Africa) centre).

Bamaño is an Islamic city, but its Islam is africanized, lax, and often tainted with animist survivals. Far from being a centre of religious expansion, the city has always been under the influence of the ancient Muslim towns in the region and of families of Moorish marabouts. The Kādīriyya and the Tijāniyya have long been established there; at first in the majority, the Kādīriyya were supplanted by the 'Umarīyya; between the two wars, Hamalīsm, in a more sober form, developed there; at the present time there has come into being a reformist group which proposes to purify the local form of Islam. It is possible to foresee Bamaño, following its present line, seeking to assume a leading rôle in an Islamic revival. In conclusion, it should be noted that Bamaño has a small Christian community and is the seat of an archbishop.

The town, originally built of mud, does not possess any ancient historical monuments.

**Bibliography:** Scanty. Information should be sought in official publications and in historical works on the Sudan. (M. CHAILLEY)

**BAMĀYĀN** (see *MANDE* and *SUDAN*).

**BÄMYÂN**, in the Arabic sources frequently **AL-BÄMYÂN**, a town in the Hindu-Kush north of the main range in a mountain valley lying 8,480 feet above sea level, through which one of the most important roads between the lands of the Oxus watershed and the Indus leads; the town is therefore naturally important as a commercial centre and was important in the middle ages as a fortress also. Although the valley, that of the Kunduz river, really belongs to the Oxus watershed and is separated from Kābul by high mountain passes, e.g., the Shibar and Unnai, its political association has often shifted from north to south. In recent centuries Bāmyān has tended to belong to Kābul and Ghazna rather than to the Oxus territories, and the pass of Ak-

ribāt to the north-west of Bāmyān has marked the boundary between Kābulistān and Afghān Turkhān.

The early history of Bāmyān is obscure. Rare coins of the Kushāns have been reported there but no monuments or other remains of that period have been discovered (J. Hackin, in *JA* 1935, 287 ff.). The Chinese sources, of which the earliest are scarcely earlier than the 6th century A.D., century, usually transcribe the name Fan-yen-na or Fan-yān (see J. Marquart, *Erdbühel*, 215 ff., and P. Pelliot's note in J. Hackin, *Les Antiquités Bouddhiques de Bāmyān*, Paris 1928, 75). According to Marquart the "Olden Middle Iranian" form was Bāmānā. The valley and town at this date are described by the Chinese pilgrim Hsuan-Tsang who found there a great centre of Buddhism with more than ten monasteries and over a thousand monks. He noticed that the language, coinage, script and religious beliefs current differed but little from those of Turkhān. The royal town was on the cliff above the valley, south-west of the great Buddha figures. These two colossal figures, which have for centuries excited the wonder of travellers, both Arab (cf. especially Yāqūt, I, 481) and European, have recently been described in detail, together with many of the associated caves and fresco paintings. Their age is still uncertain but the weight of evidence indicates that the early work, including the two great figures, dates from the latter half of the 6th or early 7th century A.D., and that the excavation and painting of caves continued well into the 8th. During this period Bāmyān appears to have been ruled by a dynasty, perhaps of Hephthalite origin, but certainly subject to the prince (Yabghu) of the Western Turks. This dynasty was still ruling in the first quarter of the 8th century and still professed Buddhism (cf. E. Chavannes, *Documents sur les Tou-hou (Turcs) occidentaux*, St. Petersburg, 1903, 291-2, and Hackin, *loc. cit.* 1928, 83).

The prince of Bāmyān bore the title *Shāh* (written *Shir* or *Shār*) which Ya'qūbī (*Hudūd* 280) erroneously translates "lion"; the word means "king" and is to be derived from the old Persian *šāhāyriyā* (Marquart, *loc. cit.*); Islam was first adopted by those princes in the time of the 'Abbāsids, according to Ya'qūbī's geography (*loc. cit.*) in the reign of al-Manṣūr, according to the same author's history (cf. Houtsma, II, 479) in that of al-Mahdī. The relations of this dynasty to the lands south and north of the Hindu-Kush are not quite clear. According to Ya'qūbī Bāmyān belonged to Turkhānistān, i.e., the lands of the Oxus territory, which is probably confirmed by Tabarī's statement (II, 1092a) that about 170/77 a foreigner from Bāmyān ruled in Qhūtal (north of the Oxus); on the other hand Istakhfī (277) says that the district (*amāl*) of Bāmyān only included the lands south of the Hindu-Kush with the towns of Parwān, Kābul, and Ghazna. Under the later 'Abbāsids the members of the dynasty of Bāmyān, like many Central Asian princes, held influential positions at the court of Baghdad; Tabarī (III, 135) tells us that a *Shāh* of Bāmyān was appointed governor of Yaman in 229/844. There was still a large Buddha temple in Bāmyān in which there were also idols in the 3rd/9th century. This temple was destroyed by the Safāwīd Ya'qūb and the idols brought to Baghdad in 257/874 (cf. the comparison of Tabarī, III, 1851 and *Fihrist*, 346, by Hartold in *Oriental. Stud. (Nöldeke-Festschrift)*, I, 327).

The native dynasties seem to have been finally

overcome by the Ghaznavids. A branch of the house of the Ghurids ruled in Bamiyān for half a century (550-609/1141-1212). Bamiyān was then the capital of a kingdom which comprised all Fārs, Khorāsān and some districts north of the Oxus, and stretched to the north-east as far as the borders of Kāshghar. Like the other lands of the Ghurids, this kingdom also was incorporated in the kingdom of Muhammad Shāh of Ghaznī in the beginning of the 7th/13th century; Bamiyān was granted with Ghazna and other lands to Jalāl al-Dīn the eldest son of the Ghaznavīshāh (Nasavī, ed. Havel, text 25, tract 44). Soon afterwards followed the destruction of the town by the Mongols (605/1212). Mūlūgen, a grandson of Cingiz Khān, fell at the siege of the town; in revenge for his death the conqueror razed the town to the ground and exterminated its inhabitants; the place received the name of Mo-balk (evil town) or, according to Rashīd al-Dīn, Mo-kurgān (evil fortress) and was still uninhabited 40 years later in the time of the historian Jūwaynī. In the past few centuries Bamiyān has always been combined with Ghazna and Kābul; like these towns it belonged, down to the 12th/18th century, to the empire of the Mughals, and afterwards to the newly formed Afghan kingdom of which it is still a part.

At present Bamiyān is a district town connected by motorable roads with both Kābul and Kandahar. The population of the valley belongs mainly to the Hazāra stock, but there are also villages of Tajiks. The inhabitants speak two languages, Persian and Paḡtū (Afghān), but the former is the more widely spoken. The modern settlement lies immediately beneath the cliff with the great images. About two miles south-east lies the ruined fortress of Gulistan, situated on a promontory on the south of the valley. This has been generally recognised as the town built on a hill which Cingiz Khān destroyed, and is probably also the strong fortress referred to by Yāqūt and Ya'qūbī. Whether it is also the site of Huan-Chuang's royal town is not clear, as the pilgrim states that it lay on the cliffs south-west of the images. No remains have been reported in this direction.

**Bibliography:** The geographical position is discussed by A. Foucher, *La Vieille Route de l'Inde*, Paris 1942. The Buddhist monuments are described by J. Hackin and A. & Y. Godard in *Les Antiquités Bouddhiques de Bamiyān*, Paris 1928; and J. Hackin and J. Carl, *Nouvelles Recherches à Bamiyān*, Paris 1933. Hackin's views on the dating should be compared with those of B. Rothenfeldt, *Wall Paintings in India, Central Asia and Ceylon*, Boston, 1938, particularly when corrected by Bachholer, *Art Bulletin*, 1938, 230 ff. Hackin (*loc.cit.* 1928) includes most of the Chinese and European travellers' reports, but Marquart (*loc. cit.*) and Chavannes (*loc.cit.*) are still indispensable. The Hephthalite connections are discussed by R. Ghiesbreght, *Les Chionites-Hephthalites*, Paris 1928. For the later history see Barthold, *Turkeshān*, 2nd ed., London, 1928. On the Ghurids of Bamiyān see *Tahabāt-i Nāsrī* (ed. Nassau Lees), 101 ff.; *ibid.* transl. Raverty, 142 ff. On the Mongol conquest, see the text of Jūwaynī (*Tārīkh-i Dīkhān-khūy*) in Schöler, *Chrestomathie Persane*, ii, 142 ff.; and d'Ohsson, *Histoire des Mongols*, i, 294 ff. (W. Barthold, tr. E. Rieu).

**BAMPŪR**, a district and small town in the VIIth sūbā of Persia (corresponding approximately to the province of Kirmān and Persian Balōchistan). For administrative purposes, Bampūr and its district come under Irānshāhr (formerly Fāhrājī),

situated 23 kilometres to the east. Bampūr, which has a population of 5,000, is chiefly remarkable for its citadel which crowns an eminence 100 feet in height. The inhabitants, who are Sānds and are Balōḡ-speaking, are mostly engaged in agricultural and pastoral pursuits. The surrounding district, which is well supplied with water, is very fertile and produces corn and dates.

After the assassination of Nādir Shāh in 1160/1747, Nāzir Khān, the Governor of Balōchistan, transferred his allegiance to Ahmad Shāh Durrānī (24.), of Afghanistan, but later became independent. Persian authority over Bampūr was not restored until 1849.

**Bibliography:** H. Pottinger, *Travels on Belucistan and Sindh*, London 1816, 330; *Eastern Persia*, by O. St. John, B. Lovett, E. Smith and Sir F. Goldsmid, i, 76, 206-7; Le Strange, 330; Sartīp H. A. Razmārā and Sartīp Nawāzī, *Farhang-i Dīwānī-yi Irān*, Vol. vii, 47.

**BĀN** (A. and P.), the hen-out tree (*Moringa aptera Gaertn.*). Dioscorides knew of its existence in Arabia and other neighbouring countries. Galen, speaking of a remedy obtained from the tree, says that it was imported from the Arabs. Abū Hanīfa reports that the fruit, called *ghā*, was a commodity greatly in demand which was bought and paid for in advance even before being ripe. The wood, because of its lightness, was used for tent-poles. On account of the high and slender growth of the bin and the softness of its wood, Arab poets used the word as a simile for a tender woman of tall stature.

The fruit, known to the Greeks as βάλανος (*balanos*), and to the Romans as *glans unguetaria*, was put to various medicinal uses. Especially a fine oil, extracted from the seeds, was applied against several skin diseases. The juice of the fruit, mixed with vinegar and water, was given to horses as a remedy for cardialgia. In addition to its application in medicine, the oil of the bin was much used in the manufacture of perfumes.

**Bibliography:** Abū Hanīfa al-Dīnawarī, *The Book of Plants* (Lewin), no. 75; Ashundov *Hist. Sindhia pharmacol. Inst. 20 Dorpat*, iii, 165, 349; Dā'ūd al-Antākī, *Tadhkira*, Cairo 1324, i, 61 f.; Ghālibī (Meyerhof-Soboy), no. 118; Ibn al-Awām, *Filāḥa* (transl. Clément-Mullet), ii/b, 145 f.; Ibn al-Bayṭar, *Dīwān*, Būlak 1293, 79 f.; Kāzwinī (Wüstenfeld), i, 249; Kindī, *Kimyā' al-Ḥīr* (transl. Garberi), 59 ff., 281 ff.; Lōw, *Die Flora der Indes*, ii, 124, 325, 330; Nāṣirī, *Nihāyat al-Arab*, xi, 275 f., xii, 78 ff. (cf. Wiedemann in *Arch. f. d. Gesch. d. Naturw. u. d. Techn.*, iv, 419 ff.); *Tuhfat al-Abbāh* (Renaud-Collin), no. 382.

**BANĀKAT**, more correctly B/Pinākāt (thus in Mukaddasī, 277, l. 1; in Sogdian: B/Pinākāt, "chief town", "capital", but in Jūwaynī, l. 47 *Fāhrājī*); a small town at the confluence of the Hāk (today the Aharangān/Arang), flowing from the right, with the Jaxartes (Iranian: Kāshān—cf. *Madād al-Ālam*, 128, 210 ff., and also *ibid.*, 72, where it is named Ūzganī). It lies almost south-east of Taghleb (Cāṣ/Shāh) and was once a flourishing place (*Madād al-Ālam*, 118), possessed however no walls and had its mosque in the bazaar (Mukaddasī, 277; cf. also al-Khāṣṣī in C. A. Nallino, *al-Hawāsimi e il suo rinascimento della geografia di Tolomeo*, Rome 1895, 36, and Yāqūt, i, 760). The town was conquered in 616/1219 by a Mongol force, 5000 strong according to the sources, under the command of Ulugh Noyon and Suktūr, its inhabitants

being either slain or else carried off to serve as assault troops in further sieges; there is no mention that its buildings were destroyed (Jūwaynī, i, 70-74; Mirshā'ad, ed. Jachert, 140).

It is clear that, during the following centuries, Banākāt fell into decline, for in 794/1392 it was "rebuilt" by Timur and named, after his own son, "Shāhrūkhīyya" (Shāraf al-Dīn 'Alī Yāsdi, *Zafarnāma*, ed. Hāhidā, Calcutta 1885-1888, ii, 636). The place is mentioned in the period from the 15th to the 17th century as a strong fortress, but later it sank once more into decay. Ruins (now bearing the name "Sharikarya") are still to be seen and were examined for the first time in 1876 by a Russian expedition.

**Bibliography:** Barthold, *Turkistan*, 269; Le Strange, 482 (with a wrong date for the rebuilding of the town); B. Spuler, *Die Mongolen in Iran*<sup>2</sup>, Berlin 1955, 28, 417 ff. On the name itself, cf. J. Marchart, *Webri and Arang*, Leiden 1918, 162-163, note; and V. Minorsky, in *BSOAS*, xviii/2 (1955), 462.

**BANĀKITI**, (for the vocalisation, see the preceding article), FAKIR AL-DIN ABU SULAYMĀN DĀWŪD B. ABŪ'Ā-FADL MUHAMMAD, Persian poet and historian (d. 730/1329-30). According to his own account, he was made *malik al-gh'awā'*, or "king of poets", in 602-3 by the Mongol ruler of Persia, Jāḥān Khān, Dawlatshāh (*Tadhkira*, ed. Browne, 227 records one of his poems. His historical work, entitled *Rasād al-'l-'Alabāh fi Tawārīkh al-Ashār wa l-'Anabāh*, was written in 717/1317-8, under the Ilkhān Abū Sa'īd; the preface is dated 25 Shawwāl 717/31 Dec. 1317. Apart from a few very brief remarks on the events of the reign of the ruler, it is a résumé of the *Dīwān* of al-Tawārīkh of Rashīd al-Dīn, the arrangement of the subject matter being different. According to E. G. Browne (ib. 101), the range of the second half of the work affords evidence not only of a wider conception of history (probably under the influence of Rashīd al-Dīn), but also of a spirit of real tolerance towards non-Muslim peoples and of a real knowledge of these peoples, doubtless promoted by the position which the author held at the court of the Ilkhān. Blochet (*Introduction à l'Histoire des Mongols* . . ., Gibb. Mem. Series, xii, 98) seems to assert that the Chinese sources of the *Dīwān* of al-Tawārīkh are indicated only by Banākāt and not by Rashīd al-Dīn; Rashīd's text which contains these indications was, however, published as early as 1886 by V. Rosen (*Collections Scientifiques de l'Institut des langues orient. du Ministère des Aff. Étrang.*, ii, MSS. persans, St. Petersburg 1886, 106-107). The *Rasād* is divided into nine parts: prophets and patriarchs; ancient kings of Persia; Muhammad and the Caliphs; Persian dynasties contemporary with the 'Abbāsid caliphs; the Jews; the Christians and the Franks; the Indians; the Chinese; the Mongols. The eighth part (China) was published in 1677 (Berlin); then, in 1679, at Jena) by A. Muller, in Persian and Latin, under the erroneous title of *Abdallae Beidawāsi Historia Senensis* (later translated into English by S. Weston: *A Chinese Chronicle, by Abdallāh of Beyza* . . . London 1820). Quatremère, however, proved that it belonged to the *Rasād* of Banākāt.

**Bibliography:** Quatremère, *Histoire des Mongols de la Perse* . . . par Rashīd al-Dīn, Paris 1836, lxxxv, lxxxvi and 425; H. M. Elliot, *The History of India as told by its own Historians*, iii, 55 ff.; Kieu, *Cat. Pers. MSS.*, i, 79 ff. Other references in Storey, section ii, fasc. 1, 8-12.

**BANĀT** [see TEMERVĀR].

**BANĀT NA'ŠH** [see NOḤḤE].

**BANĀT SU'AD** (Su'ad has departed) are the opening words of a *basīda* or ode, composed by Ka'b b. Zuhayr (q.v.) in praise of the Prophet Muhammad. The events which led to its composition may be briefly stated as follows. After the fall of Mecca in 6 A.H., Ka'b's brother Bugayr, who had embraced Islam, warned him of the fate which had overtaken some of the poets there, and urged him to come in to Medina or seek asylum elsewhere. Ka'b replied in verses disapproving of his brother's conversion. Threatened by the Prophet, Ka'b in despair came to Medina at last and presented himself before the Prophet, who was then seated in the mosque after the morning prayers surrounded by his companions. Ka'b succeeded in obtaining the Prophet's pardon; and in token of his gratitude recited in public his famous poem, in which he lauded the generosity of his benefactor. The Prophet was so pleased with it that he bestowed his own mantle (*burda*) on the poet.

The poem is, therefore, often called *basīda al-burda*. The poem consists of 38 verses, and in its general features conforms to the usual pattern of the pre-Islamic Arabian ode. Numerous commentaries have been written on it. It was first published by Lett in Leiden in 1740, and subsequently by *Preisig* with a Latin translation (Halle 1823) and also by Th. Nöldeke in his *Delictus Veterum Carminum Arabicorum*, Berlin 1850, 170 ff. R. Basset edited it with a French translation and two commentaries, Algiers 1910. An English translation will be found in R. A. Nicholson's *Translations of Eastern Poetry and Prose*, Cambridge 1923. There is also an Italian translation by G. Gabrieli (Florence 1901) and a German translation by O. Rescher (Stuttgart 1930).

The poem of Ka'b inspired another famous hymn in praise of the Prophet, viz., the *basīda al-burda* ("Mantle Ode") of al-Dūstī (q.v.).

**BANBALŪNA**, Pampluna, Span. Pamplona, a town in the north of Spain, chief-town of the province of Navarre, with a present population of about 80,000. No Arab geographer has left us an accurate description of Pampluna in the late Middle Ages. The *Rasād* of M'Qāṣ, which devotes most space to it, depicts the town as the capital of the land of the Basques (Fāscos, *Ar. Rashūniyāh* (q.v.)), a group of mountain tribes established on the southern slopes and at the western end of the Pyrenees, not far from the Atlantic Ocean. Their territory bounded, in the West, the land called *al-Aḥsa* wa l-'Kūfā' (q.v.), i.e., of Alava and the Castles (the original Castile); in the East, it reached the mountainous regions inhabited by the Gascons (Ar. *Gashān*) and the people of Cerretania or Cerdagne. Pampluna was taken by the governor 'Uṭba b. al-Hādīdī in 121/779; it rebelled against Cordova and, in 161/778, was taken by the Franks in the course of Charlemagne's expedition. It passed under the sway of the Franco-Gascons for a number of

years and, from about 825 A.D. onwards, became the capital of an independent principality with Inigo II in close connexion with the powerful Mūsā b. Mūsā, who was his maternal uncle and at the same time his brother-in-law and father-in-law. In 1278/42, 'Abd al-Rahmān II led the Umayyad forces as far as Pampeluna, which was sacked. In 1285/89, bands of Scandinavian pirates, the Norsemen, penetrated as far as Pampeluna and took prisoner the king García Iñiguez. 'Abd al-Rahmān II succeeded in taking possession of the town for a time in 1212/94, in the course of his campaigns against the Navarrese, and demolished it. Other attempts by Muslim armies against Pampeluna were made in 1221/94 and during the dictatorship of the two 'Amirid bādīshahs al-Manṣūr [q.v.] and al-Muḥallaf [q.v.].

(E. LEVI-PROVENÇAL—A. HUCI MIRANDA)

**BAND** ("bond"), a Persian word denoting anything which is used to bind, attach, close or limit, both literally and figuratively (e.g. saddle, procreation); it has also passed into Arabic and Turkish. In Persian, it has various meanings when used in compounds (e.g., *band-i anghūl*, the phalanx; *band-i pā*, ankle-bone; *dar-band*, defile, inlet; *dast-band*, bracelet; *rū-band*, head-veil; *band-i shakhs*, the name of a musical air). It denotes in particular dams (*band-i dā*) built for irrigation purposes; for instance, the *Band-i Kayser*, built across the river Kārin at Shustar by order of the Sāsānid king Shāpūr I (3rd century A.D.), several arches of which were carried away by floods about 1880; on the other side of Shustar, on the way from Akwāz, the *Band-i Gargar* (the *Maḥrūkān* of the Arab geographers), on a lateral drain of the Kārin, which was excavated during the Sāsānid period; the *Band-i Miya* ("middle dam"), constructed during the same period and several times restored, notably at the beginning of the 19th century by a son of Fath 'Alī Shāh (hence its other name: *Band-i Muḥammad 'Alī Mirā*); some 40 kms. downstream from Shustar, near *Band-i Kīr* ("bitumen dam"), are the ruins of a great dam of the same period (on these dams, see E.F. & F. Kārin, 823-826, and *Guide Bleu, Moyen-Orient*, 1936, 718-721). In addition to these, the *Band-i Amīr* (or *Band-i 'Adad*) on the Kurr (formerly the Cyrus; Barbier de Meynard, *Dictionnaire de la Perse*, 477, n. 2), about 80 km. north of Shīrāz, was constructed in the 10th/16th century at the order of the andr river were built the *Band-i Kārdīghī* and the *Band-i Kāzār* ("the fuller's dam"), which were restored by Faghār al-Dawla Cawī, atabak of Fārs under the Saldūghs (on these three dams, cf. the interesting passage in Ibn al-Balghī, *Fārs-nāma*, Gibb. Mem. Series, 131-132). Near Kāghān, in a mountain gorge, is situated the *Band-i Kūhrūd*, built under the Sāfawids (Hānd Allāh Mustawfī, *Naksha*, 71-72; de Seroux, *La Perse en 1839*, 210). In Turkey, nine dams contribute to Istanbul's water supply: on the heights overlooking Bāyıldere (on the European side of the Bosphorus), north of Bahçeköy, the *band* of Mahmūd I (Mahmūd bend), built in 1732, and the *band* of the mother of Selim III (Valide bend), 1796;

some five kms. further away, in the neighbourhood of the forest of Belgrat, four other *bands* from which water flows, as required, into the Bāgh Hāwā (Bağ Havat) or cistern of Pyrgos, and thence towards the city via two aqueducts—the most notable being the *Büyük bend* ("great dam") built in the 6th/12th century by Andronikos I and restored by several sultans, and the *Paşaderesi bendi*, the work of the same Byzantine Emperor (details of these dams: *Guide Bleu: Turquie*, 1958, 179-181).

**BĀNDĀ**, town in Uttar Pradesh (India), situated in Lat. 25° 28' N and Long. 80° 20' E; headquarters of the district of the same name. Pop. (1951) 30,327. The town, otherwise unimportant, attracted notice during the Sepoy Revolt of 1857 when its last ruler, Nawāb 'Alī Bahādur II, put up a hard fight against the British. The town, however, finally surrendered in April 1858. A new village till the end of the 12th/18th century, it began rapidly to expand when Shāhshīr Bahādur, said to be a natural son of the Pāshwā Bājī Rāo I (1739-53/1726-40), by one of his concubines who had adopted Islam, made it the chief town of his estate conferred on him by the Pāshwā. Shāhshīr Bahādur, who fought on the side of the Marathas in the Third Battle of Panipat (1757/1761), was seriously wounded and subsequently died at Bharatpur. His son, 'Alī Bahādur I, colonized many places in Bundelkhand, with the help of the Sindhi of Gwalior. He was succeeded by his son, Dhru 'I-Fakr Bahādur, who entered into an agreement with the British in 1227/1812 and was awarded the title of Nawāb and confirmed into his *dhūl* of Bāndā. An ill-built town, it has a very large number of places of worship, both Muslim and Hindu. The congregational mosque, the largest in the town, was built by the last Nawāb, 'Alī Bahādur II. A patron of learning, he has been praised by the Indian poet in Urdu and Persian, Mirzā Ghālib.

(A. S. BAEMER ANSARI)

**BANDA ISLANDS**, a group of small islands in Indonesia, Long. 130° E., Lat. 4° 12' S., inhabited by less than 10,000 people of mixed origin who are partly Muslims. From the view point of institutions these Muslims are not different from those in other parts of Indonesia [q.v.]. The islands, however, played an important part in the history of the struggle between Islam and Christendom, as the nutmeg trees which are grown there attracted the Portuguese. They arrived in 1512 in Malacca whence they sailed to the Banda Islands a year later, thus transplanting the Iberian war, which had ended a few years earlier, to South and South-East Asia. The Dutch appeared on the scene in 1599. From 1619 to 1942 the islands were under Dutch control, from 1942 to 1945 occupied by the Japanese. (C. C. BERO)

**BANDA NAWĀZ**, SAYYID MUHAMMAD (see SAYYID MUHAMMAD)

**BANDAR** (BENDER), a Persian word which has passed into Turkish, denoting a seaport or port on a large river; it has passed into the Arabic of Syria (Barthelme) and Egypt in the sense of market-place, place of commerce, banking exchange (Bothor, Vollers) and even workshop (Cuche). *Shāh-bandar*, in Persian, means customs officer, collector of taxes; in Turkish, it means consul and, formerly, a merchants' syndicate. In compounds, it occurs in Persian geographical nomenclature on the Caspian Sea (southern shore: *Bandar-Pahlān* (formerly Enzeli); *Bandar-Gaz*, the safest harbour in the region; some 50 kms. to the north, *Bandar-Shāh*, the terminus of the Trans-Iranian railway—the other terminus being *Bandar-Shāhpūr*, on the Persian Gulf; other ports on the shores of the Gulf are: *Bandar-Dāylam*, *Bandar-Rīg*, *Bandar-Būghīr* (see Enzeli), *Bandar-Makūn*, *Bandar-Līngā*, *Bandar-'Abbās* (see following article).

**Bibliography:** P. Schwarz, *Iran in Mitteleuropa* (index: *bandar*). On the places mentioned: *Guide Bleu: Moyen-Orient* (index: *Bandar*); R. Vadala, *Le golfe Persique*, Paris 1920, *passim*.

(G. HUART—H. MASSE)

**BANDAR 'ABBĀS**, a Persian port situated in the VIIIth *sūdan* (which comprises part of Fārs and Kirmīn). The town, which is on the coast of the mainland 10 km. north-west of the island of Hormuz [q.v.], stands on bare, sandy ground rising gradually to the north; it has a frontage of 2 km. along the shore. The position of *Bandar 'Abbās* at the entrance to the Persian Gulf and the fact that it is the terminus of trade routes from Yazd and Kirmīn to the north and Lar, Shīrāz and Isfahān to the north west have made it a place of some strategic and commercial importance. Owing to the shallowness of the sea, large vessels cannot berth alongside the quay or jetty and have to anchor some distance offshore and load or discharge their cargo by means of lighters.

There are grounds for believing that the town is situated on or near the site of the small fishing village of Shahrū (see *Istakhrī*, 67) or Shahrūvā (see the *Ḥudūd al-'Ālam*, 124 and 375). When the neighbouring island of Dīārīn (or Dīarrīn) ceased to be so called and was given instead the name of Hormuz at the beginning of the 6th/12th century, the former name was transferred to Shahrū. When Hormuz developed into a great commercial centre, the importance of Dīārīn as the point of transhipment for goods in transit between the island and the mainland gradually increased. Early in the 10th/16th century the Portuguese established themselves on Hormuz and subsequently also on the adjacent stretch of mainland, Dīārīn, or *Indarū*, as it then came to be called, thus passing into Portuguese hands. In 1613 the Persians recovered Garatu from the Portuguese and seven years later, with the naval aid of the English East India Company, they also drove the Portuguese out of Hormuz. In gratitude for its services, Shāh 'Abbās I allowed the Company to set up a factory in Garatu (or Gombroon, as the English usually called it) and not only exempted it from customs dues there, but also gave it the right to receive half the customs dues. An additional reason for the granting of these privileges was the Shāh's desire that the town should become the chief port in his realm: it was in token of this desire that he named the port *Bandar 'Abbās* after himself. The Shāh's hopes were soon realised, with the advent not only of the English East India Company, but also of the Dutch East India Company

and the French, the port became the most important in Persia. When Chardin was there in 1674, he stated that the town contained between 1,000 and 1,500 houses; he also remarked upon the hot climate and its deadly effect upon the European residents (*Voyager*, Paris 1811, viii, 508, 511-512).

The overthrow of the Sāfawid monarchy by the Ghāzay Afghāns in 1722, followed by the Russian and Turkish invasions and numerous internal revolts, paralysed the trade of the country and brought stagnation to *Bandar 'Abbās*. The expulsion of the Afghāns led to a temporary revival of prosperity, but this was soon nullified by Nādir's exorbitant tax-collectors. Furthermore, his creation of a naval base at Būghār [q.v.] dealt another blow at the supremacy of *Bandar 'Abbās*, and it was not long before the former port became the leading one of the country. When Planiol was at *Bandar 'Abbās* in 1750, he found that nine out of every ten houses were deserted (*Journal from Calcutta ... to Aleppo in the Year MDCC*, London 1758, 11). A few years later the Dutch and English East India Companies abandoned *Bandar 'Abbās*, thus causing it to decline still further.

In 1793 the town, together with a coastal strip 150 km. in length, was leased to the Sultān of 'Uman, in whose hands and those of his descendants it remained until its reversion to Persian control in 1868.

In recent times *Bandar 'Abbās* has recovered something of its former prosperity, thanks to the construction of motor roads from Kirmīn and Yazd and also from Shīrāz. The modern town has a population of some 11,500 (this total undergoes quite considerable seasonal fluctuations). Living conditions have improved with the provision of a piped water supply from 'Iain, 16 km. to the north-west. The main thoroughfare, the Khayyābān Rīdī Shāh-i Kabīr, runs through the town approximately parallel with the shore, at a distance of some 200 m.; the governmental and most of the municipal buildings are in the central part of this avenue. The chief mosques are the Masjid-i 'Djāmī' (for the Shī'a) and the Masjid-i Gāll-Dārī (for the Sunnīs). Modern industry is represented by a fish-canning plant.

**BANDAR PAHLAWI**, principal port (*bandar*) of Iran on the Caspian Sea; situated at 37° 28' N and 49° 27' E. Formerly called Enzeli, the town was

renamed in honour of the Pahlawi dynasty by its founder Rāšā Shāh who came to the throne in 1926. Bandar Pahlawi itself lies on a tongue of land to the west of an inlet between the Caspian Sea and a freshwater lake called Murdāb. To the east of the inlet is the older settlement of Ghāziyān. From Bandar Pahlawi a bridge carries the motor road across the inlet and into Ghāziyān, from there the road proceeds to Rašt, the principal commercial town of the Caspian littoral region, and then on to Tehran, a total distance of 364 km.

In the early 19th century there were only a few hundred houses at the site, in the first decade of this century about 9,000 people, and the present population is given at 48,500. Persian, Gilāki (a local dialect) and some Turkish are spoken. The inhabitants are Shī'īs. There are no monuments of any interest or real antiquity in either Bandar Pahlawi or neighbouring Ghāziyān.

During the second quarter of this century the settlement above has been developed into a shallow, but sheltered, harbour. In the period March 1951–March 1952 some 298 ships entered or left the port. Between 1930 and 1940 there was considerable transit traffic of goods and passengers from Bandar Pahlawi through the USSR and to Europe, but in recent years nearly all the trade has been directly with Russia.

Owing to its proximity to Russia the port town has been the scene of international incidents. In 1722 Russian troops landed on the south side of the Murdāb and again in 1804 another force landed at Enzeli. In March 1920 Soviet troops, following a British force retreating from Baku, landed at Enzeli and later gave support to the establishment of a short-lived Soviet Republic of Gilān. During the Anglo-Soviet occupation of Iran Bandar Pahlawi sheltered a Soviet garrison from 1941 until May 1946.

(D. N. WILDER)

**BANDIRMA**, a port on the Sea of Marmara, near the site of the ancient Cyzicus. The medieval Greek name for the town was Panormos. Villehardouin mentions a castle called 'Palormie', which the Latin Crusaders fortified in 1204. It was used thereafter as a base for their operations against the Greeks in north-west Asia Minor. Under Ottoman rule Bandirma was included in the *sandjak* of Karasā [s.c.]. According to the evidence of travellers who visited the town in the 16th–17th centuries, most of its inhabitants seem to have been not of Turkish, but of Greek or Armenian descent. Much of Bandirma was burnt down in 1871. It now forms part of the province of Balıkesir and is an active commercial centre, exporting the varied products of the hinterland—cereals, sheep and cattle, boracic, sesame, etc. The population of Bandirma in 1950 stood at a little less than 19,000.

**BANDI**, an arabised Persian word, originally from the Sanskrit, denoting a narcotic drug, more exactly the henbane (*hyoscyamus*). The meaning of the Sanskrit *bhaṅḍā* is really "bemp" (*cannabis sativa L.*), i.e., the variety which grows in southern climes which contains in the tip of its leaves an intoxicating resinous substance (Arabic *baḥḍā*), whence the *Zand bānā* "drunkenness". In Persian the loanword *bān* was applied to the henbane and for this reason Hunayn b. Ishāq, in his Arabic translation of the *Materia medica* of Dioscorides, (c. 235/859) equated it with the Greek *ῥοισμα*. With this meaning, the word *bān* is found in the early Persian medical writers who, as a rule, write in Arabic (al-Rāzī, Ibn Sīnā) and in more modern Persian medicine in Abū Maṣ'ūd Mawālā b. 'All (4th/10th century), while it appears to be unknown in the old Arabic poetry, as al-Bīrūnī in the chapter on *bān* in his pharmacology (MS. in the Bursa library) gives no quotations from the poets, which he would not otherwise have omitted to do. The early physicians of western Islām (Ibāḥ b. Sūwayr, Ishāq b. Sūwayr, Ibn al-Dīawād and others) also identified *bān* with henbane and called it in Arabic *sayḥān*, which, however Ahmad al-Ghāḥikī (an Arab physician of Spain of the 6th/12th century) in his pharmacology considers wrong. *Shahbūd* is however the Syriac term for henbane and the Arabic *sayḥān*, *alshān*, *ghāḥān* etc. is derived from it; but the later Arab botanists used the name for another henbane (*hyoscyamus matricaria*) which drives the taker mad, and also for the hemlock (*scicula*). In modern times the word *bān* (in the popular dialect of Egypt *bing*) is used for every kind of narcotic and the verb *bānawā*, "to narcotise" and also to "send to sleep, to anaesthetise", infinitive *bānā*, "narcosis" etc. is derived from it.

**BANDJARMASIN**, town on the southern coast of Kalimantan (Borneo, Indonesia), at Lat. 3° 18' S. and Long. 114° 35' E. It has been known from the 14th century onwards as a centre of inter-island trade and capital of a small principality. It was the capital of a sultanate in the Dutch period (1859–1912) and during the Japanese occupation. The population of approximately 300,000 is Muslim, though the influence of the Javanese civilisation is considerable, especially among the members of the nobility. (C. C. BRZO)

**BANGĀLA**, a geographical term, derived from the word Bang, originally denoting a non-Aryan people of this name and later applied to their homeland in the southern and eastern parts of Bengal, now in East Pakistan. Abū 'I-Faḍl, in his *Āṭin-i Akbarī*, remarks "The original name of Bengal was *Bang*. Its former rulers raised mounds measuring ten yards in height and twenty in breadth throughout the province called *Āl* (Sanskrit—*Āli*). From this suffix the name Bangal took its rise and currency". But both the words, Bang and Bangāl (or sometimes Bhāṅgal) were used in Sanskrit records. It is generally supposed that Bangāl was a smaller division, limited to the southern districts of East Bengal, while Bang was a wider unit. This distinction is purely hypothetical. Among the early Muslim historians, Minhāj al-Sirājī, in his *Tabāḥāt-i Nāṣirī*, uses Bang, and Dīwā al-Dīn Baranī, in his *Tārīkh-i Firāghīyā*, employs *Dīyār-i Bangāl*, or *Ārṣar-i Bangāl*, for the same region of East Bengal—a geographical division which maintained its integrity till about the middle of 14th century A.D.

Shamūd Sirājī 'Alī, in his *Tārīkh-i Firāghīyā*, gives to Shams al-Dīn Ilyās Shāh the titles of *Shāh-i Bangāl* (the king of Bangāl), and *Shāh-i Bangālīyān* (plural of Bangāl) meaning the king over the people of Bengal. As Ilyās Shāh reigned for the first time both the kingdoms of eastern and western Bengal under him, he well deserved the titles, given by 'Alī, and it is after him that Bangāl came to denote a wider geographical region, comprising the whole Gangetic Delta; and this is the sense in all subsequent writings, Persian chronicles, Chinese travel accounts, and European works. But the Indians began to use the older term Gauda for this whole region.

From the middle of 16th century A.D., the city of Bangālā is mentioned in some of the European accounts, and also marked in their maps. But no local tradition or record speaks of such a city. Its position in the old maps is never identical, nor do the descriptions of different authorities tally with one another. Probably the important ports, or the capitals, visited by the Europeans, were variously called the city of Bangālā by different authorities. The mint "*Gau-Bangālā*", occurring in the coins of the Mughal emperor Akbar, may refer to the city, or the country, of Gauda in Bangālā (or "*sur* Bangālā", more probably the latter).

The kingdom of Bangālā grew out of the original Muslim conquest of Lakhnāwī (north-west Bengal) to which were added Satgāṇ (part of south-west Bengal) and Sonārgāṇ (east Bengal). Ilyās Shāh integrated these three regions into an independent Muslim Sultanate in A.D. 1352. His descendants ruled, with occasional revolutions, till A.D. 1484, when they were supplanted by their Abyssinian guards and officers. Within about ten years the oppressive Abyssinian rulers were overthrown by their own popular minister 'Alī al-Dīn Husayn Shāh, an Arab of noble lineage, who inherited in an age of peace and prosperity for the kingdom. The independence of Bangālā was finally crushed in 1538 when Shīr Shāh annexed it into his Indian Empire, but its unity continued as a *suba* (province) even under the Mughals, from 1576 onwards.

The political unity of Bangālā led to the cultural cohesion of the people who were called Bangālī, a term also applied to the local language which developed its literature in this period.

**BANGANAPALLE**, a small state in south India prior to its merger in the Madras State in 1948. It had the distinction of being the solitary State south of the Tungabhadra ruled by a Muslim chief, in this case belonging to the Shī'ī persuasion. In 1948 it had an area of 275 sq. m. and a population of 44,631. The State lay between latitudes 15° 3' and 15° 29' N. and longitudes 77° 59' E. and 78° 22' E.

Banganapalle has had a chequered history. The ruler family claims descent from a minister of Shāh 'Abdā II of Persia on the paternal, and from a minister of the Emperor 'Alauddīn on the maternal, side. The ancestor of the family, Mīr Tāhīr 'Alī, migrated from Persia to Bidjāpūr. A number of family quarrels arose there resulting in his murder. His widow and four sons sought refuge with the Mughal *ḥaṣḍār* of Arror. One of these sons married the grand-daughter of the *dāstār* of Banganapalle, and thus came in contact with what was to be the home of the family.

Banganapalle itself changed hands a number of times. In 1643 it became subject to Bidjāpūr along with a large part of the Vijayanagar territory; but soon the Bidjāpūr hegemony gave place to Mughal rule and the rule of the Asaf Dildars. The *dāstār*, Husayn 'Alī, paid allegiance to Haydar 'Alī of Mysore and fought many a battle under his banner. But when Tipū Sultān succeeded his father he resumed the *dāstār* on a mere pretext. On Husayn's death his widow took refuge with the Nizām of Haydarābād, and one of the representatives of the family is said to have defeated Tipū's *ḥaṣḍār* in 1790 and taken possession of the town. The *dāstār* came under British supremacy by the Treaty of Seringapatam in 1800. It remained under the Madras Presidency till 1859 when it was taken over directly by the Government of India.

By the sanad of 1862 the British Government guaranteed succession according to Muslim Law in case a ruler died childless. In 1867 the hereditary title of *Nawāb* was conferred on the *dāstār*. In 1897, on the occasion of the Silver Jubilee of Queen Victoria's reign, the Nawāb was addressed as 'Your Highness'. The last ruling Nawāb, Mīr Faḍl 'Alī Khān, died soon after the merger, and the title now devolves on his eldest son Mīr Ghulām 'Alī Khān.

**BANGKA**, island in Indonesia near the East coast of southern Sumatra, between Lat. 4° and 4° S. and at Long. 106° E. It owes its fame to its tin mines and its trade which attracted foreign merchants from early times. The economically weaker part of the population is Indonesian and Muslim of the normal Indonesian type. The most important part of the population consists of Chinese immigrants. (C. C. BRZO)

**BANHĀ**, a town in the Nile Delta, situated on the Damiyā branch, one of the main stations on the railway between Cairo and Alexandria and

45 kilometres north of Cairo. In mediaeval times, it formed part of al-Shariyya province and is today the chief town of al-Kalshiyya province, with some thirty thousand inhabitants. The Arabic name is a transcription of Coptic *Panakh*.

The locality occupies a place in the traditional history of the diplomatic relations between the Prophet and the enigmatic Mukawis, the so-called sovereign of Egypt. Among the presents which the latter sent to Muhammad, honey from Banāh is mentioned, and it is the result of just this detail which its nickname *Banāh al-'asā*, "Banāh of the honey", is supposed to evoke. The story may also well be an embellished explanation of an actual fact, for one of the earliest geographers, al-Ya'qūbī, states plainly that the village of Banāh produces famous honey. Yāqūt, in turn, extols the quality of this honey, which was one of the glories of Egypt.

The description given by al-Idrīsī seems to be of the following translation: "Banāh al-'asā forms an extensive domain, its lands planted with trees and producing much fruit; the cultivated fields succeed one another without a break; opposite, on the Western bank of the Nile, stands the main centre, which has given it its name".

Banāh does not appear to have played a rôle in history. At the end of the last century, it was exporting considerable quantities of the commodity to which it owed its name, as well as oranges and mandarins, which were highly esteemed".

**Bibliography:** Ibn 'Abd al-Hakam, 48, 50; Ya'qūbī, 337 (trans. Wiet, 193); Ibn al-Fakih, 67; Idrīsī, ed. Dozy and De Goeje, 152; Ibn Mammūn, 110; Yāqūt, I, 748; Chauvet and Isenbert, *Guide de l'Égypte*, 203; J. Maspéro and G. Wiet, *Matériaux pour servir à la géographie de l'Égypte*, 50.

**BANĪ SUWAYF** (Bani Suf, Beni Suf) a town in Egypt, on the west bank of the Nile, 75 km. (120 km.) south of Cairo. According to al-Salḥāwī (902/1497) the old name of the town was Binnu-suwayf, from which popular etymology derived the form Banī Suwayf (the *بنى سوية* of Ibn Ḥishām, *al-Tuhfa al-Sunniyya*, 172, and the *بنى سوية* of Ibn Dūnān, *al-Futūḥ*, v, 10, ought probably to be read *بنى سوية*). In still more ancient times the capital of this district was Hierapolis Magna, 10 m. (16 km.) west of Banī Suf, which only attained importance under Muhammad 'Alī.

From the time of the division of Egypt into provinces (*mudiriya*), Banī Suf became the chief town of the second province of Upper Egypt, comprising three districts (*markaz*), and gave its name to this province. The town, numbering 10-12,000 inhabitants, is an agricultural centre of considerable importance, with a certain amount of commercial and industrial activity. Situated on the railway and the main road which follow the Nile, it is linked by a track to the Coptic monasteries on the Red Sea. The *makām* of the Shaykh Ḥifriyya, situated in the oldest mosque, Ḥishām al-Bahr, is venerated locally.

**BANĪKA**, (plur. *banā'ik*), an Arabic word which has been subject to considerable semantic evolution. In early Arabic, its meaning is disputed by the lexicographers (cf. Ibn Sīdā, *Muḥāsana*, iv, 84-85;

*TA*, s.v.). The primitive meaning seems to have been "any piece inserted (*ba'la*) to widen a tunic (*banā*) or a leather bucket (*dalā*)". In the case of the *banā*, according to some authorities, *banā'ik* were "snippets" of material, in the form of very elongated triangles, inserted vertically below the armholes, along the lateral seams of the garment, to give greater fullness. According to others, they were pieces inserted on both sides of the fore-part of the collar (*ḥash*) to take the buttons and button-holes. As equivalents, the dictionary gives *ḥash*, *ḥashā*, *ḥashān*; *banā* (and its variant *banāka*), like the two latter words, may be of Persian origin.

In the Arab West, *banāka* is at times employed for a kind of man's tunic, though more frequently it is applied to an element of women's hair-covering. Spanish has retained *albanega* "a hair-net for gathering and covering the hair" and the Arabic of Tetuan still uses the word with a very similar meaning. At Algiers, it is a kind of square head-dress, provided with a back flap, which women use to cover their heads to protect themselves against the cold when leaving the *hammam* (= *banika*).

In its final development, the word, in the towns of Morocco, has come to mean "a small cell, a closet serving as an office for a minister", in the old *maḥalla* (q.v.): a back parlour (cell in a prison for the insane); a small room or lumber-room (in a flat)". According to oral tradition, the *banika* was originally a silk scarf in which all ministers coming to the Council carried their documents.

For the semantic evolution, compare with that of the French "*poindre*" and also (ministerial) portfolio and cabinet.

**Bibliography:** For the Moroccan ministerial *banikas*, cf. Aubin, *Le Maroc d'aujourd'hui* (= 1902), chap. XI.

**BĀNĪYĀS** (or *Buluniyas*), the ancient Balanea, which also bore the name of Leuay; attempts have several times been made to identify it with an "Apollonia which never existed on this site" (R. Dussaud). It is today a small township on the Syrian coast situated some fifty kms. to the south of Latakia. This ancient Phoenician settlement, which became a Greek city minting its own coinage and, later, the seat of a bishopric, was incorporated in the *diḥ* of Hims at the time of the Arab conquest. It was, however, especially at the time of the Crusades, that its small harbour, protected by a fortress and dominated by the mighty castle of Markab (q.v.) on its rocky spur, was for a long period a scene of activity. Occupied by the Franks in 503/1109, Valencia, the position of which was strengthened by the taking of Markab in 512/1118, was one of the important fiefs of the principality of Antioch, at the extremity of the county of Tripoli and, after it was entrusted together with Markab to the Hospitallers in 572/1186, remained one of the last centres of resistance to the Muslim conquest. The attacks to which it was subjected, especially by Ṣāliḥ al-Dīn, until its conquest by Kālī'ūn in 684/1285, so completely ruined it that during the Mamlūk period it entirely lost its administrative rôle to the advantage of Markab, and its site and gardens alone remained the attraction of the Arab geographers. The present town does not even possess archaeological remains evocative of its ancient prosperity.

(J. SOURDEL-THOMINE)

**BĀNĪYĀS**, the ancient Panaea, owed its name to the presence in the vicinity of a sanctuary of Pan, established in a grotto and serving as the main sources of the Jordan. The present place, situated 24 km. north-west of al-Kunaytra, on the road running along the southern frontier of the Syrian Republic, occupies a pleasant site, with plentiful water and rich vegetation, in a smiling valley of Mt. Hermon. Its neighbourhood, moreover, has always been praised by Arab writers for its fertility, and especially for its lemons, cotton and rice cultivation.

The town, though doubtless possessing an older history, is only mentioned since the Hellenistic period. It was embellished by Herod the Great and especially by his son Philip, who bestowed on it the name of Caesarea in honour of Augustus. It was then called Caesarea Philippi (to distinguish it from Caesarea in Palestine), then Caesarea Panaea. Later on the second part of the name survived alone. In the 4th century A.D. it became the seat of a bishopric, dependent on the province of Phoenicia, and the Arab conquest, when it is known to have served the army of Heraclius as a base before the battle of the Yarmūk, made it the chief town of the district of al-Bānīās. Somewhat later al-Mukaddas emphasises the prosperity of the township and the surrounding villages, into which inhabitants of the *thughūr* had emigrated. At the time of the Crusades, however, when the position of Bānīyās, lying at no great distance from Tyre, between Damascus and the Kingdom of Jerusalem, acquired strategic importance, its history became more eventful and its successive masters applied themselves to fortifying the castle of al-Subayba, whose ruins still dominate the town today.

Ceded in 520/1126 by Tughtakīn, Atabek of Damascus, to Bahrām, leader of the Ismā'īlīs, who were then active in Syria, it was handed over to the Franks in 524/1130, following the death of Bahrām and the violent action undertaken at Damascus against the followers of the sect. Recovered by force of arms by Būrf in 527/1132 and delivered up to Zankī, it was then besieged by the Franks who, with the help of the Damascenes, reincorporated it in their possessions in 534/1140. Nūr al-Dīn, after being repulsed twice in succession, Baldwin III and his army coming to the assistance of the threatened garrison on each occasion, finally made himself master of Bānīyās and its citadel in 559/1164 and its adversaries, in spite of their efforts, never succeeded in setting foot there again.

Bānīyās then played the rôle of a frontier stronghold between the countries of Islam and the territory of the Franks who, in Ibn al-Bayḥār's time (1460/1184), peacefully shared the exploitation of the surrounding plain with the Muslims. It was presented by Ṣāliḥ al-Dīn to his son al-Aḥdāl and then passed into the hands of various Ayyūbīd princes, who improved its defences, as is still born out by several extant inscriptions. Baybars, in his turn, was to carry out the restoration of a fortress, the continued importance of which is emphasised by the Mamlūk authors, who even make it the residence of an amīr, independent of the governor of the place.

At this period, Bānīyās was the chief town of a *sulḥa* forming part of the *siyāḥ* of 'Adjla, in the south of the province of Damascus. It was, however, soon to decline to its present state of a small township.

(J. SOURDEL-THOMINE)

**BANJALUKA** (alternative spelling Banja Luka), a town in Yugoslavia, in the north-western part of Bosnia, situated on both sides of the river Vrbas. It is a centre of culture and commerce of considerable importance in the district, has been on a railway line since 1873, and had 42,213 inhabitants in 1956, of whom about one third were Muslims (in 1948 the number of inhabitants was 37,223, of whom 9,957 were of "unspecified nationality"). S.E. Serbo-Croat speaking Muslims who did not declare themselves as either Serbs or Croats). Apart from the quarter called "Novoselija" which developed in the 12th/18th century, and more modern parts ("Varoš" and "Pregradje"), the town consists of two other parts—an upper city, ("Gornji Seher")—where a fortress, or settlement, existed before the Turkish conquest (1527 or 1528)—and a Lower City ("Donji Seher") which was built in the second half of the 16th/17th century. Both these parts contain survivals of the Ottoman rule. Of the 27 mosques of the town, two should be especially mentioned: the oldest of them, built immediately after the Turkish conquest, stands in the Upper City and is called the Emperor's Mosque ("Hunkarija" or "Careva džamija"), which was subsequently repaired and rebuilt three times (the building to be seen at the present day is said to date from the year 1824/25). The most beautiful one in the Lower City is the Mosque "Ferhadija džamija" built in 1279 by Ferhād Sokolović, governor of Bosnia at the time. The *mahallas* (i.e., quarters) of "Gornji Tabaci" and "Donji Tabaci", in the Upper City, recall the tanner's trade—the principal trade in nearly all Balkan towns in the 16th/17th and 18th/19th centuries. In the Lower City, on the banks of the Vrbas, there is a citadel ("Kaštel") which was built during the reign of Murād III (1595-1603) as the town's second fortress.

The statement which is found first in Ewelija Čelebi, that the first part of the name "Banjaluka" is the Serbo-Croat word "Banja" (bath), is merely an example of folk-etymology, based on the fact that there are hot sulphur springs in the town. The name is actually formed from the archaic possessive adjective of the noun "Ban" (a governor, in this case of the Hungarian King), and the word "Luka" (meadow by the river),<sup>1</sup> it thus means the meadow of the Ban.

After the fall of the kingdom of Bosnia (in 1463) the Hungarians acquired the area of Jajce. It is probable that Banjalučka was built at that time (it is mentioned for the first time in 1492) to serve as a fortress for the newly built Jajce-Banates. Immediately after the fall of Jajce, Banjalučka was conquered by the Turks (in 1527 or 1528). Under Turkish rule Banjalučka gained in importance, especially after the residence of the governor of the *sandjak* of Bosnia was moved from Sarajevo to Banjalučka in the middle of the 16th century. The quick rise of the town was largely due to the names of the first governors who resided in Banjalučka, in particular Ferhād Sokolović, a cousin of the Grand Vizier Mehmed Paša Sokolović (Sokolli). Ferhād Sokolović was governor of Bosnia from 1574, and became Berberbeg of the newly formed Pašaluk of Bosnia in 1580. Banjalučka remained the seat of the Berberbeg of Bosnia until it was moved to Sarajevo in 1638. In 1661, when Ewliya Celebi visited Banjalučka, it was a flourishing town with two fortresses, 42 mahallas, 45 mosques, and several *madrasas* and baths, with 300 shops and a Bezistân. The town itself (which numbered 3,700 houses) was then the seat of the representative (*Kā'im-mahmûl*) of the Vizier of Bosnia.

Banjalučka was conquered for a short time in 1688 by the Austrians under the Margrave of Baden, and they burnt down some parts of the town in their retreat. During the 1737 war, Banjalučka was besieged by the Prince of Hildburghausen, but was relieved by the Bosnian Vizier 'Alī Paša Hekimoglu as the result of the victory of August 4th. This war was described by 'Omar Efendi of Novi (Babinger, 276-277). Since then, Banjalučka has developed more or less unsheltered, although it could not regain its former greatness until the end of Turkish rule. There were 37 mahallas and 1,126 houses liable to taxes in Banjalučka in 1851. From then on it was the capital of one of the six Bosnian *sandjaks* (districts).

At the time of the Austrian occupation of Bosnia (1878), Banjalučka capitulated (without offering resistance) as early as 19st July. Nevertheless, there was a battle with the Bosnian Muslims on 14th August. The town remained under Austrian rule until 1918, when it became part of Yugoslavia.

**BANKING** [see *DIANAHAD* and *SAVRAFI*].  
**BANKĪPŪR**, the Western suburb of the city of Patna, the 'Arzīmābād of the Muslim historians, situated in 25°37' N. and 85°5' E. on the right bank of the Ganges. The great landmark of BankīpŪr is the brick-built beehive-shaped silo or grain store-house constructed by Warren Hastings after the terrible famine of 1769-70. In Oriental circles the town is famous for its fine collection of Arabic and Persian manuscripts, some of which are extremely rare. The BankīpŪr library, called in the Trust Deeds "The Public Oriental Public Library", also known as the "Khudā Baghkh Library", contains many valuable books on Islamic literature. The founder, Mawlāwī Khudā Baghkh, (d. 1908) an advocate by profession, was a native of Chaprā (Bihar) who dedicated his entire life to the collection

of rare manuscripts from such ancient centres of culture as Cairo, Damascus, Beirut and places in Arabia, Egypt and Persia. It was Lord Curzon, Governor-General of India (1899-1905) who commissioned Sir Edward Denison Ross to reorganise the Library and to prepare a systematic catalogue. So far 31 volumes, describing some 4,000 MSS. out of a total number of over 6,000, have been published, as a result of sustained and patient collaboration between Sir Edward Denison Ross, 'Abd al-Muk-tadīr, 'Azīm al-Dīn Ahmad, 'Abd al-Hamīd and Mas'ūd 'Alī, Na'īm al-Dīn.

(A. S. BAZMEE ANSARI)

**BANNĀʾ** [see *RIKĀʾ*].  
**AL-BANNĀʾ**, AHMAD B. MUHAMMAD [see *AL-DIMYĀTĪ*].

**AL-BANNĀʾ**, HASAN, founder and Director-General of al-Iḥwān al-Muslīmūn, was born in the year 1906, the son of Ahmad b. 'Abd al-Rahmān b. Muhammad al-Bannāʾ al-Sāʾit. In addition to carrying on his trade of watch-maker, his father was a keen student of the traditions of al-Fayyās and the editor of the *Musnad* of Ibn Hanbal.

Paternal influence was of the greatest significance in shaping the formative years of Hasan al-Bannāʾ and his early education followed the ancient pattern of that of the sons of the 'ulamāʾ—the memorising of the Qurʾān and the study of *ḥadīth*, *fiqh* and *ḥugha*. In addition to his conservative religious upbringing he appears to have possessed an innate spiritual bent for at an early age he became drawn towards Sūfism and was initiated into the Ḥashāfiyya order when he was fourteen years of age.

After a period at the Junior Teachers' School at Damanihūr he entered the Dār al-ʿUlūm in Cairo, at that time an independent teachers' training College. Even at Damanihūr his precocious capacity for organisation and impulse towards active proselytising had shown themselves in his founding of al-Dīnāfiyya al-Ḥashāfiyya al-Khāfiyya. At the Dār al-ʿUlūm he developed further his thesis that the sicknesses of Islamic society could only be cured by a return to the regenerative springs of the Qurʾān, *ḥadīth* and *ṣūra*. Together with a group of fellow-students he began to spread the Islamic mission by preaching in the mosques and meeting-places of the City.

On completing his course of training in 1927 he was posted to Ismāʿīliyya as a government school-teacher and in the following year founded the Muslim Brotherhood. He remained at Ismāʿīliyya until 1933, preaching, lecturing, pamphleteering and perfecting the organisational structure of his movement on the cell principle. During this period he travelled indefatigably up and down the Canal Zone and offshoots of the Ismāʿīliyya headquarters sprang up between Port Saʿd and Suez.

Following upon his transfer to a teaching post in Cairo, Hasan al-Bannāʾ entered upon a period of intense activity and the movement rapidly gained ground throughout Egypt. Subsequent to 1936, when he espoused the cause of the Palestine Arabs, he became increasingly involved in the political arena, lobbying successive prime ministers with pleas for action and reform. The years of the Second World War saw a hardening of the attitude of the government towards Hasan al-Bannāʾ. Under both Sirrī Paša and al-Nukrāḥī he was arrested for

brief periods and the activities of the Brotherhood severely curtailed. In the immediately post-war period tension between them and the government increased, culminating in their suppression following the murder of al-Nukrāḥī in December 1948. A few months later, in February 1949, Hasan al-Bannāʾ was himself assassinated.

**BANNĀʾ**, KAMĀL AL-DIN Shīr 'Alī BANNĀʾ HARAWI, PERSIAN poet, the son of a *ḥasan* (*ḥanūf*) of Harāt, hence his choice of the pseudonym "Bannāʾ". He spent his youth in the entourage of the famous poet and Maecenas of the period 'Alī-Shīr Nawāʾī [g.e.], but fell into disgrace on account of his bitter jests, and had to take refuge at the court of the Ak Koyunlu [g.e.] prince Sultān Yūsuf b. (884-896/1429-1491), at Tabriz. After a reconciliation with 'Alī-Shīr, he returned to Harāt, but he had to leave his company once more in order to go to Samarkand, to the court of the Timurid prince Sultān 'Alī (902-953/1497-1546), son of Sultān Ahmad (823-899/1468-1494), son of Sultān Abū Saʿīd (855-873/1451-1468), who ruled over Transoxania. He composed in his favour a *ḥarida* in the dialect of Marw, with the title of *Madīyat* al-Karshīk. He was also poet of Sultān Mahmūd, who ruled over this region between 899 and 900 (1494-5). In 906/1500-1, when Abū 'l-Faṭḥ Muhammad Shaybānī Khān [g.e.] (Shaybak Khān: Shāhī Beg Özbek) occupied Samarkand, he remained for a time in prison and later became the official poet of his court and chief military judge (*ḥāfi* 'uskar), and at the same time one of the favourites of his son Muhammad Timur. After the death of Shaybānī Khān on 30 Shāʿbān 916/2 December 1510, he returned to Harāt, his native town, but he was slain during the massacre at Karshī, perpetrated in 918/1513 by Naḍīm al-Dīn Yār Ahmad Isfahānī, known as Naḍīm-ā Thānī, on the orders of Shāh Ismāʿīl the Safawid. Bannāʾ tried his hand at all types of poetry. He wrote at first under the pseudonym Hāmī, and in addition to his *diwān*, still unpublished (in which he constantly tried to imitate Hāmī), he has left two epics: 1) *Shaybānī-nāma*, on his patron's campaigns; 2) *Bāgh-ā Tram* or *Bāhrām-ū Būhrā*, a poem several times incorrectly attributed to the great Sūfī poet Sanāʾī (as a result of the word Bannāʾ being corrupted to Sanāʾī) and published in a collection with the works of *Abd al-Faḥḥār Ghūr* al-Shawʿad wa 'l-Aḥḥār and the *Tadhkirat* of Nawāʾī, at Taghleb in 1336/1918. He was also a musician, a composer, the author of two small works on music and a fine calligraphist.

**Bibliography:** Mir 'Alī-Shīr Nawāʾī, *Madīyat al-Nawāʾī*, two 16th century, Persian translations, edited with an introduction and annotations etc. by 'Alī Asghar Hilālī, Tehran 1945, 60, 223-3; Sīm Mirzā Safawī, *Tadhkirat* Sāmī (section 7), ed. in the original Persian, with index, Persian and English prefaces, variants and notes by Mawlāwī Iḥḥā Husaynī, Patna 1934, 27-30; *ibid.*, complete Tehran edition 1314/1936, 98-100; Saʿīd Naḥfīy, *Tadhkirat* al-yi *Mukhtasar-ā Adabiyāt* al-*Irān*, in *Sāʿid-nāma-yi Dārs*, 1326, 12-13. (SAID NAḤFĪY)

**BANNĀNĪ** [also *AL-BANNĀNĪ*], name of a family of Jewish converts to Islam of Fās (Fās), which from the 12th/18th century has produced a number of eminent religious scholars and still belongs, together with a few other families of Jewish extraction, to the aristocracy of Islamic learning in Fās. Its most important members are:

(1) ABŪ 'ABD ALLĀH MUHAMMAD B. 'ABD AL-SALĀM B. HAMBŪC (d. 1165/1750). He is considered the last great representative of the older school of Fās in which he occupies a key position, uniting in his person the main traditions of Mālikī scholarship in the Maghrib (cf. J. Berque, in *Revue historique de droit français et étranger*, 1949, 88), combining with them the Mālikī traditions of the East where he also studied, and forming a great number of disciples. His *Fahrasa* [g.e.] is an important source on the legal studies in Fās in his time. His commentary on the *al-ḥikāh al-kābir* of al-Shāḥīdī [g.e.] testifies to the lasting connection of his family with the Shāḥīdī *tarīq*. His main work is a commentary on the *K. al-Idhār* of al-Kalīf, on the military expeditions of the Prophet and of the first three Caliphs. His son 'Abd al-Karīm composed a biography of him.

**Bibliography:** Muhammad b. al-Tayyib al-Kāḥḥī, *Naghr al-Maḥḥān*, ii, 257; Muhammad b. Dīʿfar al-Kattānī, *Salawāt al-Jalīl*, i, 146-148; Muhammad 'Abd al-Hayy al-Kattānī, *Fihrist al-Fakhrī*, i, 160-162; Muhammad b. Muhammad Maḥḥlūf, *Shadīqat al-Nūr al-Zahyā*, i, 353; Lévi-Provençal, *Hist. Chorja*, 312 L; Brockelmann, S II, 686.

(2) ABŪ 'ABD ALLĀH MUHAMMAD B. HASAN B. MAS'ŪD (d. 1194/1780). He wrote a gloss (commentary) in 1173/1779-80 on al-Zurkān's [g.e.] commentary on the *Mukhtasar* of Khallīl b. Iḥḥā, a commentary on the *Mukhtasar* al-Manṣūf of al-Sanūsī [g.e.], a commentary on the *Sūllam* of al-Aḥḥārī [g.e.], often printed, and a reputed *Fahrasa*.

**Bibliography:** al-Kāḥḥī, *Naghr al-Maḥḥān*, ii, 257; Muhammad b. Dīʿfar al-Kattānī, *Salawāt al-Jalīl*, i, 161-162; Muhammad 'Abd al-Hayy al-Kattānī, *Fihrist al-Fakhrī*, i, 162 L; al-Nasīr al-Salawī, *al-Idhār*, iv, 129; Muhammad b. Muhammad Maḥḥlūf, *Shadīqat al-Nūr*, i, 357; Sarkis, i, 590; Lévi-Provençal, *Historiens*, 146, n. 7; Brockelmann, II, 625, 615, S II, 98, 355, 706. (3) MUSTAFA B. MUHAMMAD B. 'ABD AL-KHĀLIL, wrote in 1211/1796 a gloss on the *Mukhtasar* of al-Tafāzūlī [g.e.] on rhetoric, printed several times, also with notes of Muhammad b. Muhammad al-Anḥālī (d. 1313/1895).

**Bibliography:** Sarkis, i, 590; *Catalogue Cairo*, ii, 181; Brockelmann, i, 355, S I, 518.

(4) MUHAMMAD B. MUHAMMAD B. MUHAMMAD 'AKARAH B. 'ABD AL-SALĀM B. HAMBŪC (d. 1245/1829-30), a grand-nephew of no. 1, became Mālikī mufti of Mecca.

**Bibliography:** Muhammad 'Abd al-Hayy al-Kattānī, *Fihrist al-Fakhrī*, i, 163 f.

(5) MUHAMMAD, called Fīḥ'AWN (d. 1281-82/1865), author of a *K. al-Waḥḥ* which was printed several times, also with the commentary of 'Abd al-Salām b. Muhammad al-Hawārī (d. 1328/1910).

**Bibliography:** Berque, in *Revue historique de droit français et étranger*, 1949, 102; Sarkis, i, 590. (6) For other members of the family Bannānī, see Ben Cheheb and Lévi-Provençal, *Essai de répertoir chronologique des éditions de Fās*, in *R. Afr.*, 1921 and 1922 (index by H. Pérès and A. Sempéret, in *Bull. Etudes Arabes*, no. 32, 1947, s.v. Bannānī); Sarkis, *Madīyat al-Maḥḥān*, i, 389-391; Muhammad b.

Muhammad Makhlūb, *Shādjarat al-Nūr*, I, 431; 'Abd al-Hafiz al-Fāsi, *Riyāḍ al-Dīwana*, II, 20 ff., 100 f. (?) Not to the family Bannānī belong 'Abd al-Rahmān b. 'Izz al-Lāh al-Bannānī (d. 1198/1784), who derives his *niska* from a village in the neighborhood of Monastir (Muhammad b. Muhammad Makhlūf, *Shādjarat al-Nūr*, I, 142; Sakhīs, I, 591; Brockelmann, II, 109, S II, 105), and Abu 'r-Rāsim Ibrahim al-Warrāk (earlier than 900/1495), whose *niska* is uncertain (Brockelmann, I, S, 585).

(J. SCHACHT)

**BANNŌ**, town and headquarters of the district of the same name in West Pakistan, situated in 33° N. and 70° 30' E. Population in 1957 was 27,516 for the town and 307,193 (District).

The present town was founded by Lt. Edwardes Herberts in 1848 on a strategic site and named Edwardesābād. The name, however, did not become popular and soon fell into disuse, giving place to Bannā, the old name of the valley derived from the Bannā'ān, an Afghān tribe of mixed descent. The valley, strewn with ruins of great antiquity, was, according to local tradition, overrun by the armies of Mahmūd of Ghazna, who raised all Hindu strongholds to the ground. A century later the valley was peopled by the surrounding hill-tribes, the Bannā'ān, the Marwats and the Nihāzīs. For two centuries thereafter it remained under the loose sway of the Mughals. It was conquered in 1778 by Nādir Shāh Afghān and subsequently over-run by Ahmad Shāh Durrānī. In 1821, the Sikh ruler of Lahore, Ranjīt Singh, occupied the valley to be constantly harried by the Afghāns. It was, however, formally ceded to the Sikhs in 1838. After the first Sikh War (1845-46), the valley came under the British influence. In 1847/48, Lieut. Edwardes, as a representative of the Sikh Durbar of Lahore, marched on the valley along with a large army under Gen. van Cortlandt. In 1849 with the annexation of the Panjāb, Bannā passed on to the British. Contrary to expectations, it remained absolutely peaceful during the military uprising of 1857.

The valley has yielded finds of great archaeological value, among them being coins with Greek or pseudo-Greek legends. The Akra mound near the town is reputed to be of great antiquity.

After its construction in 1848 the Bannāi fort was named Dalipgarh, after Mahārājā Dalip Singh, a grandson of Ranjīt Singh. As usual a town soon grew up around the fort. It is now the centre of considerable trade. The town is expanding fast and large sums have been recently sanctioned by the Government for the economic development of the area.

**BANTAM** or **BANTEN** (see BĀWA).

**BANŌC**, followed by the name of the eponymous ancestor of a tribe, see under the name of that ancestor.

**BANŌC ISRĀ'ĪL**, "the Children of Israel".

1. This designation of the Jewish people occurs in the Qur'ān about forty times. The terms *Yahūd*, Jews, and its derivatives as well as *Nasārah*, Christians,

appear only in the Medinese period, although they had been widely used in pre-Islamic poetry and certainly were familiar to every Arab townsman (Joseph Horowitz, *Koranische Untersuchungen*, 144 ff. and 253 ff.). On the other hand, *Banā Isrā'īl* never occurs in authentic pre-Islamic poetry (*ibid.*, 25). It would therefore seem to follow that the exclusive use of this term during the Meccan period has something to do with the Prophet's original knowledge of, and attitude towards, the monotheistic religions preceding him.

In most of the Meccan verses, the *Banā Isrā'īl*, appear in connexion with Moses and the stories which are paralleled in the Biblical book of Exodus or its apocryphic amplifications; they are, in chronological order according to Noldeke-Schwally: x, 47, 80, 94 (disensions among the *Banā Isrā'īl*, see below); xlv, 30; xxvi, 17, 22, 59; xvii, 2, 103; xl, 53; xxxii, 23-24; x, 90; vii, 105, 134, 137, 183. This explains also the form of the name: "the Children of Israel", as in the book of Exodus, and not "Israel", as was common usage in Jewish literature in the period preceding Muhammad (with few exceptions; see *Tarbiḥ* 3 (1912), 413, n. 158.)

However the *Banā Isrā'īl* were more than the "people of Moses" (vii, 147, 158; xxviii, 76). In Sura xvi, which bears the name of *Banā Isrā'īl* (but also *al-Isrā'īl*), 4-8, the destruction of the First and the Second Temple is described as the fulfilment of a heavenly decree included in the "Book" (perhaps an allusion to Leviticus 26 and Deuteronomy 28), while liii, 59 makes Jesus appear among the *Banā Isrā'īl*.

Finally, there are a number of Meccan passages which clearly indicate that the *Banā Isrā'īl* were also understood to denote persons living in Muhammad's time. Doubtful is xli, 10: "If a witness from the *Banā Isrā'īl* testified about [a message] similar to this [Revelation (Muhammad's) or another part of the Qur'ān] and believed"—a verse generally regarded by Muslim tradition as alluding to the Jewish convert 'Abd Allāh b. Sālm (see the sources collected in Tabari's commentary, vol. 26, 6-9). For as the word "a message" similar" shows, the reference is probably to "the book of Moses" (xli, 12), as indeed Tabari himself thought possible, although he rejected that interpretation.

However xxi, 107 "Is it not a proof for them (the Meccans) that the scholars (or knowledgeable men) of the *Banā Isrā'īl* know it (the content of Muhammad's message)?" hardly makes sense without the assumption that the persons referred to were known to his hearers; the more so as the following verses, xxvi, 198-9, allude to missionary activities of non-Arabs. Likewise xvii, 101 "Ask the *Banā Isrā'īl*" is to be compared with such passages as x, 94 "If you (M.) are in doubt concerning what We sent down to you, ask those who read the Book before you," cf. xxxi, 7; xvi, 43; xxv, 59; ii, xii (xlii, 45) is no proof to the contrary, as in xii, 7 and xlv, 34 the Meccans are addressed.

In any case, the *Banā Isrā'īl* must be regarded as contemporary with Muhammad in those Meccan verses in which reference is made to their dissensions, which will be settled either by the Qur'ān xxvii, 76, or on the day of resurrection, xxxii, 23-5; xlv, 16-17; x, 95. This use of the term is even more evident in al-Madīna, where the *Banā Isrā'īl* are admonished to believe in Muhammad's message and warned of the consequences of their disbelief (ii, 40-1), or where they are censured for their behaviour, obviously actually observed (ii, 83-85; they fight one another, but ransom those that were taken captives).

In order to establish which group of contemporary monotheists were meant by *Banā Isrā'īl*, one has to bear in mind that already in the Meccan Sūra liii, 59 (see above), Jesus appears among the *Banā Isrā'īl*, and does so rather frequently in Meccan passages iii, 49; v, 72-74; 78; lxi, 6, la lii, 14 it is said explicitly that one group of the *Banā Isrā'īl* believed in him and another did not. Cf. also v, 110, where God protects him against the *Banā Isrā'īl*.

However, when in v, 12-13 the *Banā Isrā'īl* are reported to "those that say we are Christians", v, 14; or are censured in v, 70 together with "Those that say the Messiah, son of Maryam, is God", v, 72, it seems indeed that the Qur'ān, where addressing Muhammad's contemporaries as *Banā Isrā'īl*, meant Jews. To this interpretation point also the references to the dietary laws in ii, 93 and the quotation from the *Miḥna* (Sakhīs, 4, 3), which is introduced as an injunction imposed by God on the *Banā Isrā'īl*. The Muslim commentators indeed explained the Qur'ānic diatribes against the *Banā Isrā'īl* as directed against the Jews of al-Madīna, with whom Muhammad had so many dealings.

From this use of the name *Banā Isrā'īl* it does not follow that the word or the ideas connected with it had come to Muhammad from Jews. On the other hand, the term of the word (*Isrā'īl*, not *Yisrā'īl*) does not prove that it is derived from Syriac, for the Hebrew spelling with Y and Sin was merely traditional, while the pronunciation of initial yā as i was as common among Jews as among some other Aramaic-speaking peoples.

In any case, it is most likely that the term *Banā Isrā'īl* became known to Muhammad together with the general ideas on revelation and prophecy centering around it: there was only one true religion laid down in a heavenly book; that book had been "sent down" through Moses "before Muhammad" xlv, 12, 30; xl, 17. However, instead of uniting the *Banā Isrā'īl*, its very revelation caused dissension among them xxxii, 23-25; xlv, 16-17; x, 93. The same happened to the followers of Christ xlii, 13-14. Finally, Muhammad's own mission, which was destined to settle "most" of the dissensions of the *Banā Isrā'īl* xxvii, 76, was not recognised by Jews and Christians ii, 120 (see *ib.* ii, 111, 113), so that it, too, had the effect of dividing humanity xxviii, 3. This tragic discord was explained as brought about by God's own inscrutable decree xli, 43; xli, 110 (Muslim book); x, 19 (humanity originally was one *umma* or religious community); xvi, 93 (God could unite humanity in one *umma*, but He "chooses" whom He likes xlii, 13). This conception was in a way reminiscent of the *Midrash* applied to the history of the ancient *Banā Isrā'īl*. Aaron, when rebuked by Moses for making the Golden Calf, excuses himself by explaining that he did so in order to avoid the *Banā Isrā'īl* becoming divided xx, 94.

Muhammad, as the son of a caravan city, knew of course about Jews and Christians. However, the idea that these two had their common origin in the *Banā Isrā'īl*, the numerous stories about them and the belief that the various religions should rightly be one, are too specific to have come from this source. As only the term *Banā Isrā'īl* or other general designations for the earlier book religions occur during the whole of his Meccan period, it seems most probable that this use of the term is to be traced to a monotheistic tradition which emphasised the common rather than the dividing aspects of the monotheistic religions.

2. In the *ḥadīth*, *Banā Isrā'īl* denotes both the old Israelites, e.g., when 'Umar is compared to a king of

the *Banā Isrā'īl* (Heseekiah), Ibn Sa'd ii, I, 257, I, 2 ff., or when David's Araamah (Samuel II 24, 21) is referred to, Ibn Sa'd iv, I, 13, I, 23, and also the Jews and Christians in general, e.g., in the chapter "What was said about the *Banā Isrā'īl*" in Bukhārī (60) *Anbiyā'*, 50. Although, by chance, only Jews are mentioned there separately, Christians are referred to by implication in a story about a *rāḥib*, which normally denotes a monk. A story about Dīrjadyī, "who was a monk among the *Banā Isrā'īl*" is reported by Abū'l-Layth al-Samarqandī in his *Taḥṣīl al-Ḥikāya* 206.

The question why the ancient *Banā Isrā'īl*, the chosen people, Sūra ii, 2, 47, 122; xlv, 32; xlv, 16, should have disappeared, considerably occupied the mind of the Muslims. Their answers to this question echoed of course their own tribulations, such as deviations in the fields of theology and religious law ("the *Banā Isrā'īl*" perished, because they practised *Ka'f* [see *Asṭaḥ al-Ka'f*]), or public morals "because their women indulged in wigs" (Bukhārī (60) *Anbiyā'* 54) or "in high heels" (Fakīh, ii, 366, quoted by Dozy, *Suppl.* ii, 391 a).

For the Muslims regarded those *Banā Isrā'īl* as their brothers, as in the famous *ḥadīth* Farḥad-Huḍayfa: "What excellent brothers are the *Banā* to you! They (experienced) the bitterness and the sweetness," quoted e.g., by Abū Nu'aym, *Ḥilyat al-Auliya'* iii, 50, I, 5. The saying obviously refers to "the burden and the chains", i.e., the many religious obligations which were incumbent on the *Banā Isrā'īl* (both Jews and Christians according to Sūra vii, 157), cf. Ibn Kutayba, *Muḥṣal al-Ḥadīth* 142, ult.

In a *ḥadīth* quoted by Saḥl al-Tustarī in his *Taḥṣīl al-Kur'ān*, 57, the Muslims even identify themselves with the *Banā Isrā'īl*: "We are the *Banā Isrā'īl*, we, the sons of Naḍr b. Kināna. We do not follow our mother (who was the wife of both Kināna and his father Khuzayma, see Ibn Hishām i-2) nor our fathers (i.e., Naḍr, Kināna, Khuzayma); with 'we' the Arabs are meant."

However, as in the Qur'ān, *Banā Isrā'īl* denotes in the *ḥadīth* also contemporary Jews and Christians and is thus synonymous with *Abi al-Kithāb* and similar expressions. Cf. the very often quoted saying of Muhammad: "*ḥadīthū 'an Banī Isrā'īl wala haraḍi*" "Relate traditions which come from the *Banā Isrā'īl* without scruples"; cf. *Concordance of Islamic Tradition* *Mawṣū'at*, v, 441 b, s.v. *hrḍi*; and Wenckstein, *Handbook*, 237a; al-Shū'fī, *Riḍāla*, Cairo 1910, 101 (1212, 105).

Again, as in the Qur'ān, when used of contemporaries, *Banā Isrā'īl* mostly means Jews. Cf. the characteristic story about the wigs of the women of the *Banā Isrā'īl* which is given in Bukhārī (60) *Anbiyā'* 54, the first time (ed. Krehl ii 370) with a general reference to the *Banā Isrā'īl* but a second time (Krehl ii 380, I, 10) in a detailed story about the Caliph Mu'awiya, who, while visiting al-Madīna, was disgusted to find the women there wearing wigs (a habit which they might have adopted from their Jewish neighbours). "I have nobody seen doing this", the old Caliph said, "except the Jews". Thus the familiar picture of the *Ḥabir min ḥabir Banā Isrā'īl* (e.g., Abū Nu'aym, *Ḥilya* ii, 372, I, 22 = Ibn Kutayba, *Uyūn al-Aghḥār* ii, 359, I, 32) is to be understood as describing a rabbi; and when Maḡdī al-Dīn Ibn al-Aḡfir, Nihāya, s.v. *ḥay* I 136 refers to "the rabbis, *ḥabir*, of the *Banā Isrā'īl*", after Moses "who compiled the *Miḥna* (al-maḡḥnā)" he means of course Jews.

It is from this usage of *Banū Isra'il* that the word *Isra'īlī*, Israeliite, was derived as a more polite designation for a Jew than Yahūdī. We find this term already in full use in the third/ninth century, e.g. Mas'ūdī, *Tanbih* 70, 7 (the Israelites in 'Irāq); 113, 3 (Israeliite translators of the Bible); 219, 9 (Israeliites divided into three sects), cf. also *ibid.*, 103, 7; 112, 18; alongside with Yahūdī 113, 9; 184, 14. Similarly, Muslim scholars and men of letters refer in this way to their Jewish colleagues, e.g., Ishāk al-Isrā'īlī, the famous doctor and author (M. Steinschneider, *Arab. List. d. Ind.*, Frankfurt 1903, 38-45); Jewish converts to Islam also, such as the poet Ibn Sahl al-Isrā'īlī of Seville (Brockelmann S. I, 483) were styled thus.

A later, scientifically minded, age tried to distinguish with more precision between *Banū Isra'il* and *Yahūdī*. Al-Kalkashandī xviii, 252, quoting 'Unād al-Dīn (i.e. Abu'l-Fida'), states that *Banū Isra'il* are the ancient Jews by race, while the term *Yahūdī* includes also the many converts to Judaism from Arab, Rūm and other stocks. This statement is not without foundation in the usage of ancient sources. Thus Ibn Sa'd, viii, 85, l. 27 says with regard to Sāfiyya, the Jewish wife of Muhammad, that she was from the *Banū Isra'il* i.e., from pure Jewish stock, a descendant of the high priest Aaron.

As is natural, to an ancient people such as the *Banū Isra'il* things were ascribed which originally had nothing to do with them. Thus a Maghribī handbook on agriculture advises against doing farmwork on certain days, because they were the days of punishment (*ṭiğā*, cf. Sūra 7, 162) inflicted on the *Banū Isra'il*, see J. M. Millas-Vallicrosa, in *Andalus* 19 (1954), 132.

The most important aspect of the image of the *Banū Isra'il* in Muslim literature is the piety attributed to them. "The pietists (*'abid, muta'abbidin*) of the *Banū Isra'il*" is a common expression, cf. e.g., 'Abd al-Kādir Jilīlī, *Ghunya* ii 62, Abū Nu'aym, *Histop al-Ashraf* ii 373, l. 4 ff. Of a man who devoted himself to worship and asceticism it was said that he was like the *Banū Isra'il*, Sakḥawī (d. 902/1497), *al-Daw' al-Lami'* vi, 146, 20-22. Many of the stories about the pious men of the *Banū Isra'il*—quite a number of which have found their way into *Al-Layla wa-Layla*—can be traced in the Talmud and the Midrashim, such as the beautiful parable about the pious Hury of the *Banū Isra'il* in Ibn 'Asakir's *Ta'rikh Dimashq*, 32, or the story of an Ashkīzī's *Ta'rikh Domariya* of Babylonian, Talmud, Sa'adith 23. Cf. ISRA'ILY'YAR, where also an attempt is made to explain, why pietism was connected with *Banū Isra'il*.

**Bibliography:**—in the article. See also S. D. Goitein, *The Banū Isra'il and their Contemporaries, a study on the Qorān* (in Hebrew), *Tarbiz* iii, (1912), 410-422; J. Horowitz, *Enc. Jud.* 8, 369 ff. and the literature noted there.

**BANQIR**, an ancient town (East Panjab, India) situated in 30° 34' N. and 76° 47' E., 9 miles from Ambāla and 20 miles from Sirhind. The old Sanskrit name was Vahnīyūr which became, during the course of centuries, Banqīr and finally Banīr. The ruins extend right up to Chānī (in French), *Tarikh* iii, (1912), now in ruins 4 miles away. It was first mentioned by Bāhor when it was, and still continues to be, famous for its white jasmine flowers and the otto distilled from them.

Another ancient name of Banqir, according to tradition, was Pūṣpā Nagari or Pūṣpāwāli (lit. city of flowers) but it bears no resemblance to its

present name. During the rule of the Sayyid dynasty (817-55/1414-51) the town seems to have gained in importance and even just before the establishment of Pākistān (1947) was peopled mainly by *sayyids* who, like the *sayyids* of Bīlgrām, trace their descent to Abū 'l-Farāh of Wāsit, said to have migrated to India after Hūlāgū's sack of Baghdad (656/1258). The tomb of Malik Sulaymān Khān, father of the Sayyid ruler Khādīr Khān (817-24/1414-21) existed till 1947 when the local Muslims migrated en masse to Pākistān. Sayyid Ādam al-Banīrī [g.e.] (d. Madina, 1053/1643) one of the leading *ḥādīth* of Ahmad Sirhindī [g.e.] was a native of this town. It was overrun early in the 12th/18th century by the Sikh adventurer Banda Bayrāgī, and passed into the possession of the Singhpurīyā Sikhs. It was occupied in 1771/1763 by Āla Singh, the chief of Patiala and remained in the possession of his descendants till 1936 when the State was eventually merged into the new province of East Panjab. It was defended by two forts, Mughal and Sikh, which are still extant as ruins.

(A. S. DARGAZ NISARI)

**AL-BANQIRI**, Mu'izz al-Dīn Abū 'Abd Allāh ĀDAM B. S. ISMA'IL, one of the premier *ḥādīth* of Ahmad Sirhindī [g.e.], was a native of Banqir [g.e.]. He claimed descent from Imām Mūsā al-Kāzīm [g.e.], but it was disputed on the ground that his grandmother belonged to the Mahawīlī tribe of the Afghans and he too lived and dressed after the fashion of the Afghans. His name was again questioned when in 1052/1642 he was in Lahore accompanied by 10,000 of his disciples, mostly Afghans, by 'Allādī Sa'd Allāh Khān Chingīyī, the chief Minister of ShāhJahān, and by 'Abd al-Hakīm al-Siyākūtī [g.e.], who had been deputed by the Emperor to ascertain in the company of such a large visit to Lahore in the saint the reason of his force. Not satisfied with the explanation of the *Shaykh*, the emperor ordered him to quit Lahore, go back to Banqir and proceed on pilgrimage to Mecca and al-Madīna.

During the early years of his life he served in the Intelligence branch of the Imperial army but gave up service after which he was able to devote his time to take up a life of piety and spirituality. He first became a disciple of Hādījī Khān Rūghānī Būhlūlpuri and on his advice later contracted his *bay'a* with Ahmad Sirhindī. During the transition period he visited a number of places including Mutlān, Ambāla, Pānīpat, Shāhabād, Sirhind, Lahore and Sāmāna in search of dervishes and mystics.

There are conflicting statements in the *Nihāt al-Ashr*, a collection of his *maṭnawāt*, and the *Manāshih al-Hadārāt*, his authentic biography, regarding his educational attainments. While the *Nihāt* describes him as an "eminent 'ālim" the *Manāshih* records that he read primary books like the *Mūzin al-Sarī* and *Mawāṣiḥ* with Mullā Tārīq Lāhaurī, a well-known scholar of his days. His military argument, however, suggests that he was fairly well educated.

He died at al-Madīna on Friday, Shawwāl 13, 1053/December 25, 1643 and was buried in al-Bakī' near the tomb of 'Uḡayyib b. 'Affān. During his life-time he wielded great influence and at the time of his death more than 400,000 persons owed spiritual

allegiance to him. His meagre religious education, rigid attitude and contempt for State dignitaries was constantly criticised, but he remained steadfast in his mission and won over to his side both scholars and laymen like Muḥammad Anūb Badakhshī, 'Abd Khālik Kasūrī, Shaykh Abū Naṣr Amīnālāwī, his brother Ma'adūd and Shaykh Muḥammad also of Ambāla. Among his *ḥādīth* are counted more than a hundred persons, including Hāfiz 'Abd Allāh of Akbarābād, spiritual guide of Shāh 'Abd al-Rahīm, father of Wālī Allāh al-Dihlawī, and Sayyid 'Alam al-Aīlāh, one of the ancestors of Ahmad Badakhshī [g.e.].

An incidental reference in the *Nihāt al-Ashr* reveals that he was 46 when the book, as internal evidence shows, was compiled during his sojourn in the Hijāz in 1052-3/1642-3. This means that he was born c. 1005-6/1506-7. His youngest son, Muḥammad Muḥsin, was born at Gwalior in 1052/1642, while he was on his way to Mecca, a fact which further supports the view that he died at no very advanced age.

He is the author of: i) *Nihāt al-Ashr*, dealing with abstruse mystical problems and their *Sūfī* exposition, interspersed with personal experiences of the author in the spiritual field and casual biographical references; ii) *Ḥadīqat al-Ma'rifat* (in 2 vols.) is more or less a continuation of the former. The entire work is in Persian and is still in MS. He is also the author of a commentary on *al-Futūḥ* which forms the first part of the *Nahādī al-Haramayn*, compiled by Muḥammad Amin Badakhshī, who claims to have lived for fifty years in the Hijāz and also accompanied Ādam al-Banqirī on his pilgrimage to the holy cities.

**BANYAR**, a confederation of South Arabian tribes, mainly Banū 'Amir, Banū Yūsuf (Ayyūb), Āl

'Azzān and Āl 'Umar, living north of Kawr 'Awḡhilla (cf. art. 'Awḡhilla) in al-Dihlī, Marjha and Wādī Ma'fart (also called W. Banyar). The Banyar once belonged to the Sultanate of al-Kaṣās in Miṣwara; their chief town is al-Bayḡlī (cf. art. ayyūb). Here is the residence of the common head ('*shāh*) of all Banyar, while the Banū Yūsuf in the north are said to have an '*shāh*' of their own in al-Farjā. The Banyar territory corresponds, roughly speaking, to that of the MDHY in inscriptions (cf. art. MAMMUD).

**BANZART**, (Bīzarta), a town on the Northern coast of Tunisia. It stands on the site of the ancient town of Hippo Diarrhytus, the memory of which is perpetuated in the modern name. Phoenician, Carthaginian, Roman and Byzantine in succession, it was taken by Mu'awīya b. Hudayfī in 47/667 and again occupied, simultaneously with Carthage, by Ḥasan b. Nu'mān. In the 4th/10th century, it is mentioned by Ibn Hawkal as the capital of the province of Saffūra (north of Tunis), although at the time it was practically deserted and in ruins. It recovered from this decline. In the 5th/11th century, al-Bakrī speaks of the stone wall surrounding the town, as well as of its great mosques, bazars, baths and gardens. Fish is cheaper there than elsewhere. The lake (*būhayra*) offers wonderful fishing, different kinds of fish stocking it in turn. Not far from the roadside, called the *Marsā al-būha*, and from the town, there are some forts (*Kūfā* Banzart), which served as a refuge, a place of retirement for men of piety and a refuge for the local people, when they feared a Christian landing.

Following the invasion of the nomadic Hīlāl and the abandonment of al-Kayrawān by the Zīrid sultan al-Mu'izz, Banzart became virtually independent; soon, however, it was forced to pay tribute exacted by the Arabs holding the countryside, as a guarantee against being pillaged by them. Taking advantage of the rivalries which reft the population, the Arab chieftain al-Ward al-Laḡhmī entered Banzart and there set himself up as the ruler. He endowed his capital with the requisite institutions and made the town relatively prosperous. His son succeeded him and the Banu 'Umar continued in Banzart until the Almohad invasion (554/1159). The seventh of this line, the amīr Ṭūs, made his submission to 'Abd al-Mu'mīn.

At the beginning of the 7th/13th century, Banzart was occupied by the Banū Ghāniyya Almoravids and from that time entered on a decline, confirmed at the beginning of the 10th century by Leo Africanus. However, it received some Muslim emigrants from Spain, who founded the "suburb of the Andalusians" and, like all ports of the Barbary coast, it turned its attention to privateering. Having repudiated the authority of the Hafids of Tunis, in 240/1554 it submitted to Khayr al-Dīn, the master of Algiers. Charles V took it in the following year and it remained in the hands of the Spaniards until 285/1592. Banzart having once again become a Turkish town, its corsairs became an ever increasing danger. Their depredations provoked reprisals on the part of the Christian powers, namely naval expeditions by the Knights of Malta and bombardments, that of 1124/1785 by the Venetians almost completely destroying the town. The suppression of privateering and the

sitting up of the harbour brought about Banzart's ruin. Bizerta, now no more than a wretched village, was taken by the French in 1881. Considerable works were undertaken, which made it a great port, accessible to the largest ships, equipped with a military arsenal and defended by modern forts.

(G. MARGAIS)

**BĀ'OLĪ**, Urdu and Hindi word for step-well, of which there are two main types in India, the northern and the western. The northern variety is the simpler, consisting essentially of one broad flight of stone steps running from ground level to level below the waterline, the whole width of the site; subsidiary flights may run opposite and at right angles to these below water-level, thus constricting the cistern itself into successively smaller squares, and these may be supplemented by cross-flights reducing the final cross-sectional area of the cistern to an octagon. The sides other than that composed of the main flight are vertical, of stone or, less commonly, of brick. The whole site is usually rectangular—the Bā'olī outside the Buland darwāza at Fatehpur [sic] Sikrī, associated with Shāykh Salīm Chishtī is a notable exception, the nature of the terrain having made an irregular polygon the only shape possible—with apparently no consistency in orientation: e.g. the Bā'olī at the dargāh of Nigām al-Dīn Ḥusaynīya, near the city of Agra, tomb, Delhi, runs north and south in alignment with the shrine, while that at the dargāh of Khwāzida Kutb al-Dīn Bahā'udīn Kāhī at Mahrawīl, near Lilloot, Old Delhi, runs east-west and is not aligned with any major structure. Such Bā'olīs are functional structures, from which water may be drawn and in which ablutions may be carried out, and into which men dive, often from a balcony at noon, to recover alms cast in by pilgrims. They are usually unadorned, but often of a monumental beauty on account of their size: e.g. that of Nigām al-Dīn is 37.4 m. long by 16.2 m. broad, and some 20 m. deep from ground level to average water-level.

Bā'olīs are found at the principal shrines associated with Chishtī [sic] Sūfis; besides the examples already noted, a fine rock-cut Bā'olī is at the dargāh of Shāykh Mu'īn al-Dīn Chishtī at Ajmer. The reason for this particular association is not clear. Other Bā'olīs, smaller but of similar type, are not uncommon at other Islamic sites in N. India, concerning which there is no reason to suppose any Chishtī connexion. Pre-Islamic examples are not recorded.

The western variety, generally known by the Gujarati word *av*, is of high artistic and architectural merit as well as functional; it is more elaborate than its northern counterpart, consisting of two parts: a vertical circular or octagonal shaft, from which water may be drawn up as from an ordinary well, and a series of galleries connected by flights of steps, with pillared landings on the lower galleries supporting the galleries above; passages from each landing run to the shaft, where there are frequently chambers which form a cool retreat in the hot season. Such structures are known in Gujarāt from pre-Muslim times: Mātā Bhavānī's *av* near Ahmadābād, the best preserved Hindu

prototype, is probably 11th century A.D. (Burgess, *ASW*, viii, 1-3); Bāl Harīr's *av* in Ahmadābād, which bears a Sanskrit inscription of A.D. 1499 and an Arabic one of 8 Jumādā I 906/30 Nov. 1500, has ornament very similar to that of the treasury in the niches of the minarets of local mosques. The *av* at Adilābād (*ibid.*, 10-13) is a cruciform, with three main flights down to the first landing. Other *av*s occur scattered throughout Gujarāt from Baroda (Baroda) northwards; one of these, at Māndvā on the left bank of the Vātruk, is of peculiar construction, having a brick circular shaft with chambers in three storeys on one side reached by spiral stairs within the wall of the shaft itself.

The northern Bā'olīs are not dated; that at the dargāh of Nigām al-Dīn is said (Sayyid Ahmad Khān, *Atār al-Sandīd*, Lucknow edition 1900, 42) to have been built by the Shāykh (636-725/1238-1325) himself, and it is probable that other examples date from the same approximate period.

**Bibliography:** For the north, specially Maṣlūf Zāfar Ḥasan, *A guide to Nigām-dīn, MASI*, 2, Calcutta 1922, 7; H. C. Faushawe, *Delhi: Past and Present*, London 1902. For Gujarāt, J. Burgess, *The Muhammadan Architecture of Ahmadabad*, *ASI, NIS*, xxxiii (= *ASW*, viii), London 1905, 16, 10-14; J. Burgess and H. For a general outline of the period in which *av*s are built in Gujarāt, Percy Brown, *Indian Architecture (Islamic Period)*, ed. edition Bombay ed. (1957), 36-61.

(J. BURGESS-PAGE)

**BĀONĪ**, formerly a petty Muslim state in the Bundelkhand Agency of Central India, is now administered as part of Madhya Pradesh (area: 122 square miles; population: 25,256, of which only 12% are Muslims). Its rulers were descended from 'Umaid al-Mulk Ghāzī al-Dīn, the grandson of Aṣaf Dīsh, the Nizām of Haydarābād. About 1784 Ghāzī al-Dīn came to terms with the Marāṭhās who granted him a *dar* of 25 villages; the same Bāonī became detached from Bāon (fifty-two). This grant was later recognised by the British, because of his loyalty during the 1857 revolt, the nawāb was granted a *sanad* 1862 guaranteeing the succession. In 1884 the nawāb ceded lands for the Betwā canal and received the usual compensation. There is little else of historical importance to record.

(C. COLLIN DAVIES)

**AL-BĀRĀ**, place in northern Syria, belonging to what is called the region of the 'dead towns', in the centre of the limestone plateau, some fifteen kms. west of the important township of Ma'arrat al-Nu'mān. In the Middle Ages, as attested by the Arabic and Western texts, it served as a fortified cathedral town and its site is still marked today by extensive ruins, among which the modern villages of al-Kafr and al-Bāra (names corresponding to the ancient Greek and Syrian terms, *Kaprophra* and *kaw' Bār*) rise on both sides of a *wādī*. In bygone days, local trade as well as the olive oil and wine industries ensured the growth of this 'town of Apamea, situated between the two dominant masses of the Djabal Zāwīya, at a point which had to be passed through' (G. Tchalenko), and, in the Byzantine period, contained a complex assembly of churches, monasteries and living quarters. It continued to flourish

after the Arab conquest. But at the time of the Crusades, it was coveted from many sides, being taken in succession by Tancred and Raymond of Saint-Gilles in 492/1098, reconquered by Rūḍwān in 496/1102, then left to the Franks by the treaty of 514/1120, to be recaptured in 516/1123 by Balak and again by Nūr al-Dīn in 543/1148. Sorely tried by these struggles and by the ravages of the Turko-mans, it declined in the 6th/12th century, and thereafter no longer appeared in the lists given by the Arab geographers. The importance of its medieval fortress, known under the name of Kal'at Abī Saīyūn (see Abū SAYYĀS), has already been noted but other remains, inscriptions and small mosques likewise bear witness to its persistent vitality at the beginning of the 6th/12th century when, from various indications, it has been concluded that its Muslim population were for the most part Shī'īs.

(J. SOURDET-THOMINE)

**AL-BĀRĀ'** b. 'ĀZĪZ b. AL-ḤARITH al-Awsī al-Anṣārī, a Companion of the Prophet. He was too young to take part in the Battle of Badr, but he accompanied Muhammad on numerous other expeditions and later took part in the wars of conquest; he brought Rayy and Ḳazwīn under Muslim dominion. He later espoused the cause of 'Alī b. Abī Tālib and fought under his banner at the Battle of the Camel (see AL-BĀRĀMA', at SHĪFĀ 602), and at al-Nahrawān [602], the famous *baḥḥ* of Ghāfir Khumayr [602] was killed on his authority. After his retirement to Kūfa, he lost his sight towards the end of his life, and died about 70/612.

**Bibliography:** Balādhuri, *Futūḥ*, 317 ff.; Ibn Sa'd, *iv*, 80 ff.; Tabarī, i, 1358, 1371-2; Ibn al-Aṭhīr, *Kāmil*, ii, 106, 117, 118, 12, iv, 278; *idem*, *Uṣd al-Ghāib*, i, 171-2; Nawawī, *Tahdhīb*, 172-3; Saḍādī, *U'myūn*, 124; Ibn Ḥajar, *Isāba*, no. 618; I. **AL-BĀRĀ'** b. Ma'wūn, a Companion of the Prophet. Among the seventy-five proselytes who appeared at the 'Akaba in the summer of 622 at the pilgrims' festival to enter into alliance with the Prophet, the aged Shāykh al-Bārā' b. Ma'wūn of Hiraṣrā was one of the most important, and when Muhammad declared he wished to make a compact with them that they should protect him as they would their wives and children, al-Bārā' seized his hand, promised him protection in the name of all present, and sealed the compact. In the same assembly, the so-called second 'Akaba, twelve men were chosen as preliminary representatives (*wakīl*) of the new community in Yaḡrib, and on this occasion al-Bārā' was appointed chief of the Banū Salma. He is also famous in the history of Islām, for having changed the direction of praying, even

before Muhammad, by turning towards the sanctuary of Mecca. When Muhammad reproved him, saying that Jerusalem was the true *kibla*, he obeyed him, but on his deathbed ordained that his corpse should be turned towards Mecca. He died in Medina in Ṣafar, a month before Muhammad's arrival there, after bequeathing to the Prophet one third of his estate.

(K. V. ZETTERSTADT)

**BĀRĀ SAYYIDS**, the descendants of Sayyid Abū 'I-Farāḥ of Wāsiṭ near Baghdād, who with his twelve sons emigrated to India in the 7th/13th century and settled in four villages near Patilā in the *sarkār* of Sīkand in the *saba* of Dillī. The four main branches of the family were named after these four villages. Sayyid Dāwūd settled in Tihānpūr; Sayyid Abū 'I-Fadl in Chatbanūr or Chatraun; Sayyid Abū 'I-Fadl in Kūndī; and Sayyid Naṣīm al-Dīn Ḥusayn in Jāger or Jhājer. From this area they later migrated into the Muzaḥfāmāgar district of the Ganges-Jumna *shāl*. The Kusūdwāl branch settled in Maḡbara; the Chatbanūr branch near Sambāhara; the Jāger branch in Bīdāl and Patrī; and the Tihānpūr branch in Dhārī and Kumbhara.

The derivation of the term *Bārā* is uncertain. Some derive it from *bāhar* (outside), because the Sayyids, disgusted with the debaucheries of the Mīna *khār* at Dillī, preferred to live outside the city. Others derive it from the fact that the Sayyids, being Shī'īs, were followers of the twelve (*bār*) Imāms. The authors of the *Tahakāt al-Bārā* and the *Tawāḥid al-Bārānī* derive the name from the twelve villages in which they settled in the district of Muzaḥfāmāgar. This is the most probable explanation. The contention of H. M. Elliott and M. Elphinstone that one of the Sayyid settlements was named Bārā has been shown to be incorrect (see W. Irvine, in *JASR* 1896, 175).

Sayyid settlements in the district of Muzaḥfāmāgar can be traced back to the middle of the 8th/14th century. From the reign of Akbar onwards the Bārā Sayyids took part in every important campaign and became renowned for their courage. The Tihānpūr branch was the most important. To this branch belong the famous Sayyid brothers, Ḥasan 'Alī and Ḥusayn 'Alī, the king-makers of the first two decades of the 18th century. They rose to prominence in the service of 'Arīm al-Shāh, the son of Mu'azzam al-Dīn who became the emperor Bahādur Shāh. For their gallantry at the battle of Jājān (1707), which gave the throne to the father of their patron, the older brother, Ḥasan 'Alī, afterwards known as 'Abd Allāh Khān, was entrusted with the government of Allāhābād and the younger brother with that of Patna. On the death of Bahādur Shāh in 1712, distrustful of the power of their enemies at Dillī, they overthrew Dīshādūr Shāh and replaced him by Farrukh-siyar. As his ministers they enjoyed the highest dignities that the emperor could confer. 'Abd Allāh Khān was appointed *waṣīr* of the empire with the title of Kutb al-Mulk. Ḥusayn 'Alī became first *lakḥnāwī* with the title of *amir al-umaw*. They are generally given the credit for being the first to abolish the *ghizya* after the death of Awrangzīb, but the latest researches disclose that they were merely continuing the policy already introduced by the *waṣīr* Dīgh 1-Fikhr Khān (see *Jiyas in the Post-Aurangzīb Period* by S. Chandra, in *Proceedings of*

the *Indian History Congress*, Ninth Session, 120-126). Farrukh-syar was an ingrate who plotted against his benefactors, his efforts came to naught and eventually, in the seventh year of his reign, he was deposed, blinded, and finally executed by the infuriated Sayyids. The Sayyids next raised two miserable puppets to the throne, Rafī al-Durādī and Rafī al-Dawla, both of whom were consumptive youths who died in the year 1719. In the same year the Sayyids crowned Muhammad Shāh as Emperor. The administration of the six Decan provinces was entrusted to Husayn 'Alī, the younger Sayyid brother, but he was soon recalled to Dihli by 'Abd Allāh, whose position was being undermined by court conspiracies in which the Emperor was involved. It was at this juncture that Nūr al-Mulk, leader of the Turfī nobles and for that reason opposed to Sayyid predominance at Dihli, deemed it advisable to abandon Mīlwa, of which he was governor, and establish himself in the Decan. This naturally alarmed the Sayyids who took immediate steps to coerce him, but before their forces had marched many miles beyond Āgra, Husayn 'Alī was assassinated and in a very short time 'Abd Allāh was overthrown by a powerful combination of Turfī and Irānī nobles at Dihli. This took place in 1720. In 1727 the descendants of the two brothers were slaughtered or dispersed when the Rohillas sacked Jaunpur. From this date their power rapidly declined. After the establishment of British paramountcy many Sayyids returned to their former villages only to fall victims to the vile money-lenders.

**BARĀ WAFĀT** is a term used in India and Pakistan for the 12th day of Rabī' I, observed as a holy day in commemoration of the death of the prophet Muhammad. It is compounded of *bārā* (in Urdu = twelve) and *wafāt*, death. On this day, portions of the Qur'ān (*Sara Fāṭika*) and other works in praise of the Prophet's excellences are read in private houses and mosques, and sweet dishes are prepared, partaken of and also given away along with fruit as *alma*. Most of the ceremonies described in Herklot's *Islam in India* in connexion with Bārā Wafāt are now things of the past. It is now a day of rejoicing rather than mourning for the Muslims, who consider 12th Rabī' I at the same time as the birthday of the Prophet. As such it is known as 'Id Mīlād al-Nabī and is observed as a public holiday in Pakistan.

(SR. ISAYATULLAH)

**BARĀʾA**, I. — This substantive is derived from the Arabic root *brʾ*, which is frequently used to denote the general idea of "release, exemption" (from a duty, from an accusation—therefore "innocence"—, from risk, from responsibility), a meaning to be found repeatedly in the Qur'ān. With this is connected the notion of "freedom from disease, cure", which is equally expressed by this root in classical Arabic. There is undoubtedly good reason to distinguish, as Kur'ānī, of "create", when speaking of God (Jeffery, *Foreign Vocabulary of the Qur'ān*, Baroda 1938, 70).

The word *barāʾa* itself occurs twice in the sacred book. In Sūra liv, 43, it means without doubt "immunity, absolution". On the other hand its interpretation, when it occurs as the first word of Sūra ix (and one of the titles given to this Sūra) is a matter of some difficulty: "*Barāʾat*" of Allāh and his prophet towards those polytheists with whom you have concluded a treaty". The following verse, which accepts a sacred truce of four months, might give rise to the supposition that the reference here is to an immunity. But the traditional interpretation explains this *barāʾa* on the basis of verses 1-5, according to which Allāh and his prophet will be "unbound" (*harīʾ*) in regard to the unbelievers, whom the Muslims will then be able to kill with impunity (see the translation and notes of Blachère). The *barāʾa*, refers then to the "breaking of the ties"—the religious and social ties—, a kind of dissociation or excommunication, the dire consequences of which are the opposite of immunity. *Barāʾ*, indeed, is the term used for a person or persons who have broken off all relations with an individual or a group, mainly with fellow-tribesmen; the term *barāʾa* enters into those phrases which mean "to exile or to remove from the protection of the law" (for the *tabrīʾa*, an Ḥabṣī penal sanction, see below), and the *yamīn al-barāʾa* is the oath, condemned by the *kadi*s (notably Abū Dāwūd, *Sanan*, no. 3238), but still in evidence today, by which a person renounces on his own behalf, if he should swear falsely, adherence to Islam or the protection of God. The *Shāfiʿ*s advocate the "expiation" (*barāʾa*) of the enemies of 'Alī and his descendants, as opposed to the "Attachment" due to this line; *contra* the whole practice of *barāʾa-wafā*, see the condemnation of the Hanbalī school *ahūd* H. Tamout, *La profession de foi d'Ibn Rafīʿ*, Damascus 1925, 162. The evil implications of the *barāʾa*, this understood, justify, in the view of certain Muslim scholars, the exceptional absence of *barāʾa* at the beginning of Sūra ix.

In legal terminology, *barāʾat al-dhimmā*, or simply *barāʾat* is the "absence of obligation"; *Bayʾ al-barāʾa*, for example, is the sale without guarantee wherein the seller is freed from any obligation in the event of the existence, in the sale-object, of such a defect as would normally allow the sale to be rescinded (see Santillana, *Institutiones*, ii, 149, for a striking resemblance of formulae in this regard between Muslim Egypt and Christian Tuscany). Hence the term *tabrīʾa* is variously used for all sorts of declaratory or constitutive acts which absolve from responsibility. One may cite the *tabrīʾa* of the present-day Moroccan Bedouin. This is an "indemnity paid by the parents of the murderer to the victim for continuing to live within the tribe" (Loubignac, *Textes arabes des Zaʾir*, Paris 1952, 359); see the similar use of *barāʾa* < *barāʾ* noted in the Bethlehem region (Haddād, in *ZDPV*, 1917, 231).

The following derived technical terms may be noted here.

1. *Mubārakaʾa*: a form of divorce by mutual agreement where husband and wife free themselves by a reciprocal renunciation of all rights (Bergrasser-Schacht, *Grundzüge*, 85; Santillana, *Institutiones*, i, 272; cf. Averroes, *Idārya*, ed. Cairo 1935, ii, 66, who gives an accurate definition by way of comparison with some similar forms of *iddah*).

2. *Iḥṣān* or "confirmation of emptiness", with two quite distinct connotations: a) temporary abstention from sex-relations with a slave-girl, in order to verify that she is not pregnant, on the occasion of her transfer to a new master or a change in her circumstances (see 'Ann), and b) an action of the left hand designed to empty completely the *wafā*, before the cleansing of the *orifion* or *istidhāq* which must follow satisfaction of the natural needs (Lā, i, 25; Abū 'I-Ḥasan on the *Risāla* of Ibn Abī Zayd, ed. Cairo 1930, i, 144).

Proceeding now to the general theory of law as found in the classical works, the notion of *barāʾa* is there to be found in the maxim, generally accepted by orthodox and vitiated by a *Shāfiʿ* doctrine: *al-ḥal barāʾat al-dhimmā*, "the basic principle is freedom from obligation". This means, according to the standpoint one adopts: "The only obligations to which man is subject are those defined by God", or: "In the absence of proof to the contrary the natural presumption is freedom from obligation or liability".

In its first sense this *barāʾa al-dhimmā* embodies a theological notion: it contradicts the Mu'tazilite thesis which is founded upon the rationality of the legal values (*ahkām*) of a certain number of human acts, and which holds that, before the promulgation of the revealed law, all those other acts which do not admit of a rationalist assessment are all illicit (according to some) or all permissible (according to others) or unqualified (according to a third group). See Ghazālī, *Mustaḥṣal*, ed. Cairo 1937, i, 40-42, 127-132; or better: Amīdī, *Iḥṣān*, ed. Cairo 1914, i, 130-135. Both these works refute the Mu'tazilite thesis. But for almost the totality of the orthodox scholars (two exceptions are indicated, for the Mālikīs by Ḥajjī, *Iḥṣān*, ed. Tunis 1931 A.H., 123, 130-131;—the work of Lapanne-Joinville, *Le Semaîne Interne*, *Droit musulman*, Paris 1952, 85, calls for certain corrections), the legal values are based, absolutely and exclusively, upon the revealed law; before this law and outside it, human acts have no *ḥukm*; and this kind of fundamental indifference, which must not be confused with permissibility, denies the notion of any obligation.

In its second sense, which, however, the authors do not attempt to distinguish from the first (the confusion is obvious in the *Shāfiʿ* and Hanafī works entitled *al-Aḥkām* *al-Naḥṣ*; Suyūṭī, ed. Cairo 1936, 39, Ibn Nujaym, ed. Cairo 1208 A.H., 29), the *barāʾa al-dhimmā*, whether combined or not with the principle of the "continuance of facts" (*istidhāq* *ḥal*), comes to support in theory innumerable solutions—whether strict legal rules or legal presumptions—throughout the whole field of *fiqh* (Lapanne-Joinville, *op. cit.*, 82-88; Brunschwig, in *Studi ... Levi Della Vida*, i, 75).

However, the word *barāʾa* has been increasingly employed in a concrete sense to denote written documents of various kinds (pl. *barāʾat* or *barāʾat*) by virtue of a semantic development which starts from the idea of "discharge", or doubtless, to be more precise, "financial, administrative discharge"

(Khawāzīmī, *Maḥāṣin al-Uḥūm*, ed. Cairo 1930, 37; Leikgaard, *Islamic Taxation*, Copenhagen 1950, 159; Spuler, *Iran in frühislam. Zeit*, Wiesbaden 1952, 238-248). This first sense is to be found, in the context of transactions concerning customs duties, in the treaties concluded with the Christian powers since the Middle Ages, notably by the *Maḥāṣin* (14th-15th centuries); the Latin or Roman versions have: *abura*, or *arura* (Mac-Latze, *Traité de paix et de commerce*, Paris 1866-72; refer to the glossary). Equally, one can see there the sense of "official licence" which the word had come to acquire. It was by now quite readily applied to what we would term a "licence, certificate, diploma", to various written documents originating from administrative bodies or addressed to them: for example "a demand for payment or a bill of exchange", "a passport" (Dour, *Suppl.*, i, 63). "A label to be attached by the *amīn*" to a piece of merchandise (Sakātī, *Manuḥ al-Hisāb*, ed. Colin and Lévi-Provençal, Paris 1937, 61), "a request or petition to the sovereign" (Brunschwig, *Beobachtungen Orientalis*, ii, 144, n. 3). The languages of the Iberian peninsula have inherited and preserved meanings of the same kind: the Catalan *albarà*, the Castilian *albard*, the Portuguese *albard*.

Neo-classical Arabic knows the term *barāʾat al-tanfīḍ* for the consular *exequatur*, and *barāʾat al-thiba* for the diplomatic "credentials" (the dictionaries of Berber and Wehr).

In the colloquial Arabic of N. Africa, *barāʾa* > *brā* is widely used, often in the diminutive form *brayya*, with the meaning of a simple "letter, missive, note", (whence the Berber *brāt*, with the same meaning). At Fez, semantic development has led to the name of *brayya* being given, in Arabic, to a pastry consisting of a pâte enclosed in a pastry-case which is folded in the same way as a letter (Brunot, *Textes arabes de Rabat*, i, Glossary, Paris 1932, 40).

Finally we must note the expression, very common in the East, "night of the *barāʾa*" (Arabic: *laylat al-barāʾa*, Turkish: *herat gecesi*, Persian: *shab-i barāʾat*) to describe the night of mid-*Shāʿbān*, a religious festival (see the paper by H. H. Erdem, *Herat gecesi kahlula bir tedbir*, Ankara 1953). Here the precise meaning of *barāʾa* escapes the author, since none of the explanations offered by traditional interpretation or by Western scholarship are convincing: "immunity" (for those beings whose lot is favourably cast on that night), "revelation" (to Muhammad of his prophetic mission by the archangel Gabriel), "creation" (of the world: referring to the Hebrew *berāʾa*, Plessner, art. *MAHABAD* in *EL*). It would first be expedient, in order to orientate etymological research, to determine, with such precision as is possible, the antiquity of the expression and the circumstances of its origin, for it is not commonly encountered in the mediaeval texts which deal with the mid-*Shāʿbān* celebration.

Under the Ottoman Turks the administrative use of the term was particularly developed in the form *barāʾat* [pl.] (*barāʾat*), which they distinguished from *barāʾat* (*barāʾat*).

**Bibliography:** in the text of the article.

(R. BRUNSCHWIG)

II. — The theme of the *barāʾa* was particularly developed by the Khāridjites with their religious zeal and their emphasis on separation. In opposition to the *wilāya*, which is the dogmatic duty of solidarity and assistance to the Muslim, the *barāʾa* was for them the duty to repudiate all those who did not deserve this title. Throughout the heresiologies can be found the particular applications given by

the numerous sects to the principle of *barā'a*. It is only by means of the Ḥadīth catechists that we can arrive at a direct and full exposition. The oldest text which has come down to us, that of Abū Zakariyyā al-Djānāwūdī (eleventh century), imposes on a man who has reached puberty, and is in his right mind, repudiation of a) all the *kāfirān* of both worlds, living and dead, known or unknown; b) the unjust *imām*; c) those who are censured (*maḥmūdūn*) in the Qur'ān and acknowledged rebels (*muḥāfiḥūn* bi'l-*ma'siyā*); d) the man who, personally known, has committed a grave sin.

A decision concerning the children of persons subject to the *barā'a* was postponed until they attained their majority. The *barā'a* was cancelled in respect of the sinner who had carried out the *tauba*.

XI<sup>e</sup> Congr. des Or.*, 409 ff.

(H. Ronsard)

**BARABA**, steppe of Western Siberia, situated in the *oblast'* of Novosibirsk of the Russian Soviet Federal Socialist Republic, between lat. 54° and 57° North, and bounded on the East and West by the ranges of hills which skirt the banks of the Irtysh and the Ob'. This steppe, which extends for 127,000 sq. km., has numerous lakes, most of which are salt; the biggest is Lake Kul. The ground, which is partly marshland, also has some fertile zones, but it is essentially a cattle-rearing region. It has a cold continental climate.

The population (over 500,000 inhabitants in 1949) is unequally distributed; its density, which reaches 6 to 9 inhabitants per sq. km. in the central and southern part, does not exceed 1 to 1.5 in the North. It is made up of a majority of Russian and Ukrainian colonists, with a Tatar minority, some of whom have emigrated from the Volga at a recent period, whilst others are autochthonous.

The latter, whom the Russians call "Baraba Tatars" or *Barabinty*, form a small community near to the other Tatar groups of Western Siberia (Tobol Tatars, Tumen Tatars [q.v.]), which, however, shows signs of disappearing. Their very complex ethnogenesis gives rise to contradictory hypotheses. It appears that they issued from autochthonous Uralian peoples who became partly Turkicized when they made contact with the Turkish tribes who emigrated at the time of the foundation of the Siberian Empire. This Turkicization, which continued during the 16th/17th centuries, was completed in the 19th century with the large-scale influx of Tatar immigrants from the Middle Volga.

From the conquest of the Siberian Empire by the Russians under Ivan IV until the time of Peter the Great, the Baraba steppe separated Russia from the Empire of the Kalmaiks. The frontier region contained between the towns of Tara (on the Irtysh) and Tomsk (to the East of the Ob') was then called "Baraba district" (*Barabinskaya volost'*); the indigenous population, in addition to speaking their own language, spoke Kazan Tatar and Kalmaik, and initially paid tribute to the Russians, and then later, through the Russians only. In the 18th century a large number of exiles from European Russia were settled in the Baraba as colonists. At the end of the 19th century, when the Trans-Siberian railway had been built, the steppe was systematically developed

with the help of a new wave of Russian and Ukrainian colonists.

The autochthonous Tatar population, which in the 17th century was established in villages, was pushed back at the end of the 18th century towards the sterile zones of the steppe. Since then, its numerical importance has steadily declined. According to the data collected by Radlov in 1865, there were then 4,635 "Baraba Tatars" in existence. At the census taken in 1897, 4,433 were counted and, in 1926, only 39, the remainder having had themselves re-classified as "Kazan Tatars".

The Baraba Tatars at present occupy a small number of villages (wholly Tatar or Tatar-Russian) near the lakes Sabral, Yurukh and Manggh and in the basin of the river On', especially in the Kuybyshev district (formerly Kalmaik), along the Trans-Siberian railway.

The Islamization of the Baraba, which commenced in the 16th/17th century with Central Asia (Khwarizm and Bughara) continued as the result of the activities of the Tatar merchants and missionaries of Kazan, who made their way up the Irtysh. However, it seems most probable that it was only in the 19th century, after the Kazan Tatar colonists had established themselves in Western Siberia, that the majority of the autochthonous Tatars adopted Sunnī Islam of the Hanafī rite.

Radlov saw several old men who remembered their fathers making pagan sacrifices in the manner of the inhabitants of the Altai and being dressed differently from the Muslims.

The Baraba Tatar dialect, which has not been studied much as yet, possesses certain phonetic peculiarities: (a) in the place of *z* for example, it has almost entirely given way to Kazan Tatar and Russian.

Like the Russians, the Baraba Tatars live by agriculture, stock breeding and fishing; trapping animals for fur has greatly diminished.

(W. Barnholtz-J. Benveniste)

**BARĀBRA** (for Barābir; sing. Barāb); Nubian-speaking Muslims inhabiting the Nile Banks between the First and Third Cataracts. The term includes the Kunūṣ, Salkūt and Mahas. The name Barābra is not commonly used by these peoples of themselves, and is stated by Lane (i, 177, col. 3) to be a late and modern application of the term used by earlier writers for the Berbers of the Maghrib. The Danākiya [q.v.], who live above the Third Cataract, are linguistically and physically allied to the Kunūṣ but do not regard themselves as Barābra. The territory now inhabited by the Barābra forms the northern part of

the Christian Nubian kingdom of Makurra, which entered into treaty-relations with 'Abd Allāh b. Sa'd in 31/652. Arab settlement began with a migration of Rabī'a into the Aswān region in 869. After the defeat of Abū Bakwa (396/1006), the Fātimid al-Hākim is said to have conferred the title of *Kān al-Dawla* on the *Shaykh* of Rabī'a at Aswān (al-Mahallī, *al-Bayān* 107). *First Second* *bi-ard Mir min al-Aḥād*, ed. by F. Wustenfeld, "El-Macrisi's Abhandlung über die in Ägypten eingewanderten arabischen Stämme", *Göttinger Studien*, II, vii, 434-5, 473, Göttingen 1847), whence the Barābra of the vicinity, resulting from Arab-Nubian intermarriage, are known as *Ḥān Kan* or *Kunūṣ*. In the 18th/19th century the Kingdom of Makurra disintegrated under Arab pressure; its territories took place and Islam superseded Christianity. After Selīm I's conquest of Egypt, garrisons of Bosniak troops (locally called *ghuzs*) were established at Aswān, Ibrīm and Sāy, while the Barābra territory was placed under a *kāḍī*. In spite of intermarriage and the adoption of Nubian speech, the *ghuzs* remained a distinct group until the 20th century. In the 18th century the northern Barābra were under the suzerainty of Ḥamān Abū Yūsuf, the powerful *shaykh* of the Hawwāra. On the eve of Muhammad 'Alī Pasha's invasion of the Sudan, the Barābra *Kāḍīgh* was held jointly by three brothers whose headquarters were at Darr. The *ghuzs* enclaves of Aswān, Ibrīm and Sāy were under the rule of Abū al-Ḥasan 'Uthmān al-Mirghāl, the founder of the Bāghdādī order, travelled from Aswān to Dinkulā a few years before Muhammad 'Alī's conquest and won many adherents. The poverty of the Barābra territory has been a stimulus to emigration. In the 18th century Mahast colonies were formed on the Blue Nile by immigrants who had a reputation as holy men and established Qur'ānic schools. From the 18th century travellers have noted the "Berberine" servants in Cairo.

**Bibliography:** H. A. MacMichael, *A History of the Arabs in the Sudan*, Cambridge 1922, I, 12-34, 155-190 and Index; J. S. Trimmingham, *Islam in the Sudan*, London 1949. Both these works contain extensive bibliographical references. The condition of the Barābra in the early 19th century is fully described in J. L. Burckhardt, *Travels in Nubia*, London 1819. (P. M. Holt)

**BARADĀ**, referred to by Naḥmān the leper (Kings, ii, 3, 12) by the name of Abana, and by Greek and Latin authors called Chrysothraos, is the most important perennial river of the eastern slopes of the Anti-Lebanon. It has determined the site of Damascus and permitted the development of the *shihra*.

It owes its existence to the high peaks which dominate the gap between Zabādān and Sarghāya. At the foot of a limestone cliff over 1,000 m. high, a copious Vaulerian spring forms a vast lake on the Western side of the Zabādān hollow at the foot of the Djabal *Shaykh* Manṣūr. It is the overflow from this lake which gives birth to the Baradā, which meanders over the gentle slope of the Zabādān plain, receiving the waters from many springs in the area. After setting out peacefully on its course, the Baradā turns eastwards, following the axial change of direction of the eastern branch of the Anti-Lebanon. At Taḥiyā (hydro-electric station), it flows upon its fall. It then assumes the aspect of a racing torrent bounding through an enclosed gorge, the walls of which are formed of plocene andocene conglomerates. At Sūk Wādī Baradā (ancient

Abila) the gorge widens a little and then, 30 km. from its source, 'Ayn Fāḍja empties into it. This spring, situated only a few metres above the level of the Baradā, almost doubles the volume of the river. It is an overflow spring with a large and very regular flow of water, welling up in the cretaceous limestone; above the grotto is a Roman temple. At low-water, it brings down 3 cub. m. of water per second and without this influx the Baradā might well dry up during the summer. Part of this spring is harnessed and piped down to provide Damascus with drinking water. Though the Baradā races impetuously towards Damascus, man's intervention checks its impetus and brings it under control. Without the skill of man, the Baradā would have hollowed out a sluggish bed through the centre of the Damascus depression; its valley would have been no more than a narrow ribbon of greenery in the midst of parched steppes, finally losing itself in swamps. Through the ages, man has diverted the river into successive channels, flowing at different levels parallel to the main bed of the river, before reaching the outskirts of Rabwa. There, at the foot of the Kāyān, the six main canals, called *marj*, fan out. By means of manifold ramifications, their waters carry life-giving moisture to the arid land, transforming an area of over 25 km. in length by 15 km. in breadth in the basalt depression of Damascus, filled with marl brought down in the form of deposits by the river, into a fertile oasis. The Baradā, which irrigates nearly 10,000 hectares of orchards and gardens, has pushed back the desert to a distance of 20 km. from the mountains; beyond the Ghūṭa, the *Marj* is covered by extensive cultivation and from December to June displays a carpet of green meadows.

Water not absorbed by irrigation passes on towards the steppe where, in a trough devoid of outlet, it becomes stagnant in the marshes of 'Uṭaybiya.

Going downstream the following canals lead out of the Baradā: at Ḥamā, on the left bank, the Naḥr Yazid, of Nabatean origin, restored by the Caliph Yazid I, goes to swell the Naḥr Ḥawra. At Dammār, on the right bank, N. Mizāwat carries water to the market-towns of Marza; then, still on the same bank, the Dīrānt which supplies Dāris and Dīrāyā; after that, on the left bank, the N. Ḥawra, of Aramaean origin, which by itself irrigates nearly half the oasis. On the threshold of Rabwa, two canals, in the main urban, diverge: the Kanawāt, of Roman origin and restored by the Umayyads, swells the older watercourse; the N. Bānīs (literary form of Bānīyās, an Aramaean creation, about 670, Arnold mentions *maṣra IV flaminia*, which are those existing in 724 under Ḥishām b. 'Abd al-Malik; Yazid, Ḥawra, Bānīs and Kanawāt, and in the 6th/12th century, in Ibn 'Ashūr's time. According to a plan of Damascus prepared by German travellers in 1572, the Baradā is shown as a navigable waterway.

In the town, the Kanawāt, the Bānīs and the Baradā itself provide water for *hamams*, mosques, fountains and houses (drinking water has only recently been piped from 'Ayn Fāḍja) to pass on again into the countryside. A most ingenious system of irrigation has made possible the creation of an artificial oasis of exceptional fertility. The manifold canals diverted from the Baradā weave a close network watering the villages and the vegetation of the Ghūṭa. The Baradā plays a major rôle, making up for the lack of adequate regular rainfall (Damascus receives only about 200 mm.). It imparts humidity

to the atmosphere, gives rise to the autumnal and and spring rains and renders plant and animal life possible and thus, the human habitat.

Yāqūt (l. 396) indicates a village with the name of Baradā to the East of Haleb. Lammens recognised it as Barad in the *Ujbal Sin'an*. He also indicates (iii, 69) a canal called Baradā, associated at al-Jamāla by the Unweyred Sulaymān b. 'Abd al-Malik.

**BARADĀ** or **BARADĀN**, the ancient Cydnus, now *Ğayhūn*, a river rising in Cappadocia, which flows towards the West, irrigates the gardens near Ma'raḥ and those of Tarsūs, brings down alluvial deposits to the low-lying plain of Cilicia and empties into the sea on the Western side of the Gulf of Alexandretta. In ancient times, small ships sailed up it as far as Tarsūs.

**BARADĀN**, a town in 'Irak in 'Abbasid times. According to the Arab geographers it was situated some 15 miles north of Baghdad on the main road to Sāmarrā and at some distance from the east bank of the Tigris, a little above the confluence of the Nahr al-Khālīs and the latter. The Khālīs canal, a branch of the Nabrawān (or Diyālā) flowed immediately past Baradān. The caliph al-Maustur held court here for a brief period, before he definitely resolved on building a new capital on the site of the modern Baghdad (cf. Yāqūt, *Bulḍān*, 256). There was a bridge in Baghdad, a street and a gate (after this a cemetery also) in the eastern half of the town called after Baradān which was two post stations distant; cf. Le Strange, *Baghdad during the Abbasid Caliphate* (1909), 360 (index). When the author of the *Marāḥid* made his extract from Yāqūt (about 700/1300), Baradān was quite desolate and unknown. It is doubtless to be sought for in the present mound of ruins at Barḍān, the position of which agrees admirably with the statement of Arab authors. Arab sources suggest that the name Baradān is arabised from the Persian *barḍā-dān* ('the place of the prisoners'), which suggests the possibility of a Jewish colony settled here presumably by Nebuchadnezzar.

**BARĀDŪST** (Brādūst), name of two Kurdish districts. The first in the south, between Ughūn, Rāyat and Rawāḍi, with Kīm Reḡ as its chief town, perched on a crag, at an altitude of 4,372 feet. In the north it borders on Gird (Shandūn), in the West on *Ğayhūn* and in the East on Bībās. The massif of Kandī (cf. J. Edmonds, 244, n.) constitutes the framework of the district. The sources of the Little Zab (Lāven, then Kālu in the Persian section) are situated in this region. The famous Urtu arto vielo of Kūlā Shīn is likewise situated there, on the pass of the same name. There is another Barādūst, called Shūnāy Barādūst, lying to the North, between Targavar and Kōtir, with Çehrik Ka'f as the principal residence (B. Nikitine, 79, 251). It was there that Bāb was held before his execution at Tabriz. The early history of Barādūst is not well known to us. According to M. E. Zaki (*Tārīkh*, 388, 389), the founders of this principality were the Hasanwayhids (348-406/959-1015) in the person of Nāṣir al-Dawla Haḍḍ and his three sons, *Ğhāḍ* Kīrān b. Sulṭān Ahmad was the most famous *amir* of this line. At the outset he opposed Shīh Ismā'īl, but subsequently his relations with him improved. The Shīh bestowed the *lāḥab* of *Ğhāḍ* Kīrān on him and gave him the districts of Targavar, Sūmāy and Dīl as an *ihdā*. Thus it was that this valiant *amir* remained independent as regards internal affairs until the famous battle of Galdīrān (920/1514), after which, like others of the Kurdish *amirs*, he rallied to the Ottoman sultan. The latter recognised his worth and gave him numerous districts, *nawāḥā*, in the wilāyats of Arbīl, Baghdād and Dīyārbaḥr. The amirate of Sūmāy was founded by Shīh Muḥammad Bek b. *Ğhāḍ* Kīrān, whose descendants ruled it down to the extinction of the *amir* of Sūmāy in 1905, the *amir* of this branch likewise derived from the Barādūst tribe. Sharaf Khān says that Nājir Bek b. Khānir Bek b. Shāykh Hasan was *amir* of this region in his time (16th/17th century). The *amir* Khān Yākas was the most famous representative of this branch. He had defended himself in the fortress of Dīmīn, which became one of the main themes of Kurdish literature. He was *amir* at the beginning of the reign of Shīh 'Abbās I, against whom he revolted, shutting himself up inside the fortress. These events took place in 1077. Among the other Kurdish chieftains of Barādūst, may be mentioned in the south Fayḍ Allāh Bey, referred to by Layard (373, 374), and Yūsuf Bek, who made himself famous by his fight against Mir Muḥammad of Shandūn. In spite of their being bound by an agreement, he killed him treacherously, whence is derived the saying '*Barādūst bir ey dāst*'. (Barādūst friend of a month...), In the north, there was Sāḍik Khān, who played a rôle in the accession of the Kādījī dynasty. Later, he rose against Fath 'Alī Shāh (1217/1796). Closer to us in time, Ismā'īl Aḡā Sīmko 'Aldoy must be mentioned, well known during and on the eve of the Russo-Turkish war on the Russo-Turkish front and in 'Irāk. In February 1928, Sīmko lured the Nestorian Patriarch Benyamin Mār Shūn'ān into a trap and had him assassinated. For a while, Sīmko remained master of the whole region West of Lake Urmīya, but in 1922 a Persian punitive expedition expelled him from the region. He sought refuge near Rawāḍi and a few years later tried to return to Persia and re-establish his position, but was killed near Ughūn.

name has lost its importance. At present, the Bālāḥ tribe is the most powerful in the South, numbering some ten thousand families. Their territory in the massif of Kandī is difficult of access. Its centre is the township of Rāyat. Formerly, the *amir* Solrān was dominant there; it was his custom to take a man from each family to incorporate in his army. When Solrān's line died out, the tribe regained its independence, which it still retains down to the present time (1936). Its present chief is 'Aziz Bek (M. E. Zaki, *Khūḍān*, 392). In the north, the Shīkh constitute the main tribe, who number some 2,000 families (M. E. Zaki, *Khūḍān*, 412). According to the *Tārīkh-i Dīrūdān*, quoted by M. E. Zaki (*ibid.*, 238), both they and the Haydarānā shared a common origin. Their original habitat was in the neighbourhood of Mayyāfārikān.

**BARĀHIMA** (Brahmans). The Arabs' knowledge of the Brahmans and Brahmanism was, with the exception of al-Bīrūnī, very scant (probably their acquaintance with Buddhists, called *Samanīyya*—cf. the term *Samanas* applied to them by later Greeks like Alexander Polyhistor—was more direct since these were spread in Persia and eastern 'Irāk). In Muslim theological works, the doctrine most persistently attributed—from Ibn Hazm to Tahānawī (in his *Dictionary of Technical Terms*)—to the Brahmans is a denial of Prophecy. The accounts given in Ibn Hazm and al-Shahrastānī are probably versions of the same argument. According to the former, the Brahmans say that if God wanted to lead people aright through the prophets, why does He not compel the reason of each individual to the truth? According to the latter, they base their denial of prophecy on the self-sufficiency of the human reason. Al-Bīrūnī (ed. Sachau, 51-52) says that the Hindus deny the need of prophets in connexion with the Law and Ritual which they regard as having been established once and for all by the Rishis, their wise and holy men,—but assign their need for the spiritual well of mankind at special times when evil becomes rampant.

As for the derivation of the word Brahman, Ibn Hazm says that they claim descent from an ancient king called Barahm (or Barham) al-Mas'ūdī thinks they have descended from Brahman, a king who, with the help of sages, founded the Hindu religion, astronomy and other sciences. Al-Bīrūnī refers to the Hindu myth that the Brahmans have originated from the head of Brahmā (or Brāhmā) which signifies Nature and that they are thus regarded as the choicest part of mankind. Tahānawī, *op. cit.*, asserts that they claim descent from Brāhmā, the Prophet, a doctrine which possibly reflects a much later Hindu opinion which wanted to claim this Judaic-Christian-Islamic figure as its own.

The only authentic source is undoubtedly al-

Bīrūnī, who, although he wrote his work in 'Ġazna (about 1030 A.D.), had stayed in the north-western part of the Indian sub-continent, learnt Sanskrit, translated many works from that language and had acquired an intimate knowledge of Hindu philosophy, religion, law, literature, society and sciences, as a missionary. In the preface he complains that no reliable work on Hindu India existed, that even Abu 'I-'Abbās al-Irāghshārī who had written accurately about Judaism and Christianity had failed to do so with regard to Hinduism and that he himself undertook to write this work at the instigation of his master Abū Saḥī 'Alī al-Muḥsin b. 'Alī b. Nūh. (Al-Mas'ūdī mentions the works of Abū 'I-'Kāsim al-Balḥī and al-Ḥasam b. Mūsā al-Nawbakhlī). Al-Bīrūnī first narrates the difficulties which beset a foreign student; the difficulty and artificiality of the written Sanskrit, the utter difference between Hinduism and Islam and the almost total social Hindu taboos against foreigners, etc. Then follow six sections on Hindu Religion and Metaphysics and so on. The author gives a detailed description of the manners of the Brahmans their way of life, etc.

In the works of Muslim travellers in India it is usually the Yegs, their practices and way of life that gain prominence; there is little about Hindu philosophy or the Brahmans. The practices of Yegs, as a way of attaining spiritual bliss or knowledge, have sometimes aroused curiosity, but have generally been regarded as suspect if not altogether damnable. (F. RAHMAT)

**BARĀHŪT** (see *BARĀHŪT*).

**BARAK** (see Supplement).

**BARAK BARA**, a Turkish dervish who acquired some celebrity in the time of the Il-Khāns. He is said to have been a disciple of the famous Sarf Saltuk (q.v.), and is mentioned in connexion with the Bālā'ī, Bekṭāshī, and Mewlewī movements. His followers were called Barak; his *Khalifa* was Hayrān Emīrjī. A story preserved by Yazīdīghūlu 'Alī makes him a Sāḍīkī prince, converted to Christianity by the Greek patriarch and then reconverted to Islam by Sarf Saltuk, who transmitted his supernatural powers to him and gave him the name Barak. The Arabic sources describe him as a native of Tokat (the *Bāḥā* in the printed text of Ibn Ḥaḍḍar should be amended accordingly), and say that his father was a high officer and his uncle a well-known scribe. From Turkey he travelled to Iran, where he is said to have exercised some influence on *Ğhāḍān* and *Ğayḥūṭ*. In *Ẓumr* I 706/Nov. 1396 he arrived with a party of disciples in Damascus, where his dress and behaviour were sufficiently remarkable to win him a place in the Arabic chronicles of the Mamūk Empire. He visited Jerusalem, but was prevented from visiting Egypt, and then returned to Iran. In 707/1307-8 he prevailed on *Ğayḥūṭ* to send him on a mission to Gaylān, where he was killed.

The Turkish name Barak is sometimes, by confusion with the Arabic *Barāḥ* (q.v.), misspelt thus. The form *barāḥ*, given by Haart, is also mistaken. The name is in fact a Turkish word for a special kind of dog, identified by Köprülü as a 'hairless dog' (*Chamanisme* 14-15, n. 26) and by Pelliot as a 'long-haired, more or less fabulous dog' (*Notes sur l'histoire de la Horde d'or*, Paris 1930, 57-8). The name is not infrequent among Mongols and Turks in the 13th-15th centuries (for some examples see G. Moravcsik, *Byzantinoturcica*, Budapest 1942-3, s.v.).

Βαράκος and Παράκι; see also BURAK HÄĞİR and BURAK HİSAR.

(B. LEWIS)

**BARAKA**, blessing. In the Kurʿān, the word is used only in the plural: *barakāt*, like *rahma* and *salām*, are sent to man by God. It is translated by "beneficent forces of divine origin, which causes superabundance in the physical sphere and prosperity and happiness in the psychic order". Naturally, the text of the Kurʿān (*kalām*-*ilāh*) is charged with *baraka*. God can implant an emanation of *baraka* in the person of his prophets and saints; Muhammad and his descendants are especially endowed therewith. These sacred personages, in their turn, can communicate the effluvia of their supernatural potential to ordinary men, either during their lifetime or after their death, the manner of transmission being greatly varied, sometimes strange. God, however, can withhold his *baraka*.

Among agricultural peoples, a *baraka* is recognised in cereals, causing them to multiply miraculously. *Baraka* is to be met with, here and there, attributed to the most diverse objects. Already in the Kurʿān, the olive tree and the 27th Ramadan are *mubarak*. In practice, the word ended up by taking the secular meaning of "very adequate quantity": *ma fih baraka*. It is used in the vocabulary of the Almohads in the sense of "gratuity which is added to a soldier's pay". The Maghribi dialects have various uses of the word in the adverbial sense of "enough".

Derivatives of the word *BRK* occur in numerous formulas of politeness: expressions of thanks, compliments, ephemerisms; they are often associated in the context with derivatives of the root *ʿSD*. The rather obscure *tubarakallāh* (Kurʿān, lxxv, 1) is commonly used as a prophylactic against the "evil eye".

**BARAKA KIĀN** (see *BARAKI KIĀN*).

**BARAKĀT**, the name of four Sharifs of Mecca. (1) Barakāt I b. Ḥasan b. ʿAdlān belonged to the seventh generation after Kaʿbāda b. Idrīs (see *al-ʿARAB, QIḌIRĀT; MAKKA*), the founder of the last line of Sharifs. As a youth Barakāt was associated

with his father in the role (809-21/1407-18), which was challenged by several cousins. The father abdicated because of his age in 821/1418, though he lived on until 829/1426. After being confined in office by Barsbī, the Manlik sultan of Egypt, who had made himself the supreme authority over Mecca, Barakāt reigned until 845/1442 in the face of opposition by his brothers. Unseated then by other members of the line, he returned to power in the last years of his life (851-9/1447-53). During Barakāt's time the Manlik sultan Cabrak appointed an inspector (*naẓir*) for the Holy Cities and established a garrison of 50 horse in Mecca. A noteworthy increase in Indian trade and the number of Indian pilgrims went hand in hand with greater Egyptian control in the Red Sea. Barakāt visited Cairo in 851/1447. He was succeeded by his son Muhammad (regn. 859-903/1459-97).

(2) Barakāt II b. Muhammad, a grandson of Barakāt I, shared the rule with his father from 878 to 903/1473-97. From 903 on he struggled against his brothers Ḥazāʾ and Aḥmad Dīnār. In 908/1503 Barakāt was sent to Cairo in chains, leaving the way open for another brother, Ḥunayyā, to become Sharif. Restored in 910/1504, Barakāt remained the lord of Mecca until his death in 931/1525. From 910 to 931/1525-26 his brother Kānūsh was associated with him, and thereafter his young son Muhammad Abū Numayy II. The new threat of the Portuguese prompted the Manlik sultan Kānūsh al-Ghūr to delegate Ḥusayn al-Kurdī with a military force to protect Dīddā, which he enclosed with a wall and towers. Upon the entry of Selīm Yavuz into Cairo, Barakāt sent Abū Numayy (ad. c. 12) in 923/1517 to wait upon him, and the Ottoman conqueror recognised the status quo in Mecca. For some reason Selīm did not take advantage of this opportunity to make the pilgrimage, though the first Ottoman *mukmal* was sent out in 923 and the first shipment of wheat for the population of Mecca went by sea from Suez to Dīddā. Barakāt was succeeded by Abū Numayy (regn. 931-7/1525-66), from whom all the subsequent Sharifs of Mecca were descended.

From the first half of the 11th/17th century to the 14th/20th century, three clans among the progeny of Abū Numayy II contended with each other over the Sharifate: Dhawū Zayd, Dhawū ʿAbd Allāh, and Dhawū Barakāt. The eponym of Dhawū Barakāt was Abū Numayy's son Barakāt, who never held the office of Sharif himself.

(3) Barakāt III b. Muhammad b. Bīrḥīm, a great-grandson of the eponym of Dhawū Barakāt, was the first of this clan to wear the dignity, according in 1012/1672. His installation was the work of a North African, Muhammad b. Sulaymān al-Rūdīnī, an enemy of Dhawū Zayd and an intimate of the Ottoman Grand Vizier, Aḥmad Kōprülü. During the first part of Barakāt's tenure Muhammad b. Sulaymān instituted a number of radical reforms designed to improve the lot of the foreign elements and the poorer classes in Mecca at the expense of the old aristocracy. With the death of Kōprülü in 1057/1676 the reformer's star declined. Barakāt stayed on as Sharif until his death in 1093/1682, being succeeded by his son Saʿīd (regn. 1093-5/1682-4).

(4) Barakāt IV b. Yahyā, a grandson of Barakāt III, ruled less than two months (1135-6/1723). After the abdication of his father, he was defeated by Dhawū Zayd, whereupon he and his father fled to Syria.

The last Sharif of Dhawū Barakāt was ʿAbd Allāh b. Ḥusayn, a nephew of Barakāt IV, whose

reign was almost as brief as his uncle's. Placed in power in 1184/1770 by Muhammad Abū Dhahab, the general sent to the Hijāz by ʿAlī Bey (g.s.) of Egypt, he lacked the strength to maintain himself after Abū Dhahab's withdrawal. From then on the Sharifate remained the exclusive property first of Dhawū Zayd and then of Dhawū ʿAbd Allāh.

**BARAKZAY** (see *AFGHANISTĀN*).

**AL-BARĀMIKA** or **AL BARMĀK** (Barmakidei, an Iranian family of secretaries and *waiz* of the early ʿAbbsīd Caliphs.

1. Origins. — The name *Barmak*, traditionally borne by the ancestor of the family, was not a proper name, according to certain Arab authors, but a word designating the office of hereditary high priest of the temple of Nawbahār, near Balḫ. This interpretation is confirmed by the etymology which is now accepted, deriving the term from the Sanskrit word *parmak* — "superior, chief". The term Nawbahār, moreover, likewise derives from Sanskrit (*nāha rishā* — "new monastery") and evokes the name of the famous Buddhist monastery, visited in the 167th century by the Chinese pilgrim Hsuan Tsang, at Po-Ho, another name for Balḫ (Hsuan Tsang, *Mémoires*, trad. St. Julien, I, Paris 1857, 30-32). Furthermore, some of the Arab geographers likewise affirm that the Nawbahār was dedicated to the worship of idols (*ḥabāt al-idāghā*); the description of it left by Ibn al-Fakḥ (322-25) also corresponds in the main with that of a monastery and describes a monument, which can be recognised as the characteristic Buddhist *stupa*, in spite of the distortion of its name. The later authors (Yāqūt, IV, 819; Ibn Khallikān, Cairo 1948, III, 198), who make this sanctuary a Zoroastrian Fire-Temple, were doubtless influenced by the tradition which envisaged the Barmakidei as the descendants of the ministers of the Sāsānid Empire, and especially Nizām al-Mulk, *Siyāsat-nāma*, trans. Schefer, 224). It is difficult to ascertain when these imaginary interpretations, universally disseminated in subsequent literature (especially local literature, see *Fakḥ al-Balḫ*, ap. Ch. Schefer, *Chrestomathie persane*, I, Paris 1883, 71), which have been accepted for too long by modern scholarship, arose. The view just sketched has been held that they may have seen the light of day in al-Manṣūr's reign. It would, however, be more accurate to consider them as being much later than that period.

We possess little precise information on the Nawbahār and its high priests during the first century of the Islamic Empire. The lands attached to the temple, amounting to some 2,500 sq. km. are known to have been the property of the family, who appears subsequently to have retained them, at least in part, whilst the rich village of Rawān, near Balḫ, belonged to Yahyā b. Khālid personally (Yāqūt, II, 742).

According to al-Balḫāghūrī (*Futūḥ*, 499), the Nawbahār, centre of national resistance, was attacked and damaged under al-Manṣūr, but Yahyā, the "Iron brother" of Hārūn, the son of al-Mahdī. Finally in 158/773, shortly before al-Manṣūr's death, a heavy fine seems to have been imposed on Khālid, but he was pardoned and appointed governor of the province of al-Mawrah, where a Kurdish revolt had broken out. At the beginning of the Caliphate of al-

but there are no grounds for supposing that it was rebuilt as a Fire-Temple, as is sometimes assumed. As for the last Barmak, the father of Khālid, he is a figure known to us by information which is to a large extent legendary.

Thus it is that he is held to have possessed medical knowledge and to have treated, among other patients, the Umayyad prince Maslama b. ʿAbd al-Malik (Tabarī, II, 128). One tradition, moreover, intended perhaps to benefit the sons of ʿAbd Allāh b. Muslim, makes the latter, who with his brother Kutayba had participated in the repression of the revolt of Balḫ in 86/705, and not Barmak, the real father of Khālid (Tabarī, *loc. cit.*). Furthermore we do not know whether Barmak, who was again in Balḫ in 107/725-26, had previously gone to the Court of the Caliphs, as has been maintained, and had there embraced Islam. However that may be, his sons left Khurāsān for ʿIrāq, where they settled at al-Basra and there became clients of the Aḥd tribe (L. Massignon, in *Westfälische Abh. Tachau*, Wiesbaden 1954, 159 and 168). There Khālid seems to have been the first to be converted, followed by his brothers Sulaymān and al-Ḥasan.

(W. BARNROD-D. SOWERBY)

2. Khālid b. Barmak — Practically nothing is known of Khālid's activities until the moment he appeared, towards the end of the Umayyad period, in the ranks of the Hāghmīte movement; he was then entrusted with the distribution of the plunder in Kaḥḥāb's army. Shortly after that, the new caliph al-Saffāḥ entrusted the management of the *diwān* of the army and land-tax (*al-dīwān waʿl-dharrāj*) to him, and then the control of all the bureaux, so that, as one chronicler says, he played the role of a *waiz*; attached to the personal service of the Caliph, he had the honour of seeing his own daughter suckled by al-Saffāḥ's wife whilst his own wife acted as foster-mother to his sovereign's daughter. Under al-Manṣūr, Khālid continued to play an important role, without however being, as is too frequently averred, the right hand of the Caliph. He seems to have remained for at least a year director of the office of land taxation, though he was soon ousted from the central administration by the intriguer Abū Ayyūb. Appointed governor of Fārs, he appears to have stayed there for about two years. Later we see him at Bagdad persuading the Caliph, according to a well known tradition, to refrain from destroying the Iwān Kīrā, participating in 147/764-65 in the manoeuvres which led to ʿIsā b. Muṣā agreeing to renounce his rights to the succession, proffering advice to Abū ʿUbayd Allāh Muʿawwiyā, who was returning from al-Rāy. Subsequently appointed governor of Tabaristān, he remained there for about seven years (ruins struck in his name between 150/767 and 154/771 are known), took possession of the fortress of Ustīnādān near Damāwand and made himself popular with the inhabitants of these regions, where he founded the new town of al-Manṣuriya. It was probably about this time that his damānqar al-Faḥl b. Yahyā became the "Iron brother" of Hārūn, the son of al-Mahdī. Finally in 158/773, shortly before al-Manṣūr's death, a heavy fine seems to have been imposed on Khālid, but he was pardoned and appointed governor of the province of al-Mawrah, where a Kurdish revolt had broken out. At the beginning of the Caliphate of al-

Mahdī, we find him in Fīrs and, in 163/779-80, he appears to have further distinguished himself, at the same time as his son Yahyā, during the siege of Samālū in Byzantine territory, though he died shortly afterwards in 163/781-82, approximately in his 75th year.

3. The *Wazīra* and the fall of the Barmakids—When Yahyā b. Ḳāḍī was chosen as *waṣīr* by Hārūn al-Raṣīd, he already had a fairly long career behind him. After assisting his father in his various governorships, Yahyā had been appointed in 158/773 governor of Ḍjārbayḡān. He was still at Ḳāḍī's side in Fīrs at the beginning of al-Mahdī's Caliphate, and in 161/778 he had become secretary tutor to Prince Hārūn, in the place of Abū b. Ṣadāka, and had accompanied the Prince on the Samālū expedition, on which he had been especially entrusted with the commissariat of the army. A little later, when his position had been acknowledged as the second heir and appointed governor of the western provinces as well as of Ḍjārbayḡān and Armenia, Yahyā had administered this part of the empire. After the death of al-Mahdī, though he was confirmed in his office, he found himself the object of the hostility of the new Caliph al-Ḥādī, who accused him of supporting Hārūn against him and of encouraging him to maintain his rights to the succession, which very nearly brought about his downfall. The very night, however, when Yahyā, who had been thrown into prison, was, we are told, to have been executed, al-Ḥādī was found dead and other reports suggest that the Queen-mother al-Ḳhayrūn, who supported Hārūn, was not unconnected with the occurrence.

In any case, as soon as Hārūn had been hailed as Caliph, he hastened to summon Yahyā and entrusted him with the direction of affairs, investing him, according to tradition, with a general delegation of authority. The able secretary received the title of *waṣīr* and from the outset associated his two sons al-Faḍl and Ḍjaʿfar with his administrative and governmental duties. They frequently presided with him and also began to have been styled *waṣīr*. Yahyā remained in office for seventeen years, from 170/786 to 187/803, this period being referred to by some authors as "the reign of the Barmakids" (*ṣulṭa al-Barmak*). Engaged in "righting wrongs" in the name of the Caliph, he was likewise empowered to chase his own secretaries, who acted as his delegates, and was in practice head of the administration; even the office of the Seal, initially withheld from him, was soon placed under his control. Tradition likewise has it that al-Raṣīd handed his personal seal over to him, a symbol of the new authority enjoyed by the *waṣīr*. This seal, entrusted to Ḍjaʿfar, subsequently returned to Yahyā, who relinquished it when he set out to stay in Mecca in 181/797; it was then entrusted to al-Faḍl and afterwards to Ḍjaʿfar, being taken back by Yahyā after his return.

Yahyā's two sons, al-Faḍl and Ḍjaʿfar, were not satisfied with merely seconding their father. They likewise enjoyed important responsibilities. Al-Faḍl was the eldest and, moreover, Hārūn's "foster-brother", played a major rôle in the early years. In 176/794 or perhaps even earlier, he was placed at the head of the Western provinces of Iran and was

sent by the Caliph against the 'Aḥd Yahyā b. 'Aḥd Alīsh, who had revolted. He obtained the latter's submission by negotiation. In the following year he was appointed governor of Ḳhurasān, where he played the rôle of a conciliator and a builder. He pacified the country of Ḳābul and recruited a local army, part of which, we are told, was sent to Bagh-dād. Upon his return to Court, he left a deputy in his province, which he retained until 180/796. In 181/797, he appears to have been in charge of the government during his father's absence. Nevertheless, he was the first to lose the Caliph's favour. He gravely displeased Hārūn and was deprived of all his offices, except his appointment as tutor to Prince Muḥammad al-Amin, for whom he had obtained recognition as heir-apparent in 178/794.

As for Ḍjaʿfar, whose eloquence and legal erudition the authors are fond of stressing, in 176/792 he received the governorship of the western provinces, though he remained at Court, which he only left in 180/796 in order to suppress the risings in Syria. He was next appointed temporarily governor of Ḳhurasān and was placed in charge of the caliphal bodyguard as well as being entrusted with the direction of the Post Office and of the office of the Mint and textile manufactures (in fact his name appears on the coins struck in the East from 176/792 and, subsequently, also on those of the West). He was likewise tutor to Prince 'Aḥd Alīsh al-Ma'mūn, who was proclaimed second heir in 182/798. But above all he was the Caliph's favourite, if not his Gaymade as has often been supposed, and willingly took part in his pleasure parties, of which his brother, on the other hand, disapproved.

Thus with Yahyā's two sons entrusted with the tutelage of the two princely heirs-apparent, between whom an actual division of the empire was contemplated, power might have remained in the hands of the Al Barmak for a long time, had al-Raṣīd so permitted. The Caliph, however, on returning from the Pilgrimage which he accomplished with his suite in 186/802, suddenly decided to put an end to their domination; during the night of Saturday the 7 Safar 187/28-9 January 803, he had Ḍjaʿfar executed, al-Faḍl and his brothers arrested, Yahyā placed under observation and the property of all the Barmakids (with the exception of Muḥammad b. Ḳāḍī) confiscated. Ḍjaʿfar's remains were left exposed in Bagh-dād for six years. Al-Faḍl and Yahyā himself, whose wish had been to share his sons' fate, were conducted to al-Rakka as prisoners; there Yahyā died in Muharram 190/November 803, 70 years of age, and al-Faḍl in Muharram 193/November 805, aged 45 years.

The brutal fall of the Barmakids came as a surprise to their contemporaries, who had no satisfactory explanation to account for it and therefore invented various fictitious reasons, such as the story of 'Abḥāsā [i.e.], which have too long been given credence. The origin of their fall still remains partly a mystery for modern historians; but it can hardly be seen as the result of a sudden caprice on the part of the Caliph. Even if it was not "prepared well beforehand" as W. Barthold said, it was at least contemplated long in advance by the sovereign who had come to endure the tutelage of his ministers with increasing impatience and who at times accused them of pursuing a policy contrary to his own interests.

The vizierate of the Barmakids was not really the period of perfect harmony which came to be portrayed in later legend. In spite of what has been said on the matter, causes for disagreement did exist

between the Caliph and his former tutor, whose hands were never completely free to govern. Not only was he obliged in the early years, as W. Barthold has already pointed out, to render account to al-Ḳhayrūn, who, nevertheless, constantly gave him her support as long as she lived, but later he was often forced to come to terms with al-Raṣīd's wishes and to resort to that cleverness for which he was so highly reputed. In some cases he was not even successful in imposing his views, and the man appointed to replace al-Faḍl in Ḳhurasān in 180/796 was appointed against his advice. At other times he found himself having to play a highly compromised rôle. Thus we see him hastening from Bagh-dād to al-Rakka in 183/799 to divert the sovereign's ire from al-Faḍl and succeeding only at the cost of condemning his son's behaviour. Very early on also, intrigues had contributed to weaken his position and the Caliph, upon the death of his mother, had been eager to bestow honours on the accomplished courtier al-Faḍl b. al-Raḥī, in whom he had for long begun to take an interest and whom, furthermore, he appointed *ḡāḍī* in 179/795 in the place of the Barmakid Muḥammad b. Ḳāḍī; the new dignitary exercised a growing influence at Court, where he stigmatised the shortcomings of his enemies and provoked the resentment of al-Raṣīd against them.

The Caliph's relationships with Yahyā's sons were similarly not always harmonious. Al-Raṣīd did not think well of the pro-'Aḥd policy of al-Faḍl, who does not seem to have been endowed with the same flexibility as his father. He was removed from power in 183/799, four years before the final disgrace of his family. Even Ḍjaʿfar, who apparently enjoyed the Caliph's complete confidence, retaining his influence with him the longest, was not secure from the suspicions of a restive master and was reproached upon occasion for abusing his powers.

It was, of course, quite normal for the attitude of al-Raṣīd towards the Barmakids to become modified during the seventeen years of their supremacy. The Caliph, at his accession, when he was 23 years old, was content to follow his mother's advice and to relieve himself of certain responsibilities, by entrusting them to Yahyā. Later, however, this humiliating situation began to weigh upon him, the more so since the desire to impose his own will increased with the years, whilst the Barmakids, filling the most important posts with their relatives and clients and preparing themselves to institute some kind of hereditary vizierate, constituted an actual State within the State. At the same time, they had amassed great wealth, which excited the cupidity of the sovereign and to which their proverbial generosity continually called attention. Yet if the different reasons are adequate to explain their fall, nevertheless the brutality of the treatment inflicted on Ḍjaʿfar was doubtless the reason for the affection which was bestowed on him by the Caliph and which may perhaps have postponed the inevitable outcome.

On the other hand, imputations of impiety, which are sometimes levelled at the Barmakids during the period of their ascendancy, do not seem to have contributed to the disgrace which befell them. Such accusations do not even appear to have had any basis in fact. These secretaries of Iranian origin did, it is true, display a special interest in the literary masterpieces which came from Iran and India, as well as in the various philosophical and religious doctrines, which they liked to hear discussed; but these were tastes widely disseminated in Bagh-dād

society of the period and were not necessarily accompanied by heterodox opinions. The Barmakids, moreover, had completely adapted themselves to the usages of the 'Abbasid Court at which they lived; they thought highly of Arabic poets and writers and, like so many other *mawālī*, displayed an ostentatious generosity, inspired by ancient Bedouin traditions. Though they frequently assumed a conciliatory attitude towards the inhabitants of the provinces or of certain tributary states, they appear to have made no attempt to favour al-Ma'mūn, the "son of the Persian woman", at the expense of his brother. They seem primarily to have served the Caliphate effectively and loyally, pacifying Eastern Iran, repressing the risings in Syria and even Ifrīkiya, obtaining the submission of rebels, including 'Alids, directing the administration in an orderly fashion, guaranteeing to the State important resources, undertaking works of public interest (canals of Ḳāḍī and Sībī), settling wrongs aright with equity in accordance with the requirements of Islamic law and reinforcing the judicial administration by the institution of the office of the great *ḡāḍī*. Doubtless by their behaviour they accentuated the process of irānization which became evident from the beginning of the 'Abbasid regime, imparting to the vizierate a style which did not fail to attract subsequent imitators; in spite of their new prerogatives and exceptional prestige, however, their influence was a highly personal thing, as was the tragedy which terminated it. It does not appear that they ever sought to transform the vizierate in accordance with a hypothetical Sāsānid model.

The activity of the Barmakids was not merely political and administrative. An important cultural and artistic achievement is also due to them. Indeed they acted as patrons of poets, distributing rewards for their panegyrics through the intermediary of a special office created specifically for the purpose, the *diwān al-ḡhīr*; they favoured scholars and gathered theologians and philosophers in their home, in assemblies (*maḍāliḥ*) which have remained famous. They encouraged the arts, and as great builders, left numerous palaces in Bagh-dād, the most famous of which, that of Ḍjaʿfar, subsequently became the Caliphal residence.

Neither did the influence of the Barmakids disappear with their fall. It continued to be exerted during the ensuing years through the medium of the *waṣīrs* and secretaries who came to power under al-Ma'mūn and who, for the most part, were their former clients and dependants, as in the case of the famous al-Faḍl b. Sahl. It is actually known that, at the time of their ascendancy, the ministers of al-Raṣīd had gathered around themselves a group of especially competent *ḡāḍīs*, whom they had trained in their methods, and the following Caliphs were unable to dispense with them.

Finally *adab* literature laid hold of the Barmakids, stressing their edifying and remarkable traits of character, often with some exaggeration (Yahyā's "wisdom" and his gift for foretelling events, al-Faḍl's haughtiness and ostentatious generosity, the elegant language of Ḍjaʿfar) whilst some stories, such as those later to be incorporated in the *Thousand and One Nights*, popularised the figure of Ḍjaʿfar, the *waṣīr* and intimate companion of al-Raṣīd.

4. Other members of the Barmakid family.—Yahyā had a brother, Muḥammad b. Khālid, who was *khāḍḡ* from 172/788 to 179/795 and was the only one spared by the Caliph when they fell.

In addition to al-Faḍl and Dīyar, he had two other sons, Muḥammad and Mūsā, who though less brilliant, nevertheless played a role at Court. The latter, known for his military bravery, was governor of Syria in 176/792. They were thrown into prison in 187/803 with their father and brother, but were released by al-Amīn who showed himself generous towards them. Mūsā remained in 'Irāk and fought in the Caliphal army; subsequently rallying to al-Ma'mūn, who later appointed him governor of Sind. He died in 222/835, leaving a son 'Iḥrām who succeeded him and distinguished himself in several expeditions. Muḥammad, on the other hand, had joined the Court of al-Ma'mūn at Marw, where he had been preceded by his son Ahmad and his nephew al-'Abbās, the son of al-Faḍl.

Of the numerous descendants of the Barmakids, one especially was famous as a musician and man of letters: Ahmad b. Dīdāfar, surnamed Dīdāfar [g.s.], grandson of Mūsā b. Yahyā and intimate companion of the Caliph al-Muktadir.

*Bibliography:* L. Bouvat, *Les Barmakides*, 101 ff.; Dīdāghiyārī, K. al-Winārā, Cairo ed., 297-98.

5. The nisba *al-Barmakī*.—This nisba was also borne by persons not belonging to the Barmakid family. A first category comprises their clients and their manumitted slaves with their descendants. Others were natives of the quarter of Baghdad which had received the name of *al-Barmakīya*. They included the singer Dānīnīr, the man of letters Muḥammad b. Dīdān, an astrologer who was present at the siege of Samānī, a *wasī* of the Sāmānids and an envoy of the Ghaznawids.

A number of dynasties, both in Iran and North Africa, were later to claim descent from the Barmakids (Sarbādārān in Khurāsān, Barmak in Touat). Finally a tribe, from whom the dancing-girls called *ghawwād* were recently still being recruited in Egypt, claimed to be descended from them; doubtless the reputation of these dancing-girls has imparted to the word *barmakī* the pejorative sense which it sometimes assumes in modern Egyptian.

*Bibliography:* L. Bouvat, *Les Barmakides*, 105 ff.

**BARAN**, an old name for BULAND-SHAHR [g.s.].

**BARANĪ**, Dīyā' al-Dīn, historian and writer on government under the Delhi sultanate. Born not later than 684/1285, (and probably earlier as he was old enough to remember witnessing convicts' parties and to have read the whole of the *Kur'ān* in the reign of Dīlāl al-Dīn Khāḍḡ (689-92/1290-6). Baranī was well connected with Delhi ruling circles. His father, Ma'ayyid al-Mulk, was *na'ib* to Arkāt Khān, second son of sultan Dīlāl al-Dīn Khāḍḡ, becoming *na'ib* and *khawāḍ* of Baran in the first year of the reign of 'Alā' al-Dīn Khāḍḡ. Baranī's paternal uncle, Malik 'Alā' al-Mulk was *khawāḍ* of Delhi under 'Alā' al-Dīn Khāḍḡ and a prominent royal councillor. His maternal grandfather, *siyāh-sālār* Huḍām al-Dīn, *waḥīd al-dār* to Malik Barsak, was appointed to the *ghāḡnā* of Lakḡnawī by Sultān Balḡan.

Baranī himself became, for seventeen years and three months, a *nadīm* of Sultān Muḥammad b. Tughlūk (725/1325-732/1331). The *Siyar al-Awliyā'* describes him as an entertaining conversationalist and as having been a friend of the poets Amīr Khusrav and Amīr Hasan.

At the beginning of the reign of Firūz Shāh

Tughlūk (752-90/1351-88) Baranī was banished from court and, according to his own statement in the *Na'at-i Muḥammadi*, was imprisoned for a time in the fortress of Paḥlōt. It is a possible hypothesis that he was associated with the attempt of Khwājā Dīdān Ahmad Aylāz to place a minor son of Muḥammad b. Tughlūk on the throne while Firūz Shāh Tughlūk and the army were extricating themselves from Muḥammad b. Tughlūk's expedition against Thatta in Sind.

Baranī spent his remaining years in penurious exile, writing both in the hope of being restored to favour and of atoning for the sin to which he ascribed his misfortunes. He died not long after 758/1357 and was buried near the grave of Nizām al-Dīn Awliyā' at Dīlghāḡpūr. Four of Baranī's works, the *Ta'riḡh-i Firūz Shāhī*, the *Fatāwā-yi Dīdāndārī*, the *Na'at-i Muḥammadi* and his translation of anecdotes on the Barmakids, the *Alḡhīr-i Barmakīyān*, are known at present to be extant.

Baranī is a significant (though in the total context of medieval Islam, not original) figure in Indo-Muslim thought on government. Holding the first four caliphs to have been the only truly *ghāḡ* rulers in the history of the community, Baranī aimed in the *Fatāwā-yi Dīdāndārī*, a work of the *Furqan* type, and in the *Ta'riḡh-i Firūz Shāhī*, to educate the *de facto* ruler, the sultan, in their duty towards Islam in a corrupt age. In the form of *diḡā* by Sultān Mahmūd of Ghazna, the *Fatāwā-yi Dīdāndārī* advises sultans to enforce the *shar'ia*, to curb unorthodoxy (*sūf*, especially *ghaḡfa*), to abuse the infidel, to employ only pious servants and to remain inwardly humble towards God though governing with the pomp and circumstance of pre-Muslim Persian kings, that is, in opposition to the ascetic *sanna* of the Prophet and the orthodox caliphs, as Baranī, under Sūfī influence, conceived them.

The avowedly didactic *Ta'riḡh-i Firūz Shāhī*, dedicated to Firūz Shāh Tughlūk, shows what happens in history when the precepts in the *Fatāwā-yi Dīdāndārī* are disregarded. It covers the period from the beginning of the reign of Balḡan (661-85/1268-87) to the sixth year of Firūz Shāh Tughlūk. The account of each sultan of Delhi is treated as a parable in which success or failure is explicable in terms of the sultan's adherence to or deviation from Baranī's politico-religious theories. For example, Sultān 'Alā' al-Dīn Khāḍḡ is depicted as a successful sultan in so far as he subjugated the Hindus, overcame sedition, forbade strong drink and reduced the cost of living, but as an impious one since, Baranī says, his motives were worldly, he neglected his own religious observances, wished to become a prophet, appointed low men to office and avoided the company of the religious—in particular of Shāykh Nizām al-Dīn Awliyā' whose *maymūn* and *barkāt* were the true cause of the *ghawwād* reign. True 'Alā' al-Dīn Khāḍḡ dies of suspected poisoning and within four years his family is exterminated. Baranī's *Ta'riḡh-i Firūz Shāhī* is not an annual or chronicle; it is an important example of didactic historiography in Islam. (See further *Ta'riḡh*.)

**al-BARĀNIS**, name of one of the two groups of tribes which together constitute the Berber nation [g.s.], that of the other being the Būtr. It represents the plural of the name of their common eponymous ancestor: Baranus; for a possible origin of this name see Būtr.

According to Ibn Khāldūn, the Barānis comprised five great peoples: Awraḡa, 'Aḡliḡa, Anḡāḡa, Maḡḡa-Ghūmra, Kutīna-Zawīa, Subḡāḡa, Hawwra. Whether, however, the last three belong to this group is a matter of controversy; they are considered by some to be descendants of Hīmyar and therefore non-Berbers. Neither they nor the Maḡḡa will be dealt with here.

The most ancient habitat of the Barānis in the true sense of the term is the massif of the Awraḡa, the eastern provinces of Constantine and the two Kabylia where they used to live as sedentary mountain dwellers. At the time of the first Arab invasion, in the first quarter of the 7th century, the Awraḡa of the famous Kusayla [g.s.] had to abandon the Awraḡa, after the defeat and death of their chief. They went to northern Morocco, where they established themselves from the massif of the Zāḡfīn to the river Wāḡḡa; the names of some of their old tribes are to be met with today along the banks of this river: Luḡāḡa, Maryāḡa, Raḡḡiwa. The rôle they played in connection with Idrīs I [g.s.] is known.

We possess no information on the conditions in which some of the Barānis arrived and established themselves in the North of Taza. At all events, al-Bakrī indicates some of the Barānis and Awraḡa in contact with the kingdom of Nukr [g.s.]. In the present tribe (in dialect 'B-Brānes, ethnic 'B-Barnōs) which contains a sub-group called the Werba, the memory of the prince of the Awraḡa who received Idrīs I (at Wallāla) has been retained and even the remains of his palace are shown there.

The Barānis-Awraḡa participated in the expeditions launched from Morocco against the Iberian Peninsula; some of them settled there and bequeathed their name to the Djabal al-Barānis, now the Sierra de Almadén, to the North of Cordova. Some of the Barānis (from the North of Taza) formed part of the "Būtr" contingents who took Tanger (1084). A village of the *faḡh* of this latter town bears their name.

As for the Arḡāḡa (and Misiḡna) Barānis, nothing is known of the reasons for their establishing themselves in the region of Oran; some of the Misiḡna still live in the region of Bādis [g.s.]. There is the same lack of information concerning the Kutāna of Morocco.

**BARANTA**, a term used in the eastern portion of the Turkish world (Talest, Kirgiz, Kazak etc.) though today regarded as old-fashioned (for the forms of the word cf. *barama*, *barloma*, *barama*, *parlanti*; the forms *barantale* and *barantaly*, encountered in some sources, are not yet fully understood, while Seyyid Süleymanī *barant* and H. K. Kadī's *baranta* must be mistaken), generally with the meanings 'loot, robbery, plunder, pillage, looting'; 'for one who is owed money or has been wronged to get his own back by raiding his adversary's livestock'; hence 'cattle-lifting'. For related terms, cf. *barimāḡ* (Af), 'cattle-lifter, marauder' (*parimāḡ*, 'robber'); *barimāḡ*, 'to get one's own back by driving off other people's livestock, to capture on foray'; *barimāḡ*, 'to quarrel together about property' (*ḡarāḡ meḡn ḡiḡdas ḡolḡne*, *hay meḡn barimāḡ*, 'rather than be friendly with a poor man, quarrel with a rich').

The term has passed into Russian with the same meaning: *baranta*, 'revenge, retaliation; taking reprisals for a robbery by driving off cattle; foray, incursion' etc., and the derivatives *barantat*, *barantōshch*, 'participant in a hostile incursion; robber'; *barantōvsk*, 'pertaining to a foray'; *barantōvsk*, 'to raid' etc.

M. Vasmer (*Russ. etym. Wb.*, Heidelberg 1950), noting that the Russian *baranta* is used in eastern Russia and the Caucasus, indicates that it has been taken from Turkish, into which language it has passed from Mongol. See in the Mongol dictionaries *barim*, *barimda*, 'clutching with the hand', *barimdalay*, 'to be seized, held fast, to preserve, to keep'; *barimdalai*, 'the act of holding fast, of tightening etc'. Cf. in particular G. J. Ramstedt, *Kalm. Wb.* (Helsinki 1935): *bārmā* 'to seize, hold fast, assault, attack'; *b. kəpə*, 'to go on a foray in order to take from one's adversary a surety for future engagements'; *bārmāyū*, 'to take, hold fast' (cf. *bārd*, *bārmāz*, etc.).

It is clear that among the nomad Turkish peoples this term once represented a specific legal concept; in Turkish as in Mongol it involves the notion of 'pledge, surety', and our sources show that *baranta* was done only with a specific purpose and subject to certain rules. It is *baranta* when a man who has been wronged appropriates a quantity of his adversary's property in order to recover his due; the return of the property depends on the result of ensuing litigation between the parties. It is likely that reciprocal *barantas* sometimes covered a wider group. The rule demanded that the use of *baranta* to redress a wrong should be in daylight and with prior notice. *Baranta* at the same time afforded an opportunity for young men in the nomad society to display their bravery, skill and resourcefulness; to earn the appellation of 'hero', and to be held in honour. With the changing bases of social life, and changing economic conditions, *baranta*, like many another institution rooted in customary law, has lost its importance; the term has suffered a gradual diminution and has come to mean simply 'theft'.

In the limited areas where the old customs are still preserved, however, the *baranta* system survives, and the laws of the land feel the need to take cognisance of it. E.g., on 16 October 1924 the Russian

central administrative organ (VTSIK) studied the system of Baranta in connexion with offences against the customary law in the Republic of Kazakhstan and the Oyrat Autonomous Region, under three heads: simple, armed, and tribal.

**BARĀTHĀ**, the name of a residential quarter on the western side of ancient Baghdad to the south of the quarter of Bāb Muhawwar, originally some 3 kms. from ancient Baghdad. There used to be in Barāthā a mosque, designed for the prayer of the Shī'ī sect, which Yāqūt (d. 626/1228) mentions as being totally demolished. He also remarks that the quarter itself was destroyed without trace. This mosque was built in 329/941; later on it was pulled down by the 'Abbasid Caliph Al-Rāḍī Billāh; later still, it was reconstructed and maintained its normal function until after 450/1058, when it was finally abandoned.

Prior to the building of Baghdad, Barāthā was a village where, as the Shī'īs claim, 'Alī b. Abī Ṭālib passed by and performed prayers on the site of the mosque. The name Barāthā, derived from the Syrian word Baraythā, has the meaning of "outer".

**BARAWA** (BARAVA), a coastal town of Italian Somaliland. The inhabitants, c. 9000, are mostly of the Tūmī tribe of the Digil Somali, who displaced the Adjirān and are mingled with Boraq Galla. The soil is comparatively fertile, skins, grain and butter are marketed and leather is worked. Barawa is perhaps Yāqūt's Bāwāw, which exported amber, and Idrīs's B-rwa (var. M-rwa) on the pagan frontier; other Islamic geographers do not mention it. Barro, following a Kilwa chronicle now lost, says Zaydīd from Al-Absāḥ founded it soon after Malikdīgh; Sulḡān's informant ascribed it to the Khālidī 'Alī b. Malik b. Marwān in 77/696-7. In the 8th/14th century it was subject to Pute. The Chinese visited "Fu la" about 821/1218. In 908-9/1503 12 shaykhs

captured by Rui Lourenço Ravasco made Barawa tributary to Portugal. In 912/1507 Tristão da Cunha and Albuquerque stormed and burnt it; Barawa mustered 4000 defenders and afforded rich booty. It recovered temporarily but decayed after the rise of the Galla. Portuguese suzerainty was recognised intermittently. Portuguese writers describe it as a republic, governed by 12 shaykhs; Gullian mentions a council constituted by the heads of 5 Somali and 2 Arab tribes with a monarch elected for 7 years, whom he was told, it had once been the custom to kill after that time. Barawa was nominally subject to the Āl Bā Sa'ūd (q.v.) who asserted their authority against the Maṣri c. 1238/1822, but tribute was sometimes paid to Somali chiefs. For about 2 months in 1292/1875-6 it was occupied by the Egyptians. The Anglo-German declaration of 1303/1886 recognised Bā Sa'ūd rule. Three years later Italy announced a protectorate over the coast and Barawa was subsequently leased to her (see SOMALILAND). Harbour works were begun in the hope of making it the port of the Jūbā (Juba) region but were later abandoned.

**BARBĀ**, a name given by the Egyptians to all the temples and ancient monuments. This statement by Ibn Dībāyir is corroborated by Yāqūt, according to whom *barbā*, "which is a Coptic word", is applied to solidly constructed ancient buildings of pagan times, which served as laboratories for magic: they were wonderful buildings, full of paintings and sculptures. 'Abd al-Latif, in turn, noted the excellence of the art of the construction, the balanced proportions of their forms, the prodigious volume of the materials employed, and was astounded by the great multitude of inscriptions, figures, sunk carving and relief sculpture. In the eyes of some Arab writers, these various representations served a utilitarian purpose, namely to reproduce the techniques and tools of various crafts and to preserve a description of the sciences for future generations.

The Christian historian of the Patriarchs of Alexandria, Severus of Aghmūnāy, employs the word *barbā* in the very precise sense of pagan temple, in contrast to the buildings of the Christian cult. The Arabic word *barbā* is, in fact, a transcription of the Coptic *g'p'p'w*—"temple", and usage has endowed it with a classical plural *barbā*. The expression *barbā* is also reported by Leo Africanus. Many authors recount impossible stories concerning these temples, either that they tell of the means of defending the country against external enemies by means of talismans or that these talismans help in discovering treasures, which they take a greater delight in elaborating.

The only relatively serious description, from the pen of Ibn Dībāyir, concerns the temple of Aghmūn, which no longer exists.

**AL-BARBAHĀRĪ**, AL-HASAN b. 'Alī b. Ḥusayn Abū MUHAMMAD AL-BARBAHĀRĪ, a famous Hanbali theologian, who died at Baghdad at a great age. He was both a traditionalist (*shā'im*), and a jurist (*faḥih*), being, above all, one of those popular preachers (*na'iq*), who, in the history of the Caliphate during the 4th/10th and 5th/11th centuries, played so important a rôle in the struggle of Sunnism against the Shī'ī missionaries (*da'wā*) and who, without exhibiting the least spirit of compromise, successfully managed to oppose the progress of Mu'tazilite and semi-Mu'tazilite-inspired theology (*kalām*).

Al-Barbahārī was schooled in Hanbali doctrine by Abū Bakr al-Marwāzī (died 275/888) [q.v.] (cf. *Ta'arūḥ Baghdad*, iv, 212-215; *Tahakki al-Hanbalīya*, i, 56-63; *Iḥṣā'ī*, 32-34) who was supposed to have been one of Ibn Hanbal's favourite disciples and one of the most assiduous reporters of the great imām's *responsa*, both in the field of jurisprudence (*fiḥh*) and, more generally, in that of moral theology (*akhḫāq*), the rules of civility (*ādāb*) and of religious beliefs (*aqā'id*). The famous jurist Abū al-Tuḡayyī (died 283/896), who founded the Sālimiyya school (cf. *ET*, iv, 119) and who was to exert an influence on several other major representatives of Hanbalism, was likewise his teacher.

Al-Barbahārī is the author of a profession of faith, the *Khiṭāb al-Sunna*, the text of which has been transmitted to us in great measure by the kādī Abū 'l-Buḡayyā in his *Tahakki* (ii, 18-43), and which recalls that composed by Ahmad Ghulūm Khallī (died 275/888), an opponent of the extremist Sūfiism of Abū Hamza and al-Nūrī (died 297/910) and himself an author with Hanbali affinities (cf. L. Massignon, *Textes inédits*, 212-213). Abū 'l-Ḥasan al-Agh'ārī (died 329/941) is held to have composed his own *Imān* after a discussion with Al-Barbahārī, an assertion which a comparative study of the two professions of faith does not show *a priori* to be inadmissible.

Al-Barbahārī's profession of faith is primarily a polemic work denouncing the multiplication of suspect innovations (*bid'a*) and energetically enjoining a return to the precepts of the "old religion" (*al-dīn*), as it was understood at the time of the first three Caliphs, before the schism which followed the assassination of 'Uḡmān b. 'Affān and the succession of 'Alī b. Abī Ṭālib. The principle underlying this restoration resides in imitation (*taḥlīl*) of the Prophet, of his companions and their pious successors, among whom al-Barbahārī frequently cites, with Ibn Hanbal, Malik b. Anas (died 179/797), 'Abd Allāh b. al-Mubārak (died 187/797), Pūḡayy b. 'Ṭayf (died 187/803) and Hāḍir b. al-Ḥarīḥ (died 227/842). Al-Barbahārī does not condemn the use of reason (*aql*); on the contrary he perceives therein a grace diversely distributed by God among his creatures and necessary to final salvation. Neither does he entirely reject what is *hāḍir* as opposed to what is *zāhir*, that is to say, what is inward and profound in contrast to what is outward and in conformity with the letter of the text,

provided this *hāḍir* has its basis in the Qur'ān and the Sunna. What he condemns above all else are the pernicious deviations, which result from the personal and arbitrary use of reasoning (*ta'wīl*; *ra'y*; *hiyā*) in the domain of religious beliefs. His theodicy, on the problem of the divine attributes (*ṣifāt*), is limited to an attempt to reproduce the data of the Qur'ān and the Sunna.

Politically, he appears as an energetic defender of the rights of Kuraysh to the Caliphate, though he none the less remains believers of the duty incumbent on them to obey all established authority, except where disobedience to God is involved. He is particularly severe in his condemnation of all attempts at armed revolt (*akharūḍī* bi 'l-*ṣayy*), considering in fact that the re-establishment of the Law should be effected by appeal to public opinion, by the duty of missionary preaching (*da'wā*), of enjoining the Good (*amr* bi 'l-*ma'rūf*) and of proffering good counsel (*naḥi*). The re-establishment of the Law, in a world in which Islam had split up into numerous sects, was incumbent especially on the "people of the *ḥādīq*", on the *ahl al-sunna wa 'l-ḡayma*, whose triumph God had definitely assured. True to his doctrine, al-Barbahārī conducted so vigorous a personal action against *bid'a* and against the sects (*fiḥra*), especially against Mu'tazilism and Shī'ism, that he was at times accused of entertaining political ambitions.

Indeed, al-Barbahārī's influence is to be discovered behind several popular demonstrations and insurrections which broke out in Baghdad between 329/941 and 329/941. He was not unconnected with the opposition encountered by al-Ṭabarī who, in 309, was invited by the *awāl* 'Alī b. 'Isā to come to discuss with his Hanbali opponents points of doctrine which separated them and who, in 310, had to be buried at night in his own house because of the hostility of the mob (cf. on these incidents, especially *Bidāya*, 21, 132 and 145-146).

In 317/929 there was a brawl in Baghdad involving considerable bloodshed between al-Barbahārī's followers and their adversaries, arising from the interpretation given to verse xvii, 87/79: "Perchance thy Lord will send thee to a sojourn worthy of praise (*maḥim mahmūd*)". Al-Barbahārī's disciples maintained that this was to be interpreted as meaning that on the Day of Resurrection, God would seat the Prophet on His throne, whilst, for their adversaries, who followed the doctrine of al-Ṭabarī and Ibn Khuzayma, this was merely a question of the great excitement (*ḡaḡā'a*) of the Prophet in favour of believers culpable of grave faults on the Day of Judgement (cf. *Bidāya*, xi, 325-163).

In 321/923, during the Caliphate of al-Kāhir, when the question arose of having Mu'āwīya cursed from the pulpit, a measure aimed directly at Hanbali doctrine, the *hādīq* 'Alī b. Yalbak ordered a search to be made for al-Barbahārī, who managed to conceal himself, though a number of the Hanbali theologian's disciples were exiled to Basra (*Kāmil*, vii, 201; *Bidāya*, xi, 172). The measures then taken by the Caliph al-Kāhir for the re-establishment of morality were designed in some degree to appease the Hanbali critics.

Although the supporters of al-Barbahārī do not seem to have played a direct rôle in 322/934 at the time of the trials of al-Shālmaghīnī and of Ibn Mūsān, nevertheless the Qur'ān reader Ibn Shānabādhī, likewise accused of public teaching of *bid'a*, was sentenced to death by the Caliph al-Kāhir for the re-establishment of morality being designed in some degree to appease the Hanbali critics.

swair Ibn Muḥla and sentenced (cf. al-Ṣūlī, trans. M. Canard, I, 109 and 145), apparently as the result of a noisy demonstration by the Hanbalis of Baghdad.

The agitation by al-Barbahārī's supporters reached its apogee in 325/935, at the beginning of al-Rāḍī's Caliphate, still under the vicerate of Ibn Muḥla, on the eve of Ibn Rāḥ's appointment as *amir al-umara'*. Muslim historians (al-Ṣūlī, I, 114; *Kāmil*, viii, 229-231; *Diwān*, xi, 181-182) depict the Hanbalis looting shops, intervening in commercial transactions to impose the prescriptions of the Law, attacking the wine-sellers and singing-girls, smashing musical instruments, pushing their way into private dwellings and denouncing to the Prefect of Police any man found in the street with a woman, not being her *mahram* (cf. K. V. Zetterstien, *ETP*, ii, 1160, s.v. Rāḍī). The Caliph authorities then prohibited al-Barbahārī's supporters from meeting and teaching and the Muslims from praying behind an *imām* following the Hanbali doctrine. As the ardour of al-Barbahārī's supporters did not diminish, a decree by the Caliph al-Rāḍī (text in *Kāmil*, viii, 230) was issued in 325, condemning Hanbalism and excluding it from the Muslim community; it accused it of developing an anthropomorphic theodicy (*ḥashsh*) and of forbidding the visiting of the tombs of the great imāms (*ziyarat al-habib*). This condemnation only prevented Hanbali demonstrations for a while.

Al-Barbahārī's supporters resumed their agitation with violence in 327/939 under the auidate of Baḥḡam; they mobbed people going to the *mayyā* festival, that is to say the ceremonies organised in some mosques during the night of the 14th/15th Shā'abān (cf. al-Ṣūlī, I, 204 and 205). The Prefect of Police issued orders for al-Barbahārī to be found, but once again he concealed himself, though one of his lieutenants, a certain Dalīlā, was executed.

The likelihood of dismissing the hostility of al-Barbahārī's supporters was further diminished by the fact in 328/940 the *amir* Baḥḡam had the mosque of Barḥā rebuilt. This mosque had been demolished under the Caliphate of al-Muqtadir and was considered by Sunnis as the "nest of Shi'ism" (cf. al-Ṣūlī, I, 242 and 208). When in 329 the *amir* Baḥḡam was assassinated by a band of Kurdish brigades, the Hanbalis noisily gave vent to their satisfaction, attempted to demolish the mosque of Barḥā and also attacked the quarter of the money-changers and bankers, in the Darb 'Awn, which was at the heart of the financial and commercial life of the 'Abbasid metropolis (al-Ṣūlī, ii, 16 and 19). The Caliph al-Muṭṭaḥī was obliged to have a number of Hanbalis arrested and to place the Shī'ī mosque under a heavy guard.

At this juncture, in Raḡab 329/April 941, al-Barbahārī died in the house of Fāḥrā's sister, where he had hidden himself and where he was buried (*Tahakkūt al-Hanbalīa*, ii, 44-45; *Diwān*, xi, 201).

Al-Barbahārī's influence also manifested itself in several contemporary Hanbali doctors, especially Ibn Baṭṭa al-Uḥairī (died 379/997), who met him at Raḡadā on a number of occasions and who drew inspiration in his *ḥikma* from his *ṣakāda*. His influence is likewise to be encountered, through the medium of Ibn Baṭṭa, on the *kādi* Abū Ya'la b. al-Farrā' (died 438/1066) and several of his disciples, especially the Sharīf Abū Dja'far al-Hāshimī (died 471/1078), who investigated several violent popular demonstrations against *būda*.

**BARBAROSSA** [see KHAYR AL-DĪN].

**BARBASHTURU**, an ancient city on the R. Vero, a tributary of the Cinca, N.E. of Saragosa (Saragosa), in the approaches to the Central Pyrenees (modern Barbastro). It lay 50 km. almost due E. of Washka (Huesca). Barbashturu is stated by Ibn Hayyān to have become Muslim at the time of the conquest of Spain, and to have remained in Muslim hands continuously thereafter for upwards of 500 years. It became a bastion of the defences of al-Ṭaḡar al-A'la (the 'Upper Frontier'), in which system it formed a link between Saragosa and Lārīda (Lérida).

In an account of the expedition of 'Abd al-Malik al-Murraṭṭir in 396/1006 against Pamplena, Barbashturu is mentioned as the last place in the lands of Islam (Ibn 'Udhārī, iii, 122). At the time of its capture in 435/1044, one believed it belonged to the Banū Hūd of Saragosa, and evidently contained a large population and substantial wealth, though the figures given by the Arabic historians who, following Ibn Hayyān, describe this event, appear to be exaggerated. In the summer of 1064, a Christian force estimated at 40,000 men presented itself before Barbashturu. These included Normans under Robert Crespin — the name is given by a Latin chronicler — and others, who with Papal support were engaged in what has been described as *una crusada antes de las cruzadas*, 'a crusade before the Crusades'. After a siege of more than a month they succeeded in taking the town. Though the part played by the Christians of Spain is obscure, and though Barbashturu was retaken after a year, its fall marked a stage in the reconquest of the country. It was spoken of by contemporaries as an event without parallel, the greatest disaster which had ever happened in Muslim Spain, and Ibn Hayyān's painful reflections on the state of al-Andalus were prompted by what had taken place there (cited in Ibn 'Udhārī, iii, 254-255).

It was characteristic of the dismay among the Spanish Muslims that the 'Abbasid al-Muṭṭaḥī did not send only 500 horsemen to al-Muḥṭar b. Hūd of Saragosa, his nominal ally, then assembling forces for a counter-stroke, though urged to march in person by al-Hawzānī, a noble of Seville (Ibn Sa'īd, *Al-Mughrib fi ḥulā al-Maghrib*, ed. Sh. Dayf, I, 234). Thanks to a corps of crossbowmen, al-Muḥṭar b. Hūd succeeded in retaking the town. Yet Barbashturu was not destined to remain much longer in Muslim hands. It was finally taken for the Christians by Pedro of Aragon in 1101, an event which seems to have been known to Yāḥyā (cf. *Ma'āḍ al-Buldān*, s.v.).

**BARDHĀ'A**, Armenian Parac, modern Parā, a town S. of the Caucasus, formerly capital of Arrān, the ancient Albania. It lies about 14 miles from the

R. Kūr (a or a *farāshā* according to the Arabic geographers; Mas'ūdī says inaccurately 3 miles, *Ma'āḍī*, ii, 75) on a river of its own (Mukaddasī, 375), the modern Terter (Ṭarṭūr, Yāḥyā, *Buldān*, i, 560). It was built, according to Balāḡhūrī (134), by the Sāsānid Kubād (ruled A.D. 488-531). This is varied by Dimighrī (*Geographie*, ed. Mehren, 189), who mentions as founder a ruler named Barā'a b. Ḥarmīd (?), earlier than Kubād. The Arabs attempted to explain the name as from Persian *barā-dār*, 'place of captives', from the original purpose to which it was put.

Bardhā'a served the Sāsānids and the Arabs later as a frontier fortress against invasion from the N. and W. At the time of the Arab conquest it was taken after a short resistance by Salmān b. Raḍī al-Bihlī (Balāḡhūrī, 201), probably before 32/653, the date of the Arab debacle at Balāḡjār [s.v.]. Thereafter Arrān, the province of which Bardhā'a and its territory formed part, was usually joined with Armenia, sometimes with Armenia and Aḡhar-Bayḡlūn, under a single governor. In the Caliphate of 'Abd al-Malik its fortifications were requisitioned by al-'Azīz b. Hātim (Dihādī, *Diwān al-Idān*, i, 40, 205 anno 865/705) and perhaps further improved by Muḥammad b. Marwān a little later (cf. Balāḡhūrī, 205). After this Bardhā'a was well fitted to be 'the spearhead of Muslim domination and policy in those parts' (V. Minorck), and is mentioned repeatedly during the second Arab-Ḥakkar war and later under the 'Abbasids. As late as the 10th century the population retained their own Arrān dialect (Iṣṭakhṭrī, 192).

When Iṣṭakhṭrī wrote (circa 320/932), Bardhā'a was at the height of its prosperity, though decline was soon to set in. It covered an area of several miles in length and breadth in a fertile and well-watered region, and in more size challenged comparison with Rayy and Irbān. In the district of Andarāb, beginning a mile or two from the town, gardens and orchards extended continuously in every direction for a day's journey or more. Hazel-nuts and chest-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Bardhā'a also produced superior figs, and especially during the latter reported to produce the finest mulberry-trees on which the silkworms fed; were public property and according to Ibn Hawkal (see below) most of the population had a hand in silk-production. Of several kinds of fish caught in the R. Kūr was one called *ṣarmāḥ* or *ghūrmāḥ* (Persian = 'salt-fish'), which when salted was also exported. The names of Bardhā'a mentioned by Mukaddasī (380) were appreciated as far away as Central Asia (at Samarkand in 416/1025, Barthold, *Turkistan*, 283). These and other commodities, such as the furs from the North mentioned by Mas'ūdī (*Tamhīd*, 63), madder and caraway-seeds (*Hudūd al-'Alam*, 143), were no doubt mostly offered for sale at the Sunday market (*ṣūḥ al-kurāḥ*, from *Kupac*), the Lord's day, reflecting the Christian religion of the inhabitants earlier, situated in the suburbs outside the Gate of the Kurds (Bāb al-Akrād), to which visitors came even from 'Irāk. The public treasury at Bardhā'a dated from Unayyad times (Ibn Hawkal), and according to the older fashion was in the Friday Mosque, beside which stood the palace of the governor.

This description serves also as the basis of Ibn Hawkal's account nearly 50 years later (379/977), the chief difference being that Ibn Hawkal knows of the capture and occupation of Bardhā'a by the Russians in 334/943. A notice of this remarkable

event is given by Ibn al-Aṭhīr (viii, 308-10) and in greater detail, evidently from eye-witnesses, by Ibn Miskawayh (*The Eclipse of the Abbasid Caliphate*, ed. D. S. Margulouth, ii, 62-67; English translation, v, 67-74, reprinted in N. K. Chadwick, *The Beginnings of Russian History*, Cambridge 1946, 138-144). The Russians, whose number is not given but who must have numbered at least several thousands, appeared in the Caspian, undoubtedly from the Khazar (cf. country on the Volga, as on other occasions) of D. M. Dunlop, *History of the Jewish Khazars*, 209 ff.; 258 ff.), and having sailed up the R. Kūr, defeated the forces of al-Marzubān b. Muḥammad, the Musafir ruler of Aḡhar-Bayḡlūn, and gained possession of Bardhā'a. The Russian occupation continued for many months (a year according to Yāḥyā, ii, 834), and they were only dislodged with the greatest difficulty, after an epidemic had decimated their numbers.

Ibn Hawkal mentions the ill effects of the Russian invasion but, as is now clear from the second edition of his work (see *Bibliography*), he does not ascribe to a catastrophic decline of Bardhā'a in his time, illustrated by a report that there are now only five balars in the town where formerly there were 1200, mainly to devastation caused by the Russians. Rather this was due, he tells us, to 'the injustice of its rulers and the management of imams' (1<sup>st</sup> ed., 243), phrases which are amplified and explained in his second edition (336) as fiscal molestations which have 'taken up it and its people', and to 'the neighbourhood of the Georgians (al-Kurjān)' (and ed. 337, 339). The latter appears to have reference to interference from the direction of Ganḡā (Djanzā), later Elizavetpol, only 9 *farāshā* distant from Bardhā'a (Yāḥyā, ii, 559), where the Shaddādids ruled in the 2nd half of the 4th/10th century. Otherwise the Muslim government and excessive taxation of which Ibn Hawkal speaks must probably be ascribed to the Daylamite Musafirids, unwilling to see Bardhā'a recover its former position to the detriment of Arrāb. Bardhā'a may have revived somewhat, since an attack upon it by a king of the Abḡhāz is said to have provoked reprisals by the Saldjūk Alp Arslān in 461/1067. But it is scarcely mentioned in the Mongol period, and the long interval which has elapsed since then can hardly have been much more than it is today, a village in the midst of ruins.

(D. M. DUNLOP)

**BARDJAWĀN**, *Asu 'l-Furūḡ*, a slave who was for a while ruler of Egypt during the reign of al-Ḥākim. He was brought up at the court of al-'Azīz, where he held the post of intendant (*Kātib* ii, 31; Ibn Taghribirdī, Cairo, iv, 48; Ibn Khallikān, 201). He was a eunuch, and was known by the title *Ushāḡ* [s.v.]. His ethnic origin is uncertain—Ibn Khallikān calls him a negro, Ibn al-Kāṭin simply a white (*abyad al-lawn*), al-Makrīṭī either a Slav or a Sicilian, the readings Saklī and Skillī both occurring in the MSS. of the *Khāṭ* (cf. S. de Sacy, *Chronologie*, i, 130).

Bardjāwān was appointed guardian of the young heir to the Caliphate by al-'Azīz, and on the latter's death in Ramaḍān 386/October 956, he proclaimed

his ward as the Caliph al-Hâkim. His rôle was at first limited to the guardianship of the young sovereign, the effective power in the state resting with the Wazīra [q.v.] Ibn 'Amûr al-Kutûmî, the leader of the Berber troops and faction. Ibn 'Amûr's power was no doubt irksome to the young Caliph and his guardian; the supremacy of the Berbers undoubtedly angered the Turks and other Easterners in the army, and probably also the general Egyptian population. Bardjâwân threw in his lot with the Easterners, and in 386/996 wrote to Manquâtûn, the Turkish governor of Damascus, inviting him to come with his army and save Egypt and also the person of the Caliph from the tyranny of the Berbers. Manquâtûn, with Turkish, Daylamite, Negro, and local Arab support, advanced against Egypt, but was defeated near 'Asqâlin by a Berber force sent by Ibn 'Amûr and commanded by Sulaymân b. Dû'far b. Fâllih. Bardjâwân was compelled for the moment to submit to Ibn 'Amûr, but a little later the support of Dîwân b. Samâna, a disaffected Berber officer, enabled him to challenge Ibn 'Amûr again, this time successfully. In an open clash Ibn 'Amûr was defeated and driven into hiding, while Bardjâwân took his place as *sûdîs* and effective master of the state (28 Ram. 387/ Oct. 997). Bardjâwân dealt leniently with the defeated Berbers in Egypt, but the breaking of their power proved to be permanent. In Damascus the Berber governor was dismissed and his Kutûmî troops massacred. A period of disorder followed in Syria, which was ended by vigorous action on the part of Bardjâwân. Arab rebels were suppressed in Palestine and Tyre, and Byzantine attacks by land and sea repelled. Diplomatic negotiations ended with a ten-year truce between the Byzantine and Fatîmî Empires. In the West, Bardjâwân conquered Barca and Tripoli, both of which were placed under emir governors. The latter conquest was of brief duration.

Emboldened by these successes, Bardjâwân adopted a high-handed attitude to the Caliph, even going so far, according to some sources, as to restrict his riding on horseback and his expenditure on gifts (Nuwayrî, Bar-Hebraeus). Nuwayrî tells a revealing story, according to which Bardjâwân used to call al-Hâkim 'the lizard' (arṣabāḥ), this nickname rankled, and when al-Hâkim summoned Bardjâwân to his death, the message ran: 'Tell Bardjâwân that the little lizard has become a large dragon, and wants him now'. Al-Hâkim's resentments were encouraged by another slave eunuch, Abū 'I-Ḥadî Raydîn al-Saklâtî, who warned the Caliph that Bardjâwân was trying to emulate the career of Kâfir, and promised to deal with him. Kâfir had dealt with the Ikhshîdîs. Bardjâwân was stabbed to death by the hand of Raydîn, and by order of the Caliph, in the night between 26th and 27th Rabî' II 390/3 April 900 (Ibn al-Sayrafi, who does not, however, mention the exact day; Ibn Khallikân; al-Makrîzî; Ibn Muṣarrif—the reading *sa'ûn*, instead of *hi'ûn*, is an obvious error; Ibn al-Kalânî, followed by Ibn al-Aṣlî, gives the year as 389).

The killing of Bardjâwân aroused the anger of both the populace and the Turks, who no doubt feared a revival of Berber rule. The Caliph, however, appeared to the armed crowd above the door of his palace, and defended his action; accusing Bardjâwân of plotting against him, he appealed for help in his youth and inexperience. Leaders to the same effect were also sent out. In the *Draue* episode *Al-Sira al-Mustahima*, by Hamza, there is an interesting passage in which the execution of Bardjâwân by the

youthful caliph, without fear of the anger of the troops, is presented as an act of unprecedented daring, presaging the miraculous quality of al-Hâkim's rule (al-Mukhtab, v, 305).

Bardjâwân is said to have been a man of taste and a lover of the pleasures of this world. His house was a meeting place of poets and musicians. On his death, he astonished his contemporaries by the size and variety of the wardrobe, library, stables, and establishment which he left. A street in Cairo was named after him.

**BARDO** (see TOUSIA).

**BAREILLY** (Bareilly) a district town in the Uttar Pradesh, India, situated in 28° 22' N. and 79° and 24' E. stands on a plateau washed by the river Râmghangâ. Population (1931): 194,679. Founded in 944/1537, the town derives its name, according to tradition, from Bâ, Dâs, a Barhîlâ Râjdîpt by caste. It is popularly known as Bânâ Bareilly, partly to distinguish it from Râd Bareilly, the birth-place of Sayyid Ahmad Brelwî [q.v.], and partly due to the proximity of a bamboo (*bâm*) jungle.

During the reign of Akbar, a fort was built here to check the depredations of the Râjdîpt tribes of Rohilkhand. As usual a town gradually grew up round the citadel, and by 1605/1666 it had developed into a *pargana* head-quarters. It remained of little importance till the reign of Shâh Dîwân when it was made the capital of Kôter (the old name of Rohilkhand). In 1668/1657, a new city was founded by Makrân Rây, who was appointed governor in place of 'Alî Kûlî Khân, who had held the office since 1628/1628. During the Mughal period the city was ruled by a governor. After the death of Aurangzib in 1707/1707 the Hindus of Bareilly turned out the Mughal governor, refused to pay the tribute, and assumed power. They, however, soon fell out among themselves, and invited 'Alî Muhammad Khân, the Rohilla chieftain, to assume the reins of power. He soon extended his sway right up to Almorâ, a Muslim town. In 1728/1726 Muhammad Shâh, King of Delhi, marched against him and took him a prisoner to Delhi. He, however, soon won back his freedom and returned to the governorship of Bareilly in 1760/1748. On his death in 1762/1749 he was succeeded by Hâfîz Rahmat Khân, who after some sharp encounters with Awadh forces, strengthened by Maharrâta contingents, became the unquestioned ruler of Rohilkhand in 1774/1770. Nâḡib al-Dawla defeated Rahmat Khân with the help of Maharrâta troops under Sindhiya and Holkar. Shujâ' al-Dawla,

however, came to the rescue of the Rohillas but soon afterwards fell upon them, killing their chief, Rahmat Khân. In 1787/1774 Sa'adât Yâr Khân was appointed governor of Bareilly under the Awadh suzerainty. In 1216/1802 the town was ceded to the British, when entire Rohilkhand fell into their hands. In 1220/1805 Amir Khân Pindârî raided Bareilly but was driven off with heavy losses. In 1232/1816 the residents rose against the imposition of a local tax but were dealt with in iron hand. In 1251/1837 and 1257/1842 serious Hindu-Muslim riots took place. The town was badly disturbed during the "Mutiny" of 1273/1857 when Khân Bahadur Khân, grandson of Hâfîz Rahmat Khân, was proclaimed governor. After the fall of Delhi in September 1857, Talafoddin Husayn Khân, Nawab of Farrukhabâd, Nânâ Shihî from Duddhâ, and the Mughal prince, Fîrîz Shâh, the rebel leaders, made the city their stronghold. They were, however, defeated, and the city was re-occupied by the British on 3 May 1857. In 1287/1871 a Hindu-Muslim riot again took place and since then several religious riots have occurred. With the establishment of Pakistan in 1366/1947 the bulk of the Muslim population migrated from Bareilly.

General Bahkt Khân [q.v.] of the Bareilly Brigade, who was appointed Commander-in-Chief of the rebel forces during the "Mutiny", was a native of this town. Ahmad Ridâ Khân (d. 1340/1921), a theologian and scholar whose followers formed themselves into the *Hiab al-Ahmâd*, popularly known as the *Barhîs*, also belonged to this town. The *Hiab al-Ahmâd* is a sub-sect of the *Hiab*, and, contrary to other Sunnis, believe that the Prophet possessed prescience or knowledge of the future. It is an article of faith with the *Barhîs* and has occasioned much strife among the 'ulama' in the Indo-Pakistan sub-continent.

The only building of note is the tomb of Hâfîz Rahmat Khân, constructed by his son, Shihî-Fakîr Khân, in 1169/1775. This tomb has been repaired several times, the last in 1902-3 by the British Government.

Ind.), index. (A. S. BAZME ANSARI)

**BARFURCUSH**, formerly Barfurghush ("the village where loads are sold") and renamed Bâbul in 1927, is the chief commercial town in the second *Utân* (Mâzârând). It is situated four miles to the east of the Bâbul river, midway between the foot of the Elburz range and the coast. It is 12 miles from Bâbul-i Sar (formerly Maghad-i Sar), the port at the mouth of the Bâbul river.

The town was founded at the beginning of the 16th century on the site of the ancient city of Mâmîr or Mâmâtîr (see Melnigun, *Das südliche Ufer des Kaspiischen Meeres*, Leipzig 1868, 127). Shâh 'Abdîs I used to visit the town and he laid out a garden to the south-east called Bâgh-i Shâh or Bigh al-Iram. Barfurghush remained a place of little importance until the reign of Fath 'Alî Shâh [q.v.].

In recent years many new buildings, including administrative offices, a hospital and a number of schools, have been erected. The population in 1930 was 19,296.

Much silk, cotton and rice are produced in the neighbourhood.

(L. LOCKHART)

**BARGHASH** a. Sa'û b. Sulṭân, sultan of Zanibar, succeeded his brother Majdî, 7 Oct. 1870, and reigned till his death, 27 March 1888. He tried to seize power on his father's death in 1856, and again in 1859 when he was defeated by British intervention and sent to Bombay for two years. The British supported his accession but he at once resisted their efforts to suppress the Slave Trade, for he relied partly on the Ibâdî Ikhwan faction which was hostile to all European intervention in such affairs. In 1873 Barghash was obliged to suppress all slave markets and prohibit all export of slaves, even to other parts of his realm; he was then invited to London. In 1876 the movement of slave caravans on land was forbidden. To enforce this policy Lloyd Mathews began training African troops in 1877. The British agent Kirk won Barghash's confidence and became the dominant personality in Zanibar till he left in 1886. In the African hinterland Barghash had inherited wide claims and some prestige but very little power. In 1877 the failure of negotiations with Sir Wm. Mackinnon for a concession for the development of the country between the coast and Victoria Nyamru ruined Barghash's best chance of enforcing his authority in the interior. In 1881 his proposal that Britain should guarantee the throne to his family and should exercise a regency if he died leaving a minor as heir was rejected. In 1884 the German agent Peters concluded twelve treaties with chiefs whose suzerain Barghash claimed to be; their territories lay along the trade route to Tabora and Ujiji. In 1885 Germany took them and the Sultan of Witu under her protection. Barghash's protest was met by the visit of five German warships and an ultimatum which lack of British support forced him to accept. A commission of British, German, and French representatives then met to determine the extent of territory over which his authority would be recognised. Under British pressure Barghash accepted their decision (for details see *at* Sa'ûn). His health was now broken and he died immediately on his return from a visit to 'Umûn. Barghash was an able and energetic ruler who did much for Zanibar, supplied it with pure water, organised the import of cheap grain and worked hard to restore the clove industry after a cyclone in 1872. Contemporary Europeans often called him xenophobe but his position was extremely difficult. Britain, which he was powerless to resist, especially after the collapse of France in 1870, forced him to adopt an anti-slavery policy highly unpopular with his subjects and at the same time gave him no support against the Germans.

**Bibliography:** R. N. Lyne, *Zanzibar in Contemporary Times*, 1905; Emily Rûbe (Barghash's sister who eloped with a German), *Mémoires d'une arabienne Prisonnière*, 1886; R. Coupland, *The Exploitation of East Africa*, 1939, giving references to British official sources and the private papers of British officials.

(C. H. BECKER [C. F. BECKINGHAM])

**BARGHAWĀTA**, a Berber confederation belonging to the Masmûda group, established in the Tâmasâq [q.v.] province, extending along the Atlantic coast of Morocco, between Sâf and Sâfi, from the 2nd/8th to the 6th/12th century.

They were an important confederation, able, according to the Andalusian geographer al-Bakrī, to put more than 12,000 cavalry into the field simultaneously. They appear to have played a certain political rôle up to the arrival of the Almohads (second half of the 11th/12th century). Prior to this time, our information on the Barghawāta is almost exclusively due to the Eastern traveller Ibn Hawkal (second half of the 11th/12th century) and the geographer al-Bakrī (second half of the 11th/12th century); several subsequent chroniclers merely reproduce the latter's narrative with slight variations of detail (see Bibliography). Al-Bakrī says that he derived his information from statements, evidently preserved in Spain, made by a Barghawāta emissary to the Umayyad Caliph al-Hakam II, who came to Cordova on a mission in Shawwal 332/October-November 963. Indications of the rôle played by the Barghawāta at the time of the conquest of Morocco by the Almohad 'Abd al-Mu'izz are to be found in the *memoirs of al-Bayḍāq* (*Doc. inéd. d'Hist. almohade*) and in the *History of the Berbers of Ibn Khaldūn* (see Bibliography). In addition to the political importance of the Barghawāta confederation, they practised a special religion, which was nevertheless clearly derived from Islam; al-Bakrī alone gives us some meagre information on this subject, and the other chroniclers confine themselves to reproducing this.

Undenably the Barghawāta's appearance in history is connected with the Khāridjite revolt of Maysara: the populations known under the name Barghawāta (several chroniclers affirm without adequate proof that this was not their contemporary name) embraced the Khāridjite cause and in 127/744-745, if we are to believe a number of them, grouped themselves round an individual called Tarif, whose origin is much disputed; some introduce him as a chief of the Zanūta and Zuwāgha Berbers, some as deriving from a Berber group in Southern Spain (Barbūt, the distorted pronunciation of which was supposed to give Barghawāta), whilst others even accord him a Jewish origin. The Sunī authors, it should be noted, sometimes display a tendency to attribute such an origin to the strongest personalities of the dissident sects: e.g. the Shī'ī Mahdī 'Ubayd Allāh (cf. Goldfischer, *Moh. Shaw.* 1, 304). Nobody, however, says that Tarif was descended from a family established in the Tāmasān in early times. Whether or not he was the promoter of a doctrine derived from Sunnī or Khāridjite Islam, he certainly does not seem to have professed it. His son Sālih may perhaps have been the progenitor of the new belief after living and studying in the East. If we accept the chronology of al-Bakrī, completed by Ibn Khaldūn, Sālih came to power about 132/748-749 and transmitted it to his son al-Yass' about 178/794-795. It was only the latter's son Yūnus who, openly professed and spread the new doctrine during his 43 years reign, from 228/842-843 to 271/884-885. We possess no information on the relationships which must have existed at this period between the Idrīsids and the Barghawāta; nobody mentions any conflict between them. Nevertheless, there is an indication of a bloody battle supposed to have been won near the Wādī Bāb by Abū 'Ubayy al-Yūnus's nephew and successor (271-300/912-913). The Barghawāta would thus appear to have attempted to take advantage of the decline of the Idrīsids to extend their domination and propagate their doctrine.

In the middle of the 4th/10th century, they

appeared to Ibn Hawkal as infidels against whom the Sunnīs tended to conduct a holy war from the *ribāṭ* of the region of Salé. Their economy seems to have been prosperous, as they maintained commercial relations with Fās, Aghmāt, Sūs, and Sādjilmasa. They attempted to open diplomatic relations with the Caliphate of Cordova. Soon, however, they were subjected to a series of attacks by Dī'a'far al-Aḥdādī, a client of the Umayyads, in 367/977-978, by Balazgh b. Zīd, viceroy of the Fātimids in Ifrīkiya, from 368 to 372/982-983, and by Wādīh, the manumitted slave of al-Manṣūr b. Abī 'Amr, in 380/990-991. The decline of the Caliphate of Cordova enabled them to recover their breath, but about 420/1029, they were subjected to attacks by Abū 'Ismā'il Tamīm, chief of the Banū 'Irān, who conquered them. His death in 424, gave them a new respite until the arrival of the Almohads in 451/1059. After putting up a fierce resistance, which cost 'Abd Allāh b. Yāsīn, the spiritual leader of the new conquerors, his life, the Barghawāta were completely defeated and destroyed. Some, however, still remained in the Tāmasān, where the Almohad 'Abd al-Mu'izz undertook the subjugation of Morocco after the conquest of Marrakech (544/1147). Since they had embraced the cause of rebels against the new authority, the Almohad chief sent several expeditions against them and finally got the better of them in 543/1148-1149. From that date their group ceased to exist and gradually their name disappeared. Leo Africanus (beginning of the 16th/17th century) no longer quotes their name, though he knows that the Tāmasān was formerly inhabited by 'heretics'.

Their doctrine, according to the glimpse which al-Bakrī affords of it, appears as a Berber distortion of Sunnī Islam with a number of Shī'ī infiltrations and an entirely Khāridjite austerity as regards morals. Ibn Hawkal stresses the ascetic life and good morality of the Barghawāta. Moreover, the institution of numerous prayers (five during the day and the same number at night) frequent fasts, very complete abstinence, the harshness of punishments inflicted on thieves (death), fornicators (stoning) and liars (banishment) can be ascribed to Khāridjite strictness. On the other hand, the fact that Sālih promised that he would return when the seventh chief of the Barghawāta had assumed power and declared that he was the Mahdī who would fight against the Antichrist (*al-dajjāl*) at the coming of the end of the world with the help of Jesus, can be considered a sign of Shī'ī influence. The month's fast in Rajab or Shawwāl, the communal prayer instituted in Thursday, the food taboos (no heads of animals, no fish, eggs or cocks), and the rules of marriage are merely distortions of Muslim Law, as was the existence of a Qur'ān in the Berber language of 80 shars, bearing names of prophets, animals etc.

The continual use of Berber language, the frequent resort to astrology and magic (healing by means of applications of the saliva of members of the Berber tribes on the faith of the Barghawāta. It is to be regretted that apart from a few ritual expressions and the beginnings of a *ṣūra* cited by al-Bakrī, we possess no original documents on this religion. In such circumstances it is impossible to arrive at an accurate idea of it.

**BARHEDRAUS** (see *LEN AL-'IBRĪ*).

**BARHŪT** (also Barahūt or Balahūt), a *wādī* in Hadramawt, in one wall of which is the famous Bīr Barhūt, now known to be a cave rather than a well. The *wādī*, which lies east of the town of Tarfūn, empties into al-Maḍā, the lower stretch of Wādī Hadramawt, from the south. At the mouth of Barhūt is Kaḥr Hūd (see *IBR*), the most sacred shrine in southern Arabia, which is the object of a *ṣayra* every Shā'abān.

Early Islamic traditions describe Bīr Barhūt as the worst well on earth, haunted by the souls of infidels. Barhūt probably came to be known throughout Arabia because of its association with the tomb of Hādī, rather than vice versa (cf. Wessink, citing von Kromer, in *EP*, II, 328); it is unlikely that a mere cave would have acquired such notoriety. The true nature of Bīr Barhūt was first revealed by D. van der Meulen and H. von Wissmann, who explored it in 1931. About 300 feet above the floor of the valley they found a typical limestone cave, with nothing whatever volcanic about it. The curious but innocuous smell inside does not come from sulphurous vapour; it is probably due to the dust from the weathering of the rock or, perhaps, to bats'. An examination of the main corridor and various side corridors failed to disclose any noteworthy remains.

*Bibliography:* For the old erroneous beliefs regarding Bīr Barhūt, see the references cited by J. Schleifer in *EP*, I, 554, to which should be added C. von Landberg, *Études sur les dialectes de l'Arabie méridionale*, I, Leiden 1901, 432-47, 481-4. For the cave, see D. van der Meulen and H. von Wissmann, *Hadramawt*, Leiden 1932.

(G. REYER)

**BARID**, word derived from the Latin *veredus*/Greek *beridos* (of uncertain origin, perhaps Assyrian) 'post horse', usually applied to the official service of the Post and Intelligence in the Islamic states, and likewise to the mount, courier and post 'stage'. The institution of the state postal service was known to the Byzantine and Sāsānid Empires, from which it would appear the first Caliph only required to borrow it. Its foreign origin being confirmed by a partly Persian terminology, the *barid* operated from the Umayyad period and 'Abd al-Malik is considered as having strengthened its organisation, once he had re-established internal order. From the beginning of the 'Abbāsīd regime, the Post was one of the most important governmental services and its direction was entrusted to intimates of the Caliph, such as Dī'a'far the Barmakid, or to Palace eunuchs. The various Caliphs developed the system of stages which, in the middle of the 3rd/9th century, covered the whole Empire.

The actual organisation of the post in the 'Abbāsīd period is sufficiently well known thanks to the works of Ibn Khurraḍdhbih and Kādīmā, composed for the use of the secretaries of state in the 3rd/9th and 4th/10th centuries, which provide lists of stages. The Empire contained no less than nine hundred and thirty stages (*ṣabāḥ*, also called *ribāṭ* in Iran and *marḥab* al-*barid* in Egypt), theoretically, situated two *farasāh* (12 km.) apart in Iran and four (24 km.) in the western provinces; officials (*murattabīn*) were responsible for ensuring the transport of the post (*al-ḥarāṭ*) within the times allotted. The messengers (*ṣayāḥ*, *farāḥīn*) used mainly mules in Iran and camels in the West, but sometimes horses as well. The organisation, however, remained flexible and several times a Caliph, a *ṣayr* and even an ordinary governor were to be found temporarily strengthening the postal service on a particular route for political or military reasons. Pigeons were also employed for sending urgent news. The Post being an official service, it only transmitted private letters as an exception to the rule. The mounts also served to carry men, when these were agents of the State, and we even find the new Caliph al-Hādī availing himself of the services of the *barid* to return to Baghdad from Ḥijūzīn after the death of his father al-Taharī, III, 547 and al-Dīghshiyarī, K. al-Wusarā', Cairo ed., 1927.

The Postmasters (*ashāb al-*barid**), who came under the authority of the director of the department of the Post (*ashāb dīwān al-*barid**) were not restricted in their duties to the transmission of official letters emanating either from local officials or from the central services. Thanks to a text of al-Taharī relating to the Caliphate of al-Mansūr and to a diploma of investiture preserved by Kūḥlāna, we are acquainted with the duties of these officials. They had to provide the central government with all necessary information on the state of their province and agents' activities, on the attitude of the commissioners for land taxation and Crown lands and that of the *kiddā*, and on the monetary and economic situation. Their supervision extended also to the governor of the district, as is shown by the episode of Tāhī's (4.6.) autonomy in Ḥijūzīn and, in some cases, they were also entrusted with the duty of redressing grievances (Miskawayh, *Ecclipses*, I, 25). In Baghdad the reports assembled by the director of the *dīwān* were communicated directly to the Caliph, at least in the early period. In addition, there was a director of intelligence (*shāḥar*), entrusted with the supervision of the officials and officers of the capital, including the *ṣayr* himself when necessary (Miskawayh, *Ecclipses*, I, 24); this office, which seems to have been independent of the Postal Service properly so-called, was entrusted to eunuchs or amirs enjoying the sovereign's confidence.

If we are to credit the account in the *Ta'rif* of al-Umarī, the Buwayhids 'cut off' the *barid* so as to deprive the Caliph of his means of gaining information, thus bringing him more surely under their tutelage. It was in fact in their time that 'runners' (*ṣayāḥ*) first appear in the East. Gradually the postal service seems to have become increasingly disorganised until its suppression by the Saljūqids (455/1063), after which extraordinary 'emissaries' alone were used. At the time of the Crusades, the Zangids and Ayyūbids had no real postal service at their disposal, but made use of runners, swift cameldrivers and pigeons.

In the Mandālik State, the postal service for a time recovered its former importance, and its workings are known to us through texts and archaeological remains. Its reorganisation was the work of Baybars, who not only drew upon the example of the 'Abbasid Caliphs, but also on that of the Mongol Empire, with which he had to contend. The Mandālik *barid*, an organ of the State closely linked with the Holy War, therefore, assumed primarily a political and military rôle, although later it was adjusted to favour commercial traffic. Directed initially by the sultan himself, it later passed into the hands of the secretaries of state, recruited from the famous family of the Banū Fadl Allāh, who imparted to it a bureaucratic character, before passing back to the *amir dawūdīyār*. In addition to couriers (*baridī*) commanded by a *muhaddam al-baridīyān* and recruited among the mamliks of the sultan's household, the personnel included stage grooms (*shayk*) and "outsiders" (*ṭawāṣiṭ*). The postal service first operated in Egypt and on the Cairo-Damascus route (a distance normally covered in a week) and was subsequently extended to the towns of the Syrian coast and the fortresses on the Taurus borders. The stages for changing horses, theoretically four *farṣakh* apart, were first established in public caravanserais. These, special buildings were erected for the purpose, of which the almost universal type, apart from architectural improvements, corresponded to the requirements of "stabling the sultan's horses and housing the small number of men in charge of them" (J. Sauvaget). The routes were then adjusted to ensure a quicker and more regular service. At the same period, the reception of the couriers by the sultan was accompanied by a special ceremonial and their badge of office, known from its employment in Mandālik heraldry, was given a more sumptuous appearance. Pigeon post and a system of visual signalling were also developed. The invasion of Timur (803/1400), however, destroyed this organisation and swift cameldiers and runners were again used for carrying official mail.

The institution of the Post existed in the various Muslim states, where it met practical requirements and harmonised with the ethical principles of the Qur'ān, the inviolability of letters and state secrets; its form, however, was not always very developed. In Muslim Spain in the 4th/10th century, the State postal service had not the same importance as it possessed in the East; it employed messengers mounted on mules and Sumatran runners (*ṭawṣiṭ*), which reveals the sketchy character of the organisation, and was directed by a *pāshā al-barūd*, a high official, who seems also to have had a network of agents at his disposal to provide intelligence. In the Hāshid state in eastern Barbary, the Post assumed a more rudimentary aspect; the couriers had to provide their own mounts, and there were no fixed stages where they could change their horses. The Post also existed in Safawid Iran as well as in the Ottoman Empire (see further *POSTA*, *BARUKĪ*, *TATAR*, *ULAK*).

**AL-BARIDĪ**, *naba* made especially famous by three brothers, sons of a postmaster of al-Basra, and called Banū T-Baridī for that reason. They played an important rôle at Baghdad and in 'Irāq during the Caliphate of al-Manṣūr and his successors. Shī'ī tax-farmers and military leaders, they distinguished themselves by their ambition and acts of provocation and had, even at an early age, very characteristic of the period preceding the advent of the Buwayhids.

The eldest of the three brothers, Abū 'Abd Allāh Ahmad, appeared on the political scene during the second vizierate of 'Alī b. 'Isa (313-316/927-928). Disaffected with the subordinate offices to which he and his brothers were then appointed, he obtained from the next vizier, Ibn Mukla, against a gratuity of 20,000 dirhams, the tax-farm of the province of al-Ahwāz for himself and lucrative appointments for his brothers. When arrested two years later, upon the fall of Ibn Mukla, these tax-farmers, who had rapidly grown rich, were capable of meeting a heavy fine as the price of their liberty. Somewhat later, under the following Caliph al-Kāthir, Abū 'Abd Allāh again became influential. He financed the expedition against the former supporters of al-Muktadir and recovered the tax-farm of al-Ahwāz, still retaining it, in spite of numerous vicissitudes, at the beginning of the reign of al-Rādī (322/934), after having benefited from Ibn Mukla's return to power. Appointed secretary to the chamberlain Yaḥyā, he succeeded in getting rid of him (324/936), and becoming the sole master of al-Ahwāz, where he unscrupulously amassed considerable wealth, constantly deferring payment of the moneys due to the central government, whilst at Baghdad he was represented by his brother Abū Yūsuf Ya'qūb.

The *amir al-sawāq*? Ibn Rā'ik soon undertook to subvert this underling governor and occupy al-Ahwāz, but al-Baridī was astute enough to take refuge with the governor of Fars, the *amir* 'Alī b. Buwayh, whose support he obtained. In 325/937, he succeeded in becoming reconciled with Ibn Rā'ik, who again granted him the tax-farm of al-Ahwāz and the governorship of the province. When, subsequently, Ibn Rā'ik was faced with a rival in the person of the Turk Badkhan, al-Baridī alternatively allied himself with them both and in 326/938, when Badkhan had prevailed, Abū 'Abd Allāh obtained the vizierate, at the same time retaining his province and paying tribute to the Caliph. He was soon deposed, but after Badkhan's death, at the beginning of the reign of al-Mutadī (329/941), the Baridīs entered Baghdad in force and Abū 'Abd Allāh recovered the vizierate, which he retained until a military mutiny obliged him to return to Wasit. The following year (330/942), Abū 'Abd Allāh entrusted his brother Abū 'I-Husayn with the command of an army which succeeded in occupying Baghdad, forcing the Caliph and Ibn Rā'ik to take refuge with the Hamdanids at al-Mawṣil. Abū 'I-Husayn, however, incurred much bitter hatred that he was soon banished from Baghdad and Wasit by the Hamdanid troops. The three brothers held out at al-Basra in spite of the costly war which they had to conduct against the ruler of 'Umān, who landed and occupied al-Ubulla. These adventures had exhausted Abū 'Abd Allāh's

resources and he did not hesitate to have his brother Abū Yūsuf assassinated in Sa'ar 332/November 943 for the simple purpose of possessing himself of his wealth. However, he himself died shortly afterwards in Shawwāl 333/June 944 and was replaced by his son Abū 'I-Kāsim. The latter had to protect himself against the intrigues of his uncle Abū 'I-Husayn who, seeking to obtain the governorship of al-Basra for himself, was in the end condemned to death and executed in Baghdad at the end of 333/944. He was then obliged to fight the Buwayhid Mu'izz al-Dawla who, in 336/947, expelled him from al-Basra. Forced to flee to the Carmathians of al-Buhayra, his political rôle came to an end. He died in 340/950. Abū 'Abd Allāh had four other sons, to whom incidental references are made in the chronicles.

(D. SORUCEL)

**BARID SHAHIS.** A dynasty founded by Kāsim Barid, who was originally a Turkish slave sold to Muhammad Shāh III, the 13th of the line of the Bahmanids (q.v.). A man of outstanding personality, a good calligrapher and musician, he also proved his mettle on the battlefield and was, by the *biḥāṣ* in the reign of Mahmūd Shāh, and after the death of Malik Hasan Nizām al-Mulk, arrogated to himself the office of chief Minister of the tottering Bahmani State. He had often to contend with the more powerful fietholders of the Kingdom who had become virtually independent at Bidjāpur, Ahmadnagar and Golkonda, but his chief strength lay in his being always at the capital, Bidar (q.v.). Kāsim died in 910/1504 and was succeeded by his son Amīr Barid. The authority of the Bahmani Sultāns had been shattered by Kāsim, and what was left of it was now put an end to by his successor, till, after the flight of the last titular monarch, Kalīm Allāh he became supreme at Bidar. But he had to cope with the power of 'Alī Shāh of Bidjāpur, who actually occupied Bidar after routing the Barid ruler. The citadel was restored after a while, but only after the forts of Kandhār and Kalyān had been annexed to Bidjāpur. Amīr Barid tried to bring at least the small fietholders under the direct control of the centre, much as Mahmūd Gāwān had done (q.v.), but he was not successful. He died in 950/1543 and was succeeded by his son 'Alī.

'Alī Barid was a lover of literature, art and architecture and the Rangin Mahal within the fort at Bidar and his own well-proportioned mausoleum are two outstanding monuments to his taste. He was blessed with a long reign. He was the first of the Baridīs who adopted the royal title, although he was content with the epithet *al-Malik al-Mahī*, which appears in beautiful mother-of-pearl inlay in the Rangin Mahal. He was of the four allied monarchs who finally put an end to the power of Rāma Rāya, the regent of Vijayanagar, in 1565 and was put in command of the left wing of the allies along with Ibrahim Kutb Shāh. He died in 987/1579.

The fortunes of the dynasty came quickly to a close after 'Alī Barid. He was followed by Ibrahim and then by Kāsim II who was succeeded by his infant son known as Mirzā 'Alī Barid Shāh. A relative, known as Amīr Barid Shāh II put him aside and occupied the throne. He was succeeded by a ruler who is called in a bilingual inscription Mirzā Walī Amīr Barid Shāh. It was in his reign that the Baridī dynasty came to an end and Bidar annexed Bidjāpur in 1028/1619.

Very few Barid coins have been found. Although Fergita says that even Kāsim Barid struck his own coins the only coins known so far are either the Bahmani copper coins with the punch-matched legend *Amīr Shāh*, which are attributed to Amīr Barid II or else copper *ḥis* and *ḥal ḥis* with "Amīr Barid al-Sultān" but without any date. These are all in the Haydarābād Museum.

(H. K. SHERWAN)

II. — **MONUMENTS.** All the monuments of this dynasty are in the town of Bidar (q.v.) as successors to the well-established Bahmani dynasty they inherited many fine structures, and their building activity was more a matter of adaptation and rebuilding than of the erection of any major structures. The progress of the Baridī style is well illustrated in their tombs, which form a royal necropolis some 6 km. west of the city walls, and occupy a large area on account of the vast garden-enclosures of each tomb. Page references in the following account are to G. Yazdani, *Bidar: its history and monuments*, Oxford 1947.

The tomb of Kāsim I, d. 910/1504, is a small insignificant building with a plain conical dome, p. 149. That of his successor, Amīr Barid I, was left incomplete on his sudden death in 949/1542, without a dome; there are two storeys of arches on each façade, pierced by a central arch running through in both storeys, all stilled at the apex as in the earlier Bahmani buildings (pp. 150-1). The reign of 'Alī Barid (949-87/1542-79) saw much building activity: large scale improvements to fort and city fortifications, including the mounting of many more large guns; rebuilding of the Rangin Mahal, with fine mother-of-pearl inlay work and intricate wood-carving in which Hindu patterns are mixed with Muslim designs (449); much alteration of Tarkash Mahal, especially the upper storey, in which the chain-and-pond motif, characteristic of Barid work from now on, is apparent (pp. 57-9); and 'Alī's tomb, very well sited, with an imposing gateway having wide arches with low impostes and upper rooms decorated with a profusion of small cusped niches. Each wall of the tomb consists of an open arch, through which the fine sarcophagus of polished black basalt is visible; the interior is thus very bright and airy, and is embellished with good encaustic tile work (verses from 'Alī's, Kur'ānic texts, in *Zuhūr*), though not over-elaborated. Since the tomb is open on all sides there is no *hība* enclosure, and attached to the tomb there is a separate mosque with slender minarets, a vaulted ceiling, and fine cut-plaster decoration on the façade. Tomb, gateway and mosque have the trefol parapet which originates in the late Bahmani period (pp. 151-60). The tomb of Ibrahim (d. 994/1586) imitates that of his father on a smaller scale.

but is incomplete and presents surfaces of lime-laid masonry. Carved corner jambs show the Hindī *śakra* as part of their decoration (pp. 160-1). Both these tombs have a large dome, not stilted but recurved at the base to form a three-quarter orb, which appears somewhat top-heavy for the structure. This constriction of the dome is characteristic of the contemporary buildings of the Kutb Shāhi and 'Adil Shāhi (q.v.) dynasties at Golkonda and Bidjāpur also. The single opening is reverted to in the tomb of Kāsim II, which is better proportioned, but the open design is apparent in the dome over the *mihrāb* of the Kāsi (black) *maṣgid*, pp. 296-7. The Dīlāsi *maṣgid* of the town (see Bīḥās), a late Bahmāni building, was restored during the Baridī period (chain-and-pendant motif in spandrels of the façade), pp. 103-4.

From the time of 'Alī Barid the buildings become more ornate in their minor detail, and the influence of the Hindī mason becomes more apparent; in some Baridī buildings—e.g., the Kāsi *maṣgid*—the forms used in stone often seem more appropriate to wood-work. Much of the later work shows that meretricious character often apparent in the buildings of a dynasty in decline.

**Bibliography:** Fuller details of many of the above buildings are given in the article on Bidar, [p. 5]. See particularly Yāsāni, *op. cit.* for full references, extensive plates, drawings, plans, etc., and bibliography given in article Bīḥās.

(J. BURTON-PAER)

**BĀRĪA** (Ar.), a term applied to a wild animal or bird which passes from right to left before a traveller or hunter; although opinions differ on this point, this is generally interpreted as a bad omen, because, it is said, it presents its left side to the hunter who does not have time to take aim at it; it is an animal which passes from left to right (*saḥāb*) is on the contrary of good omen. The *maḥī* approaches from the front, and the *ka'ūd* from the rear.

(L.S.)

**BĀRIMMĀ** (see BĀRĪN, BĀRĀL).

**BĀRĪRA**, a slave-woman who had arranged to buy her freedom in nine (or five) annual instalments, appealed to 'Āḥīḥa who agreed to pay the whole sum. The owners were willing to sell her, but insisted on retaining the right of inheritance from her. When the Prophet heard this he told her to buy her, for the right of inheritance belonged to the one who set a person free. 'Āḥīḥa therefore paid the money and set Barira free. She remained as 'Āḥīḥa's servant and is said to have died during the Caliphate of Ya'qūb I (660-683). In the tradition of the lie she was consulted regarding 'Āḥīḥa (cf. *Buḥārī*, *Ṣaḥīḥ*, 15). Three *ṭumās* are connected with her: (1) The Prophet said the right of inheritance belongs to the one who sets a person free. (2) She was given her choice about staying with her husband Muḥibbī who was a negro slave, and when she refused in spite of the Prophet's plea for Muḥibbī she was told to observe the *idda* period appropriate for a divorced woman. Muḥibbī is said to have followed her in the streets of Medina weeping. (3) Once when the Prophet came to a woman when meat was being cooked and was given something else to eat he asked her reason. On being told that the meat was *ṣaḍāḥa* given to Barira, he said it was *ṣaḍāḥa* to Barira but a gift to him, meaning that one who had received *ṣaḍāḥa*

could give some of it as a present to another. Barira is said to have warned 'Abd al-Malik b. Marwān that if he became ruler he must avoid shedding innocent Muslim blood.

**BARĀA**, a word applied by the Arab writers both to a town—now al-Marjī—and to the region which belonged to it, that is to say Cyrenaica, a broad African peninsula jutting out into the eastern Mediterranean between the gulf of Bomba and that of the Great Syrtis, situated, therefore, between long. 20° and 30° east of Greenwich and the parallels 30° and 33° of latitude. To the east begins the Marmarica, whilst the vast eastern Libyan Sahara stretches away to the south.

The relief is made up of plateaux, resulting from the folding, in the Miocene age, of thick layers of Cretaceous limestone and lower Tertiary; they slope gently towards the south, where the Sahāra table has not been raised up, giving way to low alluvial plains and falling away to the sea in graded levels. The high plateau, the Djabal Akhdar (Green Mountain) rises from 500 to over 600 metres, reaching its highest point at 866 to the south of the ruins of Cyrene. An intermediate plateau, from 250 to 400 metres, narrow in the north, widens out to the west and south-west; it contains al-Marjī and dominates the coastal plain of Benghazi, which is also of limestone. That Cyrenaica is not a desert like its vast hinterland is due to the influence of sea and altitude: its temperatures are moderate in summer and it enjoys relatively high rainfall. January and July-August temperatures are 13.5° C. and 25.8° at Benghazi, at sea-level, 10.4° and 25.5° at al-Marjī at an altitude of 285 metres, and 8.4° and 22.3° at Cyrene, situated at 621 metres, where snow is not unknown. Rainfall, slight on the western littoral (266 mm. at Benghazi) and inadequate for almost all cultivation without irrigation as the local soils are often heavy, increases in the northern parts of the first plateau with 471 mm. at Marjī, and especially on the second, where more than 300 and even 600 mm. fall in the region of Cyrene. In contrast, rainfall declines towards the east (300 mm. at Derna) and, very rapidly, towards the south-east and the south. Likewise, the *wādis* running down towards the Sahara only have water after the heaviest rains and end in vast enclosed basins of stagnant water. The only perennial flow in the Mediterranean tributaries, only the *wādī* Derna has a perennial flow of water. The waters filter away into the limestone of the plateaux and only reappear in a few "Vauclusean" springs at the base of certain escarpments. The plateaux have a "carric" relief, with swallow-holes, sink-holes, extensive areas without surface drainage and grottoes. The high plateau, the Djabal Akhdar, still supports, to the south of al-Marjī and Cyrene, several fine forests of horizontal cypress *Cupressus sempervirens*, var. *horizontalis*; green oaks, Aleppo pines and Phœnician junipers; in the main, however, it is covered by low forest and a scrub of masties and wild olives. Cyrenaica comprises 110,000 hectares of forest and scrub. The clearings, extended by man, afford good pasturage and fertile brown, and grey land for cultivation. This very limited good region quickly passes on the coast and to the south into scanty heath dominated by a few junipers and broom

by increasingly extensive stretches of steppe. The large rocky outcrops enclose somewhat narrow areas of red clay soils, relatively fertile, but for the most part requiring too much water for so slight a rainfall. 55 kilometres to the south-east of Benghazi and 60 to the south of Derna, begins the Sahara, with its very scanty pastures and light soils.

"Servicable" Cyrenaica, a narrow fertile region and one favourably to sedentary life, isolated by the steppes of the Marmarica and Syrtica and by the vast Libyan desert, has always been a dependency of the East. A land of nomadic Libyans, it became the sole African dependency of the Greek world with the five colonies of the Pentapolis founded between the 7th and 5th centuries B.C.: Cyrene, the first to be created, and admirably situated in the heart of the Djabal Akhdar, its port Apollonia (Marā Sūsā), Barikē (al-Marjī), Euesperidēs (Benghāzī) and Teuchira (Tora). It was subsequently attached to Ptolemaic Egypt, at which time Ptolemaios (Tolmētā) and Darnis (Derna) originated. As a Roman province, it was beset by frequent disturbances and was far from prosperous. In the 4th century A.D. it was attached to the Eastern Empire and formed part of the Byzantine Empire down to the 7th century, without ever recovering its activity of the Greek period. On the eve of the Arab conquest, its agriculture was receding before the advance of pastoral life. Cyrenaica was occupied by the Arabs after two campaigns conducted by 'Amr b. al-'Ās in 22/642 and 643. Subsequent expeditions crossed it, gradually reaching and conquering the Maghrib. Thus it became a major thoroughfare, both military and commercial, from Egypt westwards, either via the southern depression and oases such as Awjīḥa or by the detour of the northern plateaux. The Berber tribes, the Lawāḥa, the Hawira and the Awjīḥa, intermingled with Arab elements, took increasingly to stock-breeding, which spread at the expense of agriculture: exports to Egypt then consisted of live-stock, wool, honey and tar Bakrī, trans. de Slane, 15; Barāa remained the only considerable centre. The region, linked to Egypt, was, like the latter, dependent in turn on Damascus, Baghdad and then the Fatimids. The Banū Hilāl and Banū Sulaym invaders, who, in the 5th/11th century left Egypt and spread over the Maghrib, crossed the Barāa region, which gradually became completely debauched. In Ibn Khaldūn's time, in the 8th/14th century (*Histoire*, trans. de Slane, i, 164-165), its towns and villages were ruined and the population, the 'Azza, were shepherds of a nomadic kind, living in the region of the oases in the south to the northern plateaux and cultivating barley; Barāa and Bernik (Benghāzī), however, still continue to be mentioned as well as the oases of Awjīḥa and Adḍābiya. The region, in theory at least, continued to depend on Egypt and, like the latter, was occupied by the Turks in the 10th/16th century. It was, however, placed under the authority, more nominal than real, of the governors of Tripoli, whom the Karāmanlī dynasty supplanted from 1711 to 1835. Barāa disappeared and, at the beginning of the 19th century, Cyrenaica, a European term, apart from the southern oases, only possessed two centres, which owed their existence to foreign immigration: Benghāzī, ancient Euesperidēs, originated at the end of the 15th century, from an immigration of Tripolitani, and Derna, on the site of ancient Darnis, founded somewhat earlier by Andalusians, owed its modest rise to the Bey Muḥammad, who, in the 17th century,

reorganised the irrigation: it has become a small palm oasis beside the sea with pretty gardens. In the interior, al-Marjī arose from the construction of a Turkish fort in 1840 on the site of Barāa. In the second half of the 19th century, however, Cyrenaica came under the *de facto* authority of the great Sanāḥiyya confraternity, an effective politico-religious power based on a sound commercial organisation. Finally, in 1897, Muslims from Crete, fleeing before the Greek conquest, founded the modest Marā Sūsā on the ruins of Apollonia.

When the Italians landed at Benghāzī and Tripoli in 1911, they found it, except for these modest urban centres, to be entirely a country of Bedouin, without a single village outside the oases. The population was made up entirely of semi-nomadic and nomadic herdsmen, living only in tents. The tribes formed two main groups, the Mrābīṭn (Murābīṭān) and the Sa'ādī. The Mrābīṭn are thought to have a Berber origin and comprise two groups: the Barābīḥī to the west, whose main tribes are the Maghribī (Syrtic), the 'Uḥā and the 'Abdī (al-Marjī), and, on the other hand, the Harbī, who include the Derna, on the littoral, the Hāsa, the 'Aylat Fā'īd and the Brā'āsa north and south of the central Djabal Akhdar and especially the 'Abidat on the plateaux south of Derna and the Gulf of Bomba. As regards the Sa'ādī, they lay claim to purely Arab origin: they are the Fawḥar and the Awjīḥa on the steppes of the south-west, by minor tribes of the Marmarica and the nomads of the Awjīḥa-Djabal region. Outside the urban centres, the entire population were Sunnī Muslims of the Maliki rite; all spoke Maghribi type Arabic dialects, except the inhabitants of Awjīḥa in the south, the first Berber-speaking locality to be encountered going westwards.

It was not until the end of 1931, after determined resistance by the Bedouin and Sanāḥiyya, that the Italians became masters of the whole of Cyrenaica with its hinterland. They did their utmost to colonise it. The first colonists settled, in rather hazardous conditions, on the unpropitious Benghāzī plain and in the vicinity of al-Marjī. Systematic effort, however, was directed towards the exploitation and settlement by Italians of the Djabal Akhdar, where, between 1934 and 1939, a dozen villages were founded. "Demographic" and then "mass" colonisation was extended over a total of 80,000 hectares, producing wine and olive oil. On the 9th January 1939, Cyrenaica, like Tripolitania, was integrated with its hinterland in Italian territory. By this time, the Italians had begun to provide Cyrenaica on a large scale with the equipment and services of a colonial country in the course of modernisation: a railway line from Benghāzī to al-Marjī and Solik (164 km.), a network of roads in the west and the north, ports (especially at Benghāzī), aerodromes, educational establishments and hospitals, postal services, works to supply water, notably a pipe-line over 200 km. with pumping stations, reservoirs and branch conduits to serve the villages of the Djabal Akhdar, etc. Cyrenaica entered the war period in full development. But all Italians left the country in the face of the final victorious offensive of the British Eighth Army in November-December 1942 and it then came under British Military Administration. The British then placed Idrīs, the leader of the Sanāḥiyya, at the head of the amirate of Cyrenaica and, in 1951, assisted him to accede to the throne of the Libyan Federal Union, which, with Cyrenaica, comprises Tripolitania and

Fazzān. Nothing remains of the agricultural work of the Italians; the country has reverted to pastoral life, with a little barley being grown, and the villages have fallen into ruin. Likewise nothing survives of the few industrial undertakings (fish-ranning-factories, breweries and distilleries, boot and shoe factories), which they had set up at Benghazi. Exports now only include a few products derived from stock breeding, salt and sponges harvested by the Greeks in the Gulfs of Domba and the Great Syrta. Cyrenaica, pre-owned by its immense Saharan hinterland, stretching to lat. 20° and embracing the oases of Kufra, covers 855,400 km<sup>2</sup> (out of a total of 1,759,500 for the whole of the Federal Union of Libya), though it contains only 291,350 inhabitants, almost all in the North (out of a total of 1,091,800). Its average yearly production is 360,000 quintals of cereals (barley and wheat), and it has a stock of between 450 and 500,000 sheep, 350 and 400,000 goats, 30 and 35,000 head of cattle and 20,000 camels. Sparsely populated, very poor in spite of the fertility of some of the regions in the north, deficient in financial resources and administrative personnel, Cyrenaica is dependent on the financial and technical help provided by Great Britain, by the United Nations and the United States.

**BARKA'ID**, in 'Abhā'id times one of the sequence of small towns on the main route between Nisibīn and Mawṣil, in the Ḥazira province, the others being Adhrama to the west, and Bā'aynūthā and Halad (where the Mawṣil-Singlar road bifurcated south-westward) to the east. Barka'īd, of which the modern Tall Rumayliya, north of the railway line (and near to Tall Kocheh station thence) may possibly mark the site, was probably just inside the Bec de Canard (eastward extremity of the modern Syrian province of Ḥazira), and lay some 50-55 miles from Nisibīn, and 80 from Mawṣil. It is described by a number of Arab geographers as a place of considerable scale, especially in the 3rd/9th century, with its walls, enclosures, gates, excellent springs, 200 shops (largely wine-shops) and busy traffic. It was, in its best days, the country-town of the district of Barka', which covered most of the country between Mawṣil and Nisibīn. It continued as a recognised staging-post until the 7th/13th century, but much diminished in scale by reason of the natural aversion of travellers and caravans to avoid a place always notorious — indeed proverbial — for its population of thieves and robbers; Barka'īd declined, therefore, to mere village status while its better reputed neighbours (notably, it is said, Bāghaziz, on an alternative route) increased.

**BARKŪK**, AL-MALIK AL-ZAHIR SAYF AL-DIN, Manlik Sultan of Egypt. He was the first of

a new series of rulers, to whom history refers as Circassians in memory of the country where they were originally purchased as slaves, and as Burjī (see BORGIRYA), became Barkūk was the first to have belonged to a regiment with their barracks in the dungeons (*burj*) of the Cairo Citadel.

Barkūk provided the link between the two dynasties of Manlik sultans: before ascending the throne, he ruled Egypt as Marshal of the Armies, *atabak al-askar* [g.c.], during the turbulent reigns of two sultans, both minors, of the line of Kālmāsh.

Purchased in the Crimea, Barkūk, unlike the rest of the Mandūks, was no son of an unknown father but could state in his monumental inscriptions that he was the son of Anas; the latter was invited to come to Egypt, where he occupied a position of some standing.

Sold to the all-powerful Yibughū 'Umārī, the Marshal who had succeeded in breaking the ill-fated Malik Nāṣir Hasan, Barkūk was for a short while imprisoned after the execution of his master. He passed into the service of the Court, but was soon involved in the conspiracy which ended in the assassination of Malik Ashraf Shā'ibān in 778/1377.

He was then promoted to be Marshal of the Armies by Malik Maṣūr 'Alī, a seven year old child. He had to contend with the ambitions of his fellows, and there was continual warfare, from which he finally emerged the victor. He was then able to gather a group of clients round himself and, when the Sultan died of plague in 784/1382, Barkūk began by placing a brother of the late ruler on the throne, the eleven year old Ḥādīdīl. In the end he threw off the mask and, on the pretext that an energetic ruler was needed for the protection of the country, at the end of the same year had the crown offered to himself by a council of the magistrates presided over by the Caliph.

Barkūk was soon up against serious difficulties, which were momentarily to make him less powerful. They started with the revolt of the governor of the province of Aleppo, Yibughū Nāṣir, who was joined by a dismissed Manlik named Muṣṭafā. The rest of the Syrian governors joined the movement, including the governor of Sis, on the remotest part of the frontier. When the Sultan, after causing his principal officers to renew their oath to him, made up his mind to take action, Yibughū already held the whole of Syria and it was beneath the walls of Damascus that he defeated the legitimate army, which came to bring him to his senses, in Rabī' I 791/March 1389.

The sultan raised a second army corps, making his preparations in some haste, for Yibughū's troops had penetrated into Egyptian territory at Katyā and were encamped at Silihiya. The Sultan set out to take up his position at Matariya, but returned to Cairo in despair, for the majority of his officers, guessing who would win, went over to the enemy camp. Nevertheless, he wished the matter to be decided by the arbitrament of war and the battle was fought to the north of Cairo and beneath the city's walls on the day Ḥumādā'ist May, without any decisive result. Day by day, Barkūk saw the devotion of his men vanishing and, in the end, he left the Citadel in disguise and went into his hiding.

He was discovered, and sent off to prison at Karak in the land of Moab, whilst Ḥādīdīl was replaced on the throne. As his masters, the latter had the factious generals, who proceeded to indulge themselves in the trivial occupation of street-fighting. Barkūk took advantage of this confused situation

and, escaping from imprisonment, gathered together an army composed in the main of Bedouin Arabs. After numerous vicissitudes, some of which read like an adventure story, he made his triumphal entry into Cairo in Safar 792/February 1390.

Clearly Ḥādīdīl could do nothing but withdraw, but apart from this he was not troubled. Sultān Barkūk, moreover, had not disposed of his old opponent Muṣṭafā and a campaign of two years was needed to get rid of him.

As can be seen, these two reigns of the Sultān Barkūk were eventful but contributed nothing to the glory of Egypt: the last fifty years of the 8th/14th century were indeed lustrous, but other events must be noted, though at the time the seriousness of their implication was not evident. Already in 788/1386, during Barkūk's first reign, rumours had been current in Cairo that a certain 'Mongol rebel named Tīmūr' had marched on Tabriz and this was soon confirmed officially by a dispatch from the Ḥalā'irid sultan of 'Irak, Ahmad b. Uways, who urged Barkūk to be on his guard. The Manlik government then sent one of its intelligence agents to conduct an inquiry on the spot: in Rajab 789/July 1387, the latter brought back somewhat alarming news. Detachments of the Mongol army had entered Upper Mesopotamia and Asia Minor, at Edessa and Malatya, after having scattered the troops of the Turcoman ruler Karā Muhammad.

In the middle of the year 795/1393, Tīmūr again made his presence felt; an embassy from the Ottoman sultan Bāyazīd urged the Egyptian government to take military precautions, whilst the Sultan of Baghdad, Ahmad b. Uways, expelled from his domains by the Mongol hordes, took refuge in the Manlik kingdom. Tīmūr had nevertheless approached Barkūk amicably, though the latter, casting aside all pretence, had the Mongol ambassador put to death.

The Egyptian sultan had left for Syria at the head of an army; at that time only a few skirmishes occurred. Barkūk made a certain number of appointments relating to the Syrian frontier, so that the fortresses of Malatya, Tarsis, Edessa and Kal'at al-Rūm resolved new commanders. Epigraphy, moreover, reveals that works were carried out at this time at the citadel of Ba'bak, the command post at the entrance to Coele-Syria. Thus, thanks to these meagre indications, we may assume that in the course of his passage through Syria, Barkūk saw to the defence of the territory; he was back in Cairo on the 13 Safar 797/8 December 1394.

The end of the reign is devoid of historical significance; the sultan died on the 15th Shawwāl 801/20th June 1399, as the result of an attack of epilepsy.

Barkūk was 63 years of age, and for over twenty years had governed Egypt firstly as Marshal of the Armies and then as sultan. The disturbances caused by the Syrian governors gave him much trouble. They can probably be explained by normal feelings of jealousy and instinct for intrigue, which at all times agitated the Manuks. Certain synchronisms, however, are suggestive and one may well ask whether the great Syrian officers were not induced to rebel by skilful propaganda conducted by the emissaries of Tīmūr, who was to benefit from the disorders.

**BARKYĀRŪK** (BIRKAYARUK), fourth Saljūkid Sultān, in whose time the visible decline of the regime began. Although the eldest of the sons of Malikshāh, he was only thirteen years old on the latter's death (Shawwāl 485/November 1092) and, unlike his father, who at a similar age had been guided by his vizier and *atabeg* Nizām al-Mulk, he lacked a man of undisputed authority in his entourage. Moreover, Malikshāh's last wife, Turkan Khān, a woman also of the noblest birth, had dominated her husband in the latter years of his life and now, with the treasury at her disposal, she was able to have her four year old son Mahmūd proclaimed Sultān at Baghdād. Already caliphal arbitration seems to have become a significant factor in the succession to the sultanate, which had previously been decided within the Saljūkid family. Furthermore, Tāj al-Mulk, the enemy and successor of Turkan Khān's counsellor, Nizām al-Mulk, had been unable to destroy the considerable armed following surrounding the sons of the late vizier, and was seeking vengeance. The Nizāmīya abducted Barkyārūk from Isfahān and at Rayy, their centre, proclaimed him Sultān. Finally, in the absence of any law of succession, a vague tribal tradition favourable to family sharing and to the pre-eminence of the eldest member of the extended family encouraged the pretensions of Ismā'īl b. Yāqūt, Barkyārūk's maternal uncle and Malikshāh's cousin, of Tutugh, the latter's brother, who held Syria as his appanage, and of Arslan Arghūn, another brother, who was active at Khurāsān. They then began a complex civil war, which was to prove much more serious than the skirmishes engendered by the accession of Alp Arslan and Malikshāh. Ultimately Barkyārūk prevailed because, following the killing of Tāj al-Mulk by the Nizāmīya, death claimed Turkan Khān and Mahmūd; Ismā'īl, who alternatively sought to join with Turkan Khān and Barkyārūk, was likewise killed by the Nizāmīya; Tutugh, the most dangerous of all of them, had succeeded in gaining recognition by the whole of Mesopotamia (including Baghdād) and had invaded the Iranian plateau, but first his great Syrian amirs Akasur of Aleppo and Būzān of Edessa deserted him and then the amirs of Iran, fearing the advent of a new suzerainty, offered resistance and Tutugh perished in the final battle; finally Arslan Arghūn, whose limited aim was to make Khurāsān an autonomous appanage, after overcoming Būrbāns, the last of Malikshāh's brothers, despatched against him by Barkyārūk, likewise died in due course. Thus from 488/1095, Barkyārūk was acknowledged by the Caliph in the Arab provinces of the Empire and on the Iranian plateau and in the following year he was able to proceed to Khurāsān to receive the submission of the province and even to renew the claim to Saljūkid sovereignty over Samarkand and Ghaznā. But the Empire over which he ruled was far from resembling that over which his predecessors had held sway.

Alp Arslan and, more clearly, Malikshāh had indeed already formed appanages and great commands for the benefit of princes of their family and in exceptional cases, for high amirs; in the main, however, frontier or remote districts were affected and, in spite of ominous incidents, they had not seriously compromised the unity of the Empire.

Under Barkyärük, things developed differently and the Empire assumed the guise of a federation of autonomous princes. In Syria, the sons of Tutugh, Dukak of Damascus and Rudwän of Aleppo, acknowledged his sovereignty in principle, without, however, Barkyärük ever being able to intervene in their affairs. In Khuzistan, in the inaccessible mountain regions of the East, rebels persisted—a cousin of Malikshäh, a descendant of Yabghu, Tughril Beg's brother, etc., so that Barkyärük deemed it prudent to constitute the whole of Khuzistan an appanage for his brother Sandjar, assisted by a governor whom he appointed. He did the same thing for Adharbaydjan (with its frontier districts), another of the frontier marches, dangerous—as recalled by Isma'ili b. Yikhtir's attempt—by reason of the numbers of Turkomen always ready to support any enterprise showing a likely prospect of booty. Here Barkyärük installed his youngest brother, Muhammad, accompanied by an *ashik*, whom he likewise appointed.

Barkyärük's difficulties, however, did not end there. Muhammad and Sandjar, co-uterine brothers (but by a different mother from Barkyärük's) were incited, especially by Nigam al-Mulk's son, Mu'ayyad al-Mulk, (who had been dismissed from the visierate by Barkyärük, in favour of a brother with whom he had quarrelled) to throw off all control by their elder brother and revolt against him. Subsequent to operations which were complicated by several *andis* constantly changing sides, and in the course of which both protagonists were in turn forced to flee, an agreement was negotiated by the moderate elements of both sides. In accordance therewith, Muhammad was given the title of *sauk* and resolved Adharbaydjan with Armenia, under the suzerainty of Barkyärük, the *sauk* sultan, Muhammad, dissatisfied, reopened hostilities, but was forced to flee into Armenia. Finally, however, in 497/1104, Barkyärük, ill and weary of the war, agreed to an actual division of the sultanate. Though in addition to the *Diqlah* with Rayy, he retained Tabaristan, Fars and *Rühizistan*, Baghdad and the Holy cities, in other words the towns of greatest consequence and the core of the central territories, he was obliged to acknowledge his brother in Isfahan, half of Iräk, and all the western frontier territories from Adharbaydjan to Syria, and to accord him the direction of the Holy War. As for Sandjar, he was to pronounce the *khutba* for Muhammad and himself simultaneously, disorganizing Barkyärük. It is difficult to say what the outcome of this agreement might have been, if Barkyärük's death and the provisional renunciation of the Empire which ensued under Muhammad had allowed time for it to come to fruition. In any event, even within the territories as attributed to each brother, the reality of their authority was far from being everywhere assured.

It had been impossible to keep watch over the attempts at regional independence, and the support of the *andis*, vacillating between the pretenders, had had to be purchased. The result was that even in Upper Mesopotamia, Kerbügü and especially his successor *Özbeknigü* were to be found almost independent at Mawsil, whilst the Artukids were taking the initial steps towards the unification of Diyar Bakr to their own advantage. In Armenia, in the Turkomen principalities established in former Byzantine territory and that of the Rawadids of Ani, which continued to exist, there was added that of Sukman al-Kutbi, one of Isma'ili's former officers, who made himself the *Shih-i Armin* at Aghlat, on

the borders of Iräk, the masters of the Balha and the Mazayaddi Arabs became powers to be reckoned with. Leaving aside Khuzistan and the Caspian provinces, where autonomous principalities had always been accepted, and the old principalities, belonging to ancient Buyid and Kurdish families, had similarly been tolerated, the *genesis* can be observed in Iran and even Khuzistan of hereditary feudal families, issuing from great Saljuqid officers, the best known of them being that of the sons of Buruk at Tustar. The successive vicissitudes of Barkyärük, the three sons, Nigam al-Mulk, 'Izz al-Mulk (died 487/1094), Mu'ayyad al-Mulk, disgraced after a year, and Fajhr al-Mulk (493/1099), then 'Abd al-Djalil al-Dihistad, who fell in battle, and al-Maybudi (495-498), were doubtless primarily occupied in finding money by all possible means (confiscation, pressure exerted on the Caliph, harassing the Christians, etc.) and in countering the intrigues of hostile classes; the difficulty confronting them lay in making themselves accepted by the *andis*, as is illustrated by the assassination of the *muhtasif* (Director of Finances) Majid al-Mulk al-Baladani, on the pretext of *Shihism*.

It is true that, in comparison with Muhammad and the early Saljuks, Barkyärük did not enjoy the reputation of being a militant defender of orthodoxy. The dissensions of his reign benefited the Nizari Isma'ilis of Hasan al-Sabbah, who acquired impregnable fortresses in the mountains of northern Iran and around Isfahan, not to mention the former Isma'ili seignory of Tabas in the desert, which went over to them. When the Nizariyya took Muhammad and Sandjar's side, Barkyärük's lieutenant in Khuzistan was even to be found soliciting considerable contingents from Tabas. However at the end of the reign, the influence acquired by the Isma'ilis and the disaffection of Barkyärük's supporters, due to the toleration he had shown them, appeared dangerous to him and he encouraged massacres of Isma'is at Baghdad and in Iran, without, however, anything being done to deal with the bases of their power.

Barkyärük died in Rähä II 498/beginning of 1105, when 25 years of age. He was certainly not a great man and the clumsiness with which he alienated the Nizariyya, for example, was a grave error indeed. Yet it must be remembered that he was very young and it would be unjust not to recognise that his factors of disintegration which manifested themselves in his time were latent even in the regime of the Great Saljuks.

**Bibliography:** The sources will be examined in the article *Saljuks*. The main ones are the History of the Saljuks of 'Imad al-Din al-Isfahani (ed. in the version of Bundard by Houtsma, *Revue*, II, 1888), the relevant part of which is based on the Persian memoirs of the vizier Anushtegin; the *Kamil* of Ibn al-Athir, s, which combines certain information from Iräki and Khuzistan sources etc., with that provided by the above work; and the *Saljuk-näma* of Zahir al-Din Nishapuri, ed. of an approximative text by Golabeh Shihwar, Tehran 1953, with its derivative, the *Rahit al-Sulär* of Rawand, ed. Mub. Irbäl, GMS 1921. To these may be added, for the revolt of Tutugh, the Muslim and Christian sources of Syrian history, in particular Ibn al-Kalidä, ed. Amédroz. See also the *Muqbil al-Turuk* in Persian, anonymous, ed. Bahar 1938, short but contemporary, and the Nestorian chronicle of Mari etc. ed. Gismund. **BARLAAM AND JOSAPHAT** [see BILAWMAR WA YÜDSAR].

**BARMAKIDS** [see BARMAKI].

**BARNIK** [see BENGÄZ].

**BARÖDA**, formerly capital of the Indian State of the same name, now merged with Madhya Bharat, situated in 22° 25' N. and 73° 15' E. on the Vajh-miri river. Population in 1951 was 211,007. It is known to the inhabitants as Waddöara, said to be a corruption of the Sanskrit word *valldar* which means 'in the heart of the banyan-trees', and the vicinity of the town still abounds in these trees. The word *bar* in Urdu also means a banyan-tree. An old name of the town is Virakhetra or Virawati which means 'a land of warriors' and was used by the 11th/17th century Guggarüt poet, Parmasand. Early English travellers call the town Barödara. The city proper was enclosed by the walls of the old fort, which have now been demolished.

The history of Baröda is closely linked with the history of Gondä. In 1140/1727 Pildji Gäkwar, the founder of the dynasty which ruled over Indian India till 1949, when the State was merged with the British India, wrested Baröda from Sarboland Rahn, the Mughal governor of Guggarüt. In 1144/1731 Peshwä Baji Räs invested the town with the intention of turning off Pildji but had to give up the siege on hearing that he was about to be attacked by Nigam al-Mulk Asad Diah. But the very next year (1145/1732) Pildji was murdered and Abhay Singh, the ruler of Didihpur, taking advantage of the confusion, captured both the fort and the town. Dämäji, who had succeeded Pildji as the ruler of Baröda, recaptured the town in 1147/1734. Thereafter he entered into an alliance with Mubün Rahn, the Mughal governor of Guggarüt. Dämäji was one of those Maharatta chiefs who fought against Ahmad Shah Durrani in 1757/1761 in the third battle of Panipat. On the death of Dämäji, the town was occupied by his youngest son Fath Singh, on behalf of his insane eldest brother Säyid Räs. The House of Gäkwar continued to rule the city independently till 1221/1806, when along with the State it was included in the dominions of the East India Company.

There are many beautiful buildings in Baröda including Lakshmi Viläs, the chief palace, built in the Indo-Saracenic style at a cost of £ 400,000. Among the State jewels is a finely embroidered cloth studded with precious stones and seed-pearls which was designed as a covering for the Prophet's tomb at al-Madina. Baröda has a fine library and its Gäkwar Institute of Oriental Research has published a number of Persian works on Indo-Muslim history.

**AL-BARRÄDI**, ABU 'L-FADL ABU 'L-HÄSÄN B. ISRAHIM, a North African Ishäqi scholar, who lived in the second half of the 8th/14th century. He was a native of Damascus in Southern Tunisia, where he studied under Abu 'L-Bakä Ya'qub al-Djarid. Thence he moved on to Yefron, in the *Diqlah* Nefisa, to attend the classes given by Shaykh Abü

Säkin 'Amir al-Shammäshi (died in 792/1390). On completing his studies, he settled in *Qierba*, where for several years he devoted his energies to teaching, holding his classes in the Wadi al-Zabib mosque. He died at *Qierba*, leaving several sons. According to al-Shammäshi, the most famous of them was 'Abd Alläh Abu Muhammad, who made a reputation especially in the science of *ayd*.

His main work is the *Kutub Qianashir al-Musäshih* (lithographed at Cairo in 1302/1885), which forms a complement to the *Kutub Tabat al-Mafädh* by the 7th/13th century Maghrabi author, Abu 'L-'Abbas Ahmad al-Darjili (p.c.). The book is divided into two categories (*fabaka*), the first of which reviews from the Ishäqi point of view the history of the early period of Islam, omitted by al-Darjili, and contains the biographies of those famous men, whom the latter failed to mention; the second subjects al-Darjili's work to a critical examination, adding a number of new facts and brief excursions. It ends with a catalogue of the books of the sect, which has been published and translated by A. de Motylinski.

According to al-Shammäshi, al-Barrädi was also the author of a *Risäla*, addressed to Shaykh Abü 'Abd Alläh Muhammad b. Ahmad al-Safghayän, in which he explicitly states his theories on faith and the unity of God; likewise of a *Shahr* on the *Kutub al-Dä'ir* by Ahmad b. al-Nazzari and of a *Shahr* on the *Kutub al-'Adä* by 'Abd al-Färah by Abü Ya'qub b. Ibrahim al-Sadräli. There is no reference in al-Shammäshi to the *Siyar al-'Undusiyya*, quoted by Lewicki (*Handschriftenk. v. N. Ishäqiyya*), a MS. of which exists at Lwów.

[R. RUBINCAMI].

**BARSÄY**, AL-MALIK AL-AĞRAF ABU 'L-NÄSÄR, Malik, sultan of Egypt from 845/1442 to 847/1448. He joined the Mamluks of Sultan Barük, received his first promotion during the reign of Shaykh and then became governor of the province of Tripoli. Like many officers, he did not avoid imprisonment, spending some time in the jails of Markab and Damascus. Fortune favoured him at the accession of Tatar and, in spite of the brevity of the latter's reign, he was able to gain ascendancy in Cairo.

From the moment Barsäy acceded to the sultanate, he displayed the salient features of his nature: greed, bad temper, and cruelty. One of his first acts was to renew the ban on Christians and Jews which prevented them from entering government service. This may have been a tax in disguise, since when non-Muslims were the object of such a decree, they usually circumvented it by payment of a sum of money. But it may also be interpreted as a measure of defiance, for European privateers were then very

active in the Mediterranean. Hence the Draconian decree: European private property was impounded both in Egypt and Syria and no European was permitted to return to his own country. There then followed the temporary prohibition of the circulation of European currencies, a measure which had uncertain effects. The government of Egypt also took serious military precautions, building a number of small forts on the coast and fitting out a flotilla of corvettes. The sultan, however, continued without respite, his preparations for the realisation of his great idea, an expedition against the island of Cyprus. After several preliminary reconnaissances, a large-scale attempt was launched; the only engagement, which was particularly bloody, ended unfavorably for the Cypriots, whose king, Janus, was taken prisoner and brought back to Cairo. He was led through the town in fetters; he only recovered his freedom and his kingdom on payment of a yearly tribute. A part of the booty was devoted to the restoration of various monuments in Mecca (859/1427).

Nevertheless, this relatively easy victory revealed a dangerous state of indiscipline among the troops and on the occasion of a frontier conflict with the army of the White Sheep Turkoman prince, Karā-Yülük, the Mamlūks, after taking the town of Edessa by storm, perpetrated the most revolting atrocities there. This disagreement between neighbors severely impaired the prosperity of Upper Mesopotamia, which was already devastated on one side or the other. After considerable hesitation, Barsbāy mobilised a large army, which finally proceeded to invest Āmid (Diyār-bakr). They were, however, unable to take the Turkoman capital, to Barsbāy's great annoyance. Faced with the growing discontent of the army, the sultan was obliged to resign himself to negotiate. Karā-Yülük accepted his proposals for peace and, in several formal formulas, recognised the sovereignty of the sultan of Egypt. The Mamlūk army made its way back to Cairo; their progress was the stampede of a discontented soldiery. The troops proceeded in the greatest disorder, giving the impression rather of the hasty retreat of a defeated army (857/1423). The sultan had left half the total strength of his army behind in Mesopotamia.

There then ensued a strange diplomatic struggle with the Timurid sultan Shāh-Rukh. The Mongol ruler claimed the right to cover the Ka'ba with a veil. This was, in fact, a privilege of the Egyptians consecrated by immemorial custom and Sultan Barsbāy, supported by his council of chief judges, was unwilling to relinquish it. The dispute, fanned by lawyers' quibbles and cruelly desirous treatment of the ambassadors, gave rise to the exchange of pithy diplomatic documents. However, it entailed no immediate consequences during the reign of Sultan Barsbāy.

No doubt the policy of the ruler of Egypt was based on considerations of prestige, but primarily he wished to prevent the Mongol sultan from gaining a foothold in Arabia through official agents, which might possibly endanger Egypt's commercial interests.

Indeed, Barsbāy had recently requested those merchants coming from India to land their wares at Djeddah, instead of putting in at the port of Aden, as previously. It was a good beginning, but, in his insatiable greed, Barsbāy determined to force the merchants to proceed obligatorily to Cairo for the purpose of paying taxes. This vexatious regulation was soon formally modified, but through the mer-

chants were excused from proceeding to the Egyptian capital, they still had to pay exorbitant dues at Djeddah. This port, however, henceforth became a commercial mart of the first importance. Half the dues collected there went to the Sharif of Mecca and half to Egypt. The tax-collectors belonged to the Egyptian administration.

Barsbāy's end is a pitiful and tragic tale. An epidemic of plague broke out and, fearing lest he might catch the disease, he resolved to suppress the vexatious economic measures to which we have referred; he proceeded to distribute alms in plenty, though at the same time he also had his physicians put to death. On the 15th Dhū 'l-Hijja 847/16 June 1428, he fell a victim to the plague. To summarise our impressions of Sultan Barsbāy, we must bear two aspects of his character in mind. He was constantly haunted by the morbid fear inspired in him by his rival, Dīnābakr Sūfi, whom he had imprisoned at his accession and who made good his escape. This in itself induced him to make haphazard gestures, which, however, were milder than those suggested to him by his own passions. There flourished a series of practices which led the Mamlūk regime to disaster: the sale of offices, confiscation of fortunes which were too noticeable, the unprecedented extension of state monopolies and the institution of the compulsory purchase of primary commodities, bought up in advance by the Government. The latter historians advise that there was an intelligent administrator, an able and poised politician, but the facts speak against this assessment. All his actions are dominated by the spectre of Dīnābakr and, precisely because of his erratic changes of mood, we can scarcely consider him as a wise and sagacious statesman. His preparations for the Cyprus and Diyār-bakr campaigns appear to have swallowed up large sums of money and the latter was a resounding failure.

(G. WIEY)

**BARSHALCNA**, Spanish Barcelona, the old Iberian town of Barcinon (compare *Barcinon*, from which Ronsseil is derived), which incidentally has no connexion with Hamilcar Barca, Barcelona, once the home of the Laetians, gradually supplanted Tarraco-Tarragona, situated to the south-west of it, as the capital of north-eastern Roman Spain (Hispania-Tarraconensis). From the fragments of the works of al-Idrisi and al-Bakri compiled by Ibn 'Abd al-Mu'īn al-Himyari, it is clear that Barcelona in their day was already a large town. It was encircled by a strong rampart and its port was rockbound, so that only captains familiar with the channels could steer their ships into it. It was in Barcelona, the capital of his country, that the 'King of Ifrandja' resided. This monarch owned armed ships for travel and corsair raids. The Genoese (Catalans) were of an aggressive temperance which spurred them on to great daring.

The territory of Barcelona produced a great deal of wheat and other cereals, as well as honey in large quantity. There were as many Jews living there as Christians. In 96-98/714-16 it fell to the Arabs under 'Abd al-'Azis b. Mūsā b. Nuwayr after a single attack. In Arabic the town is called Barshālā, a name derived from the low Latin Barcinona (Orosius already has Barcinona, the Geographer of Ravenna Barcelona, cf. Hübner in *Pauly-Wissowa*,

s.v.), but it is still more commonly called Barshālā, from which the present Barcelona derives. The form Barshālā is rarer. This is in the origin of the name al-Barshālāni, the short title which later Arab writers often gave to the king of Aragon and Catalonia (cf. *JA*, 1907, II, 279 ff.).

In 85/804 Louis, the son of Charlemagne, as king of Aquitaine, conquered Barcelona, which from that time became the capital of the Spanish borderlands of the Frankish Empire, and from 888, of the independent counts or marquesses of Barcelona or Catalonia. In 242/856, Barcelona was temporarily occupied by the Arabs (*al-Bayda al-Mughribā*, II, 95-6). In 375/985, it was taken by assault in the last time by the great Almoravid (Drey, *Histoire des Musulmans*, II, 238-9), but in 987, Count Ramon I reconquered it. In the twelfth century (1137) it was reunited with the kingdom of Aragon. Worthy of note is the order given in 450/1058 by the Muslim king of Denia, 'Alī b. Muḥammad al-'Amrī by virtue of which the Mozarabic bishoprics of Baleares [s.v.] like those of Denia and Orhuela were placed under the jurisdiction of the Archbishopric of Barcelona (Simonet, *Historia de los Mozarabes de España—Memoria de la Real Academia de la Historia*, vol. 201, Madrid 1905, 653-4; Campaner, *Bosquejo histórico de la dominación islámica en las islas Baleares*, Palma 1888, 82-84).

**BARSHĀWISHI** [see NUGGŪC].

**BARSHĀ**, the name of a pseudo-historical figure, a recluse, who is to be connected, according to a later interpretation, with the Antonian tradition. In its folk-lore aspect, the tradition concerning Barshā must have assumed several forms, because at a late period Ibn Batṭūta came across, between Tripoli and Alexandria, a *hazir* Barshā al-'Aḥid, a name which recalls the career of St. Antony and his long period of seclusion in an old cell (*ḥiḍā*). The Arabic etymology of the name Barshā calls to mind the highest sacerdotal office, one considers the *shā* as denoting the pectoral of the high priest, or the topknots of the sacerdotal coiffure. In Muslim Tradition, Barshā is the hermit who, after a long career of asceticism, succumbs to the successive temptations of the Devil who finally induces him to deny God, and then abandons him to eternal despair. These remarks refer to the commentary on Kur'ān lix, 16, which deals with hypocrites who tempt the faithful . . . "in the likeness of the Devil, when he says to Man, 'Disbelieve', but when he disbelieves, says, 'I am quit of thee; I fear Allāh, the Lord of the Worlds'". There are two rival interpretations of 'Man', and al-Tabarī (xxviii, 31 f.) sets them before us: is it a question of a particular man, or of mankind as a whole?

The first four traditions which al-Tabarī produces in the case of "Man" denoting a particular person, relate to a recluse, either a monk (*raḥib*) (Tabarī, xxviii, 332), or an ascetic (*raḥib min Ḥanī Ṭarīq*, 'abid), or a Christian priest (*ḥisā*). The story about this person is relatively constant: three brothers entrust to him their sister, who is ill, while they are absent on a journey. The monk, yielding to the suggestions of Satan, seduces her, gets her with

child, and then, in order to get rid of her and thus of the evidence of his fall, kills her and buries her in a secret place (under a tree, in his house). The brothers, on their return, believe at first that she died a natural death, but Satan reveals to them in a dream the ascetic's crime. The ascetic, panic-stricken at the realisation that his crime has been discovered, is approached in his turn by Satan, who offers to save him if he will prostrate himself before him and deny God. When the wretched man has stooped to this ultimate degree of sin, Satan mocks him, in the terms of the verse in the Kur'ān, lix, 16. After al-Tabarī, Tradition rediscovered the name of Barshā and applied it to the hero of this legend. In *EP*, Duncan B. Macdonald (s.v. *Barshā*) enumerated these sources. The first author who seems to have mentioned the name of Barshā is Abū Layth al-Samarkandī (d. 985 or 993), in his *Tanbih al-Ghāfilin*, who was followed by al-Baghawī (d. 1122), Goldziher-Landberg, *Legende vom Mönch Barshā*, fills in the history of the later development of the legend, as narrated in al-Kawfī (ed. Wüstendahl, I, 368), in the *Masṭudat* of Ibn Badaynī, chap. 64, in al-Suyūṭī, and thence, in the *Forty Vezirs*, the Istanbul edition of which, 1303 A.H., 120-126, contains a long account, of greater length than the one translated by Pétis de la Croix and Gibb.

This account, either via Spain, or through the medium of a translation of the *Forty Vezirs*, must have become the source of the 'Gothic' romance of Monk Lewis, *Ambrasio or the Monk*, in which every detail was dealt with at length and adapted to the taste of the day.

**Bibliography:** Duncan B. Macdonald, in *EP*, and *Handwörterbuch des Islam*, s.v. *Barshā*, and addenda in *JA* s.v. *Barshā*; Chauvin, *Bibliographie des ouvrages arabes*, VIII, 128 ff.; A. Abel, *Barshā, le Mönch qui défit le Diable*, Bruxelles 1959, in *Publications de l'Institut de Philologie et d'histoire orientales*. (A. ABEL)

**BARTANG** [see BADARSHĀN].

**BĀRČD**.

I. — GENERAL.

In Arabic, the word *naft* (Persian *naft*) is applied to the purest form (*pafta*) of Mesopotamian bitumen (*ḥaf*—or *ḥaf*—*ḥaf*). Its natural colour is white. It occasionally occurs in a black form, but this can be rendered white by sublimation. *Naft* is efficacious against cataract and leucoma; it has the property of attracting fire from a distance, without direct contact.

Mixed with other products (fats, oil, sulphur etc.) which make it more combustible and more adhesive, it constituted the basic ingredient of 'Greek fire', a liquid incendiary compound which was hurled at people, the various siege weapons which were made of wood, and ships. The Muslims of the East, as is well known, made spectacular use of it against the Crusaders and the Mongols. This new product retained the name of *naft*. A specialist, *naft-sh* or *carab*, discharged the 'Greek fire' in the form of a jet, by means of a special copper tube: *naft-sh*, *sarrāb*, *makhūla*; this instrument, the prototype of our flame-throwers, seems to have been a sort of huge syringe, similar to the 'pumps' of the earlier firemen of Constantinople. 'Greek fire' could also be discharged in 'pots' (*ḥisāra*) hurled by various types of ballistic apparatus, or in cartridges fixed to arrows, in the 'Chinese' fashion (*ḥisāra ḥiḍā'iyya*).

With the introduction of the use of salpêtre, about 1250, the word *naft* assumed new meanings. Since a remote period, the Chinese had known of the

igniting properties of nitre, but they only used it to propel rockets used in firework displays or in war. Knowledge of the properties of saltpetre (and of the procedure for refining it by washing) probably passed from China to Persia; in Persian, in fact, in addition to the Iranian term *shûra* (archaic: *shûra*) "nitrous earth, nitre", there existed the synonym *namak-e chî* "Chinese salt". In Arabic, in addition to *ghasradî*, a loan-word from Iranian, and the vernacular forms *milh al-hîrî* "sea salt" (cf. *infra*) and *milh al-dahîrî* "desert salt", one finds *ḥalîlî* (pl. *ḥalîl*) "Chinese stone", *ḥalîl al-sîn* "stone of China", one also meets the terms *akhar kadjar asyîrî*, lit. "flower of the stone of Asos" (an ancient town of Troas or Mysia), a sort of marine saltpetre, a powdery salty efflorescence deposited by sea spray on friable rock resembling pumice-stone, something like aphronite. Ibn al-Bayṭar gives *ḥîrî*, the history of which will be traced below, as the Maghribî equivalent of the last three terms, which apply to pharmaceutical saltpetres.

Saltpetre was at first incorporated in the igniting powder of fireworks, which retained the name of *naṭf*. Shortly afterwards, the same name was used for gunpowder.

As far as our present knowledge goes, the first word used by the Arabic-speaking peoples to denote the new saltpetre-containing powder, a word of universal application, was *daṣṣ* "remedy, medication, drug". It was in fact the term used by Hasan al-Rammah (died 694/1294) to denote the mixture used to fill the *naḍîḥa*: 10 parts of *ḥîrî*, 2 of charcoal and 1.5 of sulphur. This term is still used in Arabic (cf. Landberg, *Glossaire arabe*, I, 893). Semantically, it is parallel to the Persian *dâra* (see *infra*), although it is impossible to determine whether it is pure coincidence, or whether it is a case of a loan-word transmitted through translation, and in what sense the latter could have been effected.

Far more widespread, at least in the Mamlūk East, was the term *naṭf*, the name of the earlier "Greek fire" transferred to the new compound. In Muslim Spain, the earliest recorded name (from 724/1324) is *naṭf*. In the *Vocabolista* (a Latin-Spanish Arabic vocabulary compiled in the region of Valencia, in the 13th century), one finds opposite *Ignis* and *Igneum exulatore*, the word *naṭf*, but its meaning is not given with any precision; at all events, this term recurs at Beirut in the sense of "match". At Tunis, *naṭf* is a fire-cracker. In many Arabic dialects, words derived from the root *n-f* (*naṭf*, *naṭṭa*) have the meaning of "ampulla" (under the epidermis). This may perhaps be an echo of *ḥawrîr al-naṭf*.

The form of the word *ḥîrî*, with *h*, is not classical. It seems to appear for the first time in the *Ḍiḥrî* of Ibn al-Bayṭar (d. 646/1248). It is stated there that it is the name given in the Maghrib by the common people and physicians to the "stone of China" or "saltpetre", a substance with medicinal properties (cf. trans. Leclercq, I, 71). Al-Rammah uses the word in this sense in his formula for gunpowder. Again, for Ibn al-Kutubî (710/1310, cf. *infra*), *ḥîrî* only meant saltpetre.

In his *Tarîḥ* (1312 ed., 208), al-'Umari (d. 748/1348) twice uses the word *ḥîrî*. In one instance, he is talking about a substance incorporated in the "naphtha pots" (*ḥawrîr al-naṭf*), projectiles used in naval warfare. In the other, he is talking about *makhlûṭ al-ḥîrî*, where the word could be taken to refer to a propulsive saltpetre compound (see *infra*: II).

It is thus difficult to state with any accuracy at what date and in what country "gunpowder" assumed the name of its principal ingredient.

In Muslim Spain, the change in meaning took place in the course of the second half of the 13th century. "Gunpowder" then became *ḥîrî*, and "saltpetre" *malḥ al-ḥîrî*; *naṭf* (pl. *naṭṭ*) then denoted "cannon", and *naṭṭ* "gunner" (see Dozy, *Suppl.*, s.v.v.).

In this new sense of "gunpowder", the word *ḥîrî* is widespread throughout the Arabic-speaking world; it is in general pronounced with an emphatic *r*. As subsidiary terms, Arabia recognises representatives of *daṣṣ* (cf. *supra*). Tunisia has *ḥarṣi* "couscous", and Kabylia *ḥarṣin dherḥin* "black couscous", names (perhaps euphemistic) deriving from the resemblance of the two products, both rolled up (*maṭṭ*) and granulated. In Libya, in addition to *ḥîrî*, one finds *ḥîrî*, which can be connected either with the Arabic root *ḥ-y-r* "to flash (lightning)", or with *ḥîrî*, the Greek *stiron*.

The word is used in Turkish, mainly in the form *ḥîrî*, a pronunciation which recurs in various southern Arabian dialects: 'Uman, Hadramawt (and even *ḥîrî*, cf. Landberg, *Glossaire arabe*, I, 130). The Turkish term has been borrowed by Persian and by the Balkan languages: modern Greek, Albanian, Serbian, Bosnian. From Persian, the word has passed into Kurdish and Hindīstānī; but in the latter, as in Afghānī, it has a rival in the Persian *dâra*, lit. "remedy" (= *daṣṣ*). Representatives of *ḥîrî* recur in several African languages in the sense of "gunpowder": Amharic, Swahili, Hausa, etc. In addition to the current and popular term *ṭarṭar*, borrowed from Turkish, modern Greek recognises, as a scholarly word, *ṭarṭar*, which has been seen as the origin of *ḥîrî*. But this etymology is not absolutely certain.

Al-Kafīdī (s.v.), an Egyptian author who died in 1060/1659 after a long residence in Turkey, devoted to the word *ḥîrî*, in his *Shi'at al-Qahālī* (ed. Cairo, 1282, 35), a long notice in which he said: "this word is written with a *dāl* without a dot, and *ḥîrî* is an erroneous form. In the *Mā la yaṣīḥ al-Tahīḥ* *Ḍabḥ* (the work of Baghdadī physician Ibn al-Kutubī, written about 1310), one reads as follows: "this is, in the Maghrib, the name of the 'flower of Assyria' (cf. *supra*, the quotation from Ibn al-Bayṭar). In their vernacular dialect, the people of Ṭeik apply this term to saltpetre (*milḥ al-hîrî*) which appears as an efflorescence on old walls, where it is collected. It is used in fireworks (*ṭarṭar al-naṭf*) which rise into the air and move about; thanks to it, the fireworks rise more rapidly and ignite more quickly". The Egyptian author resumes: "this is a post-classical word (*muṣallaḥ*), derived from *ḥîrî* 'iron filings', because of the similarity of the two products. At the present time, *ḥîrî* is applied to a compound of this salt, charcoal and sulphur; it has assumed the name of one of its components". For the Ṭeiks of the beginning of the 8th/14th century, *ḥîrî* still denoted only saltpetre, but was already used in pyrotechnics.

Equally interesting is the notice devoted to this word by Ibn Khallaf al-Tiberī (in his Persian dictionary *Burḥān al-Qāṭ*) (Tehran ed. 1330/1951): "it is the *ḥîrî* of *ṭarṭar* 'remedy of collyrium for the musket'. In the Syriac language (*ṣarṭar*) it is the name given to *ḥîrî* 'nitre, saltpetre', which constitutes the principal element of *ḥîrî*. I do not know where the Persian lexicographer got his information from. But it is a fact that the *Lexicon Syriacum* of Brockelmann, (2nd. ed. 1928, 93),

records an instance of *ḥîrî* "nitrum", culled from an alchemical text.

From these two indications, the word *ḥîrî* could therefore have had an Aramaic origin, which would correlate well with its morphological pattern *ṭaṭl*.

In Armenian, the name of gunpowder is *rapōd* (for *rapōd*, with a dotted *r* which, for phonetic reasons governing word-transference, could not be directly connected with *ḥîrî*). However, the Armenian word appears to have an etymology (popular?) founded in Armenian itself: *rap* "to burn" and *awē* "air". Could the Aramaic word be of Armenian origin? (Information supplied by Professor Feydit, Paris).

De Gejele proposed for *ḥîrî* another etymology which seems to have been evoked (cf. *Quelques observations sur le feu grégeois*, in *Homages to A. D. Coderre*, 1904, 96): it could stem from *ḥîrî*, in the first place "a soothing collyrium (*ḥalī*) used for inflammation of the eye", which in the end was applied to all powdery collyriums (cf. Ibn al-Haṣṣhā, *Glossaire sur le Manṣūrî de Rasāʾid*, ed. Colin Renard, 1947, 18). The Baghdadī physician Ibn Khallaf (d. 491/1098) in his *Mā la yaṣīḥ* headed the use of "flower of the stone of Assyria", or marine saltpetre, in collyrium to strengthen the sight and make it clearer and also to get rid of leucoma. As regards the change of quantity in the first vowel, other examples of the change *a > i* are known in Maghribī Arabic nouns belonging to the same morphological pattern and also denoting medications: *ghāṣil* (already in Ibn al-Bayṭar), *ḥāṣil* "gun ammoniac", etc. One is encouraged not to pass over this hypothesis in silence by the fact that, in numerous Arabic-speaking countries, the term *ḥāṣil* "collyrium tube" has been used for "musket". Let us not forget that the first Arabic word for gunpowder was *daṣṣ* "medicament". In the field of Iranian linguistics, gunpowder is sometimes termed "medicament or collyrium of the musket". Finally, in an altogether different field, Malay too has *ḥalī ḥalī* "medicament of the musket". In the case of "gunpowder", as in that of "fire-tube", it could have been a case, to begin with, of a euphemistic name. The Arabic *daṣṣ* has further other senses of the same origin: "poison", "deplimentary compound" (cf. Dozy, *Suppl.*). To sum up, the origin of *ḥîrî* is still obscure.

On least days, the rural population of North Africa devotes itself to the *ḥîrî al-ḥîrî* "gunpowder game", with guns charged with blanks, either on horseback (*ḥîrî al-ḥîrî*, the "tipping" of Europeans) in which the participants imitate the *ḥîrî* of *ḥîrî* or *ḥîrî*, or on foot ("the musket dance"). For an accurate picture (in dialectal Arabic), cf. G. Delphin, *Recueil de textes*, . . . 213, 255; V. Loubigier, *Textes arabes des Zaʿr*, 79; in French, L. Mercier, *La chasse et les sports chez les Arabes*, 234.

From *ḥîrî* has been formed the derivative *ḥîrîḥ* "musket" (cf. *infra*); the Moroccan word *ḥîrîḥ* "ferrous sulphate", which is used as a black dye, is explained by the colour of the powder. (G. S. COLLIN)

## II. — THE MAGHRIB

The first firearms which appeared were siege engines. According to Ibn Khaldūn (8th/14th century), the Mamlūk sultan Yaʿqūb, when besieging the town of Saljuḥīya in 692/1274, brought into action against this town mangonels (*maḡḡanīl*) and ballistas (*ṭarṭarīl*), as well as a naphtha engine (*ḥindām al-naṭf*) which discharged iron grape-shot

(*ḥayl al-ḥadīd*) expelled from a "chamber" (*ḥḥama*) by the fire kindled in the *ḥîrî* (cf. *Ybar*, *Būlūk* 1284, IV, 138, at the bottom). This precise information is unfortunately doubtful for such an early period. In fact, in his account of the same siege in his history of the kings of Tiemcen (*ṭibāṭ*, 83), Ibn Khaldūn speaks only of siege engines (*alḥāt al-ḥîrî*), without any reference to this marvellous invention. On the other hand, the source used by the author for his account of this siege appears to be the *ḥawrî al-Karīf* and its parallel history al-*Ḍabḥ* al-*Ṣanīʿ*, Fās, 225; ed. Bencherch, 158; and these two texts mention only mangonels and ballistas.

It is not until the year 724/1324 that one comes across an indication of something which appears to have been a true firearm. At the siege of Huescar (68 m. (120 km.) N-E of Granada), which was held by the Christians, the king of Granada *ḥawrî* used "the great engine which functions by means of *naṭf*" (*al-ḥāt al-ḥîrî al-muṭṭaḥḥaḥ bi 'naṭf*). The latter buried a red-hot iron ball (*ḥurāt ḥadīd muḥḥad*) against the keep of the fortress. The ball, when discharged, threw out showers of sparks, and landed in the midst of the besiegers, causing damage as great as that caused by a thunderbolt. Several poets celebrated this event (cf. Ibn al-Khaṭṭāb, *al-Ḥāṭa*, Cairo 1319, I, 231; idem, *al-Lamḥat al-Badrīyya*, Cairo 1347, 72).

Nineteen years later, at the siege of Algeiras (743/1343), the Muslim defenders fired against the Christians, by means of *ṭarṭar* (lit. "thunderclaps") large thick arrows as well as heavy iron balls (cf. *Cronica del rey Don Alfonso el octavo*, ed. Ribadeneyra, Ch. 270, 344, and Ch. 279, 352). But what exactly is meant by "thunderclaps"? Actual firearms, or machines analogous to the "thunderers" or *raʿḍāḍ*? It is only during the last years of the Nāṣirid period (1382-1392) that there begin to appear in the sources the terms *ḥîrî* "gunpowder" and *naṭf* (pl. *naṭṭ*) "cannon", siege cannon for the Castilians, fort artillery for the Granadans. At the siege of Moclin (1480), the Castilians employed cannon which hurled "rocks of fire" (*ṭarṭar min nār*); the latter soared into the sky and fell back as a mass of flame (*ṭarṭar nār*) on the town, killing and burning all on whom they fell. It should be noted that, during this period, the plural *naṭṭ* is in general accompanied by the word *ḥadīd*, which is properly applied to classical engines of the catapult type. In fact, at the famous siege of the suburb of al-Bayyāḍīn, at Granada (1486), *naṭṭ* and *maḡḡanīl* were seen in action together (cf. Müller, *Die letzten Zeiten von Granada*, especially 18 and 20).

In his *Vocabolista* of the Arabic spoken at Granada (compiled in 1501), P. de Alcalá translated *artilheria* by *ḥadīd*; but *artilheria* is *naṭṭ*, derived from *naṭf* "bombard"; and *trebuchet* "trebuchet" has as its corresponding term *maḡḡanīl*. He knew in addition a sort of culverin: *ṭarṭar*, *ṭarṭar* "robadoquin, passaballante". But he only mentions the arbalest, and does not speak of portable firearms.

The latter appeared, in the Maghrib, at the beginning of the 16th century. It was a Maghribi who presented the first arquebus (*ḥawrîḥ*) to the Mamlūk sultan Kāṣhūn al-Ghawrī (906-22/1500-16), saying that this weapon, which had appeared in the territory of the Ifrāṅjī, was in use in all the lands of the Ottomans and of the Ḡharb (cf. Ibn Zuhayr, *Fath*, Paris 1852, I, 230). Leo Africanus, who left Morocco in 1510, gives us a picture of the army of the Ḥawā Waṭṭās (s.v.) as furnished with cannon, and arquebuses carried

by horsemen. In regard to Tunis, at the same period, he mentions that the king had a band of footguards composed of Turks armed with blunderbusses (cf. *Description de l'Afrique*, trad. Epanard, 239, 387). It was mainly under the Sa'dids (q.v.), however, that the use and manufacture of firearms was intensified. The sultans of this dynasty organised their army on the Turkish model; they formed a corps of Turkish and Andalusian musketeers, and surrounded themselves with more or less renegade Europeans (*hulād*) who initiated them in new techniques, notably that of casting cannon.

In 1575, the army of the sultan Mawlay Muhammad possessed more than 150 cannon, among which was one with nine barrels (now in the Musée de l'Armée in Paris). In 1578, at the famous battle of Wādī T-Majdhūn, the Moroccan army had 34 cannon; it also had 3000 Andalusian arquebuses on foot and a thousand arquebuses on horseback.

In 1591, the expeditionary force sent against the Sūdān included 2,000 Andalusian arquebuses and renegades on foot, and 500 renegade horsemen armed with blunderbusses; it carried off six mortars and numerous small cannon (cf. *Historie*, 1021, 672). These firearms facilitated the defeat of the Sudanese, who were armed only with assegais, bows and swords. At Tinahūta, the extremely hybrid—descendants of the Moroccan musketeers still constitute a sort of class: the *arma*, from the Arabic *rumāl*.

In Morocco, during this period, "cannon" was *naḥḥ* (sic), while "musklet" was *midfa'*. It is only later, in the 17th century, that this latter word took on the meaning of "cannon", while the new "blunderbuss" took the name *mukhḥala*, which came perhaps from the East. The following fact is characteristic of the date of this change of meaning: in the part of his *Naḥḥ al-Tib* in which he reproduces a Granadan Arabic text of 1540, al-Makkīrūn from Tlemcen (d. 1041/1632), who wrote it is true in the East, on several occasions substitutes the word *midfa'* for *naḥḥ* (cf. *Naḥḥ*, Bāḥk ed., 1279, II, 1265; Müller, *Die letzten Zeiten von Granada*).

In 1610, a Moroccan who had fled to Tunisia wrote in Spanish an important manual of artillery, based on German techniques. It was translated into Arabic (in a popular form) in 1638 by another Moroccan who had taken refuge at Tunis after having lived for a long time at Marrakesh, for the purpose of distribution to the Ottoman sultan Murād and other Muslim rulers (cf. Breckinmann, II, 465; S II, 74). A slightly abridged version exists in the Bibliothèque générale at Rabat; D. 1342). It is stated in this work that *midfa'* denoted "cannon" at Tunis, but "musklet" in Morocco; and that conversely, *naḥḥ* "cannon" in Morocco, denoted "fireworks" at Tunis, which the Moroccans called *amḥayyāt*.

The bronze cannon cast by the Sa'dids in Morocco, in their workshops at Fez, Marrakesh and Taroudant (or on their orders, in Holland), are particularly graceful. Many of them still exist in the ports of Morocco, usually decorated with the *shamsa* (or *iqḍāra*) of the reigning sultan. Portable firearms were imported from Europe, usually as contraband.

The artillery of the 'Alawid dynasty comprised mainly pieces seized from the enemy, on land or sea, and pieces brought as gifts by foreign ambassadors. Otherwise, cannon and mortars were bought abroad and then an engraved inscription in Arabic was superimposed. On the other hand, it was under this dynasty that the manufacture of muskets spread in Morocco, especially in the south, but also in the north, at Tetuan and Tārgūt.

However extraordinary it may appear, *midfa'* (accompanied by *cannon* and *mortars*) were used in Morocco up to 1729, not only in siege warfare but also in expeditions in mountainous areas (cf. *Archives marocaines*, ix, 107, 162, 169, 180).

Throughout present-day North Africa, the general word for "cannon" is *midfa'*; *hira* (dial. *hara*), *kar*, is "cannon-ball, shell"; everywhere the artilleryman is called *fādīl*. The "mortar" is *mihriya*; it throws a bomb, *bomba*, a Latin word received through Turkish. In Morocco, Algeria and Tunisia, the old locally made musket bears names derived from *mukhḥala*; the two principal types are called: *bā-ghir* "fired by a flint", and *hā-baba* "fired by percussion-cap". Secondary appellations are derived from the name of the armourer or from the place of manufacture, or even from the length of the cannon measured in spans (*ghir*). The vocabulary of the Maghribi dialect preserves the memory of earlier portable weapons of European origin: *kābis* "pistolet" (*arabais*), *maḥḥat*, (*muschets*), *ghibḥiḥ* (*cecpet*), *bārēla* (*corabins*), etc. In Morocco, the European breech-loaded military musket is called *khita* (Spanish *culata*); the different types are named after the number of cartridges held by the magazine. In eastern Tunisia, in Libya, the local musket is called *hinda*, and the rifled carbine *shakhḥān* (from Persian, "with a sexangular barrel", received through Turkish).

We have seen that, in the western Maghrib and up to the beginning of the 17th century, *naḥḥ* denoted "cannon" and *midfa'* "portable firearm". This semantic pair has been preserved to the present day (with the variant *naḥḥ*) in the Berber dialects of the same region; it is also found in the Arabic dialect of Mauritania. However, among the Twāreg Berbers, a musket is *h-barūd*. In Anaharic, the meanings are reversed: *naḥḥ* "musklet", *naḥḥ* "cannon".

For the nomenclatures of the Moroccan musket, cf. Joly, *L'industrie à Tétouan*, in *Archives marocaines*, xi, 391; Delhomme, *Les armes dans le Sous occidental*, in *Archives Berbères*, II, 123).

The introduction of portable firearms, their employment for the *ghibḥa*, and the necessity for a period of training in the technique of shooting with *amḥayyāt*, led to the creation of societies of marksmen (pl. *rumāl*) of a religious character (cf. *Archives marocaines*, iv, 97; xvii, 73; xx, 242; L. Mercier, *La chasse et les sports chez les Arabes*, 134).

On the other hand, the use of such weapons for hunting forced the jurists from the beginning to study the question whether prey killed by this method was licit (*halāl*) or not (the *ahkām al-bunduk* literature).

(G. S. COLIN)

### III. THE MAMLŪKS

In the present state of our knowledge, the earliest reliable information on the employment of firearms in the Mamlūk sultanate is from the mid-sixties of the fourteenth century, i.e., some forty years later than the corresponding information on the use of firearms in Europe. There exist in the sources earlier references to these weapons, but their authenticity needs further proof. If Ibn Faḍl Allāh al-'Umari speaks of firearms in his *al-Ta'rīf bi'l-Muṣṭalah al-Sharīf*, Cairo 1312 A.H., 208, II, 17-22), which he compiled in the year 241/1347, this would mean that the Mamlūks started to use firearms several decades before the mid-sixties.

Some words may be said about the terms by which these weapons were designated. These were *maḥḥat* (sing. *mukhḥala*) *al-naḥḥ* and *madfa'*

(sing. *midfa'*) *al-naḥḥ*, or simply *naḥḥ* (pl. *naḥḥ*). Subsequently the first two terms were shortened into *madfa'* and *maḥḥat*. From the Mamlūk sources it cannot be learnt whether *mukhḥala* and *midfa'* designate different types of firearms or not. During the first years following the introduction of the weapon one comes across the terms *naḥḥ* *al-naḥḥ*, *naḥḥ* *al-naḥḥ*, *midfa'* *al-naḥḥ*, *midfa'* *al-naḥḥ*, which also mean firearms. But all these last-named terms soon died out. (For detailed proofs that the above mentioned terms mean firearms and not naphtha or "Greek Fire", which is also called in Arabic *naḥḥ*, see D. Ayalon, *Gunpowder and Firearms in the Mamlūk Kingdom*, 9-14).

In Mamlūk historical sources the term *birūd* is designating the whole mixture of gunpowder is extremely rare during the major part of the Circassian period (754/1382-922/1517); only during the last decades of Mamlūk rule do references to it become quite frequent. The term *naḥḥ* remains, however, dominant until the very end of the Mamlūk sultanate. It would appear that the final victory of *birūd* over *naḥḥ* took place after the Ottoman conquest.

Though the use of artillery in the Mamlūk sultanate increased steadily since the closing years of the 8th/14th century, a long time had to elapse before they could entirely supplant the veteran siege-engine, the mangonel (*mandjānīk*, pl. *midjānīk*). For many years the *midfa'* and the *maḥḥat* served only as auxiliaries to the *mandjānīk*, fulfilling but minor tasks. The Mamlūk sources provide abundant information on the negligible damage they caused to targets against which they were aimed. At the end, however, artillery had the upper hand. The mention of *mandjānīk* in action becomes rarer and rarer during the second half of the fifteenth century, though they manage to survive up to the very end of Mamlūk rule.

The Mamlūks used their artillery in siege warfare only (both as a defensive and offensive weapon), consistently refusing until the very end of their rule to use it in the battlefield.

The ever increasing participation of artillery in sieges in the Mamlūk sultanate on the one hand, and its total absence on the battlefield on the other, can by no means be ascribed to accident. The reason for its easy adoption in siege warfare is to be found in the fact that it did not, especially during its early history, bring about any sweeping changes in the traditional methods of siege. Cannon was preceded by the *mandjānīk* which performed precisely the same function, and which for a long period was superior to firearms. In the open, however, conditions were entirely different. Here artillery constituted a complete innovation, no similar weapon having preceded it; here it was bound to effect changes in tactics and methods of warfare, thus causing the Mamlūk military hierarchy to adopt a course in sharp contrast to its very spirit.

Sultān al-Ghawri did make some concessions to the use of firearms which, though on the face of it considerable, were in reality not very significant. For in all these concessions one condition was implied: the existing structure of Mamlūk military society should not be subjected to any important change. Such an attitude amounted, in fact, to a death sentence on the scheme of reorganising the Mamlūk army and on preparing it for the final test; for without transforming Mamlūk society, along with all the conceptions for which it stood, there was no hope of making effective use of firearms. Nor was

this all: al-Ghawri made up his mind, side by side with his decision to extend the employment of firearms, to revive traditional methods of warfare.

His plan had three main points: first, to increase considerably the number of cannon cast; second, to renew *farāsiyya* exercises and the traditional military training; and third, to raise a unit of arquebuses. Of them, only the first and third counted as basic.

The Casting of Cannon. A few years after his accession to the throne al-Ghawri started casting cannon at a rate and on a scale never known before in the history of the sultanate. Near his newly built hippodrome (*maydān*) he established a foundry for cannon (*maḥḥat*) which turned out great quantities of artillery at short intervals. Unfortunately our source (Ibn Ḥayn) does not say what the number of guns involved on each occasion; in four cases, however, he does. In one there were 15 guns; in another 70; in a third 74; in a fourth 75.

This huge output of artillery was not intended at all to be used against the Ottomans in the open field. The bulk of it was directed to the ports of Egypt both in the Mediterranean and in the Red Sea in order to strengthen the coastal fortifications or to be used on board warships.

From the dispatch of so much artillery to the coast and to coastal fortifications it should not be concluded that strategic centres inland were not supplied with considerable quantities of cannon. As to the interior of Egypt, there is no doubt that both in al-Ghawri's time and in the preceding generations a very great portion of the total output of cannon was allotted to the capital, including the citadel. This is first of all borne out by the fact that most of our information about the weapon comes from Cairo; it is further confirmed by the concentration of great quantities of Mamlūk artillery in the battle of al-Rayḍāniyya (January, 1517). As for Syria, our knowledge of the fortunes of artillery in that part of the Mamlūk realm is scanty, both in regard to the coast and to the interior. From Ibn Ṭūlūn's chronicle we learn that there were great quantities of firearms in Damascus. This leads us to suppose that more detailed histories of Syria than those we possess might reveal that artillery played the rôle of a far bigger part than may be concluded from the available sources.

The Creation of a Unit of Arquebuses. Arquebuses (or hand-guns or portable firearms) are referred to in the Mamlūk sources by the term *al-bunduk al-raḥḥ* ("the pellets of lead"). The later designation for the hand-gun, *bunduḥiyya*, stems undoubtedly from *bunduḥ*, while *raḥḥ*, the bullet or cartridge, is derived from *raḥḥ*. The fact that a considerable traffic of arms was conducted in the period under review by Venice (in Arabic: al-Bunduḥiyya) might also have contributed to the choice of the term *bunduḥiyya*. It would appear that the process of transformation from *bunduḥ* *raḥḥ* to *bunduḥiyya* did not take long. Ibn Ḥayn himself mentions *bunduḥiyya* three times, while in the works of his contemporaries Ibn Zuḥayr and Ibn Ṭūlūn, who died only a few decades after him, *bunduḥiyya*, *bunduḥiyyi* and *bundiḥ* are already of most common occurrence. They also mention *bunduḥ*, but the combination *bunduḥ* *raḥḥ* is already extinct in their works.

The aversion of the Mamlūks to the use of portable firearms was far more pronounced than their reluctance to employ of artillery in the open field. For artillery is the province of specialised

technicians, whose numbers form only a small part of the fighting force, requiring little change in the structure of the army. The arquebus, on the other hand, is a personal and mass weapon, and its introduction affects a large number of troops. Hence its large scale adoption was bound to involve far-reaching changes in the organisation and methods of warfare. To equip a soldier with an arquebus meant taking away his bow and, what was to the Mamlūk more distasteful, depriving him of his horse, thereby reducing him to the humiliating status of a foot soldier, compelled either to march or to allow himself to be carried in an ox-cart.

Any attempt, therefore, to extend the use of the arquebus had to be based on non-Mamlūk and thus socially inferior elements of the army. This is what the Mamlūk sultans were forced to do from the very outset. As a result, a clash between the interests of the sultanate and those of the military hierarchy ensued. The growing danger from without did, to be sure, enable the sultan to widen somewhat the very narrow limits imposed on the use of the arquebus by Mamlūk resistance to it and to incorporate into the arquebus regiment men from other units whose social position had been somewhat higher than that of the earlier arquebusiers. But his success did not go further than this, and hence the doom of the arquebus was inevitable.

The very date of the introduction of the arquebus by the Mamlūks is significant. It is mentioned for the first time in the sources as late as 893/1490 (the rule of Sulṭān Kāyihāy), i.e., only twenty-seven years before the destruction of the Mamlūk sultanate and one hundred and twenty five years later than in Europe (the hand-gun began to be used in Europe in about 1365). Artillery, on the other hand, was introduced into the Mamlūk sultanate only about forty years later than in Europe. The much greater time-lag in the adoption of the hand-gun in comparison with the adoption of artillery is by no means accidental.

The units operating firearms were mainly composed of black slaves (*ʿabid*) and sons of Mamlūks (*awlad nās*) [30]. Members of these two categories seem never to have served in the field. So many times the black slaves constituted the predominant element in the firearms personnel and sometimes the *awlad nās*.

Sulṭān al-Nāṣir Abu ʿl-ʿSaʿādiddīn Muḥammad (901/1495-904/1498), Kāyihāy's son, who ascended the throne at the age of fourteen, made a very serious attempt to create a strong unit of arquebusiers composed of black slaves, on whom he wanted to bestow a higher social status. The Mamlūk *amirs* intervened, however, forced him to disband the unit and made him promise never to raise it again.

About twelve years after the murder of al-Nāṣir Abu ʿl-ʿSaʿādiddīn, in 916/1510, Sulṭān Kānūth al-Ghawrī, who enjoyed an incomparably higher prestige than the previous sultans, being, and in whose time the need for the arquebus was far more pressing, made, with much greater caution, a second attempt to create a unit of arquebusiers. Though it fared better than his predecessor's unit, its existence was very precarious, its status very low and its achievements quite insignificant.

It was called *al-tabaḥ al-ḥāḥimīya* because it did not receive its pay together with the rest of the army in one of the five official pay days round the middle of the month, but separately on a fifth payday at the end of the month. It was also called *al-ʿaṣhar al-mulafāḥ*, i.e., "the motley army" or "the

patched up army", because it was composed of heterogeneous elements which, according to Mamlūk criteria, were of low origin. It included in its ranks—besides *awlad nās*—Turkoman, Persians and various kinds of artisans, such as shoe-makers, tailors and meat vendors. Only when Sulṭān al-Ghawrī, in 920/1515, launched his big expedition against the Portuguese, were Royal Mamlūks joined to it. It is significant that in spite of its heterogeneous character *al-tabaḥ al-ḥāḥimīya* is never said to have included black slaves.

Though the members of this unit occupied a very low rung in the socio-military ladder and received a much lower pay than the Royal Mamlūks, the very heavy pressure was brought to bear on the sultan to abolish it, on the ground that it was favoured over other units and that its creation was the main cause for the emptiness of the treasury. The sultan gave way, at last, and dissolved it on Muharrar 920/March 1514. This dissolution was, however, on paper only. *Al-tabaḥ al-ḥāḥimīya* continued to exist because it was urgently needed on a very vital front.

The fact that the Ottomans adopted firearms in the proper way and on a gigantic scale, whereas the Mamlūks and all the other important rulers of Islam neglected them, had a decisive influence on the destiny of Western Asia and Egypt. Within a matter of two and a half years (August 1514-January 1517) the Ottomans routed the Safawids, destroyed the Mamlūk sultanate and added to their realm territories of the old Muslim world which they kept up to the very dismemberment of their empire in the twentieth century and which were far bigger than their combined conquest in Europe throughout their history. Without their overwhelming superiority in firearms such a swift and extensive expansion could never have taken place.

#### IV. THE OTTOMAN EMPIRE.

There is no evidence to show precisely when the Ottomans first began to use gunpowder and fire-arms. A passage in a Turkish register for Albania of the year 835/1431 permits, however, the inference that cannon had been introduced at least in the reign of Mehmed II (1413-1421) and, perhaps, even somewhat earlier (Inalcik, in *Balkan*, xxi, 1957, 309). Other sources mention the Ottoman use of guns for siege warfare in 1422, 1424 and 1430, and again in 1440, 1446, 1448 and 1450 (cf. the references listed in Wittek, 142 and in Inalcik, *op. cit.*, 509). It is well known, moreover, that Mehmed II (1451-1481) had a large number of cannon, when he besieged Constantinople in 1453 (Ducas, 247-249, 258, 273; Spiranides, 216 ff., *passim*; Chalcocondylas, 385-386, 414-415; Critobolus, bk. I, chaps. 20 and 29 (with additional references given in the notes); Wille, 10 f.; Jähns, 791-792, 1141-1144). Field guns seem to have made their appearance amongst the Ottomans not long before the battle of Varna (1444), i.e., during the course of the Hungarian war waged in the reign of Murad II (1441-1446). The first clear indication that the Ottomans employed cannon of this type in a major field engagement relates to the second battle of Kosovo (1448) (Wittek, 142-143; Inalcik, *op. cit.*, 509-510), but it was not until considerably later that advances in technique rendered possible the emergence of an effective Ottoman field artillery. The arquebus, too, was taken over in about 1440-1443 during the Hungarian wars under Murad II and its use much extended in the reign of Mehmed II. Note the less, the change to a more general adoption of the new weapon, e.g., within the corps of Janissaries, was a slow and gradual one, destined to remain long incomplete (Wittek, 143; Inalcik, *op. cit.*, 506, 510-512; Ayalon, 38 (note 89); Jorga, II, 228. Cf. also Pronuntorio, 36 (*arabellano*), Chalcocondylas, 356 (*arabellano*), Dolfin, 13 (*arabellano*), terms uncertain in meaning, but perhaps referring to the arquebus? See, in addition, Lokotich, 172 (Ar. *arabellano*) and Ayalon, 61: *arabellano*). After the reverses which the Ottomans endured in the Cretan war of 1453-1491 against the Mamlūks of Egypt and Syria, Murad II (1447-1481) increased the number of Janissaries and provided them, and other categories of his troops, with arms more efficient and of greater offensive power than the weapons previously available; the Sulṭān also spared no expense to create a more mobile and more com-

petently manned artillery force (Alberi, ser. 3, iii, 21 (a report dated 1503); cf. also Inalcik, *op. cit.*, 506). The arquebus, slow to load and cumbersome to handle, was ill-suited to the needs and capacities of horsemen. It found little favour therefore, in the 15th and 16th centuries, with the Ottoman timariots and the Sipahis of the Porte, i.e., the "head" and the "household" cavalry of the Sulṭān. The use of fire-arms in this field had, in general, to await the appearance of new and more manageable types of hand-gun, i.e., the earlier forms of the musket and the pistol. A corps of mounted "arquebusiers" was, however, to be found in Egypt soon after the Ottoman conquest of 1517 (Ayalon, 96-97 and 129 (note 247a); Terci Kuratlı, in *Balkan*, iv (1949), 67 and 68; *alla tufekci namini*).

The troops concerned primarily with gunpowder and fire-arms, and with their practical application in time of war, can be listed thus: (a) the *Yıldırımçılar*, i.e., the Armourers, who had charge of the weapons and munitions of the Janissaries—bows, arrows, swords, etc., but also hand-guns (*tefnik*), powder (*barut*), quick-matches (*filiz*), lead for bullets (*barutlu*) and the like. Members of this corps served both at Istanbul and in the provincial fortresses of the empire (Uzunçarşılı, *Kapıkulu Ocakları*, II, 1-31). Venetian reports written between 1571 and 1590 state that almost all the Janissaries had adopted the arquebus, the Ottoman model of this gun being made with a longer barrel than was normal amongst the Christians and loaded with large bullets, "come le (*archibugi*) barbareschi" (Alberi, ser. 3, i, 421-422, II, 99, III, 220, 343; cf. also Bombaci, in *RSO*, xx (1941-1943), 296, 299 (hand-gun firing shot which weighed 40-50 dirhams) and Uzunçarşılı, *op. cit.*, i, 366 and II, 8 (note 2: hand-guns that took shot 4 and 5 dihanis in weight), 13-14, 28-29). (b) the *Topçular*, i.e., the Artillerists, who were responsible for the actual production of guns and for their maintenance and operation in war. These specialised troops had as their chief centre the arsenal (*Top-khâne*) at Istanbul, but served also in the various fortresses of the empire and in provincial cannon foundries and munition depots (Uzunçarşılı, *op. cit.*, II, 33-35). The Ottomans at first carried into the field supplies of metal, rather than complete, but ponderous guns, and cast their cannon as need arose during the course of a given campaign (İbn Kemāl, *Tedric-i Aḥd Osman*, 462-463; 462-463 [= 420-421, in the transcription]; Dolfin, 10-11; Pronuntorio, 61, 85; Jorga, II, 227; Wittek, 142; Inalcik, *op. cit.*, 509). This procedure, still current during the reign of Mehmed II, left gradually into disuse as further advances in technique and in methods of transportation rendered it, in general, superfluous. Chemical analysis has shown an Ottoman gun cast in 868/1464 to be composed of excellent bronze, allowance being made for the imperfections of the smelting process in use at that time (Abel, in *The Chemical News*, 1868). A Spanish artilleryman, Collado, in his treatise of 1592, describes Ottoman cannon as ill-proportioned, but of good metal (*Manual de Artilleria*, 8 v: "la fundición Turquesca por la mayor parte es fea, y defectuosa, aunque es de buena liga"). An account of the methods employed in the Top-khâne at Istanbul for the casting of guns is given in the work of Evliya Çelebi (*Seyahat-nâme*, I, 456 ff., Uzunçarşılı, *op. cit.*, II, 41 ff.). (c) the *Top-khâne 'Arabidjilar*, i.e., the corps responsible for the transport of guns and munitions (Uzunçarşılı, *op. cit.*, II, 95-115). Wagons (*'araba*), drawn by horses, oxen or mules, carried the cannon, both large and

small, but much use was also made of camels to bear the lighter types of gun, especially in difficult terrain (Promontorio, 33; Menavio, bk. v, chapt. xxxix: 276; Ibn Tülin and Ibn Zuhbî, cited in Ayalon, 123 (note 206) and 127 (note 220); Albert, ser. 3, li, 432, 436, 437, 439. There is mention, here and there in the sources, of guns on wheels, i.e., passages which refer perhaps to the "araba" itself or possibly to some form of wheeled gun-carriage (Tauer, *Campaigns...*, *contre Belgrade*, 48 (Persian title): 64); *Viaggio di Impresa...* di Dia, 173 v; Giovio, li, bk. XXX, 101 r. Moreover, the Ottomans maintained on the Danube a flotilla which had a major role in the transportation of the siege artillery, field guns and supplies needed for the great campaigns in Hungary (cf. *Uzunçarşılı, Bahriye Teshkilâtı*, 403-404 (also *ibid.*, 404-405: the arsenal at Bircilik on the Euphrates); and Albert, ser. 3, iii, 153: mention of flat-bottomed boats (*palandaris*) which carried horses, cannon, stores, etc.). (d) the *ghumardagilar*, i.e., the bombards concerned with the production and use of *gomadon*, bombs, portable mines, artificial fire, etc. (*Uzunçarşılı, Kapakulu Ocakları*, ii, 115-127); (e) the *Laghimçilar*, i.e., the sappers who, with the aid of the large labour forces set at their disposal, prepared the trenches, earthworks, gun-emplacements and subterranean mines indispensable in siege warfare (*Uzunçarşılı, op. cit.*, ii, 129-133).

The Ottomans, even before the death of Mehmet med II in 1481, had acquired the main types of weapon and technique involving the use of gunpowder, i.e., siege and field artillery, mortars, bombs, the arquebus, mines and artificial fire (Jorge, ii, 227-228). A large share in the transmission of these new armis fell to the peoples of Serbia and Bosnia. Artillerists and arquebusiers, recruited in these countries and still retaining their Christian faith, are known to have been in the service of Mehmed II (Inalek, *Fatih Devri*, i, 152, 154-156 and also in *Billeten*, xxi (1957), 518). Masters came, too, from still farther afield, e.g., Jörg of Nuremberg (Kissling, 356). Reliance on specialists of European origin—at first mainly German and Italian, but with French, English and Dutch elements becoming more numerous in later times—was to be henceforth a permanent and indeed essential characteristic of the various Ottoman corps concerned with gunpowder and fire-armis.

Information of a technical nature about the types of cannon in use amongst the Ottomans can be found here and there in the Western sources of the 15th and 16th centuries. The guns are of course classified in accordance with the system of classification then current in Europe (and indeed in the Ottoman empire too), i.e., in terms of the weight or size of the projectile thrown (Promontorio, 61 and 85; de Bourbon, 139-v, with mention of iron and bronze cannon, e.g., culverins, basilisks, sakers and also mortars firing marble shot and copper or bronze "boulders" filled with artificial fire; Utano, 40 and 41). An Italian account of the campaign against Dia in 1538 lists some of the guns which the Ottomans had with them on that occasion (*Viaggio di Impresa...* di Dia, 169; Collado, 131; Albert, ser. 3, li, 432). The *ghalyba* (cf. the Hungarian *szajha*), a name given to a certain type of boat, but also used for the guns mounted on such craft: cf. Hâdjîdî Khalîfa, *Fedhiche*, li, 330; Ewliya Celebi, viii, 378 (a mention of cannon (*shaykha* *topları*) that fired stone shot weighing eighty okkas each), 382 (*shaykha nâm prânîha* *topları*); Fevzi Kurtoglu, in *Billeten*, iv (1940), 68; *Uzunçarşılı, op. cit.*, ii, 49, 50, 81 (large, medium and small *shaykha* cannon); L. Felete, in *Magyar*

*fihâr*, when a field battle had to be fought, i.e., the *wagenberg* with the gun-carts chained together and the cannon set between them—a device which seems to have been taken over from the Hungarians (Inalek, in *Billeten*, xxi (1957), 310; cf. also von Fraunholz, 234 and *Uzunçarşılı, Kapakulu Ocakları*, li, 255-264. A similar type of battle order ("in accordance with the custom of Rûm", i.e., of the Ottoman empire: *Rûm destûrî bile*) was known in Muslim India and in Persia: *Bahar-Nâma*, ed. Hünslki, 341 and 438). The method used by the Ottomans to breach the walls of a fortress is described in the work of the Spaniard Collado: medium guns, e.g., culverins, capable of deep penetration and firing along transverse and vertical lines, undermined and split the stonework, large basilisks which threw heavier and more destructive shot, violent in the force of their surface impact, being then discharged in salvo to bring down the weakened structure (*Manual de Artilleria*, 135, 200, 320; cf. also Pelevi, li, 193).

The Ottomans had of course their own nomenclature for guns and related instruments of war (cf. *Uzunçarşılı, Kapakulu Ocakları*, li, 48-51). In addition to phrases of a mere poetical character (e.g., *serper-dikan* and *mîr-len*: "dragon-mouthed" and "earth-bodied"—cf. Na'ima, li, 148) and names given to individual weapons (e.g., "the *Yedigöze*", i.e., the gun captured from Katsianer, the Imperialist general whom the Ottomans defeated in 1537 near Ezerék on the Danube—cf. Selânikî, 31), terms which have a precise technical sense can also be found here and there in the Turkish chronicles and documents. Among the types of cannon most often mentioned in these sources are (i) the *badgîngiba* or *badgîngiba*, a large siege gun (perhaps the basilisk?); cf. Selânikî, 35, 38, 41; Hâdjîdî Khalîfa, *Fedhiche*, li, 29 (guns of this kind firing shot which weighed sixteen okkas each), 31, 33; Collado, 131, 320; *Uzunçarşılı, op. cit.*, li, 49, 80, 81. (ii) the *balyemez* (g.y.), the name of which derives perhaps from the German "Faule Metze" (Kissling); cf. Pelevi, li, 302; Ewliya Celebi, viii, 415, 498 (where it is described as *manâ* *topu*, i.e., a long-range gun); Silbîdâr, li, 46 and 47 (cannon using shot of 20-40 okkas in weight are here defined as *balyemez*).

(iii) the *holanborna* (cf. the Italian *columbaria*), i.e., the culverin; cf. Selânikî, 8; Pelevi, li, 198; Hâdjîdî Khalîfa, *Fedhiche*, li, 29 (culverins which fired shot weighing eleven okkas each) and i, 33 (*lomborna*); Silbîdâr, i, 300 and ii, 46 and 47 (cannon throwing shot of 2-9 okkas in weight are here classed as *holanborna*); *Uzunçarşılı, op. cit.*, li, 49, 81; *Viaggio di Impresa...* di Dia, 169; Collado, 131; Albert, ser. 3, li, 432. (iv) the *ghakalot* (cf. the Hungarian *szakallás*), apparently a kind of light cannon which threw small projectiles of stone or metal; cf. Selânikî, 37, 41, 145; Pelevi, li, 242; Süheyl Ünver, in *Billeten*, xvi (1952), 500; L. Felete, *Die Siyâhat-Schrift*, 130, 61 and 694, and also in *Magyar Nyelv*, xxvi (1930), 264; Redhouse, s.v. *kalalot*. References to guns that fired small shot can be found in Ducas, 211 (cf. also Jâhûs, 811) and in Giovio, li, bk. xxx, 104r. (v) the *shaykha* (cf. the Hungarian *szajha*), a name given to a certain type of boat, but also used for the guns mounted on such craft: cf. Hâdjîdî Khalîfa, *Fedhiche*, li, 330; Ewliya Celebi, viii, 378 (a mention of cannon (*shaykha* *topları*) that fired stone shot weighing eighty okkas each), 382 (*shaykha nâm prânîha* *topları*); Fevzi Kurtoglu, in *Billeten*, iv (1940), 68; *Uzunçarşılı, op. cit.*, ii, 49, 50, 81 (large, medium and small *shaykha* cannon); L. Felete, in *Magyar*

*Nyelv*, xxvi (1930), 265. On the guns used in the boats which the Ottomans maintained on the Danube, see Giovio, li, bk. xxxvi, 194r. (vi) the *darbaan* or *darbaan*, a gun cast in various sizes (cf. L. Felete, *Die Siyâhat-Schrift*, i, 604, 605; small (300 dirhem shot), medium (1 okka shot), large (2 okka shot) and also a *parbaan-i laika-i hisâr* firing shot 36 okkas in weight); cf. Ibn Kemal, *Tevârik-i Âl-i Osman*, 464, 509 (= 422, 458 in the transcription); Selânikî, 8, 35 (*ghâfi darbaan* *topları*); Pelevi, li, 193 and ii, 140, 147, 196; Du Loir, *Foyages*, 226-227 (*ichâsi zambârân* = "Vasconquais rovers"); Silbîdâr, li, 47 and 37; *Uzunçarşılı, op. cit.*, li, 49, 50, 76, 79, 81; Ayalon, 80, 90, 119 (note 92), 127 (note 220).

The Ottomans, in their sea warfare, seem to have used in general the same types of gun as in their campaigns on land. Among the cannon employed in the Ottoman fleet can be numbered the *holanborna*, the *darbaan* and the *ghalyba* (Barozzi and Berchet, i, 274, li, 20; *Uzunçarşılı, Bahriye Teshkilâtı*, 460, 462, 463, 468, 469, 512-513. Further information about the naval armament of the Ottomans is available in Albert, ser. 3, i, 68, 140, 292-293, ii, 100, 150, 342, li, 243, 354-355; Barozzi and Berchet, li, 165; Marsigli, Pt. I, chapt. lxxiv, 142 and Pt. II, chapt. xxxvii, 172-173; de Warnery, 131) and also the *prânîha* or *prânîha*, i.e., the "Yedigöze", 193; Kemalâhâdî, *Mohâddîjat*, 54 (Turkish text); Bumbaci, in *RSO*, xx (1941-1943), 292 and xxi (1944-1946), 190; *Uzunçarşılı, Kapakulu Ocakları*, li, 49, 83 and also *Bahriye Teshkilâtı*, 462, 468, 469, 512-513).

The sources often mention instruments of war other than cannon, but based on the use of gunpowder, e.g., the *hasârî* (cf. *Uzunçarşılı, Bahriye Teshkilâtı*, li, 425, note 1); *Uzunçarşılı, Kapakulu Ocakları*, li, 49) and the *hasârî* (Ewliya Celebi, viii, 407, 419, 471, 472; Yusuf Nâhî, 43; Silbîdâr, li, 47), i.e., mortars which fired bombs and also shot of stone or metal (Promontorio, 61; de Bourbon, 139; *Viaggio di Impresa...* di Dia, 169; Mairand, 202; Scheitherr, 81; Marsigli, Pt. II, chapt. ix, 30-31). (ii) the *ghumardagilar*, i.e., bombs (Tauer, *Campaigns...*, *contre Belgrade*, 35, 58 (Persian text: 79, 80); Selânikî, 40-41; British Museum MS. Or. 1137, 74v (bombs made of glass, and of bronze: *ghide ghumardagilar*); Ewliya Celebi, viii, 407, 414, 432, 483 (*hasârî* (*hasârîha*) *bombara*); Na'ima, i, 304; Silbîdâr, li, 47 (*ghumardagilar*); Scheitherr, 75, 81; Marsigli, Pt. II, chapt. ix, 33; Fevzi Kurtoglu, in *Billeten*, iv (1940), 68. (iii) the *ghumardagilar*, i.e., hand-grenades (Ewliya Celebi, viii, 414, 432, 471 (grenades of glass, and of bronze: *shira* or *rud* of *bombara*); Silbîdâr, li, 467, 484, 502; Scheitherr, 77; Marsigli, Pt. II, chapt. ix, 33); (iv) the *laghim* i.e., explosive mines of various types and sizes (Hâdjîdî Khalîfa, *Fedhiche*, li, 255 and Na'ima, iv, 143 (a large mine contained 150 *hanfars* of powder); Ewliya Celebi, viii, 424 (a mine with three galleries and three powder-chambers), 425, 432, 495; Silbîdâr, li, 55, 56 (a mine of the type known as *pushurma* and holding 30 *hanfars* of powder), 66; Scheitherr, 72-73; Montecucoli, iii, chapt. lxvii; Marsigli, Pt. II, chapt. xi, 37 seq.). Numerous references to mines can be found in the Ottoman accounts of the Cretan War (1645-1669), e.g., in Hâdjîdî Khalîfa, *Fedhiche*, li, 279 ff., *passim*, in Silbîdâr, i, 409 ff., in Na'ima, iv, 116 ff., *passim*, and in Ewliya Celebi, viii, 396 ff. (cf. also *ibid.*, viii, 468 ff., enumerating the guns, munitions, etc. found in the fortress of Candia after its conquest from the Christians in 1669—an account rich in the military terminology used by the Ottomans at that time).

The Ottomans drew from the territories under their control the indispensable raw materials of war—iron, lead, copper and the like. Moreover, the mines producing such metals often served as centres for the manufacture of munitions, e.g., cannon-balls (Albert, ser. 3, i, 66-67, 146-147, 422, li, 145, 342; li, 351; Barozzi and Berchet, li, 685-686, 225, 327; Ahmet Refik, *Türk Asiyatleri*, docs. 27, 33, 42, 48, 86, 106, 112 and *Türkiye Madenleri*, docs. 2, 6, 7, 14, 21, 25, 27, 35, 36, 54 and *ibid.*, *Parakanda Veshakih*, docs. 3, 4, 7 and 8; Anbeger, *Beilage*, i, 138-140, 148-149, 205-206, 210-211 and ii, 209, 209-210, 206-208, also *Nachtrag*, 492-494; *Uzunçarşılı, Kapakulu Ocakları*, ii, 72 ff., *passim*). There were, in addition, mines yielding the saltpetre and sulphur which was needed for the production of gunpowder (*bîrâri-i tufenâ* and *bîrâri-i sıyâk*: cf. L. Felete, *Die Siyâhat-Schrift*, i, 696, note 8) at İstanbul and in the provinces of the empire (Ewliya Celebi, i, 483 and 564-565; *Uzunçarşılı, op. cit.*, i, 247 and 333-335; Ahmet Refik, *Türk Asiyatleri*, docs. 53 and *Türkiye Madenleri*, docs. 11-13, 16-20, 22-24, 26, 28-30; Albert, ser. 3, i, 146, 422, ii, 349-350, iii, 398; Barozzi and Berchet, i, 177, 275, li, 27, 163; Montecucoli, iii, chapt. xxxii; Marsigli, Pt. I, chapt. lxxiv, 142). War material also came to the Ottomans from Europe. Indeed, supplies obtained from the Christians were at times of great importance to the armies of the Sültân, e.g., during the long wars against Persia (1578-1590) and Austria (1593-1606), the one involving the establishment and maintenance of numerous fortresses and garrisons in the wide mountainous regions to the south of the Caucasus, the other developing into a bitter conflict of sieges, and both necessitating a vast expenditure of guns and munitions. The English, in these years, sold to the Ottomans cargoes of tin (essential for the making of bronze cannon), lead, broken bells and images (from the churches despoiled in England during the course of the Reformation), iron, steel, copper, arquebuses, muskets, sword-blades, brimstone, saltpetre, gunpowder (Cal. State Papers, Spanish: (1568-1570), no. 609 and (1580-1586), no. 265; Cal. State Papers, Venetian: (1603-1607), nos. 470, 494 and (1607-1610), no. 860; Brander, 479 (tin, bell-metal, lead; Charrrière, iv, 907, note 1 (broken images); Sir Thomas Sherley, *Discours*, 7 (the Janissaries have "not one corn of good powder but that whiche they gett from overborne Christians, or els is broughte them out of England"; 9, to the English "keepe 3 open shops of armes and munition in Constantinople... Gunpowder is sold for 23 and 24 chikinos the hundred... Muskettes are sold for 5 or 6 chikinos the peyce"; (chikino = chequino, sequia, i.e., the "reschine"), a Venetian gold coin, of which the Ottoman equivalent was the gold solido; cf. *The Travels of John Sanderson*, Appendix A, 294-295); Cal. Salisbury MSS., Pt. XI, 111 and Pt. XIII, 666-667). It was not long before the Dutch entered into this traffic, and to the marked advantage of the Ottomans, e.g., in the Cretan War of 1645-1669. The Western sources dating from the 17th and 18th centuries emphasise how much the Ottomans owed to this trade in munitions, how great was their reliance on European techniques in regard to the use of fire-armis and gunpowder, and how numerous were the experts of Christian origin enrolled in their service as engineers and artilleryists—experts of Italian, French and German, of English and Dutch birth (Scheitherr, 75, 80; Montecucoli, iii, chapt. xxviii and xxx (copper from the Dutch, English,

French and also the Swedes); Barozzi and Berchet, II, 173, 222, 231-232; Marsigli, Pt. II, chapt. 18, 23 (the Ottomans made cannon according to the designs of the Italian author Sardi, one of whose works had been translated into Turkish—probably *L'Artiglieria di Pietro Sardi Romano*, Venice 1621 and 33; cf. Warnücy, 92-93).

The 16th and 17th centuries witnessed in Europe notable changes in the art of warfare (J. R. Hale, in *The New Cambridge Modern History*, II, 481 ff.; O. Laskowski, in *Türkische Geschichte*, 15 (1956), 106 ff.; M. Roberts, *The Military Revolution 1550-1660*, also *Gustavus Adolphus and the Art of War*, in *Historical Studies*, I, 66 ff., and *Gustavus Adolphus*, II, 166 ff.). These changes imposed on the Ottomans a constant need to adopt or otherwise to meet in an effective manner the innovations automatic in the European practice of war—a process of adjustment which was at times slow and difficult. A Muslim from Bosnia, writing not long after the battle of Keresztes (1596), lamented that the Christians, through their use of new types of hand-gun and cannon, as yet neglected by the Ottomans, had won a definite advantage over the armies of the Süllin (Thaloccy, *Staatsarchiv*, 35, 1514; Garstin de Tassy, in *J.A.*, IV (1824), 281; cf. Salvethog Balagâç, *Nisam ul Aclom*, 13; British Museum MS. Harleian 5490, 350v). None the less, as the appearance of new, or the more frequent use of hitherto unusual terms in the Turkish chronicles and documents will make clear, the Ottomans did in fact assimilate to a large degree the latest devices and techniques elaborated in Europe during this time (Boudah, in *RSO*, xx (1941-1943), 303 (*rapna topur*, i.e., guns firing a form of grape-shot; cf. also Hâdîdî Khâlîla, *Fedâike*, I, 34 and II, 245, 317, 319, 321; Süldâr, I, 596, 598 (*miskât*); Pelevî, II, 109 (cf. Na'mâ, I, 164; muskets which fired shot 15-20 dirhems in weight); Ewilyâ Celâbi, vii, 179 (*muşkal tüfekleri* with shot weighing 40-50 dirhems, and *bul İnkeler*) and viii, 398, 410, 415, 416, 417 (*baddûlha nam müşkal*); İnalç, in *Türk Veshâli*, III (1943), 377 (*ette tabanula tüfeki*); Uzunçarsılı, *Kapulu Ocakları*, II, 8, note 2 (*altu tüfenkleri*); Pelevî, II, 212-213 (cf. Na'mâ, I, 190); an account of how an *aghâdî top*, i.e., a petard, was made). Further evidence can be found in the Western sources (cf. Alberi, ser. 3, II, 432 (*archibuzi*); Camillo, II, 307, in regard to the arquebus; but it is said that the Ottomans had not yet adopted the pistol and 404 (the increasing use of the arquebus in the Ottoman fleet); Barozzi and Berchet, I, 265 (the *spahi di paga*, during the Hungarian war of 1593-1606, had begun to arm themselves with the arquebus and the *terranella*, i.e., a short-barrelled arquebus) and II, 16 and 158; Rycant, 349 (the Sipahis of the Porte made use of pistols and carbines, but had no great esteem for fire-arms); Marsigli, Pt. II, chapt. viii, 15 and 16; the Ottomans learned new methods from the Christians in the Cretan War (1645-1669); the Janissaries and most of the Ottoman horsemen carried pistols). It was in the time of the Köprülü viziers that this gradual transformation attained its full effect. Not well qualified to judge the Scheitler, Montecucoli and Marsigli, describe in much detail, and often with approval, the weapons employed by the Ottomans, noting the excellence, for example, of their mortars (Scheitler, 75), their muskets (Montecucoli, III, chapt. xiv) and their mines, in the construction of which the Armenian *laghimdilar* had a pre-eminent rôle (Marsigli, Pt. II, chapt. xi, 37 ff.; cf. also

Levinus Warnerus, 69, 101 and Ewilyâ Celâbi, I, 515 ff.). Montecucoli (II, chaps. xxx and xxxi) observes, however, that the Ottoman artillery, although of notable effect when well served, consumed large quantities of munitions and was cumbersome to handle and transport, and that, in respect of the mobility and practical efficiency of their guns, the Christians had achieved an undoubted advantage over their Muslim foes.

The Ottomans failed in the end to keep pace with the developments which occurred in Europe. Their methods, with regard to fire-arms in general, seem to have been, during most of the 18th century, but little in advance of the techniques current in the time of the first Köprülü viziers (cf. de Warnücy, 34-35, 40-41, 52, 70, 75, 91-94, 105. This author states [op. cit., 94] that in 1739 the Ottomans, both to accept good advice, persisted in conducting their siege of Belgrade "à leur ancienne mode"). There were indeed attempts at reform, e.g., by Khum-baradî Ahmed Paşa (i.e., the Comte de Bonneval; cf. Uzunçarsılı, *Kapulu Ocakları*, II, 118 ff., and 122 ff., also British Museum MS. Or. 1131 (*Ta'vîh-i Subh*), 68v-69v), by the Baron de Tott (Uzunçarsılı, op. cit., 40, 56, 67, de Tott, *Mémoires*, II, Pt. III, *passim*), and by Khâdîl Hamîd Paşa (Ahmed Djewdet, II, 57 ff., also *ibid.*, II, 230-240; Uzunçarsılı, *Kapulu Ocakları*, II, 67-68, 91-93, 120, 125-127 and also in *Türkiyat Mecmuası*, v (1935), 225 ff. and 233 ff.), but their efforts had only a limited success. The reign of Selim III (1789-1807) witnessed, however, the introduction of radical measures designed to modernise the Western line the armed forces of the Ottoman state (cf. Enver Ziya Karal, 43 ff., and especially 45-49, 59-63 and 63-71). Ottoman fire-arms, considered as a whole, now begin to lose those features which had given them hitherto a distinctive character, their subsequent evolution becoming more and more identified with the general course of technical advance and improvement made in Europe. It will suffice to note here that the reforms carried out in the first half of the 19th century led to the emergence, within the Ottoman army, of an efficient and well equipped corps of artilleryists able to sustain a not unfavourable comparison with its European rivals (cf. *Unser Tage*, Heft XXXVI (1862), 580 and 586 ff.).

#### V. THE SAFAWIDS

A consideration of the use of firearms in Persia under the Safawids falls under two heads: artillery (generic name, *tûp*), and hand-guns; the latter, used by both cavalry and infantry, comprised arquebuses, muskets and carbines, all of which were termed, without differentiation, *tûpân*.

According to the traditional account of European writers, artillery was introduced into Persia during the reign of Shâh 'Abbâs I by the English soldiers of fortune Sir Anthony Sherley and his brother Sir Robert Sherley, who arrived in Kazwin in December 1598. Among Sir Anthony's party of 26 persons (Sir H. Denison Ross [ed.], *Sir Anthony Sherley and his Persian Adventures*, London 1935, 13 and n. 3) was "at least one cannon-founder" (Browne, iv, 105). Sir Anthony's steward, Abel Pinco, states that the Persians at that time had no artillery at all (Denison Ross, 163), but his interpreter, Angelo, asserts that Shâh 'Abbâs "has some cannon, having captured many pieces from the Tartars; moreover there is no lack of masters to manufacture new ones, these masters have been sent against the Turk and have come to serve the King of Persia" (Denison Ross, 29). Purchas, writing in 1624, claims that such progress was made under the guidance of the Sherley brothers that "the prevailing Persian hath learned Sherleian arts of war, and he which before knew not the use of ordinance, has now 500 pieces of brass" (Denison Ross, 21).

There is abundant evidence, however, in both the

European and the Persian sources, that the Persians were familiar with the use of artillery long before the time of 'Abbâs I. The Venetian ambassador d'Alessandri, who arrived in Persia in 1575, states that the Ottoman prince Bâyezid, who sought refuge with Shâh Tahmasp in 966/1559, brought with him thirty pieces of artillery (*A Narrative of Italian Travels in Persia in the 15th and 16th centuries*, London 1873, 228). Herbert (*A Relation of Some Years Travels etc.*, London 1634, 298) states that the Persians "got the use of cannon from the Van quired Portugal", and Figueroa states that the Persian artillery was manipulated by Europeans "and particularly by the Portuguese" (*Tadhkirat al-Mulûk*, 33). We know that in 955/1548 the Portuguese furnished Tahmasp with 10,000 men and 20 cannon at the time of the Ottoman sultan Sulaymân's second invasion of Persia (*A Chronicle of the Carnegies*, I, 29). Direct evidence that artillery was used by the Persian army even earlier than this is found in the contemporary Persian chronicle *Akân al-Tawârîkh* (ed. C. N. Seddon, *Arak 1937*). In the Safawid army which laid siege to Dâmghân in 935/1528-9 there was a certain *tûpân* (i.e., "mortar") [of the craft of the *shâhshâh* the great (1602)]. In a pitched battle with the Ôzbeks near Mashhad, later the same year, Tahmasp stationed in front of his army the wagons containing the *dârhan* (probably a type of light cannon, cf. the Mamlûk term *dârhan*; see D. Ayalon, *Guns powder and Firearms in the Mamlûk Kingdom*, London 1956, 127, n. 220) and (*tûpân*) *farangî* (AT, 224); the gunners and musketeers (*tûpân* and *tûpân*) were, however, unable to use their guns because the Ôzbeks did not approach from the front (AT, 217). In 945/1538-9 the besieging Safawid forces destroyed the towers (*burgî*) of the fort of Bîkrîd in Shîrwân by artillery fire (AT, 287). In 946/1539-40 we hear for the first time of a *tûpân-bâgh* (commander-in-chief of artillery), in an action against Amîr Kûshid, the rebel governor of Astîk (AT, 291). From this time onwards artillery was frequently used by the Safawids in siege warfare, for instance at Gulistân and Darband (954/1547-8) (AT, 321-2). At the siege of Kîzh near Shâkhi in 958/1551-2 the Safawids used "Frankish cannon" (*tûpân farangî*), and in addition a type of cannon called *bîldîg* (cf. P. Horn, *Das Heer- und Kriegswesen der Osmanen*, Leipzig, 1894, 17), and mortars (*hâshîh*), which are mentioned for the first time as the towers of the fort were destroyed after twenty days' bombardment (AT, 350).

It is clear, therefore, that the claim that the Sherleys introduced artillery into Persia is entirely without foundation. In fact, artillery was in regular use at least as early as 935/1528-9, that is, within a few years of the accession of Shâh Tahmasp, and fifteen years after the Safawid defeat at Căldîrân [q.v.], a defeat for which the Ottoman artillery was largely responsible. It must be emphasised, however, that even before Căldîrân the Safawids were familiar with the use of artillery, and that consequently the Safawid lack of artillery at Căldîrân can only be attributed to a deliberate policy not to develop the use of firearms in the Persian army. The Persians had an innate dislike of firearms, the use of which they considered unmanly and cowardly (Nasr Allâh Falsafi, *Qizâs-i Căldîrân, in Majallâ-yi Dāneshkhā-yi Adabiyat-i Tūhrān*, 1/5, 1953-4, 93), and in particular they disliked artillery, because it hampered the swift manoeuvres of their cavalry (*Tadhkirat al-Mulûk*, 33). It is remarkable that, although we have frequent instances of the use of artillery in siege

warfare, little attempt seems to have been made to emulate the Ottomans in the use of artillery in the field. At the battle of Maghadh in 935/1528-9 (see above), the one occasion on which the sources specifically record the use of artillery in the field by Tahmasp, its immobility rendered it ineffective, and we hear no more of field artillery until the time of Shâh 'Abbâs I. Even under the latter, however, the use of artillery was still mainly confined to siege warfare (Nasr Allâh Falsafi, *Zindaghi-yi Shâh 'Abbâs-i Avn*, 6, Tehran 1314 solar/1935, 490).

It seems that the use of artillery, as in much else, the Safawids were the heirs of the Ak Koyunlu. Long before the establishment of the Safawid state, the Ak Koyunlu rulers of Diyar Bakr and Âdharbâjdân had sought to equip their armies with artillery: the Venetians sent Uzun Hasan (d. 852/1478) "100 artillerymen of experience and capacity, who were immediately sent on to Persia, for in the matter of their artillery the Persian armies suffered greatly from a paucity of cannon, while on the other hand the Turkish armies in Asia were very well equipped in this arm, and they could effect much damage in their attack" (*Dûn Jan of Persia*, ed. trans. G. Le Strange, London 1926, 98). When a Safawid force of 10,000 men under Muhammad Beg Ustâldî had died to Him Kayis in Diyar Bakr about the year 913/1507-8, they made use of "a mortar of bronze, of four spans, which they brought from Mirdin (Mardin) . . . . This mortar was cast in that country at the time of Jacob Sulayn (Ya'qûb Sultân Ak Koyunlu, d. 896/1490), and by his orders . . . . and Castagliola (Muhammad Beg Ustâldî) also had another larger one cast by a young Armenian, who cast it in the Turkish manner—all in one piece. The breech was half the length of the whole piece, and the mortar was five spans in bore at the muzzle" (*A Narrative of Italian Travels in Persia*, 133). About the same time (probably in 912/1506-7) Isma'îl sent a force of 10,000 men under Bayram Beg (Karamallî?) to lay siege to Wan. Bayram Beg, "having two moderate-sized cannons in his camp, began to batter the castle; but they were able to do no harm, as the walls were too strong and the gunners too little skilled". After besieging the castle for three months, however, the artillerymen succeeded in destroying the source of the defenders' water supply, and the castle was thus at their mercy" (*A Narrative of Italian Travels in Persia*, 161-3). In 916/1510 Isma'îl is said to have captured four cannons from the Ôzbeks after his great victory at Marv (Djamil Kuzânî, *Tadhkirat al-Nizâmî-yi Irân*, vol. I, Tehran 1315 solar/1936, 372; no authority is quoted for this statement). It seems, therefore, from the evidence available, that although the Safawids used cannon in siege warfare during the first decade of the reign of Isma'îl I, the number of guns available was small, and the gunners were as yet inexperienced.

Sir Anthony Sherley has also been given the credit for the formation of a corps of musketeers by Shâh 'Abbâs I. In a letter dated 22 April 1619, the traveller Pietro della Valle says that the corps was created by Shâh 'Abbâs "a few years ago" (see the advice of Sir Anthony Sherley (*Tadhkirat al-Mulûk*, 33). Sir Anthony's interpreter, Angelo, however, stated in Rome on 28 November 1599 that Shâh 'Abbâs could provide horses for 100,000 men, who were armed with bows, arrows and scimitars, and that in addition he had 50,000 arquebuses; "at one time the King did not use arquebuses, but now he delights in them" (Denison Ross, 29). Sir Anthony's party left Isfahan about the beginning

of May 1599 (see Denison Ross, 22), and it seems unlikely that a corps of 50,000 men could have been organised during the five months which Sir Anthony spent in the Persian capital. Of the various members of Sir Anthony's party who have left a record of their travels, not one claims that Sir Anthony was responsible for the formation of this corps, and Sir Anthony himself, in his own account of his journey to Persia, states (with reference to Shâh 'Abbâs's victory over the Ôzbeks in Khurâshân on 9 Mûlarram 1007/12 August 1598) that "thirty thousand men the King took with him for that war, twelve thousand Harquebusiers which bare long pieces, half a foot longer than our muskets, slightly made . . . . which they use well and certainly" (*Purchas His Pilgrimes*, vol. London 1905, 409-10).

Apart from Sir Anthony's own testimony to the existence of a large and efficient body of musketeers in the Persian army before his arrival in Persia, there is conclusive evidence, again in both the European and the Persian sources, that Persian troops were equipped with hand-guns and skilled in their use long before the time of 'Abbâs I. One of Sir Anthony's companions, Munwattar, explicitly states that the Persians were already "very expert in their pieces or muskets; for although there are some which have written now of late that they had not the use of pieces until our coming into the country, this much must I write to their praise, that I did never see better barrels of muskets than I did see there; and the King hath, hard by his court at Asfahane, above two hundred men at work, only making of pieces, bows and arrows, swords and targets" (Denison Ross, 222). Even earlier (c. 1571) is the valuable account of d'Alessandri: "they use for arms swords, lances, arquebuses, which all the soldiers can use; their arms also are superior and better tempered than those of any other nation. The barrels of the arquebuses are generally six spans long (*A Chronicle of the Carnegies in Persia*, London 1939, I, 33, gives "7 palms" = 1.75 m.); incidentally this version of the text contains an obvious mistranslation, and carry a ball a little less than three ounces in weight. They use them with such facility, that it does not hinder them drawing their bows nor handling their swords, keeping the latter hung at their saddle-bow, till occasion requires them. The arquebus then is put away behind the back, so that one weapon does not impede the use of another" (*A Narrative of Italian Travels in Persia*, 227). Herbert (*op. cit.*, 298) states that the Persians had used muskets "since the Portugals assisted King Tahamas with some Christian auxiliaries to fight the Turk (probably in 935/1528) so as to . . . in 1627 they are become very good shot". In the contemporary Persian chronicle *Akân al-Tawârîkh*, however, there is direct evidence that hand-guns (*tûpân*) were in use in the Persian army even before the death of Isma'îl I: in 927/1520-1 a detachment of the Safawid garrison at Harât drove off the troops of 'Ubayd Shâh Ôzbek with arrows and hand-guns (*fir u tufang*) (AT, 172). This is the first reference to hand-guns in this chronicle, and from then on they are mentioned frequently. In 930/1523-4, the year of Shâh Isma'îl's death and Shâh Tahmasp's accession, infantry armed with hand-guns (*fir-yadagân-i tufang-andâ*) constituted part of the Safawid garrison at Harât, and reference is made to two successful actions against the Ôzbeks in which hand-guns were employed (AT, 186). In 934/1527-8, when Harât was besieged for four months by the Ôzbeks, the Ôzbek *amir al-*

amār Yārī Beg was killed by a shot fired from a hand-gun by one of the defenders (AT, 206). In 935/1530-9 Tahnāp himself led an army to Khurāsān against the Ōrghs, and laid siege to Dūghūh; his forces included a group of Rīmīn *infānqīn* (AT, 212). A few months later, the Ōzbeqs laid siege to Mashhad; musketeers (*infānqīyān*) formed part of the Safawid garrison (AT, 221). While the *Ahsan al-Tawārīkh* thus affords positive evidence of the use of muskets in the Persian army as early as 927/1520-4, there is a strong indication in *A Narrative of Italian Travels in Persia* that they were in fact in use even before the battle of Chaldīrān. In the description of the siege of Hīm Kayfā by Safawid forces about the year 913/1507-8, there is a reference to "guns" which, in the context, can only mean "hand-guns", and we are also told that the defenders possessed three or four muskets of the shape of "Asseni", i.e., of *Ṣāḡṣani* or Persian design; these muskets had a small barred noel, with the aid of "a contrivance locked on to the stock about the size of a good arquebuse", had a good range (*op. cit.*, 153).

It is clear, therefore, that the claim that the Sherleys initiated the formation of a corps of musketeers, if it has any historical foundation at all, can only be true in the sense that Shāh 'Abbās was the first to create a regular corps of musketeers, which formed part of a standing army paid from the *khizāna* revenue, as opposed to the units in existence under Isma'īl I and Tahnāp, which, like the rest of the Persian army at that time, were probably raised on a tribal basis and paid from the revenue of the *diwān-i mamālīk*. There is no doubt, however, that the practical advice of the Sherleys was of great benefit to Shāh 'Abbās, who held Sir Robert Sherley in such esteem that, after Sir Anthony's departure, he appointed him "Master General against the Turks" (G. N. Curzon, *Persia and the Persian Question*, London 1892, I, 574). In addition to the corps of musketeers (*infānqīyān*), 12,000 strong (Chardin, *Voyages du Chevalier Chardin en Perse*, ed. Landis, Paris 1811, v, 305), who were intended to be infantry but were gradually provided with horses, Shāh 'Abbās created two other corps to form part of the new standing army, namely, the artillery (*shāpīyān*), also 12,000 strong (Chardin, v, 312-3), and the "slaves" (*khālār*, *ghulāmīn-i khizāna-yi shāhī*), a cavalry regiment recruited from Georgia and Circassia, armed with muskets, and numbering 10-15,000 (*Tadhkirat al-Mulūk*, 31). The Safawid army was at its strongest under Shāh 'Abbās I; its numbers declined under his successor Saif (d. 1052/1642) and were reduced still further by 'Abbās II (d. 1077/1666), who took the extraordinary step of abolishing the corps of artillery: when the 1697-1698 Russo-Persian war broke out in 1655, no successor was appointed (Chardin, v, 312-313), and artillery does not seem to have reappeared on the scene until the reign of Shāh Sultān Husayn (1705-1735/1694-1722) (*Tadhkirat al-Mulūk*, 33). At the battle of Gulnāhād against the Afghāns (8 March 1722), the Persians had 24 cannon, under the command of the *shāpī-bāgh* Amād Khān and under the supervision of a French master gunner named Philippe Colombe (L. Lockhart, *The Fall of the Safawid dynasty and the Afghan Occupation of Persia*, London 1958, 135, who quotes Krukowski's scathing remarks on the incompetence of the *shāpī-bāgh*); the artillery was overrun by the Afghān advance, and both the *shāpī-bāgh* and Philippe Colombe lost their lives (*ibid.*, 142). It is not too

much to say that the Safawids never really made any effective use of artillery in the field.

#### VI. — INDIA

Naphtha (*naff*) was used by the Muslims in India by Muḥammad b. Kāsim in 93/711 against Rājā Dhārī. *Tir-i āshīn* (fiery-arrows) were the simplest fire missile used by the Muslim Indian rulers in the early part of the 7th/13th century. The department of *āshīn-bāz* (firerworks) was placed under the *Mīr* of *Ālāh*. Firishāh's statement that Sultān Mahmūd of Ghazna employed *tāp* "cannon" and *infānq* "muskets" against Anand Pal near Peshawar in 390/1000 is an obvious anachronism. It may, however, refer to his use of a missile carrying naphtha (*bāhrān-i naff*)—a weapon mentioned by Firishāh in another place regarding Sultān Mahmūd's campaigns in India. Saltpetre, an important ingredient of gunpowder, is commonly found in India. The word *hūsh-andūz* mentioned in the 13th century MSS., *Ādāb al-Mulūk* (f. 118 b) and *Tadhkirat al-Mulūk* (f. 30), needs a minute examination. The *Farhang-i Sharaf-nāma-i Ahmad Munyārī* (compiled in 875/1470) gives its meaning as: "a perforator, or an instrument for throwing stones or a *ghā* (ball) projected by the expansive force of combustible substances". Stein-guns explains it as a cannon or cannon ball. According to the *Bāhr-i 'Adām*, it is an instrument of war worked with gunpowder. From this it would seem that a machine which discharged balls by some explosive force was used in India by 628/1230. *Sang-i Maghrībī* "Western stone", mentioned by both Baranī and Amir Khosraw as being used under 'Alāh al-Dīn Khiljī (693-712/1296-1316) can not be taken as denoting "gun". This new implement was borrowed from Spain and North Africa—countries which were called in Arabic "the West". Generally the besiegers employed this machine to bombard a fort. How the stones were thrown is not clearly stated, but this much is certain, that the stone balls were discharged by the force generated by gunpowder.

It is very difficult to discover the real nature of fire-arms used in the 7th/13th or the beginning of the 8th/14th century in India, as the term *shāh-bāz* (firerworks) is applied to pyrotechnic displays as well to artillery, thus rendering the meaning of the passages ambiguous. However *tāp* and *infānq* are mentioned as being in frequent use from the middle of the 8th/14th century. When Sultān Mahmūd fought against Thāir at Delhi in 800/1398, the former's elephants carried howdahs in which were *ra'd-andūz* "throwers of grenades" and *lakhū-andūz* "throwers of rockets". Artillery was improved under the Lodīs (855-932/1451-1526). Bīrām Lodi employed *tāp* and *darbān* "mortars" against Bābur at the battle of Pānīpat in 932/1526.

In the latter half of the 15th/16th and beginning of the 9th/15th century, the use of cannon became very common in the Deccan. The chief reason was that the Deccan States were in contact by sea with Arabia, Iran and Turkey, from which they received artillery and engineers. Firishāh records that Sultān Mahmūd Shāh Bahmānī installed a firearms factory in 797/1395; he was the first of the Muslim rulers of the Deccan to do so. Sultān Ḥusayn Bahmānī, with the help of his Turkish gunners sank with his guns a large Portuguese ship at Dū in 918/1509. Bahādūr Shāh of Guljārāt excelled his contemporaries in artillery; his master gunner, Rūm Khān, cast many cannon. One of the reasons for Bahādūr's success against the Portuguese was his superior

artillery. All these facts show that cannon were used in India long before Bābur employed them at Pānīpat in 932/1526.

The Mughals paid much attention to the art of artillery. Bābur had a limited number of heavy guns at Pānīpat. He uses the words *dāgh*, *firīng* and *darbān*, but does not mention their number. He used his artillery "chained together according to the custom of Rīm with twisted bull-hides". Bābur's gun could be discharged eight to sixteen times a day only and after improvement could cover a range of rion strikes. Rockets became common in India after 927/1520. The bands of Akbar's (963-1001/1556-1605) matchlocks were of two lengths, 66 ins. and 41 ins. They were made of rolled strips of steel with the two edges welded together. The longer of the two weapons could only be used by a man on foot. The flintlock was little known to the Mughals. The artillery was much improved, and was more numerous, in Awrangzib's reign (1008-1118/1658-1707). Besides Indians, Turks, Arabs and Portuguese, the Dutch were also employed by Awrangzib. There was one Dutch artillery engineer who served Awrangzib for sixteen years and went home in 1077/1667.

Heavy field guns were used both by the Mughals and the Deccanis. The *haft gāz* in Bidār was constructed in 977/1570. It measures 7 ft. in length. The *mālāh* *maydān* "area of the battlefield" was built in 937/1530 by Burhān Nigām Shāh. The metal is an alloy of 80,427 parts of copper to 19,573 parts of tin. It weighs 400 maunds and the bore is so wide that a man can sit and move about in it easily. The weight of its iron shot is ten maunds (Akbar's scale). The *haft-a-hūdā*, used by Dārā in 1068/1658 at Sīmgarh, was made of 80% tin and weighed 25 ft. in length. During the contest for the throne between the sons of Bahādūr Shāh in 1123/1712, three large guns were removed from the fort of Lāhore, each being dragged by 250 oxen aided by five or six elephants, and it took ten days to reach the camp although it was not more than three or four miles distance.

*Tāpshāna*, *Zar*, or *tāpshāna-i Dīwanī* was light or mobile artillery. The *padmāl* or *kaṭmāl* was fired from the back of an elephant. *Shāh-nāl* or *Shāh-n* denotes the same weapon, a swivel-gun. According to Baranī, the *sambhār* was "a small field-gun of the size of a double musket". It threw a ball of two or three pounds. The *ghawshak* and *sakhā* were also small field-guns. "A single musket" consisted of about thirty-six barrels so joined as to fire simultaneously. Revolvers with four chambers were only in the possession of the nobles.

AL-BĀRŪDī, MAHMŪD SĀMī, Egyptian and statesman, born 27 Rājāb 1255/6 October 1839, died in Cairo in 1332/1904; his genealogy went back to Naṣrīz al-Aṭṭākh al-Malāk al-Aṣghar, brother of Barsbay (d. 842/1438). "Al-Bārūdī" is the nickname of a small town in the province of Lower Egypt: al-Bāhira, called Itāy al-Bārūd. He lost his father, then an official in the Donogla, at the age of seven. After completing his primary studies, he entered, in 1267/1851, the Cairo Military Training School, during the reign of the Viceroy 'Abbās I (1848-1854), and left it in 1271/1855 with the rank of *bāghdādī* (quartermaster-sergeant), at the beginning of the reign of Sa'īd I (1854-1863).

His taste for poetry developed from this time onwards; his reading and personal researches, his contacts with the men of letters and poets of the period, made him, despite his military duties in his capacity as an officer which took up most of his time, one of the leaders of the literary renaissance in Egypt. A return to the true sources of poetry, that is to say to the great poets of the *ghalābiyya* and particularly of the 'Abbāsid period, seemed to him essential; but he wished also to belong to his own epoch, and for this reason he took advantage of every opportunity to broaden his knowledge in all fields of literature, to begin with, Turkish and Persian, and later, French and English. He lived for some time in Constantinople, with the title of Secretary for Egyptian Foreign Affairs. At the time of the visit of the Viceroy Isma'īl to the Ottoman capital, he brought himself to the notice of the new viceroy who had just succeeded Sa'īd (1279/1863): al-Bārūdī thereupon joined the military establishment of the Egyptian sovereign. Promoted *tabāghhī* (battalion-commander) in Maharram 1280/July 1863, he assumed command of the Viceroyal Guard. He was a member of the military mission sent by Egypt to Camp de Chalons, in France, and thence to London. On his return in 1281/1864, he was promoted *kā'im-makīm* (lieutenant-colonel) of the 3rd regiment of the Guard and, shortly afterwards, *amīr-āḥyā* (colonel) of the 4th regiment of the same Guard.

He took part in the war in Crete in 1282/1865, and his services won him the Turkish decoration *Wīlāim 'Uḡmānī*, 4th class. Isma'īl, who since 1283/1866 had been Khedive, kept al-Bārūdī at the head of his Guard, and later appointed him private secretary and sent him to Constantinople, during the Serbo-Bulgarian war, to perform various diplomatic missions. At the time of the Russian war in 1294/1877, al-Bārūdī proved himself a brilliant and courageous officer, and as a result was promoted *amīr al-luḍ* (brigadier-general). From 1296/1879 to 1282, al-Bārūdī busied himself with the reorganization of the Egyptian General Staff, under the Khedive Tawfīk 'Abd al-Wahhīd, and since 1296/1879, meanwhile, appointed Minister of *Wafā*, he tried to clear up the position regarding property in mortmain, and used the sums thus recovered for the construction of public works: mosques and dwellings; he began the construction of the Khedivial Library, and proposed the creation of a Museum of the Fine Arts.

Promoted *farā* (lieutenant-general), and decorated with the *Nigām Madjīdī*, he became, in 1298/1881, Minister of War as well as Minister of *Wafā*, and thus found himself constrained to participate in the nationalist movement then in its infancy, and to intervene in the serious conflict between the locally recruited Egyptian army and the Turko-Circassian officers. From then on, al-Bārūdī found

himself involved, either as a spectator or as an active participant, in what is known as *Thawrat 'Arabīl Pasha* or *al-Thawra al-'Arabiyya*, "the Revolt of 'Arabīl Pasha" (the name is also pronounced 'Urbīl). Summary of events: fall of the minister Sharif Pasha; formation of al-Bārānī's Cabinet; proclamation of the Constitution of 1299/1882; bombardment of Alexandria by the British fleet; landing of the British army; defeat of 'Arabīl Pasha at Tell-al-Kebir (near Cairo); occupation of Egypt by Britain; exile of the leaders or promoters of the "Revolt", among whom were al-Bārānī, 'Arabīl Pasha and Shāykh 'Abduh.

For seventeen years, from the end of 1882 until the beginning of 1900, al-Bārānī was obliged to reside in the island of Ceylon. He profited by his enforced leisure to study English, to devote himself to teaching his compatriots and co-religionists, and above all to take up again his favourite studies in Arabic poetry and to give his inspiration free rein to compose the major poems of his diwan.

When he returned to Egypt after having been pardoned by the Decree of 18 Muḥarram 1318/18 May 1900, he had amassed numerous poems selected with discrimination from the collections and *diwans* of the 'Abbasid period, and which, arranged in categories, constituted the most representative anthology of *muṣallaḥ* or *muḥallaḥ* ("modern") poets. These categories are as follows: 1. *Adab* (poetry); 2. *Adab* (poetry); 3. *Rithā'* (threnody); 4. *Sijda* (descriptive); 5. *Nasib* (erotic); 6. *Hudūd* (pastoral); 7. *Zuhd* (renunciation of the world). The poets quoted, arranged in chronological order, are thirty in number, and the total verses quoted under each of the above headings are respectively: 1,697, 24,185, 3,400, 3,593, 4,616, 1,420 and 473, making a grand total of 30,593 verses. The number of verses of the *muḥallaḥ* category is particularly remarkable. More important, it seems to me, is the importance attributed to certain poets. Ibn al-Rūmī and al-Buḥārī lead the field with 3,732 and 3,597 verses. Two poets have between 2,500 and 3,000 verses: Sibī Ibn al-Ta'wīdī and al-Sharīf al-Raḍī; four between 2,000 and 2,500 verses: al-Arḥūṣī, Abū Tammām, al-Mutanabbī and al-Sūrī al-Raḍī; al-Mutanabbī is therefore placed seventh; two between 1,500 and 2,000 verses: Ibn Nūbātā al-Mirī and Miḥyār al-Daylamī; five, between 1,000 and 1,500 verses: al-Aḥwālī, al-Ghazālī, Ibn Ḥayyūb, Abū T-ʿAlī al-Maʿarrī, Surraḍī; eight, between 500 and 1,000 verses: al-Tughhrāʾī, Abū Nuwās, ʿUmar al-Yamanī, al-Tahmānī, Ibn Hishām al-Andalusī, Ibn Sīnā al-Khāḍirī, Ibn al-Muʿtazz and Ibn al-Jayyārī; and, finally, seven, between 50 and 500 verses: Abū Fīrās al-Hamḍānī, Muslim b. al-Walīd, Abū T-ʿAdhīya, Ibn ʿUnayn, al-ʿAbbās b. al-Aḥnaf, Baḥshār b. Hurd and Ibn al-Zayyāt.

The *Mukhlḥat* of al-Bārānī did not appear in any bookseller's before the death of the author, but were published in Cairo in four volumes, two in 1327/1909 and two in 1329/1911, through the efforts of the scholar Yāqūt al-Mursī.

Al-Bārānī's *diwan*, which similarly did not appear until after his death, was first published, thanks to the scholar and commentator Maḥmūd al-Imām al-Manūfī, in three volumes in two poems with rhymes *ḥamza* to *lām*, n.d., 536 and 536 pages, and was published a second time in 1910 with a preface by M. H. Haykal and a commentary by ʿAlī al-Djārim and Muḥammad Shāfi Maʿrūf; it reveals the same eclecticism. Occasional pieces are numerous; accurate descriptions of places enable one to follow

the poet-statesman through its various stages; some of the poems composed at Colombo (Ceylon) are particularly moving. It is not possible, within the limits of this article, to go into the detail which would be required by a more profound critical appreciation of the subject matter, not to mention the form, of his poems. Let it suffice to say that al-Bārānī attained an undisputed mastery of poetic language in its purest classical form; vocabulary, figures of speech, stylistic devices, held no secrets for him. He did not seek to make innovations in the pattern of the *bayḍa* or in the poetic metres (there is a rare exception in the *diwan*, 1, 61-4), and remained faithful to his models. His admiration for the passed led him to imitate several famous poems, with resounding success. For example, his imitation of the *Burda* of al-Dūsī, using the same metre (*baḥr*) and the same rhyme (*ma*), under the title of *Kaḥf al-Ḥumma fi Madh Sayyid al-ʿUmma* (Cairo 1327/1909, fvo, 48 pages, 447 verses, whereas the *Burda* only contains 172). The themes used in his *diwan*, however, are very modern and, in this respect, al-Bārānī is justly considered to be one of the most effective pioneers of the renaissance of contemporary Arabic poetry.

**Bibliography:** The reader is referred to the very full references given by J. A. Dagier, in his *Madāʾir Dīwan al-Bārānī* (Cairo 1900-1901, Beirut 1955, 139-152). To these should be added, with regard to the *Thawra 'Arabiyya*, the following two works which give all necessary documentation: M. Sabry, *La genèse de l'esprit national égyptien* (1863-1882), Paris 1924, and Osman Amin, *Muḥammad 'Abduh, Essai sur ses idées philosophiques et religieuses*, S 1344—Cf. also the notice in Broekmans, S 111, 7-8.

**BARĀDĪQURD** (or BURĀDĪQURD), a town in the Vith *sudā* (Luristan) of Persia, situated on the road connecting Hamadān with Ahwāz via Khurramābād; it is the seat of a *fārmāndā* (deputy governor). The population is 47,000.

The town stands on an extensive and well-cultivated plain that is bounded on the west by the Zagros mountains. The climate is temperate in summer, but cold in winter. There are some 900 shops most of which are in the two large bazars. The Masjid-i Dīlāmī (cathedral mosque) dates from the Mongol period.

It was at Barādīqurd that the Saljuq prince Barkiyūk (d. 1145/1109) defeated the forces of his mother Turkān Khātūn, who, after her husband Malikshāh's death, had espoused the cause of her younger son Mahmūd.

**AL-BĀRĀNĪ**, SULAYMĀN, contemporary Tripolitanian ḥadīth scholar and politician, who inspired the Arabs of his country in their struggle against Italy. He belonged to an old and noble Berber family of the Djabal Naḥḥa (with branches at Djādo, Kābāb and Djerba, where there is a private *barānīya* library) and was the son of ʿAbd Allāh al-Bārānī, the theologian, jurist and poet, who taught at the *zāwiya* of al-Baḥbāḥiyya, near Yefren. Sulaymān was suspected by the Ottoman govern-

ment of nurturing separatist ideas and plotting the founding of an Ḥadīth imāmate. Proceedings were instituted against him, but the sentences pronounced were not fully executed because of the disturbances which they provoked, especially in the Djabal. Finally he was granted an amnesty, but upon the Ottoman authorities requesting him to present himself in Constantinople, he fled to Cairo.

A man of unusual culture (having studied at Tunis, al-Azhar and in the Mzab), he founded a printing office, which had the outstanding merit of disseminating several old ḥadīth works. He also founded a newspaper, which however only enjoyed an ephemeral life, its circulation in the Ottoman provinces, Tunisia and Algeria, being prohibited.

After the promulgation in Turkey of the constitution following the Young Turks' revolution, Sulaymān al-Bārānī was elected deputy in the *lumi* of the Djabal and called to Constantinople; thereupon he learnt Turkish in two months of intense study.

When Italy's designs on Libya became evident, al-Bārānī endeavored to obtain consignments of arms from his government. After the Italian landing at Tripoli (11th October 1911), he was one of the most active promoters of the Arab resistance, which made Turkey decide to stand firm, and which continued even after the signing of the Tuno-Italian Peace Treaty at Ouchy near Lausanne, 18th October 1912. In the western Djabal sector, where al-Bārānī was conducting operations and was aiming at the formation of a Berber amirate, the issue was decided at the battle of al-Aḥbāb (al-Aḥbāb) on the 23rd March 1913. Upon his return to Constantinople, al-Bārānī was appointed senator, receiving the title of pasha.

When Turkey entered the war on the side of the Central Powers (1914), al-Bārānī was sent to Solhūm (October 1914) with the brother of Enver Pasha, Nūrī Bey, to induce the leader of the Sanūdā, Ahmād al-Sharīf, to attack the British from the West. His mission failed; the plot to force the Sanūdā's hand was discovered and al-Bārānī arrested. Nevertheless he managed to escape (January 1915). He resumed his work as an opponent of Italy, when the latter entered the war. However it was not until the end of 1916, when Turkey had appointed him Governor-General and Commander of Tripoli and its dependencies, that he landed at Misurata from a submarine. The Italians were in a precarious situation, having entrenched themselves at Tripoli, Homs (al-Khums) and Zaara, and the Arabs also were in a state of complete confusion. Their leaders had divergent aims and the tribes were fighting amongst themselves; al-Bārānī restored harmony. Nevertheless, he soon lost his pre-eminence; after proceeding to western Tripolitania, he was there defeated by the Italians (16th and 17th January 1917). At Khums and Zaara, since the month of January 1917, the Turks replaced him by a military man, the Nūrī Pasha referred to above. In November 1918, that is to say after the signing of the Armistice between Turkey and the Allies, the nationalists, under the influence of the Wilsonian principles, established the Tripolitanian Republic (*al-Dawla al-Tarbihiyya*) and influential in Tripolitania, to which Berber family of the Djabal Naḥḥa (with branches at Djādo, Kābāb and Djerba, where there is a private *barānīya* library) and was the son of ʿAbd Allāh al-Bārānī, the theologian, jurist and poet, who taught at the *zāwiya* of al-Baḥbāḥiyya, near Yefren. Sulaymān was suspected by the Ottoman govern-

ment of nurturing separatist ideas and plotting the founding of an Ḥadīth imāmate. When Italy's designs on Libya became evident, al-Bārānī endeavored to obtain consignments of arms from his government. After the Italian landing at Tripoli (11th October 1911), he was one of the most active promoters of the Arab resistance, which made Turkey decide to stand firm, and which continued even after the signing of the Tuno-Italian Peace Treaty at Ouchy near Lausanne, 18th October 1912. In the western Djabal sector, where al-Bārānī was conducting operations and was aiming at the formation of a Berber amirate, the issue was decided at the battle of al-Aḥbāb (al-Aḥbāb) on the 23rd March 1913. Upon his return to Constantinople, al-Bārānī was appointed senator, receiving the title of pasha.

When Turkey entered the war on the side of the Central Powers (1914), al-Bārānī was sent to Solhūm (October 1914) with the brother of Enver Pasha, Nūrī Bey, to induce the leader of the Sanūdā, Ahmād al-Sharīf, to attack the British from the West. His mission failed; the plot to force the Sanūdā's hand was discovered and al-Bārānī arrested. Nevertheless he managed to escape (January 1915). He resumed his work as an opponent of Italy, when the latter entered the war. However it was not until the end of 1916, when Turkey had appointed him Governor-General and Commander of Tripoli and its dependencies, that he landed at Misurata from a submarine. The Italians were in a precarious situation, having entrenched themselves at Tripoli, Homs (al-Khums) and Zaara, and the Arabs also were in a state of complete confusion. Their leaders had divergent aims and the tribes were fighting amongst themselves; al-Bārānī restored harmony. Nevertheless, he soon lost his pre-eminence; after proceeding to western Tripolitania, he was there defeated by the Italians (16th and 17th January 1917). At Khums and Zaara, since the month of January 1917, the Turks replaced him by a military man, the Nūrī Pasha referred to above. In November 1918, that is to say after the signing of the Armistice between Turkey and the Allies, the nationalists, under the influence of the Wilsonian principles, established the Tripolitanian Republic (*al-Dawla al-Tarbihiyya*) and influential in Tripolitania, to which Berber family of the Djabal Naḥḥa (with branches at Djādo, Kābāb and Djerba, where there is a private *barānīya* library) and was the son of ʿAbd Allāh al-Bārānī, the theologian, jurist and poet, who taught at the *zāwiya* of al-Baḥbāḥiyya, near Yefren. Sulaymān was suspected by the Ottoman govern-

ment here is the effect of a law of nature established by God.

In eschatology, the word *barzakh* is used to describe the boundary of the world of human beings, which consists of the heavens, the earth and the nether regions, and its separation from the world of pure spirits and God. See the pictures representing this conception in the *Ma'rifaṭ-nāma* of Ibrāhīm Ḥakīmī (Būlāq 1251, 1255); cf. also Carra de Vaux, *Fragmentes d'eschatologie musulmane*; K. Eklund, *Life between Death and Resurrection according to Islam*, Uppsala 1941.

The *Ṣūfī*, too, use the term in the sense of space between the material world and that of the pure spirits; hence several shades of meaning; cf. C. E. Wilson, *The Mansur*, book ii, vol. ii, note 20.

The same expression is also found in the philosophy known as "illuminating" (*al-ḥikma al-maḥmūdiyya*). It there denotes the dark substances, i.e. bodies: the *barzakh* or the body is dark by nature and only becomes light on receiving the light of the spirit. The celestial spheres are "animated" or "living" *barzakh*s, inanimate bodies on the other hand are "dead" *barzakh*s (cf. Carra de Vaux, *La Philosophie éliminative d'après Suhrawardī Maqṣūdī*, in *JA*, Jan.-Févr. 1902).

The term *barzakh* is sometimes rendered by Purgatory, on the analogy of the Christian idea of Purgatory, but this is inaccurate. It is used in the sense of "limbo". See further al-Tahāwī, *Dif. Def. Technical Terms*, s.v. (B. CARRA DE VAUX\*).

**BĀRZĀN**, a Kurdish village on the left (eastern) bank of the Great Zab river, approximately 80 km. due north of Arbil, in what was formerly the territory of the *Zakāri* tribe. *Sharaf al-Dīn Bihārī, Shihā-nāma*, i, 107, in 1005/1096, numbered it among the possessions of the Bahāddūn princes under the name of Bāzrān. Since the middle of the 13th/10th century Bāzrān has been the residence of a *Nakshbandī* *Shaykh*. The *Shaykh*s and their followers, now known as the Bāzrānī tribe, maintained a turbulent independence of Ottoman authority until, early in 1333/1915, the Mawālī authorities at Sulaymāniyya to Bāzrān, where he gathered support and rebelled against the government. He had some initial success against government forces, but was finally obliged to retire, early in 1364/1945, to Persia. He assisted at the inauguration of the Kurdish People's Republic at Mahābād on 10 Muharram 1365/15 December 1945 and was made a Field-Marshal. On the collapse of the Republic Mulla Muṣṭafā escaped to Soviet territory, while *Shaykh* Ahmad surrendered to the Irāk government.

**BARZAND**, a village and township (*dākhā*), in the district (*shahristān*) of Ardabil, county (*bakhsh*) of Garmī, lying in the mountains overlooking the plain of Mughān to the north. The name

may mean "high place". The village lies ca. 47° 40' E. long. (Greenw.) and 39° 20' N. lat.

A confusion between Barzand and Bazzandī (near Tiflis) appears in several of the mediaeval geographers (cf. Yāqūt, i, 36; *Hudūd al-'Alam*, 103). This confusion, together with a remark of Mirkhādī, 378, that Barzand was a market for Armenians, helps to explain why several geographers (e.g., Yāqūt) placed Barzand in Armenia.

We find no notice of the place before the time of Afshār (q.v.), who in 1220/835 made Barzand one of his headquarters in the campaign against Bihāk (q.v.). Several sources also relate that Afshār rebuilt Barzand after he had found it in ruins (Schwarz, 1904). Bihāk may have destroyed the town, since it was a strategic point on the main road from Ardabil north to the Mughān steppe. After the time of Afshār Barzand became a large town with a prosperous bazaar, noted for textiles. It may have suffered during the Mongol conquests, for Hamd Allāh Mustawī, Naṣhā, trans. G. Le Strange, 94, says the town was in ruins in his time (mid 8th/14th cent.). Later the area was included in the pasture land of the Shāh Sevān tribe (q.v.), and the people spoke Aghār Turkish as they do today.

At the present the township has a population (1950) of ca. 3820, and the central village is called Kālā-yi Barzand.

**BARZŪ-NĀMA**, Persian epic, attributed to Abū 'Alī 'Atā' b. Ya'qūb, known as *Atā'ī* (called "Atā' b. Ya'qūb, known as 'Atā'ī" Rādī in Blochet, *Catal. Mss. persans Bibl. Nat. Paris*, iii, 15, no. 1289). According to Ridā Kullī Khān Hādīyāt, "some people have wrongly considered these names to represent two poets. This is not so; they are the same person" (*Majma' al-Fuṣṣal*, i, 342). "Atā' was a poet in both Arabic and Persian (see his account in *Ḥikāyat-i Dīmāy al-Kāfir*) and an official in the reign of the Ghaznavid sultan Ibrāhīm (1059-1099) who, dissatisfied with him, ruined him and held him prisoner for more than eight years at Lahore. "Atā' died in 491/1098, according to Awfī (Lubāb, i, 72-75). At the end of a remarkable elegy (*marṭiyya*) his contemporary Mas'ūdī Sa'dī Salmān gave his name clearly: "as safa-i 'Atā' īn-i Ya'qūb, khaṣṣar shāh saqlān-i Sāmān" (by Ibn al-Farīdī, *Ḥikāyat al-Shams al-Shamsiyya* in this world received a new stimulus"). His principal work was the *Lay of Barzū* (*Barzū-nāma*), the longest and one of the most important epic poems based on the ancient Persian traditions in imitation of the *Book of the Kings* (*Shāh-nāma*) of Firdawsi (from which the *Barzū-nāma* in several parts is directly derived). Barzū, son of Salāh al-Dawla of Rustam, was born among the Tūrānians to a woman called Shāhūr. Persuaded by Afrāsiyāh, leader of the Tūrānians, he went to fight the Persians; at the end of protracted hostilities, Rustam recognised him and reconciled him to the Persians. Finally he died, killed traitorously in the course of a war against the Slavs, represented as demons (*djinn*) ruled over by the *djinn* Shāhīl. Nöldeke, seeing in these adventures (as J. Mohl did before him) a variant of those of the heroes Subhān and Dījānāgr, assumed that the work was one of pure invention. The episode of the Tūrānian singing-girl Sūsan, who captured the chief

Persian heroes by a trick, and had decided to send them in chains to Afrāsiyāh, when the Persian hero Farāmūz came suddenly to rescue them, is one of the most brilliant parts of the poem; it may be considered as a work of art on its own merits. Fragments of the *Barzū-nāma* (two MSS. in the Bibl. Nat. Paris, Blochet, *Catal. mss. persans*, iii, 15 and 16) were published by Turner Macan (*Shāh-nāma*, iv, 2160-220), Koezartan (*Mines de l'Orient*, v, 309), Vallers (*Chrest. Schahnam*, 87-99). Also it seems possible to attribute to 'Atā' the epic poem *Biḍān-nāma*, concerning the exploits of another Persian hero, the last line of which is: "Gā sin dāstān dīl bi-parādhān, xāy-i rāzmi Barzū kamī tikhān", "when I had freed my heart of this poem, I quickly began the Lay of Barzū" (Rien, *Catal. Persian Mss. British Mus.*, 132-133).

**BARZŪYA**, Arabic name, attested by Yāqūt, of a fortress to which modern writers, following a reference to it by Anna Comnena, prefer to apply the name Bourzey. The local people call it Kalāt Marza. The ruins of this castle, standing on the eastern slope of the Alawite massif, still dominate the marshy depression of the Ghāb. It had a troubled history from Hellenic times, when the impregnable position of Lysias was known. At the time of the Syrian expedition of the Emperor Trajan in 113/97, it passed from Hāmānīd hands into those of the Byzantines. Subsequently it was occupied by the Crusaders and, forming one of the best defences of the principality of Antioch (at which time it appears to have been the name Rochefort) was retaken by force by Salāh al-Dīn in 584/1188. From the Mamlik period it rapidly lost its importance and the chroniclers merely make passing references to it.

**al-BASĀSIRI**, Abū 'l-Harith Asad b. Murāṭfar, originally a Turkish slave, who became one of the chief military leaders at the end of the Buwayhid dynasty. He owed his *niṣba* al-Basāsiri (al-Fasāsiri) to his first master who was from Basā (Fasā) in Fars. A *mawālī* of Bahā' al-Dawla, he subsequently rose to the highest rank, though we only hear of him from the reign of Dīlāwī al-Dawla (426-435/1025-1044), in the struggles between the latter was obliged to make peace with the nephew Abū Khādir and the 'Ukayyids of al-Mawālī. During the reign of al-Malik al-Rahīm Khuraw Firuz

(440-447/1048-1055), a period of continuous troubles due to the indiscipline of the Turkish troops at Bagdhād, the struggle between Sunnis and Shī'is in the capital, the ambitions of the 'Ukayyids and Buwayhid pretenders, the depredations of the Arab and Kurdish tribes, and, finally, the intervention of the Saljūqīd sultan Toghrul Beg in the affairs of Mesopotamia, al-Basāsiri came to play a major rôle (Anbār taken from the 'Ukaylid Karwāsh, 441/1050, Bagra taken from the brother of Malik Rahīm, 444/1052, operations against the Arab and Kurdish brigands at Bawāzīl, 445/1054, assistance given to the Mazyadīd Shī'ī Dubays, who had been attacked at al-Jam'ān, the future Hilla, by the Banū Khafāgī, etc.). However in 446/1054, he was unable to stop the rebellion of the Turks in Bagdhād, followed by scenes of pillage and famine and an incursion by the troops of the 'Ukaylid of al-Mawālī, Kuraysh, to Barādān, whence they carried off the camels and horses from his stables. In November of the same year, Kuraysh took Anbar, al-Basāsiri's fief, and, breaking with the Buwayhid, pronounced the *khilāfa* in the name of Toghrul Beg.

At Bagdhād al-Basāsiri had a powerful adversary, the Caliph's vizier the *ra'īs al-ra'as* Ibn al-Muḥsin, who, foreseeing the end of the Buwayhids, had already formed a connexion with Toghrul Beg, because in 446/1054-1055, in which year the Turkish leader's quarrel with the Caliph and his entourage became effective, al-Basāsiri accused him of having summoned Toghrul's Ghuzz, who had been at Hulwān since 444/1053-3. The vizier prevented al-Basāsiri from taking action against supporters of Kuraysh who had come to Bagdhād, to which he reacted by imposing one of the vizier's boats, withdrawing the monthly pensions paid to the Caliph and the vizier, and, in March 1055, retaking Anbar by force. Upon his return to Bagdhād, he refrained from calling to pay his respects to the Caliph.

Al-Basāsiri probably already had Shī'ī leanings. In 447/1055, at the time of the Suni demonstrations in Bagdhād, extremists, doubtless at the vizier's instigation, seized a ship carrying wine destined for al-Basāsiri, who was then at Anbar, and broke the wine-jars. As the cargo belonged to a Christian, al-Basāsiri thereupon obtained a *fatwā* declaring the smashing of the jars to be illegal. Thereafter the vizier seditiously designated al-Basāsiri in the eyes of the Turks of the army, and of the Caliph al-Kā'im. He accused him of being in communication with the Fātimīd al-Mustansir, caused his house in Bagdhād to be pillaged and burnt by the Turks, and ordered the Buwayhid to send him away. Meanwhile the troops of Toghrul Beg, who had announced his intention of performing the pilgrimage and of proceeding to Syria and Egypt to dethrone the Fātimīd, arrived before Bagdhād. Al-Malik al-Rahīm again set out towards Bagdhād, whilst al-Basāsiri went to his brother-in-law, the Mazyadīd Dubays; the Turks of Bagdhād, deceived by the vizier, regretted his departure. The Caliph, his vizier, and al-Malik al-Rahīm accepted Toghrul's presence, and his name was pronounced in the *khilāfa* on Friday 15th December 1055; on the 18th, he made his solemn entry into the capital. Disorder however was not slow to arise between the inhabitants and the Ghuzz of Toghrul. Toghrul held al-Malik al-Rahīm responsible for the scenes of pillage which subsequently occurred, and had him arrested on 23rd December.

On Toghrul's orders, Dubays was obliged to break with al-Basāsiri, who proceeded to Rabba on the Euphrates. He wrote to the Fātimid Caliph Mustansir asking him to receive him in Cairo. The vizier al-Yāziri did not agree, but the Caliph responded to his request for Fātimid aid to conquer Baghdad in his name and prevent the Saljūqids from marching on Syria and Egypt; he gave him the governorship of Rabba and sent him 300,000 dinars, clothes of a like value, 500 horses, 10,000 bows, 2,000 swords, and lances and arrows.

According to the autobiography of the Fātimid missionary al-Mu'ayyad b. ʿI-Dīn al-Shīrāzī, who was apparently the instigator of the revolt and a real Fātimid plenipotentiary in the affair, al-Basāsiri was not the first to approach Mustansir; Mu'ayyad had written to him prior to Toghrul's arrival in Baghdad, though the letters did not reach him until after the Saljūqids had entered the city. It was Mu'ayyad who brought the money and supplies sent by Cairo to al-Basāsiri at Rabba as well as the Fātimid Caliph's patent of investiture.

The year 448/1056-7 was marked by intense Fātimid propaganda, attested by the numerous letters addressed by Mu'ayyad to the amirs of ʿIrāk and the ʿIjāzira to win them to the Fātimid cause. The excesses of the Ghuzz favoured his success. The *khawfa* was pronounced in the name of Mustansir at Wasit and other places in ʿIrāk, and Dubays, who had been constrained to do likewise for Toghrul, returned to the alliance with al-Basāsiri, reinforced by the Arab nomads and the Baghdadī Turks who had been expelled by Toghrul, marched in Dubays's company with a considerable body of troops on the region of Sindjār, where he inflicted a bloody defeat on the Saljūqid troops commanded by Toghrul's cousin Kutlumush and his ally Kuraysh of al-Mawāl. Kutlumush fled to Aḡharbaydān; Kuraysh was wounded and captured by Shāwīl 448/January 1057 and thereupon made common cause with al-Basāsiri, who proceeded to al-Mawāl where the Fātimid Caliph was acknowledged.

Toghrul's reaction was not long delayed. He left Baghdad on the 10 Dhu ʿl-Kaʿda 448/10 January 1057, and, after receiving reinforcements from Persia, marched on al-Mawāl, took the city and then proceeded towards Wasit. When Kuraysh rallied to him, whilst al-Basāsiri returned to Rabba with the Baghdadī Turks and a group of ʿUkayl. However, after the arrival of the sultan's brother, Ibrahim Ināl, who heartily disliked the Arabs, Kuraysh rejoined al-Basāsiri, whilst Dubays regained Dīnawar via Rabba. After wreaking his vengeance on Sindjār for the affair of 448 and leaving Ināl at al-Mawāl, the sultan returned to Baghdad, where he was solemnly received by the Caliph, who conferred on him the title of King of the West and the East (26 Dhu ʿl-Kaʿda 449/4 January 1058).

The sultan's brother, Ibrahim Ināl, however, who coveted the sultanate, got into communication with al-Basāsiri and sent a messenger to the missionary Mu'ayyad, who had come back to Aleppo, with a view to obtaining Fātimid support in wresting the sultanate from his brother, promising that the *khawfa* should be pronounced in the name of the Fātimids. He abandoned al-Mawāl, to which al-Basāsiri and Kuraysh returned. After the taking of the ʿIjāzira, which held out for four months, al-Basāsiri returned to Rabba. However, Toghrul reconquered al-Mawāl and the ʿIjāzira, and, whilst, according to Mu'ayyad's autobiography, al-Basāsiri, undoubtedly alarmed, directed his steps

towards Damascus. Then it was that Ināl rose in rebellion and set out for the ʿIjāzira. Toghrul left Nisibin on the 15 Ramaḍān 450/5 November 1058 and set off in his pursuit.

Now that ʿIrāk was free of the Saljūqids for a time, there was nothing to oppose al-Basāsiri's return and counter-offensive. News was soon received of his arrival at Hit and then at Anḥir. The Caliph Kāʾim hesitated as to the attitude to adopt and, in spite of the proposal of the Maryādī Dubays, who offered him a refuge, stayed on in Baghdad, counting on being able to resist. On 8 Dhu ʿl-Kaʿda/27 December 1058, al-Basāsiri entered western Baghdad with 400 poorly equipped cavalrymen accompanied by Kuraysh at the head of a further (two hundred). The following Friday, 7 January 1059, the Shīʿi *adīn* was heard and the *khawfa* was recited in the name of the Fātimids at the Mosque of Manṣūr. Then, re-establishing the bridge of boats, al-Basāsiri crossed the river and, on the 8th of January, the name of the Caliph Mustansir was proclaimed at the Rusūfa Mosque. The Caliph had his palace fortified, but al-Basāsiri not only had the aid of the Ghuzz on his right side, but also the large numbers of Sunnis impelled by hatred of the Ghuzz and the lure of pillage. After defeating a group of Ḥashimites and palace eunuchs urged on by the vizier, near the racetrack, al-Basāsiri attacked the palace on the 8 Dhu ʿl-Hijja/19 January 1059, entering the *hārīm* by the Bāb al-Nūbāt. The Caliph, seeing that the game was lost, placed himself and the vizier under the protection of Kuraysh, who got them away, whilst the palace was sacked. Al-Basāsiri appropriated the Caliph's insignia, *mindū* (turban), *ridāʾ* (cloak) and *ghubbā* (lattice screen), which were sent to Cairo as trophies. He solemnly celebrated the Feast of the Victims on 29 January 1059 at the *masalla* with the Egyptian standards. He agreed to leave the Caliph with Kuraysh, who placed him in safe-keeping at al-Ḥaḍra of ʿAna with his cousin Muḥarrish, but insisted that his enemy, the vizier Ibn al-Muslīmā, should be handed over to him. After parading him with ignominy, he had him put to a terrible death on 16 February 1059. Al-Basāsiri then took possession of Wasit and Bāra, but was unable to gain ʿIjāzira to the Fātimid cause.

But already al-Basāsiri was virtually abandoned by Cairo. Initially great hopes had been raised there by his action; Mustansir relied on his bringing him the Caliph al-Kāʾim as a captive and had the Little Palace of the West at Cairo made ready for him, and the was greatly displeased when al-Kāʾim was handed over to Kuraysh. In addition, the vizier ʿYāziri, blamed for ruining Egyptian finances to support al-Basāsiri, had been deposed and then put to death. From June 1058, Ibn al-Maḡribī, a former secretary who had fled from al-Basāsiri at Baghdad, was vizier. When the latter wrote to him, he replied in such terms as to leave him no expectations of support. Toghrul, however, had triumphed over his brother in Dīnawār II 451/July 1059 and was preparing to return to Baghdad. He offered to leave al-Basāsiri in Baghdad, provided he would pronounce the *khawfa* and coin money in his name and restore the Caliph al-Kāʾim to the throne. In such an event, he himself would not return to ʿIrāk. He asked Kuraysh to leave al-Basāsiri in the event of his refusing to agree to this proposal. For his part, al-Basāsiri attempted to negotiate with Toghrul, but persuaded him to break away from the Saljūqids but without success. Kuraysh drew his attention to

Fātimid ingratitude and let him hope for a pardon by Toghrul, but he would not accept the offer and Toghrul then started to march on Baghdad. At the Saljūqids' request, Muḥarrish freed the Caliph al-Kāʾim, who met the sultan at Nahrāwīn on 24 Dhu ʿl-Kaʿda 451/3 January 1060, arriving with him at his palace on the following day. Kuraysh had already left al-Basāsiri, who quitted Baghdad with his family on 6 Dhu ʿl-Kaʿda/14 December, proceeding in the direction of Kūfa and leaving the secretary of the Saljūqid vizier al-Kundurī on 8 Dhu ʿl-Hijja/15 January 1060 at Saky al-Furāt, near Kūfa. His head was brought to the sultan.

Thus ended the adventure of al-Basāsiri. For a year he had gained acknowledgement of Fātimid sovereignty at Baghdad. The *khawfa* in the name of the Fātimids is said to have been pronounced there forty times. The episode of attempted expansion by Fātimid on the one hand and Saljūqid on the other, and more generally the struggle between Sunnis and Shīʿis, definitely profited the cause of Sunnism and ʿAbbāsid legitimacy, of which Toghrul Beg showed himself the interested champion.

#### BASHDEFTERDĀR (see DAFTARDĀR).

**BASHIDJIRT** (BASIKURT) is the name of a Turkish people living in Baghkuristan in the S. Urals, which is now a Soviet republic. Their place of origin is doubtful; some evidence says that they came from S. W. Turkistan (see Togan, *Türk Tarih Dersleri*, 1927, p. 123). In the *ʿIbār* (Paris, 1955, 3), whilst other sources indicate that their present habitat is their original home (the Παρυσηναι, Γερουσι, Ταχτοι, Βορροιστοι and Σουφροιστοι, Ptolemy, iii, 5, 22, 24 and iv, 14, 9, 11 may be identified with "Bashyrt" and the tribal names "Geyne", "Tabin", "Burdul", and "Savin"). Ibn ʿAsadīn, ed. Togan, ii, 377; *ʿIbār*, ed. Paris, Bibl. nat. Suppl. Pers. 1364, fol. 1340. Isfahāni says that the Baghkuris lived in a mountainous

and wooded country into which it was difficult to penetrate, and that the centre of this region was 25 days journey from the Bulgars; and al-Bīrūdī calls the Urals "the Baghkur mountains". Ibn Fadlan, who made a personal survey of the country, religion, and customs of the Baghkuris in 310/322 says that he came on their tents after crossing the rivers Kinal and Soḡh, i.e., on approaching the borders of the Bulgars. He also states that they were all pagans (i.e., Shamanists). Idriʿi, by combining the stories of his contemporaries about this province with those found in the Arabic translation of Ptolemy, has given rather more complicated details about their cities, iron and copper manufactures, arms, exports of beaver and squirrel furs, etc., but much of this probably refers to the Magyars. Confusion arose because Muslim sources called the Baghkuris "the inner Baghkuris" and the Magyars "the outer Baghkuris", while the Baghkuris of the Urals divided themselves into "inner" and "outer" Baghkuris. To their neighbours the Kazaks and the Nogays they were after the 15th century known as "Islek", which gave rise to the Ottoman term "Islekh". The Yumurtal and Yenel tribes of the Baghkur were among the Turkish tribes that swayed over the Magyars in the 12th century; and theories that the Baghkuris were Magyars who did not become Turkicized till the time of the Mongols (cf. Nemeth, *Magyar Hungaria*, 95; KCA, iii, 73) lose their force with the statement of Mahmūd Kāshghari that the Baghkur and the Yemek, i.e., N. Kipchaks, dialects were closely connected. Ibn al-Dīn al-Dimashqī (died 1257) and Abu ʿl-Faḥr Khān also connect the Baghkur with the Kipchaks. In fact the Baghkuris were Muslims long before the time of the Mongols. Yāqūt, who met some Baghkuris from Hungary who came to study at Aleppo, relates traditions from them that their ancestors had learnt Islam from the Volga Bulgars and states that they were Hanafis, that they had 30 villages, spoke the "Atrandi" language and served in the army of the "Hungar" monarchs, though not taking part in expeditions against Muslim countries. The 12th century writer Abū Ḥāmid al-Andalusī, who lived for some time among the Baghkuris in Hungary, states that like the Bulgars they were Hanafis and says that there were 78 Baghkur towns in Hungary, extending the name Baghkur to the non-Muslim Magyars.

The Baghkur lands were close to the summer camping-grounds of the Mongol Khāns of the Golden Horde, and when they came under the Mongols they were forced to serve in the Mongol army. They were, however, allowed to have a separate Muslim judge. Prominent in the service of the Ilkhāns were the Amir Baghkur, who put down the rebellion of Sulaimān in Asia Minor during the time of Ghāzān Khān, and Sarkān Baghkur, a lieutenant of Öljāyṭu. Baghkuris were also found in the service of the Egyptian Mamlūks, among them ʿAlam al-Dīn Saḡdīr al-Baghkurī, who was Kālakwī's deputy in Syria.

In the first half of the 16th century the Tura (Shibān) Khāns held the northern and eastern parts of Baghkuristan under their sway, while the Kazan Khān Sāhib Gerey won influence over the "Kazan Yoll" and the Nogay Princes gained S. Baghkuristan. Two of the Ulu Nogay princes, Ismāʿīlghī Uruṣ Mirā and his nephew Ishtikīn Mirā, governed the "Nogay Yolu", i.e., S. Uralian, Baghkuris on behalf of the Kālakwīs until 1608. At one time Uruṣ Mirā made representations to Sulṭān Sulaymān I urging him to annex the Volga basin. He also sent am-

bassards to Czar Ivan IV because the Russians occupying Kazan and Astrakhan had pressed on to the east of the Volga, had made Samara, Yevliska and Ufa into Russian fortresses, and had imposed taxes on the neighbouring Bashkurts, and protested that the "Bashkurts-lets" paid taxes only to him, and that by taxing them the Russians were interfering in the internal affairs of the Nogay province (Pekarsky, *Kogda osnovany goroda Ufa i Samara*, 1872, 8). However, despite certain conciliatory moves the Russians gradually extended their control. In 1659 500 Bashkurts families were under the Russians. By 1700 the number had risen to 7,000. Under the Russians the province was organised very much as it had been before. The community was divided into several classes: the *mirzas* (Russian *knyaz*) who came from the Mongol and Tatar aristocracy; the *boys* (Russ. *strazhaki*) and *tarikhans* who were tribal leaders; the *asaks* (Arabic *ashab*; Russ. *volyniki*) who held hereditary fiefs and served in the army; the *yasaklis* who were peasants liable to military service, and the *tipfers* who were peasants registered in place of fiefholders; the *bobis* (old Turkish and Mongol *beg* = captive) who were landless peasants; and the *tsanals* who were nomads tied to a particular village. The *mirzas*, *boys*, and *tarikhans* were sent to discuss general political questions at congresses (*ayrlyk*) held at Khan Tobet in the neighbourhood of what is now the village of Baidjili Yurmut. There were also departments called *duwan* (= *diwan*) which dealt with the affairs of the province. The territory of the Yurmut tribe was the military centre of the province, and the *asaks* were stationed along four military roads leading from there: the Nogay road to the south, the Kazan road to the west, the Osa road to the north, and the Siberia road to the east.

There was fierce resistance to Russian annexation and risings were frequent. The Kütümids, the popularly chosen leaders of the Bashkurts, were generally at the head of these movements, which were sometimes combined with other movements in the Ukraine and N. Caucasus and with enterprises of the Crimeans, the Kalmauks and the Ottomans, with all of whom they had contacts. During the 17th and the first quarter of the 18th centuries the Bashkurts joined in movements in W. Siberia, the lower Jaxartes, Astrakhan, Don and Daghistan regions and even in the Debreczen area of Hungary. It was in 1667, during the reign of Küçük Süleiman, that Ismail Çelebi visited the Bashkurts between the Terek and Astrakhan together with the Kalmauks, and was greatly impressed by their military ability and by their national and religious fervour (*Seyyah-nâme*, vii, 261, 811-25, 815-6).

The Bashkurts made their risings at times when Russia had external difficulties. For example, the rising of 1679, during which several Russian towns in the Volga and Kama basins were burnt, was connected with the Turkish victory over the Russians at Ceperio and their occupation of the S. Ukraine. The Bashkurts were also skilful at making arms, and they were able to supply the Karakalpaqs and the Kazaks as well as themselves. The Russian government laid great importance on cutting off the Bashkurts' foreign contacts and on closing their iron and steel works. In 1679 they issued an edict forbidding them to manufacture iron, but this had no effect. However, by establishing works at Petro in the Urals and by deporting masses of Russians to them, they succeeded in increasing the Russian element, in spite of external difficulties.

In 1678 was the Kalmauk Khan Ayuk who was responsible for the death of Küçük Süleiman, and the

struggle against the Russians was carried on by two of his sons, Murad Süleiman and Khuzey (Ibrahim) Süleiman. During the Russo-Swedish wars in the reign of Peter the Great these caused the whole of Bashkuristan to rebellion. They were in close contact with the Crimean Khans, the Nogays and the Don Cossacks, and Murad Süleiman went to the Crimea and to Istanbul in an unsuccessful attempt to seek help. In 1708 he took part in a joint attempt with the Kuban Nogays and the Circassians to occupy the Russian fortress of Terek, but he was wounded, captured by the Russians, tried and executed. According to a Bashkurts' envoy who visited Süleiman Ahmed III in 1716 the Bashkurts together with their allies the Karakalpaqs and Kirgiz, had raised another rebellion in which they attacked Terek as a reprisal for the execution of Murad Süleiman and killed up to 40,000 Russians (Rizhskiy, *Tavris*, iii, 127). They were supported by the Kazaks, for at the beginning of the 18th century they had come under the suzerainty of the Kazak Khan Tölebi-Zhaghdy Kayib Khan, whose capital was at Tashkent. The correspondence of Kayib Khan with Süleiman Ahmed III in 1715-6 is preserved in the Ottoman archives (Istanbul, *Bahçealtı Arşivi*, *Naime Hümayun defterleri*, vol. viii, 351-3).

The rebellion lasted 17 years and exhausted the Bashkurts. At length in 1728 a delegation was sent off to St. Petersburg and a peace treaty was concluded. However in 1735 there was another rising led by Kilmek Abiz and Kusimoglu Akay against Russian efforts to encircle Bashkuristan and isolate it from the Karakalpaqs and the Kazaks. This was the bloodiest of all the Bashkurts' risings. Kilmek Abiz and Akay were eventually captured, and taken to St. Petersburg and executed, but in 1737 the fighting flared up again under the leadership of two boys from the Kuvakan tribe, Pepene and Tungevur Kösep, with the support of the Kazak Khans. Pepene proclaimed Hadja Ahmed Süleiman the son of the Kazak Khan Abu 'I-Khayr as Khan of the Bashkurts. The movement was put down only with very heavy casualties.

The fighting was renewed in 1740 under a leader known as Karasakal. This was, in fact, Baybulat, last of the Kütümids, who together with a nephew had been working with the support of the Crimean Khan among the Bashkurts since 1738 (*Tatar. Zapiski*, vol. xxiv, 102). After two years fighting Karasakal was defeated by the Russians and fled to the Ortaik Karak Khan and took refuge with Barak Khan. After this nothing more is heard of the Kütümids, but further risings occurred in 1755 and in 1774.

In 1798, in accordance with her policy of conciliating the Bashkurts, Catherine the Great divided the province into a traditional tribal cantons. She also set up Bashkurts' regiments, which were armed with bows and arrows and wore their national costume. These regiments were used in the Napoleonic wars, and actually advanced as far as Paris. However in 1861 the cantons were abolished, as were the regiments in 1862, though some small units were not disbanded until 1882. In 1872 the Bashkurts, who had previously been dealt with by the Foreign Ministry, were given the same status as other Russian subjects, though they had their own administrative and land laws.

The Bashkurts played no important part in the 1905 revolution. In 1917, in accordance with a resolution of "The General Assembly of the Muslims of Russia" held on May 1-10, which called for autonomy for Muslim Turkish regions, the Bashkurts

representatives set up a 3 man central committee (Zeki Velidi, Sa'ad Miras, Allah Berdi Djefet) to deal with the administrative organisation of their province. They came to an agreement with the Kazak-Kirgiz, and held the first Bashkurts Congress which urged that the Bashkurts should join with other peoples struggling for autonomy (the Kazaks and Uzbeks, etc.) (*Bashkurts' Aynalı*, Ufa 1925, vol. 1, 3). In the autumn they began to form an army, and an administrative centre was set up in the Caravanserai at Orenburg under Bekhovağa Yunus. In 1918 this government was supported by the Russians and its members were imprisoned at Orenburg but later escaped. In June the Bashkurts rose again, formed 2 military divisions, and revived the government at Orenburg. In order to include Kazak-Kirgiz detachments the divisions were turned into a separate army corps under the command of General Jigdalov. But the Allies, alarmed at the German drive in the Ukraine and Caucasus, wanted no national Kirgiz and Bashkurts army in the Urals and in the steppes and sought its disbandment. In accordance with their wishes General Kolzak proclaimed that the army and government would not be recognised (21 Nov. 1918).

On 19 February 1919 the "Bashkuristan" government concluded a peace treaty with the Soviets, which protected its army and its autonomy in internal affairs. Afterwards there were efforts to unite the Bashkurts with the Kazaks, but they were rejected by the Soviets, and Isterlitamak was made the administrative centre for Bashkuristan, and Aktube for Kazakhstan. This was "Little Bashkuristan", with an area of 84,874 sq. km. and a population of 1,250,000, some 5% of whom were Turks. The premier was Yumurtoglu, afterwards Z. V. Togan (Valdivov). On 29 June 1920 the members of the government withdrew from office and went to Turkistan to take part in the movement of the Basmachis (g.s.) against the Soviets. A completely Soviet government was formed and the army was disbanded. In June 1922 the Soviets united Bashkuristan with the province of Ufa, which was predominantly Russian, as "Great Bashkuristan". According to the 1933 census its area was 131,840 sq. km. and its population 2,975,400 only 51% of whom were Turks.

The Bashkurts' dialect occupies an intermediate place between the Kazak and Kazan dialects. Under the Soviets it has been reduced to writing and books have been printed in it.

**BASH-BOZUK**, a term, meaning 'leaderless', 'unattached', that was first applied late in the Ottoman period both to homeless vagabonds from the provinces seeking a livelihood in Istanbul and to such male Muslim subjects of the sultan as were not affiliated to any military corps. From this last usage it came to signify 'civilian' (cf. Redhouse, *Turkish-English Lexicon*, s.v.) and for this reason individual volunteers forming bodies attached to the Ottoman army at the time of the Crimean War were called *bash-bozuk* 'sakhri' ('civilian' or 'irregular' troops). These irregulars, largely recruited among Albanians, Kurds, and Circassians, furnished their own arms and mounts (some being cavalry) and had their own commanders. In the course of the war an attempt was made to subject them to normal military discipline; but this was not successful; and during the next Russo-Ottoman war (of 1877) the *bash-bozuk* 'sakhri' earned so much opprobrium for their savagery and love of loot that their employment was thereafter abandoned.

**BASHR B. SA'D**, Medinese companion of the Khawraj tribe, and an early convert to Islam. He attended the second 'Akaba meeting with the Prophet, and after the Prophet's emigration to Medina, took part in all the ensuing battles and himself led two expeditions, one in Sha'ban 31 December 629 against the Banu Murra at Fadak, and the other later in the same year against a force of Ghatfan which 'Umayya b. Hishm was assembling between Wadi al-Kura and Fadak in order to attack Medina. The first expedition ended in complete disaster and Bashir himself fought bravely but was wounded and left for dead. During the night, he managed to reach the house of a Jew in Fadak where he sheltered for a few days before returning to Medina. The second expedition, carried out with 300 men, was successful, 'Umayya's force was dispersed and much booty captured. In the same year, when the Prophet visited Mecca for 'Umat al-Kada' in accordance with the agreement of the previous year at al-Hudaybiya, Bashir commanded an armed contingent which escorted him but did not enter Mecca.

On the death of the Prophet, Bashir supported the claim of Kuraysh against the Medinese attempt, in the *Sahifa* meeting, to elect an Ansari successor, and was the first—or one of the first—to make the decisive move of paying homage to Abū Bakr. Later he joined the expedition to 'Irak, and was present when al-Ukra was captured by 'Abd al-Walid. He died at 'Ayn al-Taur in 22/33, though it is not certain whether he was killed in the fighting

or died from a wound he had received shortly before.

Baghir was one of the few who knew the art of writing. He was the father of al-Nu'mān b. Baghir [q.v.].

**BASHIR ÇELEBI**, a physician who flourished in the middle of the 9th/15th century. According to the little treatise *Hikāyat-i Baghir Çelebi* (of which one MS. has been published in facsimile by I. H. Ertaylan as *Tārīk-i Edirne: Hikāyat-i Beğir Çelebi, Türk Edebiyatı Örnekleri* iii, İstanbul 1946), he was summoned from Konya to Edirne by Mehmed II very soon after his accession; he explained to the Sultan the advantages of the climate of Edirne and recommended to him the site for the building of the New Palace (begun in 855/1455, cf. *IA*, article *EDİRNE* [M. Tayyib Gökbilgin], p. 127b).

The Ottoman history attributed to him (*Tarih-i Al-i Osman, Türk Edebiyatı Örnekleri* iv, İstanbul 1946) is probably not another MS. of the *Giese Annamensis Chronica* (as demonstrated by Adnan Erti in *Bull.* XIII, 1929, 182-5; the MS. is very close to Giese's *Witten*). = Flügel No. 953. Neither this History nor the *Tārīk-i Edirne* is the work of Baghir Çelebi.

**BASHIR SHIHAB II**, Amir of Lebanon, 1788-1840. Born in 1780/1767 in the village of Ghazir, Baghir lost his father Amir Kāsim in his early years and was soon compelled to try his fortune in the field of politics in Dayr al-Kamar, the capital of Lebanon. Robust, intelligent, and circumspect, he soon attracted attention as a possible candidate for the governorship of Lebanon. Shaykh Khāim Jumblat, a wealthy and powerful feudal lord, was the first to appreciate Baghir's gifts and possibilities. His first approaches were successful, and Kāsim and Baghir became friends and allies. The change for common action came in 1788. Wearied by the heavy exactions of the Turkish Pashas of Sidon, Tripoli, and Damascus, Amir Yūsuf Shihāb, governor of Lebanon, called the Notables of the Land to a meeting in Dayr al-Kamar to discuss the general situation. To their surprise, Amir Yūsuf confessed his inability to come to an understanding with Dījazār Pasha [q.v.] of Sidon and called for advice regarding his successor. Shaykh Khāim and his supporters suggested young Baghir, and Amir Yūsuf agreed. Baghir made the usual journey to 'Akkā, Dījazār's fortress, and came back Governor of Lebanon.

A rapacious intriguer, Dījazār Pasha stimulated in 1799/1794 a number of Lebanese notables to revolt and induced one of the sons of Amir Yūsuf to make a bid for the governorship of Lebanon. He then promised support to Baghir in return for a large sum of money. Having satisfied the greed of the Pasha, Baghir immediately set himself to the task of internal consolidation. In 1794, he permitted the Jumblats and the Amads to murder several Nakad chiefs in his own reception hall. Then, with the help

of the Jumblats, he forced the Amad chiefs to leave Lebanon and seek refuge elsewhere (1799, 1808, 1819). In 1822/1827, he burdened the Jumblats with very heavy contributions; and, in 1824, he defeated them in open battle and put them to flight. In the mean time, Baghir strengthened his local levies and made of them the strongest military contingent in all Syria-Palestine. His fifteen thousand men were more than equal to all the soldiers of all the Pashas of Syria put together. In addition, Lebanese levies were daring and extremely skilful in the manipulation of arms.

In the meanwhile, Baghir's grants in aid to Christian Patriarchs and Archbishops and his acts of toleration were winning for him clerical support and French consular aid. In 1817, Pope Pius VII wrote in person to thank the Amir for his policy of religious toleration; and in 1815, Pope Gregory XVI addressed the Amir as a faithful son and praised his conversion. With his own co-regulations, the Druzes, Baghir behaved differently. Until his time the Druzes had had only one religious head, the Shaykh al-Akl. Baghir introduced a second head and set him up against his colleague.

Baghir's greatest ambition was to ward off local Turkish intrigue and protect the historic autonomy of Lebanon. Circumspect and fofy, he refused to commit himself either for or against Napoleon when the time of his advance into Palestine. And, as soon as the French forces withdrew into Egypt, Baghir went down in person to the Grand Vizier's camp in al-Arslā, 1799, and procured an Imperial firman which tied the Lebanon directly with the Sublime Porte. When the Grand Vizier died, this firman became null and void, and Baghir had, by other means, Dījazār's successor, Sulaymān Pasha (1800, 1819), was more humane; and Baghir courted his favour to stem the cupidity and inordinate desires of Kandī Pasha of Damascus. In 1820, Yūsuf Kandī Pasha claimed direct control of the fertile valley of the Bekaa. When no amount of persuasion could change his desire, Baghir marched on Damascus at the head of a force, 15,000 strong, and took it to Egypt. In 1820, Baghir had to march again on Damascus and for the same reason. A year later, Darwish succeeded in gaining the good will of the Sublime Porte and marched against Baghir's ally, 'Abd Allāh Pasha, with substantial assistance from his colleague the Pasha of Aleppo. 'Abd Allāh then locked himself up in the fortress of 'Akkā, and Baghir sought allies. The change for common action came in 1828. Wearied by the heavy exactions of the Turkish Pashas of Sidon, Tripoli, and Damascus, Amir Yūsuf Shihāb, governor of Lebanon, called the Notables of the Land to a meeting in Dayr al-Kamar to discuss the general situation. To their surprise, Amir Yūsuf confessed his inability to come to an understanding with Dījazār Pasha [q.v.] of Sidon and called for advice regarding his successor. Shaykh Khāim and his supporters suggested young Baghir, and Amir Yūsuf agreed. Baghir made the usual journey to 'Akkā, Dījazār's fortress, and came back Governor of Lebanon.

Muhammad 'Alī Pasha [q.v.] of Egypt was then laying the foundation of independence. He had already sensed the hostile intentions of the Sublime Porte and was preparing himself for a war of liberation. He realised fully well the military importance of Amir Baghir and the strategic significance of Mount Lebanon. The two conferred together and soon arrived at a complete understanding of the situation. Muhammad 'Alī intervened in favour of 'Abd Allāh Pasha at Constantinople and Baghir came back to Lebanon completely victorious.

In 1247/1831, Muhammad 'Alī decided to strike. The Sultan had lost heavily in both the Greek War of Independence and in the Russian War and had, in 1826, dissolved the Janissaries of the Sublime Porte promised full respect of the privileges of Mount Lebanon, but Baghir's answer was, "You should not expect help from those whom you have always neglected". Lebanese levies fought 'Uthmān Pasha in Tripoli, joined in the march on Damascus, protected the Egyptian commissariat and rear as far north as Aleppo. In return, Muhammad 'Alī Pasha

recognised the ancient privileges of Lebanon, and promised to eschew direct interference in its internal affairs, (1833-40). But as the Sultan could never consider the new situation consistent with his dignity and honour, Muhammad 'Alī had to remain prepared for another trial. This meant more men for his army and more money for his growing expenses, and actually led to disarmament, compulsory military service and increased taxation. Unable to understand the Lebanese mentality, he ordered application of his new regulations in Lebanon and in the Druze Mountain of the Hawran, and had to suffer the consequences. Troubles flared up in the Hawran in the autumn and winter of 1837-1838; and several thousand Egyptians perished. In the summer of 1253/1838, the Egyptians were routed again in the Anti-Lebanon.

The impending clash between the Egyptian forces and the Ottoman Army took place in the early summer of 1839 at Neft on the Turkish border. As the Egyptians met the Turks to flight and threatened to march on Constantinople, and as Russia was bound to come to the help of Turkey by the terms of the Treaty of Hunkār İskelesi (1833), and as France had consistently favoured Muhammad 'Alī Pasha, the Eastern Question was open again for discussion. British and Turkish emissaries visited Constantinople in an attempt to win over Amir Baghir to their side. Baghir himself procrastinated, but the Lebanese rushed to arms in open revolt. By the summer of 1256/1840, France was isolated and the rest of the Big Powers, including Russia, signed the Treaty of London. Allied naval units arrived in Lebanese waters and a Turkish force was landed off the Bay of Junieh. Lebanese, Druze and Mshar, isolated defeated British troops at Bahrsaf, and Baghir III was proclaimed Governor of Lebanon. Baghir II surrendered to the British in Sidon and was carried to Malta in exile. Several months later, he was allowed to establish himself in Asia Minor. He passed away in 1852, and was buried in the Armenian Catholic Church in Galata, Constantinople. In 1946, when Lebanon achieved the status of independence, Baghir had sought, the Government of the Republic brought his remains to Lebanon and deposited them in the family vault in Bayt al-Din.

**BASHIR** (see BASHMIR).

**AL-BASHKUNISHI**, the Basques, a people of uncertain origin inhabiting the W. end of the Pyrenees and the adjacent part of the Cantabrian Mountains, with the Atlantic coast to the N. 'Baschunish' is evidently from Latin 'Vascones', with the phonetic change v < b elsewhere. The Basque language is called *al-baghziyya* (*Al-Rawd al-Mifrah*, ed. Lévi-Provençal, 56).

The principal centre of the Baghkunish was Pampeluna (Arabic Bāmbalūna, from an original Pompeipol), which became eventually the capital of Navarre. Their territory was invaded by Mūsā b. Nusayr at the time of the conquest of Spain (*Kutub al-Imma* wa 'l-Siyasa, *Colleción de Obras Arabicas*, ii, 132 ff.), and then or later but in any case before 1004/718-719, as Codera showed, Pampeluna capitulated to the Muslims. 'Uthba b. al-Hadijādī (Unayyad governor of Spain for five years from 116/711) settled a Muslim garrison there (Ibn 'Idhar, ii, 28). A few years later (138/755-756) the Baghkunish were in revolt and destroyed a force sent to Pampeluna by the amir Yūsuf al-Fihri, etc., about the time of the arrival in Spain of 'Abd al-Rahmān I. At the time of the famous invasion of northern Spain by Charlemagne (801/778) Pampeluna submitted to him, but it was probably bands of Basques, joined by the Muslims, who cut his rear-guard to pieces at Roncesvalles (cf. Lévi-Provençal, *Hist. Esp. Mus.*, i, 1944, 89). In 164/780-781, or in the following year, towards the close of his long reign, 'Abd al-Rahmān I was obliged to move in person against the Baghkunish.

By 798/812 the Basques of Pampeluna had renounced their Muslim allegiance, permanently as it turned out, and declared themselves vassals of Alfonso II, king of the Asturias. We soon hear of an independent Basque chief at Pampeluna, Gharsiya b. Wauke (García Iñiguez), who, as it appears, through his granddaughter Ifiga, married to the Unayyad 'Abd Allāh, became the ancestor of 'Abd al-Rahmān III, al-Nasir. A fresh grouping of power among the Baghkunish took place in 905, when Sancho Garces I set aside the elder line, and effectively established the kingdom of Navarre. The western Basques continued to be subjects of the king of the Asturias. Henceforward what from the point of view of Muslim Spain has been called the 'Basque menace' (E. Lévi-Provençal) is represented by the history of Navarre especially.

**BASHMAKLIK** (see AL-SAL' AL-IBARTI).

**BASHMAKLIK**, a term applied under the Ottoman regime during the sixteenth and seventeenth centuries to fief revenues assigned to ladies of the sultan's harem for the purchase of their personal requirements, particularly clothes and slippers (*baghmaq* or *paghmaq* meaning 'slipper' in Turkish). The word has not yet been found in any document earlier than the end of the sixteenth century, and ceased to be used from the beginning of the eighteenth. The ladies who qualified for the receipt of *baghmaqs* were the sultan's mother (*valide*), his sisters, his daughters, his *badins*, and his *ghayretiks*; but information is lacking on the different values of those assigned to each of these ranks,—if indeed there was any fixed scale at all. We know, however, that they were assigned for life and that during the seventeenth century they were often improperly enlarged beyond the usual revenue limit of 20,000

added a year by the addition to them of military fields that had fallen vacant. Though from early in the eighteenth century the term *baghmālikā* fell out of use, *fiat* revenues were still assigned to these members of the imperial *harem*, being known, therefore, simply as *khān* and consisting, since virtually all revenues were by that date collected by tax-farm (*mubtāʿa*), of the advance payments made by contractors for certain such farms. Towards the end of that century the practice was adopted of granting *mubtāʿas* to the ladies concerned on *malikāne*, or life, tenures; but in the reform period such grants were finally abolished, annual cash allowances were paid to them in lieu.

#### BASHSHARĀK ʾ. DURD (see MALĪYĀ).

**BASHSHAR ʾ. DURD**, Abū Muʿāzz, a famous ʿIrāqī Arabic poet of the 2nd/8th century. His family was originally from Tulhāristān or eastern Iran. His grandfather had been captured and taken to ʿIrāq at the time of the expedition of al-Muhallab (g.a.); his father, who was finally freed by an ʿUmayyid Arab lady of Basra, was a bricklayer of that town. Bashshār was born in Basra, the date being uncertain but probably about 90 or 95/714-15. For a long time he attached himself to ʿUmayyid as a dependent, without forgetting to glorify the memories of ancient Iran in accordance with his Shuʿubī leanings; but this was equally, no doubt, a good means of turning his detractors, attention away from his humble origins, which the fiction of his royal ancestry ill concealed (v. the naïve genealogy of Bashshār given in *Aghānī*, III, 135).

The gift of poetry is said to have been revealed in Bashshār when he was ten years old (see *Aghānī*, III, 143, 144; from a Basra source). His Basra environment was nothing if not favourable to the growth of such a talent; the caravan halt or *mawḍ* which was of such importance up to the middle of the 3rd/9th century (cf. Pellat, *Mélanges berberis*, 158 ff.) was for the young artist a kind of school in which he must have soaked himself in the poetic tradition then in full flower in central and eastern Arabia (see the anecdote in *Aghānī*, III, 143-5, which recounts the meeting of Bashshār with the Tāmihi ʿUmarī, then at the height of his fame; Brockelmann's suggestion, S I, 109, of confusion with a homonym of ʿUmarī cannot be accepted). Bashshār's career embraces the activities of a writer of panegyric, elegy and satire. It is remarkable that blindness from birth and exceptional ugliness did not cause him to be shunned by women or by the important figures of his day. But he knew how to impress and to make himself feared by the quality of his praises and his epigrams.

From the fragments or pieces which have come down to us Bashshār appears as the court poet of Umayyad governors such as Ibn Hubayra (g.a.) (see *Aghānī*, III, 197, 236) or Salm b. Kutayba (g.a.) (at the latest in 132/750) (see *ibid.*, 190), or prince Sulaymān, the son of the caliph Hishām (see *Diwān*, I, 291-303); we even have a panegyric on the last Umayyad ruler, Marwān (see *Diwān*, I, 306 ff.). The advent of the ʿAbbāsids does not seem to have checked the rising career of the poet, who was not thirty-seven years old. He was too clever a man not to adapt himself to the new state of affairs. It is difficult to follow the process in detail, but an ode originally in honour of the ʿAlid ʿIbrāhīm b. ʿAbd

Allāh is said to have been finally dedicated to the ʿAbbāsīd caliph al-Mansūr (*Aghānī*, III, 213 bottom; cf. al-ʿAsʿadī, *Diwān al-Maʿnū*, I, 130); if this fact is correct it is characteristic. Bashshār lived in Baghdad from the time of its foundation in 148/764 (see al-Marzubānī, *Mawḍūʿshah*, 247-8). His panegyrics were then dedicated either to prominent figures in Basra such as Sulaymān al-ʿAbdī (governor in 142/759-60) or his son (governor about 176/792) (see *Aghānī*, III, 165-7, 207; Pellat, 166, 280) or to such figures as ʿUkba b. Salūs (governor in 174/784) (see *Aghānī*, III, 174-5; cf. Pellat, 168) or his son, ʿAbd al-ʿAzīz (governor in 151/768) (see *Aghānī*, III, 210; cf. Pellat, 281); several anecdotes give the impression that Bashshār was much in favour under the caliph al-Mansūr, whom he probably accompanied on pilgrimage to Mecca (see *Aghānī*, III, 153, 159, 188, 212, 239 especially *Diwān*, I, 257, 275 (*ḥasida* of 29 verses) and II, 24); later relations between the monarch and the poet were to become strained (see *infra*). To these official connections we owe much precious material on the poet's life. But doubtless they are not as important as Bashshār's connections with the grammarians of Basra, such as Abū ʿAmr b. al-ʿAlī, Abū ʿUbayda or al-ʿAsmaʿī (g.a.) or with religious folk in that town such as Ḥasan al-Baṣrī (g.a.) (cf. 110/218; *Aghānī*, III, 169 ff.) or Malik b. Dīnār (g.a.) (cf. 131/748; v. *ibid.*, 170). His career in the last years of these last two persons are in line with, and confirm, his taste for consorting with people ostracised because of their manners or religious beliefs. A "literature" more anecdotal than valuable gives a picture of this aspect of Bashshār's life: his adventures and half-sarcastic escapades (thus *Aghānī*, III, 185-6, on a pretended pilgrimage to Mecca; and 233, on his relationship with some Kūfa libertines). His diatribes against Ḥammād ʿAdrad show how lively these relations sometimes were (see *ibid.*, III, 137, 205, 223 bottom; al-ʿIḍḥārī, *Bayān*, I, 30). His caustic temperament, his character and above all his sensitivity on the subject of his infirmity and lack of inheritance explain in large measure the poet's pungent invective against his rivals or enemies, though in these grounds he should not be forgotten which explain the rancour of these quarrels on the ideological plane.

Shuʿbīism is one of these causes (thus *Aghānī*, III, 138, 139 and especially 174-5, against the Bedouin poet ʿUkba b. Ruʿba; v. also *ibid.*, 166 the fragment against a Bedouin, and 201-4 in which a nobleman reproaches the poet with having stirred up quarrels against the Arab patrons). Bashshār's position on the subject of Muʿtazilism reflects his fluctuating opinion of Wāṣil b. ʿAlī (g.a.) (cf. 135/748-9 in Basra), whom he satirises, having previously flattered him (see al-ʿIḍḥārī, *Bayān*, I, 16 ff., and again in *Aghānī*, III, 145 f.; v. also the violent diatribes against each other of Bashshār and the Muʿtazilite poet Saʿwān al-Anṣārī of Basra, on which see Pellat, *Mélanges berberis*, 175-7 with a translation of Saʿwān's verse).

Bashshār's religious views remain unclear; they seem to have fluctuated, and Bashshār, as an opportunist, to have concealed his true mind. The reservations he makes on the subject of poets he appreciates such as al-Kumayrī or al-Sayyid al-Hinayfī who lived in Rome from 147/764 to 157/773-4 (cf. *Aghānī*, III, 225, VII, 237, but the facts are uncertain) would tend to indicate that he was not a Shiʿī (but see Pellat, 178, who thinks that Bashshār brought together the Shiʿī views of the Kāmilīyya, on which see *id.*, 203). The accusation of *zandaka* made against Bashshār and the anecdotes

which illustrate it rather than give it substance point to his holding heterogeneous views; among these views there are in fact to be found Manichaean beliefs strongly tinged with Zoroastrianism (see al-ʿIḍḥārī, *Bayān*, I, 26; citation of the celebrated verse *the Earth is dust and the Fire is resplendent and the Fire has been worshipped from the time that it existed*; cf. the reference to this affirmation of Bashshār's in the refutation of the Muʿtazilite Saʿwān, *ibid.*, I, 97, line 7; cf. also *Fihrist*, 338, line 10, which puts the poet among the Zindīth-Manichaeans of the mid/8th cent.).

But along with these beliefs there would seem always to have been a profound scepticism (see *Aghānī*, III, 227, line 1 ff.; *Diwān*, II, 246) mingled with a fatalistic outlook leading Bashshār to pessimism and hedonism (*ibid.*, 232, and the citation from Ibn Kutayba, ʿUyūn, I, 40 bottom). Like his fellows, Bashshār had to fall back on the *hikaya* and profess an orthodoxy and a pious zeal which was totally opposed to his real convictions (thus, his verses against the heretic Ibn al-ʿAwwādī, who was executed at Kūfa, *Aghānī*, III, 147, and above all the verse of the *Diwān*, II, 36, line 3, showing a strict Islamic orthodoxy).

His prudence in this respect was not allowed to obscure the scandal of his manners, his epicureanism and his heterodoxy. A riot ensanguined in Basra effected his ruin in the eyes of the caliph al-Maʿlūf (see the anecdotal accounts in *Aghānī*, III, 243 ff.), impinging as it did on matters of wider import, viz. the persecution under that ruler of all those covered by the name of *zindīk* (g.a.) (see *ibid.*, 246 bottom and ff.; especially, Gabrieli, *Appunti*, 158). Bashshār was seized, beaten, and exiled to the island of the Baṭṭā (al-Talāt, Cairo ed., v, 401; *Aghānī*, III, 247 ff.). This occurred in 167 or 168/784-5 when the poet was over seventy years of age (not ninety, as has been said through an orthographic confusion; cf. *Aghānī*, III, 247, 249, giving the two figures, of which only the second features in al-Khathīb al-Baghādī, *Taʾrīkh Baghdād*, VII, 118 and Ibn Khallikān, I, 88).

Bashshār was famous in his day as an orator and letter-writer or prose-writer (al-ʿIḍḥārī, *Bayān*, I, 40), but he owes his renown above all to his poetic gifts. His work in verse was as abundant as it was varied, but unfortunately has not come down to us in its original form. Being blind Bashshār was dependent on *rhētor*, of whom we know the names of four, notably the notorious Khāl al-Aḥmar (see *Aghānī*, III, 137, 164 and *ibid.*, 112, 170, 189); but none of them troubled to put together the *diwān* of their master. Occasional pieces, impromptu and epigrams were very quickly lost, while at the same time poems of more or less doubtful authenticity were attributed to Bashshār (see gloss on *Diwān*, I, 309). From the 3rd/9th century the poet's work was then known only through the collections of the anthologists, such as Ḥārūn b. ʿAlī (cf. 288/900-1; cf. *Fihrist*, 144) or Ahmad b. Abī Ṭāhir Tayfūr (cf. 280/893), who had compiled an *Iḥṣāyā Shʿr Bashshār* (see *Fihrist*, 147). It is known that in the last quarter of the 4th/10th century Ibn al-Nadīm consulted a collection of selected poems of about a thousand pages (v. *Fihrist*, 159 bottom). No account should however be taken of the *Iḥṣāyā min Shʿr Bashshār* of the two brothers al-Khāṣṣīdī of Mosul, which is not mentioned among their works by Ibn al-Nadīm, *op. cit.*, 169. This last work we know only through the extracts given by al-Tuḥṭīḥī (5th/11th cent., ed. al-ʿAlawī, Aligarh 1935). A single manuscript of eastern origin (of the 6th/12th century 7), containing

poems on rhymes from a to z, has been the basis of the edition of Ibn ʿAṣḥr (5 vols., Cairo 1950-57), which is far from satisfactory. We see that the work of Bashshār can be studied only with caution.

Bashshār writes in formal, tripartite *ḥasida*, in a tant style, and though his poems may be conventional in form and theme they show a break with those of the preceding generation. The pitilessness of his epigrams places him in the Umayyad satirist tradition (thus, *Diwān*, II, 66, against Ḥammād ʿAdrad; also *Aghānī*, III, 188, 202); here also his taste for the burlesque or far parody leads him to make innovations (thus, the prosopopoeia on his ass, *Aghānī*, III, 232 bottom). But it is probably in elegy that he has made his name most remembered. Frequently, already, his *basīra* themes tend towards the love-song, which might well be considered the abandonment of a tradition of which the pastiches attributed to al-ʿAṣḥā Maymūn (g.a.) are questionable examples. The anonymous elegies make up an important part of this work, and are addressed mainly to a Basran lady named ʿAbda, but also to other heroines whose names are probably fictitious. Now sensual and even realistic (thus *Aghānī*, III, 155, 165, 182, 200 etc.), now suffused with courtly ingenuity, these poems seem to give two different responses to the eternal conflict within the oriental Poems of an intellectual cast are also common, and though Bashshār is not really profound he avoids triviality and can make acute observations.

Adaptability is the key-note of Bashshār's manner, which can be stylised and archaizing in the *ḥasida* (thus, *Diwān*, I, 306 ff.), but looses and becomes delightfully free in the anonymous elegies, in which the poet allows himself daring licences of language (thus *Diwān*, II, 5, line 7; 10, lines 31, 35, line 2). The dominant influence on Bashshār was indeed always the tradition he inherited from the desert poets; in many respects he is close to the Hijāzī "school" as we see it in ʿUmar b. Abī Rabʿa (g.a.). But he contrived to enrich this tradition with the wealth of his own interior universe, the hard experience born of his physical disgrace and his contact with a confusing and turbulent world.

The importance of Bashshār's place in the transitional period of poetry in the middle of the 2nd/8th century cannot be overestimated. The influence of the man and the artist is attested by the enthusiasm or hatred he awoke in his contemporaries. All in all he was considered one of the *glories* of Basra. His poems, often set to music, delighted the young and the feminine public, while the *connoisseurs*' opinion emerges from the "value judgements" attributed to such scholars as Abū ʿUbayda, al-ʿAsmaʿī, Khāl al-Aḥmar and a host of others (see *Aghānī*, III, *passim*). We know on the other hand in what esteem al-ʿIḍḥārī held him (see *Bayān*, index). Finally, Bashshār profoundly influenced the following generation of poets; statements to this effect in the biographies of Abū ʿAṭābiya (g.a.), al-ʿAbbās b. al-Aḥnāf (g.a.), Abū Nuwās (g.a.), Salm al-Khāṣir and many others are confirmed by the study of their works. At the present day eastern critics have readily been able to see in Bashshār one of the greatest names in Arab poetry.

**BASİŞAR** al-**SHĀ'IRI**, Shī'ite heretic, flourished in the second century A.H. He lived in Kūfa and earned his wealth by selling barley (*ḡa'ir*), whence his name. According to the *Mīnāḥidī* and the *Muntahā*, he was sometimes mistakenly referred to as al-Aḥḡārī, instead of the correct al-Shā'irī. According to traditions related by al-Kaḡhībī, he was in 249/80 to appoint his son al-'Abḥār heir-apparent (Mas'ūdī, *Murūdī* vii, 146; read 'Alī al-Baḥrī and congratulatory verses on the occasion of the accession of al-Mu'tazz to the throne 4 Muharram 252/25 January 866 (Mas'ūdī, *Murūdī* vii, 378). This seems incidentally that contrary to the statement of Marzubānī he did not die during the civil war 251/865. Ibn Ḥaḡḡar placed his death in the reign of al-Mu'tamid (256-79/870-92).

**Bibliography:** *Fihrist* 123; Marzubānī, *Mu'djam al-Sha'irā* 314; Krenkow; Ibn Ḥaḡḡar, *Lisān al-Mitān* iv, 438; Mas'ūdī, *Murūdī* vii, 328 ff., 346. See also Kāllī, *Amālī*; Ibn Shadjarī, *Ḥamāli* (register s.v. a. 'Alī al-Darī); *Tha'ālibī, Ḥimāli al-Kūbā* 44, 164, 268, 485, 496; *Aḡḡābi* x, 108; x, 41.

**BAŞİT**, (c.1465-1535) Turkish and Persian poet. Although Latīf and 'Alī (*Kunā* al-'Abḥār) record that he came to Rūm from the realm of Persia, it is clearly stated in the *taḡhīras* of Rīyāḡī and in the *Kaḡf* al-Zunūn that he was from Ḥaḡḡād. Because of a diseased condition (*ḡarāḡ*) from which he suffered, he was called Aladja ('Blotch') Rūm. He grew up in the scholarly and literary milieu of Harāt, and frequented the circles of Sultān Ḥusayn Baykārā (1438-1507), Dīnālī (1424-92), and Nawā'ī (1441-1501). As he is not mentioned in the last-named's *Maḡḡilās al-Nalā'is*, he could not yet have won fame in that environment, but he is mentioned among the poets of Sellm I in the supplement written by Ḥaḡḡādī. Muhammad al-Shāh Kazwīnī in his Persian translation of the *Maḡḡilās al-Nalā'is*, Baḡī left Harāt for Rūm some time before 1492, bringing the books and *ghazals* of Dīnālī and Nawā'ī, and various commissions to execute for them. For a while he was in the service of the Ak Koyūnlu. When Ahmad Gōde, son of Ughurica, came to the Ak Koyūnlu throne (1496), Baḡī was sent as his ambassador to Sultān Baykārā II, reaching Istanbul in 1496 or 1497. On Ahmad Gōde's death in battle in the neighbourhood of Isfāhān in the latter year, Baḡī decided not to return to Persia but to settle in Istanbul. He later attached himself to Mu'ayyaddāde,

who was nicknamed al-Baḡī and al-Darī (for *anti-phrasen*, see A. Fischer, *ZDMG* 61, 430). When Sāmarrā was built in 221/836 he went to the new capital and in spite of his strong and even extreme Shī'ite leanings he succeeded al-Mu'tasim and his successors. He attached himself to al-Faḥr b. Khākhān [s.v.] and his nephew 'Ubayd Allāh b. Yahyā (see Ibn Khākhān) and praised them in his poems (see e.g. Ibn Shadjarī, *Ḥamāli* 117; Muḥarrar, *Kāmil* 6; Yāḡūt *Iṣṣād* vi, 122; Ibn Raḡḡīb, *'Umda*, i 78). He was acquainted with Abu 'T-Yaynā' [s.v.], Sa'ūd b. Humayyid, Ibn Abī Ṭāhir [s.v.], Abū Ḥāshim and other men of letters; they were devoted to each other in literary and esthetic labours. He was a gifted writer; some of his admirers ranked him even higher than Dīrī. He had a poor opinion of the poetry of Abū Nuwās and Muslim b. al-Walīd (see Marzubānī, *Munawwih* 282 f.). Abu 'T-Hasan Ibn al-Munajjid in the appendix to his father's *Kāb al-Baḡī* and Ibn Ḥaḡḡar al-Nu'ayn in his *Adḡḡ al-Kaḡḡā* devoted both a chapter to his poems (*Fihrist* 144, 1166, 23). His *Diwān* and the collection of his letters are lost. Amongst his verses which have come down to us, are some, that can be dated: e.g. a poem, composed in 247/861, when al-Mutawakkil went from Sāmarrā to his new residence al-Dī'a-riyya (Yāḡūt, ii, 87; read *al-Baḡī* instead of *al-Baḡī*), a few lines of a long poem, arguing in 249/80 in 249/80 to appoint his son al-'Abḥār heir-apparent (Mas'ūdī, *Murūdī* vii, 146; read 'Alī al-Baḡī) and congratulatory verses on the occasion of the accession of al-Mu'tazz to the throne 4 Muharram 252/25 January 866 (Mas'ūdī, *Murūdī* vii, 378). This seems incidentally that contrary to the statement of Marzubānī he did not die during the civil war 251/865. Ibn Ḥaḡḡar placed his death in the reign of al-Mu'tamid (256-79/870-92).

**Bibliography:** *Fihrist* 123; Marzubānī, *Mu'djam al-Sha'irā* 314; Krenkow; Ibn Ḥaḡḡar, *Lisān al-Mitān* iv, 438; Mas'ūdī, *Murūdī* vii, 328 ff., 346. See also Kāllī, *Amālī*; Ibn Shadjarī, *Ḥamāli* (register s.v. a. 'Alī al-Darī); *Tha'ālibī, Ḥimāli al-Kūbā* 44, 164, 268, 485, 496; *Aḡḡābi* x, 108; x, 41.

**BAŞİT**, (c.1465-1535) Turkish and Persian poet. Although Latīf and 'Alī (*Kunā* al-'Abḥār) record that he came to Rūm from the realm of Persia, it is clearly stated in the *taḡhīras* of Rīyāḡī and in the *Kaḡf* al-Zunūn that he was from Ḥaḡḡād. Because of a diseased condition (*ḡarāḡ*) from which he suffered, he was called Aladja ('Blotch') Rūm. He grew up in the scholarly and literary milieu of Harāt, and frequented the circles of Sultān Ḥusayn Baykārā (1438-1507), Dīnālī (1424-92), and Nawā'ī (1441-1501). As he is not mentioned in the last-named's *Maḡḡilās al-Nalā'is*, he could not yet have won fame in that environment, but he is mentioned among the poets of Sellm I in the supplement written by Ḥaḡḡādī. Muhammad al-Shāh Kazwīnī in his Persian translation of the *Maḡḡilās al-Nalā'is*, Baḡī left Harāt for Rūm some time before 1492, bringing the books and *ghazals* of Dīnālī and Nawā'ī, and various commissions to execute for them. For a while he was in the service of the Ak Koyūnlu. When Ahmad Gōde, son of Ughurica, came to the Ak Koyūnlu throne (1496), Baḡī was sent as his ambassador to Sultān Baykārā II, reaching Istanbul in 1496 or 1497. On Ahmad Gōde's death in battle in the neighbourhood of Isfāhān in the latter year, Baḡī decided not to return to Persia but to settle in Istanbul. He later attached himself to Mu'ayyaddāde,

*baḡī* 'asher from 1503 to 1507, and became one of his intimates. The testimony of the *taḡhīras* is that it was Baḡī who brought the *diwān* of Nawā'ī to Rūm.

While he wrote Persian poetry, Baḡī, being brought up in the circle of Ḥusayn Baykārā and Nawā'ī, had a detailed knowledge of Turkish language and literature. After his arrival in Rūm, he adapted himself to his new literary environment with such success, thanks to his powerful intellect, as to win the favourable mention of the authors of the *taḡhīras*. Being an elegant and witty versifier he was much in demand in the salons of the great. In the reign of Süleymān he was one of the associates of the *defterdar* İshender Celebi, and was given an income from the *avāḡ* of Aya Sofya and from the imperial treasury. His poems, both Persian and Turkish, show that he had a sound knowledge of the sciences which in that age were the necessary concomitants of poetry and on which poetry fed. The chief features of his poetry are wit, elegance, and particularly the devices of *diwān* and *ihām*. Although it influenced the local literature, his work does not display the characteristics of 16th-century Anatolian classical literature, but is closer to that of 15th-century Persia. His neat lampoons and witticisms offended no one. Some of these witticisms are quoted in the *taḡhīras* given by himself incorporated into the *diwān*. Apart from his Turkish *diwān*, he wrote a *Diwān*-name. He died in Istanbul, in his 70th year.

**Bibliography:** Ḥakīm Muḥammad Shāhī Kazwīnī's translation of *Maḡḡilās al-Nalā'is*; the *taḡhīras* of Seḥī Bey, Latīf, Hasan Celebi, 'Aḡḡī Celebi, and Rīyāḡī; *Kaḡf* al-Zunūn.

(ALI NİHAZ TARIHAN)

**AL-BASIT**, Span. Albacete, Spanish town, chief town of the province of the same name which comprises the north-western portion of the old kingdom of Murcia, situated S.-W. of la Mancha and New Castle, on the S.E. slopes of the Meseta de Central Iberia at an altitude of 700 m. The modern name derives from the Arabic al-Basit ('*logar ancho y extendido y llano y sano*') and not from al-Basṭa 'the plain' as is still often stated. The place and the name are found for the first time in al-Dabḥī of Cordova and Ibn al-'Abḡar of Valencia in the 7th/13th century, in connection with the great battle of 20 Sha'bān 540/5 February 1146, a date confirmed by a laconic passage in the *Annales Toledanos* [ed. Huici Miranda 347, in *Las Crónicas latinas de la Reconquista*, I]; 'Cabañola (Seyt al-Yusuf al-Mustansir Ahmad b. Hūd) did battle with the Christians, and they killed him in the month of February 1144' (Spanish era = 1146 Christian era). The battle, which was quite an ordinary engagement, was not between Alfonso VII of Castile and his tributary, the short-lived king of south-eastern Spain which was entirely subject to him, but between the latter and the seignior Count sent by Alfonso VII to subjugate the rebels of Baeza, Ubeda and Jaén, who withheld their tribute from Sayf al-Dawla. The rebels, seeing their lands pillaged by the Christians, again submitted to their *amir* in order that he might save them from the Counts, who refused to suspend operations and, when Sayf al-Dawla took up arms against them, routed him and took him prisoner. While he was being led to their camp, certain soldiers, called *Pardos*, put him to death, much to the regret of the Counts and Alfonso VII himself'. With him was killed his ally the governor of Valencia 'Abd Allāh b. Muhammad b. Sa'd; the latter is for this reason known by the Arabs as Šāḡib al-Basit, 'Master

(martyr) of Albacete'. The battle is also called the battle of al-Luḡḡī (Ibn al-'Abḡar: *bi 'l-mawḡ* 'la *ma'raḡ* bi 'l-Luḡḡī wa bi 'l-Basit 'ala malabara min *ḡindḡilla*) in the vicinity of Chinchilla. Al-Luḡḡī the place (and the river) may be identified either with Leraur to the west, or with Alaiur to the east of Albacete, on the northern slopes of the Sierra of Chinchilla (in the latter case it should read Latuḡḡī). It is not possible to settle the problem; Faby al-Luḡḡī is found as early as Ibn al-Kardābī (cf. Dozy, *Scriptores arabum loci de Alabacete*, ii, 19). **Bibliography:** Dabḥī (ed. Codera and Ribera), 33; Ibn al-'Abḡar, *al-Hullā al-Sayrā* (Dozy, *Notices*, 215, 219, 226); Codera, *Decadencia y desaparición de los Almorávides en España*, Saragossa 1899, 86, 109; Gaspar Romero, *Marcia Muslimana*, Saragossa 1905, 179 ff.; Seybold, in *ZDMG*, lxi.

**BASIT** (see 'ARḌ).

**BASIT WA MURAKKAḤ**, *Basit* and *murakkaḥ* (simple and composite) are translations of the Greek ἀπλοῦς and σύνθετος. In Arabic grammar (but also in philosophy and medicine), the term *murafad* is used for *basit*. In grammar, *murafad* and *murakkaḥ* correspond to simple nouns and their construct states, in medicine to constituents and their compounds. In logic, mathematics and music, a *riḡla*, the term *mu'alafal* is more commonly used for *murakkaḥ*, while it is in physics and medicine alone that the term *munamā'iz* is used sometimes as an equivalent of and sometimes as distinguished from *murakkaḥ*, *secundum prius et posterius*.

Something can be simple either absolutely or relatively: an absolutely simple thing is that which cannot be further sub-divided into simpler parts either physically or conceptually; an atom is an example of the first, a highest genus of the second type (for the definition of the simple as indivisible see, e.g., Aristotle, *Metaphysics*, 989b 17). A relatively simple thing is a constituent in a further complex while in itself it may be divisible. Again, from the point of view of the 'composition' of form and matter (and the whole of the material world is so composite), either purely immaterial entities are simple or the primitive matter which is devoid of any form, although Aristotle and the Muslim philosophers restrict the term metaphysically to the former category.

In the actual material world (for the primitive matter does not exist), the four elements, fire, air, water and earth are regarded as the basic simple bodies by the composition of which every other material object comes into existence. According to Aristotle (the chief treatment of the subject is *De Gen. et Corr.* I, ch. 10), a form of composition in which the constituents retain their identity is *syntetis*, e.g., when sugar is mixed with sand, while in a *res* composition, called *peḡḡiz*, the parts lose their identity and share a common quality which, in many cases, may be different from that of the individual constituents. The former kind of 'composition' is not mentioned by the Muslim philosophers. They say that in certain combinations, e.g., in the case of compound numbers, figures or tones, a certain total quality emerges which does not belong to individual parts which also keep their identity, while in others the parts as such share the quality of the whole (e.g., in flesh) which is called *mutaḡabbih al-aḡḡiz* (ὁμοιοπαράτης). Whereas in the animal organism, each part, e.g., flesh, bones etc. is separately constituted in this way, but not the total organism, in the case

A disciple of the Khattābiyya (g.) group among the extreme Shī'a, Baḥḥār is said to have preached the doctrine that 'Alī was superior to Muhammad, since 'Alī was God and Muhammad only a messenger. He accepted the teachings of the Khattābiyya on four of the five deified persons, namely 'Alī, Fāṭima, al-Ḥasan, and al-Ḥusayn, but denoted Muhammad, to whom he assigned the rôle which the Khattābiyya assign to Salmān al-Fāris. He was also accused of preaching libertinism, the denial of divine attributes, and metempsychosis. His followers were known as 'Uḡḡayyā (s.v.), a name that is variously interpreted. One version is that they were so called when Baḥḥār, after teaching these doctrines, was changed into a sea-bird ('alyā).

Massinon, *Salmān al-Fāris*, Tours 1912, 28, 44-5; R. Strothmann, *Morgendliche Geheimnisse in al-Buhārī'scher Forschung*, Berlin 1953, 41-2; W. W. Rajkowski, *Early Shi'ism in Iraq*, London University Ph. D. thesis 1955.

**AL-BASIR**, AND 'ALĪ al-FARĪ b. DĪ'FAR b. AL-FARĪ b. YUNUS al-ANBARĪ al-NAGHĀ' al-KĀFĪ, poet and letter-writer of the first half of the 9th century. He was born in Kūfa in a family of Persian origin which had been living in al-Anḡar, but moved to Kūfa and settled in the quarter of the Yemenite tribe al-Naghā'. On account of his blindness he

of the heavenly bodies, each body is *mutashābih al-ādām*. The final qualitative pattern resulting from definite proportions of the constituents of a given mixture (i.e., hot, cold, moist and dry) is called *mināj*, whereas the particular form which a compound takes on due to this *mināj* is called *sūra* (or *ḥay'a*) *ḥay'at*. Thus the *mināj* (temperament) of a piece of living flesh is the final pattern of the mixture of the four primary qualities, while its *sūra ḥay'at* is the form of "fleshiness" (cf. Aristotle, *De Part. An.* 622a 18f.; *De An.* 408a 5 f.).

We said above that pure forms unmixed with matter are simple in the real sense. This is patently the case with intellect which not only knows pure universals but in whose act of knowing the duality of subject and object is removed. This kind of simplicity again admits of various degrees and works upwards from the human mind, through the separate intelligences, to God, in whose mind there is no multiplicity of objects. According to philosophers like Avicenna, who believe everything other than God to be composed of essence and existence, God alone is absolutely simple, not only in the operations of His mind but also in the necessary fact of His existence (see *MĀHĪYA WA WUJŪD*).

There is no special treatise on the subject and the various applications of the term can be studied only within the contexts of the special discourses of the philosophers, chiefly in their physical and metaphysical works. As a further Greek source of the Muslim's physical doctrine see Alexander of Aphrodisias, *Scripta Minora II*, περὶ ἀπορίας καὶ εὐσεβείας. (F. RAHMAN)

**BASMAČIS** (in Ōzbek "brigand"), the name given by the Russians to a revolutionary movement of the Muslim peoples of Turkestan against Soviet authority which broke out in 1918 and lasted 1919 or even later. See *TURKISTĀN, ŪZBEK, TĀDĪK, KHORASĀN, KHIVA, TÜRKMĒN, ENWER PASHA*.

(A. BENNIGSEN)

**BASMALA** is the formula *b'ism* *illāh* *l-raḥmān* *l-raḥīm*, also called *tawmīya* (to pronounce the [divine] Name). Common translation: "In the name of God, the Clement, the Merciful"; R. Blier's translation: "In the name of God, the Merciful Benefactor", etc. The formula occurs twice in the text of the *Kur'ān*: in its complete form in *Sūra* xxvii, 30, where it opens Solomon's letter to the queen of Sheba: "It is from Solomon and reads: In the name of God, the Merciful Benefactor"; on a second occasion, in its abbreviated form in *Sūra* xii, 43: "(Noah) said: Ascend into the ark! May its voyage and its anchorage be in the name of God". Finally in its complete form, it begins each of the *Kur'ānic* *Sūras*, with the exception of *Sūra* ix.

The invocation of the *basmala*, at the beginning of every important act, calls down the divine blessing upon this act and consecrates it. It gives validity, from the Muslim point of view, to a very widespread custom, invalidating the Arab formulae of the *ghibṭiyya*: "in the name of al-Lāz" or "in the name of al-Uṣṭ"; and even the formulae where the name of a deity did not appear, such as the invitation to a wedding feast *b' ṭarīf* *on* *l-banin* or again *b' l-yumn*. The Meccans, when they were not yet converted to Islam, protested against the reference to *al-Raḥmān* (see below). At the treaty of Hudaibiyya (628), they succeeded in having *bismilla* *al-Raḥmān* ("in your name, O my God") adopted.

In writing it is customary to omit the initial *alif* of the word *ism* "name" (*isim*). Tradition rests this orthography on the authority of 'Umar, who is

suggested to have said to his scribe: "Lengthen the *bā'*, make the teeth of the *sin* prominent and round off the *mim*." Tradition also indicates that the *lām* of *Allāh* should be inclined. The formula became a popular motif of devotion in manuscripts and architectural ornamentation.

The benedictory power of the *basmala* is widely put to work in the composition of the talismans admitted by the *sihr* (lawful magic). It is said that the formula was inscribed upon Adam's thigh, upon the wing of the angel Gabriel, the seal of Solomon and the tongue of Jesus (see Douteil, *Magie et Religion dans l'Afrique du Nord*, 211).

#### Problems.

1) In the *Kur'ān*, Zuhayrīsharī informs us that the readers of the *Kur'ān* and the jurists of Medina, Basra and Syria did not count the *basmala* at the beginning of the *Fātiḥa* and the other *Sūras* as a verse. In their view its presence in these places served simply to separate the *Sūras* and as a benediction. This is also the opinion of Abū Hanīfa, and explains why those who follow his doctrine do not pronounce these words aloud during the ritual worship. On the other hand the readers and the jurists of Mecca and Kūfa did reckon the *basmala* as a verse and pronounced it aloud. This is the view of al-Shāfi'ī. It is founded upon the usage of the ancients, for they wrote the *basmala* on the leaves on which they recorded the *Kur'ānic* texts, whereas they omitted the word *amin*. This opinion is followed in the current official edition of Cairo.

2) In the acts of daily life. Acts which are classified as obligatory or praiseworthy should always be preceded by the *basmala* unless "the Law-giver has decided otherwise", as, for example, in the *ṣalāt* which begins with *Allāhu Akbar*; also, according to tradition, in the recitation of a *ghibṭa* (repeated mention of a divine Name). In all other cases the *basmala* must be written or pronounced. *Ḥadīth*: "every important matter which is not begun with the *basmala* will be cut off (or mutilated or amputated, according to the different versions)", that is to say "will be defective and hardly blessed by God; apocryphally complete, it will be spiritually incomplete". Al-Bāghūrī (*Ḥaṣṣiya*, 3) comments: "The adjective 'important' signifies: a thing having a legal value (*ḥukm*), that is to say having a certain relationship with the law. It is not, then, a question of a thing which is bad, nor of one which is forbidden or blameworthy". Particular application: Solomon writes or acts ought to begin with the full formula. It is required in its abbreviated form before the commencement of the approved acts of daily life, especially before eating (cf. the *Risāla* of al-Kayrawānī, 236). An act the quality of which may differ according to the circumstances will receive divine blessing if it is preceded by the *basmala* (narrated, for example, al-Bukhārī, *ṣaḥīḥ*, 8); exorcisms for which the *basmala* is authorized where it is a question of an act which by accident becomes forbidden or blameworthy (al-Bāghūrī, *ibid.*).

3) The meaning of "Rahman" [g.s.]. In general the Muslim commentators regard *rahīm* and *rahīm* as two epithets from the root *RHM*, whence the translations: clement, or benefactor, or most merciful for *rahīm*, and merciful for *rahīm*. However, contrary to the opinion of B. Carré de Vaux (*REP*, s.v. *Basmala*), it seems certain that *Rahmān* was in use prior to Islam in southern and central Arabia (Yaman and Yamāna) as a personal name of God, meaning the single and merciful God. On the day following

the death of the prophet Muṣaylima still appears in the Yamāna claiming to receive direct revelations from *al-Rahmān*. In the *Kur'ān*: 1) *rahīm* alone appears in the list of the most beautiful Names (adjectives), and it is to be found, in the mass of the text, sometimes as *al-rahīm* and sometimes as *rahīm* without the article; *al-rahīm* on the other hand is always preceded by the article; 2) the Meccans of the *ghibṭiyya* refused to recognise *al-Rahmān* as a Name of God (cf. J. Jonier, *Le nom divin "al-Rahmān" dans le Coran*, 366-367, with references to al-Tabarī). It seems that this divine Name appears in the *Kur'ānic* preaching in order to stress more force fully the absolute Mercy of the Single God; furthermore "whatever is said in the *Kur'ān* about *al-Rahmān* is said elsewhere about *Allāh*" (Jonier, 370).

That *al-Rahmān* should have been the name of the single God in central and southern Arabia is in no way incompatible with the fact that, when adopted by Islam, it assumes a grammatical form of a word derived from the root *RHM*. The tripartite formula which "opens" each *Kur'ānic* *sūra* and each consecrated act of Muslim life evokes the mystery of the One God who is Lord of the Mercies. It is in this mystery that the *basmala* opens, in the eyes of the Muslim who pronounces it, its power of benediction.

(B. CARRÉ DE VAUX [L. GARDEY])

**AL-BASRA** (in medieval Europe: Basora; in Tavernier: Balsara; orthodox modern European texts: Basrah, Basra), a town of Lower-Mesopotamia, on the Shatt al-'Arab, 279 m. (420 km.) to the south-east of Baghdad. In the course of history the site of the town has changed somewhat, and we may distinguish between Old Basra, marked today by the village of Zubayr, and New Basra, which was founded in the 11th century in the proximity of the ancient al-Thudla [g.s.] and which is the starting point of the modern town of Basra, for the rapid growth of which the discovery of oil to the west of Zubayr is responsible.

#### I. Basra until the Mongol conquest (656/1258)

Although probably built on the site of ancient Diridīs (Terelod) and more certainly on the site of the Persian settlement which bore the name of Yahūdīshādīh Ardshāhīr, the Muslim town can be considered as a new construction. After having camped, in 14/635, on the ruins of the old Persian post called by the Arabs al-Khurayba ("the little ruin"), the Companion of the Prophet 'Uthā b. Ghazwān [g.s.] chose this location, in 22/638, to establish, on orders from 'Umar b. al-Khaṭṭāb, the

military camp which was the basis of the town of al-Basra (the name of which is probably derived from the nature of the soil). Situated at a distance of approximately fifteen km. from the Shatt al-'Arab, this camp was destined to afford a control over the route from the Persian gulf, from 'Irāq and from Persia, and to constitute a starting base for the subsequent expeditions to the east of the Euphrates and the Tigris, while at the same time it contributed to the settlement of the Bedouin. At the outset the dwelling places were simple huts made out of rushes which were easily gathered from the neighbouring Bātā'ih [see AL-BATYIA]; they were subsequently strengthened with low walls, and then, after a conflagration, rebuilt with crude bricks. It was only under Ziyād b. Abī Sufyān that the latter were replaced by baked bricks and that the town began to assume a truly town-like appearance, with a new Great Mosque and a residence for the governor; the rampart, bordered by a ditch, was not constructed until 133/721-2. At all times the supplying of al-Basra with drinking water posed a grave problem and, in spite of the digging of different canals and the utilization of the bed of the ancient Pallacopas to provide the town with a river port, the inhabitants were forced to go as far as the Tigris to get their supplies.

This inconvenience, added to the rigours of the climate, would have been enough to prevent the military encampment becoming a great city, but political, economic and psychological factors were sufficiently strong to keep the Basrans in the town which owed its development to them, until the time when other factors intervened—in the first place the foundation of Baghdad, and then the degeneration of the central power and political anarchy, which ushered in a decline as total as the growth had been rapid.

At the beginning of its existence, al-Basra provided contingents for the Arab armies of conquest, and the men of Basra took part in the battle of Nihāwand (21/642), and the conquests of Irbīl, Fars, Khuzrān and Sijistān (29/650). At this stage the military camp was playing its natural role, but then the booty began to flow in and the men of Basra began to be aware of their importance; then it was that the pace of events accelerated and the town became the stage for the first great armed contest in which Muslims fought against their brother Muslims, the battle of the Camel (36/656 [see AL-DJAMAL]). Before the fight the inhabitants had been divided in their loyalties, and the victory of 'Alī b. Abī Ṭālib served only to increase their disorder, but, on the whole, the population remained, and was to remain, more Sunnī than Shi'i, in contrast to 'Alid Kūfa. In the following year (37/657) men from Basra took part in the battle of Siffin [g.s.] in the ranks of 'Alī, but it was, at the same time, also from Basra that a considerable number of the first Khilafids were recruited. In 41/662 Mu'āwīya reasserted the authority of the Umayyads over the town, and then sent there, in 45/665, Ziyād, who may, to a certain degree, be considered as the architect of the town's prosperity. Basra was divided into five tribal departments (*ḥiṣma*, pl. *ahḥiṣa*): Abī al-'Alīya (the inhabitants of the high district of Hīdḥa), Tamīm, Bakr b. Wa'il, 'Abd al-Kays and Ad. These Arab elements constituted the military aristocracy of al-Basra and absorbed, in the rank of *masā'id* or slaves, the indigenous population (indoubtedly relatively few in number) and a host of immigrant peoples (Iranians, Indians, people from Sind, Malays, Zangī, etc.), who espoused

the quarrels of their masters, among whom the old tribal 'ajabiyya was slow to lose its force. The local situation was aggravated under the rule of the governor 'Ubayd Allāh b. Ziyād, and on his death (64/683) serious disturbances broke out; after a period of anarchy the Zubayrids seized control of al-Basra which remained under their authority until 72/691. During the following years the primary concern of the Umayyads was to be the suppression of a number of uprisings, the most important of which was that of Ibn al-Ash'ath (g.c.) in 81/701. The period of calm which then prevailed until the death of al-Hajjaj (95/714) was only to be further disrupted by the revolt of the Mulabbids in 101-2/710-20 and certain seditions of a minor character. The town then passed, without too much difficulty, under the control of the 'Abbasids, but the proximity of the new capital was not slow in robbing al-Basra of its character of a semi-independent metropolis which it had possessed since its foundation; it became henceforth a simple provincial town, periodically threatened by revolts of a character more social than political; first the revolt of the Zulfī (g.c.), who spread a reign of terror in the region from 205 to 220/820-35, then the Zanū (g.c.), who seized power in 257/871, and finally the Karimatis who plundered it in 311/923; shortly after this it fell into the hands of the Barīdids (g.c.), from whom the Duwayhidis (g.c.) recaptured it in 356/967; then it passed into the hands of the Ma'wīdīs (g.c.) and experienced a resurgence of prosperity, although the new rampart constructed in 517/1123, at a distance of 2 km. within the old one, which had been destroyed towards the end of the 5th/11th century, is sufficient proof of the decline of the town. The neighbouring nomads (in particular the Muntafik) took advantage of the political anarchy to subject the town to their depredations; from 537/1142/3, affirms a copyist of Ibn Hawkal, a number of buildings were destroyed; and in our time there is nothing left of the ancient metropolis save a building known by the name of Masjid 'Alī and the tombs of Talha, al-Zubayr, Ibn Sīn and al-Hasan al-Basri.

The town reached its zenith in the 2nd/8th century and the beginning of the 3rd/9th century. At this period it was fully developed and its population had increased to considerable proportions. Although the figures given are wildly divergent (varying from 200,000 to 600,000), al-Basra was, for the Middle Ages, a very great city and, what is more, a "complete metropolis": it was at the same time a commercial centre, with its own mint, was halting place for caravans and its river port, al-Kallā, which accommodated ships of fairly large tonnage; a financial centre, thanks to the Jewish and Christian elements and the bourgeois of non-Arab stock; an industrial centre with its arsenals; even an agricultural centre with its numerous varieties of dates; and finally the home of an intense religious and intellectual activity. "Basra, in fact, is the veritable crucible in which Islamic culture assumed its form, crystallised in the classical mould, between the first and 4th century of the *hijra* (from 16/637 to 311/923)" (L. Massignon). It is, in fact, worth remembering that it was here that the Arabic grammar was born and made illustrious by Sibawayh and al-Jahiz; that al-Basra was the seat of the 'Umayyad caliph al-Walīd, and that Mu'azzilism was developed with Waḥīd b. 'Aṭā, 'Amr b. 'Ubayd, Abu 'l-Hudhayl, al-Nazzām and so many others; here also it was that scholars such as Abū 'Amr b. al-'Alā, Abū 'l-'Āḍa, al-

Asmā' and Abu 'l-Hasan al-Maḍīnī collected verses and historical traditions which nurtured the works of later writers. In the religious sphere the sciences shone with an intense brilliance, while al-Hasan al-Basri and his disciples founded mysticism. In the field of poetry al-Basra can claim the great Umayyad poets and the modernists Baḥshār b. Burd and Abū Nuwās; finally it was in this town that Arabic prose was born, with Ibn al-Mukaffā, Sahl b. Hārūn and al-Dīhāz. After the 3rd/9th century the intellectual degeneration is not so clearly marked as the political and economic decline, and, thanks to Ibn Sawwār, the town was endowed with a library whose fame was to endure; the 'Ishā'īn al-Safī' and al-Harīfī made their contribution to the maintenance of the ancient city's prestige, but Arab culture in general was already decadent, and Baghdad, as well as other provincial capitals, tended to supplant al-Basra completely.

**Bibliography:** The history of al-Basra was written by at least four authors—'Umar b. Shāhīn, Maḍīnī, Sijīdī and Ibn al-'Arīdī—but their works have not been discovered and it is necessary to refer to the great historical, biographical and geographical texts of Baladhūrī, Tabarī, Ibn Sa'd, Ibn al-Athīr, Ibn al-Fakhr, al-Iṣṭakhārī, Muḥaddasī, Idrīsī, Yāqūt etc. These works have, moreover, been used by L. Caetani, *Annali*, iii, 292-309, 759-84 (see also the same author's *Chronographica*, *poetica* and *Le Strabone*, 14-6, as well as by Ch. Pellat, *Le Mideux barbares et la formation de Gāhīn*, Paris 1953, where there is to be found a history of the town from its foundation up to the middle of the 3rd/9th century and a bibliography, to which might be added particularly J. Saint-Martin, *Recherches sur l'histoire et la géographie de la Mésopotamie et de la Chanaan*, Paris 1878, 47 ff., Rawlinson, *The Five Great Monarchies*, iii, 290 and Nāṣirī-Ḳubraway, *Safar-nāma*. The ancient topography of the town is the subject of a detailed monograph by Sāḥib al-'Alī, *Khilaf al-Basra*, in *Sumer*, 1952, 72-83, 281-303 (see also the subsequent numbers of *Sumer*), and of a stimulating paper by L. Massignon, *Explication du plan de Basra* in the *Westminster Abhandlungen*, 1952, 1-10. . . Wiesbaden 1954, 154-74, with two sketch maps showing firstly the site of both Basras and secondly the location of the *al-ḥammā*. The social and economic institutions of the 1st/7th century have been studied in a most profound way by Sāḥib al-'Alī, *al-Tanzīm al-ijtimā'iyya wa-l-iktisādiyya fī l-Basra*, Baghdad 1953 (with a full bibliography). (CH. PELLAT)

## II. Modern Basra

Basra, already much reduced in size and vitality in the 3th/7th-13th centuries, was further and faster debilitated by the destruction, near-anarchy and neglect which followed Hulagū's visit to 'Irāk in 656/1258, and the installation there of an Il Khān in 1282/2765. The establishment of European (British, French, Italian) permanent trading-posts, consulates and missions slowly gained ground, but disorder scarcely diminished and tribal threats increased with the rise, after 1256/1740, of the powerful Sa'dīn leadership in the Muntafik. The siege and occupation of the city and district in 1186-1194/1779-89, by the Russian forces of Suleymān Khān, brother of Karīm Khān Zand (g.c.) was a curiously detached episode of Basra's history; it was succeeded by the return of all the familiar conditions. Threats to Basra by the fleet of the Imām of Maskat in

but its cultural and economic life declined throughout the Dīlārī and Turkomān periods of 'Irākī history—740/1340 to 914/1508—and when at last at the latter date it fell with all 'Irāk to the Persian power of Shāh Ismā'īl for a brief generation—914/1508 to 947/1554—it was, in its now established new position two miles upstream, a main canal of the modern 'Aḥzār Creek, a provincial town of little interest apart from its sea-port status, its gardens, and its predilection for local independence from distant suzerains.

The Ottoman conquest of 'Irāk in 947/1534, which further strengthened the Sunni elements in the population already prevalent, had little other effect on its status or fortunes; the Turkish paḡḡa of Baghdad was satisfied with a minimum of respect and tribute from the marsh-surrounded and tribe-threatened city of the far south; and when in 953/1546 the independent airs of Basra became too offensive, two expeditions from central 'Irāk succeeded in restoring some semblance of the Sultan's authority as against powerful local (tribal or urban) candidates for power. A longer and more successful attempt at quasi-independence, under merely nominal Imperial suzerainty, was made by a local notable of now unascertainable origins, Afrāziyāb (g.c.), and his son and grandson 'Alī Paḡḡa (1034/1624) and Husayn Paḡḡa (c. 1060/1650). This interesting dynasty opened the gates of Basra and its waterways to the representative and merchandise of the West—Portuguese, British, Dutch—then active in the commerce of the Persian Gulf; it survived, with vicissitudes and interruptions, for some 45 years against the armed and diplomatic efforts of the Paḡḡa of Baghdad, the threats of the Safawid Shāh, and the intrigues of local rivals and turbaned tribesmen. And its restoration to the Empire was still incomplete until after a further full generation of local uprising and Persian penetration, tribal dominance (of the Huwayza tribes and the Muntafik), and domination by plague.

Throughout the two centuries (12th-13th/18th-19th) following these events, Basra remained the metropolis of southern 'Irāk, the country's sole port—however primitive and ill-equipped—the base for a decayed and microscopic fleet, the centre of the date trade, and the gateway to the tribes and princes of Arabia, Khūzistān, and the Persian Gulf. The city, whose administration evolved only after 1247/1831 slowly towards modernity, was ever at the mercy of tribal marauders and even invaders, notably by the great Muntafik tribe-group, and by plague and internal dissension.

During the campaigns of Nādir Shāh in 'Irāk in the mid-century Basra was threatened and for a time besieged, and his withdrawal was followed by the usual attempts at secession. Sound and vigorous government was witnessed under rare Mutasallims of higher quality, including Sulaymān Abū Laylā from 1286 (1749) and Sulaymān, the Great Khan from 1282/2765. The establishment of European (British, French, Italian) permanent trading-posts, consulates and missions slowly gained ground, but disorder scarcely diminished and tribal threats increased with the rise, after 1256/1740, of the powerful Sa'dīn leadership in the Muntafik. The siege and occupation of the city and district in 1186-1194/1779-89, by the Russian forces of Suleymān Khān, brother of Karīm Khān Zand (g.c.) was a curiously detached episode of Basra's history; it was succeeded by the return of all the familiar conditions. Threats to Basra by the fleet of the Imām of Maskat in

1213/1798 came to nothing, though rivals for tribal or governmental power in southern 'Irāk sought him as an ally, for example in 1241/1825. The great plague of Baghdad in 1247/1831 did not fail to infect the Port also, and increased its weakness and disorders.

The period 1248-1332/1832-1914 was one of slow development, improving security and increasing commercial links with Europe and America. Basra became a *wilāyat* in 1267/1850 and, among its eminent families and personalities, a centre of nascent Arab nationalism.

During the British occupation of 'Irāk (from 1332/1914) and subsequent Mandate (1339-1351/1920-32), the transformation of Basra into its most modern form was rapid. The port was constructed on spacious modern lines and fully equipped, a deep channel at the mouth of the Shaḥ al-'Arab dredged, and the town itself and its suburbs improved by a variety of new roads, buildings and public services. It became the southern terminus of 'Irāk Railways, and an air centre of increasing importance. Under the 'Irāk Government it became the headquarters of a *liwa* which included the dependent *ḥudūd* of Abū 'l-Khaṣīb and Kurna. The city, with its suburbs of Ma'ālī and 'Aḥzār, contained in 1955 some 200,000 souls. With improved security and communications Basra took its place as by far the leading port and entrepôt of the Persian Gulf, and 'Irāk's indispensable outlet. During the three decades preceding 1377/1957 further improvements were carried out in its town-planning, streets (including an imposing Corniche road), public and commercial buildings, and public services and facilities. The vast date gardens (within which, however, life remained poor and primitive) and the magnificent waterway of the Shaḥ al-'Arab offer a remarkable setting to the modernised city of Basra and its spreading suburbs with their characteristic mixture of the primitive, the medieval, and the fully modern. The date export trade has been further organised and centralised under a Board located at Basra, Exploration for petroleum by a Company of the 'Iraq Petroleum Co. group—however primitive and ill-equipped—the base for a decayed and microscopic fleet, the centre of the date trade, and the gateway to the tribes and princes of Arabia, Khūzistān, and the Persian Gulf. The city, whose administration evolved only after 1247/1831 slowly towards modernity, was ever at the mercy of tribal marauders and even invaders, notably by the great Muntafik tribe-group, and by plague and internal dissension.

Sound and vigorous government was witnessed under rare Mutasallims of higher quality, including Sulaymān Abū Laylā from 1286 (1749) and Sulaymān, the Great Khan from 1282/2765. The establishment of European (British, French, Italian) permanent trading-posts, consulates and missions slowly gained ground, but disorder scarcely diminished and tribal threats increased with the rise, after 1256/1740, of the powerful Sa'dīn leadership in the Muntafik. The siege and occupation of the city and district in 1186-1194/1779-89, by the Russian forces of Suleymān Khān, brother of Karīm Khān Zand (g.c.) was a curiously detached episode of Basra's history; it was succeeded by the return of all the familiar conditions. Threats to Basra by the fleet of the Imām of Maskat in

1213/1798 came to nothing, though rivals for tribal or governmental power in southern 'Irāk sought him as an ally, for example in 1241/1825. The great plague of Baghdad in 1247/1831 did not fail to infect the Port also, and increased its weakness and disorders.

The period 1248-1332/1832-1914 was one of slow development, improving security and increasing commercial links with Europe and America. Basra became a *wilāyat* in 1267/1850 and, among its eminent families and personalities, a centre of nascent Arab nationalism.

During the British occupation of 'Irāk (from 1332/1914) and subsequent Mandate (1339-1351/1920-32), the transformation of Basra into its most modern form was rapid. The port was constructed on spacious modern lines and fully equipped, a deep channel at the mouth of the Shaḥ al-'Arab dredged, and the town itself and its suburbs improved by a variety of new roads, buildings and public services. It became the southern terminus of 'Irāk Railways, and an air centre of increasing importance. Under the 'Irāk Government it became the headquarters of a *liwa* which included the dependent *ḥudūd* of Abū 'l-Khaṣīb and Kurna. The city, with its suburbs of Ma'ālī and 'Aḥzār, contained in 1955 some 200,000 souls. With improved security and communications Basra took its place as by far the leading port and entrepôt of the Persian Gulf, and 'Irāk's indispensable outlet. During the three decades preceding 1377/1957 further improvements were carried out in its town-planning, streets (including an imposing Corniche road), public and commercial buildings, and public services and facilities. The vast date gardens (within which, however, life remained poor and primitive) and the magnificent waterway of the Shaḥ al-'Arab offer a remarkable setting to the modernised city of Basra and its spreading suburbs with their characteristic mixture of the primitive, the medieval, and the fully modern. The date export trade has been further organised and centralised under a Board located at Basra, Exploration for petroleum by a Company of the 'Iraq Petroleum Co. group—however primitive and ill-equipped—the base for a decayed and microscopic fleet, the centre of the date trade, and the gateway to the tribes and princes of Arabia, Khūzistān, and the Persian Gulf. The city, whose administration evolved only after 1247/1831 slowly towards modernity, was ever at the mercy of tribal marauders and even invaders, notably by the great Muntafik tribe-group, and by plague and internal dissension.

During the campaigns of Nādir Shāh in 'Irāk in the mid-century Basra was threatened and for a time besieged, and his withdrawal was followed by the usual attempts at secession. Sound and vigorous government was witnessed under rare Mutasallims of higher quality, including Sulaymān Abū Laylā from 1286 (1749) and Sulaymān, the Great Khan from 1282/2765. about 12½ m. (20 km.) south of al-Kaṣr al-Kabir, is occupied, according to Timor, the site of the Roman town of Tremulae. Founded about the same period as Arzila (Arzila [g.a.]), and probably therefore by Idrīs II, at the beginning of the 9th century, it was doubtless intended to be the summer residence of the Idrīsids of Fās. When Muḥammad b. Idrīs II partitioned his kingdom, al-Basra fell to the share of his brother al-Kāsim together with Tangier and its dependencies. In the following century, it became the capital of a small state comprising the Rif and Ghumaland, the administration of which was entrusted to the Idrīdī prince Ḥasan b. Gūnim; it was soon afterwards captured (15 Muharram 353/6 October 973) by the army of the Umayyad caliph of Cordova, al-Ḥakam II; Yalyā b. Ḥamdūn set himself up there as an independent ruler before being driven out by Buḡgāḡ b. Zīrī, who razed the fortifications of the town. These are almost the only definite statements we have on the history of al-Basra.

Despite the statement of al-Mukaddas (ed. trans. Pellat, 27) that it was in ruins, the town seems to have preserved a certain prosperity in the 14th/15th and 16th/17th centuries, as is asserted by Ibn Ḥawkal and al-Bakrī, who speak of its walls pierced by ten gateways, its baths, its mosque, and the gardens, pastures and fields of corn and cotton which surrounded it; nevertheless, it rapidly declined and eventually fell into complete ruin; at the time of Leo Africanus, it was inhabited by no more than 2,000 households, and its walls stood in the midst of deserted gardens; to-day, only the stone wall remains.

**BAST** (Pers.), "sanctuary, asylum", a term applied to certain places which were regarded as affording an inviolable sanctuary to any malefactor, however grave his crime; once within the protection of the *bast*, the malefactor could negotiate with his pursuers, and settle the ransom which would purchase his immunity when he left the *bast*. In Persia the idea of *bast* was connected in particular with (1) mosques and other sacred buildings, especially the tombs of saints (for example, in 806/1404 Timūr is said to have recognised the tomb (*maṣḥid*) at Ardābil of Shāhshāh Saif al-Dīn, founder of the Safawid order, as constituting a *bast*), (2) the royal stables and houses (the wrong-doer could claim sanctuary by standing either at the horse's head or at its tail), (3) the neighbourhood of artillery, especially in the Maydān-i Tūpkhāna in Tehran. According to Chardin, under the later Safawids the royal kitchens, and the gateway of the 'Alī Kāpū palace at Isfāhān, also constituted a *bast*. Malcohn states that the residences of the *madhabs* in general were considered as *bast*, and that in the case of one particularly celebrated *madhhab*, his residence continued to be regarded as *bast* even after his

death. When telegraphic communications were introduced into Persia in the second half of the 19th century, the telegraph offices were at first invested with the status of *bast*. About 1869 Nāṣir al-Dīn Shāh attempted without success to abolish the institution of *bast*. (For details of the violation of the *bast* of Shāh 'Abd al-'Azīm by Nāṣir al-Dīn Shāh in 1891, see the article *QAMAL AL-DIN AL-ARJĀNĪ*).

In the present century, the institution of *bast* (also termed *labasjan*), assumed great importance during the events which led to the granting of the Persian Constitution by Muṣṭafā al-Kāzīm Shāh in 1906. In December 1902 a group of merchants, *mullās* and students, in order to compel the Shāh to take note of their grievances, took refuge first in the Masjid-i Džūmī in Tehran, and then, after having been forcibly expelled from this sanctuary, in the shrine of Shāh 'Abd al-'Azīm, 6 miles SSE of Tehran. A month later, on the receipt of certain promises and assurances from the Shāh, the *bastīs* left their sanctuary. The "Second *Bast*" occurred in July 1906, when some 12,000 people, led by the 'ulama, merchants, and members of the trade guilds, took refuge in the garden of the British Legation in Tehran, and ultimately (August 1906) succeeded in obtaining from the Shāh the promise of the grant of a Constitution. During the disturbances which attended the election of the members of the National Consultative Assembly, which sat for the first time on 7 October 1906, the constitutionalists again took refuge in the British Legation in Tehran; in the provinces, British Consulates, notably those at Tabriz and Kirmānshāh, and telegraph offices were used by the constitutionalists as places of refuge. In June 1907 a group of *mullās* and others hostile to the Constitution took *bast* at Shāh 'Abd al-'Azīm in an unsuccessful attempt to rally opposition to the constitutionalist movement.

**BAST** (A.), a technical term of the Sūfīs, explained as applying to a spiritual state (*ḥāl*) corresponding with the station (*maḥal*) of hope (*radjā*): it is contrasted with *ḥabḥ* (g.a.). The Kūfī and authority generally quoted for these terms is: "And God contracts (*yakḥib*) and expands (*yawḥid*)" (ii, 243). As *bast* is a *ḥāl*, it bears no relation to personal mental or spiritual processes, but is a sense of joy and exaltation vouchsafed to the mystic by God. For this reason many Sūfīs accounted it to be inferior to *ḥabḥ*, on the ground that, until God is finally attained and the human individuality is lost in Him, any feeling other than that of desolation is inappropriate. The following saying of al-Baṣrāwī thus translates this point: "The fear of God contracts me, and the hope for Him expands me . . . When He contracts me through fear, He causes me to pass away from self, but when He expands me through hope, He restores me to myself" (Kushayrī, *Risāla*, 43). These lines of Ibn al-Fāriḍ (al-Ta'yyyin al-ḥabībī,

ii, 646-7) summarise the Sūfī theory excellently: "in the mercy of expansion the whole of me is a wish whereby the hopes of all the world are expanded, and in the terror of contraction the whole of me is an awe and over whatsoever I let mine eye range, it reverts me" (tr. Nicholson, in *Studies in Islamic Mysticism*, 356). Hodgkirk writes (tr. Nicholson, 374): "Kāshānī diagnoses the contraction of the heart in the state of being veiled, and *bast* denotes the expansion of the heart in the state of revelation". The mood of *bast* appears to be similar to that in which Pascal cries: "The world hath not known Thee, but I have known Thee. Joy! Joy! Joy! Tears of joy!"

(A. J. ARBERY)

**BASTA**, Spanish Baza, *Basti* in ancient geography, now chief town of a *partido* of the province of Granada. It is situated to the north-east of Granada, 123 kilometres distant from it by road. Al-Idrīsī describes it as being of medium size, pleasantly situated, flourishing and well populated. It was a fortified town and had several bazars. It was a commercial town where local artisans pursued a diversity of trades. Mulberry trees were prolific in the town and, in consequence, there was a large silk industry. Baza was also rich in olive groves and all kinds of fruit trees. It was here that the workshops (*harāṭ*) for the weaving of prayer carpets (*masālī*-called *bastīs*) were located. These carpets were made from brocade which had no equal. The galena (*ḥabḥ*) or sulphide of antimony used in eye washes was taken from deposits in the mountain known as Djabal al-Kahl which was situated near the town. During the Umayyad Caliphate, Baza had an important Mozarab community with a bishopric subordinate to Toledo. The *Bayda* in its last section, at present in course of publication, gives the names of a number of the town's Almohad governors. In 645/1247, Baza came under the rule of Muḥammad b. Yūsuf b. Almad, founder of the Nasrid kingdom (see *Nasrids*).

**al-BASŪS** BIKT BAKSHI (A. SAHĪB MINARAD) was a legendary figure of the pre-Islamic sagan (*ayyām al-'Arab*), said to be responsible for the murder of Kulayb b. Rab'ā'a al-Taghlibī and the ensuing war (*harb al-Basūs*) between the tribes of Bakr b. Wā'il and Taghlib b. Wā'il. For the question of the historical background see art. KULAYB b. RAB'Ā'A. In the legend Kulayb is represented as a tyrant who disregarded the time-honoured customs of the Bedouins and usurped for himself the right of pasture and of hunting in his self-chosen preserves. Once al-Basūs, while staying with her nephew al-Djassās, Kulayb's brother-in-law, let her she-camel (*nar*, the she-camel of Sa'd al-Djāmal, her husband, or according to others, her protégé) graze on Kulayb's pasture and he killed the camel (*nar*, killed her food and her livelihood in the saddle). Outraged by this violation of the host's rights al-Djassās (*nar*, together with his cousin) killed Kulayb and this led to the war between the two tribes. Kulayb's killing the she-camel and his death are alluded to by al-Nabigha al-Djāmal, d. ca. 65/684 but without mentioning al-Basūs (see *Aḡḥāṭ* iv, 127, 140 and M. Nallino, in *RSO* xiv, 495 f.). Her name is given for the first time in the proverbial *shā'asā min nāḥal al-Basūs* (see, e.g., al-Mufaḍḍal b. Salama, *Fakhḥ*, 76). The full story is told on the authority of Abū 'Ubayda in the *Nakā'id al-Djāwī wa l-Farāzdaq* 905-7 and with slight variations by other

collectors of the *ayyām al-'Arab*. In the *Fakhḥ*, 76, in Thibridī's Commentary on the *Hamāda* 420 (on the authority of Abū Rīyāḥ 330/930) and elsewhere four verses are put in the mouth of al-Basūs, addressed to Sa'd and indirectly compelling al-Djassās to take revenge on Kulayb; they are a fine specimen of *lahrij* "vintennet", and are cited in the *Rasā'id al-Jahān al-Sa'd*, Cairo 1347, i, 133, as an example of the tremendous effect which poetry can have on man's actions.

The proverb *shā'asā min al-Basūs* was by some scholars thought to refer to the pathetic figure of the heroic age, but to her namesake, a Jewess, who by her stupidity forfeited the three wishes which God had granted to her husband.

Freytag), i, 683-7; Yāqūt i, 130; Ibn al-Aḡḍī i, 385 f.; *Khawāṣṣ al-Adab* i, 300 ff.; W. Cackel, *Aḡḥāṭ al-'Arab* (us-Islamica vol. II, suppl.) 76 and 97 (German translation of Nab. 909, 10096, 31-); For al-Basūs the Jewess see *LA* and *TA* s.v. *bas*; Freytag, *Proverbia Arabum* i, 687, Dandl s.v. *Kalb* (translated by R. Basset, 1904, text, i, 18) tells the story but omits the wife's name. For the motif of "the three wishes" see J. Holte and G. Polivka, *Anmerkungen zum des Kinder- und Hausmärchen der Brüder Grimm* II (1913) 223. (J. W. FOCK)

**BAŞVEKALET ARŞIVI**, formerly also BAŞKALEK ARŞIVI, the Archives of the Prime Minister's office, the name now given to the central state archives of Turkey and of the Ottoman Empire. The formation of the Ottoman archives begins with the rise of the Ottoman state, but the present collection, though containing a number of individual documents and registers from earlier times, dates substantially from after the Ottoman conquest of Constantinople in 1453. The archives became really full from about the middle of the 16th century, and continue to the end of the Empire.

The organisation of the Ottoman records in the form of a modern archive collection dates from an initiative of the reforming Grand Vizir Muṣṭafā Reşid Paşa, who in 1262/1846 erected a new building for the archives in the grounds of the Grand Vezirate, and transferred to it a large number of record collections, previously kept in bales and boxes in various repositories and offices in different parts of the city. The building, designed by the famous architect Fossatī, was provided with a staff and a director. This record office, in Ottoman times known as the *Kāḫane-i Ewāk*, originally consisted of two main groups of documents; the records of the Imperial Council (*Dīvān-i Humāyūn*) and of the Grand Vezir's office (*Bāb-i 'Ahl* or *Pasha Kapısı*). To these other records were from time to time added, notably the records of the finance department and the registers of the cadastral survey office. From the start, the *Kāḫane-i Ewāk* was attached to the establishment of the Grand Vezir. Under the Republic it was, after a brief period of uncertainty, attached to the office of the Prime Minister. The old name was replaced by the modern one by a law of 1937.

A new phase in the organisation and study of the archives had begun in 1911, after the formation of the Ottoman Historical Society (*Ta'riḥ-i 'Oḡḥmānī Endüsmeni*). The opening article in the first issue of the society's journal, written by 'Abd al-Rahmān Şheret, the last official historiographer and first

president of the society, contained a statement of the society's aims, the first of which was the classification, study, and publication of archive documents (*TOEM*, 1911, 9-19 and 69-9; cf. P. Witte, *Les Archives de Turquie, en Turquie, et en Syrie*, 1938, 691-9). In the years that followed, Turkish scholars working in the archives began to sort and classify the records, and also published many individual documents. This work was interrupted by the Revolution and war of Independence, followed by the transfer of the capital and a general mood of revolution from the Ottoman past. In 1932, however, a new start was made, and since then work has continued in housing, organising, and cataloguing the records. In 1936, Professor L. Fekete was invited to advise on the methods to be followed in these tasks (see L. Fekete, *Über Archivwesen und Archivwesen in der Türkei*, AO, Budapest, III, 1935, 179-200).

The contents of the *Bayvekalet Arşivi* may be divided broadly, according to the form in which they are preserved, into two groups—*evrak*, papers, and *defterler*, bound registers. The former, ranging from Imperial decrees drawn up in due form to odd notes and minutes by minor clerks, are estimated to number many millions, of which only a very small proportion has been catalogued. A first classification of papers was made in 1918-1921 by a committee under the direction of Ali Emiri, which sorted 180,316 documents in strict chronological order, by regions, from 'Oghlana I to 'Abd al-Majid. The great majority are of the 18th and the first half of the 19th centuries. In 1921 a second committee, under İbrahim Mahmut Kemal, sorted 46,467 documents, from 1757 to the 19th centuries, into 25 subject groups, the largest of which are those of financial (12,200) and military (6,227) documents. Within each group the documents are in rough chronological order. A third team, under Mu'alla Cevdet (Djavidet), worked from 1932 to 1937 along much the same lines as İbrahim, and sorted 184,256 documents into 16 subject categories. Here the largest groups are military (54,084), *waşf* (35,351) and internal affairs (17,668 documents). These 1937 classifications are nearly cited as the *klasifikasyon* of the three persons who directed them.

Since 1937 this kind of pre-scientific classification has been abandoned, and a new start made on more modern lines. Papers are being completely separated from registers, and classified according to the offices and departments to which they belonged, as far as possible preserving the original order and sequence. In addition to the main classification, the archives staff has undertaken the preparation of a number of special series, such as 'Imperial witnesses' (*Kâhî-i Humûyân*), decrees (*irâde*), treaties, *waşf* documents, etc. A special catalogue is being prepared of the papers and records of 'Abd al-Hamid II, which were transferred to the Bayvekalet Arşivi from the Yıldız Palace.

The *defterler*, bound registers, are estimated to number about 60,000 in all Turkish collections, the great majority being in the Bayvekalet Arşivi. They are of two basic types: statistical, containing figures and other factual information required and collected for various administrative purposes; and diplomatic, containing registries copies of the texts of outgoing orders, letters, and other communications. The *defterler* may be considered in three main groups: a) the Imperial Council and Grand Vizirate. The latter, which in the 17th century grew into a separate bureaucratic organisation, eventually took over most of the functions of the former, and the

archives of the two together thus record the workings of the chief centre of Ottoman Imperial government. Of the many series of registers included in this section by far the most important is the *Mühimme Defteri* (register of important, i.e., public affairs). This consists of 263 volumes, covering the years 961-1323/1551-1905. It is a day by day record of outgoing correspondence of all kinds, in simple chronological sequence. (On the *Mühimme* see G. Elezović, *18 Carigradskih Turških Arhiva Muhimme Defteri*, Belgrade 1931, and U. Heyd, *Documents on Ottoman Administration of Palestine* 1323-1651, A Study in the *Mühimme Defteri*, Oxford, in the press). In the course of time a number of separate series were started, dealing with matters formerly included in the *Mühimme*. From 1039 to 1355/1649-1742-3 complaints from the provinces and the decrees answering them are dealt with in separate 'Complaints Registers' (*şikâyet defterleri*). These are still in purely chronological order, but from 1155 to 1306/1742-9-1889-9 are replaced by the 'Decrees Registers' (*ahkâm defterleri*), geographically subdivided into 17 separate provincial series. The Complaints and Decrees registers together number 330 volumes. Other offshoots of the *Mühimme* include a series on military affairs (68 volumes, 1196-1320/1781-1906); a series of specially sorted *Mühimme* (10 volumes, 1207-1241/1788-1877), and a series on Egyptian affairs, the last volume of which is sorted (15 volumes, 1119-1313/1707-1914). Among the numerous other series contained in this section, are the Royal Letters (*Nâme-i kumâyân*), 17 vols., 1111-1336/1699-1917, the *Tanzimat* Council registers (50 vols., 1272-1335/1854-1914), as well as other series dealing with foreign consuls and merchants, privileges (*irâde*), legal rulings (*mahkâmâ*), treaties, sentences of confinement to fortresses (*hâfendîk*), *shâhi*, appointments, churches, minority communities, etc. etc.

b) The Cadaster (*tapu*), comprising the great land and population survey of the Empire. It was formerly a separate department of the government (see DAPKARTER 181-182), and was housed in the Defterhâna near the Sultan Ahmed mosque. The greater part of the registers was transferred to the *Bayvekalet Arşivi*, which now reports the possession of 1135 volumes. The remainder, about 250, are in the General Survey Directorate (*Tapu ve kadastro umum Müdürlüğü*) in Ankara. The earliest, a register of *timars* in a *sandjak* in Albania, dated 835/1431, was edited by İbrahim (Süleyman) Defter-i Sancak-i Arnavud, Ankara 1934). These registers, which were renewed at frequent intervals, cover almost all the provinces of the Empire in Europe and Asia, including parts of Transcaucasia and Western Persia. Arabia, Egypt, and North Africa are excluded.

c) Finance (*Mâlîyye*). The surviving records of the Ottoman financial administration are now in the *Bayvekalet Arşivi*, and comprise many series of registers, as well as vast quantities of papers. They include the accounts and records of the Chief Comptroller's Department (*hâshmetkârâne*) from the 16th to the 19th centuries; of the various special commissioners' departments (*emânet*)—arsenals, cereals, meat, artillery depot, mints, kitchens, powder-magazines; of provinces, departments, and tax-farms, mines, customs, *zehmets*, etc. A good example is the *dişvîye* series (418 vols., 958-1255/1551-1849). Part of the series is sub-divided by provinces, and some registers contain copies of *dişvîye* documents and receipts, with lists of *dişvîye* payers, sent in from provincial capitals.

Apart from the main collection in the *Bayvekalet Arşivi*, there are numerous other smaller collections in Turkey. The most important are the palace archives preserved in the Topkapı Sarayı (p. 2), the records of the General Directorate of *waşf* in Ankara, and the collections of legal documents known as *şâhidîye şerhîyye* (see signals).

**Bibliography:** For a general survey of the archives, with a description and classification of the papers and registers, see Midhat Sertoglu, *Mühimme Bâhşanman Bayvekalet Arşivi*, Ankara 1935. On the history of the collection this may be supplemented by Salâhaddin Elber, *Maddatü'l-Bâhş ve Türk Arşivçiliği*, in *IV Türk Tarih Kongresi*, Ankara 1952, 182-9. See further B. A bibliography of Ottoman archive studies will be found in Ananiasz Zajackowski and Jan Reychnan, *Zarys Dyplomatyki Osmanlijsko-Tureckiej*, Warsaw 1955 (English translation to be published).

(B. LEWIS)  
**BAŞVEKİL** (Başvaka), the Turkish for Prime Minister. The term was first introduced in 1818, when, as part of a general adoption of European nomenclature, this title was assumed by the Chief Minister in place of Grand Vezir or *Sadr-i 'A'zam* [p. 2]. The change of style was of short duration, lasting only for 1½ months, after which the old title was restored. A second attempt to introduce the European title was made during the first constitutional period. Introduced in Safar 1293/Feb. 1878, it was dropped after 114 days, restored in Sha'bân 1296/July 1879, and then dropped again, after about 3½ years, in Muharram 1300/Nov. 1882. Thereafter the title Grand Vezir remained in official use until the end of the Sultanate, when it was finally replaced by Başvekil (or, for a while, Başbakan), in the Republic.

**Bibliography:** 'Abd al-Rahmân Sherif, *Ta'rih-i Medhalat*, Istanbul 1340, 264 ff.

(B. LEWIS)

**AL-BATÂ'ITHA** (Batthari), a small *dellâs* tribe (*ghayr asîd*, d. 49) of (approx.) only a hundred males, on the south Arabian coast between Ra's Naws and Ra's Sawkira facing the Kuria Islands. They live mainly by fishing and goat herding but have also some camels, frankincense trees, and trading boats. Besides Arabic, they speak Batthari (*Batthariyya*), in which 'ayn is preserved more than in the related southern Semitic oral tongues: Mahri of al-Mahra, Harusi of al-Harâs, Shabri of al-Shahra and there overlord al-Kura', and Sukuti (basically Mahri but greatly modified by the new of Sukuti). In religion al-Batthari are Shâfi'i Muslims, and in political faction they are Ghâlibis.

The main groups (names in Arabic) are: al-Mahabigha (Mahabaghiti, al-Mahabigha (Maghrami), al-Mahabigha (Mamiri), al-Mahabigha (Mad'ari), and al-Mahabigha (Makdaji). The last named live in the mountains of Zulfir (p. 2) and are known as the *Mad'ariyya*. Of al-Mahabigha only six males were left after ten died of "fever" c. 1376/1957. Al-Mahabigha have two sections, Bayt Hubayyah (Ibn H.) and Bayt Mahdira (Ibn M.), to which latter belonged in 1378/1959 the tribal leader, Huthayyih, who succeeded his father,

Muhammad RA'î Hamra', c. seven years earlier. (The title *muhammad*, pl. *muhaddimîn*, def. art. a-, is now frequently replaced by the Arabic term *shaykh*). Although not subservient to them, the leader may confer on important matters with the chief men of al-Djanaba and al-Mahra. With prosperity overwhelming regard for purity of blood, the social status of al-Batthari does not preclude marriage with any of the neighboring tribes.

The neighbours nearest to them in their rough coastal district—small beside the area of the interior which they claim to have once owned—are al-Kara' and al-Shahra to the southwest, al-Harâs and eastern groups of al-Mahra in the interior, and al-Djanaba to the northeast. Hence, with regard to geographical names in their territory, great variety if not confusion exists between forms in non-Arabic languages and those in dialectical Arabic—especially that spoken by al-Djanaba. Because political and economic developments are accelerating the aggrandisement of Arabia, such toponyms may eventually be the principal if not the only surviving mementoes of historic non-Arabic tongues, both here and elsewhere in southern Arabia.

**AL-BATÂ'ITHI** [see AL-BATÂ'ITHA].  
**AL-BATÂ'ITHI**, ABD 'ABD ALLAH MUHAMMAD B. FÂTİK, called AL-MÂ'WUS, Fâtîmîd *wasir*. Born of obscure parents, his father having been an Egyptian agent (*ghâzî*) in 'Irâq, al-Batâ'ithi rose to power through the patronage of the caliph, Fâtîmîd *wasir* al-A'îd, in whose assassination he was implicated (551/1151), and whom he succeeded as first minister of al-Amir (ruled 495/1101-524/1130).

The creation of an observatory at Cairo had been planned by al-A'îd. Al-Batâ'ithi took up the work, in which the Spaniard Abû Djâfar Yûsuf b. Hasdîr, a friend of the philosopher Ibn Biddîja, played a prominent part, together with other scholars, native Egyptian and foreign, till 519/1125. In that year al-Batâ'ithi incurred the suspicion of the Caliph, and fell from power. Among the crimes reckoned against him was the construction of the observatory, and it was alleged that he was naming it after himself 'al-Mawdû' was proof that he aspired to the Caliphate. When al-Batâ'ithi had been arrested, the Caliph refused to go on with the work, and none dared mention it to him. He gave orders for its demolition, and the materials were removed to the government stores. The workmen and experts fled. The latter included, as well as Abû Djâfar Yûsuf b. Hasdîr, the *hâfî* Ibn Abî 'U'ayb of Tarrabulus the geometer, Abû 'I-Nadja' b. Sîad of Alexandria the instrument-maker (p. 460), and the geometer Abû Mahmûd 'Abd al-Karim of Sicily. Al-Batâ'ithi himself was crucified by the Caliph's orders. His large house in Cairo was still used as a residence more than thirty years later, but Ibn Khaldûn, who gives this

information (tr. De Slane, ii, 426), adds that in this time it had become a *hanafi madrasa*.

**Bibliography:** Ibn al-Aṣḥr, s. 437, 443-444; Makrizi, *Khitaṭ*, ed. Būhār, i, 135-137; Ibn al-Kalbi, 294, 299, 312. (D. M. Dunlop)

**BATALYAWS**, Spanish Badajoz, today the fortified capital of the province of the same name, the largest in Spain, embracing the southern half of Spanish Estremadura. The town, situated on the left bank of the Guadiana, before it turns south near the Portuguese frontier, has 100,000 inhabitants. The identification of its name with that of Pax (Julia) Augusta or Colonia Pacensis is without foundation, based on a false local patriotism. In fact, it is not the name of Badajoz which derives from that of the Roman colony, but rather, that of the Portuguese town of Beja (Arab. *Bijja* = *Béja*, derived from *Pacem*). The identification of Badajoz with the doubtful *Badia* of Valerius Maximus and of Plutarch is equally uncertain. The first time that the name of Badajoz appears indisputably in history is in the Arabic form of Batalyaws (present in the root of the modern Spanish name of Badajoz). Batalyaws is of modern foundation, having been built by 'Abd al-Rahmān b. Marwān, called al-Ḍiflī (the Galleian), with the authorisation of the amīr 'Abd Allāh who put at his disposition for this purpose a certain number of mansons and some capital. 'Abd al-Rahmān began by constructing the mosque-cathedral; he also built a special mosque inside the citadel. It was also he who built the baths near the gate of the town which had already served him as a point of support and bulwark against the Caliph of Cordova Muḥammad I. It was not until 37/930 that this place could be retained from the courageous son of Ibn Marwān, under 'Abd al-Rahmān III (Bayan, 103 ff., 140, 195, 213-14, 216). The new town of Arab construction (Abu 'l-Fida' 173; *waḥiya muḥaddath al-islāmiyya*), Batalyaws, gradually replaced in importance Colonia Augusta Emerita, Arab. *Mirida* = Mérida (37 m. = 60 km. east, upstream of Badajoz on the north bank of the Guadiana) which continued to decline. Indeed, at the time of the decadence of the Umayyad Caliphate of Cordova, Batalyaws became the brilliant residence of the Aftasids [g.n.] who, from 1022 to 1094, resided in a single important kingdom the largest part of the north of the former Lusitania. After the disastrous defeat of the Christians at al-Zallāḳā (Saccalān) in 1086, north-east of Badajoz, the principality of the north-west, namely Badajoz, as well as the other Reyes de Taifas, became gradually subject to the Berber Almoravids [g.n.], who had rushed out of Morocco to the aid of their co-religionists, these auxiliaries themselves becoming strong enough in 1094 to take all of the territory which formed a part of the Spanish province, or dependency, of the Almoravid Empire of North-West Africa, and, after its fall, of the Almohad Empire which succeeded it. In 1168 Alfonso I Henriques of Portugal took Badajoz by surprise, and was expelled at once by Ferdinand de León. Badajoz became once more Almohad. Only in 1230 did Alfonso IX of Castile and León conquer it finally. Badajoz is the birthplace of a number of Arab scholars, among whom the most eminent is 'Abd Allāh b. Muḥammad b. al-Sid al-Batalyawī who died in 322/1127 (cf. Brockelmann, i, 427; where read 444/1053; Ibn Ḥaṣḥakūb, 639).

(E. LÉVI-PROVENÇAL)

**BATH** (see HAMMAM).

**BATH' (Ar.)**, literally "to send, set in motion"; as a technical term in theology it means either the sending of prophets or the resurrection.

1. The Mu'tazila [g.n.] said that God could not have done otherwise than send prophets to teach men religion as He must do the best He can for men; orthodoxy denied this but held that the sending of prophets was dictated by divine wisdom. One of the reasons for condemning Brahmins and the Sumanīyā was that they denied the existence of prophets.

2. Philosophy taught that resurrection (*baṭh*, *nashr*, *nashr*) was of the soul only so orthodoxy condemned it as a heresy, insisting on the resurrection of the body. From the first Muhammad recorded the reality of the after life where he assumed that the judgement came with the end of this world suddenly (vi, 31), heralded by the sound of a trumpet (ix, 13; in xxxix, 68 are two blasts, each introducing a distinct stage in the action) the graves open and all hurry to appear before the judge (xxxix, 75, lxxxix 21/22) and the just who he gives their rewards in their right hands (xvii, 73/77). For the signs which precede the end of the world, see DARRA, DARḤ, 158.

The soul is not naturally immortal and its existence depends on God's will though some late passages (ii, 149/154, iii, 163/168) imply the continuous existence of the soul and that those who died for

God's sake are already in bliss. Later reports are little more than elaborations of these ideas, and do not form a consistent whole. The soul of a good man leaves the body easily but that of a bad man has to be dragged out painfully (see 'AḤRĀS AL-KARR). The body decays in the grave except for the lowest bone of the spine to which the essential parts of the body will be restored. Most reports say that the grave till the judgement but a few are not so bound; some are in *barzakh* [g.n.]. When Isra'īl [g.n.] blows his trumpet, the world will return to chaos, the sun will be darkened and men will rise from the grave as they were created, barefoot, naked, uncircumcised, and will gather at the place of judgement, a level plain with no place in which or behind which a man may hide, perhaps it is in this world, perhaps specially created. Another version makes the first blast kill everyone except Iblīs [g.n.] and the four archangels; a second blast brings all back to life. The heat of the sun is such that all sweat, a flood which with some will reach as high as the ears. They wait there 300 years or 30,000 without food or drink but worse than the physical pain will be the terror of the judge; each one will be so anxious for himself that he will pay no heed to others. They will turn to Adam to ask his intercession but all prophets in turn will refuse and refer them to Muḥammad who accepts the task and to him God listens. Other forms of judgement are the bridge, thinner than a hair and sharper than a sword, over the fire; believers pass over safely but unbelievers fall off; the scales in which man's life is weighed and the books in which his deeds, good and bad, are recorded. Sinners will be accompanied by the tools of their sin, a musician will have the instrument which distracted his mind from religion; a man's good deeds will become an animal on which he will ride to judgement. Some believe that all living creatures would rise at the last day. It is obvious that much of this is older than Muḥammad; the ancient Egyptians knew of the weighing of souls and the books of record and the Persians knew of the bridge. Later ideas are mixed. Some men turn to dust in the grave and their souls wander in the world of sovereignty (*malakūt*) under the sky of this world, some sleep and know nothing till the trumpet wakes them and they die the second death; some stay two or three months in the grave and then their souls fly on birds to paradise; some ascend to the trumpet and stay in it for there are as many hiding places in it as there are souls. Muḥammad stayed on earth for thirty years till the murder of Husayn [g.n.] when he ascended to heaven in disgust.

**BATH' (see HAMMAM)**

**AL-BATHĀNIYYA**, district in Syria with Adlathā [g.n.] as capital. It is bounded by the Djabal al-Drūz to the east, the Laḡḡā plain and the Djabdīr to the north, the Djablan to the west, and the hills of al-Djmal to the south, where the boundary is a little imprecise. Also called al-Nukra, "the hollow", it corresponds to the ancient Batanaea mentioned together with Trachonitis, Atrazyes and Garsaites as part of the old kingdom of Bashan and referred to in the Old Testament. The region is fertile, as its name derived from *batna* (lowlands and even plain) indicates. It has from ancient times been densely populated; the texts and the numerous

extant burial mounds are proof of this. Since then its reputation for being the "granary of Syria" has been maintained. According to the Arab geographers, the area was throughout the Middle Ages dotted with villages. It lay on the main route of communication connecting Damascus with al-Urdun, a highway which owed as much to the Manlik *barid* as to the Syrian pilgrim caravans.

Conquered by the Arabs in 13/651, al-Bathāniyya, like Hawrān, became *ḥarāḍī* land, and was subsequently joined to the *diwān* of Damascus although more usually connected with the Hawrān region. During the period of the Crusades it suffered from Frankish incursions. Later under Ottoman rule it was affected by two important factors: the invasion of the nomadic 'Anḍa, followed by the Revilla which introduced a reign of disorder and insecurity lasting until the end of the 19th century, and the settlement on its soil of the Hawranese hill folk expelled from their homes by the Druzes. These latter had from the 17th century begun to infiltrate into the Hawrān, where in 1861 they were joined by certain elements from the Lebanon.

Al-Bathāniyya should be distinguished from the small plain situated to the north-east of the Djabal al-Drūz, called in antiquity Saccān and in the Arab period *ar-Raḥāniyya*. This term has been translated to mean the "march of Baḥāniyya" but one of the local names Buḡḡiyye, leads one to suppose that the area had been considered rather as a "small Baḥāniyya".

**AL-BATHĀ**, ("the marshland"), the name applied to a meadowlike depression which is exposed to more or less regular inundation and is therefore swampy. It is particularly applied by the Arab authors of the 'Abbasid period to the very extensive swampy area on the lower course of the Euphrates and Tigris between Kūfa and Wāḥit in the north and Basra in the south, also frequently called al-Bathā' (plural of al-Bathā) and occasionally, after the adjoining towns, the *Bathā* (*Bathā*) al-Kūfa, al-Wāḥit or al-Basra.

The existence of considerable swamps in southern Babylonia goes back to high antiquity. The alluvial plain is soft and almost flat, the river beds are shallow and exposed to rapid silting, the banks are soft and low, therefore the flood waters overflow the banks, causing extensive marches; these would normally disappear but for the annual floods, and the rivers change their courses which, in turn, leads to new marshes. Even in the canaliform incursions the *qanāt* (swamps) and *abwād* (reedlands) are often mentioned; cf. Delitzsch, *Assyr. Handwörterb.*, 17, 115. In particular, the whole country between Muḥammara in the south, a point beyond Kurna

in the north, and beyond the river Kārda to the east, must have been covered by an enormous swampy lake; cf. Delitzsch, 627; Dougherty, *The Sea Land of Ancient Arabia*, 1937.

The Greek and Roman writers are likewise acquainted with it (as *λίγνη* or *chaldæica lacus*). Nearchus's account is particularly instructive, for he crossed this area of water and gave its breadth as 600 *stadia* (80 miles). The *Tabula Peutingeriana* also defines the Babylonian swamps; on it, in addition to *Paludae*, is mentioned the name *Ditaki*, probably to be emended to *Batābi* = *Batā'ib*. On the notices in cuneiform inscriptions and classical authors, cf. Andreas in *Papiri-Wissowa*, I, 736, 815, 1878 ff.; 2812; Weisbach, *ibid.*, III, 2041 VI, 1201 ff.; Streck, v, 1147 (s.v. *Ditaki*); Ainsworth, *Kesarschi* II, 186 ff.

Since ancient times the great marshy lake has been gradually filled up by the deposits of sediment brought down by the rivers, and the modern delta has arisen. Some places, however, remain under water. These places extend around the present Hor (Khawr) al-Buwayya, Hor al-Hammār, Hor al-Shūniyya, and probably further north.

The origin of the swamp may be a syndune which occurred in geological times; parts of it were filled by the huge amount of silt, while others remained low and were filled by water; they formed what medieval Muslims called al-Batā'ib. The syndune may have eroded in historic times (cf. G. M. Lees and N. L. Falcon, in *Hydrography History of the Mesopotamian plain* in *Geographical Journal*, On the retreat of the sea, cf. De Morgan, I, 4-8; Seton Lloyd, 19).

The Sāsānids as a rule devoted a great deal of attention to the irrigation system and drainage in Babylonia. This should have led to the decrease of swamps. Under later kings of this dynasty, however, large areas of flourishing country were swallowed up by floods, and the region of swamps grew to such an extent that the Arabs wrongly date the beginning of the Batha from this period. They claim that during the reign of Kubādh Pīrē (457-484 A.D.) a large breach occurred, near Kaskar, and inundated large areas of cultivated lands. It was not until the reign of Khusrāw I Anušīrwan (502-529) that the dykes were partially repaired, and some of the lands brought under cultivation. But in the year 6 or 7/647, in the reign of Khusrāw II Parwiz, the waters of the Euphrates and the Tigris rose again, in a flood such as had never been seen. Both rivers burst their dykes, causing huge breaches. The water reached the places of the swamps, inundating the farms of several *parāgd* there. During the succeeding years of anarchy, and when the Muslim armies began to overrun 'Irāk, breaches occurred in all embankments, and the *Dikāni* were powerless to repair the dykes so that the swamps increased in all directions (Balādhuri, 229-31; Kūlāna, 240; Yāqūt, 668-9; Ma'sūdi, al-Tanbih, 33 Ibn Rusta, 96). Under the Sāsānids, too, the first great shifting of the Tigris occurred from the eastern channel (the present course) to the western channel (the present Shāfi al-Dujaylā). This change turned all the country bordering the older eastern course into hills and desert.

The Umayyads took interest in the work of reclamation of the Batha; the Darrādī reclaimed for Mu'awiyah from the Batha lands which yielded 3 millions dirhams annually. He did that by cutting the reeds and controlling water with dykes. These lands were called al-Djāwāmid (Balādhuri, 294;

Ma'sūdi, I, 225-6). In the year 81/704, however, they were inundated again, owing to a new burst which al-Balādhuri deliberately neglected repairing.

Immediately afterwards al-Balādhuri built Wāsit in the alluvial plain near the Batha. This should have led to restoration of the neglected system of canals, the erection of dams and sluices, and to the reclamation of lands. He dug the two canals of Khil and Zaid to lead away part of the superfluous water of these two large rivers before they flowed into the Batha, and at the same time to water and fertilize the dry areas above Wāsit (Balādhuri, 290-2; Kūlāna, 240; Streck, I, 29-32, II, 303-304; Le Strange, 27). Al-Balādhuri also settled in the marshes the Zutt (p. 30), an Indian people, with their buffalo herds numbering thousands. Musāma, the Caliph's brother, spent about 3 millions dirhams on repairing the dykes, and in turn obtained vast areas of reclaimed land (Balādhuri, 294; Kūlāna, 240-2; Wellhausen, *Das Arabische Reich*, 1902, 150-5).

Reclamation of land continued, especially at the time of Hishām, and his governor of 'Irāk 'Abd al-Kasr, who built a dike on the Tigris (Balādhuri, 293; Kūlāna, 240; Ibn Rusta, 93), dug several canals, e.g., the Nahr al-Kumūn, and the Nahr al-Mubdrak; he thus reclaimed large areas of lands, which yielded a large income, but resulted in the use of a great amount of water, and to a decrease in the volume of water available for irrigation.

When the 'Abbasids came to power (121/750), new bursts occurred in the dykes which, in turn, increased the swamps. In the Euphrates region, similarly, thickets formed, parts of which were reclaimed.

In the north-west, the Batha extended nearly to Kūfa and Nīfar, while farther to the east it began at a considerable distance from Wāsit. This part is called by many medieval Muslim sources *Batā'ib al-Kāfa*. Their crude maps (cf. Miller, *Mappe Arabica*) do not show them connected with the southern Batha, but do they mention any dwelling-places or cultivation there. Nevertheless 4th/10th century sources assert that the Euphrates discharged into the Batha between Wāsit and Basra (Ma'sūdi, *Ma'arid*, I, 215; Suhairi, 118). This suggests that the present lower Euphrates region was covered with *Batā'ib* up to the 6th/12th century, when sources mention that the lower Euphrates joined the Tigris in Mattāra (Yāqūt, II, 553). This must have been due to hydrographic changes, in the depression of Shūniyya, which must have then been deeper, and the reduction of the amount of water and silt, owing to the numerous canals, which took water from the Euphrates to irrigate north and central Babylonia (cf. Le Strange, 73 ff.).

The Tigris, from about the end of the Sāsānid period to the first half of the 10th/16th century, flowed in the western bed (the modern Shāfi al-Dujaylā) past Wāsit and several towns until, in the 4th/10th century, it joined the Batha (Balādhuri, I, 288; Suhairi, 118-9, 123; Ibn 'Abd al-Bāqī, 52; Ibn Rusta, 185). According to Mustawfi, Ketr is 30 parasangs (about 107 m. = 172 kms.) south of Wāsit (Nasha, 166), according to Kūlāna (193), 22 parasangs.

The southern limits of the Batha border on Basra (Balādhuri, 294; *Awāb al-Asrār*, v. 237). Suhairi (123) describes the Batha as consisting of four Haws: Bahawā, Bakawā, Baqarā' and the Haws al-Muhammadiyya. Each Hor had plenty of water, with no reeds, but each one was linked with the other by a narrow passage of reeds. The Hor of

Muhammadiyya was the largest, and the reed passage extended from it to the Nahr Abī Asad, which passes to Hilla, Kawānā and then to the "one-eyed" Tigris (al-Dujaylā al-'awṣā'). Yāqūt mentions the Haws of Shālim, (III, 311), Dujrān, (II 36), Gharrāf (III, 381) and Rahbāb, (II, 134).

In the flat soil alluvial plain of south Babylonia hydrography could not be static, especially since the canal and irrigation system was subject to change according to the political and economic situation. Though these changes have not been yet studied in detail, nevertheless one may see an indication in the 6th/12th century, when Yāqūt mentions that the Tigris was divided below Wāsit into five arms which, together with the Euphrates, joined in Mattāra, which was a day's journey from Basra (II, 531). The area of the lands covered by the Batha undoubtedly changed according to the amount of control exercised over the flood water and the amount of water used for irrigation in the north.

Although water covered most of the lands of the Batha, nevertheless there were areas of dry land, farms, cities and villages as well as rivers and canals (Mukaddas, 129; Sa'ad al-'Awāb, s.v. *Batā'ib*; Ibn al-Jābir, *Ladhā*, I, 129). Ibn Rusta (95) says that "the higher places became mounds which are known in *Batā'ib* and are called Sartughān, Tustaghān and Ukr al-Sayd, places where the Zutt live". Mukaddas, (154) calls the Batha a district (*nahiya*) with Sultay as its chief town, and the further towns of Zaynāda, Harān, Hishādiyya and Zubaydiyya. Most of these towns were north-west of Wāsit. Yāqūt mentions as towns of the Batha Hilla (of Dubayā) (I, 594, II, 323) Khaytamiyya (IV, 884), Harrār (IV, 970) Manṣūra (IV, 664) and other places, and as its rivers the canals of Abbā, Khur, al-Zutt (II, 930, IV, 840) and Yamnā (IV, 1020).

Of the western marshes of the Euphrates about the middle of the 19th century European travellers and archaeologists give fairly accurate descriptions. The main course of the Euphrates passed through Babylon, Hilla and Diwāniyya. Several branches and cuts diverged from this branch, many of them re-uniting near Al-Kirāyat, which was at the head of the delta. During the season of the floods, the spread for about 30 miles in length, 10-14 miles west of the main channel and to a much greater distance on the east side. This regress forms the Lamām marshes. Thirty years later, the bulk of the Euphrates' waters went through the western Hindiyā canal which was dug in the 17th century by the Indian Asaf al-Dawla. This emerged into the plain further north and created the shallow lake al-Nadgāf and Shūniyya marshes, which remained even after the erection of the Hindiyā barrage in 1911 to increase the water of the Hilla branch. These swamps are situated in a large depression, wider in the mouth, about 40 m. (65 kms.) long and 15 m. (25 kms.) wide; the depth of the flood water varies from 1-2 metres in the south to 2-3 metres in the middle. Several sub-Hors branch off from it; in the east are the Haws of al-'Ujja, al-Wurjdī, Ibn Nadjīm, al-Khabāsa, Abū Ghālib, al-Kammāb, al-Hawā and Abū Hishār; to the west of the Shūniyya branch are Ghādiqd, Rughāla, Gīlbi, Abū Hinnāna, Zaylāda and Hwāha; near the Kūfan branch are the Haws of Tubay, Ghazālāt and Sīb. The areas of these Haws shrink after flood, and the land becomes excellent for rice cultivation.

The Tigris below Baghdad flows through a flat plain, and the banks are not high enough to retain the huge volume of flood water. This leads to a

number of breaches and levees on both sides of the river which produce numerous marches. The largest of them between Baghdad and Kut is Hor Shawdīya, which is a natural depression of land extending some 37 m. (50 km.) along the Tigris and 15 m. (25 km.) in width. Into this Hor flows the water of a number of minor streams from the mountain regions of Pashāī Kūh. The rather narrow Hor Hujwīya extends from 'Alī al-Ghārl to 'Amīra where it reaches Hor Sāfiyya. Near 'Amīra numerous branches diverge from the Tigris, e.g., Muḡarrāb, Cahla, Muḡayyib. The waters are dispersed in the 'Amīra rice area, where the flood waters are led out of the main channels, but these branches are well defined in spite of the Haws they form. They empty into the Hor of 'Arem which is connected with Hor Hujwīya. They receive an inflow from the Dwidjī, and Tib rivers as well as from al-Karīha (the ancient Choaspe). The annual intake of water of these Haws is estimated at 7 million cubic inches. These waters flow back in the summer into the Tigris by several channels which begin a short distance beyond 'Arem.

On the right bank of the Tigris, the major branch below Kut is the Musandak escarp, 450 metres wide at its head, which expands rapidly to almost lake-like proportions and finally branches into a number of relatively small, shallow channels into the Hor al-Sāniyya. This Hor is a large natural depression fed by the Musandak escarp and several smaller branches and flood irrigation channels which divert water from the Tigris during the floods. Water passes successively through the Shihār, al-Duwma, Dīfāt Shāh 'Alī, Shāturiyya Haws, and Hor Durhān, 'Uda, Sirimān, Sīḡā, Ruwīda and Saffār, until it reaches the Hammār lake near Hammār village. During the peak of the Tigris floods, an area of over 421 sq. km. (160 sq. mi.) is inundated by the Hor al-Sāniyya. After the flood recession no water except minor amounts of surface drainage from pump irrigated fields enter the depression of Hor al-Sāniyya, which diminishes to an area of less than 77 sq. m. (200 sq. km.) through seepage and evaporation losses.

The Hammār lake is the largest Hor, covering about 2007 sq. m. (200 sq. km.). It extends from the affluents of the Euphrates near Suk al-Shaykh down to Karna 'Alī (about 80 m. = 130 km.). The southern part of it is called Hor Sūfī, which receives water from the Euphrates and Gharrāf as well as the waters coming down from the Musandak through the several above-mentioned Haws. The total flowing into the Hammār area is about 2340 *cumes* (cubic metres per second) from all sources. The evaporation and transpiration losses are about 500 *cumes*. The edge of the Hammār lake has a seasonal low water level of 0.6 to 0.8 metres in the late autumn and a high water level of from 3.0 to 2.8 metres near the end of the flood season in May or June. At low water the area is roughly two thirds lake and marsh with a few areas of open water connected by a maze of narrow channels running in all directions through the reeds. The deeper channels (1-2 metres) usually run in a north to south or north-west to south-east direction. There are also mazes of deep water passages (*Gawādh*) between the reeds which may be a few yards wide, but deep enough for boat navigation.

A few very deep channels (10-20 metres) are found around the islands in the vicinity of Sāliyal island. Tide effect is felt in the southern parts. There are many shallow areas. The southern borders of the

Hammar are bare, uninhabited land, exposed to annual floods from the lake.

On account of its inaccessibility, the Baṭṭha was a hiding place for all sorts of robbers and rebels, and an asylum for the discontented.

The Zait [g.n.] who were transplanted with their vast herds of buffaloes in the marshes by al-Ḥajjīdījādī, made themselves, together with some other *mauḍil*, in the early 'Abbasid period, a nuisance to 'Irāq by robbing and plundering, and disturbing communications and trade with the south. Their effect was felt to a greater extent at the time of Ma'mūn. It was only after strenuous efforts that the Caliph al-Mu'taṣim succeeded in subduing them, and in removing them to the northern Syrian borders (Balādhurī, 171-175; Tabarī, iii, 1044-5, 1167-70; Ma'sūdī, *al-Tanbih*, 555). They have given their name to the Nahr al-Zait (Yāqūt, iv, 840).

Far more dangerous, however, proved the great rising of the Zandī [g.n.] who, under the leadership of 'Alī b. Muhammad [g.n.], stirred up near Basra a formidable rebellion (255-270/869-883) and dominated the Baṭṭha for several years (Tabarī, iii, 1742 ff.; Nöldeke, *Sketches from Eastern History*, 146-175; F. al-Sāmī, *Zunarat al-Zandī*, Baghdad 1952).

In the following centuries (see Banū Shāhīn (see 'Isrā' b. Shāhīn) and after them the family of al-Muza'far [g.n.] founded a more or less independent kingdom in the swamp lands which they shared at a later period with the Mazyādiyya [g.n.] who ruled from 495 A.H. until 448 A.H. in Ḥilla. After the decline of the Mazyādiyya, the Banū 'l-Muntaṭik began to play their part, although the Caliph al-Nāṣir succeeded in destroying their leaders, the Banū Ma'rūf, in 617/1220.

When the Mongols conquered 'Irāq (656/1253), the Baṭṭha fell in their hands, but the Arab tribes remained a source of disturbance. From then on it was called al-Ḥizārīr ('the islands') or al-Ḥizāwīr. It was conquered by Tamerlane (793/1388), and then by Uways the Ḍalā'irīd (826/1421); in the year 846 A.H. it was conquered by the Maḥmūdīyā [g.n.], who remained until the Ottoman sultan Sulaymān occupied it in 953 A.H. Ottoman rule of the region, however, was not firm, and they could not destroy the several tribal principalities, e.g., the Āl 'Ulyān, who ruled over the Hammar until they were destroyed in 975 A.H.; the Banū Līm dominated the lower Tigris, until they were challenged by Alī b. Muḥammad and gave the Ottomans a chance to control them. The al-Muntaṭik family ruled over the lower Euphrates up to the year 1867, when Midhat Paṣha was able to establish a *mulazarrīyya* under the control of the governor of Baghdad (Lugoniez, *Four Centuries of Modern Iraq*, Oxford; 'A. 'Azāwī, *al-Ḥayān Ḥitāyān*, 8 Vols, Baghdad 1937-37; Field, *The Anthropology of Iraq*, in *Field Museum of Natural History*, Vol. 30, part 1, no. 2, 1949).

Large numbers of the originally Aramaic (and Christian) population of Babylonia (the Nabats of Arab writers) remained in Baṭṭha for a long time, so that many sources call them the swamps of the Nabat (I.A., iii, 237; cf. also Ma'sūdī, *al-Tanbih*, 161; Miskawayh, ii, 499; Mubārīz, 123). Probably another ancient remnant is the Mandaeans or Subba, the mediaeval Muḥṭāṣila, cf. Ibn al-Nadīm, 349; Ma'sūdī, *al-Tanbih*, 161; these Subba still survive in a few places in the marshes such as Sūk al-Shaykhī, Ka'at Šāhī, and in Ḥor al-Baywayza (Ḥawīza) where the town of Hawīza is their chief centre (cf. Drower, in *Bibliography*).

Nevertheless some Arabs settled there. Ibn Rusta says that Yaḥyā, Bābīla and Banu 'l-Anbar lived near the Baṭṭha before its formation. Balādhurī refers to the Bābīlī clients who joined the Zait in their disturbances at the time of Ma'mūn. Tabarī, iii, 1858, 1859, 1903 refers to some of the Bābīlīs who joined the activities of the Zandī in the 300th century. He refers also to 'Irāq in the Baṭṭha (ii, 1759). The Mazyādiid domination must have brought Bad Asad [g.n.] until they were destroyed by Al-Nāṣir. Ibn Khallīb mentions Raḥ'a as the domain of the Zait (ii, 12), by whom he probably means the Muntakā [g.n.]. Ibn Bāṭūta mentions Khafāḍja and the Ma'sūdī (ii, 2, 4).

The greater part of the modern inhabitants is composed of semi-nomads and farmers of Arab stock, organised on tribal lines. They are Shi'ī Muslims except for a few Sunnis, the most prominent of whom are the Sa'ūdī family.

The most important of these Arab tribes, which are themselves divided into a large number of subdivisions, are:

(1) The Banū Līm who in the 16th century were able to establish their authority over the Tigris lands from Hawīza as far as the environs of Baghdad in the north, and to the outer spurs of the Puḡḡī Kūn in the east. Kūn al-Andara was the nucleus of their Shaykh in the early decades of the 19th century, but their lands and authority diminished in the 19th century and became confined to the lands east of Tigris and north of 'Imāra. They are a sheep owning tribe, and are still semi-nomadic.

(2) The Althā (= Althā) Muḥammad. They also live east of the Tigris, beside the banks of the Cabla and its main tributaries where they settled two generations ago, and have since expanded over the canals and marshes on either side of the Tigris between 'Imāra and 'Uzayr. They are mainly cultivators but also marshmen, who are occupied in breeding buffaloes and making reed mats.

(3) Raḥ'a. To the west of the Tigris. Their subdivision al-Mayyil extends along the Gharrīf up to Shaṭra, with Hayy as their chief centre.

(4) Zubayd, west of the Tigris. Their lands lie between Baghdad on the north and Kut al-Hayy in the south-east. In the south they adjoin the land of the Khazā'īl.

(5) The Khazā'īl, south-west of the Zubayd. They dwell from the district between Keḥl and the ruins of Nūfār, along the Euphrates from Shūyān to the south of Dūwānīya where they border on the country of the Muntakā.

(6) The Muntakā, a loose confederation of tribes provided over by the al-Sa' dīn who came in the 13th century from the Hijāz and were able to establish their authority over the tribes of the Lower Euphrates, and to expand at times even as far as Basra. They retained their semi-autonomous authority up to 1867, when Midhat Paṣha was able to abolish their rule and establish a *mulazarrīyya* in Nāṣiriya.

The Muntakā fall into three main divisions: 1) al-Adwād, who dwell from Darrādī to the vicinity of Sūk al-Shaykhī, and on the lower parts of the Gharrīf; 2) Ibn Mūḥallā, who live on the borders of al-Hammar; 3) Banū Sa'ūd, who live near Karna Bad Sa'ūd.

(7) Al-Ḥizārīr. The Ḥizārīr ('islands') also called Ḍawāwīr are the swamp lands as opposed to *Shāmīya*, the dry and desert land). The term has given its name to a confederation of tribes which are repeatedly mentioned in the Mongol and Ottoman

sources up to the 20th century. Their country was part of the Maḥmūdīyā state ('Azāwī, *Ta'riḫ*, iii, 112, 174, 272) then of Al-'Ulyān ('Azāwī, iv, 107); was conquered by the Ottomans ('Azāwī, iv, 50 quoting *Mir'at-i Kā'ini*, 127; Kūwīya Cehelī iv, 414), at times dominated by the Persians and by the Muntakā, until it was finally brought under Ottoman control at the time of Midhat Paṣha, who made attempts to reclaim some of its lands (*Al-Zawr*, 568). The tribes of Al-Ḥizārīr formed a confederation composed of (1) Banū Asad [g.n.] who settled between Sūk al-Shaykhī and Kurna, with their centre in Cabāyish; (2) 'Al-Buṣaynī; (3) Banū Hutayr in Hawān; (4) 'Al-Buṣaynī between Sūk al-Shaykhī and Cabāyish (cf. Ibn Khallīb, ii, 310-12); 5) Banū Muḥammad, settled near Kurna.

(8) The Ma'sūdī. They are probably the Ma'sūdī who are mentioned by Ibn Bāṭūta as dwelling between Kūfa and Wasīt (ii); Loftus (120-2) has described their primitive life and conditions. They dwell in the marshes, are organised tribally in a small way, and have no cohesion on a large scale. They are fishermen, reed-gatherers, and breeders of buffaloes. The other Arabs despise them for their profession and for their moral code, which differs slightly from that of the Bedouins.

The settlements of the inhabitants of the swamps are usually on terraces and islands, which are not entirely submerged by the annual inundation, and sometimes form villages. They consist of long huts built of reeds and reed matting (*ṣarfā*) (Thesiger, *op. cit.*; *Shākir Salim al-Cibāyish*, Vol. 1, 23-4, Baghdad 1957; cf. also Nöldeke in *WZKM*, xvi, 198, Note 1).

The most important product of the marshes is rice. Other produce are barley, yellow maize, sorghum, millet, lentils, melons, watermelons, and to some degree lady's finger (*ḥimya*, gumbos, okra) and onions.

One source of revenue is the reed, which is used for all household purposes and from ancient times has been much used for writing implements (see *OLZ*, ix, 190). The reed pens of mediaeval Wasīt and, in the 19th century, of Diālā were considered the best in the east (cf. C. Huart, *Les Calligraphes et les miniaturistes de l'Orient Musulman*, 1908), 43). Even at present 30-70 thousand tons of reeds are cut annually in the vicinity of Cabāyish (*Tam*, 60).

In addition there is great abundance of fishes, which afford a continual food supply to the natives who are exported to other districts. Ibn Rusta (ii) refers to the importance of the Baṭṭha products of reeds and fish in mediaeval times. At present it produces about 2000 tons of fish annually, employing about 500 fishermen.

Buffaloes are an important source of wealth to the marshmen south of 'Imāra and of the Hammar. The butter from their milk is exported to the surrounding cities and to Baghdad. Sheep are also reared to a moderate extent, while cows are found in various places, especially in Kurna.

As to the remaining fauna of the Baṭṭha, water fowl of all sorts are numerous, such as gulls, wild duck, geese, swans etc.; there are flocks of cranes, pelicans, flamingoes, storks, bustards and bitterns. There are also some carnivorous animals. The lion, which was known in this country in ancient and mediaeval times, was last mentioned in the 19th century (Loftus, *op. cit.*, 242 ff.). In addition, a number of leopards, jackals, wolves, lynxes and wild-cats have their lairs here. Wild-bear (*Sus scrofa*), wallow in large herds in the marshes.

The countless swarms of mosquitoes and midges form a terrible plague, and were a source of endemic diseases, e.g., malaria, which must have been an important factor in the decline of the district (cf. *Shākir Salim al-Cibāyish*, Vol. ii).

(M. STRECK-SALIM EL-ALI)

BĀTIL wa FĀSĪD (see FĀSĪD).  
BĀTIL wa ZĀHIR (see ZĀHIR).

AL-BĀTIN, a large *wadī* in north-eastern Arabia, formerly the lower course of Wādī al-Rumayh [g.n.] but now cut off by the sands of al-Dahna [g.n.]. AL-BĀTIN runs north-easterly 385 km., from below Khudhīm al-Qumāmīl in al-Dahna<sup>2</sup> to a plain 13 km. SW of al-Zubayr. In width it is unusually regular, being 10-13 km. between banks and 2-3 km. on the floor. Its only surface water is lateral flow from local rains. Most of al-Bātin is a channel through former deposits of Wādī al-Rumayh, as the sands of al-Dibidha [g.n.] on both sides contain

graves from the Arabian Shield [see art. *DIJLAH* al-*ʿAṣṣā*, (ii) & (iii)].

Al-Bāṭīn, though a historic route from al-Baṣra to al-Hijla, contains few known archaeological remains: the most prominent are the 12 tiered walls, which may be Yāqūt's *Hafar Abi Mūsā*, near the village of Hafar al-Bāṭīn. The only settlement in al-Bāṭīn, al-Hafar consists of 200 houses and the fort of the Aulrate which reports to the Governorate of the Eastern Province at al-Damām.

At an undefined point at the junction of al-Bāṭīn and its tributary, al-*ʿAḥḥā*, the boundaries of Saudi Arabia, Kuwait, 'Irāq, and the Saudi Arabia-*ʿIrāq* Neutral Zone converge, according to the al-*ʿUkayr* agreements of 1922.

**Bibliography:** Hamdānī; Yāqūt; Muḥammad b. ʿAbd. Allāh b. Ḥulayhid, *Ṣaḥīḥ al-*ʿAḥḥā**, Cairo 1370-3; H. Delson, *Kuwait and her neighbours*, London 1956; J. G. Lorimer, *Gazetteer of the Persian Gulf, 'Omān, and Coastal Arabia*, Calcutta 1908-15. (R. L. HEADLEY)

**AL-BĀṬĪNA**, a lowland district in eastern Arabia lying between the sea coast of the Gulf of Oman and the mountains of al-Haḍir. It is bounded on the north by the headland of Khawāt Māḥā, and on the south by the village of Hayl al-*ʿUmayr*, south-east of the town of al-Sib and west of the city of Muscat. The district varies in width from 10 to 20 miles. Near the coast the land is a level dotted with many shallow wells. Farther inland the soil is clay, and then the ground becomes stony as the foothills of the mountains are approached. Numerous *wādīs* cut across the district and run down to the coast, where their beds broaden out. The name al-Bāṭīna means the low-lying region, in contrast to al-*Ẓāḥira* [q.v.], the higher region on the western side of al-Haḍir, which is reached from al-Bāṭīna by two important passes, Wādī al-*Ḍīr* and Wādī al-Bawāsina.

Al-Bāṭīna is primarily a region of fishing and date culture, though the interior supports a number of semi-nomadic folk with their herds. Along the sea coast stretches an almost continuous date-palm belt, which in places extends inland to a depth of about seven miles. Wheat, cotton, barley, sugar-cane, lucerne, mangoes, bananas, figs, lemons, melons, and olives are also grown, being irrigated from the copious wells. Domestic animals are sheep, goats, donkeys, and especially the *Bāṭīniyya* riding camel, which among the three famous breeds of Oman is the one most noted for its comfortable gait. Fishing is often carried on in the *dhūḥā*, a small sailboat with palm branches (*dhārī*) similar to the *warabiyā* of Kuwait. Larger vessels sail to the Persian Gulf, southern Arabia, Zanzibar, and Fāḥisān for trade.

Al-Bāṭīna was first proselytised for Islam in 8/629 by Abū Zayd al-Anṣārī and ʿAmr b. al-ʿĀs [q.v.], who were welcomed in Suhār [q.v.] by the house of al-*ʿIḥḥā*. In the 7th/13th century the country was twice invaded by the Persians, who maintained a foothold until finally driven out by the Portuguese in 928/1522. Although the Portuguese took the tribute formerly sent to the ruler of Hormuz, they did not continually occupy the al-Bāṭīna coast until 1025/1616. Until the expulsion of the Portuguese in 1033/1623 by the dynasty of al-Yaʿsiriya [see *Yasiri*], Suhār rivalled Muscat and Hormuz as a trading port. Persian attempts to regain permanent possession of al-Bāṭīna during the reign of Nādir Shāh [q.v.] were beaten off largely by the efforts of Ahmad b. Saʿīd of Al Bā Saʿīd [see *al-Bāṭīn*]. His nine-month defence of Suhār in

1136/1743 brought him prestige which secured for himself the Imamate of Oman and for his descendants the Sultanate of Muscat.

The Sultan of Muscat has *wāḥis* at al-Sib, Barkā, al-Maḥḥā, Suwayḥ, al-Bāṭīna, and Suhār. The customs and *zakāt* revenue from these places seldom exceeds the administrative expenses. The settled population of al-Bāṭīna was estimated by Lorimer in 1908 as about 105,000 persons, half of whom were living along the coast. The number of Bedouins roaming the interior is far less. Among the sedentary population, the chief tribes are Al Saʿīd and al-Bawāsina. Many of the Bedouins in the district come from the same two tribes and Hard Khārīs. Lesser tribes are al-Bidwāt, Al Hanād, Al *Ḍīr*, al-Mawālīk, al-Nawālī, Al Bā Kurayn, Al Bā Rughayd, and al-Shubūl. The great majority of the people of al-Bāṭīna are Hindu in politics and *ḥādī* in religion, although the Baluchis and negroes tend to be Sunni.

**BĀṬĪNIYYA**, a name given in the 10th/16th in medieval times, referring to their stress on the *batin*, the "inward" meaning behind the literal wording of sacred texts; and (b), less specifically, to anyone accused of rejecting the literal meaning of such texts in favour of the *batin*.

(a) Among the Ismaʿīlīs [q.v.] and some related Shīʿī groups there developed a distinctive type of *taʾwīl* [q.v.], scriptural interpretation, which may be called *bāṭīnī*. It was symbolical or allegorical in its method, sectarian in its aims, hierarchically imparted, and secret. All branches of the Ismaʿīliyya as well as its Druze offshoots have retained the *bāṭīnī taʾwīl* in one form or another. The like system of the Nusayris seems to be a corrupt form of *bāṭīnī* circles associated with the later Twelver *imams* [see *enṣiklāt*].

Certain aspects of this type of *taʾwīl* can be matched in Jewish and Christian prototypes (for instance, in the symbolical exegesis of Origen) and other aspects can be matched among the Gnostics. Its immediate origins, however, are Muslim: the symbolical *taʾwīl* ascribed to the *imams* among the later Twelver Shīʿīs (with which it has in common its symbolical and sectarian character and something of its secrecy), its beginnings can be traced to the Shīʿī *ḥādī* of the 2nd/8th century in 'Irāq. Thus

al-Mughla b. Saʿīd (d. 119/737) is said to have interpreted the mountains' refusal to undertake the faith (Kurʿān xxxiii, 72) as symbolising 'Umar's rejection of ʿAlī Abī Maḥmūd al-*ʿIḥḥī* is said to have held that the "heavens" symbolised the *imams* and the "earth" their followers; and is credited with the key notion that while it was the Prophet who brought the text of the Kurʿān, it was the *imam* alone was charged with its interpretation, *taʾwīl*. Among the followers of Abū ʿI-Ḥaṭṭāb (d. 138/755-6) such allegorical *taʾwīl* seems to have been especially popular; some of them supposed that in each generation there is a speaker, *nāṭiq*, to declare publicly religious truth, and a silent man, *ṣāḥib*, to interpret it to the elect. Presumably it was from the *ḥaṭṭābiyya* that such elements of the *bāṭīnī taʾwīl* entered the Ismaʿīlī movement, where the *taʾwīl* was elaborated till it became the hallmark of that movement.

The *bāṭīnī* system can be described in terms of four essential notions: *batin*, *taʾwīl*, *ḥāḍir* as ʿ*imam*, and *ṭabīyya*, all which were presupposed whatever particular doctrine was taught.

It was held that every sacred text had its hidden inner meaning, the *batin*, which was contrasted to the *ṭabīr*, "apparent" or literal meaning. Not only to passages which were in any case metaphorical, but in historical passages, moral exhortations, legal and ritual prescriptions, each person, ask or object mentioned was to be taken symbolically. The things symbolised often were explained one by one as objects of approval, obedience, hatred, and the like, according to the passage; but sometimes whole anecdotes were read as extended allegories. Number and letter symbolism was freely used. The same procedure applied to non-Muslim sacred books as well; and indeed to the whole of nature. For the *batin* represented in esoteric world of hidden spiritual reality, parallel to the reality of the *ṭabīr*, the ordinary visible world, which cloaked and concealed it. The true function of scripture was to point to that hidden world even while keeping it disguised in symbols.

*Taʾwīl*, the educing of the *batin* from the *ṭabīr* text, was therefore as fundamental as *imam*, the revelation of the literal sacred text itself, and was equally dependent upon divine intervention. For every prophet who was given *imam*, a revelation to be proclaimed publicly to mankind, there must be a *waṣī*, an executor (in the case of Muḥammad, this was ʿAlī) who was given the corresponding *taʾwīl*, which he propounded privately to the worthy few, that is, the members of the sect which accepted his authority. Muḥammad, then, were divided into *ḥāḍir*, the elite who know the *batin*, and ʿ*imam*, the ignorant generality. The *ḥāḍir* were those who had been ceremonially initiated into the sect, that is, into knowledge of and obedience to the *imam*, representative of ʿAlī and sole authorised source of *taʾwīl* in any given generation. Among the Ismaʿīlīs, a series of hierarchical ranks (*ḥudūd*) of teachers mediated between the *imams* and the simple initiate. To the latter the *batin* was imparted only in gradual stages (the number of which varied) and in purely authoritarian fashion.

The *batin* was "inward" not only in being unevangelical but also in being secret. Knowledge of it must not be imparted to those *Ummā*, the ordinary followers of the *ṭabīr* revelation, lest it be misunderstood in an unauthorised way and abused. The Shīʿite principle of *ṭabīyya* [q.v.], precautionary dissimulation of one's faith, was accordingly reinterpreted to imply

the obligation not to reveal the *batin* to any unauthorised persons even apart from any danger of persecution. For some, therefore, the practice of the *ṭabīr* ritual of the *ḥaṭṭā* even in its frankly Shīʿite form came to be regarded as *ṭabīyya*, in that it kept the *batin* concealed.

Despite an authoritarian hierarchism, the *taʾwīl* (as we know it in its Ismaʿīlī form) never achieved any strict uniformity. For any given ritual action different authors gave widely differing *bāṭīnī* interpretations; even the same author sometimes gave multiple explanations in the same book. Thus the inner meaning of the obligation of *zakāt* was held to be that the *ḥāḍir* or fifth of one's income must be given to the *imam*; or that one should give all one's surplus to the poor; or that the only true wealth is knowledge. What the *taʾwīl* did accomplish was to replace what seemed a "naïve" Kurʿānic world view with a more "sophisticated" intellectual system; one which seemed to go beneath the superficial differences among the quarrelling religious communities with their incompatible dogmatic claims, to reach a profounder common truth. A unity of spirit was given to the *taʾwīl* among the Ismaʿīlīs by its being used for three large and interrelated purposes. It presented a cosmology derived from neo-Platonist sources; it interpreted eschatology in terms of cyclical religious history (and sometimes of reincarnation); finally, it justified the religious hierarchy of the sect, whose grades corresponded more or less to the several dignities of the neo-Platonist cosmos.

The desire for sophisticated freedom from commonly accepted dogmas made for a persistent tendency toward radical exaltation of the *batin*. In official Fāṭimid Ismaʿīlism the *ṭabīr* and *batin* were both held to have their own spheres of relevance, at least in matters of ritual and law, in which they were binding on the initiate. But there was a frequent recurrence among the *bāṭīniyya* of a total rejection of the *ṭabīr* meaning even of the *ḥaṭṭā*, or at least of its ritual prescriptions, as superfluous for whoever knows the *imam* and hence the *batin*; this happened, for instance, among the Nizārī Ismaʿīlīs after 559/1164. Those who rejected the *ṭabīr* altogether often tended also, consistently, to exalt the *waṣī* (ʿAlī) to a higher rank than that of the Prophet (Muḥammad), since the *taʾwīl* was worthier than the *imam*; this was the attitude of the Nusayris.

The *bāṭīniyya* movement seems to have left traces among such later groups as the Ḥurūfīs, the Rawḍiyyān, and the Bāḥīs, who also used symbolical exegesis, though in somewhat different contexts. Its terminology and conceptions, freed of their sectarianism, have likewise influenced the symbolism of Sūfī thought. Perhaps above all, however, the radical positions it took had the effect of rendering Muslim Orthodoxy all the more suspicious of any kind of symbolical *taʾwīl*. Thus Ghazālī used the Ismaʿīlī *bāṭīniyya*, in his *al-Kawāḍ al-Mutalib*, as a point of departure for his analysis of the legitimate limits of *taʾwīl* in general.

(b) Sunni writers have subsequently used the term *bāṭīniyya* polemically to condemn any writers who, in their judgment, go beyond the recognition of the evident meaning of scripture to the rejection of such a *batin*. Thus the Tayyibiyya applies the term not only to the *bāṭīnī Shīʿā* but to some Sūfīs and to such *jalālīya* as Ibn Rushd. Sūfīs commonly hold that there are rich *bāṭīnī* meanings in the Kurʿān open to the properly contemplative spirit; but they

are generally careful to avoid a position which could be labelled *batini* in this sense, Ibn al-'Arabi, for instance, whose interpretation of scripture often seems particularly free, defends himself against the charge of being a *batini* on the grounds that he accepts the *sūrah* alongside the *kalām*.

**Bibliography:** see the articles ISMĀ'ĪLIYYA, NUSAYRIYYA, QUBĀT. Also: I. Goldziher, *Die Richtungen der islamischen Koranexegese*, Leiden 1920, chapters 4 and 5; and H. Corbin, *Étude préliminaire*, in *Nāṣir-i Khusraw, Kitāb-i Jamī' al-Hishmānī*, Tehran and Paris, 1953.

(M. G. S. HOSKINS)

al-BĀTĪYA [see *muḥṭab*]

**BATJANG**, a small island in Indonesia [q.v.], near the equator, at Long. 127° E., one of the earlier sultanates and centres of Muslim propaganda. It lost its importance as a spice-island about 1650 when the trees were destroyed as a result of a treaty between the sultan and the Dutch East India Company.

(C. C. BEAN)

**BATLAMIYŪS**, the almost exclusively used transliteration of the Greco-Latin Ptolemaeus; al-Ma'sūdī, *Tanbih*, writes invariably *ḥatmīyas*, which may be read *ḥatlamāyas*, the truest possible Arabic transliteration. In one place, 129, he gives the explanation "*ḥatlamāyas hi-l-ḥatmīyas*". About his surname al-Kāfīdī al-Ma'sūdī remarks that some people believe him to be a son of Claudius, the "sixth" Roman emperor (see *loc. cit.* "second", 1, 4, 6, Tiberius), who was in fact the third. He himself puts him in his true time, and so does Ibn Sīdī al-Andalus, *Tahṣīl al-umam*, 29 (Cheikh), and already the *Fihrist*, 267 (Flügel). Al-Ma'sūdī, *loc. cit.*, and others also refute the false identification of the astronomer with one of the Hellenistic kings of Egypt.

Since no Greek scientist dominated medieval astronomy and geography, and even *Weltanschauung*, as much as Ptolemy, the Western no less than the Oriental, we have restricted ourselves to listing some books which show his influence on a large scale:

1. General: G. Sarton, *IHS*, I-III, Indices; idem, *The Appreciation of ancient and medieval science during the Renaissance*, 1955, ch. III, § 10; idem, *Ancient science and modern civilization*, 1954, ch. II; L. Thorndike, *History of Magic etc.*, I, 1923, 104 ff., other volumes see Indices.

2. Astronomy: C. A. Nallino, *l'im al-Falah*, 1914, Italian in *Raccolta di Scritti*, v, 1944; O. Neugebauer, *The transmission of planetary theories in ancient and medieval astronomy*, Emanuel Stern Lecture, New York, 1939.

3. Astrology: F. Boll, *Kleine Schriften aus Sternkunde des Altertums*, 1930.

4. Geography: E. Honigsmann, *Die 7 Klimate*, 1929.

5. Harmonics: Ingenhar Düring, *Die Harmonielehre des Klaudios Ptolemaios*, 1950; Christ-Schmidt-Schäfer, *Gesch. d. griech. Lit.* 5, 2, 1924, 904.

6. Optics: Ch. Steinhilber, *ibid.*

Here is a list of Ptolemy's writings in the order of the above paras 2-6, so far as they have left an impact on Islamic science. Under each item the Greek writings appear first, then come the titles known only in Arabic or translations thereof.

The sources are: *Fihrist*, (Ibn Sīdī al-Andalus), (Ibn al-Kūfī) and (Ibn al-ʿArabī), besides Brockmann and the catalogue of manuscripts. For the Western translations, we use, additional to M. Steinschneider, *Die europ. Übersetzungen a.d. Arab.*, and the works by Sarton and Thorndike quoted above, J. M. Millás Vallicrosa, *Las traducciones orientales en*

*los manuscritos de la Biblioteca Catedral de Toledo*, 1942; F. J. Carmody, *Arabic Astronomical and Astrological Sciences in Latin Translation*, 1950 (not throughout reliable); L. Thorndike, *Notes upon some medieval Latin astronomical, astrological and mathematical manuscripts at the Vatican*, 188, 47, 1935, 397-404; the same, *Notes on some ... manuscripts of the Bibliothèque Nationale, Paris*, journal of the Warburg and Courtauld Institutes, 33, 1957, 112-172 (offprints on sale).

2. Astronomy.

a. The *Almagest*. Since Nallino has corroborated by new arguments Koppe's suggestion that the word is derived from *παράγειν σύνταξιν* by *naḥ* (*Raccolta*, v, 252), the former opinion deriving it from *παράγειν* (Suter, *EP*, s.v. *Almagest*), has generally been abandoned. The Arabic form is *al-Majīstī* (so explicitly stated by Ḥādīdī Khallāḥ, v, 385); Barhebraeus also gives the correct Greek title *Σύνταξις* (ed. Salliani, 123). An elaborate survey of the contents of books 14 in al-Ya'qūbī, I, 131-134, cf. Klamroth, in *ZDMG*, 42, 17-18. *Tasṣīl al-Majīstī* by Ḥādīdī b. Kurra, cf. Brockmann, I, 384, 1, 72. The first translator is not Saḥl al-Ṭabarī (and this man is not identical with Saḥl b. Bihār, as proposed by Steinschneider, *Arab. Lit. der Juden*, 24), as stated by Sarton, *IHS*, I, 362. The whole problem has been discussed anew by Nallino, *loc. cit.*, who also gives a new interpretation of the account in *Fihrist* (*Raccolta*, v, 251), and arrives at the conclusion that the first translator is unknown. The MS. Esc. 915 has been used by O. J. Tallgren, *Un point d'astronomie gréco-arabe-romaine*, *Neophilologisches Mitteilungsblatt*, xxix, 1928, 39-44; cf. also the same, *Survivances arabo-romaines du Catalogue d'étoiles de Ptolémée*, *Stud. Gr. Soc. Or. Fenn.*, II, 1928, 202-285. A hitherto unknown commentary by Abū Ḥafṣ al-Ḥakīm (Brockmann, I, 385) has been discovered by G. Vajda (Paris, BN, ar. 4821, 9, cf. *RSO*, xxv, 8), another one by Ḍiḥr b. Ḥayyān is only known by name, cf. Kraus, *Jahrb. im Hayyān*, I, 1945, no. 2834.

Ch. H. Haskins and D. P. Lockwood have stated that the first Latin translation has been made directly from the Greek, 12 years before Gerard of Cremona's version of the Arabic, in 1175 (*The Sicilian Translators of the 12th Century and the Latin version of Ptolemy's Almagest*, *Harvard Studies in Classical Philology*, xxi, 1910, 75-102; cf. also J. L. Heiberg, in *Hermes*, xlv, 1910, 57-66, xlv, 207-216). See also Carmody, 15, and Millás, ch. xxxv.

b. The *πρόχειρον κωνίων* (*Tabular manuals*), cf. Steinschneider, in *ZDMG*, I, 217 and 341. Al-Ya'qūbī, I, 129 = Klamroth, 23, calls the work which he analysed, *Kitāb al-Kānīn fi l'im al-Nuḍūm wa-Ḥisāb al-wa-Kīmal Ajā'ib wa-Ta'dād*, but, as Honigsmann, 118 f. shows, this is not Ptolemy's book. This last has already in Greek times been confounded with the commentary written by Thos Alexandrinus. This was known to some Arabic scholars, as shown by Honigsmann, 120. There's no commentary on Ptolemy influenced al-Kindī, as proved by F. Rosenthal in his analysis of MS. Ayta Sofya 4830 (*Studi ... G. Levi della Vida*, 1956, II, 436 ff.).

Special attention must be paid to one of the Tables, the *κωνίων ἀστρονομικόν*, or as C. Wachsmuth in his *Einstieg in das Studium der alten Geschichte*, 1805, 394-396, repeatedly with transliteration in Arabic numbers and Christian years for every king in F. K. Ginzl, *Handbuch der mathematischen u. technischen Chronologie*, I, 1906, 139. The text is quoted by al-Ya'qūbī, I, 261, for the Greek and Roman kings. In this table Alexander the Great comes after Darius

III, then Philippos (Arrhidaios) "that one with Alexander the Builder", then "the other" Alexander (i.e. the posthumous son of Al. the Gr.). During the reign of the latter (317-305 B.C.) falls the beginning of the Seleucid Aera, which was therefore also called *Aera Alexandri*. This canon has been taken over by al-Bīrūnī, *Āḥḥ*, 88 ff., as expressly stated 1, 3. On 89 he calls rightly Alexander the Great al-*ḥanān* (Greek *κρίτης*), and 92 he calls Alexander's son al-*ḥānī*. The Arabic tradition, however, calls this latter *Ḥū* "Ḥ-Karaya", apparently because his predecessor was also called Philippos. Several authors point rightly to the difference of 12 years between the death of Alexander the Great and the beginning of the Aera allegedly called after him, Ḥādīdī Khallāḥ, III, 430, no. 6471 says *Ta'wīḥ* of Philippos the Rōmā, the Builder", but adds correctly: "the brother of Ḥū 'Ḥ-Karaya'. Two of the Achaemenid kings are given by al-Bīrūnī 2 years more than by Ptolemy. Nevertheless, from Buḥār-nasār until Alexander's death also the al-Bīrūnī MSS. have Ptolemy's total of 424 years, which number was replaced by Sachau, according to arithmetic, by 428 (86 nlt.). Cf. also K., 96 (Lippert), al-Ṭabarī, 1337/1339, I, 412 f.; S., 30 (Cheikh).

c. Ἐπιτομή των πλανητικῶν, perhaps the book named in F 268 k. *fi sayr* (not 1394!) al-*ḥabṣa*, cf. Steinschneider, *Ar. Ūb.*, 211, who rightly states, that the real Arabic title is *ḥabṣa al-ḥabṣiyya*, as quoted by K. 98, cf. Brockmann, I, 384, 78. The Arabic text (the number of MS. Leiden is 1045, not 1044, which contains the *Almagest*), an *Īḥḥ* by Ḥādīdī b. Kurra, is for book 2 the only one preserved. Both books have been translated into German by L. Nix and printed together with the Greek text of book 1 in Ḥādīdī Ptolemaeus *Opera astronomica minora*, ed. J. L. Heiberg, 1907 (Bibl. Teubn.).

d. *ῥάσις ἀπλανῶν ἀστέρων*, Arabic *K. al-anūd* (S 29). As for the meaning of this title, cf. Nallino, *l'im al-Falah*, 133 ff. (= *Raccolta*, v, 291 ff.), also I. Kratchkovsky, in Abū Hanīfa al-Dīnawarī, *K. al-Āḥḥ* al-*Tawīḥ*, *Préface* etc., 1912, 40 ff. Description of the book in al-Ma'sūdī, *Tahṣīl*, 17. Boll, *Sphæra*, 1901, 131 f. does not believe that Abū Ma'sūd used this book for his list of Paranalattenta, ed. and tr. by A. Dyroff, *ibid.*, 490 ff.; he rather supposes a falsified book attributed to Ptolemy.

e. Ἀρλούσιος ἐπερνεύειας σφαιρικός (*Planisphaerium*). F 269 mentions under Pappos *Taḥṣīr al-Baḥāyīs fi taḥṣīr al-ḥara*, transl. by Ḥabīb al-Ya'qūbī, I, 152 analyses the *K. fi Ḥabīb al-Ḥabīb*, cf. Klamroth, 30 ff. The text of Maallana al-Majīstī's Compendium, formerly known in Hebrew and Latin translations only, was recently discovered by G. Vajda, *RSO*, xxv, 8 (MS. Paris, Ar. 4821, 10). For the Latin translation see Carmody, 18.

f. Al-Ya'qūbī, I, 157 also mentions a book on the *ḥabṣa* called *K. fi ḥabīb al-ḥabṣiyya* al-*Āḥḥ*, cf. Klamroth, 23 ff. and Steinschneider 215-216. For editions of the Latin translation see Carmody, 18. For Ptolemy's influence on Arabo-Spanish astrologues see J. Millás Vallicrosa, *Assaigé d'historia de los ideas físicas y matemáticas a la Catalogue medieval*, 1951, ch. vi-vii.

3. Astrology.

a. Ἐκ τῶν ἀστρονομικῶν σύνταξιν, or *τετράβιβλος* ed. and transl. into English by F. E. Roberts, 1949 (Loeb Class. Libr., together with Manetho), new edition by F. Boll & An. Boer, 1957, F 268; *K. al-Arḥa'a*, S 21; *K. al-Mahallāt al-Arḥa'a* (Barh, 123; *al-Arḥa'a* Mahallāt) fi *Ḥakīm al-Nuḍūm*, Latin

translations Carmody, 18, Millás, ch. XXXVII, comm. by 'Alī b. Ridwān, *ib. ch. XXXIX*. The quotations from it in *Ḍiḥr* b. *K. al-ḥabḥ* collected by Kraus, no. 2834 (168, n. 1). For Ḥādīdī's compendium cf. Honigsmann, *Sieben Klimate*, 116.

b. *Κατὰ τὴν φράσιν οὐρανολογικῶν*, not authentic. F 268; *K. al-Ḍamara*, the commentary by Ahmad b. Yusuf al-Majīstī al-muḥandīs (the biographer of Ahmad b. Ṭūlūn) is also mentioned, cf. Brockmann, I, 229. A new edition of the Greek text by An. Boer, 1952, Latin translations in Carmody, 16, Millás, ch. XXXVII-XXXVIII. For a and b see also Thorndike, *Journal of the Warb. etc.*, and *ibid.*, *loc. cit.* Ten aphorisms are quoted in Ps. Magīstī's *Ḍiḥr al-Ḥakīm* (*Picatrix*), ed. Ritter, 1933, 323-324, Ahmad's commentary on aph. 9 in *extenso* quoted there, 55. A new fragment has been discovered by P. Kraus in MS. Taimur, *Ḍiḥḥ*, 290, 14, cf. his *Dirāḥ*, I, 1939, 6.

c. The book on Comets quoted by F 268 as *K. Ḥisāb al-Ḥabṣiyya*, cf. Steinschneider, *Ar. Ūb.*, 218, no. 22. Carmody, who discusses the Latin translations (16-17), calls the text "an amplification of (*Centiloquium*) prop. 99".

d. On nativities, F 268; *K. al-Mawāḍiḥ*, quoted by Ḍiḥr b. *K. al-Mawāḍiḥ al-Ṣaḥḥ*, cf. Kraus, *Jahrb.*, II, 238, n. 1, who does not believe the book to be genuine either.

e. Another pseudopigraphic book, *K. al-Maḥama*, is known from numerous quotations in Yāqūt's *Geographical Dictionary*, cf. the collection of place-names mentioned in it, and further literature in Honigsmann, *Sieben Klimate*, 125-34. The meaning of *maḥama* is not quite clear, and the quotations do not furnish sufficient evidence as to the real character of the book.

f. Recently, a short text has been edited which refers to Ptolemy, namely, *Ḍiḥr mā ḡiḥ* fi *ḥ-nayras wa-ahḥimā min-mā jāsarāḥ* Batlamiyūs al-ḥakīm wa-waḥḍajāḥ 'an 'ilm Dāniyāl (I), ed. from Ist. Murad Molla 338 by 'Abd al-Salām Ḥārūn, *Nawādir al-Maḥāḥ*, 5 (II), 1373/1954, 45-48 (information from Mr. M. Schwarz of the Hebrew University Library). It discusses the significance of the week-day on which falls New Year.

g. A book on the images which rise in the 360 degrees of the celestial sphere named *Liber imaginum Ptolemaei* and the like, exists in Latin in many MSS. cf. Steinschneider, *Ar. Ūb.*, no. 1772, Carmody, 20, Thorndike, *Journ. Warb. Court.*, 118. An Arabic text entitled *Kitāb fi Samā' al-Darajāt* ascribed to Ptolemy is one of the sources of the *Safnat al-Aḥḥ* by a certain Ḥadrāt al-Nusayrī, MS. Berlin Pet. I, 676 and Br. Mus. Add. 23,400 (the number in the Catalogue, 848, is distorted by Steinschneider, *Arab. Ūb.*, Philos., 90 and General Index into 1348, Math., 217 into 843, and 553 into 874); but the identity of the Arabic and Latin texts has not yet been examined. For the meaning of the title cf. Boll, *Sphæra*, 426 ff.

h. The *Liber ad Heronem* or *Aristonem de iudiciis* (Steinschneider, *Ar. Ūb.*, 218, no. 11) has been analysed by Millás, 175, cf. also for similar texts ascribed to Ptolemy, Carmody, 17 and 20.

i. Menesalch (= Mī ḡā' Alī) cf. *Philosophum de astronomia*, printed Venice, 1599, cf. Steinschneider, *Ar. Ūb.*, no. 1640, and *Arab. Lit. d. Jud.*, 22, no. 26, has been tentatively identified by Carmody, 47 with a *Kitāb al-Ḥabṣiyya*, MS. Esc. 915. Another MS. with the same title is quoted in Brockmann, II, 205 ad 1, 302; it exists in Alexandria, *ḥarṣ*, 12.

According to Thorndike, *The Latin Translations of*

astrolological works by *Mossabala*, in *Oriens*, xli, 1956, 60, the work is erroneously attributed to Mā'ishā' Allāh, and its author is Saḥb b. Bāghr. The Venice print is not mentioned by him, and consequently he does not make clear whether Polony's book is supposed to be a different work or whether the print points to conscious authorship. The matter is still open for investigation.

#### 4. Geography.

J. H. Kramers' account on the Arabic translations of the Γεωγραφικὴ ὁρογραφία and its influence on the geographical views of the Muslims (*ILIR*, Supplement, s.v. *Diwān al-ḡiyā*) is by no means out of date, cf. also his contribution *Geography and Commerce in The Legacy of Isidore*, 1931, 79-107. We refer the reader to the works quoted in those articles and to Stein-schneider, *Ar. Uss.*, para. 119, and Kuska's review of H. v. Meißl's publications, in *Geographische Zeitschrift*, 24, 77-81. For the translation made for Mehmed Fāthī, the conqueror of Istanbul, preserved in MS. AS 2596, cf. Honigsmann, 114; Fleissner, in *Islamica*, iv, 1916, 547; Ritter, in *Id.*, xi, 1931, 32 f., where another MS., AS 2610, is described too.

#### 5. Harmonies.

For its influence on al-Fārūḍī's *K. al-Masīḥi al-Kabīr* cf. P. Kraus, *Jahrb.*, ii, 204, n. 2.

#### 6. Optics.

The Arabic title given by S. 29 in *K. al-Manādir*, Latin translation listed by Fleissner, 45. For its influence on Ibn al-Haytham see Stein-schneider, *Ar. Uss.*, para. 122.

#### 7. Alia.

A book on the properties of stones, *K. Manāḥi' al-ḥijār*, is contained in MS. Paris 2772, cf. J. Kuska and W. Hartner, *Katalog der orientalischen und lateinischen Originalhandschriften, Abdrücke und Photographien des Instituts für Geschichte der Medizin und der Naturwissenschaften in Berlin*, 1929, 78 (not in G. Vajda, *Index generalis*, 1953).

**Bibliography:** In the text, cf. also 'Abdurrahman Badawī's introduction to his *Fondu Graeco* (*nos*) *doctrinae politicae Islamicae*, 1934; L. Thorndike, in *Isis*, 30, 1070, 33-50.

(M. FLEISSNER)

#### BATMAN (see WAGH).

**BATM**, probably the Semitic word for "stomach", with the additional sense in Hebrew of "uterus", implied in Aramaic by the verb of the same root which means "to conceive", and in Arabic by expressions such as *ḥaṭḥ baṭniha* "fruit of her womb", as well as by the use of the word to designate "a fraction of a tribe", retained as analogous to *rahim*, *rahīm* and an entire series as designations of a sterine relationship. The distinction between *awlad al-baṭn* "cognates" and *awlad al-rah* "agnates" is still used in modern Arabic, according to the notations of Weiststein for Damascus (see also *Arabica*, v, 1, 80-81; M. Canard's review of an article by Vinitskii). The interpretation of Arab philologists who place *baṭn* between *rahīm* and *rahim* in accordance with the order in which the parts of the body are enumerated, is to be rejected according to W. Robertson Smith (*Journal of Philology*, ix, 86) who believes that he has found for Hebr. *batan* that meaning of the Arab. *baṭn*, by an ingenious exegesis of Job 29, 17, where *honey batan* baffled the commentators; it would correspond to the Ar. *band baṭn* (*Kinship and Marriages in early Arabia*), 28). For a discussion of his theory cf. the articles 'Aṭṭā, 'Aḡḡlā, *kaṭṭā*, etc.

Used figuratively, *baṭn* "depression, basin" appears in geographical names (cf. Yāqūt, i, 665 ff.),

while in the sense of "interior" there are the derivations *batm* and *batmīyya* (s.v.), important in Islamology.

(J. LECLERC)

#### BATRĪK (see BATRĪK).

**BATRĪN** (or *BATRĪN*), Graeco-Roman Bostrys and the Bostron of the Crusaders; a small town on the Lebanese coast, situated 36 kms. north of Bayrūt; it witnessed the passage of all the armies of conquest, covering as it does the Bayrūt-Tarābulūs road to the south of the precipitous promontory of Rīs 'Ṣakka (Thouropoulos). According to a tradition cited by Josephus (*Antiq.*, viii, 32, 1), it was apparently founded by Ithobaal, king of Tyre. In reality it is of much older origin and is mentioned in the Tell al-'Anama letters (15th century B.C.) as a dependency of Byblos (Bibayl). At one time it was a nest of pirates, who were dealt with by Antiochus III Megas. To judge from the remains of a vast amphitheatre, the city, already famed for its vineyards, must have been of some towns, it was destroyed by the earthquake and tidal wave of 16 July 551.

In the period of the Crusades, Bostron was the seat of a bishopric depending on the county of Tripoli. It was a port where the Pisans enjoyed a number of privileges. For a long while the Bovenland family of al-Aqarūn were its lords. In 1271, following a quarrel among the Franks, the manor was razed by the Templars. Sultān Kalāwūn took Batrīn in 1289 without difficulty. Under the Mamluks of Egypt, the town was attached to the *nizāma* of Tarābulūs. In the 19th century the town enjoyed a certain prosperity due to sponge fishing which, however, today only occupies a few boats. The town now has a population of about 3,000, the majority of whom are Maronites.

Heyd, *Histoire du Commerce au Levant*, 4, 321; Lamm, *Die Syrie*, ii, 28; Desmaiz. *Trois siècles d'histoire de la Syrie*, 71; Grousset, *Histoire des Croisades*, iii, 688, 745; 'Aḡḡlā Imāḡū, *Histoire du Liban du XVII<sup>e</sup> siècle à nos jours*, i, 53, 114. (N. ELIASSEFF)

**AL-BATĀL**, 'ABD ALLĀH, famous ghāṣi of the Umayyad period who took part in several expeditions against the Byzantines. His surname means "foe", "hero", but has also a pejorative sense (cf. for example Ibn Hawkal, 85; and the dictionaries). Concerning this person there is a comparatively meagre historical tradition, a pseudo-historical tradition and, moreover, an Arab romance *Siḥat Duhannā* wa *Ḥaṭḥ al-Batāl*, and related to it, a Turkish romance, *Sayyid Batāl*.

According to the early chroniclers (Al-Ya'qūbī, Al-Tabarī), al-Batāl did not appear before the year 109/727-28, during the reign of Ḥishām b. 'Abd al-Malik (105-125/724-43). Likewise the Byzantine historian Theophanes and the author of the Syrian chronicle, known as Pseudo-Dionysius of Tell Mahre, only mention the year of his death, in 746. However (assuming of al-Batāl's date by Bal'amm) who wrote in 352/963, associates al-Batāl with Maslama b. 'Abd al-Malik in his famous expedition against Constantinople in 98/717. We are dealing with a largely legendary account and we cannot know whether it contains reliable historical elements.

Historically, al-Batāl at the head of the vanguard

of Mu'awīya b. Ḥishām conquered Gangra in Paphlagonia in 109/728. In 113/731-32 he took part in the expedition in which another celebrated Umayyad ghāṣi perished, 'Abd al-Wahhāb b. Baḡhī. In 114/732-33, or 115, in the course of an invasion by Mu'awīya b. Ḥishām of Phrygia in the region of Akroinon, he routed and captured a Byzantine leader called Constantine. There is no further mention of him before his death in 122/740. During that year several parts of Anatolia were attacked by the troops of Sulaymān b. Ḥishām. Al-Batāl's detachment, commanded by the governor of Malatya, Malik b. Shabbī (or Shu'ayb), was surprised and routed by the Emperor Leo III and his son Constantine near Akroinon. The two leaders perished, their survivors fleeing south towards Synnada where they managed to rejoin Sulaymān. The date of al-Batāl's death is nevertheless placed in 121, 123 or even in 113.

If the early chronicles do not appear to have exploited much importance to his person, his military career was celebrated early by popular tradition in various accounts and anecdotes. In the period of al-Ma'wūdī, the first half of the 4th-10th century, he was known as one of the illustrious Muslims whose portrait the Byzantines had hung in their churches (*Murūj*, viii, 74), beside that of the famous *amir* of Melitene, 'Amr b. 'Ubayd Allāh al-Aḡḡr, defeated and killed in 84/685. It is not impossible that the legend of both developed shortly after that date, as an after-effect of the first Byzantine success.

In Bal'amm's account of Maslama's expedition, al-Batāl is appointed to hold one city of Constantinople open while Maslama entered the city alone on horseback, and to enter in force should anything befall Maslama. Al-Batāl is even associated with Maslama in the account of the siege of the Byzantine capital in the *Kutāb al-Uyūn* (5th/11th or 6th/12th centuries), where one finds as well under the year 715 the romantic account of a single-handed combat by al-Batāl. The popular account of Maslama's expedition by the great Andalusian mystic Ibn al-'Arabi (d. 638/1240), related to that of Bal'amm, attributes also an important rôle to al-Batāl, commander of the contingents of Djaḡra and Syria, chief of Maslama's scouts, and charged with the same mission before Constantinople as in Bal'amm's version.

In a long biographical notice going back to Ibn 'Asḡir (d. 57/1176), a Syrian tradition reproduced more or less completely by various historians including Ibn al-Aḡḡr, Sibt Ibn al-Jawzī, Ibn al-Kutaybī, Ibn al-Batāl, Ibn al-'Umar and Ibn Kaṭhīr, one finds after a brief allusion to the rôle of al-Batāl in Maslama's expedition, romantic anecdotes of which certain reappear in the romance of al-Batāl. These are 1) al-Batāl the boy: he appears one night in a Greek village where he hears a mother threaten her crying child with giving him to al-Batāl if he does not stop crying; 2) his entrance into a Greek convent: al-Batāl, weakened by violent abdominal pains, is led by his horse to a convent where he is given asylum. He escapes the investigations of a Byzantine patrician thanks to the abbeys, follows him when he leaves, kills him, and returns to the convent where he takes captive all of the nuns and marries the abbess; 3) his entrance into Anatolia by a river: separated from his companions he arrives at Amorion where he gains access to the patrician by pretending to be a messenger from the Emperor, and forces him to indicate the whereabouts of the Muslim army, which he rejoins; 4) the death on the battlefield where the

Emperor Leo attends his last moments, looks after him and permits his burial by the Muslim prisoners.

The authors who report these anecdotes distinguish them from the "lies" of the *Siḥat Duhannā* wa *Ḥaṭḥ al-Batāl* (see below) of whose existence we know already during his period from the Jewish convert Samaw'al b. Yahyā al-Maḡribī, who wrote in 565/1169-70.

The early authors say nothing of the origin of al-Batāl. According to later historians he came from Antioch (or from Damascus), lived in Antioch, and was a *mawālī* of the Umayyad house, as was his companion 'Abd al-Wahhāb b. Baḡhī, who also plays a major rôle in the *Siḥat Duhannā*. His *kuṣya* is sometimes Abu Muhammad, sometimes Abu Yahyā, sometimes Abu 'Ḥuṣayn. His father's name is Ḥuṣayn or 'Amr. On the origin of al-Batāl, such as it is given, whether in the *Siḥat Duhannā* or in the Turkish tradition of *Sayyid Batāl*, see the articles on these two romances.

(M. CANARD)

**AL-BATĀL** (SAYYID BATĀL *Qaṣṣa*), a champion of the Arabs in the wars against Byzantium in the Umayyad period, is transformed, in the Turkish romance devoted to his adventures, into a hero of the 'Abbasid period. Al-Batāl thus became the contemporary of the *amir* of Melitene, 'Amr b. 'Ubayd Allāh al-Aḡḡr (d. 349/963) and was incorporated into the epic cycle of Melitene. After the conquest of Melitene by the *amir* Dānişmend in 495/1102, the Turks adopted the epic of Melitene, incorporating it in their own epic cycles and tracing their national heroes back to the legendary al-Batāl. It is a Turkishised Batāl embodied by an 'Alid connexion and answering to the name of Dja'far that we find in the Turkish version. The Turkish historians who used this epic romance as a historical source often took the legendary elements for historical facts and were even led to accept the chronology of the story. Thus Esfīyā Celalzade

Battāl a contemporary of Hārūn al-Rāshid, whose reign he transferred to 248/859—the year in which he made him besiege Constantinople. The same anachronism exists in the Turkish version of al-Tahiri; it was made by an anonymous translator who introduced into his work accounts taken from the Turkish epic tradition.

Al-Battāl appears in two great epic romances: the Arabic romance of *Ḍalāl al-himma* (*Dellemma*) (see *Dellemma*) and the Turkish romance of Sayyid Battāl. These two works, although related, were not subject to reciprocal influences; they probably both go back to an Arabic tradition concerning al-Battāl of which we possess no written trace, but whose existence is confirmed by two pieces of historical evidence of the 6th/12th century (cf. M. Canard, in *JdI*, cviii, 116; id., in *Byzantion*, vii, 186).

The Turkish romance. After their conquest of Anatolia, the Turks adopted as their own the local epic traditions celebrating the Arabo-Byzantine Wars. These accounts transformed by the addition of Turkish elements and Turkified Persian elements, gave rise to a new Anatolian epic having as its subject the conquest of Asia Minor. The romance of Battāl is the prototype of this literature; however, from the first, elements of Turkish folklore crept in, containing events which took place in a fantastic world peopled with anthropomorphic demons and supernatural beings, themes taken from Persian fairy stories or epic tales, popularisations of the *Shāh-nāma*, motifs from historical romances of heterodox ideology, such as the *Romance of Abū Muslim*, a work found all over the Turkish world. The Turkish romance of Battāl appears as a mosaic where the elements of different sources are amalgamated. Among these elements, the book which recounts the insurrection and the capture of the heretic Bābak stands out from the rest of the work because of its historical basis, which is evident through the trappings of the legend. In this account, which takes place in the Caliphate of al-Mu'tasim (833-842), Battāl has been substituted for the real hero of the campaign, Afghān, whose name was proscribed after his disgrace and death in 235/848. This book is probably one of the *Bābak-nāma* whose existence we know about from Ibn al-Nadīm, and which is incorporated in the romance of Battāl.

Similarly in the *Dellemma* the Turkish romance contains reminiscences of the time of the First Crusade. It was probably composed during the 6th/12th century, or right at the beginning of the 7th/13th century, because the *Romance of Malik Dāwūd*, which celebrates the exploits of the first Turkish conqueror of Melitane and which was first written down in 643/1245, was conceived as a continuation of the romance of Battāl; some narrators of the *Sāḍīk* period added a chapter in which they told how the tomb of the hero was discovered by the *Sāḍīk* of Anatolia. There exists a version of the romance of Battāl in verse, attributed to Bakāʾī, in the reign of Muṣṭafā III (1757-1774). Independently of the epic cycle, the name of Battāl still lives on in numerous Anatolian legends and in particular in the hagiographical stories of the *Sāḍīk* and *ḥalīfah* sects (see *Ḥalīfah*, *Ḥalīfah*).

**Bibliography:** Ebbé, *Die Fabrik des Sayyid Battāl*, 2 vols., Leipzig 1871; M. Canard, *Un Personnage de Roman Arabe-Byzantin, in Actes du 11ème Congrès National des Sciences Historiques, Algiers 1952* (see also articles quoted); H. Gregoire, *L'Épopée byzantine et ses rapports avec l'épopée*

(I. MELIKOFF)

AL-BATTĀNĪ (his full name is Aḥmad 'Abd Allah Muhammad b. 'Izz al-Dīn Sīyāh al-Battānī al-Harrānī al-Sabī'), the Albategni or Albatenius of our mediaeval authors, one of the greatest of Arab astronomers, was born before 244 (838) very probably at Harrān or in its neighbourhood; the origin of the *nisba* al-Battānī is quite uncertain. His family formerly professed the Sabian religion, whence the name al-Sabī; although our author was a Muslim. He spent almost his whole life at al-Rakha on the left bank of the Euphrates, where several families from Harrān had taken up their abode; from 264 (877) he devoted himself to astronomical observations which he regularly pursued for the rest of his life. Having had occasion to go on business to Baghdat he died on his return journey at Kay al-Djāris, a little to the east of the Tigris and not far from Sāmarrā in 317 (929).

He wrote: 1. *Kitāb mar'at maṭālī al-aburāğ* *fi mā bayna arṣi' al-falak*, "the book of the science of the ascensions of the signs of the zodiac in the space between the quadrants of the celestial sphere"; i.e., of the ascensions of the points of the ecliptic which are not, at the given moment, one of the four "maṭāl" or pivots (see the article *maṭāl*); it deals with the mathematical solution of the astrological problem of the "direction" of the significator, 2. *Kitāb fi taḥkik addir al-ittisāl*, "a letter on the exact determination of the quantities of the astrological applications", i.e., the rigorous trigonometrical solution of the astrological problem of the *profectio radiorum* (see the article *maṭāl*) when the stars in question have latitude (i.e., lie outside the ecliptic), 3. *Shārḥ al-makālāt al-arṣi' fi Bāḥāniyya*, "commentary on Ptolemy's *Tetrabiblos*", 4. *al-Falāq*, "Astronomical treatise and tables", his principal work and the only one that has survived to us; it contains the results of his observations and had a considerable influence, not only on Arab astronomy but also on the development of astronomy and spherical trigonometry in Europe in the middle ages and beginning of the Renaissance. It was translated into Latin by Robertus Retemius or Ketenerius (died at Pamplona in Spain after c. 1143 A.D.); the version is lost) and by Plato Tiburtinus in the first half of the 13th century (an edition of the text without the mathematical tables was published at Nuremberg in 1557 and at Bologna in 1645). Alfonso X of Castile (1252-1282) had it translated directly from the Arabic into Spanish (incomplete MS. in Paris). Three insignificant astronomical pamphlets, of which a Latin version exists in several manuscripts, which give their author's name as Betham, Boetem, Berem, Barent, have been wrongly attributed to al-Battānī.

Al-Battānī determined with great accuracy the obliquity of the ecliptic, the length of the tropic year and of the seasons and the true and mean orbit of the sun, he definitely established the Ptolemaic dogma of the immobility of the solar apogee by demonstrating that it is subject to the precession of the equinoxes and that in consequence the equation of time is subject to a slow secular variation; he proved, contrary to Ptolemy, the

variation of the apparent angular diameter of the sun and the possibility of annular eclipses; he rectified several orbits of the moon and the planets; he propounded a new and very ingenious theory to determine the conditions of visibility of the new moon; he emended the Ptolemaic value of the precession of the equinoxes. His excellent observations of lunar and solar eclipses were used by Dunthorne in 1749 to determine the secular acceleration of motion of the moon. Finally he gave very neat solutions by means of orthographic projection for some problems of spherical trigonometry, solutions which were known to and in part imitated by the celebrated Regiomontanus (1456-1476).

**Bibliography:** al-Battānī sive Albategni *Opus astronomicum* . . . . . Arabic editum, *Latine versum, adnotationibus instructum a C. A. Nallino*, Mediolani Insoburni, 1899-1907, 3 vols. in-4°. Regarding the misinterpretation of the text of al-Battānī, 1. 31-2, by C. A. Nallino, see emendation proposed by J. Vernet and J. J. de Orús in *Transformación de coordenadas astronómicas entre los drabes, in Gaceta Matemática*, 1st. series, ii, no. 3, Madrid 1950, and also J. M. Millis, *Una nueva obra astronómica alfonsí: El Tratado del cuadrante "semmeret", in al-Andalus*, xxi (1950), 125. On the influence exercised by al-Battānī's work on the Jew of Barcelona Abraham bar Hiyya (5th-6th/11th-12th century), see J. M. Millis, in *Actes du Congrès intern. des Orient.*, Leiden 1931, and *La obra "forma de la tierra" de R. Abraham bar Hiyya al-Bargeloni*, Madrid-Barcelona 1956. (C. A. NALLINO)

BATU (in Arabic script Bāṭu), Mongol prince, the conqueror of Russia and founder of the Golden Horde (1227-1255), born in the early years of the 13th century, the second son of Djöči (see *Qöčü*). During Čingiz-Khān's lifetime Djöči, as his eldest son, had received as his *yurt* or appanage the territory stretching from the regions of Kayakāl and Khawāram to Saksin and Bulghār on the Volga "and as far in that direction as the hoof of Tartar horse had penetrated". The eastern part of this vast area, i.e., Western Siberia, the present-day Karakaghstān and the lower basin of the Sir-Darya, passed upon Djöči's death in 624/1227 to his eldest son Orda, whilst to Batu fell the western part, i.e., Khawāram and the Dağhī-A Kipčak or Kipčak Steppe to the north and north-east of the Black Sea. On the first ten years of Batu's reign we know only that he was present at the *kurultay* or assembly of the Mongol princes held in 626/1229 in Mongolia, at which Ögödei was elected Great Khān, probably also at the *kurultay* of 632/1235 in which it was decided to renew the war against the Russians and neighbouring peoples; he was never again in Eastern Asia. In the army which set out in the spring of 633/1236 there were also sons of Čaghatay, Ögödei and Toluy, but Batu was in supreme command. The Mongol forces are said to have reached the territory of the Volga Bulgārs by the autumn of the same year, but the destruction of the town of Bulghār does not seem to have taken place until the autumn of 635/1237, during which year the Mongols were engaged in operations against the Kipčak Turks in what is now Southern Russia. In Bah' I-II 635/November 1237 they crossed the frozen Volga and attacked the Russian principalities, capturing city after city, until by Rajāb-Sha'ban 635/March 1238 the road lay open to Novgorod. The Mongols had approached within 65 miles of the town when they

suddenly withdrew to the south, evidently fearing that the spring thaw would render the roads impassable. After a long period of rest in the lower Don basin and minor campaigns in the Caucasus in 636/1239, the war against Russia was resumed in 637-1240 in a campaign which ended with the fall of Kiev on the 6th of December of the same year. From the Ukraine simultaneous attacks were launched upon Poland and Hungary. Through Poland the Mongols penetrated into Silesia defeating Duke Henry the Pious at Legnica on the 25 Ramadan 638/9 April 1241 and then passed through Moravia to join the main army, which, led by Batu in person, had crossed the Carpathians into Hungary and inflicted a decisive defeat on the Hungarians at Mohi (27 Ramadan 638/11 April 1241). The combined Mongol forces passed the summer and autumn on the Hungarian plain; and on Christmas Day Batu in person crossed the frozen Danube to take the town of Ezerseg. The last major operation was an expedition through Croatia and Dalmatia to the shores of the Adriatic in pursuit of Béla IV of Hungary. The armies were apparently poised for a general assault on Western Europe when news arrived of the death of the Great Khān Ögödei (5 Dhimād 11 639/11 December 1241), and Batu decided to withdraw his forces. Retiring by way of the Balkans he finally reached his encampments on the Lower Volga late in 1242.

It was now that Batu laid the foundations of the Golden Horde. Of the lands invaded in the years 635-9/1237-1241 only Russia had remained subject to the Mongols. As early as 639-40/1200-1241 Grand Duke Yaroslav I of Vladimir came to Batu's aid to pledge his loyalty and was confirmed by the Khān in his rank as "senior of all the princes of the Russian people"; in 1000/1245 Prince Daniel of Galicia had to be confirmed in the same way and do homage to Batu.

During this period Batu's attention was largely diverted to events in the East. Ögödei's eldest son Güyük, a personal enemy of Batu, had been raised to the throne in succession to his father at the *kurultay* of 644/1246. Batu had been represented at the ceremony by five of his brothers, excusing his own absence, according to Rashid al-Dīn, on the ground of physical infirmities. Early in 1248 the new Khān left Kara-Korum in a westerly direction. He gave it out, according to Rashid al-Dīn, that he was proceeding, for reasons of health, to his *yurt* on the Enil in what is now eastern Kazakhstan, but Toluy's widow suspected that his real intention was to attack Batu, to whom she accordingly sent a warning. Güyük died suddenly *en route* in a place called Kum-Sengir on the Upper Urungui, according to the *Yüan shih* in the third month (29th March-24th April) of 1248. Djuyaynī and Rashid al-Dīn disagree as to Batu's whereabouts at the time of Güyük's death. According to Djuyaynī he was advancing eastwards to meet the Khān, at the latter's invitation, when he received the news of his death in a place called Ala-Kamak, a week's journey from Kayakāl, probably in the Alatau mountains to the south of the Il. On the pretext that his horses were lean Batu summoned the princes to meet him in this place. On the other hand, according to Rashid al-Dīn, this meeting took place in Batu's own territory; and the sons of Ögödei, Čaghatay and Güyük are represented as refusing to make the long journey to the Kipčak Steppe.

The result of the meeting, wherever held, was that Möngke, the eldest son of Toluy, was, on Batu's

and 1310/1892 (Sarkis, *Mu'djam* 1928, 310). She also versified Qur'ānī, al-Mu'djam wa 'l-Kharā'ij al-Khawāssiya (Brockelmann S II 181<sup>2</sup>); and in an *urdu*isa, entitled al-Ishārāt al-Khawāssiya fi 'l-Mandil al-'Alīya (Hādijī Khāfi, i, 96) abridged Harawī's 80th manual *Mandil al-Sā'ir*. In another *urdu*isa she abridged Saḥāwī's al-*Ḥawl al-Baḥrī* fi 'l-Salāt 'alā al-Ḥabīb (Hādijī Khāfi, i, 162). She was married and had a son, who she died in Damascus in 1321/1806 (Shahārūt viii, 117; Zirikli al-Aṣḥab, Cairo 1927, ii, 458).

(7) and (8) were not particularly prominent though both produced some poetry, the latter mostly in the form of verse summaries of the reigns of Mamlūk sultans. The former died in 910/1505 the latter in 916/1510 (Shahārūt, viii, 48; Kāmilī, i, 73, 147; and cf. Brockelmann II 66, S II 33 for Muhammad's work).

After (8) Najīb's line seems to pass out of history for there is no reference to it in Muhibbī's *Ḥuldā*. (W. A. S. KHALIDI)

**BĀWAND**, (Persian Bāwand), an Iranian dynasty which ruled in Tabaristān for over 700 years (45-750/605-1349). The centre of the dynasty was the mountainous area, although they frequently ruled the lowlands south of the Caspian Sea. The name Bāw, traced back to an ancestor Bāw who was either 1) named Ispahbad of Tabaristān by Khurasaw Parwiz (Rabino, 411), or 2) a prominent Magian of Rayy (Marquart, *Erindāsh*, 128, where an etymology of the name is also given). The several rulers of the Bāwand dynasty were called *ispahbad* or *malik al-ḥibād*, and they were usually independent, though sometimes tributary to caliphs or sultans.

The dynasty can be divided into three branches: 1) the Kayniyya, which ruled 45-397/605-1006, when the *ispahbad* Shahrīyār revolted against Kābūs b. Waḥmīd, was captured and later put to death; 2) the Ispahbadiyya, who ruled 406-606/1013-1210, when Muhammad Kh̲arāsmīyār invaded Tabaristān; 3) the Kīnākh̲rīyā (653-750/1217-1310), when the last ruler Fakhr al-Dawla Hasan was assassinated.

The first branch took its name from Kayū b. Kābād the Sāsānid, possibly the grandfather of Bāw. The early history of the family is uncertain. The ninth ruler Kān b. Shahrīyār accepted Islam in 240/855 and was called Abū 'l-Mulūk. The family lost its power after 507/1106, but several princes continued to rule in localities in the mountains. One of them, Muhammad b. Wāndār, had a mausoleum erected in 1021, known as the Milā Rādīn (cf. E. Dietz, *Kurassische Bodenmutter*, Berlin 1918).

The second branch had their capital in Sāfī, ruling over Gilān, Rayy and Kīmis as well as Tabaristān, and were vassals of the Saljūqs, then of the Kh̲arāsmīyār. Towards the end of their rule the Ismā'īlīs spread in Tabaristān and obtained power at the expense of the Bāwand dynasty. Finally the Kh̲arāsmīyār assumed the rule when Shams al-Mulūk Rustam Bāwand was assassinated.

After the Mongol invasion there was anarchy in Tabaristān, and finally a member of the Bāwand family, Hunād al-Dawla Arslān b. Kīnākh̲rīyār was chosen ruler by the people. He moved his capital from Sāfī to Amul for safety's sake. Under his rule (12 or 15 years) the Mongols invaded Tabaristān. His son, Shams al-Mulūk, was put to death in 663/1264 by Abakā Khān after ruling 18 years. This dynasty ruled as vassals of the Mongols but they suffered nonetheless from Mongol invasions and depredations.

In 750/1349 Fakhr al-Dawla Hasan, last of the Bāwand family, was assassinated by members of the prominent family of Kīyā.

**BĀWĀZIDĪ**, (see *asīwāzī*).

**BĀWĀZIDĪ**, of Bawāzid al-Malik, in 'Abbasid times a town in the province of Mosul on the right bank of the Lesser Zab, not far from its mouth.

The name is the Syriac Bēth Wāzīk, "the house of the toll-collector". As the Sāsānid name, there appears occasionally Khunayyā-Sābur "Shāpur's son", after the usual style of the poetical names of towns common in the Sāsānid period. In the older geographers and historians the place is only briefly mentioned along with Takrīt, Tūrān and Sinn. Some one with an accurate knowledge of the town has, however interpolated a detailed description in the text of Ibn Hawkal (ed. De Goeje, 169, note 9). The place was notorious in the middle ages as the abode of the Kijānīyās—the inhabitants say they are descended from the troops of Sālī b. Abī Thālib—and as a nest of robbers. The town lived by receiving goods stolen by the Banū Shāyban Bedouins from caravans. Yāqūt however also mentions some scholars who were born in Bawāzidī. A portion of its inhabitants must have been Christian; the miracle-working bones of a Syrian martyr Bābōye were there. There was occasionally a Jacobite bishop of Bēth Kounān (i.e. the village of Bārmān) and Bēth Wāzīk, or a Nestorian of Shennā (i.e. Sinn) and Bēth Wāzīk.

The ruins of the town have not yet been discovered. **Bibliography:** Ibn Khuradādhbih, 94; Ibn Hawkal (ed. de Goeje), 169, note 9; Bakrī, 183; Yāqūt, s.v.; G. **BAY** (Bev), name applied to the ruler of Tunisia until 26 July 1957, when the Bey Lamine (al-Amīn), 10th ruler of the Husaynid dynasty, was deposed and a Republic proclaimed in Tunisia.

To discover the origin of this title, we must go back to the end of the 16th century. It was at that time that the Bey 'Uthmān created the Office of Bey (in Turkish: *beg*), without consulting the Porte, whose vassal he was. He entrusted the holder of the office with command of the tribes, the maintenance of public order and the collection of taxes. Equipped with these extensive powers, the Bey soon became the most important man in the country. This was the title which the Agha of the soldiery, Husayn b. 'Alī, founder of the Husaynid dynasty, subsequently assumed upon receiving the investiture at Tunis on 10 July 1793.

It was only later that the order of succession to the throne was regulated by a Charter included in the

Tunisian Constitution of 26 April 1861, article 1 of which decreed: "Succession to the throne is hereditary among the princes of the Husaynid family, by order of age, according to the rules in use in the Kingdom". This was in fact the codification of a traditional rule which, with two exceptions, was adhered to in regard to accession to the throne of Tunisia from the founding of the dynasty.

The enthronement of the sovereign was accompanied by a dual ceremony, the first private, in which the great men of the Kingdom and intimates participated, the second public, open to the broad mass of subjects. This recalled the old dual ceremony of doing homage (*al-bay'a al-ḥāṣiya* and *al-bay'a al-sayyā*). As a result of the establishment of the Protectorate, the representative of France in Tunisia became associated with the ceremony of the enthronement of the Bey, bestowing on the new Bey the "solemn investiture" in the name of the protecting Power.

Articles 3 and 4 of the Decree of 26 April 1861 stated: "The Bey is the head of the State. At the same time, he is the head of the ruling family. He has full authority over the princes and gentlemen of his family, none of whom may dispose either of their persons or of their property without his prior consent. He exercises a paternal authority over them and is obliged to give them the benefits of such. Members of the family owe him filial obedience."

The titles borne by the Bey contained a number of expressions expressly designating his sovereign function. In official documents his appellation was: *Sayyidunā wa-mawlānā . . . Bāgha Bay, ṣāhib al-mamlaka al-tūnisīya* (= Our Lord and Master . . . Pasha Bay, possessor of the Kingdom of Tunis). This old style, in part dating back to the Hafṣids and partly to the middle of the 18th century, was augmented by a new element, namely *Muḥṣir* (Marshāl), bestowed by the Porte about the year 1839, which however was only borne by three Bays. Unlike the Hafṣid styles, however, no titles (*al-shāh*) of a personal character occur.

Among the special insignia of sovereignty, mention must be made, in addition to the dynastic throne, of the ceremonial costume worn by the Bey on solemn occasions. These material attributes were enhanced by the kissing of hands ennobled on Tunisian subjects, and other marks of royalty. The Bey had a civil list, a guard of honour (the Bey's Guard), a standard, bestowed decorations (*Nishān al-dam*, *'Aḥd al-amān*, *Nishān al-iftikār*) and honorary military ranks. Finally, each Thursday there took place the Ceremony of the Seal, at which the Bey applied his seal to governmental decisions in the form of a decree, thus giving them executive force.

The heir apparent bore the title of Bey of the Camp (*bay al-amāl*). This title originated in the duty incumbent on the heir apparent to proceed twice a year at the head of a military expedition to the south and north of the country both to assert the authority of the central government and to overawe tribes who might refuse to pay their taxes. The Bey of the Camp was head of the army by virtue of this institution, but it disappeared with the advent of the Protectorate. (CH. SAMARAN)

**BAY'** (a). Two roots are used in Arabic to designate the contract of sale: *bay'* and *sh-r-y*; in the first verbal form both usually mean "to sell", but also "to buy", in the eighth form exclusively "to buy"; the function of expressing both sides of a mutual relationship is shared by these two roots

with a number of other old legal terms. *Bay'* originally means the clasp of hands on concluding an agreement, *sh-r-y* perhaps the busy activity of the market. In the technical usage of Islamic law, the normal term for selling is *bay'*, for the contract of sale, the infinitive *bay'*, and for buying, *sh-r-y*, or *ishrā'*. The frequent use of *ghard* for a profitable and of *ighard* for an unprofitable transaction (in the metaphorical sense) in the Kur'ān is parallel to that of *hasaba* "to be credited" and *istahaba* "to be debited" (cf. Schacht, in *Studia Islamica*, i, 301).

Commercial law in pre-Islamic Mecca had undoubtedly reached a certain level of development; the trade on which alone the existence of the town depended, occupied such a predominant place there that the Kur'ān not only referred to it often but used a number of technical terms of commerce to express religious ideas. On the other hand, the importance of the Meccan trade in absolute terms ought not to be overestimated; cf. G.-H. Bosquet, in *Hesp.*, 1954, 233 f., 238 ff.). To this body of ancient Arab commercial law can be traced the *ribā* contracts which the Kur'ān was to prohibit, certain dealings involving credit and speculation, and possibly the *bay'at al-mudārā'*, a special right of option, which seems to go back to a local Meccan custom (cf. Schacht, *Origins*, 159 ff.); to all appearance the legal construction of the contract as being constituted by offer (*ījāb*) and acceptance (*qabūl*), as well as part of the terminology of Islamic law and, perhaps, some of its legal maxims, belong to this pre-Islamic stratum; the term *ījāb* itself seems to reflect another, unilateral, construction of the contract (cf. Schacht, in *OLZ*, 1927, 664 ff.). The Kur'ān directly envisages commercial law in the general exhortations to give full weight and measure and to carry out agreements, in the specific demand that forward deals should be put in writing (Sūra ii, 282 f.; in the system of Islamic law this injunction has been deprived of its binding character), and above all in the two prohibitions of interest (*ribā*) and of games of chance (*mayyit*), which include aleatory transactions (Sūra ii, 219, 275 f.; v, 90 f.); in contrast with the attitude of the contemporaries, *bay'*, i.e. legitimate trade, is sharply opposed to *ribā*. The implications of these prohibitions have been worked out to their last details in Islamic law. Tradition contains a certain number of teachings regarding commerce in general and the duties of the good and the punishment of the wicked merchant (see *ṬIḤĀRA*); it also elaborates the teachings of the Kur'ān. As legal principles which now appear for the first time may be mentioned: the recognition of the right of withdrawal (*shūḥūḥ*), unconditional during the negotiation, and under certain conditions either agreed or fixed by law after the agreement has been made; the legal maxim *al-ḥarādī bi 'l-damān* ("profit goes where the responsibility lies"); the rule that the produce in existence at the moment of sale belongs to the vendor, unless the contrary is stipulated; the prohibition of a sale the object of which cannot be exactly defined (in the case of a sale of ripe fruits on a tree etc., the main group of traditions is satisfied with an estimate); the prohibition of a re-sale of foodstuffs or of merchandise in general before possession has been taken (a consequence of the prohibition of *ribā*), or in general of the sale of things which are not already the property of the vendor; the exclusion of certain things from commerce, ritually impure or forbidden as well as things which, like surplus water, are common property; finally,

of the *bay'a* (*bad'id al-bay'a*) whereby the Caliph or Sultan has recourse, during his reign, to a new *bay'a* in favour of himself or his heir apparent; and this may be repeated twice or more. The ruler resorts to this to establish the loyalty of his subjects.

III. Effects of the *bay'a*. A question peculiar to the *bay'a*—election is that of knowing whether it has the effect of investing the ruler with authority or whether it is simply confirmatory. It is in favour of the latter notion that the doctrine has generally become established, the ruler being held to receive his investiture from God.

Those who perform the *bay'a* and, along with them, the rest of the community become firmly and definitely bound. This binding effect is reinforced by the religious character which the *bay'a* acquired from early 'Abbasid times. As a result of the development of the theocratic nature of power the obligations undertaken towards the ruler are considered as being, in reality, obligations undertaken towards Allah. Furthermore this sole earthly sanction for the violation of the *bay'a* is one of extreme severity; in principle, it is death. The binding effect of the *bay'a* is personal and life-long; the idea of a *bay'a* made for a limited period is, indeed, unknown.

This effect, however, is limited by the law. For the *bay'a* is made on condition that its recipient remains faithful to the divine prescriptions, which means that if the ruler does not abide by these prescriptions those who have performed the *bay'a* in his favour are thereby released from their obligations.

**BAYÄN**, an Arabic word meaning lucidity, distinctness; the means by which clearness is achieved, explanation; hence, clarity of speech or expression, and the faculty by which clarity is attained. In technical language *bayän* develops from a (near-) synonym of *balāgha*, eloquence, to the designation of a particular aspect of it which, within the *ʿilm al-balāgha* is dealt with by the *ʿilm al-bayän*. Common usage, however, continues to employ *bayän* in a wider variety of meanings (cf. also colourless phrases like *bān bayān* or *dar bayān*, where nothing more than *fi* or *dar* is intended). Occasionally, *ṭibḥān* takes the place of *bayän* without suggesting a different shade of meaning; e.g., *Ḥāṭṭāh* (d. 996 or 998), *K. Bayān fīdā al-Kurʿān*, MS. Leiden 1654 (Cod. Waver 615), 5<sup>a</sup>, 6<sup>a</sup>; the rank of the various kinds of speech differs with regard to their *ṭibḥān*; *ibid.*, 8<sup>a</sup>; people believe of certain near-synonyms that they are equal in conveying the *bayän* of what the presentation intends to convey.

What seem to be the earliest types of statements on the nature of *bayän* are descriptive aphorisms rather than definitions. "Reason is the guide of the soul, knowledge, the guide of reason, and *bayän*, the interpreter of knowledge." (Sahl b. Ḥārūn, the famous *Shuʿab* d. 215/330-37, *apud* Ibn ʿAbd Rabbih, *al-ʿIḥd al-farīd*, Cairo 1353/1935, 1, 221; also Abū Ḥilāl al-ʿAskari, *Diwān al-Maʿnī*, Cairo 1352, 1, 141; similar al-Ḥusayn al-Kayrawānī, *Zahr al-ʿAdab* (on margin), *al-ʿIḥd al-farīd*, Cairo 1321, 1, 134). Ibn al-Muʿtazz (d. 908), *Adab*, ed.

I. J. Kratchkovsky, *MO*, 1924, 111, begins a longish passage of hymnic praise of *bayän* by describing it as "the interpreter of the heart (quoted *Zahr al-ʿAdab*, 1, 114), the polisher (*sayhal*) of the mind, the dispeller of doubt". Another saying of this kind is preserved in *al-ʿIḥd al-farīd*, 1, 221: "The soul is the pillar (*ʿimād*) of the body, knowledge, the pillar of the soul, and *bayän*, the pillar of knowledge" (repeated, e.g., by Ibn Rashīq, *ʿUmda*, Cairo 1353/1934, 1, 212).

On occasion, *bayän* is primarily connected with *ḥisāb*, purity and euphony of language; thus, e.g., by al-Jāzī (d. 869), *K. al-Bayān wa'l-Taḥyīn*, ed. H. al-Sandbil, 2nd ed., Cairo 1366/1947, 1, 325, where *ḥisān al-balāgha* means 'good enunciation, "orthodoxy"'; Abū Ḥilāl al-ʿAskari, *K. al-Sināʿatayn*, Constantinople 1320, 77, where *ḥisāb* is referred to as the perfect instrument, *ala*, of *bayān*; Ibn al-Aḥfir, *al-Maḥall al-Sāʿir*, Cairo 1312, 65: "*ḥisāb* is making evident, expounding clearly, *bayān*, not obscurity and concealment". In general, however, the concept is linked with *balāgha*. Nowayrī, *Nihāyat al-Arab*, Cairo 1322 ff., VII, 10, quotes an expanded version of Sahl b. Ḥārūn's dictum: "al-bayän is the interpreter of the mind and the training of the heart; and *balāgha* is what the common people understand and what gives satisfaction to the elite..."; Ibn Rashīq, *op. cit.*, 1, 215-16, reports two definitions of *balāgha*, one identifying it as "the power of *bayän*, clear exposition, together with good organisation"; and the other as "the opposite of 'yay' and 'yay' is the inability to achieve *bayän* (i.e., to express oneself clearly)". Tawḥīdī (d. 1023) warning against *ṭibḥān*, constraint, *Risāla fī 'l-Sulm* in *Kutub al-Ḥikma*, Constantinople 1301/1884, 206, uses *bayän* practically as a synonym of *balāgha*. *Diḥrī*, *op. cit.*, 1, 95, puts together on the same level *balāgha*<sup>1</sup>, *ḥuṭaba*<sup>2</sup> and *ahyān*<sup>3</sup> (plur. mult. of *bayān*) those elegant and clever in their speech. The judgment on the 300th century Maliki jurist and poet Ahmad b. al-Muʿadhdhal that he was equally outstanding in his command of the Arab vocabulary, *ḥuṭaba*, *bayān*, literary education, *adab*, and wit, *ḥalwa* (*Zahr*, II, 276), shows how close *bayän* came to denoting *balāgha*. Cf. also the praise bestowed by al-Ḥasan b. Wahb (d. ca. 860) on Abū Tamīm because of the *bayān* of his composition, *miḥmā*, *ibid.*, II, 134). As a specimen of later non-technical *bayān* cf. Ibn Kayyās, *al-Djāwāziyya* (d. 1350), *K. al-Fawā'id*, Cairo 1327/1909, 5, where *ḥisāb*, *balāgha*, *ḥisāb* (literary excellence), *bayān*, *ḥawāṣid* (subtleties of language) and beautiful composition are mentioned on the same plane as distinctions which God has imparted to the Kurʿān.

A definition *sensu stricto* of *bayän* is recorded in *ʿIḥd*, I, 221, and with immaterial variants by Abū Ṭāhir al-Baḥḡalī (d. 1123), *Kāmil al-Balāgha* in *Rasāʾid al-Bulaghā*<sup>4</sup>, ed. Muh. Kurd ʿAlī, 3rd ed., Cairo 1946, 432. "Whatever lifts the veil from a concealed idea, *maʿnā*, so it comes to be understood and accepted by the mind, 'aḥḥ, is *bayān*". The same line of analysis is followed in the more elaborate definition ascribed to *Diḥrī* al-Barmakī (d. 802), *Bayān*, 1, 118 (also: Ibn Kutayba, *ʿUyūn al-Aḥbār*, Cairo 1343-48/1924-30, II, 171; *Zahr*, 1, 126): *Bayān* means "that the word (*ism*; later one would have used *kalām*, discourse) covers the idea completely and renders your intention (fully), lifting it from ambiguity, *shubḥa*, so you do not need the assistance of reflection (to understand what is meant); it (*bayān*) must be free from constraint, *ṭibḥān*, remote from artificiality, *panʿa*, without obscurity,

*taʿāḥid*, and comprehensible without interpretation, *laʿwīl*". (Translated from *ʿUyūn al-Aḥbār*; *Bayān*'s text is somewhat longer; *ʿUmda*, I, 225, offers a definition of kindred intent but different phrasing).

What to my knowledge may be the first attempt to integrate *bayän* in a system of rhetorical analysis is preserved as the statement made by Ibn al-Kirīrīya (d. 847/90) on letter, word and discourse or speech, where speech is divided in ten *ahād*, seven of them 'preliminaries', *faṣṣiḥ*, and three, 'comprehensive (qualities)', *ḥawāṣid*. In this listing *bayän al-ḥalām* figures as the fourth of the *faṣṣiḥ* among requirements such as "the courage to speak up", "refraining from clearing one's throat and hemming", being able to begin and end at will (quoted *Kāmil al-Balāgha*, 433).

*Diḥrī*, *K. al-Hayawān*, Cairo 1353/1907, 1, 17, notes that both men and animals possess the faculty of *dalāla*, the indication of a meaning; but only man possesses that of *istidlāl*, the power of inferential thinking, along with it. The term *bayän*, however, in *Diḥrī*'s view, covers both kinds of *dalāla*. Human *dalāla* (or *bayän*) has five forms: word, writing, counting on fingers or knuckles, *ʿuḥād* (not *ʿahd* as Sandbil vocalises in *Bayān*, 1, 756<sup>5</sup>), indication, *ṭibḥān*, and *nishā*, posture or attitude (not *nusha* as *ibid.*, line 11); on *nishā* cf. Nallino, in *RSO*, 1919-21, 637-46, who lists, 640-41, later grammarians using the term; *Diḥrī* repeats this doctrine in the five forms of expression in *Hayawān*, 1, 23, and *Bayān*, 1, 76. Ibn al-Muḍabbir (d. 892), *Risālat al-ʿAdab*<sup>6</sup>, ed. Z. Mudrak, Cairo 1350/1931, 40, restates *Diḥrī*'s fivefold division of *bayän* and adds the correct observation that the concept of *nishā* goes back to Aristotle (whose seventh category is *ṭibḥōtati*; *Hut* (d. 1061), *Zahr*, 1, 123-25, discusses *Diḥrī*'s view without reference to a possible source). Abū Ṭāhir, *Kāmil*, 424, confines himself to repeating it concisely. Rummānī (d. 901), *K. al-Nuḥāt fī l-ʿIḥd al-Kurʿān*, ed. ʿAbd al-ʿAlīm, Delhi 1934, 26, with his division of *bayän* in *kalām*, *ḥāl*, the situation, *ṭibḥān* and *ʿadāma*, sign, seem to go back to *Diḥrī*, too; the origin of the modifications is as yet unexplained. No later references to *Diḥrī*'s theory are known to me.

Iṣḥāq b. Ibrāhīm b. Wahb, who after 335/946-7 wrote the *K. al-Burḥān fī Wadīḥ al-Bayān* (I). The exposition of the various ways of explaining (things)—until recently wrongly attributed to Kudāma b. *Diḥrī* and published under the title of *Nahd an-Naḥr* by Ṭāhī Ḥusayn and ʿA. H. al-ʿAbnādī (Cairo 1933)—corrects his work to correct the insufficiencies of *Diḥrī*'s presentation of the subject. Iṣḥāq b. Ibrāhīm distinguishes four ways of expression: a. "things may become intelligible by their essences, *ḥawāṣid* (i.e., by the very fact of their being as they are), even though the words which (commonly) express them are not used; b. they may become intelligible by coming into the heart when thought and intellect are applied (i.e., presumably *Diḥrī*'s *istidlāl*); c. they may become understandable through articulating sounds with the tongue; and, finally, d. by writing, which reaches those who are far away or do not (yet) exist." (Trans. S. A. Bonebakker, *The Kitāb Naḥd al-Siʿ of Qudāma b. Ḥalaf al-Kūṭb al-Balāḡī*, Leiden 1936, 16; words between brackets are the writer's). It can easily be seen that Iṣḥāq's concept of *bayän* is very different, and both wider and narrower, than that which *Diḥrī* endeavored to formulate. Regarding the manner in which Iṣḥāq applies his concept to his material it must suffice here to note that in his discussion

of c. he lists, 44-64, sixteen *ahām* al-*ʿQāra*, categories of verbal expression, that include, without further classification, *figura etymologica*, comparison, suggestion (*rama*), metaphor, parable, enigma and inversion.

A completely different strain of thought is represented in Rummānī's division of *balāgha* in ten parts, *ahām*: concision, *ḥifz*, comparison, metaphor, and so forth, of which *ḥam* al-*ḥam*, successful exposition, is the tenth. In line with this concept, Ibn Rashīq (d. 1064 or 1070), *ʿUmda*, I, 225-28, has a chapter on *bayän* (with two pertinent quotations from Rummānī) paralleling, as it were, on the same classificatory level his chapters on *balāgha*, *ḥifz*, *naḥm* (composition), *maḍīʿ* (transfer of meaning), *istʿāra* (metaphor), *al-muḥāḍara*<sup>7</sup> wa *ʿl-badʿ* (invention and the 'original'), etc. It deserves notice that nowhere in the tenth and eleventh centuries is there an anticipation of that treatment of the *bayān*, especially in its relation to the *badʿ*, that was later to become the dominant doctrine. Neither *ʿUmda* (d. 987), who in his *K. al-Mawāḍiʿa bayna Abi Tamīm wa ʿl-Shaḥrī*, Constantinople 1287, 6, divides *badʿ* in *istʿāra*, *taḍjīs* (paronomasia) and *fiḥāḥ* (antithesis), nor Abū Ḥilāl al-ʿAskari (d. 1003), who in *Sināʿatayn*, (e.g.) 205 and 290, treats *istʿāra* and *ḥindya* (metonymy) on the same level as all other tropes, nor again Bakrī (d. 1013), *Ḥifāḍī* (d. 1073), and Abū Ṭāhir, who still subsumes *istʿāra* and *ḥindya* under *ḥifz*, *Kāmil*, 435-459 (cf. in particular the list of forty-two rhetorical figures on 416), made any contribution to the development of the basic organisation of rhetoric, the *ʿilm al-balāgha*, or as ʿAbd al-Kāfir al-Djurdānī (d. 1078), *Dalāʾil al-ʿIḥd*, Cairo 1317/1913, 4, still prefers to call it, the *ʿilm al-bayān*, to him the greatest of all sciences, Djurdānī, to whom we owe *inter alia* the aesthetically most sensitive analysis of the metaphor, notes, *Dalāʾil*, 349-50, that the development of the *ʿilm al-bayān* wa *ʿl-bayān* differs in two points from that of the other sciences: the early authorities of this *ʿilm* expressed themselves in hints and metaphors rather than plainly and directly; and besides, in no other area were the opinions of the ancients transmitted with as little criticism. But Djurdānī's interest is not in the theory of *bayän* and his innovations are made on another plane of literary analysis. This fact is reflected in Fakhr al-Dīn al-Rāzī's (d. 1209) *Nihāyat al-ʿIḥd fī Dirāyat al-ʿIḥd*, Cairo 1327, which according to the author's statement, 3-5, is an attempt to organize Djurdānī's *Dalāʾil* and *ʿIḥd al-Balāgha* (ed. H. Ritter, Istanbul 1954; German translation, Wiesbaden 1959), and which fails to offer any explicit discussion of *bayän*.

When Ibn al-Aḥfir (d. 1234) writes *al-Maḥall al-Sāʿir fī Adab al-Kūṭb wa ʿl-Shaḥr* thinking on *bayän* has taken a new turn. To what extent it was Ibn al-Aḥfir himself who was responsible for this change we have no means of deciding. Ibn al-Aḥfir places, p. 2, the *ʿilm al-bayān* in the same relation to the composition of both poetry and prose as the science of the *uṣūl al-fikḥ* to the individual judicial statutes or decisions, *ahkām*. (On p. 114, he refers to the representatives of this field of learning as *ʿulamaʿ al-bayān*). He divides his book in a preface, *mukaddima*, dealing with the foundations, *ʿilm ʿilm al-bayān*, and two sections treating the handling of wording, *al-ḥināʾ*, *ʿilm al-bayān*, and of content, *al-ḥināʾ*, *ʿilm al-bayān*, respectively. The subject of the *ʿilm al-bayān* is *ḥisāb* and *balāgha* whose constituent elements he investigates in regard to both wording and meaning. He shares with the grammarians,

naḥṣ, his concern for the manner in which words indicate meanings; but he goes beyond the grammarian's interest by a concern for the aesthetic qualities of the various ways of verbal rendering of ideas (p. 3). In the terms of his critic, Ibn al-Haddid (d. 1257), *al-Falaḥ al-Dalīr* 'alī *ṭi-Maḥall al-Sāḥir*, Rombay 1308, 41-42 (al-Maḥall, 287-297). Ibn al-Haddid's *ṣim al-bayān* is basically a 'rational' science, *ṣim 'aqlī*, that argues from general principles by means of 'aql and *ḥawā*, taste; it does not deduce its judgments empirically from Arabic literature, *bi-l-ḥawā' min aḥwāl al-'Arab* (for *ḥawā* cf. also Ibn Khaldūn, *Muḥaddima*, ed. Quatremère, Paris 1858, II, 312-317; 349-50 trans. F. Rosenthal, New York 1958, II, 358-62; 396-98). The bearers of the *ṣim al-bayān* is to Ibn al-Aḥfir the doctrine of *ḥabība* and *maḥjās*, the proper and the transferred use of words (p. 23). It is in the nature of his system that he does not differentiate between comparison, metaphor and metonymy on the one hand and the other tropes on the other—a differentiation which was to be one of the principal features of the system that was to become dominant in Arabic rhetoric when Ibn al-Aḥfir wrote.

This doctrine originated with Ibn al-Aḥfir's contemporary, the Khorezmi al-Sakkāki (d. 1229) who, according to his own statement, *K. Miḥlak al-'Uṭm*, Cairo n.d. (ca. 1896), 2-3, set out to treat the *anwā' al-adab*, the kinds or elements of literary education, with the exception of *ḥuḡa*, lexicology. These 'kinds', *anwā'*, include: a) *as-sawā'ir*, or morphology, *ṣim al-sarf*, and b) grammar proper or syntax, *ṣim al-naḥw*, which is defined to comprise (1) *ṣim al-ma'ānī* (the different kinds of sentence and their use to which 'definition' and 'deduction' are attached); and (2) *ṣim al-bayān*, the art of (eloquent) presentation, which requires 'prosody' and 'rhyming' as subsidiary branches of study. The *ṣim al-bayān* deals fundamentally with three subjects, *miḥl*: (1) comparison, *baḥṭā*; (2) *maḥjās* (and *ḥabība*); (3) *ḥināya*, metonymy. The remaining tropes are relegated to the end of the book, 224-229, under the heading *al-badī'*.

It is presumably due to Sakkāki's commentator, al-Karwī (d. 1338), and to the *muḥasir* of the latter, al-Taḥṭānī (d. 1396), that Sakkāki's structuring of rhetoric received the more consistent form which has continued to make authority to this day. Karwī no longer wishes to deal with *adab*. To him, *baḥṭā* is the term for the science of rhetoric as a whole which he divides in the three branches of *ṣim al-ma'ānī*, *ṣim al-bayān* and *ṣim al-badī'* (as the doctrine of the embellishment of speech) [cf. BALAGHĀ]. *Ṣim al-bayān* is no more and no less than the science that deals with the various possibilities of expressing the same idea in various degrees of directness or clarity. Since the word used may indicate either the concept in its totality or merely a part of it, or again point to it through evoking an element external to it in which the hearer perceives a necessary connection with the concept actually intended, a certain number of modes of expression are open to the speaker. In their descriptive function and power, comparison, metaphor and metonymy correspond to those three basic possibilities of word-concept relations. For this reason they are treated apart from the other tropes that are dealt with under the general category of *badī'*, embellishments. This presentation of Karwī's view is based in part on his *Talḥīṭ al-Muḥl*, Cairo 1314/1923, II, 256-260; also in A. F. Mehren, *Die Rhetorik der Araber*, Copenhagen and Vienna 1853, 6-7 of Arabic text,

Trans. 53-54 of German text; and in part abstracted from the tenor of the *Talḥīṭ* as a whole; a rather full summary of Karwī's doctrine of *bayān*, *ibid.*, 20-42).

While al-Nuwayrī (d. 1332), *Nihāya*, VII, 35, already follows the tripartite structure of *ṣim al-ma'ānī*, *ṣim al-bayān* and *ṣim al-badī'*, however, distributing the tropes accordingly, Ibn Kayyīm al-Jawziyya, *Fawa'id*, a work whose purpose is the analysis of the uniqueness and inimitability, *ʿiḍāḥ*, of the Qur'ān, still uses *ṣim al-bayān* for rhetoric as a whole and divides his presentation of it in sections (I) on *ḥabība*, *baḥṭā*, *ḥabība* and *maḥjās*, metaphor, comparison, *maḥjās* (expression by way of a simile, analogy), causation, and reversion of word order; and (II) on *ṣim al-bayān* proper which he subdivides in (a) eighty-four *ṣināʿigara* (including metonymy as no. 17) and (b) twenty-four further tropes; he notes, 218, that this second *ḥawā* of (II) is also called *al-badī'*. Like Ibn Kayyīm, Ibn Khaldūn (d. 1406) sees the value of the *ṣim al-bayān* in its leading to the understanding of the *ʿiḍāḥ*, and like him he uses *ṣim al-bayān*, the name of the subsection first to be explored by Arab critics, as the designation of the 'science of expression' as a whole. But the strictness of his systematisation sets him apart from Ibn Kayyīm. *Bayān*, the manifestation of ideas, is achieved either by verbal expression, *ṣimā*, or by writing, *ḥabība* (*Muḥaddima*, II, 242-43; Trans. de Sano, Paris 1860-61, II, 281-82; trans. Rosenthal, II, 281-82). The *ṣim al-bayān* consists of the three sciences of *baḥṭā*, in Ibn Khaldūn's description a combination of grammar and *ṣim al-ma'ānī*, *bayān* and *badī'*. Ibn Khaldūn adds that it is the Easterners who give special attention to *bayān* whereas the Westerners show particular interest in the *badī'* (*Muḥaddima*, II, 289-91; Trans. Sano, II, 324 ff.; Rosenthal, II, 312-19). Ibn Khaldūn recognises the importance of Sakkāki and Karwī, with whose works he is clearly familiar and whose authority had already grown beyond challenge.

**BAYÂN B. SAM'ÂN AL-TAMIMI**, Ṣhīfī leader in Kūfa. (Often, improperly, *Bayān* in the latter, al-Taḥṭānī (d. 1396), that Sakkāki's structuring of rhetoric received the more consistent form which has continued to make authority to this day. Karwī no longer wishes to deal with *adab*. To him, *baḥṭā* is the term for the science of rhetoric as a whole which he divides in the three branches of *ṣim al-ma'ānī*, *ṣim al-bayān* and *ṣim al-badī'* (as the doctrine of the embellishment of speech) [cf. BALAGHĀ]. *Ṣim al-bayān* is no more and no less than the science that deals with the various possibilities of expressing the same idea in various degrees of directness or clarity. Since the word used may indicate either the concept in its totality or merely a part of it, or again point to it through evoking an element external to it in which the hearer perceives a necessary connection with the concept actually intended, a certain number of modes of expression are open to the speaker. In their descriptive function and power, comparison, metaphor and metonymy correspond to those three basic possibilities of word-concept relations. For this reason they are treated apart from the other tropes that are dealt with under the general category of *badī'*, embellishments. This presentation of Karwī's view is based in part on his *Talḥīṭ al-Muḥl*, Cairo 1314/1923, II, 256-260; also in A. F. Mehren, *Die Rhetorik der Araber*, Copenhagen and Vienna 1853, 6-7 of Arabic text,

Bayān's followers apparently formed a party, the Bayāniyya (or Banāniyya, or the Sam'āniyya, said

to have ascribed to the imāna prophecy through an indwelling particle of divine light; to have expected the return of various religious figures after death; and to have discussed the 'greatest name' of God. Some are said to have regarded Bayān as an imām, citing Qur'ān, III, 128. Like other Ṣhīfīs they supported Muhammad b. 'Abd Allāh at least after the 'Abbasid triumph.

*BAYAS* [see *PAYAS*].

**BAYAT**, an Oghuz (Turkmen) tribe. The Bayat are understood to have taken part in the conquests of the Saljuqs in Anatolia. The nickname al-Bayātū given to Sankur, representative in Bayra in 512-3/1119 of the Saljuqid amir Ak Sankur al-Buḥārī, is quite properly connected with this tribe. There were numerous places called Bayat in central and western Turkey in the 9th/15th and 10th/16th centuries of which few survive today. Most of these place-names, no doubt, belonged to the Bayat who participated in the conquest of Anatolia. There were Bayat among the Turkmen in northern Syria in the 8th/14th century. An important part of those, called Ṣhām Bayat, used to go in the summer like other Turkmen tribes to the Sivas and Berek (Yozgat) regions. From the beginning of the 9th/15th century onwards the northern Syrian Bayat began to figure in the activities of the Ak-Koyunlu. In the 10th/16th century, there were, besides those around Aleppo and Yozgat (Ṣhām Bayat), small Bayat clans in the provinces of Diyarbakir, Kirdis and Teylūn. In the same century they are also seen in Iran, particularly around Kazzā and Karahīrd, to the south of Hamadān. They numbered about 10,000 tents, and were perhaps more recently called Ak Bayat, probably to distinguish them from the rest of the Bayats in the country. The Ak Bayat reared some very fine horses known as *ḥabīb* and *ḥabīb*. *Ḥabīb* was also used to send those horses as gifts to the ruler of India. The Bayātī mode (*maḥjās*) found in classical Turkish and Persian music has its origin in the songs of this tribe. It seems likely that these Bayats went to Iran from Syria with the Ak-Koyunlu conquest. Some of the Bayat clans in Iran live in Kūrasān and these are called, to distinguish them from the rest, Kara Bayats. One of the clans of the famous Kādīr tribe was of the Ṣhām Bayat. In fact, as shown by names of its clans, the Kādīr tribe has its origin in Turkey. Some Bayat are also found in 'Irāq, particularly around Kirkūk. The castle called Bayat south of Baghdad quite probably takes its name from them. This tribe produced a number of famous men: Kerkut Atā (Kerkut), and Fuzūlī (Fuzūlī) were of this tribe. Hasan b. Mahmūd Bayātī, author of *Ḍiḥāḥ* *Ḍiḥāḥ* *Ḍiḥāḥ*, a work dedicated to the Ottoman Prince Ḍiḥāḥ, as is indicated by his *nisba*, of the Bayat tribe.

**BĀYAZID** (DOĞU-BAYAZIT), a small town belonging to the Turkish Republic and situated a little to the south of Mount Ararat (Ağrı-Tağ), close to the frontier with Iran. It has been suggested that the town was named after the Ottoman Sültān Bayazid I (791-805/1391-1403) who, according to this view, fortified the site as a post of observation against Timur Beg. A more recent interpretation is that the name derives in fact from a prince of the Djallayrid dynasty, i.e., from Bāyazīd, the brother of Sültān Ahmed (784-811/1382-1401). The Ottomans captured the town in 920/1514, but did not obtain definitive control over the region until after the Persian campaigns of Sültān Sulaymān in 940-942/1533-1536, 955-956/1548-1549 and 960-962/1553-1555. Bāyazīd and its adjacent territories formed, under Ottoman rule, a *sandḥāḥ* which was dependent at times on the *eyālet* of Van, but more often on the *eyālet* of Erzurum. The Russians, in the course of their wars with the Ottoman Turks, occupied the town in 1828, 1854, 1877 and again in 1914. Bāyazīd, now included in the Turkish province of Ağrı, (Ağrı) had in 1935 a population estimated at 1860 inhabitants, the comparable figure for the entire *badā'* amounting to just over 20,000 people, most of whom are of Turkish or Kurdish descent. Sheep and cattle rearing, the production of wool, hides and leather and the weaving of carpets constitute the main economic activities of the area.

(V. J. PARRY)

**BĀYAZID**, (BĀYEZID) I, called Yıldırım, 'the Thunderbolt', Ottoman sultan (regn. 19 *Ḍu*-māddā II 791-13 *Ṣhā*'bān 805/15 June 1398-8 March 1402), born in 753/1354 of Murād I and Güldāsh Khatūn. In about 782/1384 he was appointed governor of the province which was taken from the Gerniyyāns in guise of a dowry from his wife, Sültān Khatūn. Settled in Kütahya, he became responsible for the Ottoman interests in the East. He distinguished himself as an impetuous soldier (hence his surname) in the battle of Erenk-ḥādī against the Karamānids (Karamān-oghlu) in 788/1386. The assumption that he also became the first governor of Amasya (Kemāl Paḡa-zāde) stems from the fact that some territory to the west of it came under the Ottomans when they supported Süleymān of the Djāndir dynasty in Kastamonu (Kastamonu) against his father 786/790-1384-1388) and Ahmed, the Amir of Amasya, who accepted Ottoman protection against Kādī Burhān al-Dīn (*ḥāṣṣ* *wa Rasm*, 302, 308).

When, in the battle of Kosovo plain (15 June 1389), Murād I was mortally wounded, he asked his pashas to recognise Bāyazīd, his eldest and distinguished son, as sultan (*Ḍustur-nāme*, 87; Anon-

meus *Tavârih*, 27) which they did, and his only surviving brother (the others, called Savdî and İbrahim, were already dead) was immediately put to death to prevent a civil war. Lazar, the Serbian prince, was also executed on the field.

The new sultan left hurriedly (Stanojević, 417) for Bursa, his capital, because the vassal prince in Anatolia had risen up in revolt. Karaman-oghlu 'Alâ al-Dîn 'Alî, their leader, taking Beyşehir, advanced as far as Eskişehir, Germiyan-oghlu Ya'qub II recovered his patrimony and Kâdî Burhân al-Dîn captured Kırşehir (*İsmâ u Râzm*, 387). Bayezid reached an agreement with the Serbs who promised him Lazar's daughter Olivera (Despina) as his wife and an auxiliary force under Stefan Lazarević. Constantly under Hungarian pressure, Stefan remained faithful to Bayezid and accompanied him in his expeditions. But Vuk Branković in Upper Serbia (Prigita, Skoplje etc.) resisted the Ottomans who tried to take possession of the mining towns in his territory. Pasha-yigit continued the operations against him and later took Skoplje (Üsküb, 793/3391) and settled it as a Turkish base for his raids into Bosnia and Albania.

Bayezid spent the winter of 792/1389-1390 in taking Philadelphia (Alaşehir) and annexing the Turkish principalities in Western Anatolia, namely Aydı, Saruhan, Menteşe, Hamid and Germiyan. Süleyman the Elîndârîd and Manuel Palaeologus were with him during this expedition. In Dîvânîd II 792/May 1390 he was in Karahisar (Afyon), preparing to march against Karaman-oghlu. He recaptured Beyşehir and laid siege to Konya. At this time Süleyman, back in Kastamonu, formed an alliance with Kâdî Burhân al-Dîn against Bayezid to help Karaman-oghlu. Apparently this threat made Bayezid give up the siege of Konya and sign a treaty with Karaman-oghlu in which he abandoned the whole region west of the Çarşamba river. The following year (793/1391) Bayezid attacked Süleyman, but Burhân al-Dîn defied him in support of his ally. In the spring of 793/1392 Bayezid made great preparations against Süleyman. A Venetian report of 12 Dîvânîd I, 794/6 April 1392 stated that as a vassal of Bayezid, Manuel Palaeologus was about to take part in the naval expedition against Sinop (Silbereschmidt, 77). This expedition ended with the annexation of Süleyman's territory (except Sinope) and his death. Then, in spite of Burhân al-Dîn's protests and threats, Bayezid occupied Ösmangîk. But Burhân al-Dîn finally attacked Bayezid near Çorumlu (Çorum) and forced him to retreat. Burhân al-Dîn's raiders reached as far as Ankara and Sivrihisar. Besieged by Burhân al-Dîn's forces the Amir of Amasya handed over the castle to the Ottomans (794/1392). Next year Bayezid came and entered the city. Local dynasties such as Tađî al-Dîn-oghulları (in Çarşamba valley), Tađhan-oghulları (Merzifon region) and the lord of İsfah recognised Bayezid as their suzerain. Burhân al-Dîn harassed the Ottoman army on his way back (*İsmâ u Râzm*, 418-20).

Bayezid then found things more pressing in the west. After the victory at Kosovo he had increased his control on Byzantium. His support first secured the throne to John VII (27 Rabî' II 792/14 April 1390) and then to John V and his son and co-emperor Manuel (16 Shawwâl 793/17 September 1391) who had showed his faithfulness to the sultan by accompanying him in his expeditions in Anatolia (Fr. Dölger, *Johannes VII*, 27-8). When Anatolian affairs kept Bayezid busy in the east, his *Uđî-beys*

[*u.s.*] by their raids held enemies under restraint on the western borders: Pasha-yigit submitted Vuk; Evrenuz (Evrenos) [*u.s.*] conquered Kütros (Citros) and Vodenâ and advanced into Thessaly; Fîrîz Beg raided in Wallachia, and Şahîn was active in Albania. But Mircea of Batran managed to take Silistre back and attacked with success against the *akâşigî* in Karlovac (Karnobat) when Bayezid was in Anatolia. Venetian activities in Morea, Albania and in Byzantium on the one hand, and Hungarian attempts in extending influence in Wallachia and the Danubian Bulgaria on the other made Bayezid decide to concentrate his efforts in the Balkans. He first occupied Trnovo (7 Ramadân 793/17 July 1393) which had been under Ottoman control since 790/1388 and Czar Şişman had to move to Nicopolis as an Ottoman vassal. In the winter of 790/1393-94 Bayezid summoned all of the Balkan princes and the Palaeologi to Serres and there attempted to strengthen their ties of vassalage.

In particular he wanted Theodore Palaeologus to hand over his main cities in the Morea against Venice. In despair, the Palaeologi, Theodore and Manuel turned against Bayezid and sought help in the West, especially in Venice. It seems that Bayezid then reconquered Thessalonica (Neshri, 88, gives the date as 19 Dîvânîd II 796/21 April 1394; the city was taken once in 789/1387 and lost probably in 791/1389). Bayezid also conquered Thessaly, the county of Salona, Neopatria, Evrenos, and Morea, but Theodore had given Azov to the Venetians (27 May 1394) (J. Lœwertz in *REB*, I, 171-85). Another Ottoman division put southern Albania under direct Ottoman rule and Şahîn exerted pressure on the Venetian possessions on the Albanian coasts (see ARNAVUTLUK). Bayezid also started the blockade of Constantinople (796/Spring 1394) which lasted for seven years. In 797/1395 he invaded Hungary, and on his way attacked the castles of Stanbaken, Tîd, Becskerek, Temeghyar, Caraghova, Caransebes, Mehedea (see *Actes du X. Congrès Int. d'Et. Byz.*, 220). Defeating Mircea on the Argeş river in Wallachia (26 Radjab 797/12 May 1395) he then put Vlad on the Wallachian throne. Bayezid then passed over the Danube to Nicopolis and seized and executed Şişman (13 Şahbân 797/3 June 1395).

These bold conquests caused Hungary and Venice to conclude at last an alliance (796/1394) and to form a crusade in Europe against the Ottomans. When in 799/1396 Bayezid was making a major effort to take Constantinople the Crusaders under Sigismund came to lay siege to Nicopolis. Hurrying there, Bayezid inflicted a crushing defeat upon them (21 Elhâ 1-Hidjâz 799/25 September 1396) and took Vidin from Stratsimir, the last independent Bulgarian prince. Now the fate of the Balkans and Constantinople were in Bayezid's hands. In the imperial capital Manuel had to agree to Bayezid's settling there a Turkish colony with a *şâhî*. Evrenuz took Arges and Athens (799/1397). Then the sultan went back to Anatolia because of the hostile movements of Karaman-oghlu during the crisis of Nicopolis. He defeated and executed Karaman-oghlu at Aktaş and incorporated his territory with Konya (800/Autumn 1397). The following year he incorporated also the region of Dîvanik and the territory of Burhân al-Dîn [*u.s.*] and disregarding his alliance with Egypt against Timur (Tamerlane) [*u.s.*] conquered Albistan, Malatya, Behlül, Kahla and Diyarbakır.

Marshal Boucaut's attack on the Turkish coasts and the small force he brought to Constantinople were not enough to relieve the city (800/Summer 1399),

so Manuel II went to Europe to ask more help (to Rabî' II 802/10 December 1399). In the Autumn of 1399 Timur once more appeared in eastern Anatolia, and hopes were high in the West as they were during his first invasion of eastern Asia Minor in 796/1394. From 801/1399 on Timur claimed suzerainty over all the rulers in Anatolia as the representative of the Dîvânîdîkhids whereas Bayezid claimed to be the heir of the Saldûkîs there. Timur hesitated before attacking the sultan of the state. Timur gave refuge to the Anatolian rulers expelled by Bayezid who, in his turn, protected Kaşî Yusuf and Ahmad Dîvalî'r. This exasperated Timur. He took and sacked Sivas (802/August 1400), in which Bayezid retaliated by capturing the Amir of Erziğân, a protégé of Timur named Mutahbarten (803/1401). Finally Timur and Bayezid came to grips at Çubuk-near Ankara (17 Elhâ 1-Hidjâz 804/28 July 1402). Defeated and taken prisoner by Timur, Bayezid died in captivity at Akşehir (13 Şahbân 805/8 March 1403). Bayezid's hastily founded empire collapsed. The Anatolian princes, who all regained their respective territories (804/1403), as well as the Ottoman princes, who divided the rest of the country among themselves, recognised Timur as their suzerain. It was not until Mohammed II that the Ottomans again assumed the offensive in East.

Bayezid was responsible for the foundation of the first centralised Ottoman empire based upon the *Kud* system and the traditional administrative methods perfected under Muslim-Turkish states in the Middle East. Popular tradition credited him as an innovator in finances, administration and manners.

**BAYAZID II**, Ottoman Sultân (886-918/1481-1522), was born most probably in Shawwâl or Elhâ 1-Ka'da 851/December 1447 or January 1448 (some sources give the date of his birth, however, as 856 or 857/1453 or 1453). During the lifetime of his father, Mehmed II, he was governor of the province of Amasya and served in the war against Uzun Hasana, the leader of the Ak Koyunlu Turcomans, being present at the battle of Otluks Belli in 898/1473. On the death of Mehmed II in 886/1481 a conflict for the throne broke out between Bayezid and his younger brother Dîen, then governor of Karamân, with his residence at Konya. The support of the Janissaries and of a powerful faction amongst the great officials at the Porte ensured the accession of Bayezid to the throne. Dîen, defeated in battle near Yenî-Şehir in Rabî' II 886/June 1481, with-

drew to Syria and thence to Egypt. He now gathered together new forces with the assent of the Mamûk Sultân Kâzî Bâi, but, after a fruitless campaign directed against Konya and Ankara, despairing of success and sought refuge at Rhodes (Dîvânîd II 887/July 1481) with the Knights of St. John, who removed him to France in September of the same year. Henceforward, until the death of the unfortunate prince in February 1495, the Ottomans had to face the constant threat that a coalition of Christian states, using Dîen as their instrument, might invade the empire. As long as Dîen was alive, Bayezid could not take the risk of committing his forces irrevocably to a major enterprise, either in the East or in the West.

Herzegovina was brought fully under Ottoman control in 888/1483. The fortresses of Kila on the Danube estuary and of Ak-Kernâs at the mouth of the Danister fell to Bayezid in the course of his Moldavian campaign during the summer of 889/1484—a success of considerable importance in that it strengthened the Ottoman hold over the land route to the Crimea, where the Tatar *Khan* ruled as a vassal of the Sultân. A less fortunate issue of events awaited the Ottomans in their war of 890-896/1485-1491 against the Mamûkîs of Egypt and Syria, fought to determine which of the rival states should exert political dominance over Cilicia and the adjacent march-lands along the Taurus frontier. The Ottomans met with a number of reverses in the field, above all at the battle of Agha *Çayrî* near Adana in Ramadân 893/August 1488. The peace made in 896/1491 which marked in fact the failure of the Ottomans to win effective control in Cilicia. None the less, it should be noted that, with Dîen still alive and a captive in Christian hands, Bayezid had not been free to use his full resources in this war and had chosen therefore to wage a conflict limited in its objectives. Moreover, the situation on the Taurus frontier in 896/1491 was in no wise more favourable to the Mamûkîs, despite their victories, than it had been six years before.

The ceaseless warfare of Muslim *ghazî* against Christian marcher lord along the Danube and the frontiers of Bosnia flared out with great violence in 897-900/1492-1495. The Ottoman warriors launched massive raids across the Danube and the Sava and into the Austrian duchies of Styria, Carinthia and Carinthia, suffering defeat at the Vilâk in 897/1492, but on the other hand almost annihilating the Croat forces at Adina in 898/1493. A truce concluded for three years with the Hungarians brought these hostilities to an end in 900/1495. Conflict now arose between the Ottoman empire and Poland. The Ottomans and the Krim Tatars formed, as it were, a barrier which denied to the Poles access to the Black Sea. Poland began in 902/1497 a campaign designed to break down this barrier through the capture of Kila and Ak-Kernâs and through the reduction of Moldavia to a state of dependence on Poland. The Moldavian forces, however, with the aid of the Ottoman legs along the lower Danube, offered a successful resistance, the Poles being repulsed before the fortress of Sasava and, in the course of their subsequent retreat, beaten at Kolîn in the Bukovina (October 1497). Ottoman *ghazîs* from the Danube lands, with reinforcements of Moldavian and Tatar horsemen, now laid waste much of Podolia and Galicia in the summer of 1498, but a second raid directed against Galicia in the late autumn of the same year ended in disaster amid bitter snowstorms on the Carpathian mountains.

Poland, however, made peace with Moldavia in April 1499, this agreement being soon followed by a renewal of the former truce between the Ottomans and the Poles.

After the reverses experienced in the war against the Mamluks, Bâyezîd sought to provide his troops with arms more efficient and of greater offensive power than the weapons hitherto available, and also to create a more mobile and more competently manned artillery force. At the same time efforts were made to increase the size and strength of the Ottoman fleet, numerous vessels of war being built in the ports of the Aegean and the Adriatic. A new war was indeed imminent, which would test the worth of these armaments and of the much augmented naval forces of the Sultân. Friction along the borders of the Venetian enclaves on the coasts of the *Morea*, Albania and Dalmatia, where the Ottoman *ghazis* faced the Greek, Cretan and Albanian mercenaries in the service of the Signoria, and also the repeated occurrence of "incidents" at sea, induced Bâyezîd to make war on Venice in 1499/1500, a decision influenced by the fact that, since the death of Djem in 1495, some of the high dignitaries at the Porte had been urging the Sultân to pursue a more aggressive policy towards the Christians. Lepanto, lacking all hope of relief from the sea, because the Venetian fleet had been driven to take refuge under the guns of Zante, fell to the Ottomans in Muharram 905/August 1499. Meanwhile, the army of Bosnia carried out a great incursion into the Friuli and then, reinforced after the capture of Lepanto, ravaged the Venetian lands as far as Vicenza. Modon, Coron and Navarino in the *Morea* yielded to the Ottomans in 905/1500, and also Durazzo on the Adriatic coast in 907/1501. Venice, finding the conflict too expensive, sought peace in 908/1502 and in the final agreement concluded in 909/1503 renounced all claim to Lepanto, Modon, Coron, Navarino and Durazzo. Bâyezîd could feel well satisfied with the outcome of this war, which had brought solid territorial gains in the *Morea* and on the Adriatic shore and, more notable still, had underlined the fact that the Ottomans were becoming a formidable power at sea.

The years 909-918/1503-1511 witnessed the growth of a major crisis in the East. In 1503, the head of the religious order known as the Safawîyya, had begun in 904/905/1499 a career of conquest which soon made him the master of Persia. The Safawîyya had long conducted, on behalf of the Shî'î faith, a vigorous propaganda amongst the Turcoman tribes of Asia Minor—a propaganda so successful that the armies of the new regime in Persia consisted to a large degree of warriors drawn from those tribes. As orthodox or Sunni Muslims, the Ottomans had reason to view with alarm the progress of Shî'î ideas in the territories under their control, but there was also a grave political danger that the Safawîyya, if allowed to extend its influence still further, might bring about the transfer of large areas in Asia Minor from Ottoman to Persian allegiance. An additional threat arose from the fact that Shî'î beliefs flourished in those regions along the Taurus frontier which were in dispute between the Ottomans and the Mamluks. Ottoman intervention here against the adherents of the Safawîyya might well drive the Mamluks, despite their profession of the Sunni faith, into an alliance with the new Shî'î state in Persia.

Bâyezîd, aware of the danger, ordered in 907-908/1502 the deportation of numerous Shî'î elements from Asia Minor to his recent conquests in the

*Morea*. He also garrisoned his eastern frontier in force, when in 913/1507-1508 Shâh Ismâ'îl, then at war with 'Alâ al-Dawla, the prince of Albidân, occupied Diyar-Bakr and large areas of Kurdistan. How critical the situation had become was made clear on the outbreak, in 917/1511, of a great Shî'î revolt in Tekke, a region of Asia Minor long noted as a centre of heterodox religious ideas. The rebels, after plundering Kutahya, advanced on Bursa, but then, retreating in the face of superior forces, suffered a total defeat between Kayseri and Sivas in the summer of 917/1511—a conflict in which both the Ottoman Grand Vizier 'Alî Pâshâ and the rebel chieftain, Shâh Kûllî, were slain.

Meanwhile, the Ottoman empire had come to the verge of civil war. The practice that a new Sultân, on his accession to the throne, should order the death of all his brothers and their male children imposed on the sons of an ageing Sultân a dire pressure to prepare for armed conflict on, or even before, the death of their father. These had been war between Bâyezîd and Djem in 886-887/1481-1482; now, the issue was to rest between Selim, who was governor of Amasya, and Selim, who had charge of the remote province of Trebizond (Sokadd), the eldest of the three surviving sons of Bâyezîd, enjoyed little favour at the Porte and had but a minor rôle in the events which now occurred. Selim, in 916/1511, sailed from Trebizond to Kaffa in the Crimean peninsula, with the support of the Tatar Khan, moved with his forces across the Danube, demanding of his father the government of a province in the Balkans. Bâyezîd, reluctant to make war on his own son and worried about the revolt of Shâh Kûllî in Asia Minor, yielded to the wishes of Selim and, in a formal agreement, conferred on him the great frontier province of Semendria. The news that the Grand Vizier 'Alî Pâshâ, who favoured the cause of Ahmed, had been sent with a strong contingent of Janissaries to crush the Shî'î rebellion aroused in Selim the fear that, if Shâh Kûllî should be defeated, 'Alî Pâshâ might make a bold effort to raise Ahmed in the throne. Selim now marched on Adrianople, where his father was in residence. Bâyezîd withdrew in the direction of Istanbul, but there stood firm at Çaldıran-deresi near Corb. The Janissaries, although well disposed towards Selim, remained loyal to the old Sultân. Here, on 8 Djumâda I 917/5 August 1511, their skill and discipline routed the Tatar horsemen of Selim, the prince himself fleeing from the battlefield to seek refuge in the Crimea.

Ahmed, after the defeat of Shâh Kûllî, advanced towards Istanbul, hoping to cross the Straits and ensure his own accession to the throne. Disturbances amongst the Janissaries at the capital in Djumâda I 917/August 1511 overawed the adherents of Ahmed at the Porte. Ahmed, realising that the Janissaries had thus declared their support for Selim and their intention not to accept himself as Sultân, now used armed force to bring much of western Asia Minor under his control—a course of action which amounted to open rebellion against his father. The result was that Bâyezîd consented to recall Selim from Kaffa and to restore to him the province of Semendria. There was, however, a growing fear at the Porte that Ahmed would make an alliance with the Shî'î régime in Persia. This fear, together with the demand of the Janissaries for the abolition of the tax on the now inevitable campaign against Ahmed, hastened the issue of events. Bâyezîd was compelled to abdicate in favour of Selim in Safar 918/April 1512. The old Sultân had chosen to retire to the town of

his birth, Demotika, but, while travelling to this destination, died on 10 Rabi' I 918/26 May 1512.

**BÄYAZID** (or BÄZID) as engraved on his seal, *Tağhih al-Abrâr* f. 88a) **ANŞÂRÎ** (Pîr-i RAWŞAN (or RAWŞAN) 'R. 'ABD ALLAH KÂDÎ B. ŞAHAB MUHAMMAD, the founder of a religious and national movement of the Afghans (called Pîr-Târîk by the Mughal historians etc. after Hâjjî Mullâ Muḥammad, commonly known as Mullâ Zangî, a leader of the Pîr's chief opponent Aḥmad Durrânî, who was the first to dub him thus (*Tadhkira* f. 92). He claimed descent through Sh. Strâj al-Dîn (his fifth ancestor) from (Abû) Ayyub al-Anşârî, the famous Companion of the Prophet, (his 21st ancestor). His mother Aymana (varr. Dîh-bîn, Bîban, Ma'âṭir al-'Umarî), d. 1213, the second cousin of his father, was a daughter of al-Hâjjî Abû Bakr of Jalalābād, in which city Bâyezîd was born c. 911/1525, i.e., a year before Bâhūr had founded his Empire in India. His father left for Kānigūm (Wazīrīstān), his home-town, before the child had completed his forty days. Alarmed by the establishment of the Mughal supremacy, the people of Bâyezîd fled (c. 930/1559) to Bîhār and thence went with a caravan to gharām. 'Abd Allāh, who had another wife (and several children by her), now developed an aversion for Aymana and divorced her. Bâyezîd, then about seven, found his subsequent home life extremely unhappy and gradually he developed a life-long estrangement from his parents and step-brother. His early schooling was interrupted as he was called upon to attend to home affairs and trade, but he turned to his studies whenever possible, though always confining himself only to what related to the questions of divine worship. He applied himself diligently to acquiring a detailed knowledge of, and a punctilious performance of, devotional exercises and other religious duties. But he felt himself hindered in every direction, for his father would not let him perform the *ḥajj* or go elsewhere for further studies, or allow him to become a disciple of a Pîr. When he was nearing sixteen, his father took him along on one of his trade journeys. Later, Bâyezîd made several more. On these he must have met (as in *Tadhkira*, f. 82b) the Muḥid (Imā'ud-Dīn) Sulaymān, whose influence can be seen, among other things, in the excessive emphasis on the doctrine of the Pîr-i Kāmil ('perfect spiritual director'), the frequent use of *ḥaṭṭ*, for example in dealing with the "five pillars of the faith" (*arkān-i ḥamisa*), *ghusl* etc., in certain Ḥurūfî doctrines

only a narrow strip of the coast, while the Mamlūks held all of the crests.

The seventeen years of Baybars' reign show a balance of thirty-eight campaigns in Syria. Of the nine battles with the Mongols, only the last was due to the initiative of the sultan, the others being considered counter-attacks. There were five significant engagements with Little Armenia. The Ismā'īlī sectaries, the Assassins, suffered three attacks. On the Franks, the most abused, the Egyptian troops inflicted twenty-one defeats.

The military activity of the sultan was not the result only of the orders which he gave; he took personal command in fifteen battles, not fearing when it was necessary, to expose his own life. A few figures give an idea of Baybars' travels: he does not appear to have spent more than half the period of his reign in his capital at Cairo; he left it twenty-six times, and certainly covered more than forty thousand kilometres.

One sees in the rule of Baybars a splendid example of energy, bringing to light an unexpected political recovery. Under the impetus of this exceptional leader, Egypt, who had just undergone an internal revolution and had been the target of powerful enemies—Crusaders, Mongols, Ismā'īlīs—was suddenly to impose its rule upon the Orient. The revolution following the fall of the 'Abbāsid caliphate in Baghdad, the hosts of alliance between Crusaders and Mongols, the potential conspiracies of the dispossessed Ayyūbid princes, and the personal ambitions of the high ranking Mamlūk officers, are all elements of the tragic combination which makes Baybars' success so extraordinary.

It was a stroke of genius on his part to welcome a refugee of the 'Abbāsid family, after the disastrous invasion of the Mongols in 656/1255, and to recognise him in Cairo as supreme pontiff. It was not merely a spiritual gesture, for the ruler had seen in it immediate and tangible consequences: suzerainty over the Holy Cities of the Hijāz. Finally, the Egyptian state might from that time on style itself the 'Islamic Kingdom'.

The exploits of this extraordinary warrior made him a legend in his own lifetime; the epic of Baybars is well below his actual biography. His life is indeed a story of adventure: the death of the hero, drinking a cup of poison prepared by another, is but part of the perfect romance.

**Bibliography:** The two chief primary sources for the life of Baybars are the biographies of Ibn 'Abd al-Zāhir and of Ibn Shaddād, neither of which is fully extant. A British Museum manuscript of a version of Ibn 'Abd al-Zāhir, covering the period up to the beginning of 663/1265, was published, with an English translation, by Mrs. S. F. Sadeq, *Baybars I of Egypt*, Duca 1936. A more complete ms. of the same version, preserved in the Fritsch library, is being edited by Mr. A. A. Khowaitir (see further B. Lewis, in *Speculum*, xxvii, 1952, 488; Cl. Cahen in *Arabica*, v, 1958, 211-2; P. M. Holt in *BEOAS*, xcii, 1959, 34-55). A unique and incomplete manuscript of Ibn Shaddād's biography of Baybars, covering the years 670-76/1272-78, was found in Edirne by S. Yalçınlar, who published an abridged Turkish translation of it (*Baybars Türkçe*, İstanbul 1941) without the Arabic original. Further information will be found in the general historical sources (Makrid, Dhahabī, Ibn Taghribirdī, etc.). See also E. Quatremère, *Sultans Mamelouks*, t II; M. F. Köprülü, *Baybars*, in *IA*; M. Dj. Surur, *al-Zāhir Baybars*, Cairo 1938, and

the general histories of medieval Egypt by G. Wiet (*Histoire de la Nation égyptienne*, iv, Paris, n.d., 367-82, 403-38) and S. Lane-Poole (*A History of Egypt in the Middle Ages*, London 1914, index). For inscriptions see *RCEA*, xi, nos. 4212, 4344; xi, nos. 4476 to 4478, 4485, 4501, 4528, 4532, 4533, 4556, 4557, 4562, 4565, 4586, 4588, 4589, 4593, 4600, 4608, 4611, 4612, 4623 to 4626, 4638, 4660, 4720, to 4662, 4673, 4686, 4696, 4692, 4714, 4723, 4724, 4726 to 4728, 4739, 4753 to 4755, 3757 to 4740, 4748, 4750 again, 4751, 4754. Further bibliography will be found in G. Wiet, *Les Biographies de Manhal Sāfi*, no. 708. (G. Wiet)

**BAYBARS II**, al-MALIK, al-MU'AWWAZ, RUKN AL-DIN MAS'UD B. DASHGIR, Mamlūk sultan of Egypt. Perhaps of Circassian origin, Baybars belonged to the Mamlūks of Sulṭān Kālāwīn. Appointed *major domo*, *usdār*, during the first reign of Muḥammad b. Kālāwīn (693-94/1293-94), he was promoted to commander of a thousand by Sulṭān Katbughā, and his power increased, at the same time as that of his rival, Salār. Both were equally ready to assume power upon the assassination of Sulṭān Lādīn in 698/1299.

They put on the throne for the second time the young Muḥammad b. Kālāwīn. The two men were not bound by any deep friendship but they were too afraid of one another to allow their differences to persist, and so resigned themselves to ruling jointly, at the expense of a monarch then aged fourteen. At every mention of an important measure taken during that period, the Arab historians do not neglect to attribute it to both *amirs*, for example, in the rigorous directives against the Christians and Jews in 700/1301. The *dawamis* managed a vigorous resistance to the invasion of the Mongol Ghāzān. They put down, with unbridled cruelty, an insurrection of the Arab tribes of Upper Egypt, who had elected two chiefs with the sarramān Baybars and Salār. Ten years later Muḥammad, weary of their tutelage, abdicated.

Baybars, possessing more Mamlūks than Salār, was able to succeed alone to the sultanate, in Shawwāl 708/April 1309, and it was then that his weakness became apparent. In fact, Muḥammad was able to form an army from the forces of Karak, to which he had retired, and in Ramadan of the following year/February 1310, he began his third reign. Baybars had fled. Apprehended, he was brought to Cairo and strangled on 15 Dhū l-Ka'dā 709/16 April 1310.

**SIRAT BAYBARS**, an extensive Arabic folk-tale purporting to be the life-story of the Mamlūk sultan Baybars I (1260-77). Many of the people and the events in the *sira* are historical, but its overall character, as well as most of the descriptive detail, is fictitious. Its only historical value lies in the fact that it represents the type of idealised narrative most accepted by large parts of the Muslim population in Cairo in the late Middle Ages and in the following centuries. Its real interest lies rather in the fields of sociology, folklore, and history of literature.

The novel opens with a description of the end of Ayyūbid times and the beginning of Mamlūk rule, up to the accession of Baybars. Later sections treat the hero's warlike exploits, particularly these

against the Christians (Byzantines and Crusaders) and the Persians (= Mongols). Towards the end, the novel grows more and more into a fantastic tale of adventure, sorcery and recovery. Traditional tales and motifs, also to be found in other Arabian contexts such as the *Thousand and One Nights* (as well as some which are known in the Iranian tradition), have been used. Baybars's cunning but basically faithful servant 'Uḡmān—half groom-cum-pickpocket, half saint—and (in the later parts of the novel) an Ismā'īlī master of disguise by name of Shība also play large parts. Shība is constantly on the move, reconnoitring, freeing Muslim prisoners, and harming or at least scaring his enemies with his craftiness and pranks. His opponent on the Christian side is the dangerous Gawḥā (= Juan?; the original name given is Gīrgis), a deadly enemy of Islam. Besides the Mamlūks, there are also Syrian Ismā'īlīs (i.e., Assassins, even though they are never called such) who take part in the battles. The printed editions give an outline, at the end, of the history of Egypt from Mamlūk times to the present day. This is a subsequent addition, which has nothing to do with the actual novel.

Historical events are presented as seen from a bourgeois point of view. The novel has a special predilection for rich-overworked merchants or craftsmen. Pictures of life in the streets of Cairo are particularly attractive. Amongst the degenerate Mamlūk soldiery, Baybars appears as the just ruler who protects his subjects and fights corruption. Crude jokes, puns, and situations of a certain primitively comic nature, appealed to the uncultured taste of the listeners (the *sira* was probably always meant to be recited, not read). A definite Islamic conception of the world underlies the whole. Christian and other opponents of Islam are—unless they are later converted—painted in the blackest colours. There is an underlying offensive religious fanaticism. As all non-Muslims are necessarily villains, they have no claim to decent treatment, still less to pity, and none whatever to respect. Things are occasionally very harsh among Muslims too, but, on the other hand, honourableness receives due praise. Great stress is laid on abstaining from wine; adultery is decried; saints are frequently mentioned. Ahmad al-Badawī appears in the story of Baybars's youth. The most prominent saint in the later parts of the *sira* is Sīdī 'Abd Allāh al-Madghī, He is the Muslim's helper in all plights, particularly in journeys across the sea (Wangelin, 360-2).

The literary form of the *sira* corresponds to that of similar Arabic popular tales. The prose tale is interrupted and enlivened by sections of rhymed prose and interspersed with poems. These (in part quotations, in part verses made up for the *sira*, in classical metres as well as strophic forms) are not, however, evenly distributed. So far there has been no close study of these (cf. Wangelin, 307). The language is somewhat colloquial, particularly in the manuscript texts.

The first literary mention of *Sirāt Baybars*, though indirect, is a note by Ibn Yās (Wangelin, 307) at the beginning of the 16th century. According to U. J. Seetzen, E. W. Lane, and I. G. Wietstein, public recitals of the *Sirāt Baybars* were very popular in Cairo and Damascus in the 19th century. Ṭāhā Husayn mentions such recitals and the sale of printed editions (or part-editions?) of the *sira* amongst the Egyptian fellahs in the story of his youth (*Al-Ayyām*, Cairo 1929, 21 and 83). Some

parts of the novel have been given in translation by E. W. Lane in *The Manners and Customs of the Modern Egyptians*, and in G. Weil's first edition of his translation of *The Thousand and One Nights*. W. Ahlwardt has given a detailed description of some of the Berlin manuscripts of the *sira*. Helmut Wangelin has produced the first monograph on the novel, giving an extensive table of contents based on the first printed edition of the year 1908-09. The manuscripts of the *Sirāt Baybars* are comparatively recent. Levi Della Vida describes a version in the Biblioteca Vaticana which dates from the 10th/16th century, and which, unlike the other texts, has only some 500 pages. Possibly this represents an earlier stage in the development of the novel. The two texts quoted by Ahlwardt (vol. 8, 143 f.) under the numbers 9163 and 9164, on the other hand, appear to be subsequently shortened versions. This is also borne out by the *absence* of interpolated songs. The history of the development of the *sira* would probably become clearer if the different manuscripts were to be classified and compared in detail. It is questionable, however, whether it would be worth the time involved.

**BAYBARS AL-MANṢŪRĪ**. This Mamlūk general and historian began his career as a slave of al-Malik al-Manṣūr Kālāwīn (thence his by-name 'al-Manṣūr'). In the retinue of Kālāwīn Baybars participated in 663/1265 in the campaign of Sulṭān Baybars I against the Syrian Franks, in 664/1266 in campaigns in Syria and Cilicia, in 666/1268 in the siege of Antioch and in 673/1273 in another campaign in Cilicia. Kālāwīn, who had become sultan of Egypt and Syria, appointed Baybars governor of the province of al-Karak in 685/1286. His son and heir al-Malik al-Aṣraf Ḳālāwī removed Baybars from this post in 690/1291, whereupon he returned to Egypt and took part in the siege of Acre, in the siege of Kal'at al-Rūm in Asia Minor in the following year and in two expeditions against the Mongols. When in Muharram 693/December 1293 al-Malik al-Nāṣir Muḥammad elected sultan, he appointed Baybars general (*mukaddam alī*) and gave him the high post of *amīr al-dawla* (chief of the chancery). From that time

Baybars' career was linked to the fate of this prince, who was twice deposed and reinstalled. Baybars lost his post after al-Malik al-Mansūr Jalāl had become sultan instead of al-Malik al-Nāṣir Muḥammad, but he was reinstated on al-Malik al-Nāṣir's return to the throne, in 698/1299. In the following years he fulfilled both military and administrative tasks, until he was deposed from his post of *dauidār* in 701/1300-05. Meanwhile al-Malik al-Nāṣir Muḥammad had lost all influence on the government and had become a mere puppet in the hands of two powerful generals and at last he abdicated formally. Baybars al-Mansūrī was an ardent partisan of this prince and made strenuous efforts to have him reinstalled. When this came about in 709/1310 Baybars was entrusted with various administrative tasks and on 17 Djumādī I 712/1 October 1311 he was appointed viceroy of Egypt (*nāṣir al-salṭa*), second to the sultan only. But he held the post less than a year. In Rabi' II 712/August 1312 he was deposed and sent to the state prison in Alexandria, where he remained for five years. He died on 25 Ramaḍān 725/4 September 1325, about eighty years old.

Baybars was a pious Muslim, fond of theological studies, and besides his military and political activities he found time to write theological works, which he did with the help of a Christian secretary. His chief work was a general history of the Islam until the year 724/1324 called *Zubdat al-Fihra fi Ta'riḥ al-Hidra*. This voluminous work, which is divided into centuries, is based in its former parts on the *Kāmil* of Ibn al-Athīr, whereas its last part is an important source for the history of the Bahri Mamlūks, since the author tells the story of campaigns and political events in which he participated himself. The strong personal note of the *Zubdat al-Fihra* is even more conspicuous in the account which Baybars al-Mansūrī gives of the political history of Egypt at the end of the 13th and at the beginning of the 14th centuries, where he does not conceal his strong bias for al-Malik al-Nāṣir Muḥammad. His work was much used by other historians, among whom al-Aynī should be mentioned especially. It was abridged and continued by a later author, whose work is preserved in MS. Bodleiana I, 704. Baybars al-Mansūrī himself wrote a shorter history of the Bahri Mamlūks, which he called *al-Ta'rikh al-Mamlūkiyya fi'l-Fihra al-Turkīya*. This work, partly written in rhymed prose, relates the history of the Mamlūks up to 711/1311-12. Al-Sakhāwī also mentions a History of the Caliphs as written by Baybars. It was called *al-Liṭā'if fi al-ḥikāh al-khaldāfi*.

**BÄYBÜRĀD** (BAYBURĪ), known to the Byzantines in the time of Justinian as Βαυβουράδιον, is situated on the Çoruh river, about 200 km. to the north-west of Erzurum. The Saldjūks Turks overran this region in the years 446-447/1054-1055. After the battle of Manzikert in 463/1071 Bāybūd came under Turkish rule, now of the Saltuḳids at Erzurum and now of the Dānişmendids at Sivas, although the Byzantines, who still held Trebizond, did in fact recapture the town for a time in the reign of Alexios I Komnenos. During the 13th and 14th centuries Bāybūd, under the political domination of the Saldjūk sultans of Rūm and later of the Mongol Il-Khāns of Persia, prospered from the active commerce which, in the hands of Christian (i.e., Venetian and Genoese) as

well as Muslim merchants, flowed along the route leading from Trebizond to Erzurum and thence eastward to Tabriz. The Dānişmendids and, after them, the Ak Koyunlu Turcomans had control of the town from about the mid-14th to the close of the 15th centuries. Bāybūd fell to the Ottomans in 920/1514 during the course of their Cāldirān campaign against the new Ṣafawid state in Persia. Ottoman rule over Bāybūd and its adjacent territories was consolidated in 940-942/1533-1536, when Sultān Sulaymān organised on a firm basis the *eyālet* of Erzurum. The Russians occupied the town in 1829, much of the old fortress of Bāybūd being ruined in the course of the fighting. Russian forces also defeated the Ottomans in the battle of Bāybūd (July 1916) during an offensive directed against Erzurum. Bāybūd was in Ottoman times a *hadd* of the *sandjak* of Erzurum in the *eyālet* of that name, but is now included in the present Turkish province of Gümnüşhine. Its population was estimated in 1915 at 10,339 inhabitants, the figure for the entire *hadd* being given as 64,812 people. The region is noted for its production of cereals, wool, hides, etc.

**AL-BAYDĀ'Ī** (AL-BEYĀ'Ī), "the white town (castle)", a common Arabic place-name, designating localities scattered all over the Islamic territory. Hamdānī (*Sifa*) quotes four places with this name; Yāqūt has sixteen different al-Baydā'īs. Most important of these is the Persian town al-Baydā', situated in the province Fars, N. of Shirāz and W. of Isfahān. Its original name was Nāsā. Being the chief town of the Kāmfirūz district, it was as large as Isfahān in the 4/10th century, surrounded by fertile pasture lands. Several scholars carry the name of this place (see AL-BAYDĀWĪ). Also al-Hallakī (a.c.) was born here. For the S. Arabian town al-Baydā', the main place of Upper Bayhān, see BAYHAN.

**BAYDAK** (see BHATRASJĪ).

**AL-BAYDĀWĪ**, 'ABD ALLĀH B. 'UMAR B. MUHAMMAD B. 'ALĪ ARḤ-ḤUSAYN NĀSIR AL-DĪN. He belonged to the SHĀFI' school, and attained the position of chief *hadd* in Shirāz. He had a reputation for wide learning, and wrote on a number of subjects including Qur'ān exegesis, law, jurisprudence, scholastic theology, and grammar. His works are generally not original, but based on works by other authors. He is noted for the brevity of his treatment of his various subjects, but his work suffers on this account from a lack of completeness, and he has been blamed for inaccuracy. His most famous work is his commentary on the Qur'ān, *Awṣaf al-taḥṣīl wa-awṣaf al-taḥṣīl*, which is largely a condensed and amended edition of al-Zamakhsharī's *Kashshaf*. That work, which displays great learning, suffers from Mu'tazilite views which al-Baydāwī has tried to amend, sometimes by refuting them and sometimes by omitting them. But on occasion he has retained them, possibly without fully realising their significance. In his introduction he does not claim to be producing an original work. He says that he had long wished to produce a book which would include the best of what he had learned from leading Companions, learned Followers, and upright men of early days who were of lesser rank. He also purposed to include allusions which were the result of his own and his predecessors' researches. It would contain some readings of 'the eight famous imams' (for al-Baydāwī adds Ya'qūb of al-Basra to the more normal number of seven readers of the Qur'ān), and would also include readings peculiar to one or other of the recognised readers. The result is a work which has been popular and has accordingly been published in many editions. Numerous commentaries have been written on the whole work, or on parts of it. Of these Brockelmann lists 83, after which he mentions two works which draw attention to places where al-Baydāwī has failed to remove al-Zamakhsharī's heresies. Of the many editions of the work mention may be made of that by H. O. Fleischer (Leipzig 1846-8), 2 vols., *Indices* by W. Fell (Leipzig 1878); and that of Cairo, 1330 A.H., 4 parts in 2 vols., with the commentary of al-Khatib al-Kharūnī, prescribed for sixth year students in the Azhar. Other editions are mentioned in Brockelmann and Sarkis. Among al-Baydāwī's other works which are extant in print or in MS are: *Minhaj al-awṣaf* (*the al-awṣaf* [jurisprudence]); *al-dhāya al-bayṣ* (manual of law); *Lubb al-ḥikāh fi 'im al-ṣab* (grammatical); *Majma' al-awṣaf* and *Tawḥīd al-awṣaf min maḥall* (*al-awṣaf* [scholastic theology]). He also wrote a work in Persian, *Nisām al-tawḥīd* (ed. with notes in Hindustani by Sayyid Mansur, Haydarābād 1930), dealing with the history of the world up to 674/1275. Al-Suyūṭī says that al-Baydāwī died in 685/1286, quoting al-Safādī as his authority. He says that al-Sabīh mentioned 691/1291, but al-Sabīh does not give a date in his *Tabaḥṣīṭ*. Yāqūt gives 691/1293. Rieu (*Suppl. to the Cat. of the Arab. MSS in the B.M.*, p. 68) quotes a statement that he died in 715/1316.

Encyc. de bibl. arab.*, Cairo 1928-30, 616 ff.; Margoliouth, *Chrestomathie Islamica*, London 1894; Th. Nöldeke, *Geschichte des Qurān*, 2nd edn., Leipzig 1909-1938, II, 176, III, 212.

**AL-BAYDHĀK**, ARḤ BARR B. 'ALĪ AL-SUNHĀWĪ, author of *Memoirs* on the beginnings of Almoḥad history. His name was known only through extracts quoted by Ibn Khaldūn in his *K. al-'Iṣṣar*, by the anonymous author of al-*Ḥad al-Baydhāwīya*, and from various passages in which Ibn al-Kattān, author of the *Naṣm al-Djāwida*, reproduces him. The discovery of the bundle of papers (no. 1919) in the library of the Escorial by E. Lévi-Provençal, and their publication in the *Documents inédits d'histoire almohade*, brought al-Baydhāk to light, as through a trap-door, from the obscurity in which he lay. We find in his work "the actual *Memoirs* of the experiences of one who frequently took an active part in the events he sets down and who immediately appears as one of the early Almoḥads. At the first glance it can be seen that this is no chronicle of the usual type or form. The new information provided on each page and its character of authenticity nearly always enables us, in a remarkable manner, to complete our knowledge of the Almoḥads in North Africa, which has hitherto been exiguous. The thirty six pages of the manuscript have no lacunae in the text. Unfortunately, however, the beginning is missing and also no title is given. The information we possess on al-Baydhāk is limited to what it himself tells us in his work, but this is too vague to serve as the basis for a biography. We find him in the following of the Mahdi, after the latter reached Tunis, and in that of 'Abd al-Mu'min, close to their persons and acting as a servant. And it was as such that he recorded in his work merely what he actually saw and heard". An enthusiastic convert, he adds to the facts he relates all such incidents of a supernatural order as serve to confirm the divine mission of Ibn Tūmart and the predestined choice of 'Abd al-Mu'min. We do not know whether he came with his master from the East. However, the appellation *baydhāb*, which passed from Persian into Arabic, is still in use among the Berbers of the South for the paws in the game of chess. The one thing certain is that al-Baydhāk's mother tongue was Berber and that he did not know Arabic very well. This is born out by the colloquialisms abounding in his *Memoirs* and the Berber phrases appearing in his narrative. Remaining in the background as a faithful and devoted servant without political ambitions, and having served the Mahdi, 'Abd al-Mu'min and even Yūsuf I, down to whose time the information he provides extends fragmentarily, he disappears from the Almoḥad scene as suddenly as he appeared, silently and without fame".

**BAYDU**, the fifth in succession of the Mongol Il-Khāns of Persia and a grandson of Hülegü, the founder of the dynasty. He reigned only for a few months since Gayḡathu, his predecessor, was strangled on Thursday 6 Djumādī II/21 April 1295 and he himself was put to death on Wednesday 23 Dhu 'l-Ka'da/2 October of the same year. Insulted by Gayḡathu, this young and apparently unimportant prince had become involved in a conspiracy of the Mongol amirs against the Il-Khān which resulted in the latter's deposition and execution, and the conspirators had then invited Baydu to take possession of the throne. The new Il-Khān was at once opposed by his second cousin Ghāsan [a.c.], the son of the Il-Khān Arghun and the nephew of Gayḡathu, who advanced from Khurāsān at the head of an army to demand

satisfaction for his uncle's death. An uneasy truce was concluded between the cousins; and when hostilities were later resumed the issue was decided without bloodshed in Ghazân's favour thanks to the address and diplomacy of his general Nawrûz and in particular to Ghazân's having, at Nawrûz's suggestion, adopted Islam and so won the support of the Muslims. Baydu was deserted by his adherents and met his end in Nîghârûn (the present-day Nakhichevan in the Azerbaijan S.S.R.) whilst attempting to escape. During his brief reign he is said to have shown special favour to the Christians and so given offence to the Muslims, although according to Ilar Helwanî he was himself a convert to Islam.

(W. BARTHOLOMÆUS, J. A. BOYDÉ)

**BATHAK**, formerly the name of a district to the west of Nîghârûn in Khurân. In Tâhidî times it contained 390 villages with a revenue assessment of some 236,000 *dirhams*. The chief towns were Sabzawâr and Khurawdîgh. It capitulated to a Muslim army under 'Abd Allâh b. 'Aunî in 305/501. In 318/513, it was devastated by the Ghaznawids. According to Hamd Allâh Mustawfî its people were *îfânâ* 'Ajdârî *îfânîs*. Among its famous men were Nîzâm al-Mulk, the *waiz* of Alp Arslân and Malikshâh, Abu 'l-Faḍl Muhammad b. Husayn Bayhaki, the author of the *Ta'riḥ-i Bayhaki*, and 'Abd al-Razzâk, the founder of the Sabzadî dynasty. Formerly marble quarries were worked there.

(A. K. S. LAMONT)

**al-BAYHAKI**, **ABD BAKR AHMAD b. al-HUSAYN b. 'ALĪ b. MUSA al-KHURAWDĪGHĪ**, traditionist and Shāfi'ī *faḥih*. He studied Tradition with Abu 'l-Hasan Muhammad b. al-Husayn al-'Alawī, al-Hākim Abū 'Abd Allāh Muhammad b. 'Abd Allāh and others. He travelled in many countries in pursuit of this subject and is credited with having had a hundred *ṣūḥuf*. In theology he was an Ash'arite. He was of a frugal, pious, and scholarly nature. Towards the end of his life he went to Nîghârûn where he taught traditions and transmitted his books. Al-Bayhaki was a voluminous writer, his writing being said to have reached 700 fascicules. Although he was a traditionist of some note, he is reputed to have been unacquainted with the works of al-Tirmidhī, al-Nasā'ī, and Ibn Māǧā; and it is suggested that he had not seen the *Musnad* of Ahmad b. Hanbal. He used al-Bihār al-Mudhahar, freely. Al-Dhahabī said that his compas in Tradition was not great, but that he was an adept at dealing with it, being versed in the sub-divisions and the men who appear in *isnads*. Among his writings his *K. al-ṭinan al-kubrī* (publ. Haydarābād, 2 vols., 1344-56) is perhaps his most notable work. It has been held in high esteem; for example, al-Buhārī declared that there was nothing in it in adjustment, arrangement and excellence. In this work notes are frequently added about the value or otherwise of traditions and traditionists, and attention is often drawn to the fact that particular traditions are included in one or other of the recognised collections.

The Haydarābād edn. has in each vol. a valuable index of men of the first three generations and traditions traced to them, with indication of the nature of the transmission. Another work which was valued is his *Nawā' al-Shāfi'ī*. He has been said to have been the first to collect al-Shāfi'ī's legal precepts, but al-Dubāhī denies this, saying he was the last, for this collection included more than earlier efforts, and therefore there was no need to repeat the work. Al-Djawaynī, Indm al-Haramayn, highly praised his writings in support of Shāfi'ī doctrine. Al-Bayhaki was born in 384/994, died in 451/1060 in Nîghārûn, and was buried in Khurawdîgh.

**BAYHAKI**, **ABU 'l-FADL MUHAMMAD b. HUSAYN KATIB** (in Persian: Dabib), famous Persian historian of the 5th/11th century, born in 385/995 at the village of Hārīthābād in the district of Bayhāk (today the district of Sabzawār in Khurāsān). At an early age he went to study at Nîghārûn, then an important centre of learning. He soon entered the chancellery of the Ghaznawid ruler, and, with the function of secretary, and in this city spent most of his life. He was at first the assistant of the celebrated writer Abū Naṣr Muḥṣin, the director of this chancellery, and was charged with drafting and making copies of the most important official documents dispatched by Mahmūd the Ghaznawid (389-421/999-1030) and his son and successor, Maḥmūd II (421-1049-51). During Maḥmūd II's reign his first major died, in 417/1026, and was replaced by Abū Saḥl Zānāl, with whom he was not always on good terms. During the reign of 'Abd al-Raḥḥīm (440-43/1049-51), he was appointed director of the chancellery, but was dismissed after a short time. At the king's order, a Turkish slave named Nîzām confiscated all his property, and he was imprisoned, but he had no master in the end, he settled his wife's dowry. He remained in judicial imprisonment until the usurper Taghribirdī occupied the throne in 443/1051 and imprisoned him in a fortress with other courtiers held in custody. After his release, he did not seek employment at court after the year 451/1059, and he died in the month of Safar 490/2 August-21 September 1077. Bayhaki is the author of a voluminous history of the Ghaznawid dynasty, written in an archaic and sometimes complicated style. He states that he commenced his history with the year 409/1018-19, but a large part of the work has long been lost, and the only traces of it are found in the borrowings of other Persian historians—the last of whom lived in the 9th/15th century. The work, which comprises 30 volumes, has been variously entitled by different authors: *Diḥmā al-Tawārīkh*, *Diḥmā fi Ta'riḥ-i Sababtagia*, *Ta'riḥ-i Al-i Maḥmūd*, *Ta'riḥ-i Nāṣiri*, and *Ta'riḥ-i Al-i Sababtagia*. It is almost certain, however, that the different volumes referring to each ruler would have borne different titles. Thus the whole collection of 30 volumes would have had a general title of *Diḥmā al-Tawārīkh* or *Ta'riḥ-i Al-i Sababtagia*; the first part, relating to Sababtagia, would have the title of *Ta'riḥ-i Nāṣiri*, the second part, relating to Maḥmūd, that of *Ta'riḥ-i Yamīni* or *Mahmūd-i Maḥmūdī*, the third part, of which the most important portions have come down to us,

would have had the title of *Ta'riḥ-i Maṣ'ūdī*, while the title of the final part or parts must remain a subject for conjecture. The part which has come down to us comprises volumes 5 to 10; volumes 11 to 30, and the first four volumes, are lost. As regards the six volumes which we possess (5 to 10), which are usually known as *Ta'riḥ-i Bayhaki*, and which ought rather to be called *Ta'riḥ-i Maṣ'ūdī*, the title which I have given them in my edition, there are certain noticeable lacunae in the sequence of events, which indicates that a portion of these volumes has also been lost. Volumes 11 to 30 must have covered the end of the reign of Maṣ'ūd and the reign of his successor, but to the beginning of the reign of Rāḥīm in 451/1059, that is to say, the reigns of Maḥmūd, Maṣ'ūd II, Abū 'l-Hasan 'Alī, 'Abd al-Raḥḥīm and Farrukhshāh, which extend over 19 years in all from 432/1040 to 451/1059. The known MSS. of the part which has come down to us close with the events of the year 432/1040, and it is easily to be seen that this part was written later, doubtless from notes made at the time, because the author five times gives us the date 451/1059 for the composition of certain passages. On one of the occasions on which he mentions this date, he states that he has been in the service of the Ghaznawids for twenty years, which proves that he entered their service in 431/1040 at the age of 46. Consequently 451/1059 was the year in which he began to write up his notes, which covered a period of 42 years from 409/1018 to 451/1059. He states that events prior to 409/1018 had been related by his predecessor the historian Maḥmūd Warrāk, whose work is lost. The end of chapter ten of the *Ta'riḥ-i Maṣ'ūdī* which has survived includes a portion of a chronicle on Khawāram, written in Persian by the great savant Abū 'l-Rayḥān al-Bīrūnī (d. ca. 1362-40/973-1048) under the title of *al-Masūdī's fi Ḥikmah-i Khawāram*, which is incomplete and of which no other version exists. Bayhaki seems to have written other works, one of which bore the title of *Mahmūd-i Abū Naṣr-i Muḥṣin*, a collection of reminiscences which had been related to him by his master in the Ghaznawid chancellery. Some fragments of this work have been quoted by more modern authors. Another work, quoted by the author of the History of Bayhāk, bore a title which can be read either as *Raḥat al-Kutub* or *Zinat al-Kutub* and seems to have been a manual of literary style as is indicated by its title. The fragments of the *Ta'riḥ-i Nāṣiri* which have come down to us were incorporated in the *Diḥmā* *al-Raḥḥīmī* *waṣṣaṣ* *Lamīmī* *al-Rindī* of Muhammad 'Awfī (two recent incomplete Tehran editions), the *Tabaḥ-i Nāṣiri* of Miḥāj al-Dīn b. Sīrīdī al-Dīn al-Djurdjī (editions: Calcutta and Kabul-Lahore), and the *Madīna* *al-Anṣab* of Muhammad b. 'Alī Shāhānkārī (MSS.). The surviving portion of the *Ta'riḥ-i Yamīni* is incorporated in the last-named work, and the surviving portion of the final parts of the *Ta'riḥ-i Maṣ'ūdī*, which we possess, is quoted by 'Awfī. The passages from the *Mahmūd-i Abū Naṣr-i Muḥṣin* are quoted by 'Awfī and by Sayf al-Dīn 'Aḥlī in his work on the lives of the *wasīs* entitled *Āḥḥ al-Wasā'ir* (MSS.). The famous historian Hājjī Abūrdī has also reproduced certain passages from the last portion in his own monumental history. The author of the History of Bayhāk states that the *Diḥmā* *al-Tawārīkh* comprised more than 30 volumes; of these he had seen only a few in the library at Sarakhs, certain other volumes in 'Māh-dī 'Irāk' library and still others

in the possession of various people. This proves that a large part of Bayhaki's chronicle had disappeared within a short time after its composition, since already in the 6th/12th century this author did not have access to all the volumes. Only 'Awfī (6th/12th century) Miḥāj al-Dīn (7th/13th century) Shāhānkārī (8th/14th century), and Hājjī Abūrdī (9th/15th century) had at their disposal certain—or perhaps fragmentary—portions of the work. The *Mahmūd-i Abū Naṣr-i Muḥṣin* was consulted by Aḥlī in the 9th/15th century, but no one has mentioned his work on the epitaphary art except the author of the History of Bayhāk. The MSS. of the *Ta'riḥ-i Maṣ'ūdī* so far known nearly all come from India and indicate a common source.

**al-BAYHAKI**, **ZAKĪS al-DIN ABU 'l-HASAN 'ALĪ b. ZAYD b. FUNDUK**, Persian author, born at Sabzawār, the administrative centre (*ṣāḥab*) of the district of Bayhāk (W. of Naysabard) in Khurāsān in 493/1100. The date 499/1106 in Yāqūt (*Irād*, v, 208), though cited from Bayhaki's autobiography (see below), has been shown to be wrong by M. Karwīn. Of his numerous works (more than 70 titles on an encyclopaedic range of subjects listed in Yāqūt) the best known are a history in Persian of his native district, *Ta'riḥ-i Bayhaki* (to be distinguished from the *Ta'riḥ-i Bayhaki* of Abū 'l-Faḍl al-Bayhaki (see preceding article), and an Arabic supplement (*fatima*) to the biographical *Ṣiḥn al-bakna* of Abū Sulaymān al-Sidḡistī. The *Ta'imad Ṣiḥn al-Hikma* was translated into Persian probably about 730/1330. It has been edited together with the Persian version by M. Shāfi'ī (Lahore 1935), and under the title *Ta'riḥ-i Bakamā* al-Fadīm by M. Kurd 'Alī (Damascus 1948). The *Ta'riḥ-i Bayhaki* though scarcely very original (it is based, the author tells us, on an earlier history of Bayhāk, as well as on a 12-volume *History of Naysabard* by al-Hākim Muhammad b. 'Abd Allāh), is full of interest. The contents have been analysed by Rieu (*Supplement to the Catalogue of Persian MSS. in the British Museum*, 60 ff.), and in 1951, with an important introduction by M. Karwīn.

The family of Bayhaki, which had been distinguished for several generations previous to his time, called themselves Hākimīs from an ancestor, al-Hākim Funduk (*Ta'riḥ-i Bayhaki*, 102), and traced their descent back to a Companion of the Prophet, Dhū 'l-Shabbāḥayn Khuraysh b. Dhābit. Bayhaki also claimed relationship with Tabat, the historian (*Ta'riḥ-i B. yab*, 19). It appears from his autobiography, given in his last historical work *Maḥmūd al-Taḥḥir* *waṣṣaṣ* *al-Gharīb* (or *Maḥmūd al-Taḥḥir* *fi 'l-Tawārīkh*) and taken over by Yāqūt, that he had his higher education at Naysabard and

Marw, and that his career was mostly in Khurāsān. For a short time (526/1132) he was *hāfi* of Bayhān, probably owing to the influence of his father-in-law, Muḥammad b. Maʿbūl, a former governor of Kays, then *muḥarrir al-mawḍiʿ*, but he found his duties irksome and soon resigned. A short time later we find him studying algebra and astrology in Rayy (*Irshād*, v, 220). The autobiography comes down to 549/1154-55, when Bayhākī was in Naysābūr. Nothing is there said of a visit which he paid with his father to 'Umar al-Khayyām in 507/1113-14 (*Taḥmīna Ṣāḥib al-Hikma*, 118), nor of an incident which took place in 543/1148. This was the arrival in Khurāsān at the court of Sulṭān Saḍḍār of an envoy from the Christian King of Georgia, Demetrius, with certain questions, presumably on religious topics, written in Arabic and Syriac (*ḥāṭi n-suriyān*). These questions were answered at the instance of Saḍḍār by Bayhākī, as he tells us (*Taʾrīḫ al-Bayhān*, 163), in the same two languages. The *Maḥabir al-Taḍḍir* appears to have dealt with the history of Iran from about A.H. 410-560 (M. Kawtāl), i.e., approximately A.D. 1020-1165 or nearly 150 years, and was intended as a sequel to the *Taʾrīḫ al-Yamīn* of 'Uṭbī (*Taʾrīḫ al-Bayhān*, 20). Yāqūt quotes the work elsewhere, e.g., *Irshād*, v, 124. It is quoted also by Ibn al-Aḥlir (xi, 247-49, cf. 253) for the career of Sulṭān Shāh of Khurāsān, and by Dīwānī (*Taʾrīḫ al-Bayhān*, vol. II, 1-2). J. A. Boyle, *The History of the World-Compass*, 277 explicitly for the origin of the Khurāsān Shāh (where Dīwānī says incorrectly that it was a sequel to the *Taḍḍir al-Umm* of Miskawayh), but probably also elsewhere without specific acknowledgment (cf. *Taʾrīḫ al-Bayhān*, 20, 22, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000).

Some portions of Bayhākī's poetical anthology *Wāḥid al-Dumya*, a continuation of the *Dumyā al-Kayr* of Bāghar and including specimens of his own poetry in Arabic, are known. See Brockelmann, and H. Ritter, 'Philologia XIII', no. 173 (*Oriens*, vol. I, 1930, 77). There was also a supplement entitled *Dumyā al-Wāḥid* (*Irshād*, v, 221).

A work on judicial astrology by Bayhākī in Persian, *Dīwānī* al-Aḥlām, is preserved in Cambridge University Library (H. G. Browne, *Handlist of Muhammadan Manuscripts*, 255), and a compendium of this work at one time existed (*ibid.*, 254).

**Bibliography:** Yāqūt, *Irshād*, v, 208-18; Muḥammad Kawfī, *Muḥaddith al-Taʾrīḫ al-Bayhān*, ed. A. Bahmanyar, Tehran 1327/1908; Storey, 353-54, 1105-06, 1295-96, 1350; Brockelmann, I, 324 and S. I, 557-58; Muḥammad Shāh, 'The author of the oldest biographical notice of 'Umar al-Khayyām & the notice on question, in *Islamic Culture*, vol. vi (1932), 586-623.

**AL-BAYHAKI, ISRAHIM b. MUHAMMAD**, Arab author, of whose life nothing is known beyond that he belonged to the circle of Ibn al-Muʿtazz and wrote the *adab* book *Kutub al-Mabshur wa'l-Mansur* (ed. by F. Schwally, Gießen 1902, reprinted Cairo 1906) during the reign of the Caliph al-Muhtadī (295-320/908-932).

(C. BROCKELMANN)

**BAYHĀN** (Bēhān), wādī and territory in South Arabia, situated between Wādī Harb [g.c.] in the west, and Wādī Marḡha (with the high plateau of the Nisyrīn) in the east (cf. art. 'AWLAḤ). This long valley, stretching from the Kawt 'Awadhilla (cf. art. 'AWMATH) ca. 100 km. (65 miles) northward, until its dry "delta" disappears in the desert Kanafat Sabatayn, was once the centre of the ancient state of Katabān [g.c.]. Thanks to the American expedition in 1930 the main part of Bayhān now is by far the best known of all South Arabian districts.

In Katabān inscriptions BYHN often means a tribe (Bēh Bayhān) or a temple. This fact does not seem to favour the etymology of Landberg (*Arabica*, v, 4) "common pasture land" (opp. *hawl*). From Sabaeen texts we know of another Bayhān, a place situated in the Dīwān (Ryckmans, I, 342; Grohmann, I, 178; v. Wissmann, A. Höfner 15, 77), according to the *Sūfa* of Hamādī, Bayhān was irrigated from Kadmān and Hasl, but got its drinking water from Wādī Sūdān. The inhabitants belonged for the most part to Banu Muzā, whose leader of Āl Makramīn enjoyed a high reputation in the tribe of Maḥādī. Yāqūt has Bayhān in his list of South Arabian districts (*mukhlāf*).

There are three Bayhān districts to be distinguished:

(1) Bayhān al-Dawla (Bayhān al-ʿAḥā) is the narrow, barren and sparsely populated upper part of the valley, from its beginning into the Nisyrīn on the frontier of Bayhān al-Kaṣāb. Like the territory of the Banayr [g.c.] it formerly formed part of the Rasāḥ sultanate, but now belongs to the state of Yaman. The climate is unhealthy, owing to the stagnant waters of the Ghayl. The capital al-Bayḍā [g.c.] is in the S.

(2) Bayhān al-Kaṣāb, the fertile central part of the valley. See the following art.

(3) Bayhān al-Aṣṭal, the remaining, northern part of the wādī, is a sparsely populated plain, gradually turning into the wide sand desert. Its four districts (Haw, al-Shatt, Bakha, 'Asaylan) were dominated by descendants of the Prophet—the two first-mentioned by *sayyida*, the last two by *gharib*. Hence the denomination Bīd al-Sādāt al-Aṣṭal for the whole country. The capital is Nuḥayl, with a landing-ground for aircraft. Numerous Bedouins also live here, mostly belonging to Bal Harīb; this tribe also controls the important salt-mines of Aḥḍīm far into the desert.

In antiquity this whole area was more intensively cultivated, thanks to the aqueducts, and for centuries the kingdom of Katabān had its centre here, along the income road, between Shubha [g.c.] and Marb [g.c.]. Special interest is attached to the tell Harjān Kuhlān a little S-W of 'Asaylan. As already Rhodokanakis has inferred from the inscriptions, this is the place of ancient Tinnā/Tinnā [g.c.], the capital of Katabān (Pliny: Thoma). Thanks to the finds made here in 1930, esp. of Roman Aretine ware, its final destruction by fire can be fixed to ca. 200 A.D. The excavation of two palaces (VTSH and HDTH) has yielded a lot of inscriptions, a bronze statue of princess DRT and two fine bronze lions of Hellenistic type, with infant riders. At Hayd bin 'Aḥlī the cemetery of Tinnā was found and partly investigated. Antique ruins also were found further to the south, at Hana al-Hajar and Harjān bin Hunayd. Here, at the junction of Wādī Bayhān and Wādī Maḥlaka, a huge cross-section of the stratified mound was made, which allowed to establish a pottery sequence back to ca. 1000 B.C., when

the first houses were built here. In the 1200 years down to the abandonment of the irrigation system the field level increased by about 8 m. (1 cm. every year and a half). A building of two courses marks the highest point in the excavations at Harjān bin Hunayd; this house probably was constructed in the first century B.C.

(O. LÖFGREN)

**BAYHĀN AL-KAṢĀB** forms the central part of the Wādī Bayhān (see the preceding art.), lying between Bayhān al-Dawla (S) and Bayhān al-Aṣṭal (N). It includes also W. Khīr which starts in the south, to the west of W. Bayhān, until it meets the latter near the town of al-Kaṣāb. Bayhān al-Kaṣāb, together with Bayhān al-Aṣṭal, now forms the Independent Territory of Bayhān in the Western Aden Protectorate. The Territory's boundaries in the S-W and N-W are a part of the "status quo line" of 1934 between Yaman and the Protectorate. The other boundaries are, in the E the Upper 'Awlaki mountains, in the N-E the Kurāt tribes and the Fringes of the Empty Quarter (al-Rub' al-Khālī).

Bayhān al-Kaṣāb (6-8000 inhabitants) is rich in subterranean waters often found at the depth of a few yards; there are well over two hundred wells in operation and the irrigation system is adequate. Rainfall is not regular and sometimes there may be no rainfall for a number of years. The region is rich with palm and *zāḥ* tree groves and other kinds of vegetation. The main products and crops are dates, *nahḥ*, figs, grapes, wheat, barley, millet, *duḡḡ*, sesame, indigo and cotton. There is good pasture land for sheep and goats and the region is famous for a breed of camels. The inhabitants form the tribe of al-Muḥābaya, who have, as is evident from the dual form of the name, two main branches: Āl Ahmad and Āl 'Aḥlī. They are settled in a great number of villages. The main town is al-Kaṣāb, also called Hīṣū 'Abd Allāh, which is the main trading centre of the area and an important seat of administration. There is a landing ground and a wireless station at al-Kaṣāb.

The Aḥlī and Sayyids form no tribal group. They had always had the support of the Bal Harīb of Bayhān al-Aṣṭal and of one section of al-Muḥābaya, the Āl Ahmad, when Sharīf Ahmad b. Muḥsin signed a treaty with the British in 1903. The subsequent development in the internal situation of the area and the security requirements in face of the claims of Yaman to the territory and to the allegiance of the population led to the consolidation of the authority of the "Treaty Chief", with

the help of the Protectorate British authorities, over the whole territory and the tribes of W. Bayhān. In 1914 the Regent of the then minor Sharīf of Bayhān entered into an agreement with the British by which he undertook to accept advice on the administration of his country and the expenditure of his revenues. The Sharīf's capital is al-Nuḥayl, where there is a landing ground. Recently the Muḥābaya have been treated as semi-independent and were given a minor agreement for the protection of a landing ground. There is one *gharḥ* court and one Common Law (*ḥarf*) court, and two elementary schools for boys, in Bayhān.

**AL-BAYHĀSIYYA** [see ABŪ BAYHĀS].

**BAYINDİR**, one of the Oḡuz (Turkmen) tribes. The Ak-Koyunlu, founders of the dynasty called by the same name, are a clan of this tribe, and some historians call the Ak-Koyunlu dynasty 'Bayındir Khan Oghlanlar' or 'Ālī Bayındiriyye', and the Ak-Koyunlu state 'Devlet-i Bayındiriyye'. It is possible that the Bayındir took part in the seldjuk conquest of Anatolia. There were many places in central and western Turkey called after them in the 9th/15th and 10th/16th centuries. No doubt most of these belonged to the Bayındir who took part in the conquest of Anatolia. We find Bayındir among the Turkmen in Syria in the 8th/14th century. The Ak-Koyunlu clan of this tribe was engaged in political activity in the Diyarbakir region in the same century. The most important Bayındir clan in the 10th/16th century was in the Tarsus region, and was engaged in agriculture. There were other Bayındir clans in the Tripoli and Aleppo regions of Syria, and in the Yemīl II, south of Sivas. The Bayındir of Aleppo were called by the Ottoman government to take part in the expedition against Austria in 1690. A Bayındir clan lived in the Astarābād region among the Göklen Turkmen. Members of the Ak-Koyunlu dynasty believed themselves to have descended from Bayındir, ancestor of the Bayındir tribe, and used its mark on their coins, monuments and edicts. Bayındir was also used in the past as a personal name in Turkey and Iran.

**BĀYKARĀ**, a prince of the house of Tinnūr, grandson of its founder. He was 12 years old at the death of his grandfather (Shāḥbīn 702/February 1402) so he must have been born about 793/1393-3. His father 'Umar Sharīf had predecessor Tinnūr, Bāykarā is celebrated by Dawlat-Shāh (ed. Browne, 374) for his beauty as a second Joseph and for his courage as a second Rustam; he was prince of Balḥ for a long period. In the year 817/1414 he was granted Luristān, Hamādān, Nihāwand and Burḡudīz by Shāh Rūḡ; in the following year he rebelled against his brother Iskandar and seized Shīrāz but was afterwards overthrown by Shāh Rūḡ. Pardoned and allowed to go to Prince Kayḍ al-Kandahār and Garmat, he stirred up a rebellion there too, and was seized by Kayḍ in 829 (1416-7). Shāh Rūḡ pardoned him again and sent him to India; whether further is known of him. This account, which is based on Hāfi-i Abru, does not agree with

an improvised brick throne, still extant at Kalānāwār. Soon after wards Hīnū, originally a corn-chandler from Rīwārī, near Alwar, who commanded the Sīr troops, attacked Delhi, and Tardī Bēg, the Moghal governor, fled from the city without offering even the feeblest resistance. Bayram, who was now all-powerful, ordered the execution of Tardī Bēg, apparently as a lesson to others but most probably to avenge the insult which that officer had had the audacity to offer to Humāyūn in the hour of his distress when he was fleeing from Kandahār. Firghīas justifies this murder, although on purely political grounds. In 964/1556, when Hīnū clashed with the Imperial forces, the battle-field was at Pālpāt, Bayram scored a clear victory and, with the tacit approval of the monarch, killed the wounded general. Bayram has been adversely criticised for this callousness towards a fallen foe, but it should not be forgotten that in despotic monarchies, decapitation was the order of the day, especially in the case of rebels, rivals to the throne or State enemies; an example is the execution by Awarazād of Dīk Shukh, whose head was publicly exhibited in Āgra. Further, it was idle to expect any mercy from Bayram towards a low-caste upstart who nurtured the ambition of wearing the crown, and who had had the audacity to oppose the Emperor in person. With the defeat of Hīnū and the break-up of the Afghan army, the crown of Hindūstān fell into the lap of Akbar like a ripe apple. Bayram was now at the height of his power and practically ruled the empire in the name of his ward. Akbar, however, had begun to show signs of resentment towards the Protector, who interfered in his boyish pleasures and desired him to maintain a princely demeanour. His marriage in 965/1557 to Salīmā Sultān Bēgum, a cousin of Akbar and the daughter of Humāyūn's sister, Gulrahī, forcibly introduced Bayram into the royal family, thus adding to his prestige and personal glory. This marriage was celebrated with great pomp and show at Džulmūdār (Džalandhār), on (9.6.96), his way back from Māhlot (now Kānkot, in Džammū), where earlier in the same year Bayram, in a joint command with Akbar, had compelled Sikandar Sūr to surrender after a long siege. Prior to his marriage to Salīmā, which was purely of a political character, he had been married to the daughter of Džamāl Khān, a Mīwāt chieftain, who gave birth to Mirzā 'Abd al-Rahīm Khān, *Khān-i Khawān* (9.2.), only four years before his death. The Mīwāt territory, which was Tardī Bēg's assignment, had already been conferred by Akbar on one of his confidential servants, Mullā Fir Muhammad Shirwān.

Bayram committed a tactical mistake in appointing Shaykh Gadāl Kambōh of Delhi, a bigoted Shi'ī, as *nāib al-yūdār* in 966/1558-9. This caused great resentment among the people and the Tūrānī nobles, who were almost all of them Sunnīs, and al-Badā'īnī (I.iii, trans. ii, 22-4) makes it the peg on which to hang his 'most bitter gibes and venomous puns'. This, coupled with his other indiscreet acts, such as the elevation to State offices of members of the Shi'ī sect, the execution of Tardī Bēg of the Sunnī persuasion, the non-allocation of the privy purse to the Emperor, whose needs were fast multiplying with his increasing years, the meagre allowances for the royal household, and his own arrogant behaviour and over-estimation of his services, brought about a change in Akbar's attitude towards the Protector and he began to look for an opportunity to throw off the trammels

of tutelage. Māham Anaga, Akbar's wet-nurse, who, at the head of a small but powerful Palace clique, had been secretly striving to compass Bayram's ruin, played no mean a rôle in estranging the ward from the guardian. Bayram realised that the scales were weighted against him, deciding to clinch the issue by force of arms, and, on the pretext of leaving for Mecca, came to Džulmūdār with the intention of taking it, after lodging his family in the fort of Bhattinda. He was defeated in a pitched battle by the Emperor's forces and was made to return the insignia of office. Deprived both of his office and the aid of *Khān-i Khawān*, now consorted on Mun'ūn Khān, Bayram saw no way out but humbly to submit, and was pardoned by Akbar. Dejected, disappointed, and fallen from grace, Bayram, in fulfilment of his earlier intention, set off for Mecca, but was treacherously murdered by a vengeful Afghan enemy, Muḥarrā Khān Lūhānī, whose father had been killed in the battle of Mādhīwāra (963/1555). Bayram was killed while encamped at Patan (Aḥmadnagar), on 14 Džumādī I, 968/15 January 1561. His camp was plundered and his family, including the 4-year old Mirzā 'Abd al-Rahīm Khān, reached Ahmadābād almost penniless. The commandant of Patan, Muṣā Khān Pāllāhī, who had hospitably received Bayram Khān, did not even give the dead hero, formerly so wealthy, a decent burial. Some poor and God-fearing people buried the former *Khān-i Khawān*, who was, in due course, in accordance with his wishes, was transferred in 971/1563-4 to Maghad from Delhi, where it had been brought from Patan for a temporary and modest burial. Now he lies buried in a high-domed tomb in the vicinity of the mausoleum of Imām Muṣā al-Rūḍī.

As accomplished scholar, a good poet in Turki and Persian, a connoisseur of art, a liberal but orthodox Shi'ī, Bayram Khān was a truly great man who patronised the 'ulama' and men of letters, no less than poets, artists, musicians, singers and craftsmen. He has received a generous tribute from even a carping critic like al-Badā'īnī for his qualities of head and heart. His *diwān* was published at Calcutta in 1910.

Akbar, who like his father owed his throne to Bayram Khān, tried to atone for his ingratitude by bringing up Mirzā 'Abd al-Rahīm Khān, his orphaned son (who later on became *Khān-i Khawān* and is better known to history than his father) and by marrying Salīmā Sultān Bēgum, his widow. If the execution of Tardī Bēg is a stain on the good name of Bayram Khān, his undignified dismissal by Akbar is no less a blot on the escutcheon of the 'Great Mogul'.

**BAYRAMIYYA**, a *tarīqa* deriving from the *Khawāṭiyya* and founded at Ankara in the 8th-9th/14th-15th centuries by Ḥadīdī Bayrām-i Wall (Vel). In Sūfī tradition, the Prophet enjoined on Abū Bakr the *dhikr-i Bāṭin*, and on 'Alī the *dhikr-i dīnī*. The Bayrāmīyya's preference for the *dhikr-i dīnī* being shared by the Nakshbandīyya, it has been regarded as a blend of the *Khawāṭiyya* and Nakshbandīyya, but in fact its relationship to the latter is slight, its practice of the *dhikr-i Bāṭin* being a product of its Malāmī origin.

On the death of the founder, the Order split, one branch adopting the *dhikr-i dīnī* and following Ak Shams al-Dīn; these became known as Bayrāmīyya-i Shamsīyya. The other branch, under 'Umar Dede of Bursa, abandoning *dhikr*, *awrad*, their individual costume, and *tahyas* (*tekkas*), called themselves Malāmīyye-i Bayrāmīyya. Later, a third branch, the Djalawatiyya, emerged under 'Atiz Maḥmūd Hudā'ī (d. 1098/1682-3).

The chief doctrinal peculiarity of the Order, and another mark of its Malāmī origin, is that the devotee was introduced to the concept of *wahdat al-wuḥūd* at the beginning of his spiritual career, and not at the end of it as in other Orders. He must first grasp that all acts are from God (*isḥād-i a'wāl* or *isḥād-i a'wāl*); next, that the acts are a manifestation of the attributes, all of which are God's (*isḥād-i a'wāl* or *isḥād-i a'wāl*); finally, that the attributes are a manifestation of essence, that existence is one, and that all things are manifestations of the *ay'yan-i 'Ulūmīyya* which exist in God's knowledge (*isḥād-i a'wāl* or *isḥād-i dīnī*).

The headpiece of the Order was a six-panelled *hadd* of white felt, said to symbolise the six attributes (up, down, right, left, front, rear) and so to indicate that the wearer comprehended all existing things.

From the first, the Order's connections with its parent Malāmīyya were strong; more than one Bayrāmī shaykh was recognised by the Malāmīyya as the *ḥafiz* of the time.

At the dissolution of the *tarīqa* in Turkey in 1925, the centres of the Order were Istanbul, Ankara, Izmit, and Kastamonu.

**Bibliography:** See the long article *Bayramīyya* in *JA*, by Abdūllahī Gölpinarī, of which this article is a condensation. (G. L. LEWIS)

**BAYRŪT** (currently written Beyrouth or Beirut), capital of the Lebanese Republic, situated 33° 34' lat. N. and 35° 28' long. E., is spread at first on the north face of a promontory, of which it now occupies almost the entire surface. The etymology of the name, long disputed, is no doubt derived from the Hebrew *be'erot*, plural of *be'er*, (well), the only local means of water supply until the Roman period. As a human habitat the site is prehistoric, traces of the Achaean and Levalloisian periods

having been found there. It is as a port on the Phoenician coast that the agglomeration appears under the name *Beruta* in the tablets of Tell al-'Amarna (14th century B.C.), at that time a modest settlement long since eclipsed by Byblos (Jubayl). During an obscure period of twelve centuries *Beruta* underwent the passage of armies coming up from Egypt or descending from Mesopotamia, among whom was Ramses II in the 13th century and Aschaddon, king of Assyria, in the 7th century.

Towards 200 A.D., Antiochus III the Great gained a victory over Phraates V and annexed *Bayrit* to the Seleucid kingdom and Syria. The town, for a time called Laodicea of Canaan, was destroyed about 140 B.C. by the Syrian usurper Tryphon. Despite this disaster the port saw a great rise owing to the commercial relations with Delos, the Italians and the Romans; *Bayrūt* then found its vocation as a link between Orient and Occident.

Taken by Marcus Agrippa in the name of the Emperor Augustus, the town was rebuilt, embellished by remarkable edifices and peopled by veteran Roman legionaries. In 14 B.C. it was raised to the rank of a Roman colony (*Colonia Julia Augusta Felix Berytus*). Very rapidly *Berytus* became a great administrative centre (Herod the Great and his successors were resident there, an important station of commerce and exchange and a well attended university city. Its school of law, from the 3rd century A.D., enjoyed particular acclaim and by its brilliance rivalled Athens, Alexandria and Caesarea. The increase in population made it necessary to construct for its water supply an important aqueduct (*Kanūnī Zubayda*) in the valley of the *Macorus* (Nahr *Bayrūt*).

By the end of the 4th century *Berytus* was one of the most important cities in Phoenicia and the seat of a bishopric. A violent earthquake, accompanied by a tidal wave, destroyed *Bayrūt* in July 551. Justinian had the ruins restored, but the city had lost its splendour, and it was a town without defences that the troops of Abū 'Ubayda took when they entered in 140/95 the most Roman of the cities of the Orient.

Under Muslim domination a new era began for *Bayrūt*. The Umayyad caliph Mu'awīya had colonists brought from Persia to repopulate the city and its surrounding area, sericulture prospered again, and commercial relations resumed at first with the interior (Damascus) and later with Egypt. In the first centuries of Islam *Bayrūt* was considered a *ribat*, and the holy imām of Syria, Al-Awā'ī, installed himself there in 157/774. In 364/975 John Tzimiskes conquered the city, but shortly after the Fātimids retook it from the Byzantines. The Arab geographers of the 4th and 5th/10th and 11th centuries all mention that the city was fortified, and subject to the *ghinn* of Damascus.

The Crusades brought fresh troubles. In 492/1099 the Crusaders coming from the north along the coast did no more than provision themselves at *Bayrūt*; they returned there after the capture of Jerusalem. In 503/1110 Baldwin I and Bertrand of St. Gilles blockaded the city by land and sea. An Egyptian fleet managed to get supplies to the besieged, but a reinforcement of Fīsan and Genoese ships enabled them to launch an assault and take the city on 23 Shawwāl 503/1110. In 1112 nomination of the first Latin bishop took place, Baldwin of Boulogne, who relieved the patriarch of Jerusalem, since in the Greek ecclesiastical organisation of the 11th century *Bayrūt* had been subject to Antioch. The Hospital-

lers built the church of St. John the Baptist, which became the mosque of Al-'Umarî. In Rabî' II 578/ August 1282, Salâh al-Dîn sought to separate the County of Tripoli from the Kingdom of Jerusalem by retaking Bayrût, but it was not until the second attempt in Djumâda II 584/August 1287 that the city capitulated. In Dhû l-Ka'da 592/September 1297, Amalric of Lusignan took the city, whose Ayyûbid garrison had fled. The Ibelins restored the defences of Bayrût and renewed its influence throughout the Latin Orient. In 1231 Riccardo Filanghieri occupied the city, but not the castle, in behalf of the Emperor Frederick II.

Shortly after the accession of the Mamlûks at Cairo, the lords of Bayrût were reduced to treat with them in order to preserve their independence with respect to the other Franks. In 667/1269 Baybars gave a guarantee of peace. In 684/1285 Sultân Kalâ'ûn granted a truce which allowed a resumption of commercial activity, and finally, on 23 Raddâb 690/ 23 July 1296, the Amir Saadijâr Abû Shaddâd, coming from Damascus, occupied Bayrût in the name of Al-Malik Al-Ashraf Rihâlî.

Under the Mamlûks Bayrût was an important *wilâya* in the province (*djund*) of Damascus, and its governor an *amir jalâlîyah*. During the entire Middle Ages, possession of Bayrût was a powerful trump card, for one could procure there two rare "strategic materials", wood, from the pine forest south of the city, and iron, from the mines nearby.

In the 8th/14th century, commerce was troubled, the port having become the scene of rivalries between Genoese and Catalans, and the Mamlûk princes reinforced its defences, Tughlî (743/1343) and Barkûk (784-791/1382-1389) each having a tower constructed. In the 9th/15th century, Bayrût continued to be the meeting-place of western merchants who came there seeking silks, while fruit and snow were exported to the court at Cairo.

At the beginning of the 10th/16th century, the Frankish merchants were subjected to the extortions of the semi-autonomous governors nominated by the Porte. Under Fakhr al-Dîn (1593/1614) the city saw a brilliant period, and relations were warmer with Venice. In exports silk surpassed citrus fruits, while rice and linen cloth was imported from Egypt.

In the middle of the 18th century, Bayrût was the most heavily populated coastal city after Tarîbulûs, the nucleus of the population being the Maronites protected by the Druze amirs. Suffering the counter-attacks of the Russo-Turkish war, Bayrût was bombarded several times and finally occupied by the Russians in October 1773, until February 1774. From 1783 on, despite the competent administration of Bashîr II the Great (1788-1850), the campaign of Ibrahim Pasha, which terminated in the bombardment of Bayrût by a combined Austrian, English and Turkish fleet in 1840, ruined commerce. A new era began in 1860. The massacre of the Christians in Syria led to a major exodus towards Bayrût, and the tiny city of 20,000 acquired a dense Christian inport.

Having begun about a century ago, the rise of Bayrût continues. The city has developed very rapidly and for several decades has surpassed the brilliance of its Roman period. After having been, during the French Mandate (1920-43), the residence of the High Commissioner of France for the States of the Levant, Bayrût became the capital of an independent state and the seat of Parliament and the Administration of the country. The extremely heterogeneous population, predominantly Arab, is more than 200,000 (1958), which is doubled during

the week with the daily influx of villagers, workers and merchants from the surrounding areas.

Three universities (American, French and Lebanese), numerous academic establishments of every nationality, and a National Library make of Bayrût one of the most important intellectual centres of the Arab Middle East. The city is also a centre of commerce and exchange. A port continually expanded since 1893 and linked by railway to Syria and Jordan permit important transactions (2,500,000 tons in 1950), despite the competition of Haifa and, more recently, Latakia, the port of Syria. The volume of transactions has led to the creation of a Stock Exchange, and the foundation of branches by all the large international banks. An aerodrome of international class (Khalid) permits contacts with the entire world. A centre of transit and distribution, Beirut is by vocation a link between Orient and Occident.

**BAYSÂN**, a little Palestinian township in the valley of the Jordan, situated 30 kms. (18 miles) south of Lake Tiberias and 98 kms. above sea-level on a terrace raised 170 ms. above the low-lying ground through which, some distance away, the Jordan winds its way. Avoiding thus the extreme tropical heat which reigns elsewhere in the Ghawr [26], it has all the same a hot and humid climate which Arab geographers did not fail to criticise, at the same time deploring the poor quality of its water (they nevertheless point out the merits of 'Ayn al-Fulûs, a well which a wide-spread tradition regards as being among the four springs of Paradise). Irrigation formerly made possible the cultivation of rice which was the country's wealth at the time of al-Makdûl, whilst of the palm groves, mentioned in traditions, the geographer Yâkûb, in the 10th/11th century, observed only two single palm trees. But Baysân, thanks above all to its remarkable commercial and strategic position on the main stream of the traffic joining Damascus and the interior of Syria to Galilee and thence to Egypt and the Mediterranean coast, has succeeded in preserving its urban character up to the present day, despite innumerable historical vicissitudes.

The settlement of this site, proved for the period before the 3rd millennium by the excavations of Tall al-Husn which have succeeded in reaching the chalcolithic level, goes back indeed to very far-off times. We know of the Egyptians' interest in the ancient Bethsan, or Bethshân, whose name they transcribed as Bt'shn and which they annexed for three centuries after the victory of Thutmose III in the plains of Megiddo, leaving numerous traces of their occupation. Then this important village, equally coveted by Philistines, Israelites and Medianites, which at one time formed part of the kingdom of

Solomon but remained always hostile to Judaism, became in the Hellenistic and Roman periods one of the most important cities of the Decapolis under the name of Scythopolis. Hellenism flourished there and the success which Christianity attained later was confirmed by the construction of various churches and monasteries. Its bishop was Metropolitan of Palestine Secunda and the celebrated hagiographer, Cyril of Scythopolis, was born there.

Exposed to the first Arab attacks, for as early as 13/634 the troops of Khalid b. al-Walid attacked and annihilated a Byzantine army not far away, the town which now resumed its original native name softened into Baysân, was 'definitely occupied in 15/636 at the time of Shurabîl b. Hasana's conquest of the Jordan region and was certainly visited by Abû 'Ubayda b. al-Djarrâh whose tomb according to some authors is situated there. As administrative centre of one of the districts of the *djund* of al-Urdunn, it seems to have prospered peacefully among its gardens until it was attacked by the Franks of the First Crusade who annexed it to the Latin Kingdom of Jerusalem after it had been taken by Tancred in 492/1099. They created the barony of Bessan but transferred the episcopal see to Nazareth. Its history continued to be a troubled one. Muslim attacks ended in its reconquest by Saladin in 521/1187 and later there was a new raid by the Franks of the Fifth Crusade who plundered it in 614/1217. The invasion of the Mongols who were defeated not far away at 'Ayn Djâlût (648) in 648/1260 was a heavy blow to it but later on in the time of the Mamlûks it was to become the capital of a *wilâya* in the second southern frontier of the province of Damascus. At this time the caravanserai of Salâr was built in its immediate neighbourhood on the route of the present-day railway. This was used by the mounted mail couriers whose itineraries was modified in this way by the initiative of the chief of the chancellery, Ibn Fadl Allâh, in 743/1340.

**BÂYSONGHÖR**, (J. SOURDEL-THOMINE) Bâsh Bâshîk and grandson of Tughlî, was appointed by his father in 820/1417 to the office of chief judge at the court; in 823/1419 on the death of Jura-Ybâk, he took possession of Tabriz and was appointed governor of Astârâbâd in Safâr 835/October 1431, but he never ascended the throne; the astrologers having predicted to him that he would not live more than forty years, he gave himself up to dissipa-

tion and died at Harât on Saturday, 7 Djumâda 857/ 19 December 1435, at the age of thirty-six. He was buried in the Mausoleum of Princess Gawhar-Shâd. An artist and patron of the arts, he was a designer and an illuminator; in the library which he founded, forty copyists, pupils of Mi-'âh, inventors of the nasta'liq script, were occupied copying manuscripts. His example had a considerable influence on the development of the art of painting in Persia in the period of the Timurids. In 829/ 1425-6 he caused a critical edition of the *Zuhd-nâma* of Firâwâz to be undertaken and a preface to be written to this work, the longer of the two which we possess.

*Bibliography:* Cl. Huart, *Calligraphes et miniaturistes*, 97, 208, 324, 336; J. Mohl in Firdawî, *Le livre des Rois (Shâh-nâmâ)*, Vol. I, 8v, note 1; Mirzâ'âd, *Rûdâd al-Safâ*, VI, 212, 213; Khâ'ndamir, *Hâth al-Siyar*, III, Part 3, 116, 123, 120. (C. HUART)

**BÂYSONGHÖR**, second son of Sultân Mahmûd of Samarkand, grandson of Sultân Abû Saïd (d. 6.), born in the year 582/1178-8, killed on 10 Muharram 905/17 Aug. 1493. In the lifetime of his father he was prince of Dughlâra; on the death of the latter in Rabî' II 900/30 Dec. 1494/17 Jan. 1495, he was summoned to Samarkand. In 901/1496, he was deposed for a brief period by his brother Sultân 'Alî and in 903, towards the end of Rabî' I 901/1497, finally overthrown by his cousin Bâbur. Bâysonghor then betook himself to Hîsar where he was successful in defeating his brother Mas'ûd and taking the country with the help of the Beg Khosraw Shâh, who came over to his side; he was soon afterwards betrayed by this same Beg and put to death. Bâysonghor is described by his rival Bâbur as a brave and just prince. He was also famous as a Persian poet under the name 'Adilî; his *ghazals* were so popular in Samarkand that they were to be found in almost every house (Bâbur-nâma, ed. Beveridge, I, 68 b.).

(W. BARTHOLO)

**BÂYSONGHÖR**, the name of another prince, of the Ak-Koyunli dynasty in Persia, son and successor of Sultân Ya'qûb; he only reigned for a short period from 896-7/1490-2 and was overthrown by his cousin Rustam. (W. BARTHOLO)

**BAYT**, the common Semitic root of the word for "dwelling", whether the "tent" of the nomads, or the "house" (stone, wood or brick) of sedentary peoples. It may sometimes designate a "sanctuary": thus in Arabic with the article *al-bayt* is applied par excellence to the holy place at Mecca, also called *al-bayt al-harâm* (sacred dwelling) or *al-bayt al-shâh* (ancient). Geographical names composed with *bayt* are equally frequent, and the first element is often found reduced in Syro-Palestinian toponymy to the prefix *bt*, derived from the Aramaic (*Beit*) *bt*, but also known from Canaanite, to judge by several examples of it in Biblical Hebrew (*Beit-gên*, etc.).

In Arabic, the definitions, always detailed, of the lexicologists limit the term to a dwelling of medium dimension, perhaps suitable for one family. And the sense of "family" is found precisely in all of the Semitic languages. As, by contrast, *BAYT* does not figure among the technical designations of tribal subdivisions, one might see there an argument in favour of a classical distinction between the family, however large, and these other various groupings, if unfortunately the same metonymical association were not to some extent encountered in all languages, too generally to be provocative. (J. LECHE)

Organisation. All the various offices derive their powers by delegation from the Imām who is the head of the *bayt al-māl*. In *Sunni* law a firm distinction is drawn between the public authority with which the Imām is invested in this connection and the personal control of his private purse. (See Tyan, *op. cit.*, I, 391 f. and II, 195. Also Mez, *Renaissance*, 113-116 (Eng. tr., 120-122), for the position in practice.) This distinction does not apply to the same extent in the law of the Twelver Shī'ā, where the ownership of certain properties which in *Sunni* law belong to the community as a whole is vested in the person of the divinely inspired Imām. (See Querry, *Le Droit Musulman*, I, 178, 337. Bailie, *Iranica Codic*, 362.)

The actual collection and distribution of State revenues is the responsibility of the *Sāhib bayt al-māl* who controls the several officials in charge of the various categories of revenue listed below. Freedom, Islam, moral integrity ('*adala*' [see 'Aḥq] and competence are essential qualifications for such appointments, and in addition the quality of *idghāḥ* [g.n.] is required to those offices which involve discretionary assessment or expenditure. Minor agents of collection or delivery may be slaves, or *dhimmīs* when dealing only with their co-religionists. The records and accounts of Treasury business are dealt with by a special administrative department under the control of the *Kātib al-dīnār*, for which office '*adala* and professional competence are the only two essential qualifications.

Within this skeleton framework the nature and scope of individual offices is a matter for the discretion of the Imām. "Neither for general nor for particular appointments does the *Shār'ī* define the terms" (Ibn Farjūn, *Tahīrat al-Iḥkām*, II, 141, 158).

Sources of Revenue. Not all State revenues are "assets of the Treasury" (*ḥukūk bayt al-māl*) as such. These latter may be defined as those monies or properties which belong to the Muslim community as a whole, the purpose to which they are devoted being dependent upon the discretion of the Imām or his delegate.

Thus the only portion of the *ghanima* [g.n.] which qualifies as one of the assets of the Treasury is that fraction of the fifth (*al-ḥamsa*)—which term may here be taken to include the levy on mined products and treasure trove—which is the share of Allāh and the Prophet and which is to be spent in the interests of the community as a whole. The remainder of the fifth is earmarked for specified classes—the relatives of the Prophet, orphans, poor and travellers—and as such is removed from the discretion of the Imām. Similarly the proceeds of *sadaka* or *zakāt* [g.n.] are destined for particular classes of the community and though, like *ghanima*, these monies may be controlled by Treasury officials or lodged in the vaults of the Treasury pending the determination of the entitled recipients, membership from the moment of payment, vests in the entitled recipients and not in the *bayt al-māl*. Even the Hanafī jurists, who allow the Imām to appropriate out the *sadaka* at his discretion to one or more of the specified beneficiaries to the exclusion of the rest, draw a clear-cut distinction between *al-sadaka* and *mal al-Muslimīn*. (See *Kitāb al-Kharāj*, 80, 149, 187.)

The primary source of the Treasury's income is, then, the revenues collectively termed *ḥaq'*, i.e., the taxes of *khārāj* and *diya* [g.n.]. The position of the tax '*uḡr*' [g.n.] is somewhat confused. Some jurists appear to regard it as *ḥaq'* and others as *sadaka*,

while in one view it is treated as *sadaka* if paid by Muslims and as *ḥaq'* if paid by non-Muslims. Among the subsidiary sources of income are:

(i) Property with no known owner—e.g., runaway slaves when apprehended, or property found in the possession of arrested brigands. The proceeds from the sale of such property if movable, or its exploitation if immovable, belong to the *bayt al-māl*.

(ii) The property of apostates. While the great majority of jurists maintain that all the available property of apostates belongs to the *bayt al-māl*, the Hanafī jurists are divided between denying the claim of the Treasury altogether and restricting it to such property as was acquired after apostasy. (iii) Estates of deceased persons. [See *ḥukūk*]. The Treasury is especially favoured in this respect in Mālikī law, where it will always succeed, as residuary heir, in the absence of any entitled '*awāla* and such Kur'*ānic* heirs as would exhaust the estate by the sum of their allotted shares. With no heir of either category the Treasury is assured of at least two thirds of the estate, since bequests may not exceed in value one third of the net estate. In the law of the other schools, however, the presence of any Kur'*ānic* heir or blood-relative will exclude the Treasury, and in Hanafī law, failing such heirs, testamentary disposition may embrace the whole of the estate. Here then the Treasury only succeeds by a species of *catch-all*.

Expenditure. Claims upon public monies fall, according to Māwardī (*al-Aḥkām al-Sultāniyya*, 367 f.), into two main categories.

(i) Claims in regard to which the liability of the Treasury is absolute. Such claims are either for services rendered to the State—e.g., the stipends of the armed forces, the salaries of State officials, the price of equipment purchased—or for expenditure which is a specific obligation upon the State—e.g., the duty to maintain its prisoners. The satisfaction of such claims is the first obligation upon the Treasury and payment may only be deferred when (as is the case with an ordinary debtor) the Treasury is insolvent. At the discretion of the *Sāhib bayt al-māl* loans may be raised to satisfy these claims.

(ii) Claims in regard to which the Treasury's liability is dependent upon the existence of the necessary funds and the satisfaction of all claims in the previous category. Here the expenditure involved is for purposes of the public welfare and interest—e.g., the construction of roads, water supplies, the repair of damage to *khārāj* lands.

When all outstanding obligations have been met the Hanafī jurists advise that any surplus should be preserved to insure against possible future need, while the Shī'ī maintain that any surplus should be expended immediately in the public interest. Beyond these general principles the law does not go, content to leave the detailed determination of the public interest to the discretion of the Imām, with the one proviso that public funds are not to be devoted to purposes prohibited by the law—e.g., gambling, music etc.

Procedure. The administrative work of the *dīwān* (analysed by Māwardī, *op. cit.*, 370-373) raises three main legal issues.

(i) Legal proof. While it is a fundamental principle of *Shār'ī* law to deny any validity to written evidence, in Treasury practice official documents and records are *ḥaq'* in a sufficient basis for action. Shī'ī law endorses this practice by drawing a distinction between "private rights" (*al-ḥukūk al-ḥayā'a*) and "public rights" (*al-ḥukūk al-ḥimma*),

but the Hanafīs declare that Treasury documents can only serve as a basis for action when their authenticity is established by oral testimony. Secularity of payment of taxes is established in Treasury practice by the written receipt of the collector. Legal doctrine, however, requires the oral acknowledgement of his signature by the collector; and further, in Hanafī law, such an acknowledged written receipt must be substantiated by oral acknowledgement of actual receipt. Finally written authorisation for payment from the Treasury is in practice accepted as a sufficient basis for Treasury accounts, while the jurists ideally require in addition oral acknowledgement of actual receipt by the designated receiver.

(ii) Procedure in disputes. The paramount question of the allotment to the contending parties of the respective rôles of plaintiff and defendant is governed by normal *Shār'ī* principles. The plaintiff, upon whom falls the burden of legal proof (failing which effect is given to the defendant's oath of denial), is the party whose claim runs counter to the initial legal presumption attaching to the case. Thus in disputes arising from the inspection of officials' accounts by the *dīwān*'s officers (the presentation of accounts to the *dīwān* being obligatory upon officials concerned with the collection or disbursement of *ḥaq'* revenues), the accountant of the *dīwān* holds the rôle of plaintiff if the dispute concerns the income of the Treasury and that of defendant if the dispute concerns expenditure.

(iii) Jurisdiction. Disputes between private citizens and Treasury officials are justiciable by the *Sāhib al-dīwān*, unless he is expressly denied this function in his terms of appointment. Such judicial competence belongs naturally to an office of which the principal duty is that of assuring the application of the rules and regulations of fiscal law. In the case of disputes between officials of the treasury and the officers of the *dīwān*, when the *Sāhib al-dīwān* is, in effect, a party to the dispute, the principle that no one can be judge in his own case applies and jurisdiction belongs to the ordinary courts.

Fundamentally concerned with the strict regulation of man's relationship with his Creator, the *Shār'ī* deals with the relationship between the individual and the State only in general terms, restricting itself to demanding the observance of a few relevant principles. This attitude is particularly evident in the field of criminal law, where, outside the *ḥudūd* offences (in which the notion of man's obligations towards Allāh predominates) the determination of offence and punishment is left to the discretion of the sovereign. So it is with fiscal law. Only those limited aspects of public finance which are deemed to constitute man's obligation towards Allāh (e.g., *zakāt* tax) are regulated in detail; and thus the law concerning the *bayt al-māl* is essentially within the province of the administrative regulations (*ḥukūb*) of the political authority and not of the *Shār'ī*.

Bibliography. The authoritative handbooks of *Shār'ī* law according to the different schools. Abū Yūsuf, *Kitāb al-Kharāj*, Cairo 1302/1884-5, translated and annotated by E. Fagnan under the title *Le Livre du l'impôt Fowier*, Paris 1921; Māwardī, *al-Aḥkām al-Sultāniyya*, ed. M. Eugène, 1833; Ibn Taymiyya, *Siyaṣat Shār'īyya* (trans. by H. Laoust as *Le Traité du Droit Public d'Ibn Taymiyya*, Beirut 1948); N. P. Agnolles, *Mohammedan Theories of Finance* (1916); R. Levy, *The Social Structure of Islam*, Cambridge 1957; A. Mez, *Renaissance* (Eng. trans. by Khudā Bukhsh and

Margoliouth); D. Santillana, *Istituzioni di Diritto Muslimano*, 2 vols. Rome 1926 and 1931; E. Tyan, *Institutions du Droit Public Musulman*, 2 vols., Paris 1935 and 1957.

[N. J. COLLISON]

II. History. The institution can be traced back to Muḥammad in so far as there already existed in his time the embryonic notion of a Treasury of the Community, supplied by diverse forms of contributions; but its real origin is to be found in the contact between the new needs of the Community which had become the conqueror of an Empire and the pre-existing fiscal institutions of the conquered States. Tradition is certainly correct in attributing to the Caliph 'Umar several essential preliminary steps, although the details are undoubtedly surrounded with much confusion. For 'Umar the immediate problem was the organisation of the system of stipends (see '*ḥaq'*), the fiscal regime itself and the collection of taxes remaining almost exclusively in the hands of the native population. Afterwards the progressive development of a bureaucratic and centralised Muslim State had a particular effect on the elaboration of the scheme of taxation, the methods of financial administration and the organs of this administration. It is obviously impossible here to encompass the whole history of the institution, particularly after the time of the fragmentation of the Muslim world into individual States whose differences became more and more accentuated; moreover no history of this kind has as yet been written. We shall, therefore, confine ourselves to making certain observations of general validity and indicating certain desirable lines of enquiry.

The simple taxes of the early Muslim community could, in their broad concrete lines if not in their theoretical basis, be assimilated to the more complicated taxes of the States to which Islam fell heir and whose fiscal structure the Arabs, like the majority of conquering nations, respected—to such a degree, indeed, that throughout the length of Islamic history the former Byzantine territories (differing among themselves) and the former Sāsānid territories (not to mention the West) remained quite distinct areas from the fiscal point of view. To this was added, at the outset, a further distinction, afterwards resolved, between the towns conquered by force of arms, which were directly subject to Muslim taxes and tax-collectors, the towns of '*ahd*' which paid a fixed tribute and raised it independently in their own fashion, and, between these two extremes, the towns of *suk*, where the taxes were Muslim taxes but were raised by the native administration. For two thirds of a century the fiscal records continued to be written in the native languages, until 'Abd al-Malik, (685-705) ordered the translation of the fundamental documents into Arabic (the example of the Egyptian papyri proves that it was by a slower process that Arabic came to be exclusively used in the work of the subordinate administration).

Both practice and theory fairly soon distinguished between the taxes and sources of revenue:

The basic tax was the land tax, *khārāj*, originally levied upon all the lands of the non-Muslim natives. When a large part of the indigenous population became Muslims by conversion, it became necessary, in spite of certain minglings, in order not to ruin the fisco, to decide that the land was not affected by the change of faith on the part of its possessor and must always be subject to the *khārāj*. From the point of view of the Islamic theory, the *khārāj*

*raḥī* constituted a permanent rent from the land for the benefit of the Muslim community, the supreme owner. This is the doctrine of *ḥayʾ*, the immovable properties acquired by conquest, a foundation in perpetuity for the benefit of successive generations of the community, in contrast to the movable booty, *ghanima*, which was distributed immediately. From the point of view of the indigenous population, the *ḥarāḍī* merely continued the pre-Islamic land-tax. In addition to the *ḥarāḍī* non-Muslims are subject to a capitation tax, *ḡḡiya*, which does lapse upon conversion to Islam. The distinction between *ḥarāḍī* and *ḡḡiya*, though sharp in theory, is not always so in terminology and in practice, particularly because the Byzantine Empire, it seems, had practiced a combined land-capitation tax.

The tax, or rather voluntary alms, peculiar to the Muslim was the *sakāt* or *ṣadaka*, levied upon both landed and movable property. As regards landed property it was applied on the one hand to Arab properties (especially in Arabia) and on the other hand to the *ḥiḡāʾ* conceded from the State domains to Arab notables and, later, to the military leaders of every race. In its relation both to landed and movable property the *sakāt* was closely allied to the tithes, *ḡḡr*, which was known to the Near Eastern pre-Islamic societies and was so called.

To these taxes were added for the *ḡḡr* the right to one fifth of the booty, the produce of mines, treasure trove from the land or from the sea and the *maṣāʾir* *ḡḡriyya*, succession to the inheritance of persons dying without legal heirs.

In addition, the State lands, *sawāʾif*, when they were not conceded as *ḥiḡāʾ*, whatever the method of their exploitation, brought in revenues similar to those of private properties. Further the State appropriated the proceeds from judicial fines.

It was only the taxes listed above which were held to be legal by the theory. But in practice many others were discovered or invented. Some were supplementary increases upon the normal taxes for the delinquency of attendance or for any other reason (*ḡḡraʾ*, *ḡḡḡḡ*), in contrast to the basic tax, *asī*, and others fell upon the most varied forms of economic activity (*ḡḡraʾ*, *ḡḡḡḡ*). These last were generally condemned by the jurists, who were often connected with commercial circles, under the name of *ḡḡḡḡ*, and certain pious rulers attempted to abolish them, though naturally this was without any lasting effect. The police often demanded the payment of a particular *ḡḡḡḡ*. Finally the State was always punishing high officials who had enriched themselves by confiscations (*ḡḡḡḡ*) etc.

The peculiarities of the assessment and the collection of each tax will be studied under their respective titles and so nothing more need be said on the subject here.

In general terms, the recovery of taxes can be effected either by direct administration (through the agent or *ḡḡḡḡ*) or by farming out, *ḡḡḡḡ*. The system of tax-farming, which was as well known to antiquity as the direct levy, gained ground with the growing decadence of the 'Abbasid Caliphate, but it was perhaps never practiced to such an extent as has often been believed by those who have failed to distinguish properly the notions of *ḡḡḡḡ*, *ḡḡḡḡ* and *ḡḡḡḡ*, which, although there may be occasional confusions of terminology, are utterly different things. *Kabala* can only come into operation where there exists a group of tax-payers collectively responsible for the tax. By agreement between the

group and the agent of the *ḡḡḡḡ* it may be decided, as was the case in the later Roman Empire, that the tax will be paid by one or several individual persons of standing, and it will be left to them to reimburse themselves afterwards with some small additional sum by way of compensation. The *ḡḡḡḡ*, therefore, does not modify in any way either the amount of the tax owed to the State or its direct recovery by the agents of the State from the basic group. The tax-farmer, *ḡḡḡḡ*, on the other hand, is an individual who, often for one or more provinces and for a number of years, pays annually to the State a contracted sum, less than the calculated revenue from the tax, and afterwards undertakes its recovery on his own account, which will, of course, reimburse him with profit. If the State is reduced to this method it is assured of a precise and immediate return from the pockets of rich individuals, but it loses a portion of the money paid by the tax-payer and, for the duration of the contract, the control of operations. As for the *ḡḡḡḡ*, he may well be a *ḡḡḡḡ*, but he has at the same time the unique position of a sort of official money-changer cum surety; for he verifies and standardises by exchange the different types of currency, good and bad, paid by the tax-payers in return for a small percentage collected as a supplementary tax from the latter.

Furthermore, since the territories subject to the normal taxation, levied directly or by farming out, there were other areas in regard to which the State had renounced some part of its fundamental rights. In some areas—*ḡḡḡḡ*—the State temporarily refrained from sending agents of collection, abandoning the revenue to an army commander so that he might cover therefrom the expenses of his army's maintenance. In other areas—*ḡḡḡḡ*—he is carefully distinguished from the *ḡḡḡḡ*—the State was content with a contracted tribute, without concerning itself with the theoretical scheme of taxation: equivalent to the primitive *ḡḡḡḡ*, this was applied in particular to the vassal rulers of regions which were not completely subdued. The *ḡḡḡḡ*, in its original form of a concession of land from the State domains which was subject to the payment of the title, had not any particular fiscal character; but later there were assigned under this name to army officers as the equivalent of their salary the fiscal rights of the State in *ḡḡḡḡ* districts, initially subject to the payment, by the beneficiaries, of the title for the area concerned, then later with no attached condition, the result of professional military service (see Cl. Cahen, *L'évolution de l'Égypte*, in *Annales ESC*, 1933). These different methods of alienation of the revenues of the *ḡḡḡḡ* naturally diminished the returns, but they equally alleviated the expenditures in a manner which often involved hardly any break with the previous position, since in any case the proceeds of the taxes from a province were never sent to the *ḡḡḡḡ* until the provincial expenditure had first been satisfied on the spot. The danger to the State was only serious in proportion to the extent, which varied in the different regions and at different periods, to which these alienations resulted in a relaxing of the fiscal control itself and consequently also of the appreciation of the resources of the territory concerned.

This appreciation was obtained with fairly reasonable accuracy not only through the lump evaluations of the budget but also from the daily sessions, following the ancient custom, devoted to the detailed assessment of lands and their fiscal value, as well as of persons subject to the *ḡḡḡḡ*

and, in all probability, the *ḡḡḡḡ*, not to speak of the other taxes. The best example preserved concerns the Fayyūm in the 7th/13th century (*Arabica*, 1936), but what we know of the fiscal *ḡḡḡḡ* of the province of Kūman in Iraq, etc., and in a general way of the methods of the administration, allows no one to doubt that there are almost everywhere parallels in 'Abbasid times. The value of each fiscal unity was the object of an assessment, *ḡḡḡḡ*, which continued to serve as an authority so long as there had been no revision, although naturally, the administration itself had to admit annual variations. Diverse works, such as the *Maḡḡḡḡ al-ḡḡḡḡ* and the Egyptian papyri, allow us to follow from another angle the precision of the daily accounts of the refunds of taxes and of the reliefs granted to tax-payers. Arrears (*ḡḡḡḡ*) were meticulously noted and claimed in following years, although it was in practice often necessary, when arrears had accumulated, to settle them by compromise. Recovery of taxes necessitated a distinction between the two calendar years, for only the personal taxes or the payments *ex contractu* could be based on the legal lunar year, while the taxes on land and its produce were of necessity based on the solar year, Persian or Egyptian.

These methods, which were the pride of the *ḡḡḡḡ* and the *ḡḡḡḡ*, allowed the 'Abbasid Caliphate, until the beginning of the 4th/10th century, and certain regional rulers after that date, to establish veritable budgets, at any rate of receipts (the arbitrary activity of the rulers in the matter of expenditure not allowing equally comprehensive appreciations in that phase). The numerous 'Abbasid budgets have been preserved, undoubtedly based upon good archive sources, the relative agreement of which guarantees the accuracy, if not of all the details, at least of the main and broad essentials. They do not provide a complete statement of the total receipts of the Caliphate, for the *ḡḡḡḡ*, the *ḡḡḡḡ* on movable property and, a *ḡḡḡḡ*, the *ḡḡḡḡ* only figure there exceptionally (their non-variable character and the fact that they did not issue from the same services being obvious). Such as they are they show us a total of income exceeding 400 million dirhams for the second half of the 2nd/8th century, falling short of 300 million by the beginning of the following century, and at the beginning of the 4th/10th century down to 140 million *ḡḡḡḡ*, which is approximately equivalent to 200 million dirhams. This shrinking of the receipts was due to the territorial losses of the Caliphate and not, except at moments of crisis, to diminishing fiscal values within each province. The increasing financial difficulties of the Caliphate were, therefore, not occasioned by any economic catastrophe, for which supposition there is absolutely no foundation, but by the relatively increasing burden of necessary expenditure, particularly military, which it was impossible to reduce in proportion to the decline in the provincial tax returns. Without attempting here to cover all the details of the military organisation of the Caliphate, we may try to show something of the financial burden which it constituted: a foot-soldier's usual pay being of the order of 1000 dirhams per annum, and that of a horseman double this amount, it can be estimated that the cost of the stipends alone for an army fifty thousand strong would be in the region of seventy five million dirhams. To this, of course, it is necessary to add the exceptional salaries of the commanders, the gratuities and the cost of equipping and maintaining the armies

and the fortifications etc., and one writer maintains that in the middle of the 3rd/9th century the army was costing at one time some 200 million dirhams, which means to say that at that moment there would be a surplus only of approximately one half of that sum (not counting the taxes which did not figure in the budget) for all 'civilian' expenditure. This latter expenditure is more difficult to assess, although we know the salaries of the principal officers of Government and Court under the 'Abbasids and the *ḡḡḡḡ*, not to speak of later periods (see especially *ḡḡḡḡ al-ḡḡḡḡ*, *ḡḡḡḡ*, and al-Makrizī, *ḡḡḡḡ*, 101).

It is difficult to give a precise description of the various organs of the central fiscal administration which often, and in a varying manner, overlap and are confused with each other under ill-defined titles. The fiscal administration was the primary duty of the *ḡḡḡḡ* in particular and in general, consequently, of the viziers when this latter developed. But it was impossible for a single organ to deal at the same time with both the operations and the fundamental rules (*ḡḡḡḡ*) of assessment and collection and the daily accounts of income and expenditure. In spite of the difficulty of the texts it is apparently to this division of duties that the institution of the *ḡḡḡḡ al-ḡḡḡḡ* corresponds, for this office, which was later known in the East as the *ḡḡḡḡ* (the director being the *ḡḡḡḡ*) appears to be the service of *accountancy*. From the time of al-Mahdi it controlled the accountancy services attached to each *ḡḡḡḡ* as well as those of the provincial administrations. Expenditure was the province of a special *ḡḡḡḡ*, the *ḡḡḡḡ al-ḡḡḡḡ*, while expenditures relating to the army were the province of the *ḡḡḡḡ al-ḡḡḡḡ*. With the inauguration of the system of the fiscal *ḡḡḡḡ* this latter *ḡḡḡḡ* in fact came to possess duplicates of the survey registers for receipts. The *ḡḡḡḡ al-Mā* properly so called was the service to which the income was delivered and from which the expenditure was drawn, the Treasury. An army of scribes, *ḡḡḡḡ*, and accountants, *ḡḡḡḡ*, worked in these offices, some under the control of others, applying the accountancy techniques which the didactic fiscal treatises of the *ḡḡḡḡ* period have revealed to us. For the representation of numbers they employed what is known as the *ḡḡḡḡ* script, which consisted of letters and particular signs devised from abbreviations of the names of numbers, and which was to remain in use almost up to the present day in certain countries, to the exclusion of the 'Arabic' numerals.

Still further subdivisions existed in the services, in particular, as regards the receipt of the land taxes, between the service for the *ḡḡḡḡ* and that for the *ḡḡḡḡ*, that is to say landed properties subject solely to the tithe. On the other hand a regional division was gradually established, by virtue of which we can distinguish a *ḡḡḡḡ* of *Sawād* (province of Baghdad), one of the east and one of the west (Arab territories). Special services administered confiscated properties; these were sometimes returned, sometimes distributed. Again, dues paid in kind, presents and gifts received, the valuable products of the *ḡḡḡḡ* etc., were stored in the *ḡḡḡḡ* or *ḡḡḡḡ*, and the general term of *ḡḡḡḡ* appears to have almost replaced, in the administration of the later Caliphate, the term of *ḡḡḡḡ al-Mā*, the change reflecting, undoubtedly, the proportionate increase of presentations in kind and the diminution of fiscal receipts in hard cash.

The Muslim State, however, always recognised the distinction between the private Treasury of the

Caliph or the Prince, *Bayt māl al-khāyṣa*, and the public Treasury, *Bayt māl al-maḥṣūm* or simply *Bayt al-māl*. But the distinction was by no means a rigid one, for the private Treasury was supplied not only with the revenues from the sovereign's personal estate but also with different public revenues such as fines, confiscations and even capitation fees and land taxes from certain provinces of Irāk and southern Iran, out of consideration for both the needs of the Court and also all the pious works which the Caliph and his successors had to undertake. In practice, whatever the personal position of the Caliphs, the privy purse was often to play the rôle of a simple reserve for the public Treasury, furnishing it with advances which might or might not be reimbursed (W. Fischel, *Le Bayt Māl al-Khāyṣa*, in *Actes du 19<sup>e</sup> Congrès des Orientalistes*, 1938, 538-41).

Each of the provinces had, on a small scale, an organisation parallel to that of the central government. They did not despatch to the latter the sum total of their fiscal revenue but only the residue after local expenses had been satisfied. Furthermore the provinces did not send on this residue as and when it was received, but in bulk, and when the needs of the State were particularly pressing the *ḥisāl* would resort to sending promissory notes, guaranteeing the delivery of sums received, which the *Diwān* could then use in negotiations with its creditors. The autonomy of the provincial fiscal administration is among the reasons which explain the ease with which independent régimes could establish themselves in the different areas without undue complication.

The interests of State, subordinate rulers and tax payers caused a variation, at different times and in different places, of the proportion of payments in cash and payments in kind which made up the tax returns. Moreover the East paid in silver and the Mediterranean countries in gold. The result was that the early accountancy of the fiscal services had to operate in different categories. At the end of the 300th century, however, an effort was made to establish a unified system of accountancy on the basis of the gold standard, with a legal tariff for the exchange of the dirham and a regulated price list for the different commodities; in this way the budget estimates could be more clearly established.

The theory, basing itself upon the early machinery of taxation in the Muslim community, never accepted the principle that all fiscal revenue ought to be devoted without distinction to each and every expenditure incurred. In particular the theory held that the *zakkāt*, inasmuch as it was a Muslim tax, ought to be used for pious works, for alms, the holy war, the ransom of Muslim slaves and aids to travellers etc., and ought, in principle, to be expended in the locality of its collection and not delivered to the focus. It is impossible to appreciate the extent to which such distinctions could be respected in practice; there was evidently no question of their being observed in times of crisis. The only sources of revenue which were assured of an employment in conformity with the precepts of the law were the private foundations *waḥfs*, *ḥabūs*. These, naturally, did not form part of the fiscal revenues, but they were firmly under the control of the State, usually through the intermediary of the *ḥabūs*, in order to prevent abuses.

It can scarcely be doubted that the fiscal régime was oppressive, even if no more so than that of the neighbouring non-Muslim States. Apart from the "neck-brand" of those subject to the *ḡizya*, brutal

methods of collection, such as those described for the early 'Abbāsid period by (the pseudo?) Dionysius of Tell-Mahré (*Arabica*, 1954), were often employed despite the efforts of certain princes and *sultans*. Egypt, as it did in Roman and Byzantine times, continues to present us with a picture of taxpayers fleeing their homes to escape the taxes, and the Coptic revolts of the 2nd/8th and 3rd/9th centuries had in general no other than fiscal causes. The autonomy of the provinces, even if it did not alleviate the tax burden itself, did improve the situation in general, since the interest of the local rulers lay in being self-supporting and in at least expanding on the local revenues which had formerly gone to enrich the favourites of the Caliph. A few echoes of the conflicts between the democratic and aristocratic notions of taxation have come down to us (for example in Ibn al-Kalābī, 343 and 352-3).

The growing, albeit variable, spread of the régime of the fiscal *ḥisāl* from the beginning of the 4th/10th century considerably diminished the importance of the fiscal administrations, as it also did that of the direct resources of the State. It is out of the question here to trace the financial history of the different Muslim principalities which were the heirs of the Caliphate. It must suffice to say that until modern times the countries which have not been affected by the Mongol invasion have retained for the taxpayers almost the same system of taxation, that the rights of the State have only ever been partially alienated and that in consequence certain methods of assessment and budgetary estimates have always been possible. The countries incorporated, during the 7th/13th century, into the Mongol Empire, not to speak of the subsequent series of changes of rule, experimented with forms of fiscal administration which combined with the old Muslim traditions new elements taken from the conquerors. Such elements were also introduced into Asia minor, where, in addition, there still persisted Byzantine traditions which had become interwoven with the local *Saddikī* Muslim institutions; and these three elements apparently influenced, though in a way which has not yet been discovered, the original formation of the future Ottoman institutions. The figures quoted in such and such a source have often been adduced to demonstrate the decadence of the fiscal revenues and consequently of the economy; but these figures can only be interpreted on the basis of a consideration, in the first place of the proportion of taxes accruing directly to the State and that alienated to individuals, and in the second place of the value of currency and market prices; and it would be wise for the moment to refrain from any positive assertion.

**Bibliography:** We can naturally do no more here than note certain sources of particular importance. For the origins references may be found in Caetani, *Annali*, iv, 368-47, to which may be added Abū 'Ubayd b. Salīm, *K. al-Amāl* (see 5233); the majority are drawn from the works on *khazānī* composed in the first 'Abbāsid century by Abū Yūsuf and Yahyā b. Adām (of which an annotated English translation by A. Ben Sheshem, Leiden 1958 has just appeared), and, later, from the *K. al-Futūḥ* of Balādhurī. The *K. al-Khazānī* (not wholly preserved) of Kūdāma (cf. A. Makhlūf, a typewritten thesis, Sorbonne, Paris) and the scattered information in the *Maḥāṣin al-'Uṭūm* of Khwāzīmī date from the 4th/10th century, and the *Aḥkām al-Sultāniyya* of Māwardī from the 5th/11th century. The

budgets studied by A. V. Kremer in his *Kulturgeschichte des Orients*, i, ch. VII and *Das Einnahmebudget . . . vom Jahre 306* (Dienkür, d. h. *Abad. d. W. Wien, Ph.-Hist. Kl.* xxxvi, 1888 (the oldest one, now also accessible in *Diabshiyat*, *K. al-Wasār*, cf. *Maik*, 179-182, or Cairo 1938, 87-88) are drawn from various chronicles. In the Būyid period belong the didactic treatises on fiscal mathematics of al-Būzādī (a study is being prepared by Saleh al-Ah, Baghdad) and of the anonymous author of the *K. al-Hisāl* (analysed and commented upon by myself in *AEIO*, x, 1952). Much information can naturally be obtained from the Egyptian papyri, edited by A. Grohmann, see his commentaries in the articles in the *Archiv Orientalny*, v, vi, 1933-1934, and by C. Levever in *ZDMG*, 1953. Among the historical chronicles and works the most valuable are evidently the *Tadhkirat al-'Uṣmān* of Ibn Miskawayh with their supplement by Rudjrawat, the *K. al-Wasār* of Rūḥ al-Sibt and the *Ta'rikh-i Kūm* of Hasan b. M. Kūmī, much used in A. K. S. Lambton, *Landlord and Peasant in Persia*, Oxford 1953, especially chap. II. Certain official correspondence, such as that of the Būyid vizir Ibn 'Abbād, ed. 'Abd al-Wahhāb 'Aziz and Shukri Dayr, 1947, may be consulted with advantage. For unexplained inheritances will suffice to note certain recent publications: for the Ayyūbids, in addition to the classical *Kawānīn al-Dawānīn* of Ibn Mammūl (ed. Astruc, 1943), the short works of 'Uḡayḍ b. Ibr. al-Nābulūsi (*Description of Fayyūm*, see my analysis in *Arabic* 1956, and *Lam'at al-Kawānīn*, edition prepared by myself); for the Mongols, the *Ḥikayat Jalālīyya* of 'Abd al-Wasār<sup>2</sup> of Kīyā al-Māzandarān ed. W. Hinz and studied by him in *Der Islam*, xxix, 1949; for the Yemni, R. B. Serjeant and myself will publish a valuable work of the 9th/15th century, the *Mulakhḥḥas al-fitan* (cf. *Arabic*, iv/1957, 23 f.). For Egypt in general and the Mamlūks in particular the importance of Makrīfī, *Khilāf*, and of Kalkashandī, *Sūbḥ* need not be emphasised.

There does not exist any financial history of the Muslim world; there are, however, certain useful partial studies. See particularly, for the period of the origins, D. C. Dennett, *Conversion and the Poll-Tax in early Islam*, 1951; for the whole of the "classical" period, Fr. Lökkegaard, *Islamic taxation in the classic period*, 1951 (a great documentary and technical achievement, but not uniformly reliable) which refers to the works, important in their time but now superseded, of C. Becker, etc., and Chapter 8 (cf. 6) of Mez in *Renaissance*. Useful observations will be found in the Sorbonne thesis of D. Sourdel on *Le vizir al-'Abbāsi*, when this is published. Among other more specialised studies, apart from those which are cited in the text of the article, see: W. Fischel, *Origins of Banking in Medieval Islam*, in *JRAS*, 1933, and H. Gottschalk, *Die Māḡārat-ṭayyān*. An exposition of the classical doctrine may be found, for example, in S. A. Siddiqi, *Public Finance in Islam*, Karachi 1948.

In the Ottoman state the distinction was carefully maintained between the private treasury of the Sultan (*Khazine-i Endirān* or *II Khazine*) and the public treasury or treasuries of the state (*Khazine-i Emiriyye*, *Khazine-i Devlet*, *Khazine-i 'Amir*, etc.). On the Ottoman treasury and finances see further DAFTARĀR, *EMAZINE*, *MALİYYA*. The term most commonly applied

to the state treasury was *Miri* (from *emir*), which was also used in the more general sense of government property (cf. *BEVĀLİK*). In Ottoman administrative documents the treasury is not normally called *bayt al-māl*, though the expression does occur, usually in the form *bayt al-māl-i Mūsūlīm* or *bayt al-māl-i 'Uṣmān* (as for example in some legal rulings of Abū 'I-Su'ūd quoted by Omer Lutfi Barkan in *Tanzimat*, İstanbul 1940, 333, 336, 343; and in a few *hüsn-nāmes* published in Barkan, *Kanunlar*, 297, 300, 326. In all these the context is the rights of the *bayt al-māl* over certain categories of land, called *arḥ-i miri* or *arḥ-i mülk*). In common Ottoman usage the term *bayt al-māl* was normally restricted to a certain group of revenues belonging by law to the public treasury. These consisted of various categories of forfeited, escheated, and unclaimed property, and are enumerated and discussed in a number of documents. The most important were property belonging to missing and absent persons (*māl-i ḡayb* and *māl-i mawḥūḥ*); unclaimed or escheated inheritances (*mawḥūḥāt*, *mawḥūḥāt*); runaway slaves and stray cattle (*'abd-i dīb*, *baḥān*, *yara*). The collection and care of these properties was the function of an official called the *Emīn bayt al-māl* or *bayt al-mālīf*. Most legal sources agree that unclaimed inheritances are to be held for a period of time, variously determined, as a trust, to give the heirs the opportunity to assert and establish their claim. Only after their failure to do so does the money or estate become the property of the treasury. There are frequent complaints that this rule was disregarded, and that property was seized too quickly and without proper verification (e.g., Lutfi Paḡha, *Asṭūḥ*, ed. and tr. R. Tschudi, Berlin 1910, text tr. 12, 13; cf. Sarī Mahmūd Paḡha, *Naḡḡat al-Wasār*<sup>3</sup>, ed. and tr. W. L. Wright, Princeton 1935, 71).

The Ottoman *hüsn-nāmes* contain elaborate instructions and safeguards concerning the claiming of these properties and the assigning of the proceeds. Property claimed for the *bayt al-māl* could be and frequently was assigned to *'imāls*, to *sandīkch*-boys, and even to *sipahis*. As early as 883/1479, a *ferman* of Mehemmed II lays down a distinction between reversions worth less than 10,000 aspers, and those worth 10,000 and over. The former were to be paid to the *'imāl*, or tax-farmer of the area; the latter were reserved to the Imperial treasury (*haysā*) (Hali Inalcik, *Fatih Sultan Mehmet'in Fermandari*, *Bell*, no. 44, 1947, 599-700). A similar distinction is made in a late 15th century *hüsn-nāme* (Anhegger-Inalcik 70-1), and is common in *hüsn-nāmes* and registers from the 16th century onwards. The normal rule was that these properties, or the fees payable if they were successfully reclaimed by their owners, belonged to the treasury. In fact the share of the treasury was limited to items worth 10,000 aspers or more, and to property left by the servants of the Sultan, a category including the *sipahis* and other persons in the Sultan's employ. In the earlier period it also included the Janissaries. The remainder was part of the *ḥisāl* of the *sandīkch*-boys. There were some exceptions to this division. In the so-called *'irāq timars* (*irak timari*), the *bayt al-māl* revenues were assigned to the *timar*-holder, and not, as in ordinary *timars*, reserved to the Sultan's or the governor's *ḥisāl*; in some *waḥf* lands too, notably those in favour of the *haramayn*, they were included in the *waḥf* revenues. From the 16th century the Janissaries had a special officer of their own, the *Odjaḡ bayt al-mālīfisi*, a kind of regimental

treasurer one of whose duties was to collect and assess the *mukhallafat* of heirless *nasabiyas*, 'façient egliaus, etc. These or their equivalent were placed in the regimental chest (Ismail Hakki Unaygar, *Ösmânî Devleti tashkilatında Kuvvalah Oskânî*, Ankara 1943, 311-320). Another interesting example of corporate privilege occurs in Jerusalem, where the *Zahiriya* of Maghribî *mudjâwirs* were collectively given the right of retaining the *mukhallafat* of any one of their number who died without heirs. This right was granted by Saladin, and confirmed by the Mamluk and Ottoman Sultans (Baycekal, *Arabic law*, *reçetier* no. 127, p. 932/1276; cf. A. S. Tritton, *Materials on Muslim Education in the Middle Ages*, London 1957, 123). A similar privilege appears to have been given to the monks on Mount Athos (P. Lemerle and P. Wittek, *Recherches sur l'histoire et le statut des monastères orthodoxes sous la domination turque*, *Archives du droit orientel*, li, 1948, 443, 542, 453, 465).

The Muslim West. As long as the Maghrib and al-Andalus were under the direct administration of the Umayyad or the 'Abbasid Caliphate they posed no particular problems of financial organisation; the local *bayt al-mál* was only a branch of the *bayt al-mál* of Damascus or of Baghdad.

It was only when some part of the Muslim west slipped from the control of the eastern Caliphate that separate administrations were organised there.

Except for the chapters of Ibn Khaldûn devoted to administration (*Muqaddima*, Cairo, 219), one cannot point to any theoretical treatise concerning the administration of the public finances or even any systematic treatment of the situation at any given period or place. There is no alternative but to try to give some idea of what happened from the slight and scattered indications in the chronicles and diverse documents available.

L. al-Andalus. The work of E. Lévi-Provençal has shown that in Muslim Spain the term *bayt al-mál* was nearly always taken in a limited sense. In effect this expression, which is often found in the form *bayt al-mal-muslimin*, designates the treasure composed by the revenues of pious foundations (*awqaf*) and clearly distinct from the public treasury properly speaking, which is commonly called *khizmat al-mál* and much more rarely *bayt al-mál*. This treasure from pious foundations was quite naturally placed under the authority of the *hâdî* who looked after its administration, and was kept in a religious building, at Cordova in the *madhira* of the Great Mosque (Ibn 'Idhârî, *Nasab*, iii, 98). The sums which constituted it originated for the most part from the revenues of pious foundations often assigned to strictly determined expenditure, but also from irregular deposits that could not be touched, in particular the goods of 'absentees' (*ghâ'ib*), that is Muslims who, for one reason or another, had

abandoned their possessions without designating a legal mandate for their administration.

The *hâdî* was assisted in the provinces by the inspectors of the pious foundations (*na'ib al-awqaf*) and was only qualified to authorise expenditure. These funds could only be employed for the ends indicated by the donors, or if the objects were only expressed in vague terms, for works of public utility and religion like help for paupers, the upkeep of mosques and the payment of their staff, the building of institutions of learning and the payment of teachers, etc. The *hâdî* could authorise advances from the public Treasury for pious works like the organisation of a military campaign against the infidels or the restoration of a defence work on the frontier of the *dâr al-islâm*.

This system still functioned at the beginning of the 6th/12th century during the Almoravid occupation, as is shown in Ibn 'Abdîn's discourse on the *âshûs*, edited and translated by E. Lévi-Provençal (see bibliography).

II. Maghrib. Nothing leads us to believe that the term *bayt al-mál* was used in the Maghrib in such a restricted sense. It seems to have been used in its wider meaning of the public Treasury and it designates at the same time the administration of public finances.

So far the financial organisation of the different states of the Muslim West has not been the object of a systematic study. It must be added that the information supplied by the Arabic chronicles is slight and very scrappy. We must be content with very general observations on the matter.

The Aglabids of al-Kayrawân do not appear to have been innovators in this respect and seem to have been content with the system they found when they came to power in 848/860.

If the Fâtimids did not change much in the administration and nomenclature of the taxes, they obtained, according to the indications of Ibn Hawqâl (ed. De Goeje, 69) a remarkable return from the taxes, the annual total of which reached 7 to 8 million dinars. The Zirids could only maintain the system so well organised by their predecessors. We know practically nothing about the financial organisation of the Almoravids, except that their first ruler, Yûsuf b. Tâghulbî felt obliged to contest himself with "legal" taxes—an attitude which his successors did not keep up, and that they maintained in Spain the organisation that they found in force there.

The only precise indication that we have on the subject of the Almohads is the establishment by 'Abd al-Mu'min in 535/1166 of a sort of cadaster intended to cover the whole Maghrib and to help in the assessment of a land tax (*sharâ'ij*) (*Rawâ' al-Kirdis*, ed. Tornberg, 126; 174).

R. Brunschvig's study on the Hafsids contains all the details possible—and they are comparatively few—on the financial organisation of the eastern Maghrib from the 7th/13th to 9th/15th centuries. The official who directed it bore the name of *sâhib al-ashghâl*, a term also used by Ibn Khaldûn (*loc. cit.*), then of *munaffiqh*. It was characterised by the fact that, in a number of instances, it renounced Kor'anic "legality" but it was successful, for the Hafsîd treasury was nearly always well filled.

Nothing precise is known about the Hafsîd 'Abd al-Wâd. It is possible that the thesis being prepared by M. Mongin may clarify the subject.

The rare and scattered indications on the financial organisation of the Marînids can be found in the

*Maadîk* of Ibn Faḍl Allâh-al 'Umari (tr. M. Gauderoy-Demonchy, *BGA*, ii, Paris 1927) and in the *Musnad* of Ibn Marâk (ed. and tr. E. Lévi-Provençal, in *Hasp.*, 1928). They all concern the reign of Abu 'I-Hassan (the middle of the 13th century).

A text of al-Iḥrâḍ (*Nuḥbat al-Hâd*, ed., Houdas, 38-40; tr. 70-75) gives interesting information on fiscal matters at the beginning of the Sa'îdî period and on the establishment of a new land tax called *al'dba*. Finally, the work of E. Michaux-Bellaire gives quite a clear picture of the financial system under the 'Alawid dynasty at the end of the 19th and beginning of the 20th centuries.

It may be hoped that the Turkish archives preserved in Tunis and Algiers contain the materials for a study of Turkish fiscal policy in the Maghrib, at least from the 18th century.

AL-BAYT AL-MUKADDAS [see AL-KUDES]

BAYT RÂS, a village in Transjordan, known by the Arab geographers, and situated about 3 km. N. of Irbid in the district of 'Ajlûn (q.v.), on an eminence (89 m) surrounded by ruins which mark the deserted site of the ancient Capitolias. This town of the Decapolis, the name of which corresponds to the Arabic name which outlined it and doubtless relates to its dominant position in a less hilly region, was noted by the early itineraries along with Adhîrâḥ (Dor's), Abila (Tall Abil) and Gâdara (Umm Kayal), which were neighbouring places. Formerly a Nabatean possession, it had increased in importance during the Roman period, being declared autonomous in 97-8, the first year of Trajan's reign, and had maintained its importance as a Byzantine bishopric of Palestina Secunda. Occupied by Shurahbîl b. Hasana at the beginning of the period of Arab conquest and incorporated in the *dîwân* of Urdunn, it enjoyed during the Umayyad period a position which is attested by various notices in the poets and chroniclers. These sing the praises of its wine, "already praised by the pre-Islamic poets Nâbigha Ḍhubaynî and Ḥassân b. Ḥabîb" (H. Lammens) and still known by Yâkût in the 6th/13th century, and mention it as the seat of the caliph Yazîd II, who lived there with his favourite Ḥabâba (the tradition which makes it the birthplace of the caliph Yazîd I seems however more doubtful, and may be based on a confusion with the village of Bayt Rînis in the *Qhûta* of Damascus, as has already been pointed out by H. Lammens, *Études sur le règne du calife omayyade M'awwiyah Ier*, Beirut 1908, 379 and n.). The fame of Bayt Râs, at a period when the Marwânîd rulers preferred to reside in the region of al-Balâḥ [q.v.], which is rich in archaeological remains that can be attributed to them, was followed by a rapid decline, and the site was almost completely abandoned. It is a cause for regret, however, that the ruins which still exist, and which have been briefly described by travellers, have never formed the subject of serious study which might

enable one to distinguish the traces of an Umayyad establishment in the midst of the earlier buildings.

(J. SOURDEL-THOMIRE)

BAYTÂR is the most frequently used form of the word which denotes the veterinary surgeon. It is an arabised form of *βιαιτάρης*, and, as a matter of fact, the more exact term *biyâr* is to be found in ancient poetry, as well as *baylar*. The preservation of the original Greek form in Oriental languages is also proved by the 12th century *Mufaḥḥis Numeri rubâ*, 9, where *βιαιτάρ* is expressly written. However, the Greek hippiatric writings do not seem to have been known in Islam, if the quotation of Heracleides in al-Bîrûnî, *al-Djâmi' fi Ma'rifa al-Djâwahir*, 101 does not mean Heracleides of Tarnum (ca. 75 B.C.), who wrote, amongst others, a hippiatric book, cf. M. J. Hasehmi, *Die Quellen des Steinbuches des Brûnî*, Thesis, Bonn 1935, 44. A pseudo-Hippocratic work on the subject bearing the title *De Curationibus infirmulorum ascorum*, was translated by a Jew named Moses of Palermo for Charles I of Anjou (1266-1285), and printed in Bologna 1865, in P. Delprat, *Trattati di medicina attribuiti ad Ippocrate tradotti dall'arabo in latino*.

The oldest Arabic work on *baytâr* is ascribed to Hunayn b. Ishâk by Ibn Abî Usayb'ca, i, 200, 26; it is also the only work on the subject noted by Taḡhîrîrîdî, *Mufaḥḥis al-âḥida*, i, 270, who calls it "sufficient" (*ḥâfî*). A writer contemporary with Hunayn is the first author on hippiatrics whose works are preserved, namely, Abû Yûsuf Ya'qûb b. Aḡlî Hîrân, stablesman at al-Mu'tasim and al-Mu'tadid (second half of 3rd/9th century), cf. Brockelmann, S I, 412 f., where further bibliography is quoted. A great many manuscripts of books by several authors were listed by H. Ritter in an annex to his review on 'Aḡlî b. 'Abd al-Rahmân b. Hudhayl al-Andalusî, *La parure des cavaliers*, ed. L. Mercier, 1922 (*Der Islam*, xviii, 1929, 119-126). The words *baytâr* and *baytâr* are still in use in modern Spanish (*albellar* and *albellaria*). A French article on the veterinary medicine of the Bedouins was translated into Arabic by Péro Anastase, *al-Machirî*, i, 1898, 684, 942.

(M. PLESSNER)

**BAYYĀNA**, Spain. Baena, a small town in the province of Cordova, 39 kilometres from the capital. During the Muslim period it belonged to the district of Cabra; with al-Zuhra', Ecija, Luena and Cordova, it formed the *ihim* of al-Kambāniya (la Campiña). Situated on a hill in the Campiña of Cordova and watered by the Marbella, a tributary of the Guadajoz, it was surrounded by gardens, vineyards and olive groves, as at present, and enjoyed great prosperity during the Umayyad period. The town possessed a solid fortress, situated on the slope facing the river, a cathedral mosque built by the order of 'Abd al-Rahmān II, markets and baths. Ibn Hafṣūn (p. 2) succeeded in conquering Bayyāna during the period of the *amir* 'Abd Allāh but, with the fall of the caliphate and the ensuing disorder of the *fitna*, it lost much of its rural tranquillity. Its present location dates back to the Muslim period, as no Roman traces have been found there nor in various parts of its environs, as far as the neighbouring ridge of Antigua. Alfonso, the Warlike on his famous expedition into Andalusia, passed by Baena without taking it, shortly before the battle of Amisol (Sfar 520/March 1126). When the town fell into the hands of Ferdinand III in 1240, it had a double enclosure, an internal wall which enclosed the *alcázar* and the *medina*, and an external wall which encompassed the outskirts occupied by the civilian population. The *mudajir* who remained at Baena were transferred to Castile in 1271, but a royal decree authorised their establishment at Cordova until their final expulsion. The most important celebrity of the town was Kāsim b. Aḥagḥ b. Muḥammad, b. Yūsuf b. Nāṣir b. 'Aṭā', a traditionist and philologist who was born at Baena in 247/862 and died at Cordova in 340/951.

(A. HUCI MIRANDA)

**BAYYĀSA**, Spain. Baeza, a town in the province of Jaén, 48 kilometres from the capital. Its present population is about 17,000 and it is situated on a hill whose slopes descend to the south of the Guadajoz and the Guadajoz. Of Iberian foundation, it was called Bistra, according to Ptolemy. Pliny calls its inhabitants *Vicienses*, and the Goths made it the seat of the diocese *bistensis*. Upon its fall to the Muslims it took the name Bayyāsa. Its corn and barley were praised, according to al-Idrīdī, who did not however mention its olive groves which today cover half its area.

During the Umayyad caliphate Ibn Hafṣūn (p. 2) conquered it, but it was retaken by 'Abd al-Rahmān III in 227/810. In 412/1022 the town belonged, with Jaén and Calatrava, to the *fiat* of Zuhayr *faṭā* 'Amirī. It was occupied by the Almoravids, whose last champion in al-Andalus, Ibn Ghāniya, surrendered it in 521/1126 to the emperor Alfonso VII; the latter kept it until he evacuated it in 522/1127 at the same time as Ubeda, shortly before his death and after the loss of Almería. For nearly a century it belonged to the Almohads, and in 602/1212 al-Nāṣir on his way to Las Navas de Tolosa, moved his camp from Jaén to Baeza. After the rout, the inhabitants of Baeza fled to Ubeda, and on 18 Sfar 609/20 July 1212, the victors entered the deserted city and burned it. When the Christians had retired, it was rebuilt and repopulated. In the following year, Alfonso VIII besieged it with difficulty during the winter of 1213-14, and was forced to retire without success.

A nephew of 'Abd al-Mu'min, Abū 'Abd Allāh, who held the governorships of Bougie, the Balearics and Valencia, must have lived a long time at Baeza, for his ten sons had the surname al-Bayyāsi, and the eldest, 'Abd Allāh revolted at Baeza against the caliph al-'Azīz and al-Mu'min. He allied himself with Ferdinand III and received a Castilian garrison in the *alcázar* of Baeza. When he was killed by the Cordovans in 625/1226, the inhabitants of Baeza again abandoned their city, and it was finally occupied by Ferdinand III on 19 Jhu 1-Hijjja 624/59 November 1227. During the 14th and 15th centuries, Baeza, as a stronghold of great strategic importance, was on its situation on the frontier between Castile and the kingdom of Granada, played a major rôle in the struggles of the Reconquest between the Nasrids and the Moriscos.

**BAYYINA** (plural *bayyindī*), etymologically the feminine adjective "clear, evident", was already in use as a substantive with the meaning of "manifest proof" in numerous passages of the Kur'an in *as-sūra*, 2 for example, whence it is that the *Sūra* itself is entitled *al-Bayyina*. In legal terminology the word denotes the proof for *acclamation*—that established by oral testimony—, although from the classical era the term came to be applied not only to the fact of giving testimony at law but also to the witnesses themselves. There are other words to express other aspects or degrees of the notion of proof, notably *hujja* (plural *hujjāt*) "argument, proof (in general or at law)", "a document constituting proof", *dall* "conclusive indication" and *ḥukm* "demonstration".

In the legal field the Kur'an is concerned with proof in diverse matters, both civil and penal. It is at once noteworthy that it is fundamentally to oral testimony (*shahāda* [p. 2]) that the Kur'an prescribes recourse. It recommends that certain legal acts should be established by witnesses—divorce by repudiation (IV, 2), testamentary dispositions (V, 106-108), accounts of guardianship (IV, 7) and the contracting of debts (II, 282). And while, in this last case, the Kur'an strongly supports written evidence, this is closely tied up with the eye-witnesses who ought to corroborate, as soon as it is completed, the recognition of the debt dictated to the scribe by the debtor. Such are the modes of proof which the Kur'an, albeit in a summary fashion, regulates. It notes, in addition, the need for a double number of witnesses (four in place of the ordinary number of two) to establish legal proof of fornication (IV, 19, XXIV, 4, 23) or to provide for the case where the husband cannot produce this difficult standard of proof of his wife's adultery, institutes the exceptional procedure of the mutual "oath of imprecation" (*ḥay'a*) between the spouses (XXIV, 6-9). This procedure, although it does not, properly speaking, establish proof, has, nevertheless, important legal effects. On the other hand the sacred text has nothing to say about the primitive institutions of physical ordeal and oaths of compurgation.

Classical Islamic law consecrated the superiority of proof by testimony, requiring, for its validity,

the fulfilment of some fairly stringent theoretical conditions (see 'AḤL and *SHAHĀDA*). And it was only in so far as written evidence could be construed as a *Zayyir* (*zayyir* [cf. the *testatio* of Roman law]) that it became, generally and more widely accepted, though not without keen discussion, reservations and precautions, even in the case of notarial acts (see E. Tyan, *Le notariat et le régime de la preuve par écrit dans la pratique du droit musulman*, *Annales École française de droit de Beyrouth*, 1945, no. 2). In the Kur'an verses relating to testamentary dispositions (V, 106-108) the witnesses, in case of suspicion, or new substitute witnesses, were invited to take an oath by Allāh; but traditional theory regards as abrogated the precept contained in this passage, which is the only one in the Kur'an where third-party witnesses are required to support their own evidence by an oath. Occasional and exceptional instances can be added, under Islam, of *ḥay'a* subjecting suspect witnesses to the oath. The doctrine, however, established a clear-cut distinction, as far as the "legal proofs" (*ḥujjāt shar'iyya*) which it enumerates and regulates are concerned, between proof by testimony and the oath. The celebrated maxim declares: "The burden of proof (by testimony) lies upon the one who makes the allegation and the oath belongs to him who denies (*al-bayyina 'alā l-mudda'ī wa-l-yamin 'alā man ankar*)" with the variant "to him against whom the allegation is made (*'alā l-mudda'ī 'alā yāḥ*)". It ought to be noted that in the process of the action "the one who makes the allegation" is not necessarily the original plaintiff (and hence the burden of proof may fluctuate), and further that, in the view of the scholars, evidence can only normally be given to positive facts.

In principle the *bayyina* itself has a self-sufficient authority: where the legal conditions of validity are satisfied it is, as a general rule, binding upon the judge. Several early attempts to support testimony with an oath taken by the plaintiff wholly failed, apart from cases where the defendant defaults or suffers from some incapacity, to influence the classical law (Schacht, *Origins*, 187-188; see Ibn Kudāma, *Mughnī*, ix, 277; for the contrary view of the Fātimids, *al-Nu'mān*, *Ḥikāyāt*, Damascus 1957, 163). The Hanafi school held strictly to the letter of the maxim mentioned above, and indeed certainly contributed to the spread of its influence, if not to its very formulation; for, contrary to the doctrine of the other *madhāhib*, Hanafi law does not allow the plaintiff to take the oath in order to complete an imperfect *bayyina* (a single witness) in disputes concerning property, nor does it allow the oath declined by the defendant to be returned to the plaintiff. In the mutual taking of the oath (*ḥay'a*) which the Hanafis, along with the other schools, uphold in certain cases where *bayyina* is lacking, each of the two parties stands in relation to other in the position of defendant. For other developments of the judicial oath see the article *yamin*. We will only observe here that the pre-Islamic oath of compurgation survives, in Islamic law, as a method of proof in a limited field of penal procedure (see *ḥay'a*).

It is possible, especially in regard to property claims, that contradictory *bayyindī* may confront each other. The *fiqh* texts concern themselves with this *al-bayyindī al-bayyindī* and endeavour to destroy the conflict by officially declaring one of the proofs superior on the basis of criteria which differ considerably among the different schools and may

result in diametrically opposite solutions. Should the proofs concerned nevertheless still prove equal, the solutions, even within the schools themselves, vary between their reciprocal cancellation, resort to a supplementary and decisive form of evidence, and their being taken at face value—which then necessitates either division of the property or the drawing of lots.

Superior though the *bayyina* might be as a mode of proof, it is difficult to regard it in all circumstances as "stronger" (*ahd*) than an acknowledgement (*iḥdār* [p. 2] or, less technically, *ḥay'a*). Indeed the contrary is expressly stated by the *Ḥāfiẓ* Ibn Hāzim, *Muḥalla*, II, 426. The doctrine requires less in the way of personal capacity for an acknowledgement than for testimony, by reason of the basic presumption of truthfulness on the part of the person making the acknowledgement. But the authors usually—and quite wrongly—distinguish in this regard between the acknowledgement whose only effect is to bind the one who makes it (*'alā nafsi*) and the acknowledgement which affects the rights of third parties (*fi ḥaqq ḡayri*), and their decisive force and their legal consequences differ considerably.

In addition it would be relevant, on the subject of *bayyina*, to enquire into the position, in relation to it, of the expert evidence which may be required by the judge. Further, if one were to attempt a general theory of proof in Islamic law, it would be fitting to take account of the discussions relating to the judge's personal knowledge of the facts of a case, to underline the considerable importance and the abundance of legal presumptions, and to note the rôle and the importance of certain auxiliary indications or initial steps in proof recognised by the law. In this field of proof at law two Islamic tendencies may be observed: the desire to establish, in a humane fashion, what is most probable by regulated means rather than to pursue the strict truth, the certain knowledge of which belongs only to God,—and a tendency towards rationalisation, which, though it does not prevail always and everywhere, is nevertheless latent in, for example, the position allotted to the oath of compurgation and the complete absence of ordeal in the form of physical trial (despite tenacious survivals of this in the customary practice of tribal societies up to the present day).

*Bibliography*: The texts of *fiqh*, the articles of the *Fi* to which reference has been made above, and the modern studies to which reference will be made in *Revue de la Société Jean Bodin*, vol. *La Preuve* (to be published in 1960) as well as in the article *BAYYINA* (p. 2). (R. BOUSCHON)

**BAYYŪMIYYA**, an Egyptian *farḥa* founded by 'Alī b. Ḥijrāt b. Muḥammad al-Bayyūnī al-Ḥafṣī, born c. 1208/1199 and died in Cairo in 1183/1176. After joining the Almadhiyya and *Khawāṭiyya* (the latter through the Demirdashīyya) *farḥas*, Bayyūnī, by developing a *ḡayr* characterised by particularly loud and emphatic utterance, established a virtually independent *farḥa* of his own. Another feature of his *farḥa* was its appeal to the poorest classes and specifically to highwaysmen, many of whom, after a period of chastisement at Bayyūnī's hands, swelled the ranks of the vast armed retinue that accompanied his rare appearances in the streets. But perhaps his influence was chiefly due to the extremes of excitement and passivity that he experienced during the *ḡayr*. The *'ulama's* attempt to ban his *ḡayr* sessions (held every Tuesday at the Husaynī Maghaddī) was thwarted by *Shaykh*

Shahrawī, Rector of the Ashar, whose determination on this occasion contrasts favourably with his behaviour on others (Djibarti, I, 195). Bayyūmī's works include handbooks on the Demirdaghiyya and Bayyūmīyya and a commentary on Dīf's *Ṭarḥ al-Kīmīl*. He seems to have been *naṣṣ* at home in *ḥaḍḥ*, on which he lectured when Shahrawī invited him to the Taybarsiyya College at the Ashar. The mosque in which he is buried was built by Muṭṭalā Paṣhā, a *sultān* of Egypt (probably between 1757-1760), when according to Djibarti he became grand vezir (probably sometime between 1764-1765). Bayyūmī did not leave any distinguished *ḥaḍḥ*-but his *ḥaḍḥ* was still popular during the *mawṣiṭ* in Lane's days.

**BAYZARA**, (Arabic), denotes "the art of the flying-hunt", and is not restricted to the designation of "falconry". (Its Persian origin from *bāz*: goshawk; see below) is more closely related to the notion of "osting art"). Derived from *bayzār*, "ostinger", an Arabised form of the Persian *bāyār/bāzār*, it was preferred to its dual form *bāzāra*; the words *bāyāza* and *bāyāza* were scarcely used in the Muslim Occident. The use of rapacious predators (*bāz*, pl. *hawādir*) as "beasts of prey" (*ghirāḥ*, pl. *ghirāḥ*) was undoubtedly known to the Arabs before Islam, and Imru' al-Qays sketches, in his *ayyām al-bayd*, some descriptions of flying-sport. However, hawking only assumed importance with them after the great Muslim conquests which brought them into contact with the Persians and the Byzantines. It quickly won the favour of the new leaders who discovered in it the possibility of diversion and of satisfying peacefully their passion for riding. Caliphs and high Muslim dignitaries were zealous in elevating it, with veneration, to the rank of an institution under the direction of a "master of chase" (*amīr al-bayd*), and *ghirāḥ* (*amīr ghirāḥ*). The Umayyad caliph Yazīd b. Mu'awīya (680-83) was one of the first to show an unbridled enthusiasm for the flying-hunt. Historians, biographers and chroniclers in the Arabic language provide information, each according to his own period and country, on the current practice of hawking, and relate for the occasion lively anecdotes of the exploits of certain persons in this field. (see al-Tabarī, Ibn al-Aṭṭar, al-Sayyūṭi, al-Makrīṭi-Quatremaire, in J. Sauvaget, *Introduit, à l'hist. de l'Orient Musulman*). Much more valuable is the information concerning bayzara found in certain encyclopedic works, edited for the purpose of adab or philological learning, such as the *K. al-Hayawān* of al-Djāhiz (Cairo 1947), the *Al-Muḥāsana* of Ibn Sida (Alexandria 1904, vol. vii, and indices by M. Tāhī, Tunis 1950), the *K. Saḥā al-ʿAṣā* of al-Kāḥkashandī (Cairo 1913, vol. ii), the *K. Mawāḍiʿ al-Dhahab* of al-Manṣūfī.

The Maghrib and Muslim Spain, as well as the Orient, had their enthusiasts for the hawking-sport. In Aghlabid Ifriqiya, the governor Muhammad II (864-75), called not without reason the "Crassus" (Abū Ṭaḥarīnī), exhausted the state exchequer with his wild expenses on the "flying-play" (*baʿṣ*) (see Ibn Ṭhābir, *Bayān*, trans. Faḡam, Algiers 1901, 147-48). Later, the Hafṣids, too, were smitten by hawking. Like a Sāsānid prince, al-Mustanṣir (1249-

77) found his pleasure with the hawk on his fist, in a vast "preserve" (*mayyad*) near Biserta (see Ibn Khaldūn, *K. al-ʿIṣār*, trans. De Slane et Casanova, II, 238). In the 15th century his descendant Ṭūmān (1435-88) spent several days a week in this entertainment (see R. Brunschwig, *Deser, récit de voyage inédit*, Paris 1926, 21). At the Umayyad court in Cordova, the Grand Falconer (Sāḥib al-bayṣir) enjoyed a high office, close to the ruler (see Ibn Ṭhābir, *op. cit.*, in E. Lévi-Provençal, X<sup>e</sup> s., Paris 1932, 53). The fashion of hawking, widespread in the countries of Islam during the Middle Ages, was the livelihood of a great number of people, and its practice was not limited to the privileged classes, as it was in Christian Europe. The rural population and the nomads continued to devote themselves to it and preserved the tradition, down to the beginning of the 20th century. From this fact it is easy to evaluate the rôle played by the sporting-bird in Muslim economic life, especially during the medieval period, by the commerce it provoked and the people required for its maintenance. (see A. Talas, *La vie économique au I<sup>er</sup> et II<sup>es</sup> siècles de l'Hégire*, in Arabic in *Madjallat al-Madina* al-ʿIrāqī, 1932, II, 271-301; al-Djāhiz (I), *K. al-bayṣir*, in *ʿI-ʿIṣār*, ed. H. H. Abdul-Wahab, Cairo 1935 34-35, trans. Ch. Pellat, in *Arabica*, I, 2, 1954, 160-61).

Most often, in fact, the master of the hawk-keepers train one to be a falconer in the strict sense of the term, and he only put on the glove (*dastabā*; Maghrib: *buḍḍā*) during the hunt. The care of the "hawk's room" (*bayt al-bayṣir*) was entrusted to hawkers' assistants (*ghulām*, pl. *ghulām*) who had besides the task of keeping the aviary well provided with pigeons and other game-birds, for the nourishment and training of the hawks. The latter, a technical term of the bayzara, necessitated, according to the kind of sporting-bird, the competence of the ostinger (*bāyār* pl. *bāyāza*). On the preference of *bāyār* to *bāyāza* see Ibn Saʿīd al-Akḥfān, *Irḥāḍ al-Makḥūd*, 92; the terms *bāyāza*, *bāyāzī*, *bāyāz*, *bāyār*, *bāyārī* in the general sense of hawker, are Spanish-Maghribi, and frequently give way to *bayṣir*, or of the falconer (*ṣāḥib*); both were often used by the *ballabās*, the master of the hawking-pack who sets his greybonds (*ṣaḍāḥ*, pl. *ṣaḍāḥiyya*) on the gazelle or the hare, and the Goshawk, occasionally the Saker Falcon or even the eagle, flying "waiting on" (*baʿṣ*), distances the pack and binds to the quarry.

The traditional classification in the Orient of predators worthy of training and *dastabā*, based on the black or yellow colour of the iris denoting remarkable visual powers, corresponds exactly to the modern ornithological system. In fact the "dark-eyed birds" are found only in the genus *Falco*, "falconidae", who alone have a black iris. These are "long-winged sweeping birds", "lured-birds", used to "highflying" (the flight of the heron: *ṣaḥḥān*, of the crane: *ḥarḥ* or *ḥarḥān*, of the crow: *ghirāḥ*, from time to time the eagle: *ʿaḥāḥ*, the kite: *ḥidā*, and the wild water-fowl: *ṣayr al-mā*). The Arabist is often puzzled by the abundance of terms designating sporting-birds, a such abundance not being due to the multiplicity of types, but to the great variety of adjectives qualifying the innumerable shades of plumage worn by the birds according to its sex, its age and habitat. The Arabs saw several different types when it was only a question of individual birds of the same family, whether immature, young or adult, male or female. One can discover, however, among that accumulation of names

the generic term, with the aid on the one hand of scientific inventories of the avifauna of each country, and on the other, of the descriptions provided by the great Muslim naturalists, such as al-Karwīnī (1029-1089) in his *K. ʿAdḍiyya al-Maḥḥāḥ*, al-Damīrī (1141-1409) in his *K. Hayāt al-Hayawān*, and especially by the authors of cynegetic works (see below).

Thus the *sāḥib*, falconer, was occupied in training only: a) the Ger-Falcon, *Falco rusticolus*, (*ṣaḥḥār*, *ghuṣḥār*, *ghuṣḥār*) which, unknown in the Arab countries, had to be imported at great expense from Siberia, and which often figured among the ceremonial gifts upon an exchange of ambassadors; b) the Saker Falcon, *Falco cherrug*, (*ṣaḥr*, *ṣaḥr al-ghuṣḥār*, *ḥarḥ*); c) the Peregrine Falcon, *Falco peregrinus*, under its three oriental sub-species: *perigrinator*, *babylonicus* and *calidus* (either *ghāḥin* or *ḥabīr* for the "Passage-Peregrine"); d) the Black-winged Kite, *Elaeus cataractus* (*ṣaḥr*, *ṣaḥr al-ghuṣḥār*, and *ṣaḥr*); e) the Merlin, *Falco columbarius* (*ṣaḥr*); f) the Hobby, *Falco subbuteo* (*ḥawṣiḥ*); g) the Kestrel, *Falco tinnunculus* (*ʿaḥḥ*); h) the Lesser Kestrel, *Falco Naumanni* (*ʿaḥḥ*); i) the Red-footed Falcon, *Falco vesperlinus* (*ḥawṣiḥ*) (see A. Maʿlūf, *Maʿḍam al-bayṣir*, Cairo 1932, to be consulted with great care in view of the numerous errors in a scientific apparatus so often outdated).

In the Muslim West highflying hawking knew only four *falconidae*: the Saker (*nabīl* or *ḥabīr*, derived from the name of the Andalusian town Niebla, which points to a loanword); the Barbary Lanner Falcon, or the "Alphane" of the Christian falconers, *Falco naumanni* (*ḥawṣiḥ*); the Barbary Falcon, *Falco peregrinus peregrinator* (*ḥarḥ*); and Eleazar's Falcon, *Falco eleonorae* (*ḥabīr*) (see Leo Africanus, *Il Viaggio*, Venice 1857, 166; L. Mercier, *La chasse et les sports chez les Arabes*, Paris 1927, ch. V, *La fauconnerie*, 81-106, and bibl.; E. Draumas, *Les chevaux du Sahara*, Paris 1953, with the *Réflexions de l'Emir Abdelhader*, 339-372). These four *falcones* are described in the Maghrib as "noble" (*ḥawṣiḥ*). As the "yellow-eyed birds", raised only by the *bāyār*, ostringer, they are the class most used in the hawking-sport. They are all "short-winged soaring birds" or "list-hawks" trained for "lowflying". This category is composed largely of the genus *Accipiter* or *accipitridae* and includes in some parts of Persia and Turkey the smaller *glaucididae*.

The bird which has enjoyed the greatest favour since remote antiquity and in every country of the Orient is undoubtedly the Goshawk, *Accipiter gentilis*, and its subspecies *accip. albidus* (either *bāz*, or *ghāḥid*) which, because they do not belong to the avifauna of the Arabic countries, were imported by merchants from Greece, Turkestan, Persia and India; the Maghrib scarcely knew of them. It was believed that the Goshawk was born to the flying art. Its Persian name *bāz*, passed into Arabic before Islam, was applied apparently through ignorance to every sporting bird, and the term *bayzara*, osting art for the experts, meant hawking in general. Conversely, it was "falcon" which prevailed over "goshawk" in Europe, and "falconry" covered the technique of the osting art. In the arabisation of the name *bāz*, it was necessary to give it a trilateral root, of the choice caused some trouble among philologists and lexicographers. Three alternatives were proposed: a) BZW-BZY, giving by derivation *bāz*, *al-bāz*, *bāziyy*; pl. *ḥawṣiḥ*, *ḥawṣiḥ*, *ḥawṣiḥ*; b) BWZ-BYZ giving *bāz*, *pl. abāz*, *abāz*; c) BZV giving

*baʿṣ* pl. *baʿṣiḥ*, *abʿṣ*, *baʿṣiḥ*, *baʿṣiḥ*, *baʿṣiḥ*, *baʿṣiḥ*. After the Goshawk, it was the Sparrow-Hawk, *Accipiter nisus* (*bāḥḥ*, *ulām*, *ḥāḥ*) and its short-footed subspecies called "Shikra", *Accip. badius brevipes* (*bayḥḥ*), which was preferred owing to its docility and the vast area of its distribution; its hen (*ḥāḥ*) is still used at Cape Bon in Tunisia for flying at the passage-quail in spring (see D. M. Mathis, *La chasse au faucon en Tunisie*, in *Bull. Société Sc. Natur. de Tunisie*, II, 3-4, Tunis 1949, 107-18 and illustrations; idem, in A. Boyer et M. Planol, *Traité de Fauconnerie et d'Autournerie*, Paris 1948, 242-48; L. Lavaden, *La chasse et la fauconnerie en Tunisie*, Tunis 1920, 20-21; al-Labṣī, in Arabic, Tunis, May 1955, 24-27 and illustrations).

As for eagles, they never have had in fact the rank of sporting-birds (*ḥāḥ* al-bayṣir); however, Persians and Turks trained with success the Crested Hawk Eagle, *Spizacus circhatus* (*ṣaḥḥār*), Bonelli's Eagle, *Hieracus fasciatus*, and the Booted Eagle, *Hieracus pennatus* (both called *ḥawṣiḥ*). The Harriers (*ḥawṣiḥ*) and Buzzards (*ḥawṣiḥ*) were neglected owing to their untamable ferocity; the kite and the vulture (*ḥawṣ*) as well, because of their taste for carrion. The Persians carried the art of training as far as the Eagle Owl (*bāḥ*) which served to attract the other predators. All of the "yellow-eyed birds" were remarked for the lowlying at the quail (*ḥawṣiḥ*, *ḥawṣiḥ*), the partridge (*ḥawṣiḥ*), the Chukar partridge (*ḥawṣiḥ*) and the See-See (*ṣaḥḥār*), the sandgrouse (*ḥawṣiḥ*), the Bustard (*ḥawṣiḥ*), the Little Bustard (*ḥawṣiḥ*), the Francolin (*ḥawṣiḥ*), the Ruddy Sheldrake (*ḥawṣiḥ*) and other game-birds of the steppe and desert.

The techniques proper to bayzara were early in Islam the objects of numerous treatises; but, for the most part, have not survived; Ibn al-Nadīm mentions ten of them in his *Fihrist*. On the other hand a large number of the manuscripts in the public and private libraries in Europe and the Orient have yet to be studied (cf. Brockelmann, chapters on "Naturwissenschaften" and "Jagd"). Nevertheless these techniques are comparatively well known to us thanks to several works already edited. The oldest of these texts, treating falconry, might be the basis of the Latin-Coman versions not yet identified but attributed to the two authors Moamīn and Ghāfirī (see the excellent critical edition of these texts by H. Tjerneld, Stockholm-Paris 1945). Recently, the Syrian Kurd ʿAlī had the happy idea of publishing (Damascus 1953) a treatise *al-Bayzara* devoted to the falconry of the Fātimid caliph al-ʿAzīz bi-ḥish (975-90); the anonymous author offers us the profit of his own long experience and that of the specialists in hawking (*baʿṣiḥ*) in a style stripped of extraneous erudition: poetical citations are arranged in a special chapter. This work is by far the most valuable of those we possess in Arabic on the training methods. At almost the same time, Aṣʿad Ṭālas edited (Baghdād 1954) the oldest known Arabic text, *K. al-Maṣāyid wa-l-Maṭāʾir*, the work of the famous poet al-Kuḥshūjī (d. 961 or 971) (cf. Brockelmann, I, 85, and S I, 137; Talas, *Madjallat* . . . *op. cit.*, with an analysis of the work). This complete treatise on ventry and falconry was one of the sources most exploited by later authors of cynegetic works; there emanates from it unfortunately too great a preoccupation with *adab* which relieves it of any practical significance. Very different and far more lively and useful are the "hawking-sport memories" of Ḥusām Ibn Muḥammad (d. 1188) in his *K. al-Faḥār* (ed. P. Hitti, Princeton 1939, ch. III,

192-229) composed during the period of the Crusades (see Drenbourg, *Vie d'Ouslma*...), and texts, Paris 1885 and 1893). The work of the Manlik Muhammad al-Mangli, K. *Uns al-Malik al-Hakim al-Fadl*, written in 1371 (cf. Brockelmann, II, 136 and S II, 167) and published (Paris 1886) with a mediocre French translation by Florian Pharaon, has lost much of its value since the treaty of Al-Kashghim has been available. Further, *bayzara* is treated in didactic poems such as the *bayza* in 213 lines of the Maghribi al-Fadl (d. 1514; Brockelmann, II, 196), and the *Diwan* of al-Fayyaz (Ms. Escorial, n. 992) of a certain 'Isa al-Azuli (16th century?) often cited by al-Mangli. These compositions deserve publication, though they have already been exploited by L. Mercier (*op. cit.*) who has in addition used the manuscripts of Al-Fahili (d. 1541) and Al-Ash'ari (1444) (MSS. Paris, B.N. nos. 2831 and 2834). Talas (*Madjalla*...) has restored to its original version the beautiful *ardja* on the flying-sport in Ibn Nuhita (1287-1366) entitled *Fari'd al-Suluk fi Masayid al-Malak*.

From all these texts it results that snaring and training methods were nearly the same for all species of sporting-birds. The young hawk was caught "eyas" or "yellow beak" (*ghifri*, *ghifri*) or "tranchers" ("croakers", i.e., the nest-forsakers (*nahfi*) from her cry; when "fired" (*har*) or "baited" (*ba'ah*) ("native" (*bi*) or "passage-hawk" (*hafi*) or *ridfi*), she was lured or snared by means of nets, of nooses and chiefly of "flying-decoys" (*haraq*) (cf. the system of the hut in Ibn Munkidh, *op. cit.*, 200-07; M. Planiol, *op. cit.*, 154-56). When, captured, she was "reclaimed", i.e., made tame (*af'ir*, *ba'af*); her eyelids were "beautified" (*khafi*) and she was "adorned" (*ladfi*, *lanbi*) by fasting and then, progressively unsewn, she was induced to step, of her own accord, on the fist by offering her some "beakfuls" (*talhin*) and tempting her with flesh of live preys (*talbi*). When become tame and stepping on to the fist at call, she was tied to the "restraint" (*fiwila*), and it was now the beginning of her training by stunts at such and such games. Her carnivorous instinct was awakened and her keenness (*farsha*) to bind to the quarry developed by releasing before her training-birds (*haraq*) selected from the species for which she was being trained to hunt. These exercises were patiently repeated, each time at a greater distance. When estimated "soured" (*masa'af* *bi-l-ras*), the pupil was fitted with "nooses" (*al-shah*) (*al-shah*) (*al-shah*) and then she was accustomed to wear on her head the "hood" (*burha*, *kumma*, Maghribi: *hambal*) and to be "mailed in the sock" (*babal*), gaining some "manning" (*mas*) by long hours spent among the crowds of the streets and markets. Once familiarised with people, horses, dogs and domestic animals, she was taken to the hunting places where she was given "fire food" (*al-fadl*) at waterfall and sparrows. She returned at the sound of a drum (*tanbal*) attached to the saddle of the falconer (see L. Mercier, *op. cit.*, 98), and she was allowed to "take her pleasure" (*idha*) on one of her takes. In the Maghribi training was never carried to such a degree of refinement: always taken in adulthood, the bird was retrained and underwent only a rudimentary training (cf. L. Mercier, *op. cit.*, 96-104). Being set down to rest, the hawk was placed on the "block" (*hamila*, *bulfi*) or on the "perch" (*shida*, *bandara*), and was "weathered" (*daghril*) in the sun, near her bathing-pool. During the period of moult (*hama*, *labril*), she

was kept apart, from any noise, and her "mutes" (*ghar*, *rang*) were carefully controlled. By this means her good health was assured. The treatises on *bayzara* devote long chapters to the diagnosis of diseases, particular to sporting-birds and their cure, revealing most often a barbaric empiricism combined with hygienic superstitions.

From the time of the Prophet the question has been posed, with regard to Kur'anic law, of the legality of eating a game-bird caught by means of a trained (hawk) predatory; it was a question of whether the bird caught to be slaughtered in accordance with the rites. Averroes, in his *Bidayat al-Mudhakk*... (cf. Averroes, *La terre de la chasse*, *Art de la Bida*, text and trans; annotated by F. Viré, in *Revue Tunisienne de Droit*, nos 3-4, Tunis 1954, 228-59), gives a clear account of the different positions adopted by each of the four schools of law. This same question constitutes the introductory part of all of the works dealing with falconry and venery.

The *bayzara* on the other hand did not fail to inspire poets and, from the time of the Umayyad period, it became with the coursing hunt one of the principal themes of popular poetry in *radja*. In fact the *ardja*, more supple and lively than the rigid classical *bayza*, soon became, with al-Shahid (d. 1254), al-Aghidji (d. 870/80), his son Ru'ba (d. 1437/60) and several others, the typical form of the epycletic poem (*taraduyd*). The latter, very much in fashion under the 'Abbasids, was adopted by the great masters of verse such as Abū Nuwās, Ibn al-Mu'tazz, Kughāghī and Al-Nāghī, and afforded them, through research into rare terms (*ghawā*), the occasion of displaying their learning" (Ch. Pellat, *Langue et Littérature Arabes*, Paris 1952, 108-09) (on the *taraduyd*, see idem, *Le milieu barbare*, 100 ff. and notes. *Taraduyd* are found in the *diwāns* of the poets; those of Abū Nuwās are for the most part cited by Al-Jāhiz, *Hayawān*). It is regrettable to note that this poetic erudition led to the use, by those who took pleasure in it, of a language which has very little in common with that employed by the lovers of the flying sport. In Muslim Spain the poets, especially from the 11th century on, exploited principally the theme of the hawking-sport, which could not escape their pronounced taste for nature. They were able to inject into it that romantic note unknown to Oriental versifiers (cf. H. Poërs, *Poésie Andalouse*, Paris 1953, 340-9). Besides these creations in learned language, there was a poetry of falconry prolonged and preserved, in their different dialects, by the great Arab nomads. It is interesting to note that the Touaregs have never known of the hawking art (cf. H. Lhote, *La chasse chez les Touaregs*, Paris 1951). The *diwān* displayed by the Arab anthropologists for the "vulgar" tongue has deprived us of these Bedouin "songs" which were never really honored in the courtesans of the Sahara, revealing in their descriptions of the hawk, her flight and her quarry, a realism difficult to find in classical poetry (cf. M. Sidoum, *Chants sur la chasse au faucon attribués à Si El-Hadi Aissa, Chérif de Laghouat*, in *R.Afr.*, nos 270-71, 1908, 272-94, text, trans, notes).

The very large role played by the hawking-bird, as a theme of inspiration, Islamic works of art, is material for considerable study. In fact the artistic modes of expression: miniatures, decorative sculpture in stone, in stucco, wood and ivory, engraving on crystal, glass and copper, moulding in bronze, glass and precious metals, ceramics, tapestry

and embroidery, owe to the "hawk motif" a great deal of their inestimable accomplishments. Indeed, it is from this motif, in its innumerable interpretations, that Muslim art of East and West has drawn many of its characteristics (cf. A. C. Pope, *A survey of Persian Art*, Oxford 1939; G. Migon, *Art Musulman*, Paris 1956; G. Marçais, *L'Art de l'Islam*, Paris 1946). We add in conclusion that this same motif was vastly exploited by Manlik heraldry (cf. L. A. Mayer, *Saracenic Heraldry*, Oxford 1932; Artin Pacha, *Conte à l'école du blason en Orient*, London 1924).

**BĀZ** (see BAYZARA).  
**BĀZ BAHĀDUR**. The last ruler of independent Māwa before the Mughal conquest in the time of Akbar, Bāz Bahādur was the son of Shujā' Khān, a relative of Shīr Shāh Sūr, whom the latter appointed governor of Māwa after its conquest by Shīr Shāh's forces in 949/1542. On the death of Shujā' Khān in 969/1554, Bāz Bahādur murdered his brother Dawlat Khān, governor of Ujjain (Ujjain) and had himself proclaimed as sultan in 969/1555. He then brought most of Māwa under his rule by forcing his youngest brother Mustafā Khān to give up Rāisin and Bhūsa. In 968/1560-1, a Mughal army under Adham Khān advanced to conquer Māwa. Bāz Bahādur was forced to relinquish his capital Mandi. The next year he succeeded in defeating Pir Muhammad, Adham Khān's successor. Towards the end of 969/1562 was obliged by Mughal reinforcements to flee into the hills of Gondwana. Though from his refuge there Bāz Bahādur made several guerrilla attacks upon the Mughal forces, he grew tired of the struggle and in 978/1570 submitted to Akbar eventually to receive a *mansab* of 2000. He died not long after and is probably buried at Agra.

Bāz Bahādur is celebrated in popular legend for his love for his mistress Rūpmati for whom he is said to have composed love-songs and verses. He is also an eponymous figure in the development of a new passionate style of central Indian painting, in which the twin cultures of Māwa, Hindu and Muslim, were blended.

(P. HARDY)

**BĀZHAR**, Bezor, a remedy against all kinds of poison, highly esteemed and paid for throughout the Middle Ages up to the 18th century, and in the Orient even up to this very day. The genuine (Oriental) Bezor-stone is obtained from the bezor-gnat (*Capra aegagrus Gm.*) and, according to the investigations of Friedrich Wöhler, the famous chemist (1800-1882), and others, it is a gall-stone. The stone seems to have been unknown to ancient Arabs, for neither in the lexica, nor in Sidiyūs, *Studium über die persischen Fremdwörter im klassischen Arabisch*, 1919, is the word mentioned. The generally accepted etymology is Persian (*bāz*)-*har* "against poison" (P. Horn, in Geiger-Kuhn, *Grundr. d. ir. Phil.*, ii, 259). The Arabic books of stones and drugs present various spellings and etymologies that do not always correspond with each other, nor are the etymologies themselves throughout correct (see later).

For the first time in Islamic literature the Bāzhar seems to appear in some of the Hermetic writings (none of them printed), and in the (partly edited) pseudo-Aristotelian writings inspired by the Oriental translations of the Alexander Romance. In the Lapidary ascribed to Aristotle (J. Ruska, *Der Steinbuch des Aristoteles*, 1912, 104 f.) Bāzhar is erroneously stated to be Greek, while the explanation is the usual *al-nāfi* is 'I-*naamm*. The poisons coagulate the blood; this effect is prevented by the stone which frees the body of the poison by strongly sweating. Aristotle also registers the different colours of the Bāzhar and the places where it is found, namely: China, India, and 'East' and Khurāsān. Also as amulet and sealing-stone the Bāzhar is useful, as well as against the sting of poisonous insects (see below).

Some MSS. of the pseudo-Aristotelian *Sir al-Aṣār* (*Secretum secretorum*) offer a chapter on precious stones, namely, Oxon. Laud 210 and Paris 2418. The text of the former was translated in *Opera hucius*, inedita, Rogeri Baconi (i), V. *Secretum secretorum*, ed. R. Steele, 1920, 253; the latter has only been noted by 'Abdurrahīm Badawī, *Fontes Graecae (sic) doctrinarum politicarum Islamicarum*, i, 1954, 167, n. 3. Steele also gives (174) the Latin text according to ed. Achillini, 1507, and

Upper Egypt led to a Muslim expedition, which defeated the chief, Khatma, and imposed a treaty (516/833). The caliph was acknowledged as suzerain, mosques in Bedja territory were to be respected, Muslim merchants and pilgrims were to pass in safety, and collectors of *ṣakl* from converts were to be allowed entry. Other provisions sought to prevent an alliance of the Bedja with Christian Nubia. Further raids and withholding of tribute from the gold-mines ensued. A cavalry expedition, sent by sea, defeated the Bedja camel-men, whose chief went to Šimāra in 241/855-6 to make his personal submission to al-Mutawakkil. Soon however the Bedja began to raid al-Fustāt itself. After a particularly severe attack, a force mustered by 'Abd al-Kahmān al-'Umarī intercepted a raiding-party and killed its chief. Supported by the Kabā'a and Qiyāyā, al-'Umarī established control over the mining districts (c. 255/868-9) and, after his death, Rabā'a, who intermarried with the Hadārīb, came to dominate the area. Al-Mas'ūdī describes the chief of Rabā'a in 332/943-4 as the owner of the mines; he commanded 5,000 Arabs and 30,000 Bedja camel-men. The ratio is probably more significant than the numbers. The rise of 'Ayyūbīb (c. 255) in the mid-15th/11th century increased the importance of the Hadārīb, whose territory was crossed by the route from the Nile valley to the port. A chief, called by Ibn Battūṭa al-Hadārīb, shared in the customs of 'Ayyūbīb. Information about the southern Bedja is sparse. Al-Ya'qūbī lists six Bedja "kingdoms". Al-Uṣūlī depicts the farthest Bedja as a fragmented, pagan society, in which each group had its own *kāhin* to give guidance on grazing and raids.

Decline of the Hadārīb and formation of the tribes. By the 18th/14th century the gold-mines had been abandoned and 'Ayyūbīb was in decline. These economic factors may explain the disappearance of the Hadārīb, who appear to have migrated southwards, perhaps becoming the Balaw ruling-caste which dominated the Bedja of the Suakin-Maṣāra hinterland. The spread of Arab tribes up the Nile and the establishment of the Muslim Funj sultanate (c. 902/1504) resulted ultimately in the general, if superficial, islamisation of the Bedja. This is reflected in the adoption of Arab pedigrees. Some of these (e.g. the derivation of the Bishrīn, Ummārī and 'Aḥāḥa from Khālīd b. al-Walīd or al-Zuhayr b. al-'Awwām) are obviously fictitious; others, such as the Hadānawīa claim to descent from an otherwise unknown Hūḡāḡ refugee from the Ottomans, may be a genuine memory of the tribe's development. The Funj period saw the appearance and expansion of the modern tribes. Funj suzerainty was recognised by the southernmost group, the B. 'Amīr, a congeries dominated by a caste of Sudanese-Arab descent, the Nabṭīb, which had superseded the Balaw about the end of the 16th century. The 18th century witnessed the westward expansion of the Ummārī and the drive of the Hadānawīa to the Kāḡh and 'Aḥāḥa. (See also 'ARABIA and 'ARABIA). Suakin had meanwhile become the principal port of the region and was connected with the Sudanese Nile by several routes across Bedja territory. From 1317 it was an Ottoman possession but by the early 19th century the port was controlled by a Bedja group, the Hadārīb, probably distinct from the medieval Hadārīb but, like them, linked genealogically with Hadramawt. They were ruled by the five Artayka clans.

The Egyptian conquest to the present day. The Egyptian conquest of the present day. The Egyptian conquest of the Nubian Sudan

(1821-22) did not immediately affect the Bedja. Khatma-gatherings at al-Taka (the Kāḡh region) failed permanently to subdue the Hadānawīa, and an administrative post was founded at Kasala (1840), which became a trading centre and the headquarters of the important Khātmiyya *ṭarīqa*. The Ummārī led tolls on the Suakin-Berber trade-route, and, like the Hadānawīa, were employed in transport. Although administrative control was imperfect, this was a time of pacification and economic progress. Artayka took the lead in developing the agriculture of the Baraka, previously slightly cultivated by the B. 'Amīr. Attempts were made to grow cotton commercially in the Kāḡh and Baraka deltas. The growing security and prosperity were shattered by the Mahdiyya. This aroused no response among the Bedja until the arrival of 'Uḡmīnā b. Abī Bakr Dikna in 1885. He owed his success less to his partly Bedja ancestry than to the support given him by the local head of an indigenous *ṭarīqa* which had left the rivalry of the government-backed Khātmiyya. 'Uḡmīnā Dikna cut the Suakin-Berber route, captured the government posts in Bedja territory and threatened Suakin itself. His followers, mainly Hadānawīa and Ummārī, fluctuated in their support, and the capture of his headquarters at Tūkar in 1891 by an Anglo-Egyptian force marked the beginning of the Mahdist decline among the Bedja. Pacification and development were resumed under the Condominium (1899-1956). The tribal organization was reconstructed. Security was effectively established. Schools and hospitals were set up in the towns. Contacts between the Bedja and the outside world were increased by economic developments—the creation of Port Sudan, the construction of railways linking the coast and Kasala with the Nile valley, the commercial production of cotton in the Kāḡh and Baraka deltas. The old way of life is however slow to change, and the full integration of the Bedja into the Sudanese polity remains a problem for the new Republic.

**Bibliography:** Principal references only. K. al-Maḡrībī, *K. al-Maḡrībī*, ed. G. Wiet, Cairo 1922, II, 267-80, which incorporates the 10th century account of Ibn Sulaym al-Uṣūlī and other material. Wiet's footnotes give valuable bibliographical references. Modern European sources to 1937 are listed in R. L. Hill, *Bibliography of the Anglo-Egyptian Sudan*, London 1939. To this should be added O. G. S. Crawford, *The Funj Kingdom of Senaar*, Gloucester 1931; A. Paul, *A History of the Beja Tribes*, Cambridge 1954; and the following articles in *Sudan Notes and Records*: D. C. Cunningham, *A History of Kasala and the Province of Taba*, xxv, 1937, 1-66, xxviii, 1940, 1-54; xxviii, 2, 223-271; W. T. Clark, *Managers, Customs and Beliefs of the Northern Bedja*, xxvi, 1938, 1-30; S. F. Nadel, *Notes on Beni Amer*, xxvii, 1945, 53-64; A. Paul, *Notes on the Beni Amer*, xxxii, 2, 1950, 223-245. The collection made by the late Sir Douglas Newbold, entitled *History and Archaeology of the Beja Tribes of the Eastern Sudan*, now in the Griffith Institute, Ashmolean Museum, Oxford, contains tribal and other material. Copious documentation on the Bedja during the Mahdiyya exists in the Mahdist archives, held by the Ministry of the Interior, Khartoum.

(P. M. HOLY)

**BEDJĀWĀN** [see BĀDĀWĀN].

**BEDOUINS** [see BĀDŪW].

**BEG** or **BEY**, a Turkish title, "lord", used in a number of different ways. The various dialect forms (*bāg*, *bāh*, *bek*, *bey*, *bīy*, *bi*, *pig*, etc.) all derive from the old Turkish *bāg* as seen from the Orkhon inscriptions (8th Century) and the Chinese transcriptions concerning the Turks of Mongolia of the same period. The word has no Altaic origin. Mongol *begi* being a later loanword from Turkish; the series Turkish *bāh*, *bāg*/Mongol *bārka*, *bāsi* "strong, sound", etc., owes nothing to the old Turkish *bāg* and should be dissociated from it; the same is true of the series: Turkish *bāg*, *bāg* "wise-man, sorcerer", Mongol *bāg*, *bā* "Shaman". Like many other titles, *bāg* is a loan word possibly deriving from the Iranian *bāg*, viz. the title of the Sāsānid king "divine", from an older form *bāga* "God", cf. *Bāg-dād*.

In the Orkhon inscriptions the compound term *bāg-lar* refers to the "nobility", "the order of beys", as opposed to the *bodun* "people, masses". The word *bāg* also appears in these texts to denote the second rank in the hierarchy of high dignitaries. Finally, there is the evidence of a *Bars* *Bāg* who becomes *Khān* and brother-in-law of the Turkish Grand Khan. These different usages show that the title *bāg* (as later with *beg* or *bey*) does not imply a specific position or duty but is essentially honorific. Hence among many Turkish peoples it is joined to the name of the "elder brother": *agha* *bāg* *agha*, or *agha* *bāg* = old Ottoman *agha* *bey* "lord elder brother". Some Turkish societies have reserved the title for personages of high rank; others have given it an extended general meaning of "chief", "master", "husband" or "Mr.". It can only assume a precise connotation in a given social and administrative context, often as the second part of a compound (as *beg* "chief of tent", "comptrol", Golden Horde; Ott. *sandjak beyli*; etc.); or as a title when used with a proper name which it usually follows: *Bars Bāg*, *Mehmed Bey*. The feminine title of *Begum* [q.v.] is simply a possessive form of the 1st pers. sing. of *beg* = *bāg-im* "my lord", thence "my lady"; cf. *Khān-im*, a similar possessive formation which has assumed a feminine connotation.

(L. BAZIN)

In Islamic times we find the word applied under the Karakhanids to at least one high official; and it was the title first borne by Tughrul and his brother Çağrı, the founders of the Saljuqid empire. Under the Saljuqids and other subsequent Turkish régimes, as Turkish terms began to be used officially side by side with the traditional Arabic and Persian, *beg* came to be employed as the equivalent of the Arabic *amir*, as in the titles *begler-beg* or *beylerbeyi*, equivalent to *amir al-umard*, and *sandjak-beyi*, equivalent to (*amir*) *livā*. Under these régimes, again, whereas the great monarch would be entitled *Khān*, *Khān*, or *sultān*, lesser sovereigns, such as those of Anatolia, or state successors to the Saljuqids, the Karakoyunlu, and the Akkoyunlu, were entitled *beg*, as indeed was the great Timur himself.

Under the Ilkhanes *beg* was sometimes used for women, and under the Moguls of India the feminine form, *begam*, was common. Under the Safawids, since the ruler went by the title *shāh*, *beg* lost ground for lesser personages to *khān* and even *sultān*. Under the Ottomans, on the other hand, it remained in wide use for tribal leaders, high civil and military functionaries, and the sons of the great, particularly *paḡas*.

**Bibliography:** *EP*, art. *Beg* by Barthold;

*IA*, art. *Beg* by Köprülü; *Rehsoze*, Turkish-English Lexicon, s.v. (H. BÖRKS).

**BEGDİLİ**, a tribe of the Boz-ök branch of the Oghuz (Turkmen) peoples. Anōghṭag, ancestor of the Khwārimshāh dynasty, is sometimes believed to be of this tribe, but this is probably not so. A large Begdili community was found among the Turkmens in Syria in the 8th/14th century. At that time they were led by Tashkhūn (Tashkūn) Oghlān. They were regarded as one of the most important Turkmen tribes in Syria in the 9th/15th century. Another important branch of this tribe lived in the 14 villages of the Gūlār district of the 101 province in the same century; their leaders were in possession of fiefs (*ḍarāḥ*). The Begdili of Syria were the largest of the Turkmen tribes in the Aleppo region in the 10th/16th century; they had 40 clans during the first half of the same century. The Syrian Begdili also had important clans in the Yemī II and among the Boz Ulus in the Diyārḥakr region. Another branch of these Begdili went to Iran together with the *khān* Shāhīn. The finest grazing grounds between Dīyārḥakr and Aleppo were, in the 11th/17th century, in their possession. They were, however, punished by Khūsraw Pāshā during his Baghdad expedition (1039/1630), for refusing to pay taxes and for allowing their cattle to destroy the crops of the local people. They are estimated to have had 12,000 tents during the second half of the same century. Like many other tribes, the Begdili were called to take part in the Austrian campaign in 1101/1600. A few years later the government made an attempt to settle the Begdili and other Turkmen tribes living near them, in the Rakka region. Consequently some Begdili settled in Rakka and the rest in the Aleppo and 'Aynṭab region. As already mentioned a branch of the Syrian Begdili went to Iran together with the Shāhīn. Many important Safawī commanders and governors were of this tribe. A branch of Begdili is seen among the Gīkīn III in the Astarābād region.

**Bibliography:** Faruk Sümer, *Buḡala Oğuz Boylarına Dair*, in *Dil ve Türk ve Coğrafya Fakhri Dergisi*, x/1, Ankara 1953.

(FARUK SÜMER)

**BEGLERBEGİ**, *beylerbeyi*, Turkish title meaning 'beg of the begs', 'commander of the commanders'. Like other titles it suffered progressive debasement: having originally designated 'commander-in-chief of the army' it came to mean 'provincial governor' and finally was no more than an honorary rank. In the first sense it was used by the Saljuqs of Rūm as an alternative title for the *malik al-umard* and by the Ilkhanids as the title of the chief of the four *umard* *al-ulus*. In the empire of the Golden Horde the title was used for all the *umard* *al-ulus*. In Mamlūk Egypt it was perhaps used for the *alibak al-ashīr*. (For references to the sources see M. F. Köprülü, *Osmanlı Müesseselerinin Örneği*, İstanbul 1937, 190-5 [Italian translation: *Alcune osservazioni* ...], Pubblicazioni dell'Istituto per l'Oriente di Roma, 1944, and I. H. Uzunçarşılı, *Osmanlı Devleti Teşkilatı Medhal*, I, 1941, index; cf. also D. Ayalon in *BSOAS* XVI [1953], 59).

Among the Ottomans too the title seems to have meant originally 'commander-in-chief' (in which sense it is used by Sa'd al-Din, l. 69). It is said to have been first bestowed on Lala Shāhīn by Murād I when, after the capture of Edirne, he himself returned to Bursa (Giese's *Anon.*, 22a = Uroğ. 22). Lala Shāhīn was succeeded by Timurtaş, still apparently the sole *beglerbeyi*, who was left to guard Anadolu

when Bayezid I marched against Mirā (Neshir [Taschmer] 186). When Müsā, during the 'time of troubles', had seized the European territories he appointed a *vezir*, a *kādī* and a *beglerbegi* (Giese's *Ann.* 451). But *beglerbegi* of Rumeli in Cevall 290 and 'Saldjukscheile' (Giese 189). By the end of the reign of Mehmed II at the latest there existed two *beglerbegis*, with territorial designations, one 'of Rumeli' and one 'of Anadolu' (cf. 'Afr.' 181, '*beglerbegis* of Anadolu' and 183, '*beglerbegis* of Rumeli'; such reference for earlier periods in later historians may be anachronisms). This was clearly the case under Murad II, by which time the *beglerbegis* of Rumeli and Anadolu were the governors-general of the two provinces, their main responsibility being the supervision, through the *sandjak-begis* (q.v.), of the feudal *sipahis*, whom in time of war they led into battle. As Ottoman territory expanded, new provinces were created, so that by the end of the 16th/17th century the *beglerbegis* numbered nearly forty. The *beglerbegi* of Rumeli (who from 1521/1536 onwards was admitted to the *divan*, cf. Forlister 1, 593) always took precedence, the others, if of the same rank (see below), taking precedence according to the dates of the conquest of their provinces. It was not unknown for the Grand Vizier to hold also the office of *beglerbegi* of Rumeli.

It is clear from a *Kānūn-nāme* of Mehmed II that already in his reign *beglerbegi* had come to be also an honorary rank (as it had perhaps been under the Saldjuks of Rūm, cf. Köprülüzeade, *op. cit.*, 192), holders of which took precedence immediately after *vezirs*. By the end of the 11th/12th century *Rumeli beglerbegis* too had become an honorary rank, besides denoting the actual governor-general. Conversely, from the 16th/17th century onwards, the office of *beglerbegi* of important provinces was often bestowed on holders of the rank of *vezir*, who had authority over *beglerbegis* of neighbouring provinces. The *vezir* was entitled to three tugs, the *beglerbegi* to two. Both *vezirs* and *beglerbegis* bore the title *paşa*, whence the *sandjak* in which the *beglerbegi* resided was known as *paşa sandjakı*.

The *beglerbegi* was regarded as 'viceroy', *salname şehidi*; he had a miniature coat of arms and presided at his own *divan*. At first he had full powers to grant *timars* and *25'40ims*, his appointments being automatically ratified, but after 937/1530 he could grant with his own *herid* only the smaller (*teğhirsiz*) *timars*.

In the 12th/16th century the terminology became further confused, for (1) the name *paşa* (q.v.) was increasingly given to the governor-general, and *beglerbegi* in this sense fell into desuetude (except for the *beglerbegis* of Rumeli and Anadolu, to judge from D'Osson, *Tableau général*, vii, 278); (2) the Persian *mirā mirān*, *mīrān* (q.v.), which had earlier been used indiscriminately (together with *Ar. amir al-umara'* [q.v.] as a synonym for *beglerbegi*, was increasingly given to the governor-general, and *beglerbegi*, and bestowed as such even on governors of *sandjaks*. With the thorough re-organisation of provincial administration by the law of 1281/1864 the term *paşa* became the official designation of the provincial governor (cf. A. Heidhorn, *Droit public et administratif de l'Empire Ottoman*, Vienna-Leipzig, 1908, 137 ff.). Thereafter only the terms *Rumeli beglerbegi*, *mīrān* and *mirā amir* survived, and they only as honorary titles.

In the Safavid state the *beglerbegis* formed the second of four classes of provincial governors (*Tadhkirat al-Mulūk*, tr. and comm. V. Minorsky,

GMS New Series xvi, London 1943, 25, 43, 163). *Bibliography*: Hammer-Purgstall, *Staats-, passim*; P. A. von Tschendorf, *Das Lehnenwesen in den Osmanischen Staaten*, Leipzig 1872; J. (V. L. MENAGE)

**BEGTEGINIDS**, an important seigniorial family which, though it never completely freed itself from the overlordship of its powerful neighbours, possessed for a century extensive lands in Upper Mesopotamia, partly in the east around Irbil and partly in the west for a shorter period, around Harrān. The founder of the family, Zayn al-Dīn 'Alī Kūšūk b. Begtegin, was a Turcoman officer whose fortune was linked from the beginning with that of Zenki. Probably as a result of his participation in this prince's campaigns in Kurdish territory, we find him in possession of a number of districts, stretching from the Great Zab to the lands of the Hanayid and Hakkari Kurds, Takrit, and Şahrūr, with Irbil at their centre. In 530/1145, after the revolt of the Saldjuksid Alp-Arslan at Mosul, Zenki further gave him military control over this town. Despite this power he remained a faithful lieutenant of Zenki's two successors in Mosul, Sayf al-Dīn and Kuth al-Dīn, as well as of their vizier Djamāl al-Dīn al-İsfahānī, until the time of his disgrace; the last-named of these princes added to his territories Sindjar and Harrān, the latter in compensation for Jūm in Syria which one of his brothers had to give up to Nūr al-Dīn, the uncle of Kuth al-Dīn and prince of Aleppo. However, at the end of his life Zayn al-Dīn surrendered all his lands to Kuth al-Dīn, securing in exchange his own right of succession to Irbil alone. He died an old man in 563/1168, and left the reputation of being brave, upright, temperate, and a protector of the devout.

His fate, however, was surpassed by that of his son Muzaffar al-Dīn Gökburī. The latter, ejected first from Irbil by the governor of that town (and later of Mosul), Kāimān, to the advantage of his younger brother Zayn al-Dīn Yūsuf. From Kuth al-Dīn he received in compensation Harrān, which his father had held. At the opportune moment he aligned himself with Saladin, who added Edessa and Samosata and married him to one of his sisters. From that time on he played a glorious part in most of Saladin's campaigns, in particular the conquest of Palestine and Syria and the struggle against the Franks (third Crusade). Then in 586/1190, his brother Yūsuf having died after he also had had to surrender to the confederate armies in front of Acre, Gökburī surrendered his *Diyar* Muḥar territories to Saladin on behalf of his brother Takī al-Dīn 'Umar and obtained from him as *de facto* overlord of the Zenkids the succession to the entire province of Irbil. He held this for forty-four lunar years, until he was eighty-one years old, and judging from his revenues considered himself from the time of Saladin's death as the vassal of the Caliph alone. He played an astute part in the struggles which went on all this

time among the various rulers of Upper Mesopotamia, supporting first the Ayyūbids against the Zenkids, and later the weakened Zenkids, to whom he married two daughters, according to the sons of al-'Adīl. Finally he set himself to opposing the ambitions of Badr al-Dīn Lu'lu', the lieutenant and successor of the Zenkids, who was an ally of the Ayyūbids al-Aḡraf. At the end of his life, having no son and fearing the intervention of his different neighbours, Gökburī bequeathed his principality to the Caliph, who brought it under effective occupation (630/1233).

Apart from diplomatic and military matters Gökburī was concerned with various enterprises of social value, especially at Irbil, though their influence extended beyond the town itself. He instituted *madrasas*, *ḫanahās*, hospitals and almshouses, and public services in aid of pilgrims, as well as contributing to the ransom of prisoners of the Franks, etc. He seems to have been the first prince to celebrate formally the *Marid* festival, perhaps as a reaction to the Šh'P nativity festivals or Christmas as kept by the Irbil Christians. He was a devout and a well-read man, much visited by scholars and writers from foreign lands. In governing he was assisted, particularly on such occasions, by his vizier, who was known by reason of his former activities as *Mustafā* of Irbil, and compiled the history of the town. Ibn al-Khalikān and his family were among their most famous protégés. Around the town of Irbil, which had always remained Christian and somewhat aside from the current of Muslim history, there grew up a new lower town, and the whole became transformed into a Muslim centre of some standing. This advance, which was attended by a rather severe fiscal policy, was set at naught by the Mongol sack of 634/1237.

**BEGTİMUR** (see *ŞHARH ARMAN*). **BEGUM** (Indo-Persian BEGAM, Turkish BİGİM), feminine of BEG (q.v.). During the Mughal period of Indian history its use, as an honorific, was confined to the royal princesses only. Dīshānārā Begam (q.v.) the unmarried daughter of Şāhjdjāhān (q.v.), bore the official title of Pādshāh Begam during the reign of her father. She retained it even after the dethronement and subsequent incarceration of Şāhjdjāhān. During Akbar's rule the Begams (queens and princesses) received from 1228 to 1610 rupees per annum as privy purse. After the death of Dīshānārā, his widow Nūr Dīshān, received 200,000 rupees per annum allowed her by Şāhjdjāhān. Mumtāz Mahal, the consort of Şāhjdjāhān, drew 1,000,000 rupees annually from the Imperial Exchequer while Pādshāh Begam enjoyed an allowance of 600,000 rupees per annum, half in cash and half in lands. Awrangzib gave the latter 1,200,000 rupees per annum. Before the establishment of Pakistan (1947), Indian Muslim ladies of high and noble

birth were designated as "begams". Now all married women in Pakistan, with the exception of those belonging to the poorer classes, are called "begams", the equivalent of *khānim* Mrs., or Madame. In this sense the word is practically unknown to the Arabic and Persian speaking countries. Husbands, in public and private, not infrequently address their wives as begam, scrupulously avoiding pronouncing their given names. Domestic and menials, as a rule, address their mistresses, in India and Pakistan, as begams. Conventionally, every newly-born girl bears this word as a suffix to her name, but the practice is now fast disappearing.

**BEKRİ MUSTAFĀ AGHA**, the name of a drunkard, who lived in the reign of Sultān Murād IV (1623-1640), and is said to have led him into habits of drunkenness; the name *bekrī* therefore in Turkish still commonly means a drunkard. In the popular literature and in the Karagöz plays the drunkard Bekrī Mustafā Agha is a well-known figure, characterised by his sharp and ready wit and his Bohemian way of life. Evliya even gives the title of a *Tahidī Bekrī Mustafā the Blind Arab Beggar* (*Seyahat-nāme*, i, 654).

**BERTĀSHIYYA** (see *BEKTAŠIYYA*). **BERTĀSHIYYA**, a Dervish order in Turkey. The patron of the order is Hādījī Bektāsh Wall, whose biography as given in the order's traditional writings, (the first version of which goes back to about the beginning of the 9th/15th century) is legendary, its purpose being manifestly to bring together the saint with famous religious personalities and to account for the later political importance of the Bektāshīyya by insisting on the activity of its alleged founder. It is quite out of the question that Bektāsh was ever in relation with 'Oghmān and Orkhān or that he consecrated the Janissary corps (established for the first time under Murād II), as is maintained by the Bektāshī tradition and by some historical sources written under its influence.

We can however consider as certain the appearance in the 7th/13th century, among the dervishes of Anatolia, of Hādījī Bektāsh from Khurāsān. He was probably a disciple of Bābī Ishāq (see *BĀWĀ*), whose revolt had taken place in 638/1240. The aristocratic entourage of the rival Mawlawīyya order later laid emphasis on this. According to the researches of M. Fuad Köprülü, the order originated from the circle of his disciples. However, in the *Mahāshī* of Hādījī Bektāsh, originally written in Arabic and translated into Turkish verse by Khālīl-oghlu and afterwards rendered also into Turkish prose, the secret rites and doctrines characteristic

of the Bektāshīyya are not particularly emphasised. At all events, the order, whose immediate predecessors appear to have been the Abdālīn-Rūm, already existed in the 8th/14th century; it was at the beginning of the 10th/16th century that the grand master Bālm Sultān, the "second Fīr", gave it its definite form.

Turkish dervish institutions had received their characteristic features in western Turkestan from Ahmad Yasawi (d. 562/1166); they had acquired an ever increasing expansion in Anatolia, but at the same time they had adopted heretical tendencies. The Bektāshīyya was able to conserve a good deal of the pre-Islamic and heretical elements in those regions where the order absorbed Muslim as well as Christian sects it came to include a large part of the population, as for instance in southern Anatolia and particularly in Albania, where there arose a kind of mixed religion, composed of Islamic and Christian elements. Also other communities with closely related related dogmas and rites, and especially the groups comprised under the denomination of Kīrlībāshī, stood in certain relations to it.

The attitude of the Bektāshīs towards Islām is marked both by the general features of popular mysticism, and by their far-reaching disregard for Muslim ritual and worship, even including the *ṣalāt*. In their secret doctrines they are *Ṣūfīs*, acknowledging the twelve imāms and, in particular, holding *Ḍjā'far al-Ṣādiq* in high esteem. The centre of their worship is 'Alī; they unite 'Alī with Allāh and Muḥammad into a trinity. From 2 till 10 Muḥarrarūn they celebrate the nights of mourning (*mīlām gūjeler*); also the other 'Aīd martyrs and especially the *ma'yāmīn pāk* (those who perished in infancy) are highly venerated by them. In the 9th/15th century the cabalistic number speculations of the Hurūfīs spread among them, while the *Djīvān* of Fadl Allāh Burūfī in its Persian redaction, and the Turkish exposition of the doctrines of the sect written by Ferīd-oghlu under the title *ʿAḥḥādīna*, have canonical authority with them. Furthermore they believe in the migration of souls.

The Christian elements may already partly have belonged to the Anatolian predecessors of the Bektāshīs; other parts were perhaps taken over from Christian groups who joined them later. On the occasion of the reception of new members there is a distribution of wine, bread and cheese, which is probably a survival of the Holy Communion as practised by the Aristoītes. Moreover the Bektāshīs make a confession of sins before their spiritual chiefs, who grant them absolution. Women take part in their rites without veiling their faces. A narrower group vow themselves to celibacy, the celibates wearing earrings as a distinctive mark. It is not yet made clear whether celibacy existed already in early times among the Bektāshīs; probably it was introduced for the first time by Bālm Sultān.

The Bektāshīs not seldom settled in famous places of pilgrimage, explaining the sanctity of the latter in conformity with their own traditions, for instance in Seyyid Ḡhāfīr near Eskişehir and in several places in Albania. The miracles described in the legends of their saints have often conserved shamanistic features.

The entire order was governed by the Čelebi, who resided in the master monastery (*ḡīr-ḡāh*) at Māḡḡīdī Bektāshī, constructed over the saint's tomb (between Kīrşehir and Kayseri). This office used to pass in the 18th and 19th centuries from father to son; it was not, however, always hereditary.

The celibates have their own grand master or *dede*. The head of one single monastery (*tekke*) is called *bāba*; the fully initiated member *dergīh*, the member who has only taken the first vow *muhīb*, the not yet initiated adherent *ʿāḡīh*. The discipline is chiefly governed by the relation of the *muhīb* to his disciples and novices.

The Bektāshīs wear a white cap, consisting of four or twelve folds. The number four symbolises the "four gates": *ḡharīʿa*, *ṭarīka*, *ma'rīʿa*, *ḡhāḡīka*, and the four corresponding classes of people: *ʿāḡīd*, *ʿāḡīf*, *ʿāḡīf*, *muhīb*; the number twelve points to the number of the imāms. Particularly characteristic are also the twelve-fluted *ladīm lādīm*, which worn round the neck, and the *teher* (double-axe). Illustrations are to be found in the work of J. K. Birge (see bibliography).

The big *tekkes* comprise the following parts: *maydān evi*, the monastery proper with the oratory; *ekmek evi*, the bakehouse and the women's quarters; *ak evi*, the kitchens; *mīlmām evi*, the guest quarters.

Among the many earlier settlements of the order the following should be mentioned. In Rumelia: Dimetoka and Kalkandelen; in Anatolia: Ḡḡmūdīnīk north-west of Anasya and Elmalı in Lycia; near Cairo first at Kasr al-'Ayn and soon afterwards also on the Muḡattām slope (already as early as the 9th/15th century); there are others in Baghdad and at Karbādī.

The Bektāshī form of the dervish religion deeply influenced the pious attitude of the Turkish people. Next to the mystical writings proper of the order there flourished also a rich and fervent lyric poetry of Bektāshī poets.

The order's political importance was due to its connexion with the Janissaries; the latter had been from the beginning, in the same way as all other early political institutions of the Ottomans, under the influence of religious corporations. In the second half of the 9th/15th century at the latest the Bektāshīs acquired exclusive authority amongst them. The receptivity of the Janissaries to Bektāshī beliefs may perhaps be explained by their Christian origin. Their connexion with this strictly organised order gave the Janissary corps the character of a closed corporation. The Bektāshīs also took part in several dervish rebellions against the Ottoman power, e.g., the revolt of Kalender-oghlu (933/1526-1527). The destruction of the Janissaries in 1243/1826 by Mahmūd II affected also the order to which they were linked; many monasteries were destroyed at the time. Towards the middle of the 19th century began the renewal of the order, and the rebuilding of the monasteries; the Bektāshīs experienced a revival which found expression in its literary activity at the end of the 19th century and even after 1908.

In the autumn of 1925 the Bektāshīs, like all dervish orders in Turkey, were dissolved; it was, however, precisely the Bektāshīs who had opened the way for many measures inaugurated by the Turkish republic (relation to Islamic orthodoxy; position of women). To-day the Bektāshīs continue their existence in the Balkan peninsula, particularly in Albania where their chief monastery is in Tirana; according to certain documents, there were still 30,000 Bektāshīs in Turkey in 1932 (cf. C.O.C., 1932, 206).

**Bibliography:** Pioneer works in critical research are the studies of G. Jacob and Kīrşehirli Mehmed Fuad and his school. These writings and the remaining bibliography are mentioned in: J. K. Birge, *The Bektāshī Order*

**BELEN** (see BAYLĀN).

**BELEYN.** The name of a tribe-group of herdsmen and cultivators in the southern part of the Keren province of Eritrea. Known to themselves as Bogas, and numbering some 30,000 souls, they are organised in two main tribes, the Bayt Tarkē and Bayt Tawke, strictly similar in culture and habit, though claiming distinct (mainly mythical) origins. A characteristic master-and-serv relationship has long been traditional among them, but tribal has now largely given place to direct government authority. The Beleyen generally followed Coptic Christianity until the Egyptian occupation of Keren area in 1277-1294 (1860-1876), but have since adopted Islām.

The Beleyen language, unknown elsewhere, is an unsentimental dialect of the Agau group of Kuschitic (Hamitic) languages. This, and their social structure and folk-lore, indicate that their presence in Eritrea is due to the immigration of little-known Agau elements from northern Ethiopia in the 10th and 11th (16th and 17th) centuries into territory previously occupied by folk of lower culture and energy.

**BELGRADE** (in modern Serbian *Beograd* = White City), capital of the Federal People's Republic of Yugoslavia and of the People's Republic of Serbia, at the confluence of the Sava and the Danube. It comprises Beograd, the old town on the right bank of the Sava and the Danube, Novi Beograd (= New Belgrade), a new settlement still under construction, on the left bank of the Sava, and Zemun, the old town on the Danube. A number of smaller places on both banks of the Sava and the Danube also belong to Belgrade. It has more than 500,000 inhabitants.

Since Belgrade became the capital of Yugoslavia in 1918, it has begun to spread to the far side of the Sava and the Danube. In former times it covered only the area along the right bank of the Sava and the right bank of the Danube below the confluence. It was here that the Celtic Scordisci founded a settlement and named it *Scordis*, a name which the town retained in the days of Roman rule (Singidunum). During the Bulgar rule in the 9th century, the town received its Slavonic name, which it retained, despite frequent changes of rulers (including Byzantine and, later, Hungarian

ones). It was, however, frequently translated (Alba Bulgaria, Nandor Alba, Nandor Fejervár, Alba Graeca, Griechisch Weissenburg). In their day, the Turks referred to it as *بلگراد* (Belgrad).

In order to distinguish it from other towns in Albania, Hungary, and Transylvania which also bore the name of Belgrade, the Turks occasionally called it *Belgrad Uğures* (in the 15th century), *Aḡaḡī Belgrad*, *Tama Belgrad*, *Edipgrad*, *Semendire*, or similar names. In some Turkish documents, and in contemporary geographical and historical works, Belgrade is sometimes designated by names applied in the Islamic world to border towns and strategically important fortresses. Thus the name *dār al-ḡhīdīd* is found frequently, and this has led some of the earlier Serbian historians to state that this was the Turkish name for Belgrade. Prof. F. Bajraktarević has proved that such a statement is unfounded.

Up to the First World War, Belgrade was an important fortress on the road from Central Europe to the Near East. Thanks to its strategic importance, Belgrade has had a stormy past. After it had changed rulers frequently in the Middle Ages (Byzantines, Bulgars, Hungarians, and Serbs), Belgrade was ceded to the Hungarians after the death of the Serbian despot Stevan Lazarević (1427). For nearly a century, it was the most important base for the defence of the southern borders of Hungary against Turkish raids.

If we disregard some uncertain reports concerning a siege of Belgrade by Illyerids, the Turks twice attacked Belgrade prior to 863/1459: in 843/1440, when the town resisted a six months' siege, and under Meḡmūd II the Conqueror, who in 866/1456, arrived with a great army, a fleet, and strong artillery. Encircled on the landward side, with the Turkish fleet blocking the Danube, and heavily bombarded, Belgrade now the less held out. Assistance reached the town, and under the leadership of János Hunyady, who took over the defence after the break-through, the garrison of Belgrade resisted successfully, despite the fact that the Turks had penetrated into the lower fortress. After a premature assault, the Turks gave up the siege on July 23rd. This was the second occasion on which Belgrade won fame as "The outer wall of Christendom". In 845/1441-2, the Turks built a fortress opposite Belgrade, on the mountain Avala (Havala). This fortress played an important part in the Turkish raids on Belgrade after Serbia finally fell under Turkish rule (863/1459). The defensive power of Belgrade decreased during the first decades of the 10th/16th century in the clashes with the Turks. Broken by financial and political crises, Hungary was not able to give regular pay to the garrison; still less could it improve its defences.

During Sultān Sulaymān's first campaign (927/1521), the Turkish army entered Belgrade on 29 August 1521, after a long siege. The Hungarian troops were sent home, the Serbian population was settled in Constantinople, and some of the Serbian crews of the warships in the Danube became sailors in Turkish service. At that time, the west of the *sandjak* of Smederevo (Semendire) was moved to Belgrade, and Bālī-bey (died 933/1527) the son of Yahyā Paḡḡa, was made governor. In order to make Belgrade secure, Bālī Bey destroyed all settlements in the neighbouring areas of Syria, and he used the building materials of these destroyed Syrian towns for Belgrade's new fortifications,

on his minister Khwāja Dīshān. It was captured by Bābur in 1505/1529. During the reign of Akbar, Rājā Dījay Singh Sawā'i built many a temple and an observatory here, the latter is now in ruins. Shihābādīn appointed his eldest son, Dārā Shukoh, as the governor of the town when he came into close contact with Brahmans and imbibed Hindu learning. Avraṅzīb, enraged at Muslim students also being taught by Brahmans, ordered the closure of its *madrasas*. He also built a mosque on the site of an ancient Hindu temple which he destroyed on the plea that it was being used as a seat of conspiracy. The name of the city was also changed to Muḥammadshāh but it never gained popularity, although it appears on his coins struck here. Muḥammad Shāh "Rangīlā" (1132/1719-1162/1748) bestowed the *pargana* of Benares on Maṣārīm, a Rājput zamindār, whose son Balwant Singh sided with the British during the Battle of Buxar, (1764) when he became independent of the Nawab of Awadh. It was ceded to the British in 1169/1775. In 1930 the estate was merged into the Indian Union forming part of the Banāras Division (Uttar Pradesh).

Kabir, the Indian *sāfi*-poet, came of a weaver family of this place. 'Alī Hazin, the Persian poet, lies buried here. It is also the birth-place of Aghā Ḥaṣhr, an Urdu dramatist. Benares is famous for its silks and brocade manufactured by Muslim weavers. The morning at Benares, like the evening at Lucknow, has become proverbial in Urdu literature.

(A. S. BAIME ANSARD)

**BENAVENT**, (in al-Idrīsī b.n.d.h.), Benevento, never captured by the Muslims, even for a short period as were Bari and Taranto. However, in the 3rd/9th and 4th/10th centuries the Muslims became involved in the history of the town and principality of Benevento, having frequently been both enemies and allies of its princes in their domestic struggles, as well as often plundering and threatening its territory. The period on which we are best informed, thanks to the Latin sources, is the middle portion of the 3rd/9th century (the Arab sources are silent in this regard or give only very vague information). We know that in 228/84 a Saracen *amir* Apolaffar or Apolaffar (Abū Dī'ālī), who had come

from Taranto, became the ally of prince Sicomulph against his rival Radelechis, but eventually quarrelled with Sicomulph and was killed defending Benevento. In 237/851 we find a certain Massar (Abū Ma'shar), with a troop of Saracens, allied to this same Radelechis. Massar was later treacherously seized by Radelechis and executed together with his family. Some years after this Benevento was again threatened by Sawdān, the emir of Bari. It was only during the 4th/10th century that the Muslim danger receded, to disappear in the 5th/11th century with the Norman conquest of Sicily. According to the testimony of al-Idrīsī the town of Benevento is very old (*al-Idrīsī* says its population is large).

(F. GABRIELI)

**BENAVENT**, a Muslim leader who inspired Arab resistance to the Normans in eastern Sicily from 462/1072 until 479/1086. His name figures as *Benaout* or *Benaouth* in the account of the historian of the Normans, Malaterra. This person, of whom the Muslim sources make no mention, defeated the son of Count Roger in 467/1075 near Catania, captured this town in 474/1081, and in 478/1085 led expeditions from it into Calabria. In the following year he was besieged by Roger in Syracuse, and made a supreme effort to free this stronghold, which seems to have been the centre of his power. He was killed in the ensuing naval battle in the port, on 8 Šafar 479/25 May 1086. The real Arab name of this champion of Islam in Sicily was Ibn 'Abdāb. His memory has been handed down only by his enemies, who admired his courage. Almost certainly he was a forerunner of the Muḥammad b. 'Abdāb who a century and a half later led the last great revolt of the Sicilian Muslims against Frederick II, by whom he was put to death.

**Bibliography:** M. Amari, *Storia dei Musulmani di Sicilia*, III, 151-160. (F. GABRIELI)

**BENDER**, a town in Bessarabia; the name appears on a coin of Mengli Gerey dated 905/1499-1500. It is found in the Tatar documents as *Bender-Kerman* (V. Zernov, *Materialy*, 16). Bender, from Persian *Bandar*, was called earlier *Tigana* or *Tigiana*, which may have a Kuman origin. That the town was first established by the Genoese is a legend (*Chronique d'Ércebe*, ed. Girescu). Its rise as a trading town with important customs revenue was due to its being on the "Tatar-route" on which an active trade was carried on between Lvov and the Crimea and Ak Kirmān (2.6.) in the 14th century. The place seems to have passed under the rule of the Tatars to that of the Moldavian princes around 1490. The Tatars tried to reconquer it (Ulugh Muḥammad in 1428 and Imnek Mirzā in 1476), and, finally Mengli Gerey in cooperation with the Ottomans took it with Kavhan and Tombasar in 1484. When in 945/1538 Süleyman II invaded Moldavia and formed the new *sandak* of Ak Kirmān with the incorporation of the south Bessarabia he ordered the erection of a strong castle on the new border at Bender. A good description of the castle was given by Ewliyā Celibī (v, 116-120) in 1097/1686-87. It became the seat of a *sandak*-begi toward 1570 and later it was attached to the newly formed *şeykh* of Ozi. The khān of Bender had 40 *şahīr* (2.6.) under his jurisdiction and the customs house, always active, was under an *emīn* (2.7.). Ewliyā Celibī reported that its "xaruch" lying on the west and

the south of the castle consisted of 7 Muslim and 7 non-Muslim districts with 1700 houses and about 200 shops. Bender was, Ewliyā adds, "the key of the empire" in the north, a stronghold especially against the Cossacks of Dnieper.

Bender was also famous as the refuge of Charles XII of Sweden between 3 August 1709 and 17 February 1713 and of Potocki in 1768. The Russians captured it first on 27 September 1770, in 1789 and on 8 November 1806 keeping it only with the treaty of Bucharest, 28 May 1812.

**BENDER** [see BANGAR].

**BENG** [see BANGG].

**BENGAL** [see BANGALA].

**BENGALI**.

(i) Muslim Bengali Language.

Bengali belongs to the Indo-European family of languages. It may have begun to evolve as a separate language with a distinct identity, out of Gauṛa Apabhraṃsa, about the 8th or 9th century A.D. The greater part of the vocabulary of Bengali was derived or borrowed from Sanskrit.

The Muslims conquered Bengal at the beginning of the 13th century, and ruled the country for nearly six hundred years. Under Muslim rule Persian was one of the languages of culture, provincial administration, and inter-state communication. Because of this, large numbers of Persian words and, through Persian, Arabic and Turkish words, became part of the Bengali language.

In 1856 English replaced Persian as the language of administration. From then onwards Persian no longer enjoyed the same status as before in the national life of Bengal and of northern India generally. Before the handing over of power in 1947, which resulted in the partition of Bengal, words of Perso-Arabic origin constituted nearly 8% of the total vocabulary of Bengali, and a little more than 15% of Muslim Bengali vocabulary. Hindustani began to be spoken in Calcutta from the latter half of the 18th to the middle of the 19th century, and a number of Hindustani words were received into Bengali vocabulary. At the beginning of the 19th century, there was in written Bengali something of a conflict between Sanskritised Bengali, that is, Bengali in which Sanskrit words preponderated, and Persian Bengali, examples of this can be found in the works of Mityunajay Bidyānankar and Rām Rām Basu. During this period innumerable Muslim *punthi*, known as Musalmānī Bāṅlā, appeared. These were written in a mixture of Bengali, Hindustani and Awadhī.

Words of Persian, Turkish or Arabic origin which have become part of Bengali can be classified under seven broad heads, namely: (1) Administration and warfare, e.g., *phauj* (soldiers) < *ḥawāḍ*, *ṭahṭh* (throne) < *ṭahṭh*, *ḥayṭ* (war) < *ḥarīṭ*, *shahīd* (martyr) < *shahīd*, *ḍiāḥam* (wound) < *zakhm*, etc.; (2) Revenue and law-courts, e.g., *ḍjāmi* (land) < *zamin*, *khāḍḍ* (revenue) < *khāzina*, *āin* (law) <

*d'īn*, *ḥakīm* (judge) < *hākim*, *hazī* (judge) < *ḥāḍī*, *ḥāḍāla* (judgement) < *ḥayyala*, etc.; (3) Religion and ritual, e.g., *Āllāh* (God) < *Āllāh*, *ḥādī* (God) < *ḥādī*, *nāmāz* (prayer) < *namāz*, *roḡḡā* (fasting) < *ruḡḡā*, *ḥajj* (pilgrimage) < *ḥajj*, *ḥarbīn* (sacrifice) < *ḥarbīn*, etc.; (4) Education, e.g., *dān* (school) < *dawān*, *ḥālam* (pen) < *ḥalam*, *ḥāḍḍ* (paper) < *ḥiḡḡḡ*, *tāḥlīm* (student) < *tāḥlīḥ* 'ḡīm, etc.; (5) Races, religions, and professions, e.g., *Ḥindī* (Jew) < *Yahūdī*, *Ḥudud* (Hindu race) < *Yahūdī*, *Muslim* (Muslim), *Phirangī* (English) < *Farangī*, *dardj* (tailor) < *dard*, etc.; (6) Culture and civilisation, e.g., *rumāl* (handkerchief) < *rūmāl*, *ḡāḍḡ* (iron) < *ḡāḍḡ*, *āṭar* (perfume) < 'ḡir, *āṭar* (mirror) < *d'īna*, *korma* (preserved meat) < *kurma*, *ḡoṭī* (meat ball) < *ḡaṭṭa*, *ḡāḍḡ* (a type of sweetmeat) < *ḡāḍḡ*, etc.; (7) Common things and notions in life, e.g., *naram* (soft) < *narm*, *ḡāḍḡ* (Well done!) < *ḡāḡ*, *ḡāḡḡ* (Bravo!) < *ḡāḡ* *ḡāḡ*, *ḡāḡḡ* (news) < *ḡāḡḡ*, etc.

Persian contributed as many as 5,500 words to Bengali vocabulary in general, and nearly another 2,000 words to the vocabulary of the Muslims inhabiting the south-eastern part of East Pakistan in particular. In addition, Persian suffixes like *ī*, *dān*, *dānī*, *dār*, *ḡḡḡḡ*, *ḡāḡḡ*, *ḡāḡḡ*, etc., are used to form Bengali adjectives, abstract nouns etc., e.g., *ḡāḡ* + *ī* = *dānī* (country-made), *ḡāḡ* + *dānī* = *ḡāḡḡḡ* (flower-vase), *ḡāḡḡ* + *dār* = *dāḡḡḡḡ* (shopkeeper), *ḡāḡ* + *ḡḡḡḡ* = *ḡāḡḡḡ* (drunkard) *māmā* + *ḡāḡ* = *māmāḡḡ* (litigant), *ḡāḡḡ* + *ḡāḡḡ* = *ḡāḡḡḡ* (interested in fashion), etc. Persian words like *nār* and *māda* denote gender in Bengali, e.g., *ḡāḡḡ* (pigeon), *ḡāḡḡḡḡ* (male pigeon), *māḡḡḡḡḡ* (female pigeon). Similarly *māḡḡḡ* and *māḡḡḡ* before a Bengali word of common gender denote the male and the female of the species respectively, e.g., *māḡḡḡḡḡ* (dog), *māḡḡḡḡḡḡ* (bitch).

Arab merchants developed commercial relations with the people of the south-eastern coastal regions of Bengal long before the political conquest of the country by the Muslims. The Muslim conquest in later times strengthened the religious and cultural ties of the people of this area with the Islamic way of life, and resulted in an increase in the numbers of the Muslim population. It left its mark on the pronunciation of words in this part of Bengal; for example, in the districts of Noakhali, Cīṭṭāṅṅ and Sylhet the use of the Arabic voiceless velar fricative *ḡ* (ḡ) in place of the Bengali plosive *ḡ* and *ḡ* of the same category, e.g., *ḡāḡḡḡ* < *ḡāḡḡḡ* (cloth), *ḡāḡḡ* < *ḡāḡḡ* (I eat), etc., and the Arabic voiced alveolar fricative *ḡ* (ḡ) in place of the Bengali voiced plosive *ḡ* (ḡ) affricate *ḡ* of the standard Bengali dialect, e.g., *ḡāḡ* < *ḡāḡ* (I go), *ḡāḡḡ* < *ḡāḡḡ* (to know) etc.

Since the handing over of power in 1947 there has been in East Pakistan a growing tendency to absorb words of Perso-Arabic origin in large numbers through Urdu, as a result of cultural and political contact with West Pakistan.

**Bibliography:** Halhed, *Bengali Grammar* 1783, intro. (M. ANOUB HAI)

(ii) Muslim Bengali literature.

Formative Period (900-1200 A.D.) Bengali sprang up as a distinct branch of the Indo-Aryan language about three hundred years before Muslim rule in Bengal and flourished as a regional literature a century and a half after the Muslim conquest. But it did not exist either as a language or as a literature before Bengal came in contact with Islam and the

Muslims. Archaeological excavations at Pāharpur (Rājbāh) and at Maināmati (Tripura), which led to the discovery of a few 'Abbasid coins of the period from the 8th to the 13th centuries, and the history of Muslim saints like Rāyazīd Hishām (d. 874) at Nāyārabā, Cīttāgar, Sūltān Mahmūd Mahāveṛī (1047) at Mahāshib, Bāgura; Muhammad Sūltān Rīmā (1055) at Madanpur Myrnesingh, Bābā Adam (1119) at Vīkrampur, Dacca, prove that there were constant maritime and missionary communication between the Muslim world and Bengal while the Bengali language was being formed.

**Turki Period (1201-1350 A.D.).** The Turks conquered Bengal in 1202 and took 150 years to establish their administration all over the country. This was the period of creation of an Islamic atmosphere through administrative, religious and social machinery. Sanskrit, the fountainhead of Hindu culture, fell into desuetude; Persian, the official and cultural language of the Muslims, came into prominence; and Bengali, the language of the masses, developed rapidly. Shāh Sāhibzādā, a Sanskrit hagiologist, in Shāykh Djalāl al-Dīn Tabrizī (d. 1223), wrote *Nāṭan-pur Rūglamā*, a Bengali ballad by Kānāi Pandit, contain sufficient materials indicative of the growing Islamic atmosphere in Bengal.

**Period of Independence (1351-1575 A.D.).** Bengal became independent under Sūltān Bīrīs Shāh (1342-1357) and preserved her independence for 225 years. The Sultans of Pandua and Gaud identified themselves with the people and extended their patronage liberally to Bengali literature irrespective of caste and creed. The *Rihāṭnāma*, *Kāmyāna* and *Mahābhārata* were translated into Bengali under their direct patronage; the great poets Vidyapati and Candidās flourished; and Muslims, participating with their Hindu neighbours, opened up new avenues of literary themes primarily derived from Persian-Arabic culture.

The first attempt at popularising Bengali among Muslim scholars was perhaps made by the saint-poet Nūr Kūtub-ā-Ālam (d. 1416) of Pandua, who introduced the '*Rihāṭnā Style*' in Bengali, in which half the homiletic was composed in pure Persian and the other half in unornate Bengali. The saint was a disciple of Ghayyūth al-Dīn 'Aṣṣan Shāh (1397-1410) and a life-long friend of the Sūltan, under whose patronage Vidyapati of Mithilā and Muhammad Saqlit of Bengal, the author of the first Bengali romance *Yūsuf-Zulaykhā*, flourished. Other writers of romances, like Bahārīn Khān with his *Laylā-Majnūn*, Sābirīd Khān with his *Hānīd-Kayyāpārī*, Donāghāzī with his *Sayf al-Mulk* and Muhammad Kātib with his *Madhūmāṭī* (1583-1588), followed Saqlit in quick succession.

Muslim historical tales too were introduced in Bengali by a few poets. Zayn al-Dīn wrote *Rasul Vījay* on the exploits of the Prophet, under the patronage of Yūsuf Shāh (1478-1488), who also helped Mulkīddār Hān to compose *Shirīdrīgha Vījay*. Sābirīd Khān also wrote a *Rasul Vījay*, while Shāykh Fayd Allāh (1545-1575) composed *Ghāṭ Vījay* and *Gorāghāṭ Vījay*.

The earliest Muslim poet introducing Islamic precepts in Bengali literature, was Afīd 'Alī. His book of admonition, *Nāṣihat-nāma*, was written on the tenets of Islām. He was also a composer of songs, in one of which he mentions the name of Pirāz Shāh (1528-1531).

Positive literary evidence on the fusion of Hindu and Muslim culture is found in Shāykh Fayd Allāh's *Satpāpīr* (1575). He described in it the beliefs and

practices of a new cult aiming at a common platform of worship for Hindus and Muslims alike. Cānd Kāḍī and Shāykh Kabīr, two composers of songs on the common ideals of Sūfis and Vaiṣṇavas, flourished during the time of Husayn Shāh (1493-1519) and his son Nurāt Shāh (1519-1531).

**Mughal Period (1575-1757 A.D.).** Bengal came under the Mughals in 1576, to whom the country was a 'hell full of the bounties of heaven'. They introduced their own culture with more stress on Persian and neglected the provincial literature. Notwithstanding this, Hindu literature developed on the themes of Cāndī, Manasā, Dharmā, Annadā and Gaṅgā; Vaiṣṇav literature reached its climax and Muslim Bengali literature, deeply influenced by Indo-Persian literature, flourished as never before.

Among Muslim literary figures, two major poets deserve special mention, namely, Sayyid Sūltān (1550-1648) and Ālāwal (1607-1680). The former was the saint-poet of Cīttāgar; Nābī Faṃbā, his magnum opus, rivalled the Bengali *Rāmāyana* and *Mahābhārata* in all respects; the latter, who was a scholar poet of the Mughal Court, adopted the theme of *Padmāvatī* (1651), from Hindi. Both of them exerted a wide and abiding influence on successive generations of poets, who not only improved upon the old themes, but also discovered new ones.

In the field of religion, the *Nāṣihat-nāma* of Shāykh Parīn (1550-1615) and *Kutub al-Masālīn* of Murtazā (1572-1606) are outstanding. Nāz Allāh Khān (1560-1625), a prolific writer on religious subjects, wrote the *Shar'at-nāma*, *Māzīr Saṣāl* and *Hudayāt al-Islām*. The Bayanāt of Nawāzish Khān (1638), *Hasir Masa'il* of 'Abd al-Karīm (1698), *Nāṣihat-nāma* and *Shihāb al-Dīn-nāma* of 'Abd al-Hakīm (1620-1660), *Sarfarīz Nih* of Kanar 'Alī (1670) also deserve notice.

In the realm of Muslim tales, the *Nābī Faṃbā*, *Rasul Vījay* and *Shāh-e-Mirāsī* of Sayyid Sūltān; *Djāng-nāma* of Nāz Allāh Khān (1560-1625), *Amir Hamza* (1684) of Ghulām Nābī and *Ambya' Vāpī* (1758) of Hayāt Mahmūd narrate many legends about the Prophet and his uncle Hamza. Sayyid Sūltān's *Hilā-nāma*, Muhammad Khān's *Riyāzat-nāma*, Shāykh Parīn's *Nūr-nāma* and Muhammad Shāh's *Nūr Kandī* were built up with the Muslim concepts of Sūfāt, Dismāyat and Cosmogony respectively.

Romances introduced earlier were developed by 'Abd al-Hakīm in his *Yūsuf Zulaykhā* and *Lilmātī Sayf al-Mulk*, Nawāzish Khān in his *Gulī Bakīnālī* (1698), Ghārib Allāh in his *Yūsuf Zulaykhā* and Muhammad Akbar in his *Zeb al-Mulk* (1673). When pure romances became monotonous, Sherābī in his *Fīr-nāma* and Shāykh Sa'dī in his *Gudā Mālīkhā* (1712) introduced moral instruction in romances.

A good elegiac literature developed centring round the tragedy of Karbalā. Muhammad Khān in his *Maktūl Husayn* (1643), 'Abd al-Hakīm in his *Karbalā*, Hayāt Mahmūd in his *Djāng-nāma* (1723), and Muhammad Ya'qūb in his *Maktūl Husayn* (1694) contributed largely to the wide popularity of this theme.

**British Period (1757-1947).** The Hindus took advantage of Western education at least half a century before the Muslims, and revolutionised Bengali literature by the introduction of a new prose and a new poetry embodying Western ideas, thoughts and forms. Iwar Chandra Vidyāsāgar (1820-1891), Bankim Chandra Chatterji (1835-1894) and Maghu-

sūdan Datta (1824-1873) played a great rôle in this literary regeneration.

The Muslims entered the field half a century later. Mir Musharrāf Himsay (1848-1931), Pandit Riyāz al-Dīn Maṭṭḥādī (1850-1919) Shāykh 'Abd al-Rahīm (1859-1931), Kaykubād (1858-1931), Muzammil Hakk (1860-1935) and Dr. Abu 'l-Husayn (1860-1916) took to this new Bengali to lay the foundation of modern Muslim Bengali literature and a host of others came in their wake. Among them Iwar Husayn Shīrāzī (1870-1931) was the most illustrious.

Meanwhile, Rābīdrānāth Tagore (1860-1941), the Nobel prize-winner, appeared on the literary scene of Bengal and raised her literature to a world status.

Nāṣir al-Islām (b. 1899), the Rebel Poet of Muslim Bengal, ushered in a new school of realistic poetry full of life, light and vigour. He shared the sorrows and sorrows of his countrymen in particular and of oppressed humanity in general. He was the only singing bard to herald a new era of common men and awaken them to struggle for the independence of their motherland, a struggle which culminated later in the creation of Pākistān. In his wake, the poet Djasim al-Dīn (b. 1902) came forward to sing the songs of rural Bengal, particularly of its east portion, now known as East Pākistān.

**BENGHĀZĪ**, the principal town of CYRENEA, formerly the district of Barka [q.v.], situated on the western plain on a strip of shore partly cut off from dry land by lagoons. Its position is not advantageous, as its harbour is exposed to winds from the north and west, while the neighbouring regions are arid and the fertile districts on the al-Mardj and Djabal Aghdar plateaus are some way off. The town is built on the site of the former Eubesperides, a colony founded by the Greeks in the fifth century B.C. During the reign of the Egyptian Ptolemy III Euergetes the settlement became known by the name of his wife Berenike, and retained this name, as Bernik, in the Middle Ages. It was always a town of secondary importance, and declined in the Middle Ages, possibly vanishing completely.

The modern town dates from the immigration at the end of the 19th century of Tripolitarians from Zliten and Mesrata who had commercial connexions with Derne, an Andalusian settlement established some time previously on the eastern seaboard of Cyrenaica. It takes its name from Sidi Ghāfi, a saint buried locally, but about whom little is known. The Tripolitarians were gradually reinforced by immigrants from the other Ottoman countries, notably Cretan, who came in numbers before and after the Greek conquest of their island (1897); and other immigrants were Jews from Tripolitania, tribesfolk and oasis-dwellers from various districts of Cyrenaica, and a few Europeans. The population of the town was 5,000 at the beginning of the 19th century, and 15,000 towards 1900, including about

a thousand Italians, Maltese and Greeks and 2,500 Jews. It had risen to 19,000 when the Italians landed at Benghazi in 1911. Formerly the centre of a Turkish *vilāyat*, Benghazi then became the chief town of the eastern part of the colony of Libya, which was finally pacified only in 1931. It was connected by railway to Solik in the south (35 miles) and al-Mardj in the east (68 miles), and became the terminus of the road skirting the Great Syrtē, as well as of those which radiate out across the northern plateau, the heart of the country. A new harbour was built, protected by breakwater, and the town was provided with municipal services as in a European city. The old town had been built within a quadrilateral 700 metres long by 300 metres wide, to a fairly regular plan. The great mosque, dating from the 16th century, was restored. A new, generously planned suburb was built to the south of old Benghazi, in the direction of the former suburb of El Berka which had sprung up around a Turkish barracks. In 1938 Benghazi had 66,800 inhabitants, of whom 22,000 were Italians. Its harbour was the busiest in Cyrenaica, and several industries were based in the town: leather and footwear, furniture, building, and tunny-fish processing. Greeks and Italians fished in the Great Syrtē, and this, together with the salt-pans on the coastline, increased opportunities for employment.

Benghazi suffered much from the bombing of late 1942, and from the departure of the Italian population, who evacuated it and the whole of Cyrenaica on the arrival of the British 8th Army. It became the capital and seat of the sovereignty of the Federal Union of Libya (1951), and the principal town of Cyrenaica, but lost its industries and much of its importance as a port. The value of its airfield is primarily strategic. Its population in 1954 was about 63,000, all Muslims except for a very small number of Jews and Europeans.

[J. DESFOIS]

**BENJAMIN** [see BENEAMĀN].

**BENNĀK**, also called *bennāk* in the 9th/15th century, an Ottoman 'arṣī ('arṣī) tax paid by married peasants (*muzawwajīn re'āyā*) possessing a piece of land less than half a *ḥiṭ* [q.v.] or no land, the former being called *chindī bennāk* or simply *bennāk* and the latter *djābī bennāk* or *djābī*. The word *bennāk* might possibly be derived from the Arabic verb *banaḥa*.

Actually the *bennāk re'āmi* made part of the *ḥiṭ re'āmi* [q.v.] system and can be considered originally as consisting of two or three of the seven services (*bulbūl, khidmet*) included in the *ḥiṭ re'āmi*. The rate of *bennāk* was 6 or 9 *akā* in Mehemmed II's *kanūnname* [q.v.], but in some areas (Taher, 829/1425) it was only 5 *akā*. In later times it was usually 9 for *djābī bennāk* and 12 for *chindī bennāk* and when the *ḥiṭ re'āmi* system was extended to eastern Anatolia in 1540 the rate there was 18 for *chindī* and 12 or 13 for *djābī bennāk*.

In principle *bennāk re'āmi* was paid by the Muslim peasants directly to the *timār*-holders for whom they were recorded as *re'āyā* in the *defter* [q.v.].

In the *defters* the term *bennāk* showed the peasants themselves paying *bennāk re'āmi*. If a bachelor was married he was immediately subject to this tax. If later divorced he paid only the bachelor tax (*māḍīr-re'āmi*). If married, the nomad *re'āyā* without stock animals paid also *bennāk*. Thus this tax was considered essentially as a poll-tax and called also *re'āyāt re'āmi*.

**BERÄR**, formerly a province of British India consisting of the four districts of Amroli, Akola, Baddhis, and Yerru, area: 17,800 sq. mi.; population: 3,651,866 of whom 315,169 were Muslims (1941 Census). Under British rule it was administered as part of the Central Provinces. It has recently been incorporated in the Bombay State.

The territories of the Vakāṭas, contemporaries of the Guptas, roughly corresponded to modern Berar. It was first invaded by Muslims in 1224 but was not permanently occupied until 1248. It formed the northernmost province (barā) of the Bahmanid kingdom of the Dakhn but towards the end of the 15th century became an independent sultanate under the 'Imād Shāhīs until annexed by the Nizām Shāhīs of Ahmadnagar in 1574. It was conquered by Akbar towards the end of his reign and remained a saba of the Mughal empire until 1724, when Asaf Dīsh Nizām al-Mulk became independent in Hyderabad. Until the defeat of the Marāṭhās by Arthur Wellesley at Assaye in 1803 it was frequently overrun by Marāṭhā forces (see *NAUPUR*). In 1804 the Berar territories ceded by the Bhopāl Rājā of Nāgpur were handed over to the Nizām. During the governmentship of Lord Hastings, Berar was for a time controlled by the East India Company (vide *Preliminary Report to the Russell Correspondence relating to Hyderabad*, C. Collin Davies, *The Indian Archives*, vol. vii, no. 1, 1954 ff.). In 1853 Berar was assigned to the East India Company and its revenues were partly employed in the payment of the Nizām's debts and partly in maintaining the Hyderabad Contingent. By a fresh agreement in 1902 Lord Curzon reaffirmed the rights of the Nizām over Berar but the province was leased in perpetuity to the Government of India at an annual rental of 25 lakhs of rupees. During the viceroyalty of Lord Reading a demand by the Nizām for the restoration of Berar met with no success. Later under Lords Willington and Lindley a number of petitions were made to the Nizām, but Berar continued to be administered as part of the Central Provinces until 1956.

**BERÄT**, A word of Arabic origin (for the Arabic meaning see *BARÄT*) which in Ottoman Turkish denotes a type of order issued by the Sultan. Several words of Turkish or other origin were used with the same meaning: the Turkish *bitir*, *yarlıq*, *huyarısın*, the Arabic *berät*, *emr*, *ahkām*, *tevkif*, *menâşir*, *niğân*, *irâd*, the Persian *fermân*, *niğân*. Some of these words were used during the entire Ottoman epoch, others were used only during certain periods; some of them had only a general meaning, others had also a more special, limited meaning. In the same document several words could be used to designate the "sultan's order"; they could denote an order in the wider sense and also in a narrower, more limited sense.

*Bitir* meaning a sultan's order was not much used after 1500. *Emr* (*amr*), in use for 400 years, did not only mean a general order issued in the name of the

sultan, but also a special order which decreed the issue of a *berät*; hence the expression in the preambles of the *berät*: *eli emirü* "he who has the order concerning the issue of the *berät* in hand". *Ahkām* (*ahkām*) always occurs in the sense of general order, but also meant a special type of order, the documents of which used to be separately dealt with by the administration and which, at present, are registered in the Turkish archives as a separate archival unit (*ahkâm defterleri*). The *niğân* meant all orders, without any restriction of subject, that were provided with the *tugra* (*niğân*), but (since the 16th/17th century) especially those which were drawn up by the highest financial department of the empire, the *defterhâne*, and were concerned with financial matters. Synonymous with the term *niğân* was *tevkif* (*tevkif*) which could be used, without further limitation, to designate any document which was provided with the *tevkif*. (Their identical meaning is proved by the derivatives of both words, the *tevkif* and the *niğân*), which are synonymous). An order of higher rank was meant by the more rarely used *menâşir*, the *niğân* and the *irâd* (in use only since the 19th century). The *berät* had a more limited meaning, that of a "deed of grant", "a writ for the appointment to hold an office"; the documents belonging to this group were also handled separately by the administration; the memory of this is preserved in the designation of some public resorts: *evkârîye berät defteri* "the دفتر of the beräts issued in matters concerning the Orthodox Greek Church"; *kadük berät defteri* etc. (Midhat Sertoglu, *Muhtesem bahmından Başvekkil Arızi*, 29, 32).

As all grants in the Ottoman empire derived from the sultan, the *berät* was always issued in the sultan's name and its constant attribute was: *şerif* or *hümâyün* ("imperial berät").

In the Ottoman empire all appointments were made by "grants", those which were paid by a temporary tenure of estates as well as those paid in ready money; thus all appointments to the civil service, whether that of a high-ranking *paşa* or that of a low-ranking employee of a mosque, were effected by a *berät*. The bishops of Syria also received their licenses from the sultan in the form of a *berät*. *EP*, 678, s.v. *Baräts*. Even the vassals of the empire, e.g., the princes of Transylvania, received their recognitions in their principality in the form of a *berät*, with the difference that in the diploma issued to them the expression in question was complemented the following way: *bu beräti hümayün ve 'ahdümün sâk-niğânına verdim* "I have issued the imperial berät and the treaty full of faith". Thus under the name of *berät* an exceedingly great number of orders were issued and these could be grouped according to their contents: *westif* *berät*, *timär berät*, *mülhikne berät*, *silâsım berät*, and, if issued for the benefit of a corporation, *ođlaklı berät* etc.

The word *berät* became especially part of the many expressions used in connection with the administration of the *timär*-estates, e.g., *beräti 'alilighın ilân lâğihine verildi* "the instruction (for warrant) called *lağihine* given for issuing a high *berät*", *beräti şerifim verilmek fermânını elmağış* "since my imperial order has been given for issuing a high *berät*", *lağihereyi berät etmemek* "to exchange one writ called *lağihine* for a *berät*", *lağiheli berät alomak* *bulûdu kâfi hümayün yâdir olmağış* "as the sultan's order has been issued for the renewal of the *beräts*" (such procedure was usually ordered

after the sultan's accession to the throne), *eli berät* "having a berät in hand" (corresponding to this expression is the above quoted *eli emirü*), *el-i berät* "who has a berät", and in official documents there is often reference to issued *beräts*. The word *berät*, however, often does not occur in the deeds of grant and it has to be inferred from the contents of the document whether it is at the same time a *berät* or not.

According to the dimension of the grant, the *berät* has simpler or more elaborate variants, but the *berät* is always written in *divan* style and the structural elements, as well as their order are usually the same. After the *ad-vel* and *tugra* standing outside the text, the text may begin with two formulas: one is more ceremonial: *niğân-ı şerif* "illighine salâm" . . . , *hümâyün olâr ki* "The high and noble sultan's emblem . . . whose order reads as follows", the other is more simple: *sehb-i tabir-i hurâf olâr ki* "the cause of the writing of this document is as follows". In the ceremonial variant the sovereign expresses in a phraseology appropriate to Persian style that owing to his power received from God, he considers it his duty to reward his zealous subjects, and the therefore, starting with an exactly fixed day, he charges a certain subject of his (mentioned by name) with a certain office or service or endows him with possessions herewith. If the office or service was connected with the enjoyment of certain estates (and most of the cases were such), then these were enumerated (*dihir e şerh e beyân olmaş*). This enumeration is externally the most prominent part of the text, in *siyah* script, but written with the ordinary Arabic numerals, forming a separate section in the document. This is followed by the proper admonition to the inhabitants concerned, to recognise the person in question as *su-hâşî*, *sandıkbaşî*, etc. and as a conclusion the usual phrase of the sultan's orders: "let everybody acknowledge these and give credence to the imperial emblem, the *tugra*". In some cases the *berät* has no date, in others it has, in a type of writing different from that of the document, written by another hand, by the so-called *ta'rifliğî kalem*, the recording office called "dating department". At the bottom of the document, in the lower left-hand corner of the paper can be read the place of issue (*hicmahal* or, when the Sultan was in the field, *hic-yer*).

A certain fee had to be paid for drawing up a *berät* (*resm-i berät*). The official rate for this is, to the best of our knowledge, not known. According to numerous known instances, with grants of smaller value it varied between 1 and 3 per cent. (see Laszlo Velics and Ernő Kammerer, *A magyarországi török korszak története*, Vols. I-II, Budapest 1886 and 1891).

It can be stated from Persian deeds of grant, of which fewer are known (Makar Khabūza, *Persidiye firaki i shahi Masruya Gazi*, I, Tiflis 1949); B. S. Puturidze, *Gruzinskerisidie (istoricheskie dokumenty)*, Tiflis 1955; A. D. Papasiyuk, *Persidskie dokumenty*, Moscow 1956), that they consist of the same structural elements and for the most part of them the same phrases as the Turkish *berät*, but the word *berät* does not occur in them and, when used in Persian, has not the same meaning as in Turkish (see also *BARÄT*).

II, Westasiatische Studien, 125; Gibb and Bowen, vols. 1 and 2, 1050-7, index.  
(L. FERIKET)

**BERÄTİ**, *berät*, holder of a *berät*, a name given in the late 18th and early 19th centuries to certain non-Muslim subjects of the Ottoman Empire, who held *beräts* conferring upon them important commercial and fiscal privileges. These *beräts* were distributed by the European diplomatic missions, in abusive extension of their rights under the capitulations. Originally intended for locally recruited consuls or officers and agents, they were sold or granted to growing numbers of local merchants, who were thus able to acquire a privileged and protected status. The Ottoman authorities attempted to curb this traffic, and at the end of the century Selim III sought to compete with the European consuls by himself issuing *beräts* to local Christian and Jewish merchants. In return for a fee of 1200 piastres, *beräts* conferred the right to trade with Europe, together with important legal, fiscal, and commercial privileges and exemptions. These grants, enabling Ottoman *ghimmi*s to compete on more or less equal terms with foreign (*musta'min*) merchants, created a new privileged class, known as the *Avrupa tedjidi*. In this class the Greeks, thanks to their maritime skills and opportunities, were able to win a position of preeminence, which was reinforced by the advantages of the neutral Ottoman flag during part of the Napoleonic wars. Early in the 19th century the system was extended to Muslim merchants, who for a fee of 1200 piastres could obtain a *berät* of membership of the analogous guild of the *Eden-i İslâmîye*. The number who availed themselves of this offer was, however, very limited. Both terms and guilds fell into desuetude after the Tanzimat.

**BERBER** (Barbar): (1) Tribal territory. The name originally signified the territory of the Mirafâb (Mayra'ab), an Arabic-speaking tribe claiming kinship with the Dja'ilya. It extended on both banks of the Nile from the Fifth Cataract (lat. 18° 25' N.) to the river Atbara. The Mirafâb included both riverain cultivators and semi-nomads. The ruler (*malik*) was a vassal of the Funj sultan of Sinnâr. On the death of a *malik*, the sultan nominated his successor from the ruling family of Timshê. He also levied, at intervals of four or five years, a tribute of gold, horses and camels. Burckhardt (1814) describes the southernmost portion of Mirafâb territory as forming a small separate kingdom, known as Ra's al-Wadî, under a member of the Timshê family. Berber was an important trading-centre. A route from Upper Egypt across the Nubian Desert here reached the Nile, and caravans going to

Egypt from Sinnär and Shandil passed through Berber. The trade of Dongola found an outlet through Berber but by the early 19th century the Dongola-Berber route across the Bayda Desert was dangerous and little used. Trade with Suakin and al-Taka (the region around modern Kassala) was slight owing to the predatory Bedja and Bighār tribes. The transit dues levied on Egyptian caravans provided most of the *makā*'s revenue; the Mirāfā paid him no taxes on land or produce, although they provided the tribute levied by Sinnär. Caravans coming from the south (i.e., Funj territory) paid no dues, although they made presents to the *makā*. The trading-connections of Berber resulted in the settlement of Danakla, 'Abbadā and other strangers. The 'Abbadā served as guides and protectors of caravans crossing the Nubian Desert. The last *makā*, Nasr al-Din, is reported to have sought the assistance of Muhammad 'Alī Pasha to regain his throne; certainly he welcomed the arrival of the Turco-Egyptian army on 5 March 1821.

(2) Province. During the Turco-Egyptian period the Mirāfā territory formed part of the province of Berber, which extended to the Red Sea. The *makā* of 16° 24' N. lat. towards to Abū Hamad on the right bank and Kurit on the left bank, and included the adjacent deserts and their nomads. The extension of Muhammad 'Alī's rule over the Bedja, resulting in the opening of a permanent trade-route with Suakin, increased the prosperity of the provincial capital. The last khedivial governor was the 'Abd al-Nasir, Husayn Pasha Khalifa, who was endeavouring to repress Mahdist activities when Gordon arrived as governor-general in February 1884. Gordon's attempts to establish friendly relations with the Mahdi and his indiscreet disclosure of the intended evacuation of the Sudan weakened resistance. In April 1884 the Mahdi commissioned Muhammad al-Khayr 'Abd Allah Khidmat to lead the *ghidā* in Berber, and in May the provincial capital was taken, leaving Gordon isolated in Khartoum.

Mahdist Berber was administered by a military governor and had a provincial garrison and treasury. The decline of commerce irritated the inhabitants but a precarious trade continued with Upper Egypt and Suakin, the customs dues of which formed a source of provincial revenue. The last Mahdist governor, Muhammad al-Zaki 'Uthman, after appealing in vain for help against the Anglo-Egyptian advance, evacuated the provincial capital which was occupied by Anglo-Egyptian forces in September 1897. After the reconquest, Berber was reconstituted within narrower boundaries than the pre-Mahdist province and was subsequently combined with Dongola and Halfa to form the present Northern Province.

(3) Town. Berber as the name of a town was apparently unknown before the Turco-Egyptian period. Bruce (1772) speaks of "Gooz" (i.e., Kūr al-Funj) as the capital of Berber. This place was much decayed at the time of Burchard's visit (1814), when the capital was a more northerly village called by him "Ankberry". This may be an error for al-Mikhayrīf, ("El Mekhey" in Cailland), a name used for the provincial capital under the Turco-Egyptians. Al-Mikhayrīf was abandoned after the Mahdist conquest and the modern town of Berber lies further north, on the site of the Mahdist camp. Since the Reconquest Berber has declined in importance. The provincial head-quarters was transferred in 1905 to al-Dinir, while the modern railway-town of 'Albārā has superseded it as a centre of communications.

**Bibliography:** J. L. Burchard, *Travels in Nubia*, London 1819, 207-251; N. Shoukayr (Shukayr), *Tārīkh al-Sūdān*, Cairo 1903, I, 87-99; O. G. Crawford, *The Fung Kingdom of Senaar*, Gloucester 1951, 53-56, 267-270 (with source-references). A valuable unpublished report by Husayn Pasha Khalifa on the fall of Berber is in the Sudanese archives in Khartoum, Cairat 178, 36.

**BERBERA**, the port and former capital of the British Somaliland Protectorate, lying in 10°26' North lat. and 45°02' long. The *Periplus*, Ptolemy, and Cosmas give the name *Βερβερα* ἡ πόλις or *Βερβερα* to the coast of the land of Frankincense. The town itself may be *Μελιόνη* ἡ πόλις. The older Arab geographers write of the land of Berberā, the Gulf of 'Aden being *Barbarā* or al-*Ḥaḥāḥ* al-*Barbarā*. The inhabitants are known as *Βερβερα*, Berbera, or Berbari. They are Somali (q.v.) and the people whom Yāqūt (iv, 602) describes as barbarous negroes, amongst whom Islām had penetrated, living between the Zanj and the Habash. Ibn Sa'īd (died 1286) who seems to be first to mention the town of Berberā, describes them as Muslims, and Ibn Battūta records that they are Shāfi'ī which they are today. The name *Sūm* first occurs in an Ethiopic hymn in the reign of the Negus Yeshāḥ (1141-49) and frequently in the *Futūḥ al-Ḥabasha* (1540-50).

Berberā's original site is Bandar 'Abbās now a burial ground to the East of the present town. Amongst its tombs are those of three *sayyids* said to have been concerned with the foundation of Bandar 'Abbās as other Arabian proselytisers founded Zayla and Makiyāh. Traditionally the town was contemporary with 'Amūd and Aw Barre further to the West. It formed part of the Muslim state of Adal (sometimes based on Zayla), (q.v.) which, founded in the 13th century, reached its zenith in the 14th century and rapidly declined after Imām Ahmad Ibrahim al-Ghāzī (1506-43)'s 16th century conquest of Abyssinia. While the Abyssinian armies were recovering their losses with Portuguese aid, Berberā was sacked in 1518 by Saldanha. In the 17th century, with Zayla, it became a dependency of the *ghazis* of Mukāḥ. The first British-Somali treaty was signed in 1827, two years after the Mary Ann had been plundered off Berberā. With 'Alī Sharmarkā (Sōmālī Habar Yōnik), governor of Zayla, Britain signed a treaty in 1840 to secure harbouring rights for vessels of the East India Company. He was British Agent at Berberā when Burton was attacked in 1855. Travellers in the 19th century describe Berberā as a poverty-stricken collection of huts with a population, in the hot months, of as little as 8,000. From October to March, however, during the north-east Monsoon, the port was open to vessels from Arabia, the Persian Gulf, and India, bringing imports of dates, cloth, rice, and metals etc., and exporting slaves, livestock, ghee and skins, and the town sometimes contained as many as 40,000 persons.

Berberā was occupied in 1875 by the Egyptians who withdrew nine years later during the Mahdist rebellion in the Sudan when Britain acquired Zayla and Berberā. Treaties were signed with the Gada-būsi (1884) and the Habar Awal (1884 and 1886) clans. In 1901 Shaykh Muhammad 'Abdille Hassan (q.v.) (the 'Mad Mullah') of the Shilliba tribe began his *ghidā* against the colonial powers. The administration of the interior was abandoned in 1908, and gradually resumed about 1912.

In Burton's time Berberā was dominated by the Habar Awal 'Ayyāl Ahmad who were still in 1912 receiving a subsidy of 10,000 Rs. annually. With a population today rarely less than 30,000 most of whom are Habar Awal 'Isa Mūsā, the town is the headquarters of Berberā District. It is the centre for the Protectorate of the Kādiriyā *ṭarīqa* with a *maḥal* for Sayyid 'Abd al-Kādir al-Djilānī, and of the Somali Youth League nationalist party. A local Government Council was formed in 1953, and the harbour is being developed.

Defrémery), ii, 180; Shihāb al-Dīn, *Futūḥ al-Ḥabasha* (ed. and trans. R. Basset, 1897); R. Burton, *First Footsteps in East Africa*, London 1859, 407-440; G. Ferrand, *Les Comptes*, Paris 1901, 109-112; R. E. Drake, Brockman, *British Somaliland*, London 1912, 31-39; A. T. Curle, in *Antiquity* (Sept. 1937), 315-327; J. S. Trimmingham, *Islam in Ethiopia*, Oxford 1952, *passim*.

**BERBERI**, name given to the eastern Hazāra inhabiting the mountainous region of central Afghanistan between Kūbd and Harāt; in Irin, the region of Māghbad, Balūḥistān (near Quetta), and in the S.S.R. of Turkmenistan, the oasis of Kūzjika (district of Maki) [see HAZARA].

**BERBERS**, the name by which are commonly designated the populations, who, from the Egyptian frontier (Siwa (q.v.)) to the shores of the Atlantic Ocean and the great bend of the Niger, speak—or used to speak before their arabisation—Berberic (or rather local forms) of a single language, Berber. This term is probably an abusive or contemptuous epithet, used in Greek (*Barbaroi*) and in Latin (*Barbari*) as well as in Arabic (*Barbar*, singular *Barbari*, pl. *Barbari*, *Barbarina*), and does not constitute a national name, as some people (cf. P. H. Antichan, *La Tunisie*, 1884, 3) maintain (cf. the toponyms Berber in Nubia and Berber in Somaliland; see G. S. Colin, *Appellations données par les Arabes aux peuples indigènes*, in *GLEES*, vii, 95-6). The term *amaziḡ* (*amazigh* (and var.), pl. *imaziḡin* (*imazighin* (and var.) may be considered as designating the Berbers in general, though they themselves, lacking as they do all sense of community, usually employ their tribal names when referring to themselves or have otherwise more or less willingly accepted foreign designations (Kabyles, Chaouis, etc.). The term *amaziḡ* has the meaning of "free man" (see however T. Sarnelli, *Sull'origine del nome Imazighin*, in *Mémorial André Basset*, Paris 1957, 131-138) and is still employed over a fairly extensive area. The feminine *lamaziḡt* (*lamazighit*) (*amazighit* (and var.)) is used there to designate the Berber language.

The only general work on the Berbers is the small but excellent popular account by G. H. Bousquet, *Les Berbères*, Paris 1957.

#### I. — HISTORY

##### a) Origins

The language is at present the only criterion which will serve to distinguish the Berbers, who, from the anthropological point of view, reveal morphological characteristics which are too varied, indeed too irreconcilably opposed, to permit us to speak of a homogeneous Berber race, whilst, from the political point of view, they have always been too divided to constitute a truly distinct nation. In spite of the relative abundance of prehistoric remains discovered in the immense territory conveniently called "Barbary", in spite of the epigraphic documents and the works of Greek, Latin and Arab authors, a whole portion of the history of this obviously composite people is still unknown to us. It would be useless to deny that the origin of the Berber language—the unity of which, moreover, is a relative matter (see section V below)—remains a mystery for us and that to locate, therefore, the cradle of the men who speak it remains an impossible task. However, on this absorbing subject, bibliography is by no means lacking, and, many hypotheses, sometimes presented as certainties, have been put forward concerning the origins of the Berbers. Classical authors consider them about variously as autochthonous, oriental or Aegaeans. The Arabs usually consider them as orientals, Canaanites or Himsyarites, and this latter hypothesis has recently been supported by cogent arguments (Helfritz). The Canaanite origin has been revived by some modern authors (Antichan, Daumet, Shoukayr), whilst for others the Berbers are autochthonous (Carette), with an admixture of Asian blood, especially Phoenician (Fournel, Mercier); some people, usually amateurs, even go so far as to reconstruct the ancient population of Barbary in all its elements (Rinā, *Les Origines berbères*, Algiers 1889; Col. de Lartigue, *Mémoires de l'Académie des Sciences et belles-lettres de l'Algérie*, 1904) and to establish bold relationships with the Celts, Basques and Caucasian peoples (Comm. Cauvet, *Les Origines cancéennes des Touaregs*, in *Bull. Soc. Gég. Alger*, 1925; idem, *La Formation celtique de la nation targuie*, *ibid.*, 1926), or even with the indigenous populations on the other side of the Atlantic (idem, *Les Berbères en Amérique*, Algiers 1939). Anthropology is at a loss and the problem is not simplified by the existence of fair Berbers. The best qualified scholars are reserved in their opinion and generally consider that various elements coming from the south, the east and perhaps the north were added to a basic population rather similar to that which occupied the northern shores of the Mediterranean, but that this occurred at too remote a period for us to be able to date the various migrations. In any event, all these are no more than hypotheses; only linguistic data may perhaps enable us to solve the mystery of Berber origins, which, in the middle of the 20th century, remains complete.

#### b) Before Islam

All that can be said for certain is that the Berbers had been established in Northern Africa from a remote period. The classical historians and geographers refer to them under different names, which have not persisted as they were certainly not used by the peoples concerned: Nasonomians and Psylli occupying Cyrenaica and Tripolitania; Garamantians leading a nomadic existence in the Sahara; Mactians, Maxyans populating the Tunisian Sahel; Numidians living in the eastern Maghrib; Getulians defending the desert borders and the high plateaux; and lastly Moors, spread over the central Maghrib and the furthest Maghrib. The establishment of foreign colonies, Phoenician, Carthaginian, and Greek, only had a limited influence on all these populations, except perhaps in the immediate vicinity of Carthage. They were divided into numerous rival tribes, which were, however, capable of uniting briefly against the foreigners, though never to the point of forming powerful and lasting states. At the time of the Punic wars, however, whilst anarchy persisted in the East, the beginnings of political organisation (creation of the kingdoms of the Massylae, the Masasyllae and of Mauritania) can be observed in the centre and the west. The genius of Masinissa, bolstered by the support of Rome, permitted this prince to unite the whole of Numidia under his rule and to create, in a few years, a kingdom comprising all the Berber populations from the Moulouya to the Syrtes. But this kingdom had but an ephemeral existence: it disappeared in 46 B.C. and Eastern Numidia became a Roman province. A few years later the kingdom of Numidia was reconstituted and became a simple Roman protectorate. Still shorter was the life of the kingdom of Mauritania, created by Augustus in 17 A.D. in favour of Juba II, and transformed into a Roman province as from the year 42.

Rome's dominion in Africa lasted until the 5th century of the Christian era. In this period of time, the Berbers, whilst assimilated in the Province of Africa and in Numidia, were hardly changed in the mountainous areas, on the high plateaux, on the confines of the Sahara and in Mauritania. For the most part the Romans were content to impose on them the obligation of paying tribute and providing auxiliary troops, leaving the administration of the tribes to the local chieftains (*principes, praefecti, reges*). The Berber spirit of independence was by no means extinguished; it showed itself at times in risings, led by more or less romanised natives, such as Tacfarinas (17-29 A.D.), and at times in attacks by the desert peoples or by the barely civilised

tribes of the interior. Such were the attacks led by the Nasonomians and the Garamantians during the reign of Augustus and Domitian; the insurrections of the Moors during the reigns of Hadrian, Antoninus and Commodus; of the Getulians during the period of military anarchy; the rising of the Quinquecentians (Kabyles of the Djurdjura) at the end of the 3rd century. As Roman authority progressively declined, there was an increasingly energetic reaction on the part of the Berbers, who affirmed their particularism by the adoption of heterodox religions, as for example Donatism, but that the religious quarrels which desolated Africa in the 4th century are, from many points of view, racial wars. The rising of the "Circumcelliones" appears to have been a kind of Berber jacquerie. Revolts, such as those of Firmus (372-75) and Gildon (398) provide further testimony of the effectiveness of the native populations. But, as previously, the Berbers were unable to ally themselves against the common enemy and to take his place. Their hostility to the Romans merely made the Vandal conquest easier. Like the Romans, these Germanic invaders were obliged to take the Berbers into account. Though Gaiseric succeeded in restraining them by enrolling them in his armies, his successors had to overcome the struggle against them, Mauretania, Kabylia, the Aurès and Tripolitania retained their independence. The Byzantines who, after defeating the Vandals, remained the masters of North Africa for a century (531-642), were no more fortunate. Indigenous chieftains such as Antalas in Byzacene and Yabdas in the Aurès, offered only resistance to Solomon, the governor sent by Justinian, that he had great difficulty in surmounting it. After the death of this general, killed in an expedition organised against the Levantines (Luwāta [g.e.]) of Tripolitania, the situation in Byzantine Africa became very critical. John Troglita was only able to stop the invasion of the Luwāta with the assistance of the Berbers of the Aurès. But Byzantine authority was not recognised by all the indigenous populations. Outside Byzacene, the former Province of Africa (Tunisia) and the northern part of the province of Constantine, the coastal towns and some strongholds in the interior, the Berbers were everywhere independent. At that time they formed three groups: 1—in the East, the Luwāta (Hawwāra, Avergha, Nazāwa, Avergha); 2—in the West, the Mactians, Cyrenaica, the Djardj, the Aurès; 3—in the West, the Sanhādja scattered throughout the central Maghrib and the furthest Maghrib (Kutāma in Little Kabylia, Zwāwa in Great Kabylia, Zanāta on the Algerian littoral between Kabylia and Chelif, Iren from Chelif to Moulouya, Ghmaāra in the Rif, Mawāda on the Atlantic coast of Morocco, Gersūla [Djardila] (p. 13) in the High Atlas, Lemta in Southern Morocco, Sanhādja "with the *litham*" leading a nomadic existence in the western Sahara); 3—the Zanāta spread out along the borders of the plateaux, from Tripolitania to the Djabal 'Amur, and extending progressively towards the central Maghrib and the furthest Maghrib.

#### c) After Islam

The arrival of the Arabs scarcely changed the previous situation. Their first expeditions were, in reality, no more than raiding expeditions and left no traces other than the havoc wrought by the Muslim bands. It is true that the founding of al-Kayrawān (596/69) provided the Arabs with a permanent base of operations, but the expeditions of 'Ukba b. Nāfi' (g.e.) across the Maghrib were more like raids than an actual conquest. The towns still occupied by the Byzantines remained inaccessible to the Muslim leader, as did the mountain *massifs*, where he would have been unable to overcome the inhabitants. In fact so little were they under control that one of their leaders, Kusayla (g.e.), having surprised and killed 'Ukba at Tahūgha, expelled the Arabs from Ifrīkiya and formed a Berber kingdom comprising the Aurès, the Southern part of the present-day Department of Constantine and most of Tunisia (568-712). Kusayla was unable to hold his position for long and, in spite of the resistance of the Berbers of the Aurès, symbolised by the legendary personage of the "Kāhina" (g.e.), the Muslims finally emerged victorious at the end of the 1st/7th century. The conversion of the Berbers to Islam, initiated by 'Ukba without great success, took place at the beginning of the following century. This was accomplished less by conviction than by interest, for the Arab generals had the idea that the natives would enrol in their armies in hopes of booty and thus be won over to their religion. The Berbers formed the nucleus of the armies which, under the command of Arab or even Berber leaders like Tārik (g.e.), in a few years completed the subjugation of the Maghrib and, less than half a century, brought about the conquest of Spain.

Harmonious relations, however, did not long prevail between Arabs and Berbers. The latter complained of having been poorly rewarded for their services and, in spite of the fact that they were Muslims, of being treated more like inferiors than equals. And so, having first broken away from orthodox Islam and endorsed Khārījī doctrines (see below, section III), they rose against the Arabs. The movement began in the West (122/740), at the instigation of a man of the Matghūra, Maysara (g.e.), and subsequently, in spite of his death at the hands of his own followers, prevailed throughout the whole Maghrib and even spread into Spain. The Arabs suffered disastrous defeats, like that of Kulūdmīn (Yakū [g.e.]) in 129/741; they were expelled from al-Kayrawān, which was sacked by the Warfādijūma, followers of the Sufrite doctrines (139/756); then the Nawwāra (Ibādīs), led by Abū 'I-Khattāb (g.e.), defeated the Warfādijūma and formed an Ibādī state extending over Tripolitania, Tunisia and the eastern part of Algeria. For a while the authority of the 'Abbasid Caliph was abolished in Africa. But

the Berbers, continuously divided amongst themselves, were incapable of profiting from their success. The destruction of Abū 'I-Khattāb's army by troops from Syria restored Ifrīkiya to the Arabs (144/761). Forty years of sanguinary struggles and innumerable engagements (300 according to Ibn Khaldūn) enabled them to re-establish their control over the eastern Maghrib. The rest of the country eluded them. A number of states, governed by chieftains of Arab origin, but inhabited by Berbers, for the most part heretics, not recognising the authority of the 'Abbasid Caliph, came into being in various places. Such were the kingdom of Tāhart (144-296/761-908) founded by the Imān Ibn Rustam with the survivors of the Ibādites from the East who had taken refuge in the central Maghrib (see RUSTAMIDS); that of Sijilmāsa (g.e.) where the Banū Midrār (115-366/721-977); that of Tlemcen (g.e.) founded by Abū Kurra, chief of the Banū Ifren; that of Nakūr (g.e.) in the Rif; the state of the Barghawāta (g.e.) on the Atlantic coast; finally, at the beginning of the 3rd/9th century, the kingdom of Fās, founded by Idrīs I, a descendant of 'Alī b. Abī Tālib, with the help of Berber tribes (Miknāsa, Sadrīta, Zwāgha). Only the semi-independent dynasty of the Agglabids (184-296/800-909) recognised the sovereignty of the 'Abbasids; they found among the Berbers soldiers for the conquest of Sicily, but had to suppress many revolts by the indigenous populations of Tripolitania, southern Tunisia, the Zāb and the Hodna.

Berber opposition to the Arabs remained, in fact, as inoperative as ever; it was even so violently strong to ensure the triumph of Sufrite doctrines in the Maghrib, in spite of the fact that they were radically opposed to the Khārījī doctrines embraced by the Berbers in the preceding century. The Kutāma provided the *da'ī* Abū 'Abd Allāh al-Shā'ī (g.e.) with the soldiers who fought the Agglabids and founded the Fātimid power for the benefit of the *mašā'ib* 'Ubayd Allāh (297/910). The Fātimids, it is true, did not succeed in imposing their rule on the whole of the Berbers. Though they succeeded in suppressing the Imāmate of Tāhart, they were unable to prevent the Idrisids from maintaining themselves in the furthest Maghrib; they did not obtain the submission of the Maghrāwa and the Zanāta who, out of hatred for the Fātimids, had placed themselves under the patronage of the Umayyads of Spain; finally, they had to combat the revolt of the Khārījids led by Abū Yazīd (g.e.) "the man with the donkey" (332-36/943-47), a revolt which endangered their power and which they only succeeded in suppressing with the help of the Sanhādja of the central Maghrib. In addition, at an early date, the Fātimids turned their attention towards the East and, once the Caliph al-Mu'izz had established himself in Egypt (362/971), they lost interest in the Maghrib. North Africa was once again disputed between the various Berber tribes, none of which was sufficiently strong to dominate the others. In the East, the Sanhādja, taking the place of the Kutāma, upheld the authority of the Zirids (g.e.), governors of Ifrīkiya and Tripolitania (362-563/971-1107); in the West, following the disappearance of the Idrisids, power passed into the hands of the Zanāta, at first nothing more than local governors on behalf of the Umayyads of Spain, but later independent princes at Fās until the advent of the Almoravids (455/1063). At the beginning of the 5th/11th century, the Zaid state disintegrated; in the centre of the Maghrib there was founded the

Hammâdîd kingdom [g.e.], the rulers of which recognised the authority of the Caliph of Baghdad and took as their capital firstly the Ka'ba and then Bougie (Bijlîya; 405-547/1014-1152). The anarchy resulting from the internecine Berber struggles was further complicated, in the middle of the century, by the invasion of the Hilâlî tribes, which had as an immediate result the devastation of Ifrîkiya and part of the Maghrib, and which entailed, as a long-term consequence, a profound modification of the ethnography of North Africa.

However, just as the disorder seemed to reach its climax, two Berber dynasties, that of the Almoravids [see AL-MURĀVĪDŪN] and that of the Almohads [see AL-MUWAḤḤIDŪN], both proclaiming reforming religious doctrines, succeeded in establishing their temporary supremacy in North Africa. The triumph of the Almoravids was that of the Lantîna, who until then had led a nomadic existence between southern Morocco and the banks of the Senegal and the Niger. Converted to Islam in the 3rd/9th century, they had for a long time been only nominal Muslims. They had been instructed in orthodox doctrine and practices by 'Abd Allah b. Yâsin (d. 451/1059) and resolved to carry the faith to the Blacks of the Sudân and to the ignorant populations of southern Morocco. Their conquests speedily passed beyond these limits. 'Abd Ilâz b. 'Umar founded Marrâkush (490/1098) and Yûsuf b. Tâghlîn (Tâghlîn) within a few years subdued the whole of Morocco and the central Maghrib as far as the borders of the Hammâdîd kingdom, halted the progress of the Christians of the Iberian Peninsula by the victory of Zâlîka (g.e.) (479/1086), dethroned the Andalusian amirs, and became the sole master of the whole of Muslim Spain. The decline of the Almoravids was as rapid as their success. Exhausted by their own victories and by contact with a higher civilisation, the Berbers of the Sahara rapidly disappeared. To replace them, the Almoravid Caliphs were obliged to have recourse to the use of Christian mercenaries, whilst they themselves, unimpaired of Islamic orthodoxy, scandalised strict Muslims by their conduct. Won over to the unorthodox doctrine (muḥakkid) by the preaching of Ibn Tûmât (g.e.), the Masmûda of the Atlas rose against them. Under the command of a man of genius, a Berber of the Kûmiyya, 'Abd al-Mu'în (g.e.), they overcame the Almoravids without great difficulty (541/1147). The Empire founded by the Almohads was still more extensive than that of their predecessors, though it is true that 'Abd al-Mu'în did not succeed in subduing the whole of Spain, on the other hand he destroyed the Hammâdîd kingdom of Bougie and the Zirid kingdom of Ifrîkiya, expelled the Christians from the parts which they had occupied, and made himself master of all the country between Syria and the Atlantic. Thus a great Berber Empire extended over the whole of North Africa; however it was not long before it began to crumble. The Almohad Caliphs were not more successful than the Almoravids in remaining faithful to orthodoxy; one of them, al-Mu'în (g.e.), even went so far as publicly to curse the memory of Ibn Tûmât, and dealt rigorously with the faithful. The rivalries of the various Berber splinter groups was an additional factor which contributed to the disintegration of the empire created by 'Abd al-Mu'în. The quarrels of the Masmûda and the Kûmiyya led to constant bloodshed at the Moroccan coast; the tribes of the central Maghrib supported the enterprises of the Banû Ghâniya (g.e.), or

attempted to make themselves independent. A century after the death of 'Abd al-Mu'în, the last of his line, Abû Dabbâs, reduced to the rôle of bandit-chief, met his end in obscurity (668/1269). The Maghrib was already divided among new powers, the Marinids (g.e.) installed at Fîs, the 'Abd al-Wâdîds (g.e.) at Tlemcen (Tilimsân), the Hafîds (g.e.) at Tunis. Not one of these new dynasties was capable of imposing its supremacy on the others, or even of making its own subjects respect it. In Morocco, the tribes of the mountain regions were in a state of constant revolt against the Marinids; in the central Maghrib, the Banû Warrâjîn of the Ouâsensis, the Zwiwa of the Dîjârija, the Kabyles of the province of Constantine, and the populations of the Zab and Dîjârid, remained outside the authority of the sovereigns of Constantine, Bougie and Tunis; the same was true of the oases of the Jebel Nafîsa and the Aurès. The inability of the Berbers to organise themselves in a large State is conclusively demonstrated. It therefore becomes impossible to follow their history except by making a historical assessment of the rôles of the various tribes. The task, moreover, would be immensely complicated by the changes brought about as the result of the Hilâlî invasion. In the plains and on the plateaux, the Berber populations intermingled with the Arabs; gradually they abandoned their language and customs, and even their names, and they are reduced to that of some personage from whom they traced their origin; they became arabised. Other groups escaped this transformation because of the inaccessibility of their habitat, as for example those of the Aurès, Kabylia, the Rif and the Atlas; their ranks were swollen by refugees from many sources who sought asylum among them; finally some were driven back into the Sahara, so that from the 8th/14th century "the Berbers form a cordon on the frontier of the country of the Blacks similar to that formed by the Arabs on the confines of the two Maghribs and of Ifrîkiya" (Ibn Khaldûn, *al-'Ibar*, trans. de Slane, II, 104). This disintegration was accompanied by a recession of Muslim civilisation. It would not be an exaggeration to say that a number of Berber groups reverted to a way of life of semi-savagery, only retaining a few very rudimentary notions of Islam. In the 9th-10th/15th-16th centuries, their re-Islamisation was the work of maraboutism, presenting themselves for the most part as natives of southern Morocco, of the legendary Skîkîyat al-Hamrâ, which popular imagination pictures as a land of miseries and saints. Such was the influence of these pious men that whole tribes today consider themselves as their descendants. Only a few rare groups avoided their influence. (G. YVES\*)

## II. — DISTRIBUTION AT PRESENT

At the present day, the Berbers, although without doubt constituting the basis of the population of North Africa, no longer form a homogeneous mass and one can at most take into account those of them who have retained the use of the Berber language; they would appear to amount to over 5,000,000 individuals. Many of them are in fact bilingual—even trilingual—but still more numerous are those who have lost—often deliberately—all memory of their origins as well as their customs and language, frequently providing themselves expressly with an Arab genealogy; a few contrast elements here and there lay claim to a Berber origin, though they have ceased to speak the language of their ancestors. Generally speaking, Berber has in fact always receded before the advance of Arabic, and recent events or those of the present day have tended to accentuate the narrowing of the area in which the old language is used; the disappearance of various Berber speaking pockets, especially in eastern Barbary, is a contemporary phenomenon, and it seems likely that the political situation in North Africa will continue in the immediate future to favour the extension of the domain of Arabic.

However, several considerable groups have persisted in the mountain *mâsâr* and in the desert, that is to say in those regions only superficially penetrated by the Arabs. They are linked together by pockets more or less close to one another, which remain as evidence of the older ethnic and linguistic pattern. In general terms, it may be said that the density of Berber groups increases from east to west. They are scattered over a vast area which extends from the Egyptian frontier (with Siwa and Dîjardub) to the Atlantic Ocean, from the cliff of Hombori, south of the Niger, to the Mediterranean.

**Libya.**—Various groups subsist in the mountains of the country of Barka, in the Djabal Ghûryîn, Ifren, Nafîsa; they are also to be found in the oases of Awjîla, Sokna, Timissâ and, on the coast, at Zâra; some of the elements of the population of Awjîla and of Urtîla, in the neighbourhood of Tripoli, say they are Berbers although they speak Arabic (about 2½% of the population in all).

**Tunisia.**—Six villages in the island of Djerba: Adjim, Guelila, Sedoukch, Elmal, Mabboudin and Sedjiane, to which must be added seven on the mainland: Tmagourt, Sened, Zraoua, Taoudjout, Tamezert, Chnial and Douiret, which are still partly Berber-speaking; these Berbers, many of whom speak a long time in the towns of the North, especially in Tunis, where they occupy positions of trust, are much attached to their dialect, which moreover serves them as a secret language (1% Berber-speaking in all).

**Algeria.**—Kabylia in the north and the Aurès in the south-east have been the two poles of Berber resistance; these regions are now only separated by

a fairly narrow Arabic-speaking zone, up to Sétil. In the Algerian and Oranais Tell country, the groups only reach some importance in the mountain region of Blida and the Chêlîf (Ouâsensis, Djendel, Beni Menacer, Chenoual; finally, several groups appear along the Algero-Moroccan frontier (Beni Snous, near Tlemcen) (about 30% Berber speaking in all).

**Morocco.**—The geographical configuration of Morocco has been especially favourable to the survival of the Berber populations; though a number of tribes have relinquished the use of Berber, it nevertheless remains the language of the great groups of the Zanîta, Masmûda and Sanhâja in the Rif, the Middle, High and Anti-Atlas, as well as in the Sous, R. Montagne, *Vie Sociale*, 17, has estimated that the Arabs constitute from 10 to 15% of the population in Morocco, Arabised Berbers from 40 to 45%, the remaining 40 to 45% being Berbers who cannot disclaim their origin.

**Sahara.**—In the Algerian and Moroccan Sahara, the oases of Ouad Righ, Ouarâgla, Ngouma, the seven towns of the Mzab, the "Isours" of the Gourara, the Touat, the Tidikelt, of Figuig, of the Tafilaît, of the Dades; then in a very extensive zone in the shape of a triangle, between Ghâdimen in the North, Tombouctou in the south-west and Zinder in the south-east, including Ghat, Djanet and the Abshagar, we have the various groups of Touareg (g.e.).

Berber is also spoken in Mauritania (Zenaga) by about 25,000 inhabitants (especially the Trâra); the Wâda pocket uses Aser, a Soninké dialect mixed with Berber.

**Diaspora.**—Outside those zones roughly indicated above, attention must be drawn to the influx of the Berbers into the large towns of Morocco (Casablanca) and Algeria (Algiers), where, "détritisés" and lacking the control of their natural social group (see below section IV), they tend to form an impoverished proletariat, ready for anything. Outside Barbary, there are to be found in the Lebanon descendants of the Kûlâma who arrived with the Fatimids and, in Damascus, Algerian Berbers who emigrated at the beginning of the conquest, or who rejoined the amir 'Abd al-Kâdir (g.e.) or his descendants. Some elements remained in various European countries after the second world war, and a few are even reported in America, but above all Metropolitan France has the largest number of Berbers; the majority of them are Kabyles, who have temporarily—or in some cases permanently—abandoned the barren soil of their homeland, seeking to find more fruitful means of livelihood abroad; these displaced persons also form a proletariat which finds it difficult to adapt itself to the conditions of life in the Metropolis.

(G. YVER-CH. PELLAT)

### III. — RELIGION

In ancient times, the religion of the Berbers appears to have been divided into a multitude of local cults, corresponding to the tribal divisions. The objects of this cult, concerning which we only possess scanty and incomplete information, were doubtless natural objects: grottoes, rocks, springs, rivers and mountains, to which must be added the celestial bodies, at least the sun, moon and some of the stars. The veneration accorded them still persists in some of the legends, beliefs, rites and religious ceremonies. In spite of their conversion to Islam and their deep feeling of belonging to the Islamic community, the Berbers have in fact retained a host of pagan practices, some of which have more or less been adapted to Islam, whilst others remain in direct opposition to Islamic precepts; these survivals are particularly apparent in agricultural rites and festivals, practices for obtaining rain, harvest rites, lightning bonfires, *amara* (q.v.), the concept of *baraka* (q.v.), the cult of saints etc.

It cannot be denied that from Punic times, various foreign divinities were not only borrowed, but were in fact assimilated to the national divinities (see H. Basset, *Influences puniques chez les Berbères*, in *KAf*, 1921). Judaism also obtained numerous proselytes, and even if it did not reach the rôle which some claim for it, it was disseminated over the whole of North Africa; in fact, with the exception of the descendants of Jews expelled from Spain in the 9th/15th century, the majority of indigenous Jews are descended from proselytes pre-dating the appearance of Islam (see Slouschz, *Hébreux-Phéniciens et Indo-Berbers*, Paris 1909; M. A. Simon, *Le Judaïsme berbère dans l'Afrique antique*, in *Rev. Hist. et Philol. Fac. phil. protestante de Strasbourg*, 1946; L. Volnot, *Philosophes judéo-musulmans du Maroc*, Paris 1948; P. Flambard, *Population israélite du Sud marocain*, in *Hesp.*, 1950, 363 ff.; *idem*, *Un Mellaq en pays berbère*; *Dennat*, Paris 1952; *idem*, *Les Communautés israélites du Sud marocain*, thesis, Sorbonne 1957).

Judaism paved the way for Christianity which prospered in spite of the bitter struggle which it had to conduct against paganism and the internal quarrels which soon beset it; it will be sufficient to note that it afforded the Berbers an opportunity of grouping together against Roman rule and that they enthusiastically embraced heresies (Arianism, Donatism, etc.) opposed to the doctrine of the Church of Rome (see P. S. Monnier, *Étude sur l'influence du Christianisme sur les Berbères*, Paris 1902; *idem*, *Le Christianisme en Afrique*, Algiers 1913; E. Albertini, *L'Afrique romaine*, 53 ff.; Dom Lederey, *L'Afrique chrétienne*, Paris 1904; Monceaux, *Histoire littéraire de l'Afrique chrétienne*, Paris 1900-23).

The same thing happened at the time of the Muslim conquest: it was only the name of their adversaries which had changed. We do not know in detail the history of the conversion of the Berbers to Islam, but tradition has it that they seceded twelve times and Islam only finally triumphed in the 6th/12th century; it was at this date that the last indigenous Christians disappeared, whilst Jewish

communities survived down to our own day. At the beginning of the conquest, the converted Berbers professed the orthodox doctrine, the only one known to them; but their spirit of independence soon showed itself by their adoption of Khāridjī doctrines which put forward the most egalitarian ideas (see IRĀDĪYYA, KHAWĀRĪDĪ and the works of T. Lewicki, especially *Études théologiques nord-africaines*, Warsaw 1955, and *La répartition géographique des groupements théologiques de l'Afrique du Nord au moyen âge*, in *Koehn Orientalistik*, 1957; see also Chahk Bēkri, *Le Khawāridjisme*, in *Af. Af.*, 1957, 55-108). The clearest indication that religious doctrine little concerned them fundamentally is given by the fact that one party espoused the cause of the Shī'is, not only that of the Idrīsids of Fās, but even of those who had come under the influence of the Persian outlook and saw in the *imām* an incarnation of the Divinity. Thus it came about that alongside the Khāridjīs (Sufīs and Ibadīs) there were the Fātimīds, and that the Kutāma provided the main support for *mahdī* 'Ubayd Allāh. This tendency to turn to extremes was again in evidence when a puritan reaction brought about the triumph of Sunnī doctrines with the Lamtūna (Almoravids) of the Sahara, recently converted in the 5th/10th century; it was further emphasised with the Maghāda of the Atlas who founded the Almūd, Emīr and destroyed the remaining dissidents, Christians or Shī'is, with the exception of a few Khāridjī communities who were protected by mountains, the desert or the sea; it again made its appearance with the formation of the small Marābūt states which arose in Morocco from the 5th/11th century onwards (see R. Montagne, *Le social*, 22 ff.).

Among reactions against official Islam, two further attempts must be cited which aimed at creating a new religion in Morocco: in the Rīf, in the 4th/10th century, the attempt of Hā-Mīn al-Mufraī (q.v.) and, on the Atlantic coast, that of Sālih b. Tarif (q.v.).

After having provided a Father of the Church, Saint Augustine, born at Thagaste (Suk-Aghar), the Berbers under Islam only produced theologians who were adept in disputation, but no great intellects. Wherever Sunnī Islam triumphed, it was Malikism which was adopted, and it continues to prevail in Barbary, though some Khāridjī communities (Ibadīs) survive in the Djabal Nafusa, at Djerba, in southern Tunisia and in the Mzab.

**Bibliography:** On the old religion of the Berbers and its survivals, there is copious bibliography and only the main works can be indicated: R. Basset, *Recherches sur le religion des Berbères*, Paris 1910 (extract from the *RHR*); L. Brunet, *Cultes naturels à Séfrou*, in *Arch. Berb.*, 1918/2; H. (R. BASSET-CH. PELLAT)

### IV. — CUSTOMS, SOCIAL AND POLITICAL ORGANISATION

Observers have all been struck by the character and usages of the Berbers, which differ in many respects from those of the Arabs, particularly as regards women, who, in general, enjoy a greater degree of freedom (see for example the "courts of love" among the Touareg [ahā], H. Lhote, *Touaregs du Hoggar*, 208 ff.) and to a certain extent, greater respect (on women, see M. Gaudry, *La femme chavica de l'Aurès*, Paris 1929; A. M. Golichon, *La vie féminine au Mzab*, Paris 1927-31; L. Bousquet-Lefèvre, *La femme kabyle*, Paris 1939; on matriarchy: G. Marcy, *Les vestiges de la parenté maternelle en droit coutumier berbère*, in *RAf*, 1941/3-4). As a rapid synthesis is made impossible by the great diversity which appears from one group to another, we shall limit ourselves to giving references to the large number of monographs and works of ethnography which have been devoted to North Africa.

The Berbers (except in the Mzab) are basically a rural population, leading a nomadic or sedentary existence. The nomadic life is in tents, of which the different types have been frequently described (see H. Lhote, *Touaregs du Hoggar*, 221 ff.; E. Laoust, *L'Habitat chez les transhumants du Maroc central*, in *Hesp.*, 1930 ff.); the sedentary population live in houses (see E. Laoust, *op. cit.*; A. Adam, *La Maison et le village dans quelques tribus de l'Anti-Atlas*, in *Hesp.*, 1950, 486 ff.) or even in majestic kasbahs (kasaba) which in some respects recall the style of South Arabia (see H. Terasson, *Kasbahs berbères de l'Atlas et des sassi*, *Les Grandes architectures du Sud marocain*, Paris 1938; A. Paris, *Documents d'architecture berbère*, Paris 1925; K.A.C. Creswell, *A Bibliog. of Muslim Arch. in North Africa*, Paris 1924, *passim*).

One of the peculiarities of Muslim Barbary is the retention of customary law, which continues to be applied, either officially or unofficially (see 'Idā', both in Algeria and Morocco (for Tunisia, see G. H. Bousquet, *Note sur la survivance du droit coutumier berbère en Tunisie*, in *Hesp.*, 1952/2-3, 248-9). This custom ('Idā, 'urf, 'urf, 'urf) is essentially oral, but of recent years some tribes have felt the need to record in writing in Arabic and even in French, though rarely in Berber (see below section VI) some

*binās*, simple lists of sentences, with the scale of appropriate fines (imprecations are unknown). Justice, based on custom, is dispensed, in civil and criminal matters, either by a kind of (individual) arbitrator, or by judicial *qadīmās* which set themselves up as clandestine tribunals (for example in the Aurès subject to French law) or which in contrast have had a legal existence (as in Morocco since the famous *daīr* (daīr) of May 16th 1930, called the "Berber daīr", which gave rise to numerous protests because it established customary tribunals). Needless to say, this law is not uniform and varies quite considerably from group to group; as a result of its lay origin and oral transmission it is subject to modification (see Hachou-Campredon, *Étude sur l'évolution des coutumes kabyles*, Algiers 1921).

The social organisation of the Berbers also differs in many respects from that of the Arabs; it is based on the ties of blood, real or fictitious. The smallest social unit is the "hearth", a number of hearths among the sedentary people forming a village, and among the nomads a "douar" (aou, *hagmm*, etc.); several villages or "douars" form a division which is a state in miniature; the tribe groups several divisions together, but has less political personality; the tribal confederation only represents a temporary association required by especially grave circumstances, most frequently war.

The idea of relationship within the group has as its corollary the respect for a kind of collective morality, a constant solidarity between its members, who in particular perform a collective corvée (*tiwari*), ensure the safety of strangers to whom one of them has accorded his protection, own collective granaries (see *asādir*), etc.

The fact is, however, that their political organisation paradoxically reveals two diametrically opposed, but not incompatible, systems, which seems a further proof of the diversity of the ethnic elements numbered under the name Berber: on the one hand, an aristocratic type, having a warrior nobility, a religious caste, a class of tributaries and finally the *serfs*; this is the régime prevailing among the Touareg, who are governed by an *amānkal* (q.v.), each tribe being placed under the authority of an *amghar* (q.v.); on the other hand, in the rest of Barbary, we find a democratic type, with an elected assembly (*djama'a*, *enfās*, *ayl arl'n*) in which all power resides (legislative, judicial and executive); each assembly of a lower group delegates members to higher assemblies, but generally speaking, it is the *djama'a* of the division which has most political weight. This democratic system usually results in a *de jure* oligarchy and does not impede the development of personal power, at least in those regions where the internal leagues (*leff* (q.v.)) group independent divisions together (and not just villages or parts of villages, as in Kabylia, the *seffs* (q.v.)); R. Montagne (*Le social*, 91 ff.) has pertinently analysed the stages in the development of this power of the temporal leaders, who have been called the "Lords of the Atlas".

#### V. — LANGUAGE

One cannot but envy the assurance with which René Basset, fifty years ago, painted a picture of the Berber language in this *Encyclopaedia*. By an inevitable process, research has produced questions in greater number than answers: some illusions have vanished. However, the balance-sheet for this half century is not negative: a mass of materials has been collected, their classification and analysis has been undertaken and sometimes fairly extensively developed; an attempt at a synthesis has even been made by André Basset, but he is cautious and is at pains to avoid taking hypothesis for established fact.

#### A. The historical problem

1. — History of the language: Berber is almost exclusively a spoken language, and its history, even in the recent period, is almost unknown owing to the lack of written documents. It is only in the 19th century that the texts collected orally from Berbers by Europeans start to become numerous. Indigeneous documents are rare and of limited scope. Southern Morocco has produced manuscripts in Arabic script (cf. section VII) of which we only possess partial and out-of-date editions; moreover, the language of these works of religious edification, in spite of its undeniable interest, seems somewhat artificial. The Berber words and expressions cited by Arab authors have not received a systematic treatment. The best known and also the oldest are the phrases of the 12th century published by L. Lévy-Provençal in his *Documents inédits d'histoire almohade*. Paris 1928 (cf. G. Marcy, in *Hesp.*, 1932, 61-77) and which appear to confirm the relative stability of the language. The Arabic texts have also preserved a number of Berber ethnic names, anthroponyms

and toponyms which still remain to be studied. The remains of Guanche, which was spoken in the Canary Islands up to the 17th century, are generally considered a Berber language. However after a very detailed investigation, L.-D. Wolff only relates a part of the Guanche forms to Berber.

Further back than the Almohad period, the linguist finds no Berber documents properly so-called. The early centuries after the Arab conquest are even more "obscure" for him than for the historian. Antiquity confronts us with a number of very difficult problems. It has bequeathed us a documentation as mysterious as it is abundant on African dialects:

a) Over a thousand Libyan inscriptions have been published (cf. section VII). The alphabet used is known with fair accuracy, at least for the bilinguals, but the proposed interpretations show serious divergencies and are not convincing; Libyan has not been deciphered.

b) In the east and particularly in Tripolitania, a series of inscriptions in Latin characters have been discovered, whose meaning is unknown. One or two words are Latin, others can be explained by Punic, but the remainder has not been identified.

c) A host of African words, mostly proper names, are to be found scattered throughout the Punic, Greek and especially Latin inscriptions, as well as in the classical authors. Some of these words have been identified as Punic; the majority have only given rise to nebulous explanations.

Thus, little has been made of these old materials. Why is this the case? Very few research workers venture into this field and if they do so, it is generally in the course of other investigations or in the service of a different discipline. Moreover, the unity of the documents, scattered both in space and time, is problematical. The inscriptions of Tripolitania are of an early period. The Libyans ones come from Tunisia, Algeria and Morocco and cover several centuries: the only one which is dated goes back to 139 B.C.; some appear to be contemporary with the Roman Empire; the majority cannot be dated at all. The onomastic material is even more dispersed: provided by texts ranging from Herodotus to the latest antiquity, it concerns the whole territory comprised between Egypt and the Atlantic. Such diverse evidence inevitably represents several stages of linguistic development, or even several languages. Its interpretation assumes that preliminary work has been done in listing and subjecting them to a critical examination; however, a general onomastic index is still awaited. In spite of the extraordinary diversity of this ancient material, the modern Berber dialects are frequently thought of as providing a miraculous key capable of unlocking all doors. Extensive use is made of the glossaries, but only in order to adduce isolated comparisons or erect a superstructure of conjectures, whereas a system of well established correspondences alone could afford proof. A direct connexion is postulated between Libyan and Berber, considered as two stages of the same language. This assumption is based on history, which discovers Berber populations in Africa from ancient times and concludes that the Berber language was already spoken there: but was it the only language? If it really is Berber that is concealed in the Libyan inscriptions? The parallels which are certain are rare; the similarity of the Libyan and Touareg scripts (cf. section VII) does not demonstrate that the languages are related; the difficulties encountered call for criticism. A. Basset has drawn

attention to the fact that the argument taken from history is negative. A. Picard is still more sceptical. This example of caution, little imitated as yet, is thus provided by Berber specialists. A comparative linguist and ethnologist like J. D. Wolff, whilst grouping Libyan and Berber together, also hesitates to consider them as a single language. J. G. Février asks whether Libyan cannot be considered "as a kind of pre-Berber", but allows himself no reply. Such rational doubt is preferable to the illusion of knowledge; it neither entails relinquishing research nor the denial of any connexion between Libyan and Berber; it timely invites us not to forget that what constitutes a certainty for the historian only provides the linguist with a working hypothesis.

2. — Cognate or neighbouring languages: The comparison of Berber with other languages has still only produced rather slender results. Certain unduly fanciful attempts are no longer worth mentioning. The connexions proposed by G. Marcy and Hauss have remained fragmentary. The opinion advanced by O. Rössler, according to which Berber is a Semitic language close to Akkadian, evokes an interest mixed with caution. The Hamito-Semitic theory, which places Berber in a group including Ancient Egyptian, the Cushitic languages of Abyssinia and the Semitic languages, appears to be unfruitful. For Marcel Cohen, the name Hamito-Semitic by no means implies the existence of a "Hamitic" branch as opposed to the Semitic. The position occupied by each of the members within the family is still inadequately known. As early as 1844, Berber was considered by T. N. Newmann to be a "Hebrew-African" language. Certain similarities, both in the respective roles played by consonants and vowels as well as in the nature and function of various morphological elements, justify the continued prosecution of research. Borrowings from other languages and reciprocal influences must be assessed, analogies specified and extended to vocabulary: l'essai comparatif sur le vocabulaire et la phonétique du chamois-berber published in 1947 by Marcel Cohen gives the impression that the connecting links between Berber and the other languages under consideration are rather strained.

In addition to these attempts at defining relationships, we must refer to the whole field of studies which may be termed "Mediterranean", as they concern the civilisation which flourished on the shores of the Mediterranean prior to the arrival of the Indo-Europeans. Here vocabulary takes precedence over morphology: the aim is to determine a cultural community rather than to establish a linguistic affinity. The toponyms of ancient Africa and Berber, cited as a testimony of this remote period, are often invoked alongside Iberian, Basque etc. Thus it is that they are accorded a more or less important place in works devoted to the "Mediterranean substratum" (C. Battisti, V. Bertoldi etc.), to the non-Indo-European elements in Latin (G. Nencioli), to Sardinian (B. Terracini, M. L. Wagner), to the regions of the Alps and Pyrenees (J. Hubschmid) and more generally to the "Euro-African" civilisation (J. D. Wolff).

In spite of the inevitable grouping, the excesses and mistakes, research into these ticklish problems can no longer be ignored.

An even more urgent problem for North African dialectology is to determine precisely in what respects Berber and Maghribi Arabic have affected one another. It is a question of substratum or adstratum as the case may be. There is no lack of

documents, but we have scarcely passed the stage of noting the most obvious features. The Berber dictionaries summarily indicate certain borrowings from Arabic. Some words by Arabists (L. Brunot, G. S. Colin, Ch. Pellat, Ph. and W. Marçais) give a place to Berber matters.

We do not know what Berber owes to the languages of Tropical Africa: this may well be a great lacuna.

#### B) Dialects and Language

On the geographical distribution of dialects, cf. section II.

It is the study of present-day dialects which has produced the most positive results during recent decades, especially through the efforts of A. Basset. However, there still remain a few illusions to be shed. None of the classifications proposed for the dialects is really satisfying. Attempts have been made to discover in them the traditional division of the population into Masenka, Sanhaja and Zanata (cf. I): this is to appeal to a confused story. It would be preferable to start from the linguistic data: but what factors are relevant? A distinction is sometimes made between "occlusive" dialects and "spirant" dialects, yet the Chleuh dialects, which moreover form a distinct group (cf. below), are not in agreement on the problem of certain sounds: they therefore, far from being split up into several groups? As A. Picard reminds us, phonetics is only one aspect of living language. A classification based on phonological systems would be more interesting, though equally arbitrary. Linguistic geography demonstrates that every phenomenon occupies an area of its own; A. Basset proved this so convincingly in respect of Berber, that he relinquished the idea of dialect in this field altogether: the language disintegrates directly into four to five thousand local idioms. Nevertheless it would be difficult to avoid taking into account a kind of linguistic harmony which, in such geographically close-knit regions as the Chleuh country, Kabylia, Aures etc., superimposes itself on the division into local idioms, without effacing it; mutual comprehension is immediate within every such zone and Berber speakers have a feeling for these groupings (cf. A. Roux, in *Hesp.*, 1954, 269). Even in these privileged cases, no common language exists. It is true that the wandering poets of the Middle Atlas of Morocco, referred to by A. Roux (cf. section VI), use a kind of intermediate dialect for their compositions; furthermore, an investigation should be made of the Berber spoken in the large towns where the emigrants collect together. But up till now, political, economic and cultural conditions have militated against a unification which those concerned do not seem to need: when necessary, they use another language, frequently Arabic, to communicate with one another. Any comprehensive description of the Berber dialects, therefore, comes up against local factors which persistently impose limits on its applicability. Nevertheless, it is justified by the unity of the language, which remains clear in spite of the diversity.

1. — Phonetics and Phonology. Though the sounds of the numerous dialects have already been ascertained and more or less adequately described in the monographs, we still possess no complete table of their correspondences. Moreover, as yet no dialect has been subjected to a phonological analysis. Comparison, however, enables us to establish the main features of a system of phonemes which appears to be the basis on which the various local

systems rest. Here, only slightly modified, is the table proposed by A. Basset:

Consonants	labials	b	f	m
	dentals	t	d	n l r
	shibants		s	z
	palatal shibants		ʃ	t
	velars	k	g	
	uvular			
Semi-vowels		y	ʔ	
Vowels		i	u	
		ə		

The tendency for short occlusives to become spirant in numerous dialects (Rif, Middle Atlas of Morocco, Kabylie, etc.) has already been mentioned. This may lead locally to the introduction of new phonemes and to modification of the phonological system. Almost everywhere this system has been complicated and distorted by large-scale borrowing from Arabic, to which the presence particularly of the pharyngals and *ʕ* and the laryngal *h* in the majority of dialects appears to be due.

A remarkable fact is the presence in Berber of emphatic consonants. Apart from *d* and *z* there are attested: [ɖ], [ɣ], [ɟ] and even [ʒ], [ʒ], but they cannot be accorded phonological status *a priori*. Emphasis does not always belong exclusively to the phoneme concerned. On [i], cf. below.

*y* and *u* are sometimes pronounced as consonants [ɣ], [w], and sometimes as vowels [i], [u], according to their position; quality varies with syllable pattern, which is not everywhere the same. Furthermore, besides these occurrences of phonetic [i] and [u], morphology suggests the need to recognise separate vowels *i* and *u*: which is not devoid of difficulties.

Each of the three vowels *a*, *i*, *u* comprises a range of gradations conditioned by the articulation of the neighbouring consonants and devoid of phonological value. As regards [a], it is in principle a purely phonetic element, the occurrence of which is subject to the laws, as yet not very well known, which govern the syllabification and structure of words. Very unstable in central and southern Morocco, it appears presents a greater consistency in Kabylie; in spite of certain indications by Foucauld which must be verified and above all, interpreted, it is by no means certain that [a] has phonemic status in Tuarég.

An important rôle is played by the quantitative value of consonants. Every consonant or semi-vowel may be "short" or "long", thus creating a type of opposition widely exploited by the vocabulary and to a still greater extent by the morphology. Chleuh *ʒ* "tongue"; *dl̄* "he has sold"; *ʒh̄at* "he has given it (masc.)"; *ʒh̄at* "he has given it (fem.)". The long consonant seems to be less characteristic by its duration than by the tenseness of its articulation; lengthening sometimes results in transition from spirant to occlusive and from voiced to voiceless: thus it comes about that the frequent realisation of *ʔy* is [tʃ], and that of *ʒd* [tʃ]: we may be represented by [ʒʔʔ] (on one occasion even [kkʃ] or [bbʔ]), and *ʔy* by [ʒtʃ].

Not all vowels always have the same duration; their length, however, is not pertinent, except perhaps in Tuarég.

Accentuation of a word, where the accent is one of intensity, is not recognised as fulfilling a distinctive function.

## 2.—Forms and their functions.

a.—The Berber word. Words are made up of

a theme and inflexions. The theme is produced by the combination of a root with a schema. The root is bound to a minimum concept beyond any kind of grammatical categorisation. It is always consonantal, containing one or four, most frequently two or three consonants, being characterised by their number and order. The term *schema*, borrowed from the Arabists (J. Cantineau), indicates the structure of the theme; the schema gives the word part of its grammatical identity: thus, to a degree which varies with cases, it may indicate the nominal or verbal nature of the word, the number of the noun, the form of the verb, etc. The schema itself is defined by the presence or absence of formative consonants, by short or long quantity of formative consonants or radicals, by the presence or absence, the place and quality of the vowels. The inflexions complete the grammatical description of the word; as prefixes and/or suffixes, they appear fundamentally to be consonants; in certain cases, it is convenient to recognise a zero inflexion. Examples: Tuarég *tbl̄as* "she tie" = theme *tbl̄as* (root KRS, schema *t ʒ a ʒ*) + inflexion *t*; *tbl̄asr̄id* "knut" = theme *tbl̄asr̄id* (root KRS, schema *t ʒ a ʒ*) + inflexion *t*; *tbl̄asr̄id* "knut" = theme *tbl̄asr̄id* (root KRS, schema *t ʒ a ʒ*) + inflexion *t*. The system on the whole closely resembles that of Arabic, though it is more difficult in Berber to isolate the roots and establish the precise value of the schemas.

Berber distinguishes two genders, masculine and feminine, and two numbers, singular and plural.

b.—The verb. The forms (stems) are derived. Verbs appear either in a simple form or a derived form. The simple form is constructed in principle with or without an object and is at times translated by our active voice and at other times by our passive. Derivation is achieved mainly by means of prefixes. There are three primary derived forms, which sometimes combine among themselves. They have frequently been referred to as the causative, passive and reciprocal forms, according to their most apparent significance; these designations do not correspond closely enough to the facts and have nowadays been replaced by those of shibant-form, dental-form and nasal-form according to the articulation of the prefix. Examples: Tuarég *ʔybr̄* "to strike with the foot"; *ʔybr̄* "to go to strike"; *ʔybr̄* "to be struck"; *ʔybr̄* "to strike one another". In fact, not all verbs possess the complete series of simple and derived forms. A derivation by the suffix *-t* is well attested in Tuarég and has left traces elsewhere.

The themes. For each of the forms, simple or derived, there are three themes or groups of themes: 1) an aorist theme: ex. Chleuh *ʒd* "to put on clothes"; *ʒw̄y* "to become red"; 2) an intensive aorist theme: *ʒs̄a*, *ʒw̄y*, which is sometimes accompanied by a negative intensive aorist theme; 3) a preterite theme: *ʒs̄a*, *ʒw̄y*, to which is connected a negative preterite theme: *ʒs̄a*, *ʒw̄y*. These themes may contrast with one another by alternation of vowels or of consonantal length, or by prefixing *ʒt* (in the intensive aorist only), or again by a combination of two or rarely three of these processes. In principle the two aorist forms a group opposed to the preterite, as *ʒw̄y* (intensive) to *ʒs̄a* (preterite). It frequently happens, however, that the themes of the aorist and the preterite coincide. When several verbs adopt precisely the same procedure to differentiate their themes, they are said to belong to the same type; this affords a means of formal classification which is justified by the existence of a relationship, often masked but

sure, between the verbal type thus defined and that of the derived forms, as well as between the verbal type and the schemas of the nouns of action and of the agent. The verbal type itself appears to be more or less bound to the structure of the root.

A careful examination of all the themes obliges us to distinguish a large number of types of verbs. In practice, account is taken above all of the antithesis of the aorist and preterite themes, which enables us to recognise the main groups, particularly the "zero vowel" type (A. Basset) in which the affirmative aorist and preterite are formally identical (Chleuh *ʔybr̄*: *ʔybr̄* "to harvest"), the type with a non-alternating "full vowel" (*ʔm̄n*: *ʔm̄n* "to accompany"), the pre-radical alternating vowel type (*ʔm̄n*: *ʔm̄n* "to take"), the intra-radical (*ʔm̄n*: *ʔm̄n* "to give back"), the post-radical (*ʔm̄n*: *ʔm̄n* "put on clothes"), different types of complex alternations (*ʔm̄n*: *ʔm̄n* "to become red").

The table of verbal themes lacks symmetry, as there is no intensive preterite given. The latter exists in Tuarég, and A. Picard, basing himself on certain Kabyle and Moroccan data, has recently raised the important question of the Pan-Berber character of the intensive preterite (*Memorial A. Basset*, 107-20).

The inflexions. — A first though incomplete series of suffixed personal inflexions is associated with the aorist and intensive aorist themes to produce the ordinary and intensive imperatives. The inflexion is zero in the 2nd person singular, which is the form of the non-intensive imperative used by grammarians to indicate a verb ("the verb *ʔybr̄*, the verb *ʔm̄n*", etc.).

The impersonal inflexions *y-n* (on occasion *z-n* in the plural) are added in well defined syntactical conditions (cf. below) to any one of the themes to form what is called the "participle". Survivals of an older stage (in the negative preterite) or disturbances in the articulation of the verb (cf. below), are closely welded to it. In the case of simultaneous use, these pronouns and the particles of approach and withdrawal follow one another in a fixed order: indirect object (I), direct object (D), participle (L). After a number of words (particles of the aorist, the intensive aorist, negation, etc.) or in a relative clause, the elements (L) precede the verb; elsewhere they follow it; hence these chains which illustrate on both sides of the verb: Chleuh *ad-as t̄n d-ʔw̄y* "I have brought them to him": *ʔw̄y-as-t̄n d-ʔw̄y* "I have brought them to him".

c.—The noun. All nouns cannot be reduced to a single morphological type. Some have been borrowed from Arabic (or from other languages) and have not been berberised; they have retained the Arabic article and are characterised by the initial consonant group *K-* or *CC* (< *K-* by assimilation): *ʔh̄as* "glass", *ʔw̄y* "market"; this group is considerable in all dialects except Tuarég.

The majority of Berber or berberised nouns in principle have an initial *a*, *i* or *u*: if they are masculine, *la*, *li* or *lu*; if they are feminine; this initial has been related to the demonstrative elements, which is not unlikely; locally in a number of schemas it loses its vowel. The prefixed *t* characterises the feminine; many nouns may have a suffix *-t* in the feminine singular: Chleuh *ʔyʔal* "ass": *ʔyʔalt* "she-ass"; *ʔigimmi* "house". The vowel of the initial syllable participates in both oppositions of number and state (cf. below). The plural is indicated, furthermore, either by a vowel preceding or following the last radical consonant, with or without further vowel alternances: *ʔyʔal*: *ʔyʔal*; *ʔyʔal*: *ʔyʔal*; *ʔyʔal*: *ʔyʔal*; or by a basic suffix *-n*: *ʔyʔal*: *ʔyʔal-n*; or by a combination of both processes: *ʔyʔal*: *ʔyʔal*. The concept of state, in spite of the ambiguity of the terminology, is

the intensive aorist and the preterite alone remain in opposition: *ʔyʔal* "these populations dwell" (process envisaged as a series or sometimes as a development); *ʔyʔal* "the members of such and such a family dwell, have taken up their domicile" (process envisaged from beginning to end, as a whole). With the exception of certain optative formulas, the non-intensive aorist, therefore, only appears in certain syntactical conditions where it may assume the meaning of any other verbal theme whatever: in this sense one may, with A. Basset, consider it as the "unmarked" term of the aorist: preterite opposition; this use of the aorist is very frequent in the Moroccan dialects, but is less current elsewhere.

Whatever the theme, the verb assumes the form of the "participle" when it occurs in a relative clause in which the subject and the antecedent are identical: Kabyle *w̄y ʔyʔal* "he (who) dwells".

The satellites of the verb. — The particles of the aorist have been mentioned above. There are other particles (*wa*, *da*, *ha*, etc.) which may accompany the intensive aorist or the preterite; the list of them and the conditions in which they are used vary considerably according to the dialect, some dispensing with them altogether. The basic negative particle is *ur* (*ul*, *ud*, *u*); it always precedes the verbal form which, in different dialects (Kabylie, Aurès, etc.), may then be followed by a second element (*as*, *ʔal*, etc.); *ur* is encountered with all the verbal themes, but negative constructions are not everywhere identical.

The verb is frequently accompanied by a particle "of approach" *d* and sometimes by a particle "of withdrawal" *a* (*a*), which indicate the direction of the action. Finally the personal pronouns, direct or indirect objects of the verb (cf. below), are closely welded to it. In the case of simultaneous use, these pronouns and the particles of approach and withdrawal follow one another in a fixed order: indirect object (I), direct object (D), participle (L). After a number of words (particles of the aorist, the intensive aorist, negation, etc.) or in a relative clause, the elements (L) precede the verb; elsewhere they follow it; hence these chains which illustrate on both sides of the verb: Chleuh *ad-as t̄n d-ʔw̄y* "I have brought them to him": *ʔw̄y-as-t̄n d-ʔw̄y* "I have brought them to him".

d.—The noun. All nouns cannot be reduced to a single morphological type. Some have been borrowed from Arabic (or from other languages) and have not been berberised; they have retained the Arabic article and are characterised by the initial consonant group *K-* or *CC* (< *K-* by assimilation): *ʔh̄as* "glass", *ʔw̄y* "market"; this group is considerable in all dialects except Tuarég.

The majority of Berber or berberised nouns in principle have an initial *a*, *i* or *u*: if they are masculine, *la*, *li* or *lu*; if they are feminine; this initial has been related to the demonstrative elements, which is not unlikely; locally in a number of schemas it loses its vowel. The prefixed *t* characterises the feminine; many nouns may have a suffix *-t* in the feminine singular: Chleuh *ʔyʔal* "ass": *ʔyʔalt* "she-ass"; *ʔigimmi* "house". The vowel of the initial syllable participates in both oppositions of number and state (cf. below). The plural is indicated, furthermore, either by a vowel preceding or following the last radical consonant, with or without further vowel alternances: *ʔyʔal*: *ʔyʔal*; *ʔyʔal*: *ʔyʔal*; *ʔyʔal*: *ʔyʔal*; or by a basic suffix *-n*: *ʔyʔal*: *ʔyʔal-n*; or by a combination of both processes: *ʔyʔal*: *ʔyʔal*. The concept of state, in spite of the ambiguity of the terminology, is

its complement, the *Bahr al-Dumâ'*, partially published by de Slane in his appendix to the *Histoire des Berbères*, iv, 552-62 (a complete ed.-trans. of this last text by H. H. Stumme is in the press). The "Kur'ân" of Hâ-Mîn and of Sâlih b. Tarif are, in a sense, related to these works, but they are, entirely lost, the same being true of the Berber text of three treatises composed in Taghshlhit by Ibn Tûmart. Of *Khâridjî* literature, which was probably abundant, there remains the treatise of Ibn Ghânim entitled *al-Mudawwana* (cf. Motylinski, *Le Manuscrit arabo-berbère de Zougaga*, in *Actes du XIII<sup>e</sup> Congrès des Orient.*, Algiers 1909, II, 64-78). A proportion of these religious works (particularly the *fiqh* and some others existing in manuscript form, cf. A. Roux, in *Actes du XIII<sup>e</sup> Congrès des Orient.*, Paris 1909, 326-7) are in verse so as to be more easily memorised, but unfortunately they include a high proportion of Arabic words. To this type of literature belong religious poems, such as that of Sâlih, which relates a young man's descent into Hell in search of his parents (R. Basset, *Le poème de Çabi*, Paris 1879, P. Galand-Pernet, in *Mémorial A. Basset*, Paris 1957, 39-49), those of Sidi Hamûn (H. Stumme, *Dichtkunst und Gedichte der Schläb*, Leipzig 1895; Johnston, *Fadma Taghravani*, in *Actes du XIII<sup>e</sup> Congrès des Orient.*, II, 100-11; idem, *The Songs of Sidi Hamûn*, London 1902; P. Justinar, *Poesie berberi*, in *JA*, 1908, 208), the legend of Joseph in verse (Loubigne, *Dial. des Zaïan*, Paris 1924-5, 359-94), a story of the ascent of the Prophet and a version of the *Burda* of al-Bûsîrî (q.v.). To these may be added the translations of the Old and New Testaments made by Catholic and Protestant missionaries.

Secular works are rare; apart from Arabo-Berber glossaries and books of popular medicine which have practical interest, such writings as we possess were composed under the guidance of European scholars, as for example the *The Narrative of Sidi Ibrahim* on West Africa in Taghshlhit (F. W. Newman, in *JRAS*, 1848, 215-60; trans. R. Basset, Paris 1882), or the description of the Djahâl Nafîsa by al-Sîmî, in *al-Sîmî*, in Nafîs (ed. trans. Motylinski, Algiers 1885); to these may be added the collection of stories entitled *Kitâb al-Shûba* (MS of the B.N. in Paris), which to a large extent appears to be borrowed from the *Dağdışîr-nâme* (q.v.) and the *Hundred Nights* (R. Basset, in *Revue des traditions popul.*, 1891; extracts published by de Slane, de Rochemonteix, R. Basset); to this category belong the ethnographical narratives and texts composed at the request of investigators who subsequently included them in their dialect studies or made independent collections of them, such as the *Textes touareg en prose* by Ch. de Foucauld, Algiers 1922. In this connexion it will not be without interest to note that the *Fichier de documentation berbère*, directed by Fort-National (Kabylia) by the Rev. Father Dallet, has been published since 1947 texts and even small plays composed in Berber, in addition to linguistic and ethnological documents.

As for the customary *binâmes* in use among certain Berber populations, very few of them have been published in the original language (see above section iv); the following may be mentioned: Ben Sedira, *Cours de langue Kabyle*, 295-353; Boufifa, *Le Kanoun d'Adin*, in *Revue de médecine ... XII<sup>e</sup> Congrès Orient.*, Algiers 1905, 152-78.

Folk-lore is abundant, not to say rich. Marvellous and humorous tales, fables, stories of animals, historical and religious legends are transmitted from generation to generation by the women, who are

wont to tell them of an evening. It is this folk-lore that investigators have been able most easily to collect and few are their accounts which do not contain some stories or riddles, without counting collections of folk-lore texts presented also as linguistic documents.

Finally, secular poetry, in spite of its appearance of primitive simplicity, is probably the most original literary production. The songs improvised collectively during the ritual dances (*ahidus*), hallabes, funeral laments, and ritual chants contain a large share of tradition, but real professional poets also exist among the Berbers, whose inspiration, generally speaking, is restricted to themes of love and war. In Morocco, the *imayasin* (see A. Roux, *Un chant d'amour, l'aide berbère du groupe linguistique berabér*, in *Mém. H. Basset*, Paris 1928, II, 237-42) travel about the country and, like the troubadours, celebrate important events, sing the praises of likely patrons and discharge their arrows at those who disappoint them. Some poets, such as the Kabyle Mohand b. Mohand and the Touareg poetess Dassin, have achieved a certain fame, local it is true and ephemeral, since their works, remaining oral, are soon forgotten in countries where the *rawâit* do not exist.

Berber art also is of no great account; the rock engravings and paintings are indeed far from lacking in quality, but one may well ask whether the artists who executed them are really the ancestors of the present day Berbers. In spite of the great architectural achievements to which we have referred (above, section iv), there is no real Berber art comparable to Arab and Hispano-Moorish art. The fact is that the Berber is a countryman, indeed a nomad, only seeking to possess articles of current use, which are easily transportable; his art, therefore, is limited to ornamenting articles of everyday life and does not transcend a craftsmanship seeking to provide the comforts of life rather than to delight the eye. Its products, sought at times by a clientèle enamoured with exoticism and simplicity, and supported in North Africa by the efforts of the authorities to maintain and improve traditions and techniques, are restricted to carpets, hangings, mats, silk embroidery, chinaware, earthenware, cabinet-work, work in gold, brass wares and damascene work; ornamentation is characterised by the almost exclusive use of the straight line (triangles, stripes, lotenges, checker-work). To this may be added very realistic statuettes in wood, which are at variance with the Islamic ban on the representation of the human form.

**BERGAMA**, the ancient Pergamon in Mysia (on which of the data and references given in Pauly-Wissowa). Armenians who had fled before the Muslim raids into Asia Minor settled in Byzantine Pergamon during the course of the 7th century. The Byzantine emperor Philippikos (711-713) was of Armenian descent and came from Pergamon. Muslim forces under Madana b. 'Abd al-Malik sacked the town in 716, but it was rebuilt and refortified after the Arabs had abandoned their attempt to take Constantinople in 717-718. Pergamon was included, from the reign of Leo III (717-741), in the theme of Thrakesion and, from the reign of Leo VI (886-912), in the theme of Sanois. The town suffered during the Turkish raids into western Asia Minor after the battle of Manzikert (1071). It continued, however, to be a prosperous and well fortified centre under the Byzantine emperors of the house of Komnenos and their immediate successors. Pergamon, having been hitherto a suffragan bishopric dependent on Ephesos, was raised to the status of a metropolis in the reign of Isaac Angelos (1185-1195). After the fall of Constantinople to the Fourth Crusade in 1204, the town was included in the Greek state of Nicaea. Later, when the Turks overran western Asia Minor in the years around 1300, Bergama came under the control of the Begs of Karas. The Ottomans, during the reign of their Beg Orghân, annexed the emirate of Karas. Bergama became thereafter a *hadd* of

the *sandjâk* of Khulwendiğir in the *eyâlet* of Anadolu and later a *hadd* of the *sandjâk* of Izmir in the *vilâyet* of Aydin. The region of Bergama is fertile and noted for its production of cereals, fruit, vegetables, tobacco and cotton. Greek farmers occupied Bergama in the years 1909-1925. As a result of the subsequent exchange of population arranged between the governments at Athens and Ankara, Bergama lost its Greek inhabitants and received in their place Turkish elements brought over from Greece. The population of Bergama was estimated, in 1950, to be approximately 16,500 people.

**BERKE**, a Mongol prince and ruler of the Golden Horde, grandson of Çingiz-Khan and third son of Jöchi. Little is known of his early career. He took no part in the wars in Russia and Eastern Europe in the years 634-659/1237-1242 but was more frequently in Mongolia than Batu, whom he represented at the enthronement of Güyük (642/1248) and that of Möngke (649/1253). His *yurt* of appanage was originally situated, according to Rubruk, in the direction of Darband but by 653/1255 had on Batu's orders been removed to the east of the Volga in order to cut off Berke from contact with his fellow Muslims. His conversion to Islam is mentioned by Rubruk, who says that he did not allow pork to be eaten in his *orda*. The date of his conversion is unknown. Djidajin's statement that he was brought up from infancy as a Muslim seems hardly credible. On the other hand he seems to have already become a Muslim at the time of Möngke's accession to the Rhanate, when, as Djirwayn tells us, the animals provided for the festivities were slaughtered for his benefit, in accordance with the Muslim ritual.

Batu died according to Djirwayn while his son Sartak was on his way to the Court of the Great Khan. Sartak continued his journey and was appointed his father's successor by Möngke but himself died shortly afterwards. He was succeeded by the young prince Ulaghai, his son or brother, Horkidin, Batu's widow being appointed regent. According to the Russian annals the camp of "Ulavici" was visited by Russian princes as late as 1257. It was not until the death of the young Khân, probably in the same year, that the succession passed to Berke.

Like Batu, Berke, during the early years of his reign, seems to have exercised certain sovereign

rights in Mā warā' al-Nahr. According to Džurđān he visited Bulghār and showed great honour to the learned men of the town; he is also said to have ordered the Christians of Samarkand to be punished and their churches destroyed because of their behaviour towards their Muslim fellow townsmen. When the news of Muḥammad's death arrived (1259), the *Khutba* was read in Berke's mosque not only in Mā warā' al-Nahr but also in Khurāsān.

During the next four years (1260-1264) two brothers of the dead Great Khan, Kublāy and Arīgh Böke, were engaged in a struggle for the throne. As the coins struck in Bulghār show, the unsuccessful claimant Arīgh Böke was recognised by Berke as the rightful heir. Prince Alughu, a grandson of Ghaḡatay, appeared in Central Asia about the same time, first as a representative of Arīgh Böke and afterwards in open revolt against him; he succeeded in bringing under his sway not only the whole of his grandfather's appanage but also Khawārm, which had always belonged to the kingdom of Džochi and his successors; the governors and officials appointed by Berke were driven out of the towns. The measure mentioned by Wassāf (Bosnabey ed., 57) of a division of Berke's army, 5,000 strong, in Bulghār must have been carried out, not, as Wassāf himself says, by Kublāy, nor, as d'Ohsson supposes, by Hūlegü, but by Alughu. The war between Berke and Alughu was continued until the latter's death; in the last years of his life, after the final defeat of Arīgh Böke, Alughu's troops occurred and destroyed the town of Otrar. Berke, whose forces were engaged in the South and West, could do nothing against his enemies in the East, but he did not abandon his claims; Prince Kaydu, a grandson of Ögedey, who had fought under Arīgh Böke, continued the war against Alughu after Arīgh Böke's defeat and was supported by Berke.

The campaigns in the West against the Lithuanians and King Daniel of Galicia were of no great importance and were conducted by the frontier commanders without the personal intervention of Berke. King Daniel fled to Poland and Hungary and his son and brother were forced to dismantle the fortifications of all their main cities.

The war between Berke and his cousin Hūlegü, the conqueror of Persia, was more important and less successful. The causes of the war are variously given. Berke is pictured by some authorities as the defender of Islām and is said to have bitterly reproached Hūlegü for his devastation of so many Muslim countries and particularly for the execution of the Caliph Musta'sim. However those authorities who say that Džochi's heirs felt their rights endangered by the foundation of a new Mongol kingdom in Persia are probably nearer the truth. Some of the territories incorporated in the new kingdom, such as Arrān and Aḡharbāyduḡān, had already been trodden by "the hoof of Tartar horse" in the reign of Čingiz-Khān and were therefore, according to the Conqueror's directions, part of the appanage of Džochi. The evidence on the war itself is contradictory. Hūlegü seems at first to have been victorious, advancing against the Terek (late in 1262), and then to have been defeated by Berke's forces (Berke not being present in person), losing a great part of his army in the retreat; many were drowned in the Terek when the ice gave way under their horses' hoofs.

Even before the outbreak of these hostilities the Egyptian Sultān Baybars (r. 1260) had decided to enter into communication with Berke and form an alliance

against their common enemy Hūlegü. A message to this effect had been sent from Cairo to Berke as early as 1260; on the 16th November 1262 an embassy was dispatched for the same purpose, and in the following year Berke's ambassadors were received by Baybars. The detention of Mongol and Egyptian envoys in Constantinople led to hostilities between the Golden Horde and Byzantium. Berke dispatched an army under Prince Nokay into Thrace, where they joined forces with the Bulgarians; and the Saldjuk Sultan 'Izz al-Din Kay-Kubā, who had been driven out of Asia Minor and placed in custody in the fortress of Ainos on the Aegean was set free and brought to the Crimea.

In 1265, the year of Hūlegü's death, the Kipčak and Persian Mongols were again at war. The two armies, under Berke and Abaka, for a long time faced each other across the Kūr; in search of a crossing Berke proceeded upstream to Tiflis, where he died (1266); and his forces then withdrew.

Berke left no family, so that the throne passed to Batu's grandson Mangku-Temur. During the last years of his reign he was no longer, as Batu had been, second to the Great Khān in the Mongol Empire, but the ruler of an independent state, although this evolution was not completed till the reign of his successor, who was the first of the Kipčak Khāns to strike coin in his own name. It is difficult to estimate how much Berke did as a Muslim to further the practice of Islām among his subjects. The Egyptian accounts speak of schools in which the youth was instructed in the Qur'ān; not only the Khān himself but each of his wives and Emirs also had an *imām* and a *mu'addib* attached to their establishments; yet we learn from the same sources that all sorts of heathen customs were observed at the court of the Khān with the same strictness as in Mongolia. Not only Berke himself but several of his brothers are said to have adopted Islām; and yet half a century was to elapse after his death before Islām became definitely predominant in his kingdom.

Berke was the founder of New Saray (so called to distinguish it from the Saray founded by Batu), which was situated on the eastern bank of the Upper Akhtuba near the present-day Leningk, about 30 miles east of Stalingrad.

*Bibliography:* As in the article on Batu.

(W. BARTHOLOMÆJ, A. BOYLE)

**BESERMYANS** (or Glazov Tatars), a small ethnic unit akin to the Udmurts (Votyaks) living in North Russia. Differing views are held on the subject of their origin, some considering them as Finns who have come under Turkish influence, others as descendants of the old Kana Bulgars, profoundly influenced by the Udmurt language and culture.

The Soviet census of 1926 listed 10,035 Besermyans, 9,195 of whom were from the districts of Balezino and Yukamenskoe in the autonomous Udmurt SSR and 834 from the neighbourhood of the village of Slobodskoe at the confluence of the rivers Vyatka and Kama in the Kirov region. The Besermyans are bilingual, speaking Russian (in the Udmurt ASSR) and Kazan Tatar (in the Kirov region) as well as Udmurt much influenced by Tatar. They were converted officially to Christianity in the 17th century, and until the October revolution were considered fully Orthodox, but in fact they remained Muslims at heart, retaining many customs which are traditionally Islamic. Notably, they would call in the Tatar month after the Orthodox priest when a death occurred.

After the proclamation of freedom of worship in 1905 the greater part of the Besermyans returned openly to Islām.

**BESHİKE** (BESHİKE KÖYÜ, BESHİKA) is a bay on the western coast of Asia Minor opposite the island of Tenedos (Boğdja Adası). It lies about 23 kilometres to the south of Kuş Kape, between the two capes of Kuma Burnu and Beshik Burnu and, although open to the sea, affords good protection to shipping. Inland from the coast is situated the classical Troas and evidence of ancient remains has been found in the immediate neighbourhood of Beshike itself. The British and French fleets sailed to Beshike in June 1853 during the course of the crisis which led to the outbreak of the Crimean War. Great Britain also sent her fleet to Beshike in 1876 and 1878.

**BESHİK ASİ** [see İSTANBUL].

**BESHİK** [see SİĞIRCI].

**BESHİPARMAK** ("five fingers"), a Turkish name given sometimes to mountain ranges in Asia Minor and elsewhere. The best known example is the Beshiparmak-dagh in south-west Asia Minor, on the lower reaches of the Büyük-Menderes—a mountain chain rising at its loftiest elevation to a height of 1367 metres. This particular range was known in ancient times as *ḡ. Aḡḡḡḡḡ*. The region became, during the Middle Ages, an active centre of Christian religious life, which flourished until the Turks overran western Asia Minor in the 13th-14th centuries.

(V. J. PARRY)

**BESİKA BAY** [see BESHİKE].

**BESKESEK-ABAZA** (or BESHİKESEK ABAZA), the Russian name for a Muslim people belonging to the Abasgo-Circassian (Adigh) section of the Caucasian family. Ethnically they are close to the Kabardians. From the time of the High Middle Ages the Abaza people have been divided into two groups speaking different dialects: the northern or Tapanta group of six tribes, and the southern or Şikarawa group, also of six. In the 1926 census 13,825 Abaza were counted, but Lavrov thinks that these real figures must be considerably larger, perhaps about 20,000 at the present time. The majority of the Abaza (10,093 out of 13,825 in

1926) live in the Circassian Autonomous region, the high valleys of the Great and Little Zelenčuk, the Kuban and the Kama. Here there are thirteen villages, and there are two other Abaza villages near Kislovodsk in the Stavropol' Krai, as well as a few groups of Abaza in the Circassian and Nogai villages in the Adigh Autonomous Region.

The Abaza are descended from the multi-lingual tribes which at the beginning of our era dwelt on the shores of the Black Sea, north-west of present-day Abkhāzia, and which fused together in the course of the centuries to form the Abkhāz national unit.

In the 14th and 15th centuries most of the Abaza left their original homes in the coastal region (between Tuapse and Bfbi), crossed the Caucasus, and dislodging the Kabardians settled in the area they now inhabit. From that time onward they had to contend with the hostility of the Circassians, and their history is one of slow but continuous decline. At the end of the 16th century the Abaza tribes which had formerly dominated the region accepted perforce the rule of the Kabardian and Besleni princes. At this time too (in the reign of Sultān Murād III) the Turkia extended their protectorate over eastern Caucasasia but by the treaty of Belgrade relinquished Kabardia, which was recognised as an independent territory. The Turkish frontier then ran along the Kuban, and the Tapanta who were leading a nomadic existence on both banks of this river became independent, no longer owing any clearly defined allegiance. After the treaty of Küçük-Kaynardja (1774) the Russians occupied Kabardia, and in 1802 the greater part of the territory of the Abaza was combined with that of the Nogai in a special *pristavstvo* administered directly by the Russian authorities. During the Caucasian war the Abaza were divided in their allegiance, the Tapanta allying themselves with the Russians while the Şikarawa supported the Mirdist cause. After the Russian conquest, which took place between 1856 and 1864, the majority of the Şikarawa (the Tam, Kizilbek, Bag, Cegrei and Mıslıbaı tribes) emigrated to Turkey; 30,000 are officially stated to have left, but this estimate seems too low. After the Caucasian wars only 9,921 Abaza remained in the region (E. Fellgins, *Cislovo danile n goriskom i problem musulmanskom naseleniu Kubansk oblasti, in Sbornik Svedeni o Kavkaze*, Tiflis 1885, ix, 87-94).

The conversion to Islām of the Abaza (who had formerly been animists or Christians) began after their migration towards the northern Caucasus, when they came into contact with the Crimean Tatars and the Nogai. They took over the 'Adal and chronological system of these peoples (a twelve-year animal cycle), together with Sunnī Islām of the Hanafī school. This conversion was slow, almost all the tribes south of the Kuban' being still animist or Christian at the end of the 17th century (Buseya Horafens, cited by V. D. Smirnov, *Krimskoe Khānstvo pod vserkizentskim Otomanskim Porti do nalada XVIII veka*, St. Petersburg 1887, 347). Ewliya Çelebi affirms that the Ribedraa, one of the most important Maza tribes, are not Muslims. Almost all the Tapanta had accepted Islām by the end of the 18th century, but the Şikarawa were still Christians when they were visited by P. S. Pallas, Islām being restricted to the nobility (*Bemerkungen auf einer Reise an die Südlischen Städtchen des Russischen Reichs in den Jahren 1793 und 1794*, Leipzig 1799, 365). At the

same period J. Reinegers (*Allgemeine historisch-geographische Beschreibung des Kaukasus*, Göttingen, St. Petersburg 1796, 273) states that the Tam, Cegrel, and Barakal tribes of the Şikawara group were "enemies of Islam". In 1807, J. Klaproth (*Reise in den Kaukasus und nach Georgien*, i, Halle-Berlin 1812, 459) found that the Tam were Islamised but "kate pork", and this is confirmed by the anonymous author of the article *Goriskie plomena Irtinskia na Kabas'ya in Kavkaz* no. 94, 1850, who describes the Tam as "very lukewarm Muslims", the Cegrel as "settling small stores by Islamic ritual, apart from certain of the nobility", the Bag (a tribe of the same group) as "without precise beliefs" and the Barakal as partially converted to Islam. Thus it seems that the final conversion of the Şikawara dates only from the middle of the 19th century, effected by the missionary zeal of Muhammad Amin, the Na'ib of Şhimal [s.v.] in Circassian territory.

Until the beginning of the 20th century Abaza society retained its very complex feudal structure, which was similar to that of the Circassians. At the bottom of the social scale were the slaves, *unsul* (among the Circassians). Then came the free serfs, *İlg* (*İlg'ina* among the Şikawara), and the freed serfs, *asıl-İlg*, who remained under the obligation to perform certain tasks but could none the less change their master and themselves own *unsul* and *İlg*. Above these was the most numerous class, that of the free peasants, *ahāl* (or *İlshakşah*). Next were the nobles, divided into "small nobles", who made up the princes' retinues, and the *amlak*, "great nobles", *amlaklı* (found among the Şikawara) who could have retainers of their own. At the top of the scale were the "princes" who were heads of clans, *alğa*, and vassals of the Beskenel and Kabardian princes. They took their place not among the Circassian princely class (*paşa*) but in the lower class of *İlshakşah*. The children of the *alğa* and women of a lower class made up a special class, *İama*.

Until the October revolution and even during the first years of the Soviet regime the Abaza still retained certain patriarchal and feudal customs (clan divisions, vendettas, *kalyon*, *alalık*, etc.).

#### Language and literature

The Abaza language belongs to the Abkhazo-Adighe division of the Iberio-Caucasian languages. It is so close to Abkhaz that it is sometimes taken as simply a dialect of this tongue, but it shows numerous Kabardian features. There are two dialects: *Abğbara* in the south, with two sub-dialects, that of the *Apsua* Aul and that of Staro and Novo-Kavinskie, and in the north *Tapaşa*, comprising likewise the two sub-dialects of Kubina-El'barsan and Pidi-Krasno-Vostochnoe. Abaza was an unwritten language until the October revolution. In 1932 a modified Roman alphabet was devised for it and a page in the language added to *Čerkes K'apğıl*, the Čerkes Adighe daily. In 1939 the Roman alphabet was replaced by Cyrillic, and in this new script the first works by Abaza writers have appeared, from 1940 onwards (collections of poems by Tekeov and Tjibabakhov, the short stories and novellas of Zinov and Tabudov, etc.).

**Bibliography:** L. I. Lavrov, *Abasid (Ido-ričsko-Etnografičeskii Očer)* in *Kavkazskii Etnografičeskii Šornik*, U.S.S.R. Academy of Sciences, Moscow 1955, 5-48, (the best historical and ethnographical study); see the same writer in *Sovetskaja Etnografika* no. 4, 1946 (*Očer russkikh Itepov*); *Šhura Bekmurzin Nagnov, Istoria*

I of the Scientific Memoirs of the Pedagogical Institute of Rostov-on-Don 1939); and *Akharskaja Fonetika* (vol. v of the same collection), Rostov-on-Don, 1949.

[A. BENNISON and H. CARRÉRE D'ENCAUSSE]

#### BESLENYE (see ČERKES)

**BESNI** (Behesni in the Middle Ages), from the Syriac Bet Hensai, a crossroads settlement at a height of more than 2,900 feet on the important junction of the Malatya-Aleppo and (Cilicia)-Mar'ash-Diyār Bakr roads. Besni was the hinge between the series of strongholds north of the great bow of the Euphrates on the one hand, which protected the upper valleys of the right bank tributaries of this river from incursion from the plateaus and high ranges of the eastern Taurus, and on the other those towards the south, which dominated the small basins north of 'Aynāb. Further it was in the immediate vicinity of a pass which led down towards the north-west to the gorge of the Ak-Şu, the site of the old stronghold of Hadaşh the Rod. Despite these advantages and the ancient etymology of its name, Besni is not mentioned in texts until after the destruction of Hadaşh, whose place it then took (4th/10th century). Formerly it had been overshadowed by Kayşin, its southern neighbour, which was then more important and was itself linked predominantly with Mar'ash, Besni probably owed its rise to an influx of Armenians after the Byzantine conquest. At the end of the 5th/11th century it was part of the principalities of Philant and Kogh-Vasli, and during the period of the Crusades was one of the most frequently mentioned places in the Franco-Armenian province of Edessa. It was fought for by the Zengid or Ayyūbid princes of Aleppo and the Saljuqids of Rūm, who in the 7th/13th century incorporated it into their border province of Mar'ash. The Mongols ceded it to the Armenian kingdom of Cilicia, which in turn gave it also annexed by the Manlik state, with whose fortunes it was linked until the end of the 8th/14th century. It then came within the sphere of operations of the Dhu Tjghadir Turcomans, was pillaged by Timur, passed again at the end of the 15th century into Manlik control, and in 922/1516 was occupied by the Ottomans together with Syria. From that time on it has had no more than local importance. The town, in which a fortress largely rebuilt by Kā'itbāy is still standing, had a population of 10,500 in 1955.

**Bibliography:** Besni is mentioned by all the chroniclers of the period of the Crusades, in particular by Matthew of Edessa, Michael the Syrian, and Kamāl al-Dīn b. al-'Adīm. The last-mentioned gives a note on it in the geographical section of his *İdğya* (Aya Sofya 3076, f. 313), and likewise 'Izz al-Dīn b. Şhaddād in his *İ'ā'id* (= Ibn al-Şihna, ed. Cheiko, 171). Of the Manlik chroniclers see especially Ibn Kadir, Ibn Hadjar, Makrizi, al-'Ayni, Ibn Taghribardī, Ibn Yās. On the modern period, particularly Ainsworth, *Travels*,

i, 265 and Cuiet, ii, 376; Mukrimin Halli, *Maras Emiri* in *TTEM*, years XIV-XV; G. Caben, *La Syrie du Nord*, 120-121; additional references in Besim Darket, *Besni*, in *IA*, x.v. (CL. CAREN)

#### BETELGEUZE (see NUGGŪM)

#### BETHLEHEM (see BAYT LAHM)

#### BEY (see BEG)

#### BEYATLI, YAHYA KEMAL (see YAHYA KEMAL BEYATLI)

**BEYLİK** (BEGLİK), a term formed by joining the adjectival and relative suffix *bik* to *bey* (*beg*, *beg*) which was an old Turkish title [see BEG]. The word *bey* is said to correspond to the Arabic *amir*, and *beylik* to *imāra*. The term *beylik* thus denotes both the title and post (or function) of a *Bey*, and the territory (domain) under the rule of a *Bey*. Later, by extension, it came to mean also "state, government", and, at the same time, a political and administrative entity sometimes possessing a certain autonomy. When the Ottoman Empire was established, 'Oghmān Bey, the founder of the dynasty, was referred to as *Beş* by the sovereign of the Saljuqid Empire; in the same way, the territories which he had taken from the Byzantine Empire were granted to him as a *beylik*, *imāra*. At the beginning of the 16th century, the other Turkish principalities in Asia Minor (of the *Tuwağ' Malak*) were also generally referred to as *Beylik*. Later, as the Ottoman Empire increased in size, the country was divided into *Sandjak-beylik*s—the most important and fundamental military and administrative unit, and these in turn were grouped, regionally, under the authority of the *beylerbey*s. From the 9th/15th century, these Balkan countries which acknowledged the political and military suzerainty of the Ottoman Empire but enjoyed complete internal autonomy, were referred to as *Beylik*: e.g., *Beylik* of the Danube, *Beylik* of Eflak, *Beylik* of Bogdan, *Beylik* of Erdel. Later still, countries which had obtained some privileges from the Ottoman Empire and had succeeded in achieving a measure of autonomy, were also considered as *Beylik*: e.g., *Beylik* of Ssam (Samos), *Beylik* of Bulgharistan (Bulgaria). This term in turn extended its meaning still further, and began to be used as an adjective to denote places and things belonging to the Government; e.g., *Beylik ardi* (*mirt ardi*), "the lands (domain) of the *Beylik*"; *Beylik bigla*, "the winter quarters of the *Beylik*"; *Beylik fışma*, "the fountain of the *Beylik*"; *Beylik dābir*, "the stable of the *Beylik*"; *Beylik çami* "the ship of the *Beylik*", etc. There are also some Turkish proverbs in which this word occurs, e.g., "A *Beylik* of one day is a *Beylik*" (*Bir günün beyliğı beylihdür*). The name of an official in the central organisation of the Empire was derived from this term: *Beyliğdži* (*Begliğdži*), who was the president of one department of the *Divān-ı Hamāyün* [s.v.].

[M. TAYYİR GÖRKLÖN]

ii. — In North Africa, the term is used in the former Ottoman possessions in the Maghrib, but not in Morocco or in the Sahara, where Turkish administrative influence was never felt. Like the word *mağharra* in Morocco it refers to government and administrative authority at every stage. It may date from the beginning of the Ottoman occupation and the rule of the *beylerbey*s, or possibly from a later period. In this latter case it no doubt commemorates the influence of the local Algerian beys, of Constantine, the Titeri and the west, at least as much as that of the chief Bey in Algiers; he, moreover, was replaced by a *Dey*

from 1671 onwards. Our information is too scanty for us to draw any conclusions.

In Tripolitania, Tunisia and Algeria the regime denoted by the word *beylik* is substantially the same, except that in Tunisia offices of government tended very soon to become hereditary. This was not the case elsewhere.

The forms of government were everywhere Ottoman, and remained unmodified or almost so, while in the majority of cases the words used to denote them were also part of the Ottoman vocabulary. But these institutions did not strike deep roots in the countries of North Africa, and had no acceptance below the provincial level. The central government was in effect entirely Turkish, and the same held for the provincial government in so far as each province was under the authority of a Turkish governor or integrated within the Turkish regime, and all important towns, i.e., garrison towns, were administered by an official appointed by the central or provincial government. The authority of the *beylik* went no further; small ungarrisoned towns, villages and tribes were administered by their own officials, who were recognised by the central or provincial government and served as intermediary agents and points of contact between the *beylik* and the people.

The *beylik* as the central authority inspired a variety of feelings in the people: fear and suspicion, productive of a general ill-will, but also unbounded confidence in times of disaster and personal trouble. The *beylik* at such times, if it so desired, could deputise for Providence.

**Bibliography:** There is no work dealing specifically with this subject, but information on various aspects of the institutions of the *beylik* can be found in several works. The following are cited by way of example:

R. F. Dan, *Histoire de Barbarie et de ses corsaires*, Paris 1637; Ventura de Paradis, *Alger au XVIII<sup>e</sup> siècle*, published by Vagan, Algiers 1898; H. de Grammont, *Histoire d'Alger sous la domination turque*, Paris 1887; Ch. A. Julien, *Histoire de l'Afrique du Nord*, ii, (revised and brought up to date by R. Le Tourneau) Paris 1952.

[R. LE TOURNEAU]

#### BEYOĞURLU (see ISTANBUL)

**BEYŞEHİR** (Beyşehir), now the centre of a *kada* in the province of Konya, lies on the south-eastern shore of a lake (50') bearing the same name. This lake was known to the Ancients as Karalis (a village called Kırılı is still found close to the north-eastern shore). The town of Karaleis in Pamphylia was situated near the lake in ancient times. Beyşehir itself is believed to have been founded in the time of the Saljuqid sultan of Rūm 'Alā' al-Dīn I (616-634/1219-1237). When the Turks overran western Asia Minor in the years around 1300, Beyşehir came into the possession of the Begs of Hamid, who had at various times to defend it against the neighbouring Begs of Karamān. The Ottoman sultan Murād I purchased Beyşehir and certain other towns from Kamāl al-Dīn Husayn, the Beg of Hamid, in 751/1351. After the battle of Ankara (604/1402) Beyşehir fell under the control of Karamān. The Ottomans regained the town in the reign of Sultān Mehmed II (816-824/1453-1481), but their possession of Beyşehir did not become definitive until 847/1443. The present Beyşehir is a small town which had, in 1935, 2600 inhabitants.

**BEZETA** [see DIDO].

**BEZISTÂN** [see KAYSARIYYA].

**BEZOAR** [see BAZAR].

**BEZM-i 'ÂLEM** [see WALIDE SULTÂN].

**BHAKKAR**, a fortress situated on a limestone rock in the middle of the river Indus at 27° 43' N. and 68° 56' E., which is identified with the Sogd of Alexander. The island is connected with Rôhr and Sukkur by a cantilever bridge. With the decline of Arôr, the ancient Hindî capital of Sind, about the middle of 2nd/8th century, when the river Indus changed its course, Bhakkar soon attained the highest strategic importance. The island must have been fortified and garrisoned at a very early date as a certain Abû Turâb, an Arab, who died in 171/787 is reported to have reduced it. At the time of the conquest of Sind by Muhammad b. Qâsim al-Thakafî in 92/710-711 the place was known as Bahârîr. (Abû 'I-Fadl erroneously identifies it with the ancient Arab chieftain of al-Mansûrah). The name Bhakkar appears for the first time when 'Abd al-Kazzâk, waiz of Mahmûd of Ghazna conquered it in 417/1026. Nâsir al-Dîn Kubâdjî, the governor of Uth was besieged in this fort in 614/1227 by the armies of Shams al-Dîn Iltutmîsh and while trying to escape in a boat was drowned in the Indus. In 697/1297 it was invaded by the Mongols who were repulsed by the troops of the governor, Nûrâ al-Dîn, appointed by 'Alâ' al-Dîn. The famous Khwâjî [994/1594-716/1316]. The fort figures frequently during the Sind campaigns of Mub. b. Tughlugh and his nephew Firûz Tughlugh as well as in the later history of Sind. It changed hands several times, being considered the key to the conquest of lower Sind.

During his flight through the desert of Sind, Hamayûn [160] escaped here. Shâh Bîg Argîshûn, a ruler of Thatta, appointed Mir Mahmûd Kolkâtâsh its governor; he held it for fifty years, having been confined in 982/1574 in his appointment by Akbar. The fort was strengthened by the local sayyids, against the impending attack of Dharîdî tribesmen in 973/1567. Soon afterwards it was visited by Shâh Bîg himself; he drove out the sayyids and paraded out the ground into building sites for his chiefs, who plundered bricks from the ruined town of Arôr and some Turkish and Samana buildings in the vicinity of Bhakkar, for constructing their own houses. The fort was the scene of a fierce battle in 962/1554 between Mahmûd Kolkâtâsh and Mirzâ 'Isâ Khân Tarkhân, ruler of Thatta. It was captured by Nûr Muhammad Kalhôrâ in 1149/1736,

from whose descendants it was seized by the Afghans who were dispossessed in their turn by Mir Rustan Khân of Khayvârpûr. It came into British possession in 1859 with the conquest of Sind by Charles Napier.

Near the fort flourished the town of Bhakkar, now known as Purânî (old) Sukkur. In Akbar's time it had luxuriant orchards; in the 11th/17th century it was famous for its sword-blades. The town was peopled mainly by sayyids and was a great seat of learning, especially in the 10th/16th century. Amongst its prominent scholars and scholars were: Mir Ma'sûm Nâni [c. 15] author of the *Ta'rih-i Ma'sûmî*, a history of Sind (Poona 1938); Shâhîkh Farîd, who compiled the *Dihâbir al-Khawârid*, an excellent biographical dictionary still in MS, and Kâdî Zahir al-Din, grammarian, lexicist and philologist.

(A. S. BAZMEE ANSARI)

**BHARATPŪR**, formerly a princely State in India, now forming a part of Râjast'han, lying between 26° 43' and 27° 50' N. and 76° 35' and 77° 40' E. with an area of 1,982 sq. miles. The chief city is Bharatpûr, situated in 27° 23' N. and 77° 30' E., 34 miles from Agra, with a population of 37,321 in 1951. Paharsar, 14 miles from Bharatpûr, was first conquered in the 5th/11th century by the troops of Mahmûd of Ghazna, under the Sayyid brothers, Jalâl al-Dîn and 'Alî al-Dîn, who claimed descent from Imâm Dû'âfar al-Sâdîk, in about 3 hours, as the local tradition goes, whence the place derives its name *pahar* (1 hrs.) see (conquered). At the close of the 6th/12th century it passed into the hands of Mu'izz al-Dîn b. Sâm also known as Shâhîh al-Dîn Muhammad Ghôrî, and remained under the rule of different dynasties till it was conquered by Bâbur, who had sent an uli-

matum, in verse, to the Mir of Bayânâ, 34 miles from Bharatpûr, beginning *bd Tark satnâk malûn ay Mir-i Bayânâ*. It remained thereafter under the Mughals. An attempt by Brijî, the founder of the State of Bharatpûr, at independence towards the close of the reign of Aurangzib was thwarted by the Imperial army killing Brijî in action. During the reign of Farrûkhshiyar (1125-31/1713-18) Çârman Dîjât ravaged the area and closed the roads to Delhi and Agra. In 1132/1718 a strong expeditionary force under Sawâ'î Dîjân crushed the chief of Dîjârpûr, was sent to punish him but the Sayyid king-makers who were opposed to Muhammad Shâh, king of Delhi, made peace with the Dîjâts directly. In 1135/1722 Badan Singh, the successor of Çârman, was proclaimed full Râjâ of Bharatpûr on the condition of paying tribute to the Emperor. In 1167/1753 his son, Shîrâjî Mal, gained so much strength as to attack the Imperial capital and indulge in pillage and plunder. Shâh 'Abd al-'Azîz al-Dihawî [c. 18] has, in several of his letters, lamented the atrocities committed by the Dîjâts on the residents of Delhi.

The present city and the mud-fort of Bharatpûr are said to have been founded about 1140/1723. The British, under Lord Lake, made an unsuccessful attack on this fort in 1220/1805; it was, however, captured by Lord Combermere in 1242/1826.

(A. S. BAZMEE ANSARI)

**BHAROC**, A district in Gujarat (q.v.) in the present Bombay State, India, of about 1450 sq. mi. and with a population of some 300,000; the Islamic population was about 20% of the total prior to partition in 1947, but much of this has since moved to Sind in Pakistan. The principal class of Muslims was Bohârî (see BOKAROC). Bharoc is also the name of the principal town of that district, Lat. 22° 42' N., Long. 72° 2' E. It is first known as a town within the Mawra domains, and later (c. 130 A.D.) to have been in the hands of Parthian Shâhs; from the Middle Indian form *bharuaccha-* of the Sanskrit *bharguachra-* it was known to the Greeks as βαργουαχα, a seaport from which the Red Sea commerce was carried on (Ptolemy, *Geog.* VII, I, 63; VIII, xxvi, 12), and as the head of an important trade-route into India (*Periplus*, II 47-8). Held by Râjapûts in Gujarat and Gûjars, probably as tributaries of the Çâlukyas, it suffered Arab invasions in 15/636, 99/777, and 154/770. It was held by Râjâkrakutas in the 3rd/9th and 4th/10th centuries until reconquered by the Çâlukyas; from them it was taken in 698/1298 by Ulugh Khân, brother of the Sultan 'Alâ' al-Dîn Khiljî, by whom Hindu and Dîjân temples were destroyed (*Beegs, Persia*, I, 327). It was used as a summer residence by governors representing the Delhi sultans until 798/1396, when Muhammad Zâfar Khân (governor from 793/1391) assumed his independence. From then it continued subject to the Ahmad Shâhî kings (q.v.) until annexed by Akbar in 980/1572. In 1149/1736 'Abd Allâh Beg received from Nîrâm al-Mulk (independent in the Deccan from 1135/1722, who

previously as governor of Gujârât had made Bharoc part of his private estate) the title of Nîk 'Alam Khân, and was the founder of the line of Nawwâbs of Bharoc. In 1186/1772 Bharoc was captured by the British—whence its Anglo-Indian name of Beroch.

*Buildings*.—The old fortifications were rebuilt by Bahâdur Shâh (1512-43/1526-57). In 1071/1660 they were partially razed by Aurangzib, but rebuilt on his orders in 1097/1685 as a protection against the Marathas. They are now in a very dilapidated condition. The Dîjânî Masjid, c. 701/1302, is of great significance in the development of Islamic architecture in Gujârât; the earliest buildings at Patân were mere adaptations of existing Hindû and Dîjân structures, whereas here an original and conventionally planned mosque is composed of former temple materials, the enclosure walls, of temple stones specially recut, being thus the earliest examples of independent Islamic masonry in Gujârât. The *hauz* is an open colonnade, the three compartments of which are three temple *mandapas* re-erected intact, except for the removal of the Hindû animal figures, with 48 elaborately carved pillars; the three *mubâraks* are unadorned temple niches with pointed arches added under the lintels. The *hauz* road, with three large and 10 small domes, houses elaborate coffered ceilings removed from temples; the designs of these, though Hindû, were conventional in character, and were perpetuated in later Gujârât Islamic buildings. It appears that the whole production was the work of local Hindû artisans working under the direction of Muslim overseers.

*Bibliography*.—For the history see article GUJARAT; *Bombay Gazetteer*, II, 1877, 337-69. For a full description of the Dîjânî Masjid, J. Burgess, *On the Muhammadan architecture of Bharuch . . . in Gujarat*, ASW I VI (= ASI, NIS XXIII), London 1896. (J. BURGESS-PACK)

**BHATTI**, the Pandjâb form of the Râjput word Bhatti, the name of a widely distributed Râjput tribe associated with the area stretching from Jaisalmer to the western tract of the Pandjâb between Fâtahâbâd and Bhatnâr. Large numbers of those settled in the Pandjâb accepted Islam. According to one of their traditions the Jâdous of Jaisalmer were driven from Zabulistân to the Pandjâb and Râjputânâ, the branch settling in Râjputânâ being named Bhatti. The references in the *Cal'-nama* to the Bhatti king of Ramal in the Thar desert confirm the legends preserved in Tod's *Annals and antiquities of Rajast'han*, . . . , Madras 1871. They are also mentioned in 'ARF's *Ta'rih-i Firâz Shâhî* (Ib. India, 36-39). The widespread nature of their settlements is recorded in the *Âf'n* where Abû 'I-Fadl reserves the form Bhattî for those settled in Sîrind, Multân and Pandjâb.

*Bibliography*: MS. Eur. D. 164, India Office Library, *History of the Râthors and Bhattis of Râjputânâ*. (C. COLLEN DAVIES)

**BHATTINDA**, head-quarters of the Govindgarh tahsil of the former Patiala State, now merged with the Pandjâb State of the Indian Union, situated in 30° 13' N. and 75° E. Population (1951) was 24,991. An ancient town, seat of the Bhattîyâ or Bhattî Râjapûts, it commanded the strategic routes from Multân to Râjast'han and the Gangetic valley, including such historic places as Pînapat and further on Indraprâ (Delhi), for invaders from the north-west of the Indian sub-continent. In ancient times it stood on an affluent of the Ghaggar rivulet, which still flows past Anhâlâ [q.v.] and the surrounding

country was practically uninhabited. Known as Vikramgarh in the pre-Islamic period, it figures in early Indo-Muslim chronicles like the *Tabahat-i-Nasiri* and the *Taj al-Ma'asir* of Hasan Nizami (Panjab Univ. Lib. MS.) as Tabarhinda (تَبَرْهِنْدَا), a corrupt form of the correct name Bhattinda (بھٹینڈا) due apparently to the transposition of the dots of the letters *bā* and *hā*. Murtadā al-Zahidī is nearer the truth when he says that (تَبَرْهِنْدَا) *al-Bitranda* (Taj al-'Arāṣ, ix, 212) is "a city in India". Bhattinda is composed of the words *Bhatti* and *rinda* (a jungle, a haunt), meaning a place which "abounded" in Bhattis, as Sirhind, is of *sh* (a perceptive) and *rind* (a jungle), again corrupted by Muslim historians of non-Indian origin into Sirhind. This place-name is generally found written as بھٹینڈا in all earlier Persian chronicles and hagiographical works (e.g., *Bābur-nāma*, Eng. translation by A. S. Beveridge, i, 383). In the *Tabahat-i-Nasiri* (ed. 'Abd al-Hayy Habībī, Quetta 1949, i, 537) Bhattinda is wrongly called Sirhind because no hills exist in the vicinity of this town. The existence of a dense jungle, thirty miles from Bhattinda, in the direction of Sirhind, is, however, proved by a statement in the *Malikāt-i-Timuri* (Elliot and Dowson, *op. cit.*, ii, 427). This jungle served as the favourite leopard hunting-ground for Akbar (*Ā'in-i Akbarī*, Eng. transl. Blochmann, i, 286). As to the predominance of Bhattis in and around Bhattinda, there is more than ample evidence (*Imp. Gazetteer of India*, n. ed. viii, 91). Cunningham's etymology of the name Bhattinda (see *ibid.*), based on mere conjecture is erroneous and wide of the mark.

It was conquered by Mahmūd of Ghazna in 393/1045 when the Rājā of Bhattinda (Bahāṭīya), Bīdjay Rāy, unable to resist the besiegers, fled from the fort, and committed suicide. There has been some controversy as to the identification of Bahāṭīya (Bhattiyya) mentioned by al-'Uṭbī (*Ta'rikh-i Yamini*, Lahore 1306/1882, 200 ff.). Muhammad Nizām positively asserts (*The Life and Times of Sultan Mahmūd of Ghazna*, Cambridge 1911, 107-209) that it was Bhattinda and no other town. But a little-known place, called Hāṭiyya, still exists in the neighbourhood of Raiwālpindī, which also answers the description, given by al-'Uṭbī, to some extent. Unless, however, more conclusive evidence is forthcoming Muhammad Nizām's view must prevail. Towns of Sultan Mahmūd of Ghazna, Cambridge 1911, 199-202 and index; A. Cunningham, *Archaeological Survey of India* (Annual Reports), xxiii, 2-8; *Journal of the Punjab Historical Society*, ii, 109, iii, 35; *Cambridge History of India*, iii, 14; *Akbar-nāma* (Bib. Ind. English transl.), ii, 166; *Ā'in-i Akbarī* (Eng. transl. by Jarrett), Calcutta 1851, ii, 295, 300-1; Elliot and Dowson, ii, 438-40; Article *KATAS* in *PA Supplement*, London *al-Masūdī*, Haydarabad 1330, ii, 450. (A. S. BAZMĀZ AVASTHI)

**BHITTAI**, Sultān 'Abd al-Lāṭif (1689-1752), a Sindhi poet belonging to a priestly family of Mātari Sayyids. He lived for a large part of his life at Bhit ("sandhill"), a small hamlet near Hala in the district of Haydarābād in Sindh. He is the national poet of Sind. His poetry is soft in nature, as the poet, though not a man of great learning or education, was deeply impressed by the mystical thought of Djalāl al-Dīn Rūmī, whose influence is evident in many of his poems. These poems were gathered together after his death by his followers and made into a collection which is called the *Risalo*. They are

however, killed by the Hindus while on their way to Delhi from Bhattinda. The fort was captured by Nāsir al-Dīn Mahmūd in 643/1253 and Malik Shāh Khān was appointed its commandant.

Very little is heard of the town thereafter. It must have decayed and lost its importance, although its fort has, throughout, been famous both for strength and impregnability. Strangely enough it finds no mention in the *Memoirs of Bābur*. Akbar, as already stated, used to hunt leopards in the *pargana* of Bhattinda. His guardian Bayram Khān (p. 95), after his disgrace, lodged his family in this fort before proceeding to Djalālūdīn (p. 95), where, in a decisive action with the Imperial troops, he suffered an ignominious defeat. It then completely fades out of history and only reappears in 1168/1754 when it was conquered by Āla Singh, the Patilāli chieftain, whose descendants held it till the merger of their territory with the Indian Union in 1956. The modern fort is 128 ft. high, with 36 bastions. It dominates the town, a thriving centre of trade and commerce, and is visible for several miles around. In the time of Sultān Mahmūd, it had a deep and wide moat, which that great conqueror ordered to be filled up with stones and trees before storming the fort. The ditch still exists partly filled up with the refuse and debris of the town, which is dumped here. The fort is now mouldering rapidly and some cracks have also appeared in the arches of the main gate. Its two massive minarets collapsed in 1958.

Bābā Hādījī Ratan (see *RATAN*), said to have been born in the pre-Islamic era and to have later visited the Prophet, was a native of this place.

**BHITTAI**, Sultān 'Abd al-Lāṭif (1689-1752), a Sindhi poet belonging to a priestly family of Mātari Sayyids. He lived for a large part of his life at Bhit ("sandhill"), a small hamlet near Hala in the district of Haydarābād in Sindh. He is the national poet of Sind. His poetry is soft in nature, as the poet, though not a man of great learning or education, was deeply impressed by the mystical thought of Djalāl al-Dīn Rūmī, whose influence is evident in many of his poems. These poems were gathered together after his death by his followers and made into a collection which is called the *Risalo*. They are

written in a pure form of eighteenth century Sindhi and are remarkable for the manner in which philosophic and religiousness is made of the folk tales of the Sind countryside. The poems deal with the longings of unrequited love and the need for trust in the power, wisdom and compassion of Allah. Their deeply mystical character has endeared them to the simple rural folk of Sind. It is noteworthy that their appeal has been as much to the Hindus of Sind as to the Muslims. The reason is perhaps due to the fact that the bulk of the indigenous Sindhi population is Hindu in origin, as many of the personal names testify, and the poet himself was deeply interested in the mystical contemplation of fakhs, *sanyasis* and *yogis*, which in turn found an echo in the Sikh religion followed by most of the caste Hindus living in Sind till the partition of India in 1947 resulted in their precipitate flight therefrom. The poems of the *Risalo* which are lyrical in type are sung to well-known Indian music and many of them, such as the *Sur Asa* and the *Sur Bilawal*, proclaim a sublime form of devotion. The folk stories on the other hand make direct appeal to the childlike simplicity common to unsophisticated people. The love tales of Hussai and Premaban, of Sahib and Mohar, and of Lalan and Channar, are the cradles of Sindhi children today. A vast literature in Sindhi on the poet and his message has been evoked by the poet's achievement and the *rauda* of Shāh 'Abd al-Lāṭif is the scene of regular pilgrimages of devotees who listen today to the recitation and singing of his verses. There have been learned studies of Shāh 'Abd al-Lāṭif's life and work by three Sindhi scholars of distinction, namely the late Shams al-'Ulamā' Mirzā Kalich Beg, the late Professor H. M. Gurbuxani and the late Shams al-'Ulamā' U. M. Daudpota, whose works may be consulted by those interested. (H. T. SORLEY)

**BHOPAL**, formerly a princely State in India, lying between 22° 29' and 25° 54' N. and 76° 25' and 78° 51' E. with an area of 6,898 sq. miles, with a population of 8,18,474 in 1951. It was the second most important Muslim State, next to Haydarābād (p. 2).

Bhopal was founded by a military adventurer, Dost Muhammad Khān, a native of Tirāh (in the tribal area of present-day Pakistan) who belonged to the Mirzā' Khel tribe of the Afridi Pathans. In 1120/1708 he went to Delhi, at the age of 14, in search of employment, and succeeded in obtaining from Bahadur Shāh I (p. 3), emperor of Delhi, the lease of *Bērasia pargana*, partly in recognition of his military services and partly through his own efforts. A man of exceptional courage and outstanding military skill, he soon extended his sway over a large area and founded the town of Bhopal with its citadel, which he named Fatgah. Taking advantage of the enfeeblement of the central Mughal authority, he broke loose and assumed the title of Nawab. He died in 1153/1740 and was succeeded by his minor son Muhammad Khān, who was soon afterwards ousted by Yār Muhammad Khān, a natural son of Dost Muhammad Khān. The latter died in 1168/1754 without ever being formally installed Nawab and was succeeded by Fayd Muhammad Khān, a pious man and almost a recluse, whose weakness as a ruler, combined with the political ebullience of his Hindū ministers, resulted in half of the Bhopal territory being lost to the Peshwā, Bāgī Rāo I. On his death in 1192/1777 he was succeeded by his brother, Hayāt Muhammad Khān who, strangely enough, adopted four Hindū boys as his *khāns*, two of whom, Fālid Khān and

Chōtē Khān, later became ministers. Rivalry between Wazīr Muhammad Khān, a cousin of the ruler, and Murtad Muhammad Khān, his minister, was responsible for surrendering the fort of Fatgah to Amir Khān Pindiri (the founder of the former Tōnk (p. 2) State (who was then in the service of the Sindhi of Gwalior. Wazīr Muhammad Khān had to leave Bhopal but on Sindhi's repairing to Gwalior, disturbances had broken out, he returned with a sizeable force and expelled the Marathas, under Amir Khān, from the fort and after sometime also drove out the Pindiris. In 1223/1807 Hayāt Muhammad died and Wazīr Muhammad, who had proved his capability as a ruler, succeeded him to the principality, setting aside the claim of Ghawth Muhammad Khān, son of the deceased ruler. In 1229/1813 the combined forces of Nāgpur and Gwalior marched on Bhopal, which resisted the invaders heroically for eight long months and the unsuccessful siege had to be lifted.

On the death of Wazīr Muhammad Khān in 1232/1816, his son and the son-in-law of Ghawth Muhammad Khān, Nadir Muhammad, succeeded him. He entered into a treaty with the British, the obligations of which he faithfully observed. This treaty guaranteed to him and his descendants the territories of Bhopal, while the British were assured the services of native troops for exterminating the Pindiris, who were then over-running Central India and were no more than organised bandits. Nadir Muhammad was married to Kudsīyya Bēgām, a daughter of Ghawth Muhammad, who assumed the reins of power after the death of her husband in 1261/1845, as regent on behalf of her minor daughter, Sikandar Bēgām, whose formal accession took place 25 years later in 1261/1845. From this lady began the long and illustrious chain of the Bēgāms of Bhopal, which ended up with the voluntary abdication of Sultān Djalāl Bēgām in 1345/1926, in favour of her son, Haimū Allāh Khān (the last feudatory ruler of Bhopal) and her subsequent death in 1348/1930.

Sikandar Bēgām, owing to the delaying tactics of her mother, who wanted to retain power in her own hands, was married very late in 1251/1835 to Djalāludīn Muhammad Khān, a nephew of Nadir Muhammad Khān. Kudsīyya Bēgām, still reluctant to part with power, instigated a civil war in which Nadir Muhammad was defeated by the combined troops of the Dowager Bēgām and his own wife. In 1253/1837 the authorities of the East India Company interposed and restored the administration of the State to Djalāludīn Muhammad Khān. Kudsīyya Bēgām, baulked of her wishes, had to retire on pension. She lived long thereafter but was scrupulously kept out of the picture by her successors, Sikandar Bēgām and her daughter Shāhidulāh Bēgām, whose husband Siddik Hasan Khān, for personal and public reasons, did not allow the old Bēgām even to attend social functions held by the ruling family. She died in 1299/1881 and held a *diqdar* of Rs. 498,682 since her retirement from political life until her death. The rule of Sikandar Bēgām is remarkable for a number of military reforms which forged the irregular Bhopal troops into a fine well-knit force. The State remained loyal to the suzerain British power during the upheaval of 1857 in spite of the refractory conduct of a few of the nobles. She also introduced agricultural, economic, administrative and legal reforms. Although the head of a Muslim State, she was bold enough to do away with the *pardā* and appear in public attired in military accoutrements. At the same time

she was of a religious bent of mind and performed the Hajj in 1280/1863-4. After a rule of 25 years, she died in 1285/1868 and was succeeded by her minor daughter Shāhjahān Bēgam, under the regency of Fawā'id al-Muhammad Khān, an uncle of Sikandar Bēgam. In 1285/1847 he had to resign, chiefly because of the machinations of Kudsīyā Bēgam, and Sikandar Bēgam was appointed regent. In 1272/1855 Shāhjahān Bēgam married Bahāddār Bakhsh Muhammad Khān, who did not belong to the ruling house. He, therefore, as subsequently all the husbands of Bēghams of Bhōpāl, enjoyed only the status of a Nawab-and-consort and had nothing effective to do with the administration of the State, the entire power having been delegated to Sikandar Bēgam, a woman jealous of her status and dignity. She strongly objected to the recognition of her minor daughter as ruler and could only be appeased by Shāhjahān Bēgam's voluntarily giving up all claim to rule during the life-time of her mother; an act of filial attachment rather than of expediency or political sagacity.

In 1285/1868, her husband having died a year earlier, Shāhjahān Bēgam was formally installed as the ruler. Three years later she remarried, taking a *maridat* of Kanawād, Sayyid Siddik Hasan [g.c.], once a petty official of the State, as her husband. Through the efforts of the Bēgam the honorary title of Nawab and other insignia of office were conferred on Siddik Hasan Khān as the consort of the ruler. She had discarded the *pardah* after the death of her first husband but again retired on her marriage with the *maridat*, whose learning and ability always over-awed her. Her second marriage met with a mixed reception, the entire ruling family strongly disapproving it. The heir-apparent Sultān Dīshān Bēgam, was full of bitterness and her memoirs depict Siddik Hasan Khān as an unscrupulous upstart, a tyrant who robbed her and her mother of all happiness, threatening the latter with divorce, a great stigma for a lady of high birth, if she went against his wishes. She also holds him responsible for the estrangement between her and her mother and the grand old lady Kudsīyā Bēgam. His disgrace in 1303/1885, due to his objectionable writings, came as a shock to the Bēgam but she had to bow before the decision of the British Government. Siddik Hasan Khān died in 1308/1890, to the great relief of Sultān Dīshān Bēgam and others, but the relations between the ruler and the heir-apparent showed no improvement. The real cause, it appears, of the estrangement between mother and daughter was the latter's husband, Ahmad 'Alī Khān Sultān Dulhā, with whom the ruler, for unknown reasons, was never entirely happy, although it was she who had selected him as her son-in-law out of some twelve suitors.

In 1310/1891 Shāhjahān Bēgam died of cancer and, in accordance with the *sanad* issued in 1270/1862 by Lord Canning, Governor-General and Viceroy of India, was succeeded by Sultān Dīshān Bēgam, her only child by her first husband. She had no issue from Siddik Hasan Khān. Sultān Dīshān, during 25 years of rule, personally directed the administration of the State and carried out a number of reforms. She paid two visits to England, first in 1320/1901 to take part in the coronation ceremonies of King George V (1911-1936), and then in 1344/1925 to get the succession of her youngest and surviving son, al-Hādīdī Hamid Allāh Khān, recognised by the British Government. Her two other sons, Muhammad

Nasir Allāh Khān (b. 1293/1876) and Hāfīz 'Ubayd Allāh Khān (b. 1294/1877) both died, in quick succession, in 1343/1924. It was suspected that they had been poisoned, but the political sagacity of al-Sultān Dīshān averted a crisis. The late Aghā Khān also played an important part in securing the rulership of Bhōpāl for Hamid Allāh Khān, who thus superseded the sons of his two dead brothers. Born in 1312/1894 Hamid Allāh Khān was educated at 'Aligarh and took an active part in politics insouciant in the native princes. On two occasions (1911-2, 1944-7) he was elected Chancellor of the Chamber of Princes and in that capacity rendered yeoman service to the cause of his brother-princes. In 1366/1946 he played a memorable rôle in Indian politics, acting as an intermediary between the Indian National Congress and the Muslim League, led by Muhammad 'Ali Jinnah [g.c.], when he was able to secure a *carte blanche* from the Congress in favour of the Muslim League. This was, however, later repudiated by M. K. Gandhi, the undisputed leader of the Congress.

On the lapse of British paramountcy in 1947, when India and Pakistan became two independent States, Bhōpāl was first treated as a centrally-administered area but in 1949 was merged with the Indian Union. It has since elected a legislature and a ministry with a Chief Commissioner as the constitutional head of the administration. The ex-Nawab, now no more than an ordinary citizen, has since been pensioned off and is entitled to a privy purse of 1,200,000 rupees a year of which 100,000 rupees was allocated to the heir-apparent, Gawāhr-i Taqī 'Abdulla Sultān who has since migrated to Pakistan and settled permanently there.

**Bibliography:** Nawab Shāhjahān Bēgam "Shirin", *Tadq al-Habli Tarikh Riyasat-i Bhōpāl*, Cawnpore 1289-90/1873 (also Urdu version, Cawnpore 1873; Eng. trans. by H. C. **BHŌPĀL** (CITY). Capital of the Indian province of Madhya Pradesh, situated in 25° 16' N. and 77° 25' E. on a sandstone ridge and on the edge of two

beautiful lakes, the Pulghat-Pul Talab and the Barā Talab, famed throughout India for natural charm and picturesque surroundings, was founded by Dīshā Muhammad Khān, an Orakzār Afridī in 1747-1748 when he built the Pathgarh fort, named after his Indian wife, Fath Bāf, and connected it by a wall to the old dilapidated fort, ascribed by tradition to the legendary Rājā Bhōjī, after whom a quarter of the city is still called Bhōjipura. The population in 1937 was 120,333. The city is divided into two parts, the *Sikār-i Bādar*, enclosed by a wall built by Dīshā Muhammad, and the modern quarters and suburbs, Dīshāngrahābād and Ahmadābād, added by the succeeding rulers to perpetuate the memory of Dīshāngrahābād Muhammad Khān, husband of Sikandar Bēgam, and of Ahmad 'Alī Khān, husband of Sultān Dīshān Bēgam, rulers of Bhōpāl. The city was made the capital of the State by Nawab Fayd Muhammad Khān (1108/1754-1191/1777) whose predecessors' seat of Government was Idlīmānagar (23° 25' N. and 77° 25' E.).

In 1227/1812-3 the town, outside the wall, was devastated by the combined forces of Nāgpur and Gwalior, which had attacked Bhōpāl. Nadir Muhammad Khān (1233/1816-1234/1818), during his short rule began to restore the town, which soon was continued for decades thereafter. Many civic amenities, like roads and street-lighting, were introduced by Sikandar Bēgam followed by Shāhjahān and Sultān Dīshān Bēgams; the former particularly added some grand buildings of which the Taj Mahal palace and the Taj al-Masjid deserve mention.

The two lakes, on whose banks a string of palaces has been raised by almost all the rulers, are connected by an aqueduct and provide drinking water to the citizens. Above them rises the city, tier on tier of irregular houses, with spacious gardens here and there, dominated by the congregational mosque of Kudsīyā Bēgam, built of purple-red sandstone, with high minarets, from which the *madrās* [g.c.] was beaten during Ramadan both at the *sabr* and *shar* times.

**Bibliography:** See article Bhōpāl and *Imp. Gazetteer of India*, Oxford 1908, viii 142-5. (A. S. BAZMEE ANSARI)

**BFA** [see KASTLA].

**BIBAN**, the gates: passes across a chain of the Tellian Atlas Mountains—parallel to the Djurdjura, south of the depression of the Wādī Sahel. The French have retained the Arabic name for these passes, *Dammē kapa*, Iron Gates. The road and railway track from Algiers to Constantine both pass through the Great Gate, al-Bāh al-Kabir, hollowed out by the Wādī Chebba. The Little Gate, al-Bāh al-Saghir, 3.5 km. to the east, is crossed by the Wādī Buktān. It is the narrower of the two. These "gates", which were not included in the network of Roman roads that century onwards by Turkish troops travelling between Algiers and Constantine; but these troops were forced to pay the rough local inhabitants to let them pass through the area unopposed. On October 26th, 1839, a French column of 8000 men, commanded by Marshal Valée, Governor-general of Algeria, and at the head of a *hachaga* of 4000 men, crossed the Pass of the Little Gate without hindrance, for the mountain tribesmen of the locality had obtained the customary tribute through the good offices of Mokranī, *hachaga* of Medjijana, won over to the French cause.

This expedition, known as that of the Iron Gates,

was acclaimed as a brilliant feat of arms, but it led to the final rupture between the French and 'Abd al-Kadir who regarded it as a violation of the Treaty of Tafna.

Geographers have extended the name Bibān to the whole of the antinatal chain of mountains which cuts across the Iron Gates and which stretches at a height of 1000 to over 1400 metres from Aumale to the Gourgeon (Lafayette), separating the depression of the Wādī Sahel and the tributary valleys of the lower Bou Sellam from the structurally complex mountains of the Ouenougha, the Mrita and the Metmen and of the basin of the Bordj bon Arreridj. These mountains with their limestone, marl and schistose clay soil are not very fertile. The Bibān chain is partly wooded with Aleppo pines. Populated by Arab tribes in the west, Kabyle Berbers in the centre, it forms, in the east, the southern boundary of the Kabyle Berber dialect area (see 'ABD AL-ĀDİR, ALGERIA, ATLAS, KABYLIA).

(G. VYER-[J. DESPOIS])

**BIBI**, a word of East Turkish origin, with the meaning of "little old mother", "grandmother", "woman of high rank", "lady". It is noted, with the sense of "woman of consequence", "lady", in the Ottoman-Turkish dictionary *Lughat-i Delhizli*, composed in 988/1580-1581. Bibi also means, in Anatolian Turkish, "paternal aunt". Taken over into Persian at an early date, with the sense of "woman of the house", "lady", the word can be found in a verse of Anwarī (14th cent. A.D.) cited in the *Farkhang-i Nāyirī*. It was used in Khurāsān during the 12th century as a title for women of distinction, as in the case of the mother of the author who wrote the history of the Saljuqs in Asia Minor, al-Husayn b. Muhammad b. 'Alī al-Dī'ārī al-Rughāfī, better known under the name Ibn Bibi [g.c.] al-Munawwidjāna (son of the distinguished lady, the woman astrologer). One of the two wives lady of Shuykh Saif (cf. Saif al-Dīn) was called Bibi Fātima. The mausoleum, situated near Tehrān, of the daughter of the last Sāsānid, Yazdgerd III, is known under the name Bibi Shahrābād.

**Bibliography:** Shuykh Sulaymān Bughārī, *Lughat-i Delhizli-yi Turk-i 'Oṭmānī*, Istanbul 1298, 88; *Tamhlaye Tarasma Sözlüğü*, Istanbul 1934, x, 90; *Tarasma Dergisi*, Istanbul 1934, ii, 909; *Turkhan-i Kāfī*, s.v. H. W. Duda, *Die Seltzshuhengeichte des Ibn Bibi*, Copenhagen 1959, 2; Browne, i, 330 and iv, 42; al-Yā'qubī, ii, 293. (H. W. DUDA)

**BIBLE** [see TAWRAT, ZANŪB, IḤḤIL].

**BIBLIOGRAPHY**. In the present article the word is used in the sense of a systematically arranged list of books, compiled for the benefit of those who need to know what has been written on a particular subject.

The outstanding achievement in Islamic bibliography to appear before the adoption of printing in Islamic territories is the *Fihrist*. Its author, Ibn al-Nadīm (g.c.), a bookseller (*ṣāhib al-kitāb*) in Bagdad, compiled the work in 379/987-8 in the form of a bibliographical history of literature, arranged in ten books, the first six being concerned with the "Islamic writings" (Kutub, grammar, history and belles-lettres, poetry, scholastic philosophy, and law), the remaining four with philosophy and science, legends and fables, sects and creeds, and alchemy. In each book there is to be found an account of the rise and development of the study of the subject dealt with, a list of all available writings on it and bibliographical details of their authors, from the earliest times.

The other great monument of Islamic bibliography is the *Kaṭiḡ al-Zawā'ir* (ed. al-Kutub wa'l-Ḥadith, I, 1931), a work for which the Ottoman polyhistor, Ḥajjījī Khāfī, spent some twenty years collecting materials. The first volume was completed in 1064/1653-4, some 650 years after the *Fihrist*. After an introduction relating at great length the nature, value, divisions and history of the various sciences, the author lists in one alphabetical sequence the titles of all the works written in Arabic, Persian and Turkish which he had personally seen or of which he knew the title. For each work he gives details of author, date of compilation, particulars of its division into sections and chapters, and the various commentaries, glosses, refutations and criticisms that the work has attracted to itself; he gives *isnads* of all works seen by him in order to facilitate the identification of unknown works. Several supplements to the work were compiled by his successors, the latest by Bagdath Ismā'īl Pasha (d. 1920) containing some 18,000 titles.

Little needs to be said about the remaining bibliographical works which have survived. Ibn Khayr al-Ishbīlī (A.H. 502-572, [c. 6.5]), who spent the greater part of his life as a peripatetic student in Andalusia, compiled a *Fihrist* (ed. Codera and Ribera, *BAH* IX, X, Saragossa 1894) in which he enumerates the titles of some 1400 books in Arabic of both Spanish and Oriental origin which he had read or heard, with chains of transmission going back to their original authors. Lists of works of individual writers exist, such as those for Rāzī (compiled by al-Bīrūnī, ed. by P. Kraus, Paris 1936), Galen translations (by Husayn b. Ishāq, ed. Bergsträsser, Leipzig 1925, and 1932) and Suyūṭī's autobiographical (Brockelmann II 145; S II 179). The *Shi'is* have been assiduous in the compilation of bibliographies of writings of their own adherents; the earliest, by Muḥammad b. al-Ḥasan al-Tūsī (d. A.H. 460), has been edited by Sprenger, *ʿAbd al-Ḥakīm*, and Ghāfir al-Kāfir for the Bibliotheca Indica. In the preface to this edition three similar works on bibliography are described. More recently, *Idjāz* Husayn's (A.H. 1240-1286) *Kaṭiḡ al-Ḥudūd wa'l-ʿAsfār* (ed. al-Kutub wa'l-Ḥadith, I, 1931) contains notices of 3414 *Shi'is* books arranged alphabetically, and the *al-Ḥārūf al-Tāyīn al-Shi'a* of Aḡā Burzur al-Tāyīnī (1936-), in progress has already run to ten volumes.

The publications of Western scholars and students of Islam were recorded for the first time by Schnurrer, the second edition of whose *Bibliotheca Arabica* published in 1811 lists in an arrangement by subject the printed works on the subject from the earliest times until the year 1810 with a chronological index. Zenker's *Bibliotheca Orientalis* (Leipzig 1840; 2nd ed., 1846, 1861) which purported to give the titles of all Arabic, Persian and Turkish books from the invention of printing, is disappointing. Chauvin continued the work of Schnurrer in a much more expert fashion, providing incidentally an author index to the *Bibliotheca Arabica*. Of his *Bibliographie des ouvrages arabes ou relatifs aux Arabes publiés dans l'Europe chrétienne de 1810 à 1885* twelve volumes in all were published during the years 1892-1922; the materials for the remaining part of this work are still preserved in manuscript in the library of the University of Liège. It was his intention to bridge the gap between Schnurrer and the *Orientalische Bibliographie* which began publication in 1887 and provided a most adequate record of all publications in the Islamic field, as well as in all

other branches of Oriental studies, until 1911.

Had Chauvin's work been published in its entirety there would now be in existence a substantially complete record of all Western publications on Islamic subjects from the beginnings down to 1911 readily to hand in the three bibliographies, Schnurrer, Chauvin, *Orientalische Bibliographie*. The ever-increasing volume of work done on Islamic studies and consequent publication since that date made it even more difficult to comprehend the total of publications over a period within the confines of a single work. For publications since 1911, therefore, the scholar must make recourse to a large number of bibliographies of all kinds which cannot here be listed in detail. (Pannmüller in his *Handbuch der Islamwissenschaft* (Berlin and Leipzig 1923) provided a useful introduction and guide to the literature of the subject, but had no intention of compiling a complete Islamic bibliography). The principal periodicals in the field have striven to cope with the problem: it is only necessary to mention the *Kritische Bibliographie* published in *Der Islam* at intervals from 1913 to 1933 and *Abriss der Islamwissenschaft* (1937), has been a regular feature of the *Revue des études islamiques*. In *Index Islamicus* (Cambridge 1938), Pearson has attempted to list the periodical and *Festschrift* articles of the fifty years from 1906 to 1955.

The Ibn al-Nadīm-Ḥajjījī Khāfī tradition of bibliographical literary histories has been carried on in our own times in the monumental works of Brockelmann and Storey on Arabic and Persian literature respectively. Each of these writers gives, in addition to biographical data, a list as complete as it is possible to make of surviving manuscripts, cumulating the printed catalogues of collections in all libraries, as well as notes on the principal editions, translations and works of history or criticism of the individual writers. Brockelmann handles his material on a chronological basis, Storey arranges his by subject; both are quite indispensable for all students of these literatures, as well as to all who have occasion to catalogue Arabic and Persian books and manuscripts. A similar work with more limited scope was compiled by Babinger, *Geschichtsschreiber der Osmanen* (Leipzig 1927), Christian and Jewish literature in Arabic form the subject of separate treatments by G. Graf, *Gesch. d. christlichen arab. Lit.*, 5 vols., Vatican City 1944-53, and M. Steinschneider, *Arab. Lit. der Juden*, Frankfurt 1902.

In recent years Islamic countries themselves have been making great contributions to their bibliography. In 1918 Yūsuf Ḥayy Sarāḥ published his *Muḥḍar al-Maḥḍar al-ʿArabīyya* (ed. al-Kutub wa'l-Ḥadith, I, 1931) which purported to give the titles of all Arabic printed books from the beginnings of printing to the year 1910 inclusive, arranged in alphabetical sequence according to the most commonly used name of the author's name, whether this be *ism*, *laqab*, *hunya* or *nisba*. The work is provided with an index of the titles of works. Egypt has issued a number of volumes of what is to all intents and purposes a national bibliography in *Al-sidq al-Ḥadīth*. A Persian national bibliography by Dr. Aḡhī Atāshī has appeared in the *Farhang-i Irān-samin* since 1954 and the first volume of a catalogue of Persian printed books by Khānabā Mughār was published in 1337 solar/1956. The *ʿOḡmānīl muḍḍir* of Bursal Mehmed Tabī is a bio-bibliographical dictionary of Ottoman writers in the style of the *ʿaḡḡā* and is of great value to all students of Turkish culture, even though it is

not marked by accuracy of bibliographical detail and, as Babinger puts it, fudging a name in the index is often a matter of luck or demanding of great patience. *Türk bibliyografyası* has recorded all publications in Turkey since 1928 and the National Library has announced plans for the publication of a catalogue of Turkish printed books from the date of the adoption of printing in that country in the 18th century. *Türkiye mahalleler bibliyografyası*, an index to articles in Turkish periodicals, has been issued regularly since 1952.

*Bibliography*: The *Fihrist* of Ibn al-Nadīm was edited by Flügel and published after his death by J. Rosentzweig and A. Mueller (2 vols., Leipzig 1872-2, reprinted Cairo, 1348). A new edition by J. Fück is in preparation. Its contents were analysed in detail by Flügel in *ZDMG* xiii, 359-650 and set out in tabular form in Browne, I, 383-7. See also references in Pearson, *Index Islamicus*, nos. 23281-7, 733 (except 23285). For Ḥajjījī Khāfī, see Babinger, *G.O.*, 193-203. The *Kaṭiḡ al-Zawā'ir* was edited by Flügel (*Oriental Translation Fund*, 7 vols., Leipzig 1833-38; also *Büyük* 1858, İstanbul 1310-11, and 1941-3). The *Keṣf al-Zunūn Zeyli* of Bagdath Ismā'īl Pasha was published in İstanbul 1945-7. On astronomy: Nallino, *ʿIlm al-Falak*, 74- and Italian version, *Storia dell'astronomia presso gli Arabi in Raccolta dei scritti*, v, 144-150. On *Shi'is* bibliography see Browne, IV, chap. 5, esp. 353-8.

G. Gabrieli, *Manuale di bibliografia musulmana* (Rome 1916) is the only work of its kind and is invaluable for its lists of general bibliographical works. (Regrettably only the first part was ever published). For the works of Schnurrer and Zenker see the preface to Chauvin, *Bibliographie des ouvrages arabes*, esp. 32-333; for the unpublished portions of Chauvin's *Bibliographie* see J. Gobeaux-Thoret, *Notes from the Liège Library on Victor Chauvin and on Ibn Ḥudūd in Unity and variety in Muslim civilisation* (ed. Grunbaum, 1955), 363-4; the index to Schnurrer occupies xli-cxvii; Brockelmann, *Geschichte der arabischen Literatur* was originally published at Weimar and Berlin, 2 vols., 1898-1902; Supplementbände I-III, Leiden 1937-1942; 2den Supplementbänden angekündigt. Aufl., 2 vols. Leiden 1941, 1949. Storey, *Persian literature*, London 1927-, in progress.

(J. D. PEARSON)

**BID'AT**, innovation, a belief or practice for which there is no precedent in the time of the Prophet. It is the opposite of *sunna* and is a synonym of *mubḍar* or *hādith*. While some Muslims felt that every innovation must necessarily be wrong, some allowance obviously had to be made for changing circumstances. Thus a distinction came to be made between a *bid'a* which was 'good' (*hasana*) or praiseworthy (*maḥmūda*), and one which was 'bad' (*sayya'a*) or blameworthy (*maḥmūda*). Al-Shāfi'i laid down the principle that any innovation which runs contrary to the Kur'ān, the *sunna*, *ijmā'*, or *athar* (a tradition traced only to a Companion or a Follower) is an erring innovation, whereas any good thing introduced which does not run counter to any of these sources is praiseworthy. On this basis innovations have been classified according to the five categories (*akḥām*) of Muslim law. Under duties incumbent on all Muslims (*al-dīn al-kullī*) are included such *bid'as* as the study of grammar, rhetoric, etc. on which an understanding of the Kur'ān and the *sunna* is based, investigation of the reliability of men whose authority is quoted for traditions

(*al-ḡarḥ wa'l-ḡarḥ* [g.c.]), distinguishing sound and weak traditions, codifying law, and the refutation of heretical sects. Prohibited (*muharrama*) innovations include the doctrines of those who oppose the followers of the *sunna* and the accepted beliefs of the community. Among those which are recommended (*maḥmūda*) is the establishment of such institutions as hospices and schools. Innovations which are disapproved (*maḥmūda*) include the decoration of mosques and the ornamentation of copies of the Kur'ān. Among those which are permitted (*mubḥala*), i.e. towards which the law is indifferent, is the free use of pleasant foods, drinks and clothing.

*Bid'a* is to be distinguished from heresy. When it includes matters which have been introduced in disagreement with what has come down from the Prophet, it is said that this is not due to any purpose of rebelling against him, but has arisen through some kind of confusion. Innovators are called *ah* *al-bida'* and *ah* *al-ahwā'*. The implication is that the innovator (*mubḥala*) is one who introduces something on an arbitrary principle without having any basis in the recognised foundations of Islam. The objection to *bid'a* has led some Muslims in more recent times to denounce the use of tobacco and coffee, and even of modern scientific inventions; but among the Wahhābīs, the strictest body within modern Islam, scientific inventions are freely used. Indeed, the economy of the present state of Sa'ūdī Arabia is mainly dependent on oil whose production could not be accomplished without modern inventions.

*Bid'a* may be treated on the level of *hiyas* [g.c.]. Just as what is *hiyas* in one generation may be included in what a later generation considers *ijmā'*, so may it be with *bid'a*. The distinction between 'good' and 'bad' innovations was therefore a necessary principle. Only people of an ultra-conservative nature who live in an unreal world of their own ideas could insist that the practice of the Prophet and his Companions in al-Madīna may alone be followed, and that no allowance may be made for the development of knowledge and differing circumstances. But a number of traditions condemning innovations are found in the collections of Ḥadīth as statements of the Prophet.

(J. ROSSON)

**BIDAR**, a district in south-central India (the 'Deccan', [g.c.]), and the headquarters of that district, lat. 17° 35' N., long. 77° 35' E., population over 15,000, 82 miles north-west of Hyderabad from which it is easily accessible by road and rail.

The identification of Bidar with the ancient Vidarbha (Briggs's *Ferishta*, II, 413) is now discounted, cf. G. Vazifā, *Bidar: its history and monuments*, Oxford 1927, 3. Bidar was included in the Chōlōya kingdom of Kālyāṇ, 418-610/10th-12th centuries, but was in the hands of the Kāḷāṭyās of Warangal when conquered by Ulugh Shāh (later Muḥammad b. Tughlāk, [g.c.]) in 722/1322 (details of siege and men-

tion of fortifications, Divā' al-Dīn Barāni, *Ta'rikh-i Firāz Shāhī*, Bihl. Ind., 449), from whose governor it was taken after a fierce battle in 748/1347 by a *Amir-i Sadah* (Commander of a *Sadi* or subdivision of approximately 100 villages; Barāni, 495; *Kāshā*, Cairo ed., II, 75). Zafar Khān, the latter, on his acceptance as first king of the Bahmani dynasty (c. 1492) as 'Alī' al-Dīn Husayn Bahmani Shāh, divided his dominion into four provinces, of which Bidar was one. The town was important strategically (Bahmani dynasty, monuments, (g.e.)), and as a fortress held the seventh Bahmani king Shams al-Dīn (799/1397) in internment; Muhammad II (780-99/1378-97) established orphanage schools in Bidar and elsewhere, cf. Briggs's *Firihā*, II, 349-50. An assassin by the eighth king, Firda Shāh, against his brother Ahmad in 825/1422 was repulsed at Bidar, leading to Ahmad's succession, shortly after which he transferred his capital to Bidar from Gulbarga (Sayyid 'Alī Tabatabā'i, *Burhān-i Ma'āthir*, Haydarābād edn., 49-50), rebuilt the fortifications and renamed it Muhammadābād; the natural position of Bidar on a healthy plateau with abundant water and its central position within the kingdom, offered advantages not possessed by Ahsanābād-Gulbarga. Bidar was attacked in 866/1462 by Sulṭān Mahmūd Khāldī of Māhā, who destroyed some of its buildings, but was repulsed with the aid of Sulṭān Mahmūd Shāh of Gujjarāt. Bidar's heyday under the Bahmanis was during the able ministry of Mahmūd Gāwān (g.e.), c. 866-886/1462-82; but after his murder the Bahmani power declined, to the advantage of the minister Kāshī, Barid (founder of the Baridī dynasty, (g.e.)) and his family. The Bahmanis reigned as puppet kings under the Baridī ministers until at least 952/1545; Amir Barid was *de facto* ruler until 949/1542, and his son 'Alī Barid adopted the royal title, presumably after the death of the last Bahmani king, Kalīm Allāh (for coins in whose name, dated 952 (= 1545 A.D.), see *Proc. VII All-India Oriental Conf.*, 749). Bidar fell to Ibrahim 'Adil Shāh of Bijāpūr in 1028/1579, was annexed to the Mughal empire by Aurangzib in 1066/1656, and passed to Nizam al-Mulk Asaf Dīsh in 1117/1714.

**Monuments.** Buildings particularly associated with the Bahmani and Baridī dynasties are described under those headings; those of the post-Baridī period are unimportant and are not described. Page references in the following account are to Yazdani, *op. cit.*

The city and fort are both fully walled, and in their present area date from the time of Ahmad Shāh Wali Bahmani, who incorporated the old Hindu fort in the west of the present area into his buildings of 815-1429/32; Persian and Turkish engineers and architects are known to have been employed. The ground on the north and east of the perimeter falls sharply away; on the other sides the walls are within a triple moat hewn out of the laterite outcrop by local Hindu masons (p. 29). Much of the defences was destroyed in Mahmūd Khāldī's invasion (vide above) and restored by Nizam Shāh; but their character was changed in the time of Muhammad Shāh Bahmani, c. 875/1470, after the introduction of gunpowder. Minor improvements were made by Mahmūd Shāh (inscriptions, *EIM* 1925-6, 17-8), and more extensive ones, including the mounting of large guns, by 'Alī Barid Shāh, 949-87/1542-79. The description of the defences in the reign of Shāhshāh by Muhammad Sākh Kamālī (*Amn-i Sākh*, Bihl. Ind. III, 249-50) indicates that little subsequent changes were made. In the perimeter of

4 km. there are 37 bastions, mostly massive, many with gun emplacements, and 7 gates as well as the three successive gates between town and fort. The first gateway serves as a barbican for the second, the Sharāz Darwāza—so called from the figures of two tigers carved on the façade, a common feature of Dakhni forts (32). The third gate, Gunbad Darwāza, is massive, with battered walls, hemispherical dome and cornice *guldastas* recalling the contemporary Delhi architecture, but with an outer arch of wide span stilted above the haunch, the shape of much Persian-inspired architecture in the Deccan and characteristic of the Bahmani buildings in particular (34). The town walls are said to be the work of 'Alī Barid (Muhammad Sākh, *Amn-i Sākh*, 17-18) in 952-5/1553-8, but doubtless superseded Bahmani work. Again there are 37 bastions, adapted for long-range guns, and five gateways (83-90).

Within the fort are the Solah Khambā ('sixteen pillars'), so called from a period of its decay when 16 pillars were screened off in the *finān* Masjid, the earliest Muslim building at Bidar and the original Dīnāf Masjid, having been established before the transfer of the capital (inscription giving date 827 (= 1423 A.D.), *EIM* 1912-24, 26-7); the style is heavy and monotonous, particularly in the 91-metre façade, and the inner circular piers are over-massive; the central dome rests on a hexadecagonal collar pierced with traceted windows, to form a clerestory (34-6); the Tāsh Mahall, the modern quarter for what was probably Ahmad Shāh Wali Bahmani's palace described in the *Burhān-i Ma'āthir*, 70-1, and referred to as *Dār al-Indira* by Firāzī, I, 627. The arches have the typical Bahmani stilt at the apex, and the fine encrustive tile-work, probably imported from Kāshān, includes the emblem of the tiger and rising sun (66-77); the Rubandī Dīwān-i 'Kūm, with fine tile-work in floral, geometric and calligraphic (Kūfī) designs, generally Persian with some *chinoiserie* (62-6); the Gagan = (Skt. 'sky'), Tarkash and Rangin Mahall, all begun in Bahmani times and rebuilt by the Barid Shāhs; typical Barid chain-and-pendant motif in Turkish Mahall, 'Alī Barid's rebuilding of Rangin Mahall with ivory mother-of-pearl work and woodcarving; the Hindu as well as Muslim patterns with some carving of wooden arches, the best of Barid work but on too small a scale to be fully effective (60-2, 57-9, 44-9 respectively); a group of underground rooms, *Hasār Kothrī*, with an emergency escape passage leading outside the walls (77-8); and the Shāhī Hammām, late Bahmani or early Barid, with a fine vaulted ceiling, 51-2; and minor buildings.

Within the town walls are the Cawābā, a massive tower at a cross-roads probably built by Ahmad Shāh as an observation post (90); the great Madrasa of Mahmūd Gāwān, built 872/1472, whose Persian prototype was the madrasa of Khairābād in Khurasān (cf. E. Diez, *Churasmische Baudenkmäler*, 4, 72-6); corner, destroyed by a gunpowder explosion in 1707/1699), 40 m. high, in three stages. Much of the former tile work has perished from the *mudra* and façades, but the proportions, the silhouette, and the interplay of light and shade due to the rows of deeply recessed arches on all faces are very pleasing to the eye. The most imposing monument of the Bahmani period, it has no parallel elsewhere in India (91-101); the Tāsh Mahall, a gateway containing a room in which is a couch associated with the saint Khālī Allāh, with fine cut-plaster medallions, etc., of

late Bahmani design, and a trefol parapet which, originating in the Bahmani period, is found in Baridī buildings also (100-2); the Dīnāf Masjid of the town, plain but elegant, with a high lantern-vaulted *hauz* under its double dome, late Bahmani work restored in the Baridī period (chain-and-pendant motif in spandrels of façade), 103-4; the Bari Khānkhāh of Mahbūb Subhānī, whose mosque parapet shows the overlapping arches of the Bahmani period, 111. Outside the town walls are (besides the tomb buildings of the Bahmanis and Barid Shāhs, (g.e.)) the fine Cawkhānī of Hadrat Khālī Allāh, similar in style to the tomb of 'Alī' al-Dīn Bahmani and one of the best Bahmani buildings (141-6); the tombs of the Abyssinian nobles in the Mahall Kot, 180; the Kālī ('black') Masjid, probably early Baridī, whose *mīhrāb*, projecting out from the *hauz*, forms a high square chimney-like base for a dome supported on each side by an open arch, resembling an aerial Baridī tomb (196-7); and numerous other buildings.

Mention must be made of the local Bidrī ware, a class of damascened metalwork in which engraved and inlaid silver designs are made on an alloy (mainly zinc with some copper, lead and occasionally tin) base, which is afterwards blackened and highly polished; the blackening is carried out by rubbing a locally-obtained earth, containing alkali nitrates, mixed with ammonium chloride, on the fresh surface of the alloy.

**Bibliography:** Yazdani, *op. cit.*, supercedes all previous work on the monuments: full references, extensive plates, drawings, plans, inscriptions, etc. See also J. Burgess, *Antiquities in Bidar and Ahsanabad District*, ASIWT III (= NIS III, 1878; ASI Annual Report, 1928-9, 5-21; Hyderabad Arch. Dept. Reports, passim; Sir J. Marshall, *The Monuments of Muslim India*, Chap. xxiii in *Cambridge History of India*, 1928; Percy Brown, *Indian Architecture (Islamic period)*, Chap. xiii. For Bidar as a fortified city, full description with measured drawings of fortifications in S. T. R. *The strongholds of India*, London 1937. For the history of Bidar see *Gazetteer of the Bidar district*; Sherwani, *Mahmūd Gawan, the Great Bahmani Wazir*, and *The Bahmanis of the Deccan*, an *Objective study*.

For Bidrī ware, full references in T. R. Gairola, *Bidrī Ware, in Ancient India*, XII, 1926, 116-8, which supercedes all previous technical work.

(H. K. Sureswar and J. Burgess-Patel)

**BIDRĪ**, MIRZĀ 'ABD AL-KĀSIR B. 'ABD AL-KĀSIR ARJĀS (or Barid), of Dughlāran origin, was born at 'Arīmābād (Patna) in 1054/1644, where his family had settled. He lost his father in 1059/1649 and was brought up by his uncle Mirzā Kalandar (d. 1076/1665) and maternal uncle Mirzā Zarif (d. 1075/1664), who was well-versed in *hadīth* literature and *fiqh*. In 1079/1669 he visited a number of places in Bengal along with Mirzā Kalandar. In 1079/1669 he went to Cuttack (Orissa) where he stayed for three years. It was here in Orissa that Mirzā Zarif, who also had strong mystic leanings introduced him to Shāh Khān Husaynīlāh with whom he soon after contracted his *bay'a*. In 1079/1669 he went to Delhi, where he met Sh. Khālīl, a madīfī, to whom he devoted a lengthy chapter in *Qasb-i Husaynī*. For two years thereafter he wandered about the woods of Bindrāban and the streets of Muttra, A'zamābād and Agra in search of Shāh Khālīl, who had disappeared suddenly. While at Agra, Bidrī experienced hardship and starvation. In 1079/1668 he married,

and entered the service of Prince Muhammad A'zam B. Aurangzib, whom he served for a number of years. The Prince once requested him to compose a *bayda* in his praise; Bidrī refused to do so, and requested his position. Bidrī's movement (as reproduced in *Fayāz Kuds*, 86) that Bidrī remained in the service of the Prince for twenty years is not supported by other writers. Soon after his resignation he again took to wandering; this time visiting several places in the Panjāb including Lahore and Hasan Abdāl. His wanderings, however, ended in 1091/1685 when he finally settled at Delhi. He was offered a high post by Asaf Dīsh I, the Nizam of Haydarābād, who was one of his pupils in poetry; although grateful for the offer, Bidrī refused to accept it. He died in 1133/1721 and was buried in the courtyard of his house in Old Delhi. The exact location of his grave in the ruined city has been a matter of great controversy. The present grave, with an inscribed head-stone, is spurious.

Essentially a mystic poet, said to have composed over-thirty thousand verses, Bidrī is very popular in Afghanistan and parts of Chinese Turkestan. In poetry he has been compared with Sa'dī and Rūmī, in prose with al-Ansārī al-Harawī and al-Ghazālī (g.g.).

He is the author of: (i) *Qasb-i Husaynī*, written in 1115/1704, a mainly biographical work interspersed with supernatural anecdotes (Cawnpore 1292/1875); (ii) *Nihā*, a philosophical treatise dealing with certain abstruse problems like *na'iy*, *ahim*, *nubuwat* etc., profusely interspersed with *ghazals*, *ba'z* and *rubā'iyyat*, (Cawnpore 1292/1875); (iii) *Muhā* A'zam, a *madhna* on the lines of Zuhūrī's *Sābīhinā*, published as a part of *Kulliyāt-i Bidrī* (Bombay 1299/1881); (iv) *'Arīn*, another *madhna*, written in 1124/1712 and comprising 11,000 verses, deals with metaphysical problems as the author understood them (Bombay 1299/1881); (v) *Tār-i Ma'rīfāt*, another *madhna* comprising 6,000 verses, still unpublished (M.S. Panjab Univ. Lib.), deals with natural phenomena; (vi) *Fihm-i Hayat*, also a *madhna* of the same length as *Tār-i Ma'rīfāt* (Bombay 1299/1881); (vii) *Dīwān*, no complete edition has been published so far; an incomplete edition, however, up to *radīf* only was published at Kābul (1334/1915), and another edition at Cawnpore (Nawākhshir: 1292/1875); (viii) *Rubā'i*, a fine specimen of Persian letter-writing, containing useful information about numerous pupils of the poet and some of his benefactors (Cawnpore 1292/1875); select works of Bidrī have also been published at Tashkent, as he is very popular in the republics of Tadzhikistan and Uzbekistan in the U.S.S.R.

**Bibliography:** Khālī Allāh Khān 'Khālīfī', *Fayāz-i Kuds*, Kābul 1334 (Shamsi/1915), (this work contains extracts on Bidrī from all the known published and unpublished sources); 'Ibād Allāh Aghātar, *Bidrī*, Lahore 1952, (extensively reviews all the works by Bidrī except his *divān*); 'Abd al-Ghānī, *Tadhkira-i Bidrī* (in Oriental College Mag. Lahore, August 1956); 'Abd al-Ghānī 'Nasikh', *Sugham-i Shāwari*, Lucknow 1924/54, 73; 'Abd al-Hayr, *Nadwī*, *Nadwat al-Khawariz*, Haydarābād (Dn.) 1376/1957, vi, 127; Kudrat Allāh 'Kāshān', *Madhna* A'zam, Lahore 1913, i 115-17; *Ma'rīfāt* (A'zam-garh) 333 1934, May and July 1945, 581/1946; Siddiq Hasan Khān, *Sham-i Andamam*, Bhopal 1292/1876, 82-4; Mir Husayn Dost Samdāshī, *Tadhkira-i Husaynī*, Lucknow 1292/1876, 74-7;

**BIDJĀN**, AHMED, son of Salāh al-Dīn 'al-Kātib' (and hence known as Yazīd al-Ḥaḥḥī) and younger brother of the famous Yazīd al-Ḥaḥḥī, Turkish mystic writer and popular educator who flourished in the middle of the 9th/15th century. The brothers, after studying under Hājīdī Bayram [q.v.] of Ankara, lived a retired life together at Gelbaha, Ahmed practising such austerities and becoming so emaciated that he was called—and calls himself in his books—'Biddi-jān', i.e., 'The Lifeline'. To judge from the date of the *Munāṭiq* (see below), Ahmed must have lived until after 870/1465-6. He was buried beside his brother at Gelbaha, where their *tirbe* was a popular resort of pilgrims (cf. Ewliya, v, 320 and iii, 401, where E. also records a tradition that Ahmed lived for some time at Sofia).

His works are: (1) *Asmā' al-Muḥibbīn* (H. Kh. [Fīgh] no. 1211), a Turkish prose translation of his brother's Arabic *Maḥabib* (H. Kh. no. 1246), completed in Muh. 555 (Feb. 1451); this book, a standard mystical work (contents described by Hammer in *S. B. Ak. Wien, Phil.-Hist. Kl.*, iii, 129 ff.), has enjoyed great popularity, 12 printed editions being recorded in Felmi Karatay's *Is. Ün. Kit. Türkile Basmaları*, 1956; (2) *Durr-i Mahnān* (H. Kh. no. 4873), a cosmographical work written to display God's power and also based on the *Maghāzib al-Zamīn*; (3) *Āḡāz al-Maḥabib* (H. Kh. no. 8070), an abridgement of Kazwīnī's work (cf. Rieu, *CTM*, no. 606) made in 857/1453 (edition: Kazan, 1888). Numerous MSS of these three works exist. (4) *Munāṭiq*, a 'Summa' of faith and practice, with interpretations of Koranic texts, stories of the prophets, sayings of holy men, etc. (MS in St. Petersburg, *Lib. (Khāshī) EC*, Ty 3324), composed at Gelbaha in 870/1465-6 (cf. av.). All his books are written in a simple didactic style and a tone of humble and sincere piety.

The still popular *Āhmadiyya*, sometimes attributed to Ahmed Bidjān, is in fact the work of Ahmed Mūrshīd (for whom see 'OM', I, 33).

*Biddi-nagāz* 87: *Lahurī*, 51; *Shāh al-Dīn*, ii, 460; '*Āli*, *Kāsh*, v, 237; *Shāh al-Madīnī*, 128; *Hammer-Purcell*, i, 497, 501; idem, *GOD*, I, 127 ff.; Rieu, *CTM*, 27b, 105b, 106a and references there given; Gibb, *Ottoman Poetry*, i, 385 ff.; 'OM', I,

16 and 194-6; *ET*, arts. *BIDJĀN* (unsigned, = Ahmed Bican in *IA*) and *Yazīd al-Oguzi* (Fr. Babinger); Fr. Taeschner, *Die geog. Lit. der Osmanen*, in *ZDMG* 73 (1923), 36 ff.; E. Rosi, *Elenco dei Manoscritti Turchi della Bibl. Vaticana*, 1935, and references to other catalogues there given. (V. L. MENAGE)

**BIDJANAGAR** (see VIDJAYANAGARA).

**BIDJĀPŪR**, town and head-quarters of the district of the same name in Bombay State (India), situated in 16° 49' N. and 75° 43' E., 350 miles south of Bombay. Population in 1951 was 65,734. It was the seat of the Yadavā kings for over a century from 586/1190 to 604/1204 when it was conquered by 'Alī' al-Dīn Khwājā for his uncle Dīlāl al-Dīn Khwājā [q.v.], king of Delhi. In 809/1485-6 Yūsuf, an alleged son of the Ottoman Sultān, Murād II who, on the accession of his brother Mehmed II to the throne, was said to have escaped certain death through a stratagem of his mother, founded the Muslim kingdom of Bidjāpūr and built the citadel. This story seems to be unknown to the Ottoman historians (cf. Khālī Edhem, *Duval-i Islāmīyye*, 495); the Ottoman historian Munaḥḥim Baḡhī, who includes an account of the 'Alīd-shāhs in his *Dīnā* al-Duval, describes Yūsuf as of Turcoman origin. For a discussion of this question see further Ismail Hikmet Ertaylan, *Adab al-Bidjāpūr*, Istanbul 1953, 2 ff. He also included it in his dominions. He assumed the title of 'Ādil Shāh' which became the royal surname and the dynasty came to be known as the 'Ādil Shāhs of Bidjāpūr. He was succeeded by three incapable or profligate rulers. In 965/1557 'Alī 'Ādil Shāh came to the throne; he built the city wall of Bidjāpūr, the Dīnā Masjīd, aqueducts and other public utility works. In 973/1565 the combined forces of Bidjāpūr, Ahmadnagar and Golconda defeated the Vijaynagar forces at the battle of Tālibāda. 'Alī 'Ādil Shāh died in 987/1579 and was succeeded by his minor nephew Ibrahim 'Ādil Shāh, under the regency of the famous Cānd Bīm. He died in 1036/1626 after an independent rule of 47 years and was succeeded by Muhammad 'Āli Shāh, during whose reign Bidjāpūr, the Mahratta capital, rose to power. His father Shāhājī Bhōslā was a petty officer of the Bidjāpūr Sultān. Having been bred and brought up on Bidjāpūr 'salt', Shivājī repaid the debt of gratitude by attacking Bidjāpūr territory and between 1056/1646-1058/1648 he seized many forts of importance. In 1067/1656-7 Awarangzib, while still a prince, attacked and besieged Bidjāpūr, but on hearing of the serious illness of Shāhājīdshāh had to lift the siege and leave for Agrā. Thirty years later (1097/1686) Awarangzib succeeded in subduing Bidjāpūr during the reign of Sikandar 'Ādil Shāh (1083/1672-1097/1686), the last of the 'Ādil Shāhs. Sikandar 'Ādil Shāh was imprisoned and allowed a pension by Awarangzib. He died in 1117/1699-1700. In 1100/1688 Bidjāpūr suffered a violent type of bubonic plague which claimed 150,000 persons, including Awarangzib's Mahāl, a queen of Awarangzib while Ghāzī al-Dīn Firūz Dīlāz, a high noble, lost an eye. Towards the close of his reign Awarangzib appointed his youngest son, Kām Bāghshā, to the government of Bidjāpūr. On Awarangzib's death Kām Bāghshā proclaimed himself Emperor at Bidjāpūr, assuming the title of *Shāh al-Dīn*. In 1137/1724 Bidjāpūr was included in the dominions of the Nizām of Haydarābād. It was, however, transferred to the Marāṭhās in 1174/1760 for a sum of 6,000,000 rupees. On the overthrow of the Pēshwā in 1234/1818

the British occupied Bidjāpūr and assigned it to the Rājā of Satārā in whose possession it remained till 1266/1849 when, on the lapse of the State, it formed part of British Indian territory. In 1284/1864 Bidjāpūr was made a separate district and in many of the old palaces were housed Government offices which were, however, later shifted elsewhere.

The 'Ādil Shāhs were great patrons of art and literature. Malik Jūmāl the poet and Zafarī, the celebrated author of the two Persian classics, *Sih Naṭr* and *Mīnā Basīr*, adorned for a considerable time the Court of Ibrahim 'Ādil Shāh, himself a poet, who composed in Dakhān Urdu.

Bidjāpūr, apart from the plague epidemic of 1100/1688 also suffered from two terrible famines. The first occurred in 1120/1718 and continued for six long years decimating the population of the city. It is still remembered as the Skull Famine, the ground being covered with the skulls of the unburied dead. The second occurred in 1234/1818-19 reducing the once flourishing city to a mere township, of a few thousand souls, which has since then remained a city of desolate palaces and historical ruins. Other periods of severe distress were those of 1240/1824-5, 1248/1832-3, 1270/1853-4, 1286/1863-4 and 1283/1866-7.

**Bibliography:** Baḡhī al-Dīn Ahmad, *Wāḡh-i 'Āli Mamlakāt-i Bidjāpūr* (in Urdu), 3 vols. **Monuments.**—The 'Ādil Shāhs developed the building art above all others, and their architecture is the most satisfactory of all the Deccan styles, both structurally and aesthetically; hence their capital, Bidjāpūr shows a more profuse display of excellent and significant buildings than any other city in India except Delhi alone. The Bidjāpūr style is coherent within itself, and there is a gradual progression between its two main phases. Most worthy of note are the doming system with its striking treatment of pendentives; profuse employment of minarets and *guldastas* as ornamental features, especially in the earlier phase; elaborate eaves; reliance on mortar of great strength and durability. The materials employed are either rubble-and-plaster or masonry; the stone used in masonry work is local, a very brittle trap. There is evidence to show that architects were imported from North India, and that use was freely made of local Hindu craftsmanship.

Pre-'Ādil Shāhi works are few: the rough *mināra*, (Ar. *masjid*) with wooden galleries, in the walling of the Makka Masjīd; Kāshū al-Dīn's mosque, inscribed 720/1210, from pillars of old Hindī temples, trabeate, with elevated central portion as clerestory, recalling

the mosques of Godjārāt [q.v.]; the Bahmāni *masjid* Khwājā Dīshāh's mosque, c. 890/1485, similar but without clerestory.

No 'Ādil Shāhi building can be certainly assigned to the reign of Yūsuf. The earliest dated structure, referred to as Yūsuf's Dīnā Masjīd, strikingly foreshadows the style to come with single hemispherical dome on tall circular drums with the base surrounded by a ring of vertical foliations so that the whole dome resembles a bud surrounded by petals, and façade arches struck from two centres, the curves stopping some way from the crown and

converging to the apex by tangents to the curve; inscr. 918/1512-3 records erection by Khwājā Sanbal in the reign of Sultān Mahmūd Shāh, son of Muhammad Shāh Bahmāni, indicating that Bahmāni suzerainty was still acknowledged some time after the 'Ādil Shāhi defection. Of Ibrahim's reign are also the massive Dakhnī 'Idgāh (within the present city walls) and several small mosques, on one of which (Iḥlās Khān) the arch spandrels are filled with medallions supported by a bracket-shaped device, later a very common ornament. Only one mosque of this period (Ibrahīmīyā, 922/1526) is dated.

The long reign of 'Āli saw much building activity: the city walls, uneven in quality since each noble was responsible for a section, completed 973/1555, with five main gates flanked by bastions and machicolated, approached by drawbridges across a moat, beyond which is a revetted counterscarp and covert way (many bastions modified to take heavy guns; inscriptions of Muhammad and 'Āli II); Gagan ("sky") Mahāl, an assembly hall with much work in carved wood; a mosque in memory of sayyid 'Āli Shāhid Iṭr, small (10.8 m. square) but superbly decorated with cut-plaster, with a steep wagon-vaulted roof parallel to the façade, a tall narrow chimney-like vault over the *mihrāb* which has a door leading outside; the Shāhīyā suburb; outside Bidjāpūr, the forts of Shāhadrang (966/1581), Dhārwar (973/1567), Shāhānūr and Bānkpur (981/1573); 'Āli's own severely plain tomb; and his Dīnā Masjīd, generally ascribed to 985/1576, a fine large (137.2 by 82.5 m.) building, not fully completed (only buttresses where tall *mihrābs* were to be added, no *hauz* or *chahār-faḥs*), partially ornamented (only the central arch of seven in the *hīnā* façade is cusped and decorated with medallion-and-bracket spandrels), with the great hemispherical dome, standing on a square triforium, capped by the crescent, a symbol used by the 'Ādil Shāhs alone among the Dakhnī dynasties. The cornice is an improvement on earlier works by showing deeper brackets over each pier instead of a row of uniform size. The vaulting system of the dome depends on cross-arching; two intersecting squares of arches run across the hall between the piers under the dome, meeting to form an octagonal space over which the dome rests; the pendentives thus overhang the hall and counteract any side-thrust of the dome. The exterior walls are relieved by a ground floor course of blind arches over which is a loggia of open arches.

In Ibrahim II's reign fine sculptured stonework replaces the earlier rubble-and-plaster. The palace complex dates from about 990/1582 (Sāt Maḥal, 'Granary', Cind Mahāl); the first building in elaborate sculptured stone is Malikā Dīshāh's mosque (994/1586-7), which introduces a new shape by the dome forming three quarters of a sphere above its band of foliation. The Bāghīrī mosque and three others on the Shāhīyā suburb are very similar, and fine

stonework occurs also in perhaps the greatest work of the 'Ādil Shāhīs, the mausoleum of Ibrāhīm II and his family known as the Ibrāhīm Rawḍa: within a garden enclosure 137.2 m. square stand a tomb and mosque on a common plinth; the tomb (shown by inscriptions to have been intended for the queen Tājī Sultāna only) has uneven spacing of the columns and other features, and the cenotaph chamber is covered with geometric and calligraphic designs, reputedly the entire text of the Qur'ān. The mosque columns are regular. The whole composition is in perfect balance and was minutely planned before building. An inscription gives the date of completion, by *ahjād*, as 1036/1626. Palaces of this reign include the Ānād Mahall, built for entertainments (*Basā'it al-Salāṭin*), and the Aḡār Mahall (1000/1591) with fine painted wood decoration including some fresco figure-paintings thought to be the work of Italian artists. The Ānād ("egg") Masjid, 1017/1608, has the mosque (presumably for the use of women) on the upper storey, with a *sarīf* below; the masonry is polished and finely jointed, and above is a ribbed dome. In 1008/1599 Ibrāhīm proposed moving his seat of government some 5 km. west of Bidjāpur where the water supply was better; but the new town, Nawraspur, was sacked in 1031/1622, before its completion, by Malik 'Anbar, and little remains. Other work includes the mosque known as the Naw Gumbadh, the only Bidjāpur building with multiple domes; the fine but incomplete mausoleum of the brother *pirs* Hamid and Latīf Allāh Kādir (ob. 1011/1602, 1021/1612); and, the supreme example of the later work of this reign, the Mīhārī Mahall, near a gateway to the inner courtyard of a mosque in the city, with a narrow facade based on a vertical double square, richly covered with stone diaper patterns and with a balcony supported by long struts of carved stone, their decoration resembling, and really more appropriate to, woodwork patterns; fine paneled ceilings within; superb cornices and elaborate *minars* outside, all richly carved.

Works of Muhammad's reign are of uncertain chronology owing to lack of inscriptions and historical records. Muṣṭafā Khān's mosque is plain with a facade in which the central arch is much wider than the flanking ones, following the pattern of many of the older palaces; his Sarāṭ (finc. 1050/1640-51) a Mahall at 'Aynāpur; tombs of the *naẓir* Nawīz Khān (ob. 1058/1647) and of several *pirs* showing a decadence in style with a second storey and dome too attenuated for the size of the buildings; Afdal Khān's mausoleum and mosque, where the second storey is of insufficient height—the mosque being the only two-storeyed one in Bidjāpur, the upper *livās* being the duplicate of the lower except for the absence of a *minbar*, hence presumably for Afdal Khān's *sunnia*, 63 members of which have their reputed graves 1 km. to the south: finc. mausoleum 1064/1653; and the major building work, one of the supreme structural triumphs of Muslim building anywhere, Muḥammad's own mausoleum, the Gol Gumbadh. The tomb building, standing within a mausoleum complex, is formally simple: a hemispherical dome, of 43.9 m. external diameter, is supported on an almost cubical mass 47.4 m. square (external), with a staged octagonal tower at each angle. The floor area covered, about 1693 sq. m., is the largest in the world covered by a single dome. External decoration is simple, confined to the great cornice 3.5 m. wide supported by four courses of brackets, the openings on the pagoda-like corner

turrets, and the merlons and *minars* of the skyline. The dome is supported internally by arches in intersecting quadrates as in the Dījānī Masjid; inscription over the S. door gives the date of Muḥammad's death by *ahjād* as 1067/1656 at which time work on the building presumably stopped, the plastering being incomplete. Unfinished also is the tomb of his queen Dījānī Rēgām at 'Aynāpur: foundations, piers and octagonal turrets to the identical scale of the Gol Gumbadh, but the dome was intended to be covered by a central chamber. Of 'Alī II's reign the pavilion called Pān Mahall on the citadel wall, and the Makka Masjid, both with fine masonry and exquisite surface carving; the tomb-complex of Yākūt Dīlāwī, unusual by having the mosque larger than the tomb; and 'Alī's own unfinished mausoleum, with arches struck from four centres instead of the usual Bidjāpur arch. Later buildings are insignificant, except for Awrang-zib's eastern gate to the Dījānī Masjid; the tomb of the last monarch, the minor Sikandar, closes the 'Ādil Shāhī effort with a simple grave in the open air.

**BIDJĀVA** (Bougie), maritime Algerian town situated about 175 km. east of Algiers. Built on the lowest slopes of the Djabal Guriya, the city overlooks a spacious and remarkably sheltered bay. Doubtless Roman and Carthaginian shipping anchored off Saldæ, the old town. At the beginning of the Christian era, it formed part of the domain of Juba, king of Cherchel. The emperor Augustus founded a colony there and settled it with veterans. An inscription dating from the second century extols Saldæ as "civitas splendidissima". Nevertheless, it played no significant part until the Muslim era. In the 5th/11th century, al-Bakrī refers to it as a very ancient city, a pleasant winter resort, populated with Andalusians. From this period, the Spanish Muslims were strongly represented side by side with the Berber element, the Bidjāva tribe, to which the town owes its name.

The event which made Bougie historically famous took place in 460/1067. The facts are briefly as follows. The mid-5th/11th century witnessed the rupture between the Zirids of al-Kayrawān and the Fatīmid Caliph of Cairo, and the reprisals which followed: the Hilalian invasion, the arrival of nomad Arabs sent from Egypt to take possession of the rebel kingdom. These reprisals were terrible. The nomads pillaged the countryside of Irīkiya. The sacked inland towns were partly evacuated. The kingdom of the Hammāuids first took advantage of this free-for-all. The end of the eleventh century was the

golden era of their Kal'a. At the same time the Arabs were not slow to spread westward and offered a serious menace to the Kal'a of the Banū Hammād. These decided to look about for a less exposed capital. Just as the Zirids had left al-Kayrawān and betaken themselves to the maritime town of Mahdiyya, the masters of the Kal'a withdrew to the coast. In 1067, the Hammāuid al-Nāsir occupied the land of the Bidjāva and set up his capital at Bougie which he wished to call al-Nāsiiriyya. Though he continued to spend part of his time at the Kal'a, he gave priority to the expansion of his new capital, put himself out to attract settlers and built there the splendid Castle of the Pearl (*Kasr al-Lā'la*). The son of al-Nāsir, al-Manṣūr (485-498/1090-1104) left the Kal'a (which, however, he had embellished with new buildings) in his turn. He abandoned the Kal'a permanently and installed himself in Bougie with his troops and his court. Here he built the great mosque, planted gardens and erected the palace of Anīmūs and the Sta (*Kasr al-Kaḥab*) and supplied the city with water, carried by aqueduct from the Djabal Tudja. The town is reputed to have been divided into twenty-one quarters and to have contained seventy-two mosques. Doubtless this is something of an exaggeration but it is certain that the first half of the 6th/12th century was the golden age of Bougie. The second capital of the Hammāuids had inherited from the first. It had welcomed the intellectual *élite*, the wealthy bourgeoisie, the sages and artists of the fallen Kal'a. Life in Bougie was easy and free from austerity. The luxurious costume worn by the citizens, from the studied elegance of their turbans to their shoes, tied on with gilded ribbons, shocked Ibn Tūmāt, the future founder of the Almohad sect, who, about 1118, spent some time in Bougie and made an attempt to reform the manners and customs of the town. Like this visit of Ibn Tūmāt, that of the great Andalusian mystic Sīdī Bū Madyan and his teaching during that stay is sufficient to indicate the importance of Bougie as a centre of religious studies.

Through the nearest of Bougie, commercial and cultural relations were established with countries overseas, so that it became the centre from which the civilisation and art of eastern Barbary radiated outwards to Christian Europe, especially Sicily and Italy.

For al-Idrīsī, geographer to King Roger II, Bougie was "the chief city, the core of the Hammāuid state". There is every reason to believe that the royal residences of Palermo were inspired by the Palaces of Bougie, which were so enthusiastically described by the Sicilian poet, Ibn Hāmid. There is also the letter, most cordial in tone, written by Pope Gregory VII to al-Nāsir, "King of Mauretania and the Province of Setif" (Mas Latrie, *Traité de paix et de commerce*, 22-23).

Very little remains in Bougie of its past as a capital city. We can, however, identify with some certainty the sites of the palaces built by the Hammāuids. The castle of Anīmūs must have stood not far from the tomb of Sīdī Tuṣṭi; Fort Barral has supplanted the Palace of the Star. The Castle of the Pearl stood on the site of the Berber barracks. Some of the remains of the city walls (the eastern face, where the wall, four metres thick, is flanked by looped towers) can be attributed to the twelfth century rulers, as can the gate known as the Saracen Gate, that great arch through which ships could enter the inner harbour.

The city of the Hammāuids must have been

appreciably more spread out than the modern town, especially in the hilly section where the Plateau of the Ruins is situated. The names of seven or eight gates have come down to us. Some of these can be located: Bab Andarān to the east, on the road leading to the Valley of Monkeys, Bab al-Bunūd, on the site of the Fouka Gate, Bab al-Law, in the same position, but lower down than the Bab al-Bunūd. Outside the town, on both banks of the Soummam, stretched the famous gardens, planted in the twelfth century and restored in the thirteenth, the Baḥrī, on the west bank, the Kaḥf on the east.

In 546/1152, Bougie was captured by 'Abd al-Mu'min and the last of the Hammāuids set sail for Sicily. The ancient royal city became the chief town of an Almohad province subordinate to Marrākeḥ. Its downfall must have been painfully felt by its citizens. It is believed that the Almohads failed to win their affection, and one is tempted to attribute to this unpopularity of the new masters the choice of Bougie by the Banū Ghāniya, who landed there in the middle of the twelfth century in an attempt to restore the empire of the Almoravids.

Bougie was for the Banū Ghāniya merely an operational base. The Almohads were not slow to reconquer it and it remained under their rule thereafter until the collapse of the Mu'minid dynasty. From that time, Bougie and the region surrounding it became part of the kingdom of the Hafsids of Tunis. The remote position of this province seems to explain its rôle in Barbary from the thirteenth to the fifteenth centuries. This governorship, far from the capital, would have been bestowed by tradition on the heir to the throne, and, in spite of the distance, the army of Bougie on more than one occasion marched to Tunis to press the claims of a Crown Prince anxious to succeed to the throne without further delay. By virtue of its position as a frontier province, Bougie was coveted by the 'Abd al-Wāhid sultans of Tlemcen, who attempted several times, though without success, to conquer it.

At the same time, Bougie remained an opulent mercantile town, into which Venetians, Pisans, Genoese, Marseillais and Catalans imported merchandise made in Europe and from which they exported local products, especially candied peel, wax, alum, lead and raisins. Meanwhile to the profits of trading were added the sometimes richer prizes of privatising. According to a famous work by Ibn Khaldūn (*Hist. des Berbères*, I, 619, trans. iii, 1127), piracy from the year 760/1360 was carried out according to a well-tried method and with remarkable success.

The attack on the town and its capture by Pedro of Navarre in 910/1510 were entirely in the nature of reprisals. Bougie, now a Spanish town, remained so until 962/1555. During those forty-five years, its new masters went through hard times, encamped on the seaboard of the land of the infidels without normal contact with the hinterland, threatened by the Berber mountain tribes and at the same time dreading the Barbary Corsairs who were blockading the coast. After a heroic stand, Don Luis de Peraltá had to surrender the area, which had become terribly impoverished.

Bougie, subjected to the mistrustful authority of the Algerian Turks who kept in their own hands the practice and profits of privatising, was unable to recover from this decline. The region retained some little importance by virtue of the *barasia*, the exploitation of timber for ship-building, which the masters of the Regency had supervised by

a local religious chieftain of the Amokrân family. But the town profited little from this activity. 'Ja Bongie', wrote the traveller Peyssonnel, "everything is falling into ruins, for the Turks keep nothing in repair". In 1833, when the French troops, commanded by General Trezel, entered the town, it was nothing more than a rather sorry city of barely two thousand inhabitants guarded by a hundred and fifty janissaries.

**BIDJNAWR** (Bijonaw), a town and district in the Koblkhând division of the Indian State of Uttar Pradesh. The district has an area of 1,867 square miles with a population of 984,196, of which 36% are Muslims. The town has a population of 36,646 (1951 Census). Little is known of the district's early history. In 1399 it was ravaged by Timur. Under Albar it formed part of the *sarkâr* of Sambhal in the *sûba* of Dhili. During the decline of Mughal power it was overrun by Rohillas under 'Alî Muhammad. It contains the town of Nağhlâbâd founded about 1750 by Nağhlî al-Dawla who became *wâlî* of Dhili and whose son was the Rohilla leader Zabîta Khân. After the defeat of the Rohillas in 1774 Bidjawn was incorporated in Awadh. It was ceded to the British in 1801. During the 1857 insurrection Mahand Khân, a grandson of Zabîta Khân, was one of the most formidable opponents of the British.

**BIDLIS** (Bitlis), chief city of the *wilâyet* of the same name, in eastern Anatolia. It stands on the river Bitlis, 25 km. south-west of the westernmost point of lake Van (38° 20' N., 42° 5' E.), at a height above sea-level variously estimated between 1,400 and 1,585 metres. Known to the Armenians as Bazesh (Paigish) and to the Arabs as Badlis, it is referred to as Bidlis in old Turkish works. The city is in a relatively wide part of the deep and narrow valley cut in the eastern Taurus by the river Bitlis before it descends to the upper *Djâzira*. The narrow and straggling streets, with their stone-built, earthen-roofed houses, are ranged one above the other from the valley floor, covered with poplar and fruit-trees, to the bare slopes of the hills. The quarters of the city are separated one from another by the main valley and its intersections, crossed by stone bridges. Although the picturesque aspect of the city has always been admired by travellers, its location gives it a harsh climate: summer days are excessively hot, winter is rigorous and long, with heavy snowfalls. Rainfall is also heavy (about

7 metres annually), particularly in spring, whereas drought is common in summer.

The valley in which Bidlis stands affords the only route across the Taurus from the Van basin to the plateau of Diyarbakr and the plains of the *Djâzira*. By this road, from time immemorial, caravans have made their way from the south to Erzurum and thence to the Black Sea; this was the route taken by Xenophon and his Ten Thousand. Throughout history the rulers of Bitlis lived toll on passing travellers and took care to maintain control of the plain of Mush, which supplied the food they could not find in their own barren mountains.

When and by whom the city was founded is not known. An ancient legend tells that it was Alexander the Great who entrusted to one of his commanders, a man called Lis, the task of building here an impregnable citadel. When the building was finished, Lis refused Alexander admission. Alexander besieged the citadel but failed to force an entrance. Lis then explained to him how he had carried out his orders to the letter. He was pardoned, and the city commemorates his name. The city played an important part in Armenian history, and is frequently mentioned in the old Armenian histories (Georg. *op. cit.*, Cairo, Leipzig 1890, 168), which are however silent about the date of its conquest by the Muslims, recording only that the region of Daron (Mush) was taken by them in 641. Streck (*EP*, s.v. Bidlis) mentions Arabic inscriptions on the walls of the citadel, but according to Lynch these were destroyed without ever being copied. Muslim historians relate that 'Iyâd b. Ghannî, 'Umar's commander in the *Djâzira*, after securing the surrender of Arzan went on to Bitlis and thence to Ahlâlât (Ahlât). The Patriarch of Ahlat accepted peace terms, and on 'Iyâd's return the Patriarch of Bitlis agreed to pay tribute on the same scale as Ahlat (al-Balâdhuri, *Futûk*, Cairo 1901, 184; al-Wâkidi, *K. al-futûk*, Cairo 1902, II, 152-154). It was not long however before the region reverted to Byzantine rule. Mu'âwîya subjugated it again, but after his death it was once more lost to the Muslims till the reign of 'Abd al-Malik, whose brother Muhammad attached it to the province of al-*Djâzira*. In the 'Abbasid period it fell under the successive Shaykhîd, Hasnîd and Marwânî dynasties of Diyarbakr. In the time of the two last-named dynasties, when Byzantium recovered the Euphrates basin, the Armenian King of Vaspourkan (Basrgirgan, the Van basin) threw off Muslim sovereignty and gave his allegiance to Constantinople, whereupon Bitlis, like Ahlat, became a frontier-city. The Muslim onslaught brought some branches of the tribes of Bakr b. Wa'il and Taghlîb to the region, and under Marwânî rule various Kurdish tribes spread over these parts, notably the Hunayyîd, to which the Marwânîds belonged. Nâsirî Khusrâw, who visited the region in 1046, the year before the great Turkish invasion, states (*Sajâr-nâma*, Berlin 1841, 8 foll.) that Arabic, Persian and Armenian were spoken at Ahlat, and we may suppose that the same situation obtained at Bitlis. Fajîr al-Dawla Muhammad b. Bîzârî, whom the Saljûqîds appointed to govern Diyarbakr in 1084, destroyed Marwânî rule and distributed their lands and fortresses to Turks. Bitlis was given to Muhammad b. Dîlmâc or Dîlmâc, whose descendants continued to rule it until 588/1192, when it was seized by the amir of Ahlat. In 1207 both cities fell to the Ayyûbîds, who settled large numbers of Kurds in the region. Though Ahlat was devastated by Jalâl al-Dîn Rûk'azimshâh in 1229, the cities

of Van and Bitlis began a period of prosperity. Bitlis in particular becoming an important centre of learning until the Mongol invasion. After the fall of the Hhânîds, the Kuzekî tribe of Kurds established a dynasty at Bitlis, which managed to maintain itself, despite many vicissitudes, till the mid-19th century, having acknowledged in its time the suzerainty of Timurîds, Kara Koyunlus, Ak Koyunlus, Safawîds and Ottomans. Sharaf Khân, a 16th-century member of this house (whose *Sharaf-nâma*, completed in 1570, is a principal source for Kurdish history) claimed descent from the Ayyûbîds, while his grandson 'Abdâl ('Abd Allîsh) Khân told Ewliyâ Celebi that he was descended from the 'Abbasîds. Ewliyâ's visit was in 1655. His observations include the following. The *bidî* exacted from caravans passing through the city went to the Khân. The *sharâf* of the plain of Mush had been bestowed by Murâd IV on the Khân for life; out of it he paid the warden and garrison of the citadel. On the other hand, the *diyar* paid by the Jacobite and Arab *ra'îs* of the city was reserved to the *hâl* (administrative division) of Van, and was collected by an *agha* who came from Van at the beginning of every year. Some 700 tribes were subject to the Khân. Within the citadel houses were 100 houses, but half the area was covered by the ruler's palace. In the 17 city-quarters were 5,000 houses. In the environs were thousands of orchards, all containing summer-houses. Of the mosques, with a total of 110 *madrâssas*, the most important was the *Sharafîyya*, built by Sharaf Khân, Tavernier, whose visit was at the same period, writes that the Bey of Bitlis recognised neither Shîh nor Pîshîgh, and could not raise in the field a force of 20-25,000 cavalry. At that time the population was largely Kurdish and Armenian. The *Dîkhînnâmî* states that the latter were in the majority. According to the Jesuits who visited the city in 1683, the nominal vassalage of the Bey to the Ottomans was preserved only in that he sent them tribute on his accession. (Fleuriot, *État présent de l'Arménie*, Paris 1694). The power of the Kurdish princes was not broken by the Turks till 1847, though the city remained a Kurdish political and religious (Nakshbandî) centre during the turbulences of the 19th century.

On the establishment of full Ottoman sovereignty, Bitlis formed a *hadd* belonging to the *sandjak* of Mush within the great *wilâyet* of Erzurum, but after the Russo-Turkish war of 1877-78 it was made into a *wilâyet* to emphasise the dependence of the region on the central government. The area of the *wilâyet*, which was divided into 4 *sandjaks*—Bitlis, Sirt, Mush and Genç—was almost 30,000 square kms., with an estimated population of 400,000. According to Cuinet, the central *sandjak*, with an area of 5,500 square kms., had a population of some 108,000: 29,000 Moslems, 13,000 Armenians, 4,000 Syrian Jacobites and 1,000 Yazîdîs. The *silâsname* for the year 1310/1892-93 shows the population of this *sandjak* as 77,000: 46,000 Muslims, the remainder Armenian. Lynch, who quotes this total, says it ought to be increased by 15 per cent to compensate for deficiencies in the registration. For the population of the city itself in the 19th century no reliable figures exist. Lynch estimated it at 20,000 at the time of his visit (1898): 20,000 Armenians, 200 Syrians, the rest Kurds. A Russian source of the beginning of the 20th century gives the number of houses in the city as 5,100: 550 belonging to Turks, 3,000 to Kurds, 1,500 to Armenians.

The staple industry of Bitlis in the 19th century

was weaving, with its ancillary craft of dyeing. Other exports of the city and the surrounding country included gallnuts, gum tragacanth, madder, tobacco, honey and livestock.

Till the troubles of the end of the 19th century, Turks, Kurds, Armenians and Jacobites had lived side by side in Bitlis. The Jesuits who founded a mission there in 1683 had been well received by the Bey. In the 18th century an Italian priest, Maurizio Garzoni, lived and worked among the Kurds for 15 years. An American Protestant mission was founded in 1858. The insurrection of the Armenians, the measures taken to suppress it, and the Russian occupation during the First World War all contributed to a grave reduction in the population and to the disappearance of industry. The population of the city in 1927 was 9,050, in 1930 11,452.

Early in the Republican period each of the 4 *sandjaks* comprising Bitlis *wilâyet* became a separate *wilâyet*. In 1929 Bitlis was attached as a *hadd* to the *wilâyet* of Mush, nearly 70 per cent of the population of which were Kurds according to the 1935 census. Bitlis was restored to *wilâyet* status in 1936, and is now divided into 5 *hadd*'s: Bitlis, Tatvan, Ahlat, Mutlî and Hizan, with an area of 5,482 square kms. and a population (1950) of 98,422.

(G. L. LEWIS)

**BIDLIS**, texts, Meslânî Hâkîm al-Dîn Idrîs b. Meslânî Hâkîm al-Dîn 'Alî al-Bidlîsî, historian of the Ottomans, was probably of Kurdish origin. He became *nîshân* at the Ak Koyunlu court, and in the name of Ya'qûb Beg wrote a letter of congratulation to Bâyezîd II in 800/1485 which was much admired (Hammer-Purgstall, II, 290). In consequence of the growing power of Shâh Ismâ'il he fled to Turkey in 907/1501-2, where he was welcomed by Bâyezîd and commissioned to write the history of the Ottoman House in Persian. His work was criticised as being over-lenient to the Persians, and he failed to receive the payments he had been promised. He asked for permission to go on the Pilgrimage, but this was granted only after the death of the Grand Vizier Khâldûn 'Alî Paşa (who seems to have been his chief enemy) in 918/1512. From Mecca he wrote to the Ottoman court a letter in which he threatened that if his wrongs were not righted he would expose in the *shîdhî* and *khâtîme* of his history (which were not yet written) the ingratitude shown to him. Selîm I invited him back to Istanbul shortly after his accession and the completed history was presented to him. Idrîs accompanied Selîm on the Chaldîran campaign of 920/1514, and afterwards rendered invaluable service to the Ottomans by winning over the Sunni Kurdish princes to their side; the *fermân* quoted by Sa'd al-Dîn (II, 322) shows that he was given a free hand in organising the Kurdish territories. He also accompanied Selîm to Egypt, where he is said to have protested against the misdeeds of the Ottoman officials (Hammer-Purgstall, II, 518).

He died in Istanbul, soon after Selim, in Dhū l-Hiǧǧa 926/Nov.-Dec. 1520, and was buried at Eyyüb beside the mosque founded by his wife, Zeyneb Khātun.

His great history, the *Haǧḡ Bidāǧ* [Hādǧǧī Khālifa, ed. Flügel, no. 2737, and cf. nos. 2732 and 14406], the 'Eight Paradises', i.e. the reigns of the eight sultans from 'Oḡmān to Bāyezīd II, is written in the most elaborate style of Persian *inshā*, avowedly on the models of the histories of Djuwaynī, Wāsiḡ, Mo'in al-Dīn Yaḡdī and Šaraf al-Dīn Yaḡdī. Though it was highly esteemed both by Sa'd al-Dīn, who frequently refers to it (cf. especially I 129), and by Hammer-Purgstall (cf. I XXXIV), it is still unpublished. It was begun in 905/1502-3 and finished in thirty months; the last political event described in detail is the relief of Midill in 907, but the latest date recorded is 912. The long *Khātme*, entirely in verse, which was written in Mecca (cf. Rieu, *CPM* 2192), describes the civil war at the end of Bāyezīd's reign; it concludes with a *Shāh-nāme*, in which Idrīs relates his misfortunes.

A continuation (*dhāw*) to Idrīs's history, covering the reign of Selīm I, was written by his son Abū l-Faḍl (on whom see Babinger, 95 ff.). A Turkish translation of the *Haǧḡ Bidāǧ* was made by a certain 'Abd al-Bāǧī Sa'dī in 1140/1733-4 at the command of Mahmūd I; it is not altogether reliable (cf. M. Sükrü in *Isl. XIX* [1917] 128). The history of Kemal Pašhaḡāde [g.o.], sometimes referred to as a 'translation' of the *Haǧḡ Bidāǧ*, was written as a *nāṣir* to it, but is an entirely independent work.

Idrīs also wrote a *Selīm-nāme* in prose and verse, which was left unfinished at his death and edited later by Abū l-Faḍl (a quite distinct work from Abū l-Faḍl's *dhāw*, cf. F. Taubert in *Arch. IV* [1932] 101). He was a poet and a calligrapher (cf. Mustakim-zāde, *Tuḡḡat-ı Khāḡḡīn*, 1st. 1928, 110), and wrote a number of treatises on various subjects including: (1) *al-Iḡā' 'an maṣālik l-'aḡāḡ* (H.Kh. no. 5930 (?) and 6218), Brockelmann II 302 and cf. S II 325; (2) two Persian translations of the 'Forty Hadīḡs' (H.Kh. no. 7507, and cf. A. Karahan, *Islām-Türk Edebiyatında Kerk Hadis*, Istanbul 1954, 111-3); (3) a *ḡarḡ* to the *Faṣṡḡ al-ḡurūm* (H.Kh. no. 9973); (4) a *ḡarḡ* to Šahabastār's *ḡulḡān* (H.Kh. no. 10839); (5) a *ḡarḡ*, entitled *ḡarḡ al-Mabīn*, to Šahabastār's *ḡarḡ al-Yahīn*; (6) a *ḡarḡ* to the *Khāmariyye* of Ibn al-Fārid (Dr. S I 464); (7) *Risāla l-'aṣāṣ* (Dr. S II 325); (8) a *ḡarḡ* to Bayḡāw's *Taḡrīf* (cf. Rieu, *CPM* 2190); (9) a Persian translation of 'Dāniš's *Bayān al-Havāṣī* (cf. Hammer-Purgstall, II, 578 and 'Oḡmānīl *Muḡḡīlār* III 7, where an autograph MS is recorded). Bursalī Meḡmed Ṭābir also records five other works, which he had presumably seen.

**Bibliography:** Babinger, 45 ff. and the references there given, especially Rieu, *CPM*, 216-9; Hammer-Purgstall, II, 432 ff., for Idrīs's activities in Kurdistan (mainly following Abū l-Faḍl's *dhāw*); Scherf-nāme, ed. Vellaniinof-Zernof 342 ff. = Charnoy's translation II/ 208 ff. (where however the *Haǧḡ Bidāǧ*, perhaps through confusion with the *Selīm-nāme*, is described as a poem of 80,000 verses: this error was reproduced by C. Huart in the article *Bidlist* in *Et' = Idrīs Bidlist* in *Isl.*; M. Sükrü, *Das Heḡl Dikḡl des Idrīs Bidlist* in *Isl. XIX* [1917] 127 (survey of the MSS in Istanbul, including autographs dated 919, and analysis of contents to the death of Orḡḡān); Storey, II/2 412-6 (the latest and fullest survey of the MSS). A passage from 'Abd al-Bāǧī's trans-

lation is quoted by F. Babinger in *Isl. XI* (1921) 42 ff., and several passages of the Persian text are quoted by F. Giese in *Die Verschiedenen Textversionen des 'Aḡḡalāde*, Abh. Pr. Ak. W. 1936, Phil.-Hist. Kl. no. 4. Some passages from the *Selīm-nāme* are given in translation by H. Mas'ūd in *Selīm I' en Syrie, d'après le Selīm-nāme*, in *Mlanges Syriens offerts à M. René Dussaud*, Paris 1939, II, 779-782. In the archives of the Topkapı Sarayı are preserved Idrīs's letter asking for permission to go on the Pilgrimage (E 3156) and the letter he sent from Mecca (E 5675, reproduced with Turkish synopsis by F. R. Unruh in *Bell. VII* [1943], 198). A letter sent by Idrīs to Süleymān I and Idrīs's seal are reproduced in L. H. Uzunçarşılı, *Osmanlı Tarih-i II*, Ankara 1949, Pl. xli.

**BIDLIST**, ŠHARAF AL-DIN KHAN, commonly known as SHARAF KHAN, Persian historian of Kurdish extraction, the elder brother of the Amir of Bidlis, Šhans al-Din Khan, born at Karadīn-nūr Kummā on 30 Dhū l-Hiǧǧa 940/c. February 1541, during the exile of his father. His family was taken under the protection of Šhāh Tahmāsp the Safawid (930-984/1524-1576), and he was brought up at the court of that ruler with the latter's children, and received his education there. At the age of twelve, he was raised to the rank of *amir* of the Kurds, and held this position for three years. In Zimāddā II 973/January 1568 he took part in campaigns in Gilān against the last prince of the Kiyānī dynasty, Khān Ahmad Khān (913-1020/1536-1611), who on several occasions rebelled against the Safawids. This campaign having ended with the capture of the prince, he returned to court, and Šhāh Ismā'īl II, on his accession to the throne in 984/1576, conferred upon him the governorship of the province of Naḡḡdīwān and Širwān, with the title of *amir al-umam* of the Kurds. At the time of the invasions of these regions by the Turks under Murād III in 986/1578, he joined the army of the victorious Khurav Pašha and in this way was placed on the throne of his ancestors at Bidlis. In 1005/1596-7, he abdicated in favour of his son Šhans al-Din Khan, and commenced the task of writing a history of the Kurds in Persia, under the title of *Šharaf-nāma*, a work in 15 chapters, the first of which are devoted to the Kurdish tribes and princes and the last (part 2) to the Persian and Turkish rulers of his time. This work was translated into Turkish first by Muḡammad Bey b. Ahmad Bey Mirzā in 1078/1667-8, and later by Šam'ān in 1095/1684 (autograph MS. in the Bodleian). The Persian text was published by Vellaniinof-Zernof (*Scherf-Nāme*, or history of the Kurds, by Scherif, prince of Bidlis, published, ... translated and annotated ... 2 vols., St. Petersburg 1860-2), and a reprint of the first part appeared in Cairo in 1931. F. B. Charnoy has translated it into French (*Cherel-Nāme* or history of the Kurdish nation, by Cherel-ouddine ... translated with a commentary ... 2 vols. 4 books), St. Petersburg 1868-75).

(SAID NAGIY)

**BIDPAY** (SEE KALĪLA WA-DIMNĀ).

**BIGHA** (the Greek Βιγιά), a town in north-western Asia Minor and now the centre of a *kāḡā* in the province of Kaḡḡaz, is situated on the Koḡḡa Çay, i.e. the ancient Granicus, about 15 miles from the Sea of Marmara. At the mouth of the Koḡḡa Çay stands Kara Bigha (the Βιγιάς of classical times), which is the port ('isole') of Bigha. Bigha, under Ottoman rule, was at different times a *sandāḡ* of the *eyālet-i Bahar-ı Sefid* (the province of the Kapadın Paḡa or High Admiral of the Ottoman fleet), a *sandāḡ* of the *vilāyet* of Khōḡḡāwān (Brusa), and still later a *kāḡā* in the Mutasarrıflik of Bigha (the administrative centre of which was, however, not Bigha itself, but Kaḡ-ei Sultāniyye, i.e. Çankīl-Kaḡe). The town had in 1945 about 8150 inhabitants.

PARKY)

**BIGHA** (SEE MISRĀL).

**BIH'AFRĪD B. FARWARDĪN**, an Iranian religious apologist who, in the later period of Umayyad rule—about 129/747—set himself up as a new prophet at Khawāf in the district of Nāḡāpūr. He gathered about him a large following and was put to death by his disciples on the orders of Abū Muḡḡlīm in 177/794. Before this he is believed to have lived in China for seven years, and on his return, to have revealed himself to certain people as resurrected and descended from heaven. Legend also has it that he pretended to be dead and remained for a year in the tomb which he had had built for himself. Enunciating his doctrine in a Persian scripture and claiming that he was in essence a Zoroastrian, he nevertheless adopted certain practices and prohibitions which seem to be inspired by Islam. Among these were the prohibition of wine, animals not ritually bled, and consanguineous marriages, the abolition of the *zāṣṣ* [g.o.], the prescription of seven daily prayers to be offered up facing the sun, and obligatory almsgiving.

Doubtless, he intended by this compromise to give a new lease of life to his old religion. But Abū Muḡḡlīm, incited to turn against him by the Mōbāḡḡs who did not approve of this reform and realisation moreover the danger which this movement represented for the new converts, forced BIH'AFRĪD to rally to Islam and to support the 'Abḡḡād cause. As, in spite of this, the reformer continued his preaching, he was later executed. Adherents of his doctrine, awaiting the return to earth of their master, were still to be found in the 4th/10th century. **Bibliography:** Fihrist, II/4; Khwāzmi, *Mas-jāḡḡ al-'Uḡm*, ed. van Vloten, 81; Raḡḡḡāḡ, *Farḡ*, 347; Šahristānī, 187; Hīrōn, *Chronologie*, ed. Istit.* 1949, 474 ff.; B. Spuler, *Iran in frühislamischer Zeit*, Wiesbaden 1952, 196. (D. SOURDIS)

**BIHĀR**, a province of India lying between 21° 48' and 27° 31' N., and 83° 20' and 88° 35' E., bounded by Uttar Pradesh on the west, Nepāl on the north, Bengal and East Pakistan on the east and Orissa on the south; area, with Chōṭā Nāḡpūr, 67,164 sq.m., population 38,784,000. The dialects of the predominantly Hindu population, Bihārī, Maithilī and Māḡāḡ, are referred to as BIHĀRĪ, and are more akin to Bengālī than to Hindi; the latter is, however, the official language of administration and education. The region is now of major economic importance on account of its coalfields and heavy iron industries.

Biḡār—which takes its name from the now unimportant town of Biḡār, surrounded by Buddhist monasteries (Sk. *vihāra*)—was in the British period from 1765 within the Lieutenant-Governorship of Bengal, later joined administratively with the now independent Orissa (g.o.). This lack of independence reflects the position of the region—whose boundaries have only been formally defined in recent years—from the earliest days of Islamic supremacy in India, and its history is one of individual governors and towns rather than of dynasties and regions. Monghyr (Mungyr), for example, was taken during Iḡḡḡīyār al-Dīn Muḡammad b. Baḡḡḡīyār [Hādǧǧī]s raids on Biḡār in 590/1193 and held by him under the Delhi sultan Kutb al-Dīn Ayyab; it was annexed to Delhi by Muḡammad b. Tuḡḡḡāḡ in 726/1339, belonged to Dījāwarpur (Jaunpur) from 799/1397, reverted to Delhi when overrun by Sikandar Lōḡī in 892/1488, and was later held by the kings of Bengal before becoming subject to the Mughals. Parts of Biḡār did form a separate administrative unit in the 7th/13th century (Šhans al-Dīn Beḡmīsh established a governor in Biḡār in 622/1225); under Akbar in 991/1582 it formed a *sāba* of eight *sarkārs*, subordinate to the *sāba* of Bengal. The capital remained at the town of Biḡār until transferred to Patnā by Šḡḡr Šhāḡ Sūr in the 9th/15th century. The importance of the region was as a buffer between Awadh and Bengal until the Mughal period, when the emphasis was as a line of communication between them, as many fine bridges of the Mughal viceroys testify.

2. Monuments: There is no particular 'Biḡār' style of Indo-Islamic architecture. The finest group of buildings is at Sāḡḡāḡm, including the justly famous mausoleum of Šḡḡr Šhāḡ (inscription of 952/1545) standing 50 m. high in a large artificial lake; its architect, Abūwāl Khān, had been a master-builder under the Delhi Lōḡīs, but his treatment of

the octagonal mausoleum transcends any of the Delhi conceptions. Shēr Shāh obtained the fort of Rohtāsarāh from its Hindi Rājā in 946/1539, and to him is attributed the Dāmā Masjid; the reconstructed fortifications, the palaces, Bahāsh Khān's tomb and mosque, etc., date from the viceregency (948-1008/1580-1600) of Rājā Mān Singh under Akbar; to Mān Singh is attributed the mosque at Hādāī, near Rājīmāhāl: the long barrel-vault traversing the central bay of the *hūmān* of this early Mughal structure recalls the style of Dzwānpur [9.3]. Monghyr has been mentioned above: the fort is reputed to have been built by early Bengal Sults, but the style appears Mughal; Rājā Tōdar Mall is known to have repaired the fortifications in 988/1580. The two forts of Palāmāw, built by local Cere Rājās in the 11th/17th century, were taken by the Mughal governor Dā'ūd Khān Kurayghī, who erected a mosque (1070/1660) and other structures; the Nayā Kūfā boasts the splendid Nāpūrī Darwāzā in the Dīkhānūtī style. The tomb of Muḥammad Shāh Dawlat (Choti Dargah) at Mānāwī erected by the governor Būshīm Khān in 1027-26/1608-16 is of some merit. For other buildings see M. H. Kurayghī, cited below.

**Bibliography:** There are no primary sources specifically dealing with Bihār; for the various historical incidents involving Bihār see *Cambridge History of India*, Vols. iii (1928) and iv (1937) (full bibliographies); also *Imperial Gazetteer of India*, Vol. viii, Oxford 1908, and for local histories, relevant volumes of the *Bihar and Orissa District Gazetteers*, Patna c. 1930; some are revised versions of the former *Bengal District Gazetteer*.

For the monuments of Shēr Shāh Sūrī, see A. Cunningham, *ASI Report*, xi, 1880; Percy Brown, *Indian Architecture (Islamic Period)*, Bombay n.d., Chap. xvi; H. Goetz, *The mausoleum of Sher Shah at Sasaram*, in *Art Islamica*, v, 1, 97; for other monuments also, *ASI Annual Report* 1922-3, 34-41, and (most important, with full descriptions and histories of monuments) Maunū Muhammad Hamid Kurayghī, *List of Ancient Monuments ... in Bihar and Orissa*, ASI, NIS Vol. II, Calcutta 1931, 54-66, 139-147, 146-191, 197-202, 207-219. (J. HERTON-PADE)

#### BIHĀR-I DĀNĪSH (see 'UNAVAT AL-BĀRQĀ')

AL-BIHĀRĪ, MUHAMMAD ALI B. 'ABD AL-SĀKĀR, AL-'UṢMĀNĪ AL-SINDHĪ AL-HANAFĪ was born at Kārā, a village near Muḥibb 'Alīpur in the province of Bihār (India). He belonged to the Malik community, of exotic origin, still unidentified. He received his early education at home from Kūth al-Dīn al-Anṣārī al-Sihāwī and read some books with Kūth al-Dīn al-Husaynī al-Shānābādī. After completing his studies he went to the Decraan where Awrangzib was at the time engaged in military operations against the local rulers. The emperor, impressed by his erudition, especially his high proficiency in jurisprudence, had appointed him *hāfi* of Lucknow. After some years he was posted to Haydarābād on the defeat of 'Abd 'l-Ḥasan Tāsh Shāh, the ruler of Golconda, in 1097/1686-7 at the hands of Awrangzib. He was later appointed tutor to Prince Rafī' al-Kādir, a son of Shāh 'Ālam b. Awrangzib. He went to Kābul in 1109/1097 along with his ward when Shāh 'Ālam was appointed governor of that province. On his accession to the *hāfi* of Lucknow. In 1106-7 Shāh 'Ālam Bahādur Shāh I appointed him the chief justice of the realm and conferred on him

the title of "Fāḍil Khān". He died soon after in 1110/1707.

He is the author of: (i) *Sullam al-'Ulūm*, a famous text on logic; (ii) *Musallam al-'Uḥūd*, a standard work on *uṣūl al-fih*; (iii) *Dzawhar al-Farā*, a dissertation on the individual atom. All these three books are prescribed as courses of study in Indo-Pakistani religious institutions and have been the subject of commentaries, glosses and super-glosses. (iv) *Risāla fi 'l-mughallāt al-'amnat al-wurūd*; and (v) *Risāla fi 'l-ibhāt anna madhhab al-Hanafīyya aḥd 'an al-rā'y min madhhab al-Shāfi'yya*.

**Bibliography:** *Āḥid Bilgrūd*, Ma'āhir al-Kirām, Haydarābād (Dn.) 1910, 211; *Iḍen*, Subhat al-Mawjūd *fi 'd-dikr al-Hindū*, Bombay 1303/1886, 76; Siddiq Hasan Kanawdī, *Abjad al-'Ulūm*, Bhopal 1296/1878, 905; Rahīmī 'Alī, *Tadhkira-i 'Ulamā' 4 Hind*, Lucknow 1312/1894, 175; Brockelmann, *GAL II*, 420, S II 622-4; *JASB* (1913), 195 ff.; Muhammad Husayn Azād, *Tadhkira-i 'Ulamā' 4 Hind*, Lahore 1914, 42; Zubaid Ahmad, *Contribution of India to Arabic Literature*, Jullundur 1916, 36-9, 126-130; 'Alī al-Hayy Nadwī, *Nuḥbat al-Khawāṣir*, Haydarābād (Dn.) 1376/1957, vi, 250-2; Fakir Muhammad Lāhorī, *Ḥadā'iq al-Banāfiyya*, Lucknow, 1324/1906, 431; Fadl al-Imām 'Iḥyārābādī, *Tarāḍim al-Fudāl* (Bih. trans. Barmee Ansari), Karachi 1936, 48-53. (A. S. BARMEE ANSARI)

#### BIHĀRISTĀN (see QIAD)

**BIHISHT** (see BĀSAR)

**BIHISHTI**, Ishāḡiyya of an Ottoman poet and historian, whose personal name was Ahmed. He was born in about 871/1467-7, the son of a certain Suleymān Bey. At the age of 13 he entered the service of Bāyezid as a page, but was banished from court for some offence and is reported to have fled to Harāt. He was pardoned but not received back into favour. He was writing his History in the last year of Bāyezid's reign (917/1511-2) and probably died in that year.

Bihiḡit is said to have written the first Khamsa [9.2] in Ottoman Turkish; of his *methnests* survive: *Laylā ve Mēdnān*, *Muḥsen al-Eṣrār*, *Mīrā u Muḡtārī*, *Ishkender-nāme* and *Heft Peygher*. His History, written in a somewhat turgid style, probably consisted originally of eight 'books', one for each of the sultans from 'Oghuz to Bāyezid II. Ad. 2869 in the British Museum and Revan Köprü 1270, two portions of the same MS, cover the years 791-908; Ad. 24, 995 in the British Museum, a later compilation mainly based on Bihiḡit's history, probably contains material from the first three 'books', which are not known in the full version. The history, which follows closely the *Hasd Bihiḡit* of İdrīs Bidlīsī [9.2], is neither so early nor so important as was once believed.

**Bibliography:** Rabinger, 43, and sources noted there, especially Rieu, *CTM*, 44 and 47; S. Nūzhet Ergun, *Türk Şairleri*, s.v.; R. Uter, *Bikhiḡ ve Laylā ve Mēdnān*, unpublished thesis, no. 386 in the Türkiye Enstitüsü library (a study of Turkish MS 1591 in the library of Istanbul University); a MS. at Ushaw College, Durham, contains the five poems named above.

(V. L. MÉSAGE)

**BIKHUBADH**, in 'Abhāsī times the name (adopted, with the organisation, from the Sāsānid Persians) of three districts (Aṣṭān, Arabic *Kūra*) of the province of Bārk, all situated on the eastern branch (modern Hilla branch) of the Euphrates. The name means "the Goodness (or good lands?) of

Kubūdh", a Sāsānid king who reigned in the 5th century A.D. The districts bordered, to the south, on that of Kūfa, and on the Great Swamp of the Lower Euphrates. The three districts, sometimes referred to jointly as the Bikhūbādīh, were those of Upper, Middle, and Lower Bikhūbādīh. The Upper district contained six sub-districts (*hassid*), those of the village and ruins of Bābil (Babylon), Khutarniya, Upper and Lower al-Tallūḡa, 'Ayn al-Tamr, and others. Middle Bikhūbādīh contained four subdivisions, those of the Baḡdāt Canal, of Sūrā and Bārsamān, of Bārsamān, and of Naḥr al-Māy. Lower Bikhūbādīh had five subdivisions, including those of Furāt Dadahlā and Nīstar.

**Bibliography:** *BGA*, *passim*, particularly iii, 133; vi, 723; Yāqūt, i, 770; *Mawṣid al-Iḥdā*, *Lexic. gener.* (ed. Joynboll), i, 57, 183; iv, 98, 412 ff.; Balādhurī, Futūḥ, 271, 484; M. Streck, *Babylonien nach den arab. Geographien*, i (1900), 16, 20; J. Marguier, *Érudition* = *Abb. G. W. Geol.*, New Series, Vol. iii, no. 2 (1901), 142, 163 ff.; Le Strange, 70, 81. (M. STRECK; S. H. LOWENKOPF)

**BIHRŪZ** (Amīn), son of Amr Rustam and, like him, chief of the Dombolt. A loyal ally of the Sāfawids, he took part in the war between Shāh Tahmāsp and Sultān Sulaymān al-Kānī in 945/1538. He died in 985/1577, at the age of 80, after having been in power for 50 years. His labab was Sulaymān Khāllā. (B. KRITINE)

**BIHRŪZ KHĀN**, son of Shāh Bandar Khān, amir of the Dombolt. He was known under the name of Sulaymān Khān al-Dhān. At the time of Sultān Murād's attack on Aḡharbāyḡān, he distinguished himself in the army of Shāh Sāfi. He died in 1041/1631-2.

**Bibliography:** M. E. Zakī, *Maḡāhīr al-Kurd wa-Kurdīn*, 144; *Tārīkh al-Dawla wa'l-Imarat al-Kurdīya*, 386, 387. (B. KRITINE)

**BIHZĀD**, KAMAL AL-DIN, UṢTĀD, the most famous Persian miniature-painter. The main sources for his life are: i. Kh'āndamīr, *Habib al-Siyar*, Bombay 1857, iii, 350 (T. W. Arnold, *Painting in Islam*, Oxford 1928, 140) and two documents from his *Nāma* Nāmah (Bibl. Nat., MS. Suppl. Pers. 1842), a preface to an album of calligraphy and miniatures compiled by Bihzād and the document appointing him head of the royal Kitāb-Khāna (Muhammad Kaẓwīnī-L. Bouvat, *Deux documents inédits relatifs à Behzād*, in *RMN*, xxvi, 1914, 146-161); 2. *Bābūr-nāma*, ed. Beveridge, London 1921, 278, 292, 320; 3. Mirā' Muhammad Haydar Dughlā, *Tārīkh-i Raghīdī* (T. W. Arnold, in *BOSQ*, v, 1930, 672-673); 4. Dīst Muhammad b. Sulaymān of Harāt, *Account of past and present printers of the year 951* (1544) in the Bahār Mirā' Album, Top-kapi Sarai Libr., Istanbul (Binyon-Wilkinson-Gray, *Persian Miniature Painting*, Oxford 1933, 186); 5. Mustafā 'Alī, *Menzih-i Hānecārīn* (1931/187). Istanbul 1926, 37, 62-65, 67; 6. Kādi Ahmad b. Mir-Munshī, *Gulshān-i Hunar* (1075/1660), *Calligraphers and painters* ..., tr. by V. Minorsky, Washington, 1959, 159, 179-80, 183); 7. Iskandar Munshī, *Tārīkh-i 'Īlam-ārā-yi 'Abbāsī* (T. W. Arnold, *Painting in Islam*, 141).

On the basis of the existing work of Bihzād, one can assume that he was born during the decade 1260-66, Mirā' Muhammad Haydar Dughlā, Dīst Muhammad, and Kādi Ahmad describe him as a pupil of Amr Rūh Allāh, known as Mirak Nakāsh of Harāt, the librarian of Sultān Husayn Bāyqārā, who brought up the young orphan; the Turkish art historian 'Alī states, however, that his teacher was

Pīr Sayyid Ahmad of Tabriz; lastly Dīshānūr mentions Khālī Mirzā as an artist whose style Bihzād continued (*Tāsh-i Dīshānūr*, trs. Röger and Beveridge, ii, 119). He became recognised very quickly, and received great artistic opportunities through his first patron Mir 'Alī Shāh Nawā'ī and, from some time before 893/1488 on, through the Tīmūrīd Husayn Bāyqārā, at whose court in Harāt gathered the intellectual *élite* of the time with Nawā'ī, Dīshānūr and Kh'āndamīr at their head. Bihzād remained in Harāt after the dynasty was overthrown by Muhammad Khān Shaybānī of Bihār; since that prince had the presumption to correct Bihzād's miniatures. He moved, however, to Tabriz, the Sāfawid capital, with the latter's conqueror, Shāh Ismā'īl. The favour which he enjoyed with the latter is evident from the story told by 'Alī of Ismā'īl's anxiety about Bihzād during the campaign against Sultān Selīm I, in 1514. The distinction in that prince had been even more evident from the fact that on 27th Dīshānī 1528/1532 he was appointed head of the royal library and placed in charge of all the librarians, calligraphers, painters, golders, marginal draughtsmen, gold mixers, gold beaters and lapis-lazuli washers. This document disproves the statement of Kādi Ahmad that Bihzād remained in Harāt until the beginning of the reign of Shāh Tahmāsp (930/1524). Under Shāh Tahmāsp, Bihzād also received numerous marks of honour and was engaged along with Sultān Muhammad and Akā Mirzā in the royal library. In the *Lafz-i-Nāma* of Faḡh Sultān Murād's attack on Aḡharbāyḡān, he is mentioned as the master of working; he took a Turkish assistant, Darwīsh Muhammad Nakāsh of Khurāsān, a colour-preparer, as his pupil and finally entrusted him with his own works. As other pupils are mentioned by Haydar Mirzā: the portrait painter Kāsim 'Alī, Maḡdūd and Muḡlā Yūsuf; by 'Alī: Sharḡhāda of Khurāsān and Akā Mirzā; by Kādi Ahmad: Dīstī Dīwāna and the father of the painter Murāfir 'Alī; he also called Bihzād a contemporary of Yāf Muḡhabbil of Harāt which is borne out by the fact that they jointly worked on the *Bistān* of 893 H. in Cairo (see below). Kādi Ahmad places Darwīsh and Kāsim 'Alī into a slightly earlier period than Bihzād, which would make the master-student relationship doubtful. Finally Iskandar Munshī states that Murāfir 'Alī was one of his pupils. According to a chronogram given by Dīst Muhammad, Bihzād died in 944/1536-1537 and was buried in Tabriz beside the poet Shāykh Kamāl of Khujandī; according to another tradition, he died earlier, in 1313/1534. Still another tradition preserved by Kādi Ahmad has it that he died in Harāt and that he was buried in the neighbourhood of Kūfā-Mukhlā within an enclosure full of paintings and ornaments. In the Yildiz Library in Istanbul is an alleged portrait miniature which shows the aged Bihzād as an unassuming, apparently shy man in Sāfawid costume (A. Sakisian, *La miniature persane*, Paris-Bruussels 1929, fig. 130).

The older sources yield little information for our knowledge of Bihzād as an artist, however much they praise him as the greatest of his age. Kh'āndamīr's extravagant language seems to emphasise his great refinement, minute perfection and power of lifelike representation. Haydar Mirzā compares him with his teacher Mirak, whose art is ripe although not so finished; also with Shāh Murāfir who seems to have been held in almost equal esteem, whom

Biḥzād surpassed, however, in control of the brush, in drawing and in figure composition, without attaining his delicacy. Kādi Ahmad stresses his sense of proportion and he mentions the excellence of his bird images and that he was fluent in his charcoal drawings. Bābur praises his art as very delicate, especially emphasising the fact that he drew bearded figures admirably, while his beardless figures were not so good, and adds that he exaggerated the length of the double chin. Bābur's successors on the Mughal throne were also among his admirers, eagerly endeavoured to get his works for their libraries and frequently mention the prices they paid (c. 3-5,000 rupees). His works had, however, already previously been collected, as some of his paintings formed part of an album of the Safawid prince Sultan Ṭhrālm Mirzā (d. 984/1517). Dīshāngir is one of the first to mention the tradition, also recorded elsewhere, that Biḥzād was specially distinguished for his drawing of battle-scenes. As a result of the general esteem in which he was held Biḥzād's name finally became proverbial. According to Kādi Ahmad he should be put alongside of Māni, the other traditional creator of incomparable masterpieces, while in typically Persian hyperbole, Kādi Ahmad exaggerates this further by stating that Māni would have imitated him had he known of him. Māni, however, hints that Biḥzād's success was to some extent due to the influence of his patrons. This presupposes intrigues and jealousies which may account for the fact that Biḥzād is not properly listed in the account of Persian painters and calligraphers given by the Safawid Prince Sām Mirzā in his *Tuhfa-yi Sāmī* (M. Mahfuz-ul Haq, *Persian Painters, illuminators and calligraphers, etc. in the 16th century, A.D.*, in *Journal & Proceedings, Asiatic Society of Bengal, New Series*, vol. 38, 1932, 239-42).

Modern research has been mainly concerned with identifying Biḥzād's original works. It has been to some extent successful, especially since the London Exhibition of Persian Art in 1931 at which a large number of pictures ascribed to Biḥzād were brought together. It is, however, not yet possible to isolate him completely from others in his artistic development and characteristic qualities, as a sufficiently large number of works have not yet been definitely attributed to his predecessors and contemporaries. The problem is greatly complicated by the fact that as a result of Biḥzād's fame his signature has been wrongly added to miniatures for centuries, be it for financial profit or to provide a collector with a page by the celebrated painter, or his works have been copied, including the signatures, either in *foto* or in parts, or they have been finished or restored after his death.

The basis for our actual knowledge of Biḥzād's work is provided by the paintings in the *Bāstān* MS. finished in Rājāb 893/June 1488 in Harāt, in the Egyptian National Library, Cairo. It was written for Sultan Ḥusayn Bāyqarā by Ṣalāḥ 'Alī Kātib, illuminated by Vārī, and it has one double frontispiece miniature (with a now defaced signature) and four single-page paintings, dated 893 and 894. Two of the latter have Biḥzād's name in the architectural decoration, so that they could not possibly be a later addition, and a third one has a signature that is so inconspicuously placed and modest in tone that they too seem to be genuine. As all paintings are in the same style and of the same quality, they have been accepted nearly universally as authentic works of the master. They prove to be the fulfilment of the Timūrid style

which is shown to perfection. These paintings are most skilfully and harmoniously composed, also in relation to the inserted text units. Within the pictorial space which is treated according to the concepts of the period the none-too-large figures are well distributed in their proper numbers. The rich pigments are of a wide range and applied with a highly developed colour sense. They reveal that, on the whole, Biḥzād seems to have preferred cool colours, such as blues and greens, particularly in interior scenes, but they are always balanced by complementary warm colours, especially a bright orange. All the units of the design fit into a decoratively conceived all-over picture which is perfectly executed. The branches of trees in bloom, the richly decorated tile patterns, and the designs on the carpets reveal in particular the artist's decorative sense and the delicacy of his work. Its realism distinguishes it, however, from the paintings of the previous period. This is apparent in the iconography which is no longer purely of courtly nature and primarily devoted to the many deeds and loves of kings; it brings in addition and on the same level everyday events (e.g., the odd behaviour of a drunken prince, the *awāḥ* at a mosque, mares nursing foals in a stud farm, etc.) and shows also a concern for the activities of persons of lower social standing (a *hasebi* chastising an intruder, servants bringing food, peasants at work, etc.). Furthermore the figures are no longer mere types, puppets with mask-like faces, but are individualised and often shown full of spontaneous movement or with a sense for the dramatic. Even when they are shown in repose, their attitude is natural.

Since none of the other works connected with Biḥzād have a safe signature, though some of them carry attributions dating from the first half of the 16th century, only their stylistic aspect—the perfectly executed combination of the decorative and the realistic—can serve as guide to other true Biḥzādian paintings. Some additional help is provided by the custom of the period to work with stencils, so that individual figures known from a well established Biḥzād painting can be traced in other, more uncertain works, although such a procedure could also have been done by a student. Unfortunately, our present ignorance of Biḥzād's paintings prior to 1485 and after 1500 leaves us in doubt about the master's activities in his youth and old age. In view of so many uncertainties, it is natural that scholars have disagreed about certain attributions, but even if not all of the following works are by the master himself, they are at least from his school.

1. Mir 'Alī Shīr Nawā'ī, *Khamsa*, dated 890/1485 and written for Badī' al-Zamān son of Sultan Ḥusayn Bāyqarā. 4 vols. in Bodleian Library (MSS. Elliot 287, 408, 317, 339) and 1 vol. in John Rylands Library, Manchester (Turk. MS. 3). At least 1 miniature (Elliot 287, fol. 77r: "Muḥammad and his Companions") very close to Biḥzād while another, Elliot 339, 95v: "Mystics in Landscape", shows strong influence of his style.

2. Amīr Ḥusraw Dīblawī, *Khamsa*, written in 890/1485 by Muḥammad b. Aḥar. Four miniatures close to Biḥzād (F. R. Martin, *Les miniatures de Biḥzād dans un manuscrit persan daté 1485*, Munich, 1912, pls. 9, 16, 18 and 21).

3. Gulshin, written by Ṣalāḥ 'Alī Kātib, Muḥarram 891/Jan. 1486. M. de Rothschild Collection, Paris. One miniature ("Sa'di and the youth of Kāshghar") most likely by Biḥzād. The paintings

Figure A: "Entertainment at the Court of Ḥusayn Bāyqarā". Left part of double frontispiece by Biḥzād in a manuscript of Sa'di's *Bāstān*, written in 893/1488. Cairo, Egyptian National Library.

(Courtesy, Egyptian National Library)

Figure B: "King Dārā and the Horseherd". Miniature by Biḥzād in a manuscript of Saʿdī's *Bāstān*, written in 893/1488, Cairo, Egyptian National Library.

(Courtesy, Egyptian National Library)

Figure D: "Battle Scene". Miniature by Biḥzād in a manuscript of Nizāmī's *Āl-e Rūm*, painted at the end of the XVth century, British Museum, Add. 25900, fol. 211v.

(Copyright British Museum)

Figure C: "Masque Scene". Miniature by Biḥzād in a manuscript of Saʿdī's *Bāstān*, written in 893/1488, Cairo, Egyptian National Library.

(Courtesy, Egyptian National Library)

Figure E: "Iskandar and the Seven Sages". Miniature probably by Bihzād in a manuscript of Nizāmī's *Khamsa*, of 900/1494-95, British Museum, Or. 6810, fol. 214r.

(Copyright British Museum)

of these 3 MSS. of 1485-86, if they are indeed by Bihzād, would represent the work of his youth, which has not yet quite reached the quality of the Cairo *Bihzād* MS.

4. Double miniature "Sultān Husayn Baykāra with his Harām and Retinue in a Garden", ca. 1490-1495, Tehran, Gulistan Palace Library. Very close to Bihzād's style, goes at least in part back to him.

5. Nizāmī, *Khamsa*, text dated 846/1442, British Museum, Add. 25,090, 19 miniatures of later date, one dated 898/1493 which is the approximate date for 4 miniatures in Bihzādian style. Three paintings have small attributions probably genuine (fols. 121v, 161r, 231v), a fourth, unsigned on fol. 144r, ("Maḡnūn before the Ka'ba") of such high quality that it could also be by Bihzād.

6. Nizāmī, *Khamsa*, written for Amīr 'Alī Fārd Barīk, one painting dated 900/1494-95, British Museum Or. 6810. 16 miniatures attributed to Bihzād by Djahāngīr and most likely either by him (fols. 37v, 135v, 190r, 214r, 225v, 233v) or by his students (fols. 27v, 72v, 93r, 100v, 128v, 137r, 144v, 154v, 157r, 175r).

7. Shuraf al-Dīn 'Alī Yazdī, *Zafar-nama*, probably written for Sultān Husayn Baykāra; according to a later colophon finished in 872/1467 by Shīr 'Alī, but six double-page paintings date from 1490s. Johns Hopkins University Library, Baltimore (R. Garrett Coll.). 8 (sic) miniatures attributed by Djahāngīr to the early period of Bihzād. All paintings most likely by Bihzād, though in parts, possibly in collaboration with students; several show later retouches, probably Mughal.

8. Circular miniature "Pir and Youth in Landscape" in an Anthology dated 930/1524 written for Waṣīr Khān Malik Ahmad, Washington, Freer Gallery of Art, no. 44. 48. The painting which may be earlier than the MS. closely paraphrases a miniature in no. 2. According to the introduction, the owner, a high official of the Safawid court, regarded it as a genuine work at a time when Bihzād was alive and connected with the royal library. It seems therefore to be a work of the master's old age which would explain its weaker and repetitive character; alternatively, it may be a copy by a student, supervised by Bihzād and therefore regarded as his own work.

9. Single painting "Two Fighting Camels with Attendants", Tehran, Gulistan Palace Library. According to its inscription this is a work by Bihzād when he was 70 years old. In 1017/1608 Djahāngīr took it to be an authentic picture. A mid-15th century version of the same theme shows that this is much weaker than its prototype (R. Ettinghausen, *Some paintings in four Istanbul albums*, in *Art Orientalis* 4, 1954, 102, figs. 3 and 63). Nos. 8 and 9 would therefore have to be regarded as possible works of Bihzād's declining years.

Works mentioned in literature but not now known are: a *Khamsa* of Nizāmī written by Mawlānā Mahmūd Nishāpūrī for Shāh Tahmāsp, a *Timūr-nama* written by Sultān 'Alī Maḡhādī, and the paintings in the album of miniatures for which Khānīdār wrote the preface and in the one owned by Sultān Ibrahim Mirā.

Bihzād's influence is first seen in his pupils, of whom some, like Kāsim 'Alī and Ākā Mirā, almost attained their master's level. In spite of the fact that another change in style took place very soon under the Safawids, there was in the first three decades of the 16th/16th century a transitional style which shows

many features of Bihzād's work; a characteristic example is an 'Alī Shīr Nawā'ī MS. of 1526 (Bibl. Nat., Suppl. turc. 316). Harāt painters carried Bihzād's style to Bulghārā where it became established at the Shaykhān court. A MS. of 'Ayyūb's *Mīhr-u Maḡfār*, copied in Bulghārā in 929/1523 is a good example of how much more faithful the Bihzādian style was preserved there than in Tabrīz (Freer Gallery of Art, nos. 52,5-12,8). Here the tradition of Bihzād and the Harāt school survived till beyond the middle of the 16th century. By the migration of artists from centres still under Bihzād's influence, the Harāt style and Bihzādian tradition were brought also to India.

Independently of the general development of style we find Bihzād's miniatures and motives more or less faithfully copied down to the 17th century. "Dārā's Meeting with the Horseherd" in the Cairo *Divān* is found in *Divān* MSS. of 1335 (Paris, Cartier collection) and 1556 (Bibl. Nat., Suppl. pers. 1187), and others. The "Fighting Camels" recur in many Indian and Persian miniatures, on a Persian carpet with animal designs of the 17th century (Berlin, formerly Schloss-Museum) and on a green glazed faience bottle of about 1600 (London, Victoria and Albert Museum), while as late as 1028/1619 and 1035/1626 Bihzād's 'Abdāl reproduces designs thought to be by Bihzād (Paris, Vignier collection and Gulistan Palace Library).

**AL-BIKĀ'Ī**, plural of al-Bak'a, the proper name of the elongated plain commonly called the Bekaa, which, at a mean altitude of 1,000 metres, lies between the mountains of Lebanon and Anti-Lebanon. The ancients had clearly defined it by the term *Coele Syria* (Hollow Syria) of which the appellation was subsequently extended. It is a depression of tectonic origin filled in by sediment, and is an extension of the Jordan rift along the north-south axis which forms one of the basic features of the structure of the Near East. Two rivers, the Litānī and the Orontes, which have their sources on either side of the Ba'alabakk watershed, drain it rather inadequately before cutting their way, the one through the rugged highlands of the south, the other through gorges opening on to the basalt plateau of Hims. Its continental climate makes it a semi-arid steppe land, which nevertheless is studded with oases and depressions, for long marshy, which justify al-Bak'ahāndī in mentioning the lake of al-Bikā' in his day.

The complementary works of drainage and irrigation, among which those of Tankiz, viceroys of Syria at the beginning of the Mamlūk epoch, have remained famous, contributed to its development. But today it remains still scantily populated (38 inhabitants per sq. km.) and is traditionally devoted to the production of cereals, which is maintained by a system of communal ownership or of big estates. The majority of its population is Muslim, with Shi'is predominating in the north, and lives in large villages situated for preference on the foothills, where caves have long attracted those inclined to the monastic life. Among the localities in this high valley, in ancient times a region of sedentary population and a much-used trade route which then became from the time of the Arab

conquest one of the richest districts in the province of Damascus, one may mention, besides many sites renowned for their ancient ruins and cave carvings, the Umayyad residence of 'Ayn al-Jarir (q.v.), the straggling village of Karā' Nūh, which was the Mamlūk capital, and the little prosperous villages of today such as Zablā. The most important centre has always been Ba'alabakk (q.v.) although in Mamlūk times the authority of this citadel, which had for a long time commanded the whole of the country, had been considerably curtailed, and the neighbouring countryside, divided into two districts, had been entrusted to an independent governor. From that time, alongside the *nahya* of Ba'alabakk there were two *vilāyas*, the Bikā' al-Ba'alabakkī and the Bikā' al-'Azizī.

The last name is to be connected according to Arab historians with that of a son of Salāb al-Dīn, al-'Aziz (q.v.), and according to certain modern scholars with that of the ancient local divinity Atīnos. Perhaps one can also see traces of ancient cults in the numerous popular dedications to which toponymy and monuments bear witness, and which evoke above all either the story of Noah and the memories of the flood, or the figure of Ilyās, a hermit *par excellence* and despiser of the cult of Ba'al.

**BIKĀSĀSHI** [see BIKRASHI].

**BILĀD-I THĀLĀTHĪA**, the three towns, a term employed in Ottoman legal and administrative usage for Eyyūb, Galata, and Üsküdar, i.e., the three separate urban areas attached to Istanbul. Each had its own *kādi*, independent of the *kādi* of Istanbul, though of lower rank. Every Wednesday the *kādi* of the 'three towns' joined the *kādi* of Istanbul in attending the Grand Veiz. This judicial autonomy of the three towns goes back to early Ottoman times, probably even to the conquest. The three towns also enjoyed some autonomy in police matters, being subject not to the police jurisdiction of the Agha of the Janissaries, which [was] proper, but of other military officers.

**BILĀL B. ABĪ BURDA** [see ABĪ BURDA].

**BILĀL B. DJARIR AL-MUHAMMADĪ**. Abū 'l-NABA', Zura'yā' (q.v.) vizier and governor of 'Adan. He was appointed governor of the city by the Zura'yā' prince Sabā' b. Abī 'l-Su'ūd at the time of his war against his cousin and co-ruler of 'Adan, the Mas'ūdī 'Alī b. Abī 'l-Qharāt, 531-32/1136-38. With the death of Sabā' in 533/1138-39 his son and successor, al-'A'azz, intensely jealous of Bilāl, intended to have him put to death, but died himself in 534/1139-40 before this could be achieved. At his death Bilāl had a younger son of Sabā', Muḥammad, brought from Ta'izz, where he had gone into concealment from the hatred of his brother, placed him on the throne over the young

sons of al-'A'azz, and married him to his daughter. As a reward for his loyalty Bilāl was appointed vizier of the now unified city, a post which he retained until his death in 546-47/1151-53. Following the accession of Muḥammad b. Sabā' Bilāl was accorded the honorific titles of *al-Shaykh al-Sa'id al-Muwaffāq al-Salāb* by the Fātimid caliph al-Hāfi. He is reported to have amassed a considerable fortune while in office, of which he reverted to the ruler upon his death. Two sons of Bilāl followed him in the office of vizier until the fall of the dynasty with the Ayyūbid conquest of South Arabia (569/1173).

**BILĀL B. RABĀ'Ī**, sometimes described as Ibn Ḥamāma, after his mother, was a companion of the Prophet and is best known as his *Mu'adhḡin*. Of Ethiopian (African?) stock, he was born in slavery in Mecca among the clan of Jumah, or in the Ṣarāt. His master is sometimes given as Umayya b. Khalaf (q.v.) but also as an unnamed man or woman of the same clan. He was an early convert—some sources credit him with having been the second adult after Abū Bakr to accept Islam. Owing to his status he suffered heavy punishment and torture, especially, it is stated, at the hands of Umayya b. Khalaf, but he bore it with fortitude and would not recant. Finally, he was rescued and manumitted by Abū Bakr who bought him, or exchanged for an able-bodied slave of his own who had not accepted Islam. Henceforth, although a freedman of Abū Bakr, Bilāl seems to have been in constant attendance on the Prophet.

He emigrated to Medina, where at first he suffered from fever along with Abū Bakr and a number of Meccan Muslims. The Prophet established a tie of brotherhood between him and Abū Hurayra of Khaybān, whom Bilāl later named as his representative for receiving his pension when he himself decided to campaign in Syria. As a result of this tie of brotherhood, 'Umar attached the list of African pensioners to that of the tribe of Khaybān, and Ibn Ishāq records that this was the case in Syria in his own days.

Bilāl became "official" *mu'adhḡin* when the call to prayer was first instituted in the first year of the *Hidjra*. He accompanied the Prophet on all military expeditions. At Badr he caused the deaths of Umayya b. Khalaf and his son, both of whom had already surrendered, but their captor was completely powerless to defend them against the determined attack led by Bilāl.

Although best known as his *mu'adhḡin*, Bilāl was also the Prophet's "mace-bearer" [see 'ANASA], his steward (*Khāzin*), his personal servant, and on occasions, his "adjutant". The climax of his career as a *mu'adhḡin* came when Mecca fell to the Muslims and Bilāl called the faithful to prayer for the first time from the roof of the Ka'ba. After the death of the Prophet, Bilāl agreed to act as *mu'adhḡin* to Abū Bakr but refused a similar

request from 'Umar, and joined the campaigns in Syria, where he spent the rest of his life. Some sources say that he refused to act in that capacity after the Prophet's death and called publicly to prayer on only two occasions afterwards—when 'Umar visited al-Djābiya, and when Bilāl himself paid a return visit to Medina and was requested to call the *adhān* by al-Hasan and al-Husayn. Both were moving occasions.

Bilāl seemed to have attained high prestige during his lifetime. An Arab tribe accepted his brother as a suitor in spite of his bad character, and (according to Tabarī, I, 2527) when 'Umar sent a representative to Syria to investigate the source of certain donations made by Khālid b. al-Walid, Bilāl lent support to both the different commander Abū 'Ubayda and the Caliph's representative, by himself removing Khālid's turban and demanding an answer. When a satisfactory explanation was given, Bilāl restored Khālid's turban with full respect and honour.

He is described as being tall and thin with a stoop, of dark complexion, with a thin face and thick hair strongly tinged with grey. The date of his death is given variously as 17, 18, 20, or 21 (63), 639, 641, or 642) and his place of burial is stated as Aleppo or, more probably, Damascus or Darayā.

**BILAWHAR WA-YŪDĀSĀF**, hero of the *Kitāb Bilawhar wa-Yūdāsāf* (*Bilwāhar*), an Arabic work deriving ultimately from the traditional biography of Gautama Buddha, and subsequently providing the prototype for the Christian legend of Barlaam and Josephat.

Contents of story. To the king childless king Janayyar, a pagan ruler of Sūlbat (i.e., Kapilavastu) in India, a son is born by miraculous means. The king names him Yūdāsāf (better: Bōdhissattva = Bodhisattva). An astrologer predicts that the prince's greatness will not be of this world; the king therefore confines the child in a city set apart, to keep him from knowledge of human misery. Growing up, Yūdāsāf frets at his confinement and insists on being allowed out. Finding forth, he sees two infirm men and later, a decrepit old man, and learns of human frailty and death. The holy hermit Bilawhar of Sarandīb (Ceylon) then appears in disguise and preaches to Yūdāsāf in parables, convincing him of the vanity of human existence and the superiority of the ascetic way. Bilawhar spurs removal and riches, indulgence in food and drink, sexual pleasure and all fleshly delights; a vague theme coupled with belief in immortality is preached, but no specifically Islamic dogma advanced.

King Janayyar is hostile to Bilawhar and opposes Yūdāsāf's conversion. In spite of the efforts of the astrologer Rāhīs and the pagan ascetic al-Bahwan, Janayyar's overcome in a mock debate on the faith and is himself won over. Yūdāsāf renounces his royal estate and embarks on missionary journeys: after various adventures, he reaches Kaḡḡūr (i.e., Kusinārā), where he entrusts the future of his religion to his disciple Abhād (i.e., Ananda) and dies.

The accompanying table shows the occurrence of the principal parables and fables in the three surviving Arabic versions and in the Georgian and Greek Christian recensions stemming therefrom.

Sources. The *Kūb Bilawhar wa-Yūdāsaif* is not a direct translation from any Indian Buddhist work but a synthetic compilation built round episodes in the legendary life of Buddha; it embodies parables of extraneous provenance, including the New Testament parable of the Sower. The narrative framework contains sections reminiscent of such works as the *Buddha-carita*, the *Mahāvastu*, the *Lalitavistara* and the *Jātaka Tales*. Note that in the authentic tradition, the Buddha had no teacher, however, the ascetic preacher Bilawhar figures in embryo in the Fourth Omen, where the Buddha-elect encounters in Kapilavastu one who had become a wanderer "for the sake of winning self-control, calm, and utter release".

Early clues to the story's transmission to the West are provided by Central Asian Buddhist-Sogdian texts, where *Būdāsaif* is shortened into the form *Pūtyōp*, i.e., *Būdāsaif*, and by the Manichaean fragments recovered from Turfan in Chinese Turkestan. Le Coq published (*SBPr. Ak. W.*, 1909, 1202-18) a Manichaean Turkish fragment containing the encounter of the Bōdāsaif prince with the decrepit old man; the same scholar published (*Türkische Manichäische aus Chotscho*, I, 2-7, in *Abh. Pr. Ak. W.*, 1912, Ashgani) and Kadow and Oldenberg (*Imp. Akad. Nauk*, 6th ser., VI, 1912, 751-3, 779-82) elucidated another, containing the story of a drunken prince who mistakes a corpse for a maiden, later incorporated in the Ibn Bābūya version. Of particular importance is the discovery, communicated in 1957 by W. B. Henning to the 24th International Congress of Orientalists, Munich, of a fragment in the Berlin Turfan collection comprising portions of 27 couplets of an early Persian metrical rendering, in which the heroes' names occur in the forms *Eylahar* and *Eudāsiif*. This fragment, containing part of Bilawhar's exhortation to Bōdāsaif and of the dialogue concerning Bilawhar's age, is part of a manuscript written not later than the first half of the 10th century A.D. The occurrence of the Iranian name-form *Eudāsiif*, as opposed to the Arabic *Būdāsaif* with *-ā-* in the second syllable, shows that this version belongs to the earliest line of transmission; it has been tentatively attributed to Rōdāki (p.g.) or his

school. These indications, pointing to a Central Asian environment and a Middle-Iranian language medium for the early development of the Bilawhar and Yūdāsaif romance, are supported by Yūdāsaif's inclusion, together with Mānī, Bardsayās, Māzāk and others, in a list of false prophets condemned in 'Abd al-Kāfir b. Tāhir al-Baghādī's treatise *Al-furq bayn al-firak* (ed. Muhammad Badr, Cairo 1328, 333; pt. II, trans. A. S. Halkin, Tel-Aviv, 1935, 200-1). Authorities such as al-Bīrūnī (*Chronology of Ancient Nations*, trans. Sachau, 186-9) connect Bōdāsaif with the Sabaeans, who were supposed to identify him with both Enoch and Hermes Trismegistus; Bōdāsaif was also represented as having invented the Iranian alphabet.

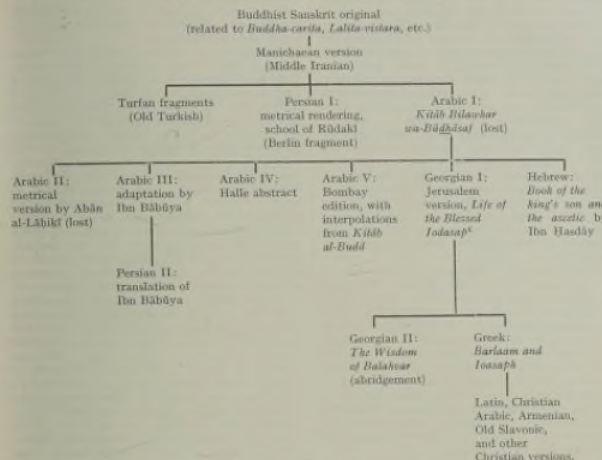

Versions of the work. Among the books translated in early 'Abbāsid times from Pehlevi into Arabic by Ibn al-Mukaffā' (p.g.) and his school, the *Fihrist* lists (305) the *Kūb al-Budd*, the *Kūb Bilawhar wa-Yūdāsaif* (*Būdāsaif*) and the *Kūb Būdāsaif mayra*. The last-named book survives as a chapter of the *Nabā'id al-furak* b. Tāhir al-Baghādī *wa-Yūdāsaif* (Browne in *JRAS*, 1920, 216-7; Rosen in *Zap. Vost. Ost. Imp. Russk. Arkh. Obshchestva*, 1901-2, 77-118). The first two are amalgamated in the *Kūb Bilawhar wa-Būdāsaif* published at Bombay in 1306/1885-9 (Russian trans. by Rosen, edit. by Krakovsky; *Poest' o Varlaame putimke i Isade Isavrite indyokom*, Moscow, 1947). This Bombay edition is the fullest version of the text: episodes introduced from the *Kūb al-Budd* having been distinguished from the remainder, the original Bilawhar and Bōdāsaif (Yūdāsaif) story may be largely reconstituted, reference being made to the Halle abstract (edit. by Hommel in *Verh. des VII. Int. Orient.-Congr.*, Semit. Sect., Vienna 1885, 115-65; trans. Rehatsek, *JRAS*, 1890, 119-33), the adaptation incorporated in the *Shi'at Kūb al-Budd al-din wa-Yūdāsaif* al-ni'ma by Ibn Bābūya (p.g.), the longer Georgian Christianised version discovered in Jerusalem (Greek Patriarchal Library, Ms. Georgian 140: edit. Abuladze, *Balasarionis K'art'uli redaktatsi*, Tiflis, 1957), as well as to the early 13th century Hebrew paraphrase by Abraham b. Hadyar or Chisid (see Steinschneider, *Die hebr. Uebersetzungen des Mānī*, *alters*, 86-7). The English fragment of the *Kūb Bilawhar wa-Yūdāsaif* in the Taimyriya collection, *Abkhāz* section (Broekelmann, I, 138) has been identified by Stern as belonging to the same redaction as the Halle abstract; it supplies some of the text missing in the defective unique Ms. of this recension (notes supplied by S. M. Stern). The metrical version dated in the *Fihrist* (119) to have been composed by Abn al-Lahikī (p.g.) has perished.

Note that in the Mss., the name of Yūdāsaif is written in many different ways; the original *Būdāsaif* or *Būdāsaif* has been corrupted by addition of a diacritical point into *Yūdāsaif* (whence *Yūdāsaif* or *Yūdāsaif*, and thence Georgian *Iodasaif*), from which comes Greek *Iosaph*, the Latin *Iosaphat*. Distortion of the story. With its companion works, the *Kallā wa-Dinnā* and the romance of Šudbād, the book of Bilawhar and Yūdāsaif was widely diffused in early Arabic literature. Note for instance the allusion in the *Rasā'id al-Ḥafid al-Safid* (Cairo ed., iv, 120, 223) to Bilawhar's fable of the King, the just Wazir and the Happy Poor Couple, in connexion with belief in immortality.

The Western *Bilawhar* and *Iosaph* (Iosaphat) legend derives from the *Kūb Bilawhar wa-Yūdāsaif* via the longer Georgian (Jerusalem) redaction, wherein the heroes' names appear as *Bilawhar* and

TABLE 2

## Transmission of the Book of Bilawhar and Yūdāsaif

Iodasaif; the Georgian was adapted and rendered into Greek by St. Euthymius the Athonite and his school about A.D. 1000. The mediaeval attribution of the Greek Barlaam to St. John Damascene, revived by F. Dölger (*Der griechische Barlaam-Roman, ein Werk des H. Johannes von Damaskos*, Eittal 1933), fails to take account of the textual evidence and is to be discounted.

Also to be rejected is the Almadī doctrine which identifies with Jesus Christ the holy Yūs āsaf whose shrine is venerated at Srinagar in Kashmir. Many of the legends concerning the Yūs āsaf of the Almadīs are simply extracts borrowed from the *Kūb Bilawhar wa-Yūdāsaif*, with "Kashmir" substituted for "Kusnīrā", the traditional place where the Buddha died.

(D. M. LANG)

**BILBĀS**, a confederation consisting, according to C. J. Edmonds (220-22), of five tribes: Mangūr, Mānūh (I have rather noted it pronounced Mānūh), Prān, Sūn and Rīmī. The Mangūr of the mountains are an important tribe who live in Persia on both sides of the Lāwā (the upper reaches of the Little Zab in Persia). The Mangūr of the plain live in Irak where they consist of two branches: Māngūr Zūdī and Māngūr-a-Rūtā (the naked Mangūr). The Mangūr of the plain recognise the authority of the chief family of the mountain Mangūr, whose head appoints each year one or two persons (not of his own family) to govern the sections in the plain. The Mānūh are another important tribe who live in Persia east of the Lāwā and to the north of the Mangūr. They have also a section in 'Irāk, the Mānūh-a-Rūghā (the black Mānūh). The Prān have also one mountain branch in Persia to the north of the Mangūr, west of the Lāwā, and another in 'Irāk. The Sūn and the Rīmī who had formerly distinguished themselves in the cavalry of Nādir Shāh (ibid., 143), were afterwards expelled from Shahrīr (ibid., 142-143) by Salīm Bābān (1743-1757) and, fallen from their ancient glory, now occupy five poor villages in Bīrūn near the Zab. The Rīmī are subdivided into Kečel-a-Khāw Spī (bald and white hats) and Fakr Wāysī. Sometimes classed among the Bīlās are the Uđjāk who live in

subject of one of the most wide-spread and fertile cycles of legends in the Orient.

The name Bilkis does not appear in the *Kur'an* but is current with Muslim commentators. Sura XXVIII, 15-43 reflects some of the principal elements of the Sheba legend and describes the sun-worship of the Queen, how a hoopoe (*hudhūd*) carries a letter to her from Solomon, the Queen's consultation with her nobles, and the despatch of presents to Solomon. When these are not well received by the King, the Queen of Sheba comes herself and, by a ruse (mistaking the polished floor for a pool of water), is made to move her legs. Eventually, after her surroundings (together with Solomon) to Allah, i.e. she becomes a Muslim.

Muslim commentators (Tabari, Zamakhshari, Baydawi) supplement the story at various points: the Queen's name is given as Bilkis; the demons at Solomon's Court, afraid that the King may marry Bilkis, spread the rumour that the Queen has hairy legs and the foot of an ass. Hence Solomon's ruse of constructing a glass floor which the Queen mistakes for water thus causing her to lift her skirts. Solomon then commands his demons to prepare a special deplatory to remove the disfiguring hair. According to some he then married the Queen, while other traditions assert that he gave her in marriage to one of the *Tubba's* of the tribe of Hamdan.

In Jewish sources the continued narrative of *Kur'an* and Muslim commentators can first be traced in the 8th (?) century *Targum Sheni* to Esther where we find a most elaborate version of this story. This is further embellished in the 11th (?) century *Alphabet of Ben Sira* which avers that Nebuchadnezzar was the fruit of the union between Solomon and the Queen of Sheba. The fullest and most significant version of the legend appears in the *Kebrā Nagast* ('Glory of the Kings'), the Ethiopian national saga. Here Menelik I is the child of Solomon and Makeda (the Ethiopian name of Bilkis) from whom the Ethiopian dynasty claims descent to the present day. While the Abyssinian story offers much greater detail, it omits any mention of the Queen's hairy legs or any other element that might reflect on her unfavourably.

Although the *Kur'an* and its commentators have preserved the earliest literary reflection of the complete Bilkis legend, there is little doubt that the narrative is derived from a Jewish Midrash. This judgement is based not only on intrinsic probability and our knowledge of the general influence of the Midrashic genre on early Islam, but is also supported by: (a) the curiously abrupt version of the story in the *Kur'an* which clearly presupposes prior development; (b) Talmudic insistence (*Shab. Batra 15b*) that it was not a woman but a kingdom of Sheba (based on varying interpretations of Hebrew *milh*) that came to Jerusalem (obviously intended to discredit existing stories about the relations between Solomon and the Queen); (c) the Ethiopic name Menelik I in *Sura XXVIII*, 44 (cf. Nöldeke, *NB*, 51); (d) the probable derivation of Bilkis from *בִּלְקִישׁ* or the Hebrew *pileggh* 'concubine'.

In Persian art Bilkis may often be seen standing in water before Solomon. The same scene is depicted on a window in King's College Chapel, Cambridge.

**BILLAWR**, BALEER—whether from the Greek βύλαρος is a disputed point; cf. Dozy, *Supplément*, I, 1170-1701, crystal. According to Ptolemy, Aristotle, the stone is a kind of glass but harder and more compact. It is the finest, purest and most translucent of natural glasses, and also occurs among the colours of the yābūt; by the dust-coloured rock-crystal is meant the smoky topaz. It may also be artificially coloured; it concentrates the sun's rays so that a black rag or piece of cotton or wool may be set on fire by it; valuable vessels for kings are made of rock-crystal. A commoner kind which is harder and looks like salt—i.e. quartz—gives out spark when struck by steel and is used for striking fire by kings' servants. No account of its crystalline formation, which Pliny gives, is given by the Arab writers, nor is the general distribution of quartz known. Al-Fihāqī says that at 13 days' journey from Kāshghar are two mountains the interiors of which consist entirely of beautiful rock-crystal; it is worked at night, as the reflection of the sun's rays renders work by day impossible. Al-Akādī (*in al-Maḥbir*, 1908) gives the fullest account of the places in which it is found; according to him it comes from East Africa (Zandī), Badakhshān, Armenia, Ceylon, the land of the Franks and Maghrib al-Akḥḥā. According to al-Bīrūnī (d. 430/1038), rock crystal of very high quality from the Zandī Islands, near East Africa, and from the Dībāghāt Islands, west of India, was brought to al-Basra, where it was worked into vessels and other objects. The organisation of the manufacture is described in some detail. Such defects as might have been found even in this rock crystal, said to be superior to that mined in Kāshghar, were concealed by ornaments and inscriptions.

Nāṣirī Khawar, who visited Egypt twice between the years 439/1047 and 441/1050, praises the objects of rock crystal that were sold in the bazaars of Old Cairo (Misr). The raw material had up to that time been brought from the Maghrib, but he was told that Red Sea rock crystal had recently been received which was even more beautiful and transparent than that brought from the Maghrib. Judging from al-Ḥazwī and al-Makrīzī, who drew on earlier sources, the manufacture of rock crystal objects in Egypt must have reached its highest level during the earlier part of the Fātimid period. The dispersal of al-Mustansir's treasures in the years 453/1061-461/1069 must have been a severe blow to the industry as it brought innumerable objects on the market, some of which are described. These objects were either *madḥrāḥ*, plain or faceted, or *manḥāḥ*, ornamented, and it is obvious from what we have heard from al-Bīrūnī that the latter were then held in higher esteem than the former.

Apart from pieces of Safawid, Mughal or other post-medieval origin, something like 165 objects of rock crystal are known to exist which are indisputably of Islamic origin. In the majority of cases they have been preserved in the treasures of European churches, where most of them have served as reliquaries. In such cases the mounting may offer a

*terminus ante quem* for the dating of the rock crystal object, the earliest of such *termini* falling within the years 973 and 982 A.D. Not a single one out of these 165 odd specimens—which include many chess pieces and other minor objects—bears a date, but two of them have inscriptions containing the name of a ruler, in both cases a Fātimid Caliph: a ewer in the Treasury of St. Mark's in Venice made for al-Azīz (365/973-386/996), and a crescent-shaped object in Nuremberg, perhaps the head-gear of a harness, made for his grandson al-Zāhir (411/1021-427/1036). A ewer in Florence must have been made for al-Husayn b. Ḥusayn between 399/1000 and 407/1017, during the reign of al-Hakīm.

All these works in rock crystal are often spoken of as 'Fātimid', but quite a number of them may be of pre-Fātimid origin, and some of them may have been made at al-Basra.

The entire number of specimens referred to belong to the category described as *manḥāḥ*; on the other hand we hardly possess any example of *madḥrāḥ* work, unless we accept as such some of the faceted ewers that some scholars regard as Fātimid, while others think they were made in Europe (Burgundy, Bohemia, Sicily, or Spain).

**BILLITON**, corrupted form of Billang, island in Indonesia at about 108° eastern Long. and 5° southern Lat., a little larger than 1800 square miles. It owes its fame to its tin-mines, and it is probably for this reason that it is mentioned in Indonesian documents of about 900 A.D. A part of the indigenous population—less than 100,000 souls—was converted to Islam in the 19th century.

**BILLAR KÖSHK**, 'The Crystal Palace': this is the title of a Turkish folk tale which gave its name to the oldest Turkish collection of such tales. Variations of this one can be found in Naki Tez, *İstanbul masalları* (publications of the İstanbul Edebiyatı ve Tarih Cemiyeti, 1908, 202 ff.; W. Radloff, *Proben der Volksliteratur der türkischen Stämme*, St. Petersburg 1885 ff., viii (texts collected by I. Künos, 1899), part III, no. 19; Ignace Künos, *Matériaux zur Kenntnis des rumelischen Türkisch*, part I, *Volksmärchen aus Adakale*, Leipzig and

New York 1907, 255-261, no. 30; 8 MSS. of the tale of Billar Köshk, or, more specifically, of its variant *İnceli Çadır*, can be found in the Fildere Archives of the Dil ve Tarih-Coğrafya Fakültesi in Ankara. This collection usually contains 23 tales, including the title story Billar Köshk (in the edition by I. Künos, cf. *Türkische Volksmärchen*, V, note 2, there is a further tale, *Ekirisi ile Yemendi*) and the farce *Hırsı ile Yankesi*, ('The thief and the pick-pocket'). All of these have an oral tradition, and have only recently been somewhat modernised and brought out in book form. They have, however, lost nothing of their popular flavour in spite of their literary style. Numerous editions of this collection of folk tales have circulated in Turkey during the past hundred years, and since the writing reform in 1928, there have also been some in Latin script.

Editions: *Billar Köşh Hükümeti*, ed. Emîret Kutubhânesi, İstanbul 1339; *Billar Köşh Hükümeti*, İstanbul 1918; Selma Muir 'Yurdutari', *Resimli Billar Köşh Hükümeti*, İstanbul 1940.

Translations: T. Menzel, *Türkische Märchen I: Billar Köşh*, 14 Turkish tales, translated into German for the first time, from the two İstanbul editions of the collection. (*Beiträge zur Märchenkunde des Morgenlandes*, edited by G. Jacob and T. Menzel, II, Hannover 1923.)

**BILMA**, (Ar.) (in Todaga: Toqei or Tūqei), chief centre of the Kavar, a group of oases situated mid-way between Fezzan and Chad, on the main route from the Mediterranean to the Sudan. The palm groves extend for 50 kilometres from north to south, from Anay to Bilma. At no point are they more than 2 kilometres wide. Bilma is situated at the foot of a cliff which faces west; its base is formed by the marine layers of Upper Cretaceous, and its summit by the sandstone of the Continental terminal.

Although conquered by the Arabs in the 1st/7th century (expedition of 'Uthb b. Nāfi' reported by Ibn 'Abd al-Hakam), the Kavar was still partly pagan at the beginning of the 19th century. The population, numbering about 1500, consists of a settled negro race, the Kanuri, and the Guzeblā, hybrids from Kanuri and Teda. These settlers have always been subject to the nomads who inhabit the neighbouring regions, first to the Toumou of the Air, then to the Teda. They cultivate palm-trees whose dates are sent to the Tibesti and to the Hausa countries; but their chief means of livelihood lies in the exploitation of the salt-works situated at 2 kilometres to the north-west of Bilma, at Kalala. These salt works are made up of about a thousand pits spread over some 15 hectares. The salt is mainly extracted in the hot season, from April to November, because of evaporation.

The pits are dug down to the underground water level (2 m.), the water is left to evaporate, a crust is formed which is broken with palm sticks, and the salt is deposited at the bottom. There are two main types of salt: *beza*, in the form of crystals which is

not treated in any way and is used for human consumption, and the *kaṣṣa*, moulded into loaves in hollowed out palm-trunks and used chiefly for the feeding of animals. The salt-works belonged first to the Kuṣṣan, a Kanuri tribe, who were driven back to the south-east of Kawaṛ, between Kouka and Gouri; then, from the sixteenth century, to a Tausarg tribe, the Kol Gress. Since the arrival of the French, they have belonged to the people of Bīlma. The apply for authority to dig to the village chief who is master of the land, and exploit the works themselves, without paying royalties to anyone. All commercial activity is carried on during the *asfar* [s.a.] in the autumn and spring, when the Tausarg caravans bring in the millet, butter, dried meat, fabrics and kola nuts which are bartered for the salt. These great caravans comprising several thousand camels, with growing security have been replaced by smaller individual caravans, which are tending to get smaller still, following into the infiltration into Nigeria of sea-water salt and European salt, but the family bartering system remains unchanged; only the rate of exchange varies from year to year.

**BILMEÐJE**, the name given as a rule to popular riddles among the Ottoman Turks. Northern and eastern Turks use instead various words from the root *bil-* ('to find'), such as *bilâğmak*, *tapmağla*, *tağbiğak*, *tağbiğak*, *tağbiğjurnal*.

The true riddles of the people can generally be distinguished from artificial riddles such as the *laglas* or *mu'ammâ* by their obviously simple form, their puns or double meanings, and their appearance of unreason or illogicality. This last characteristic of riddles, their irrationality, is manifested in this way: when speaking of various objects and happenings, certain traditional expressions are employed which have only a vague connexion with the ordinary natural way of looking at things, and which must be known before the meaning can be grasped. That is to say, it is not generally possible to find the solution to a riddle by using one's logical judgement.

To solve a riddle, one must first comprehend the sense of the peculiar terminology, which has something of the quality of a berrypyth. None of these features is peculiar to popular Turkish riddles. The riddles of any given people differ from those of any other only in details, usually of form. The specially Turkish character of the *bilmecje* is primarily bound up with geographical location and Turkish popular life. Broadly speaking, the Islamic stamp is secondary and unimportant.

At the present time, riddles chiefly constitute the branch of Turkish popular literature that is peculiar to children. Nevertheless, we have evidence suggesting that once upon a time they were regarded very seriously and formed a part of popular philosophy: we find stories in which riddling contests occur, with one man quoting a hemistich and his opponent replying it with another, sometimes with serious consequences for the defeated party. So too the existence of riddles relating to cosmology and sex shows clearly that these were not originally

invented for children. With the change in their social rôle, riddles underwent considerable modification and took on new meanings. Indeed the solution of riddles is usually a shifting and fluid element in their history.

Riddles are mostly in the form of a short proposition: consider for example this riddle, known to have existed as early as the 14th century and still widespread today: *yer altında yağılı kayış* ('only sliding underground') = 'snake'. Most of the popular riddles consist of two parts which are assonant or half-rhyming because of the syntactical balance between them: *Allah yufur aspidâs—bîkâk âlar haplâm* ('God builds its structure, the knife opens its door') = 'water-melon'. Riddles of this pattern are often extended into regular quatrains (*mânî*), a characteristic form of Turkish popular verse. Paronomasia and onomatopoeia abound.

A comparative examination of material so far collected shows that the various groups into which riddles may be classified are all variants of certain primitive types. In fact, because of the alterations incidental to the process of being passed orally from one person to another, and because they are consciously adjusted to suit new solutions, riddles are subject to constant change. This entails a well-nigh infinite increase in the number of variants. Nevertheless there are some riddles which have changed neither their form nor their solution for centuries.

As early as Mahmûd Kâşgharî's *Dîwân Lughât al-Turk* (11th century) we find riddles, under the names *tabuğhuq neng*, *tabuğhuq* and *tabuğhuq*. But the oldest known examples of Turkish popular riddles are found in the Codex Cumanicus and have formed the subject of numerous publications (G. Koun, *Codex Cumanicus*, Budapest 1880, 141-157, 236 foll.; W. Radloff, *Das Türkische Sprachmaterial des C. C. (Mémoires de l'Académie de St. Pétersbourg, 1887, xxxv, 2 foll., no. 6); W. Bang, Über die Rätsel des C. C. (SBPr. Ak. W., 1912, xxi, 334-353); J. Némethy, Die Rätsel des C. C. (ZDMG, 1915, lxxvi, 577-608); S. E. Malov, K istorii i izučeni C. C. (Izv. Akad. Nauk SSSR, Izvestia section, 1930, 348-375); J. Némethy, Zu den Rätseln des C. C. (RCA, ii, 366 foll.).*

There are also a good many collections of riddles recorded by contemporary scholars, but these are far from having exhausted the rich store existing among the Turkish peoples.

**Bibliography:** A. N. Samoylovich, *Zagadki zakavkazskikh Turkmenov* (Zivaya Starina, 1909), 28-31. He has published a bibliography of studies of riddles of the Turkish peoples till 1912. This (RO, iv, 4; ill 1926) has been completed by Malov. For bibliography of Ottoman riddles see Kowalski's article *Türkische Volksrätsel aus Nordbulgarien* (*Festschrift für G. Jacob*), 130 ff. (ill 1932). Important collections of Turkish riddles: I. Kinos, *Osmantürkische räthselhafte zweytheil*, Budapest 1880, s. 141-177; T. **BİMÄRİSTÂN**, often considered to be *mârisân*, from Persian *bimâr* 'sick' + the suffix *-istân* denoting place, a hospital. In modern usage *bimâristân* is applied especially to a lunatic asylum.

#### 1. Early period and Muslim East.

According to the Arabs themselves (cf. Makrîdî, *Kihât*, ii, 402), the first hospital was founded either by Maâkhyûl, a mythical king of Egypt, or by Hippocrates, the latter of whom is said to have made for the sick in a garden near his house a *xendakharion*, literally 'lodging for strangers'. The authority for this statement is given by Ibn Abi Usaybi'a (*U'yûn*, ed. Müller, i, 26-27) as Book 3 of Galen's *Fi al-ğibâ al-mawâf* (*Peri Eileas*), a work which has not survived in Greek. Since hospitals were not a feature of life in classical antiquity, the question of origin is not solved by these indications. Al-Walid I (Caliph 86-96/705-715) is credited with having been the first to build a *mâristân* in Islam, placing in it doctors and assigning them stipends (Makrîdî, *loc. cit.*), but although this is stated in similar terms (hospitals for the sick) by so early a writer as Ibn al-Fakhî *circa* 285/902 (106-107), the fact is open to doubt. According to al-Tabarî (ii, 1196), al-Walid restrained the lepers from going out among the people and assigned them stipends, — a bare statement somewhat amplified in another passage (ii, 1271), where al-Tabarî mentions that al-Walid 'gave donations to the lepers, telling them not to beg from the people nor assigned to every cripple a servant and to every blind person a guide'. Ibn al-Ağlir (*10th anno* 88/707) has a short notice to the same effect, and al-Dihabî adds that the servants and guides were slaves (*Ta'riğh al-İslâm*, iv, 67). It would seem that we have to do here with measures of segregation, somewhat as in Muslim Spain later, where a whole quarter at Kordova (Gordova) was known as Rabad al-Mardjâ, 'Suburb of the Sick' (cf. E. Lévi-Provençal, *Hist. Esp. mus.*, iii, 385-382, 434).

The establishment of the first real hospital in Islam depended on the continuing influence of the medical school and hospital at Dîwandaysâbir (Dîwandaysâbir) in Khûristân. Founded under the Sâssânids, this institution maintained its Syro-Persian and Indian, ultimately Greek, traditions, into the Arab period and from the time of the transference of the capital to al-İrâk exercised a profound effect on the development of Arabic medicine. As far as hospitals are concerned, contact with Dîwandaysâbir bore fruit in the reign of Hârûn al-Râşid (170/786-193/809), who charged Dîrğahî b. Balğhithajî, a Christian doctor of that school, with the creation of a *bimâristân* in Baghdâd. At the same time a skilled dispenser in the *bimâristân* at Dîwandaysâbir was sent to Baghdâd. This man's son, Yûhannâ (Yahyâ) b. Mâsawayh, afterwards became head of the new *bimâristân* (Ibn al-Kifî, *Ta'riğh al-Bukamâ*, ed. Lippert, 385-384; Ibn Abi Usaybi'a, i, 274-175). The original Baghdâd hospital was situated in the S.W. suburb on the Karğîlâh Canal. It was here that, following the catholic traditions of Dîwandaysâbir, the Indian Manka at the request of Yahyâ b. Bîğlîd al-Barmakî translated the Sanskrit medical work *Sûtrata-samhitâ* into Persian (*Fihrist*, 303) and al-Râzî (Rhazes) lectured, according to some.

How long the *bimâristân* of Hârûn continued to function alone is not clear. From the beginning of the 4th/10th century or somewhat earlier we hear of a spate of new foundations in Baghdâd: the *bimâristân* founded by Badr al-Mu'tadid, the *ğubûm*, 'page', of al-Mu'tadid (279/892-289/902) in the Muğharri quarter on the E. bank of the Tigris (Ibn Abi Usaybi'a, i, 221, cf. 214); a *bimâristân*

in the Harbiyya quarter, N. of the City of al-Manṣur, endowed in 302/914 by the 'good sultan' 'Alî b. 'Isâ, who gave the direction of it together with 'the rest of the hospitals in Baghdâd, Makkia and al-Madîna' to the learned Abî 'Uğmân Sa'îd b. Ya'kûb al-Dimishqî, otherwise known as a translator (Ibn Abi Usaybi'a, i, 234); the *bimâristân* al-Sayyida on the E. bank, opened in al-Maharram, 306/June, 916 by Sinân b. Ṭahit, who appears to have succeeded Abî 'Uğmân al-Dimishqî as general intendant of hospitals in Baghdâd and elsewhere (Ibn Abi Usaybi'a, i, 221-222); the *bimâristân* al-Muktadîr at the Bâb al-Shâm, built about the same time (Ibn Abi Usaybi'a, i, 222); and the *bimâristân* of Ibn al-Furât in Darb al-Mufaḍḍal, over which Ṭahit b. Sinân is said to have been given the charge in 313/925 (Ibn Abi Usaybi'a, i, 224). These hospitals derived their revenues from endowments (*waqf*) made by powerful and wealthy individuals. The funds were in the hands of trustees, who were not always very attentive to their responsibilities (Ibn Abi Usaybi'a, i, 221). An idea of the size of the hospitals may be gained from their monthly expenditure: at the Muktadîr *300 dinars* a month; at the *bimâristân* al-Sayyida, *600 dinars* a month (*ibid.*). Some comfort for the patients was secured by the provision of blankets and charcoal in cold weather (Ibn Abi Usaybi'a, i, 222). Efforts in this direction sometimes went much further (see below).

We know less about hospitals in the provinces, but some certainly existed before the 4th/10th century. The *bimâristân* of al-Rayy, over which al-Râzî presided before coming to Baghdâd, where he died as head of a hospital about 320/932 (Ibn al-Kifî, 271), was a large institution (cf. Ibn al-Kifî, 273; Ibn Abi Usaybi'a, i, 310-311) and had probably been in existence for some time. A lunatic asylum at Dayr Hirkî between Wâsit and Baghdâd was visited by al-Mubarrad in the Caliphate of al-Mutawakkil, i.e. between 232/847 and 247/861 (*Mas'ûdî, Murûğh*, vii, 197 ff.).

In the time of Sinân b. Ṭahit, who died in 331/942 (*Fihrist*, 302), on instructions from 'Alî b. 'Isâ already mentioned the prisons were daily visited by doctors, medicines and potions were provided for sick prisoners, and female visitors were also admitted, evidently in the capacity of nurses (Ibn Abi Usaybi'a, i, 221). At the same period medical practitioners and a travelling dispensary (*khizma* *li-l'adwiyâ* or *ta'ğribia*) were sent round the villages of the Sawad (i.e., lower 'Irâk). From correspondence between Sinân and the *waqf* concerning this mobile medical unit it appears that at this time non-Muslims as well as Muslims were treated at the *bimâristân* (Ibn Abi Usaybi'a, *ibid.*).

At least some of the Baghdâd hospitals which have been listed were probably still in existence when the great 'Aḍud *bimâristân* was founded at the bend of the Tigris in W. Baghdâd by the Buwayhid 'Aḍud al-Dawla. Al-Râzî is repeatedly mentioned in connexion with this hospital, which from the time of its opening in 372/982, shortly before the death of 'Aḍud al-Dawla (Dihabî, *Duwal al-İslâm*, i, 167), was the most celebrated of the hospitals of Baghdâd. It is said that al-Râzî chose the site by causing a piece of meat to be suspended in every part of the city, and discovering where there was least putrefaction, and also that 'Aḍud al-Dawla selected him from more than a hundred doctors as first chief (the word is *adîf*, from Syrian) of the new foundation (Ibn Abi Usaybi'a, i, 309-310). But al-Râzî had died 50 years earlier. The explanation of the anachronism,

already noted by Ibn Abi Usayb'a (*ibid.*), may be the similarity in the script of the *Bimāristān* al-'Adulī and that founded in al-Rāḥ's lifetime by al-Mu'tadilī (see above).

When first founded, the 'Adulī hospital had twenty-four doctors (Ibn al-Kifī 235-236). Several classes of specialists are mentioned: 'physiologists' (*ḥabā'iyūn*), oculists (*ḥabā'īn*), surgeons (*ḥabā'īn*), beryones and bone-setters (*muḥabirūn*) (Ibn Abi Usayb'a, i, 310). The salary of *Ḍiḥrī* al-B 'Ḥayd Allāh, whose turn of duty at the *bimāristān* was two days and two nights per week, is given as 300 *ḍirhams*, i.e., monthly (Ibn al-Kifī, 148). Lectures were given at the 'Adulī hospital (Ibn Abi Usayb'a, i, 239, 244), and we know some of the works which were read in this way, e.g., the *Dirāḥiyya* (Andalusi) of Ḥabīb b. Saḥl of Qudayyāliyyūn (*Fiḥrī*, 297, cf. Brockmann, i, 232), eventually superseded by another work of the same title by Ibn al-Tūmī, a later dean (*shāḥ*, see above) of the 'Adulī hospital (Ibn Abi Usayb'a, i, 161, 259). When Ibn Ḍiḥayr visited Baghdad in 430/1038 the place was like a great cauldron, with a water-supply from the Tigris, and all the appointments of royal palaces (*Rūḥ*, ed. De Goeje, 225-226).

Another of the great hospitals of mediaeval Islam was founded in Damascus by Nūr al-Dīn b. Zangī (547/1146-569/1175). The Nūrī hospital is said to have been built from the ransom of an unnamed king of the Franks (*Makrīdī*, *Ḥikāyat*, ii, 408). Ibn Ḍiḥayr (*Rūḥ*, 283) describes how the staff kept lists of the patients' names and the amounts of medicines and food which each required. A typical day in the life of a leading doctor at the Nūrī hospital included going the rounds of the sick and writing down prescriptions of medicine and treatment, visiting private patients, then returning to the hospital in the evening to lecture for the students on medical subjects (Ibn Abi Usayb'a, ii, 133). There was also a Nūrī hospital at Halab (Aleppo) (*Rāḥib* al-Tabāḥ, *Ta'rikh* Halab, ii, 77).

In Egypt no *bimāristān* existed till Ahmad b. Tūlūn constructed one in 259/872-261/874 (*Makrīdī*, *Ḥikāyat*, ii, 405). Here the rule was that no soldier or slave should be admitted for treatment. The institution was visited, however, by the king and his men and women. The Nūrī hospital was founded by Salih al-Dīn, but the great creation of al-Manṣūr Kāḥlūn, completed in 11 months in 693/1284, was the most splendid of its kind in Egypt, and perhaps the most elaborate which had yet been seen in Islam. The endowment is said to have amounted to nearly one million *ḍirhams* in a year (*Makrīdī*, *Ḥikāyat*, ii, 406). Men and women were admitted. None was turned away, nor was the period of treatment limited. Formerly a Fatimid palace with accommodation for 8,000 persons, the Manṣūrī hospital possessed wards where fevers, ophthalmia, surgical cases, dysentery, etc., were separately treated, a pharmacy, a dispensary, store-rooms, attendants of both sexes, a large administrative staff, lecture arrangements, a library, in fact all that the best experience of the time could suggest for the healing of the sick. The account of these matters given by al-Makrīdī (*Ḥikāyat*, ii, 406-408) is an impressive tribute to the hospital science of mediaeval Islam.

Books were written about hospitals, e.g., the *Kitāb* *bi-ḥikāyat al-bimāristān* of al-Rāḥ (Ibn Abi Usayb'a, i, 310), the *Bimāristān* par excellence, cf. Ibn al-Kifī, 272 = Ibn Ḍiḥayr, ed. Fu'ād Sayyid, 77), which, like the *Kitāb al-bimāristān* of Ḥabīb al-'Ulamā' al-Fārikī, head of a flourishing hospital

in Mesopotamia in the 5th/11th century (Ibn Abi Usayb'a, i, 233), is now lost. Somewhat different are the *Makāla Amīniyya fi 'l-taḍayya al-bimāristāniyya* of Ibn al-Tūmī, and the *Daḥir al-bimāristān* of Ibn Abi 'l-Bayyān, both works on pharmacopoeia mentioned by Paul Shāth (*Al-Fihrist*, Cairo 1938, i, 70, 73), who gave an edition of the latter (*Bulletin de l'Association d'Égypte*, xv, 1933, 135, 138).

#### ii. Muslim West.

The first large hospital in North Africa for which there is any evidence was founded at Marrākush by the Almohad sultan Ya'qūb al-Manṣūr (580-95/1184-99) about a hundred years before the establishment of the famous hospital at Cairo. The sultan was a great builder and, after attracting to his court the most celebrated Spanish doctors of his time, Ibn Tufayl, Ibn Ruḡḡib, Ibn Zuhr al-Hafid and his son, he built in his capital, for sick foreigners both rich and poor, a magnificent hospital of which there is a description by 'Abd al-Wahid al-Marrākushī (cf. *al-Ma'adid*, ed. Mohammed El-Fassi, 1938, 176-177). The same sultan also founded, in various parts of the empire, hospitals for the insane, for lepers and for the blind (cf. al-Kurānī, ed. Fās 1905, 124; Francis Beaumont, 1907).

The great Marinid Sultan (q.v.), Abū Yusuf Ya'qūb, Abū 'l-Ḥasan and Abū 'l-'Inan, kept up these establishments and added many others (cf. al-Kurānī, ed. Fās, 1305, 214; cf. *Ḍiḥayr* al-Saniyya, ed. Ben Cheb, 100; Ibn Marzūq, *al-Musnad*, ed. Lévi-Provençal, in *Hispania* v (1925), 36; Ibn Bāḥrī, *Rūḥ*, ii, 327). At a later date, the ruling sultan appropriated the revenues intended for these hospitals, which consequently fell into decline or disappeared.

At the beginning of the 10th/16th century, Leo Africanus described the hospital at Fez as being in total decline and used primarily as a prison for dangerous lunatics. This is still its function, and it is also used as a prison for women (cf. Leo Africanus, *Description de l'Afrique*, trans. Schuler, ii, 78, trans. Epaulard, i, 188; Le Tourneau, *Fez*, 255-257).

The famous Almohad hospital at Marrākush seems to have disappeared without leaving any traces, and the hospital founded there by the Sa'adid sultan 'Abd Allāh al-Ḥabīb bi-Ḥabīb (965-81/1557-74) became a prison for women (cf. al-Nāṣirī, *Kitāb al-Idhār*, trans. v, 60).

In 1247/1832 the 'Alawid sultan Mawlay 'Abd al-Rahmān built at Sale a hospital attached to the

sanctuary of Sayyid Ibn 'Aḥir. This hospital, which is still in use, is dispensed with doctors; instead, the sick relied for their cure upon the baraka of the saint. The memory of old hospitals which have disappeared or fallen into disuse is preserved in some towns of Morocco, for example in Rabat and El-Ksar (cf. L. Brunot, *Textes arabes de Rabat*, in: *Glossary*, 753), and also in Tangiers.

Lepers (plural *ḍiḥāḥ*, or, euphemistically, *marḥū*) were usually placed in a special quarter, called *al-ḥāra*, outside the towns. At Fez, they were originally settled outside Bāḥ al-Khawḥja, on the Thénier road. During the first half of the thirteenth century they were removed to caves outside Bāḥ al-Sharḥ. Then, in 688/1286, they were installed in other caves outside Bāḥ al-Gāa. At the beginning of the 10th/16th century they lived in a town near the Sōk al-Khams (cf. al-Kurānī, ed. Rabat 1936, i, 53-54; Leo Africanus, *Description de l'Afrique*, trans. Epaulard, i, 229). At Marrākush, the *ḥāra* was originally outside Bāḥ al-Ḥamīd, until, at the end of the 10th/16th century, the Sa'adid sultan al-Manṣūr removed it to outside Bāḥ al-Dakḥl.

At Tunis, the Hafsid Sultan, Abū Farīs, founded the first hospital "for poor, foreign or infirm Muslims", completed in 823/1420 (cf. al-Zarkashī, *Ta'rikh al-Dawlatayn*, ed. Tunis 1289, 102). At Granada, the Nasrid sultan Muhammad V, built a splendid hospital "for sick and poor Muslims", completed in 768/1367. The foundation inscription reads that "never, since the beginning of Islamic influence in these parts, has such an establishment been founded". Perhaps this is an exaggeration, for there were others, and in Granada itself. And, from the 7th/13th century onwards, the Valencia *Ucubalida* translates *hospitale* by *diālatā* and, therefore, living terms: *marāṭin* and *maladīn* (cf. Ibn al-Khatib, *al-Idhār*, ed. Cairo 1379, II, 23; Lévi-Provençal, *Inscriptions arabes d'Espagne*, 164; L. Seco de Lucena, *Planos de Granada árabe*, 53).

A distinction must be made between "hospitals" intended for the sick and "hospices" or "night lodgings" (*manāzil*) intended for travellers. In the Muslim West, such hospices were established outside the gates of the big towns by most of the sovereigns who founded hospitals. They received the name *ḍawīya* (q.v.) (cf. G. S. Colla, *La suavia mudejar de Anemli, a Taza, in Hispānia*, 1953, II, 1). Al-Khafādī appears to have repeated an earlier error in stating that the first *bimāristān* was set up by Hippocrates who gave it the name *ḥiḥimadūkhīya* (*ḥiḥimadūkhīya*, "hostelry for foreigners" (cf. *Ḥiḥimadūkhīya*, ed. Cairo 1282, 50) (cf. above, p. 1221).

The Moroccan author of the *Ma'adid* (cf. supra), writing in Baghdad in 621/1224, is the only Western author to use the correct etymological form: *bimāristān*. All the others use a form, *marāṭin*, which has lost the Persian preposition. Very soon, the word appears with the first *a* shortened. In the Spanish dialects, the *a* was followed by the *u* (perhaps a *Ucubalida* *marāṭin* and *maladīn*; P. de Alcala, *marāṭin*), and this vocalisation is attested for Egypt in the 11th/17th century by al-Khafādī (cf. *Ḥiḥimadūkhīya*, ed. Cairo 1282, 206). In present-day Cairo the word is pronounced *marāṭin*.

In the modern dialects of the Maghrib, some vocalisation has taken place in the word: *marḥū*, the reason for this being, as we have seen, that *marḥū* is attractive. In Tetuan it is pronounced *marḥūn*, and everywhere the meaning of the word is "prison for dangerous lunatics" (cf. W. Marçais, *Textes arabes de Tanger*, 465).

#### iii. Turkey.

The first Saḥḥid *Dār al-Shifā'* (Hospital) and *Madrasa* were established in Kayseri in 602/1206. This was followed by the building of other hospitals in Sivas, Divriği, Çankırı, Kastamonu, Konya, Tokat, Erzurum, Erzurum, Mardin and Amasya. The Anatolian hospitals were numerous then, as now, *Bimāristān*, *Māristān*, *Tīmāristān*, *Dār al-Shifā'* or *Dār al-'Afiya*. They were general hospitals in that they accepted all kinds of patients, and their staffs included surgeons, physicians, pharmacists and oculists. They were supported by independent funds, and were organised according to the size, importance and specific needs of the locality.

The first Ottoman *Bimāristān* in Anatolia was the *Dār al-Shifā'* of Yıldırım in Bursa. When Bursa was conquered by the Ottomans in 726/1306, it had no hospital. The first Ottoman sultans (Sultān Orḡān, Murād I, Yıldırım Bāyazīd) enlarged the city and built some institutions, among which was the *Dār al-Shifā'* of Yıldırım, opened in 802/1399. This institution, which was a section of *Yıldırım 'Umdet* (a special centre including hospital, bath, rest house for travellers etc.) was repaired many times before it was abandoned in the middle of the 19th century in favour of the Ahmed Medfī Paḡha hospital. It is in ruins now.

The leprosy which was built at Edirne in the time of Murād II (824-853/1412-31) operated for approximately two centuries. Before this leprosy, the Turks had built others in Sivas, Kastamonu and Kayseri in Anatolia.

The *Dār al-Shifā'* of Fātih which was opened in 875/1470, was built by Mehmed II, the Conqueror (855-886/1451-81), and was a part of his *Kudsiye*. Although it is now in ruins as a result of many large fires, the hospital buildings served until the last century. The *Wahbiye* shows that there was a large medical student body in addition to the medical staff. This was the traditional method of training medical students in Islamic hospitals.

In the same century Bāyazīd II (886-918/1481-1512) established another *Umdet* at Edirne, on the banks of the Tundja river. A part of this institution was a hospital which was named after him. The buildings were begun in 891/1486 and completed in eight years, but the *Wahbiye* was not established until 898/1493. Although the institution is now in ruins, its large staff served the public well until the beginning of this century. According to Ewliya Çelebi, it had a staff of ten musicians who played for the patients from dawn till noon. There are many mistakes in the plans of the institution, which were prepared very hurriedly by C. Gurliḥ, cf. C. Gurliḥ, *Die Baukunst Konstantinopels*, Berlin 1872, 2 vols.

During the 16th century three great hospitals were established in Istanbul and one in Manisa. The *Bimāristān* of Khaseki was built in 940/1530 in the Spanish dialects, the *a* was followed by the *u* (perhaps a *Ucubalida* *marāṭin* and *maladīn*; P. de Alcala, *marāṭin*), and this vocalisation is attested for Egypt in the 11th/17th century by al-Khafādī (cf. *Ḥiḥimadūkhīya*, ed. Cairo 1282, 206). In present-day Cairo the word is pronounced *marāṭin*.

The fourth hospital, the *Bimāristān* of Topkapı, was built in 991/1583 in Istanbul for Nūrūdīn

Sultān, mother of Murād III (982-1003/1574-95). This institution served as a hospital until 1927 when it became a tobacco warehouse.

In the 17th century, Ahmed I (1012-26/1603-17) had a large hospital erected behind the old Byzantine Hippodrome near his famous mosque. The hospital was opened in 1025/1616 and has only recently been demolished to make room for a new school.

There was a recession in the establishment of Ottoman health and social aid institutions during the 18th century; but in the 19th century military service, styles of clothing, education etc. were modernised in the Ottoman Empire. In 1253/1837 the Ġharābī hospital was established in Istanbul at Edirnekapı in the *Madārasa* of Māhmut II Sultān. While this hospital was being modernised by Bezm-i 'Alea, Walide Sultān, mother of Sultān 'Abd al-Majīd, new modern military hospitals and a modern medical school were established. These institutions were to meet the medical needs of the new army. A new school of medicine and surgery established in Istanbul in 1253/1837, by Sultān Mahmut II (1227-1255/1808-39), began its teaching in Italian but switched to French with the coming of some good medical teachers from Austria in 1839. This medical school was enlarged by sultans 'Abd al-Majīd, 'Abd al-'Azīz and 'Abd al-Hamīd II, and eventually included a rabies institute, a bacteriological institute and an inoculation centre. A number of physicians having knowledge of European languages and modern medical methods graduated from this school. They went to Anatolia and founded modern hospitals there. Immunisations against rabies and smallpox were started here nearly at the same time as they were begun in Europe. The Ottoman Government was one of those which helped to establish the Pasteur Institute.

Shihlī children's hospital, which is one of the largest hospitals in Istanbul, was established by Sultān 'Abd al-Hamīd II, in 1316/1898.

These hospitals were the most important of the Ottoman Empire and although there are many others to be found throughout Turkey, space does not permit their inclusion. In five centuries the Turks established nearly seventy hospitals in Istanbul alone. (Hani N. Şenustaşoğlu.)

**BINĀ<sup>2</sup>**, building, the art of the builder or mason. Building techniques depend partly on the materials used. In the Islamic countries we find very widely differing materials employed, from rammed earth to ashlar, with unbaked and baked brick, rubble and rough-hewn stone as intermediary stages. The choice of one of these materials depends of course on the resources of a given country, or the lack of them, but as well as this on local traditions or traditions brought in by foreign builders, which may for a time supplant local ones. Thus Syria, where the art of stone-cutting had long been known, reproduces in stone the complicated forms of the *mukarnas* (= stalactites) which were borrowed from Persia and probably derive from brick architecture. And on the other hand Egypt, whose quarries had yielded such fine free-stone, uses brick at the time of the Tūlūmids, they are taking their models and no doubt their chief architects from 'Irāk, where brick was the normal material. Apart from such considerations Muslim builders seem comparatively indifferent as to choice of material, except in some countries such as Syria which cling to their preference for fine work. Of the three great Hispano-Moorish towers of the 6th/12th century, which—no doubt wrongly—are attributed to the same architect, the Giralda at

Seville is built of brick, the Ḥassān tower at Rabat of ashlar and the minaret of the Kutubiyya at Marrakech of rubble. This indifference on the part of the builder as to material and the carelessness of craftsmen in its use are seen more clearly in palaces than in religious buildings, especially in the West from the 7th/13th century. There are several reasons for this: speed of construction, the need being to satisfy a master's whim the shortest delay; the use of unskilled slave labour capable of nothing more complicated than ramming concrete between two boards; and finally the general use of facings (coverings of plain or sculptured plaster, inlaid-work of enamelled clay or earthenware tiles) which completely conceal the body of the walls.

It is remarkable that the technique of cobwork (*lābya*) should have been described in detail by Ibn Khaldūn in his *Muḥaddima*, and leads us to assume that he thought it a characteristically Muslim practice. Earth with which chalk and crushed baked earth or broken stones are often mixed is rammed between two boards kept parallel by beams. The wall is plastered over, often in such a way as to simulate joints of heavy bond-work beneath. When this plaster falls, the regularly spaced holes left by the beams become visible. In the Muslim West cobwork became general in the 5th/11th and 6th/12th centuries, especially in military building. In the Maghrib it seems to have been an importation from Andalusia, where it had long been known.

Unbaked brick (*ṣaḥb*), which sometimes serves as a facing for cobwork, is made of earth and cut straw rammed together in a wooden former. It is still in common use in Sahara towns, and was employed very early in arid regions, especially in Mesopotamia and Arabia. The walls of the Prophet's dwelling in Medina were probably built of this material, as are those of the 'Abbāsid mosques of Sāmarrā. We find it employed about the same time in Ifrikiya. The excavations at 'Abbāsiyya, the seat of the Aghlabids of al-Rayawān, have brought to light carefully moulded specimens of *ṣaḥb* 42 cm. long by half that measurement in width, and a quarter in thickness, which suggests that the cubit used by the builders was 42 cm.

Baked brick (*qīr*), used so commonly in the Iranian world and by the Romans also, notably in the public baths, is to be found in all the Islamic countries, but was always *par excellence* the building material of Persia. It is of varying dimensions, and is sometimes cut on an angle or partly rounded off. It is used alone or with rubble in parts of a building where accuracy of line is important (pillars, pedestals, stairways, arches, vaults, etc.). It functions as horizontal tying material alternating with courses of rubble, or vertical tying, to maintain regularity of construction, especially at corners (A). Brick is as a rule covered over with plaster, but it may remain visible and add an element of colour, either the pink of baked earth or that of some enamel applied to its edge.

Rubble or rough-hewn stone was used in Sāsānid building and is still used in Muslim Mesopotamia, as in the stronghold of Uḡhaydir (mid 2nd/8th century). In the 5th/11th century it seems to have been the material most familiar to the Berber builders of North Africa. It is used above all for the ramparts of towns before the introduction of cobwork (cob walls will often have a foundation of rubble, and also in waterworks. The cementing mortar and protecting plaster are of chalk, sand, crushed fragments of tile, and wood charcoal. An analysis of their

composition reveals a pattern of evolution which has been studied by M. Solignac (*Recherches sur les installations hydrauliques de Kairouan*, . . . in *AIEO Algiers*, 1952-3), and allows us to date the works.

The use of ashlar continues a Roman and Byzantine tradition. Its homeland is in Syria, where ashlar has remained a common building material until our time. It was temporarily replaced by brick in Egypt, but came into use again in the Fātimid period (4th-6th/10th-12th century) especially in the fortifications of the Armenian Badr al-Dīnall. In Ifrīkiya it is used for the religious and military buildings of the 3rd/9th century and from the 7th/13th century was popular again with the Tunisian architects. In Spain it is the regular material of the Umayyad foundations; local tradition was there reinforced by Syrian influence. The Maghrib takes it over in the 6th/12th century in the Almohad buildings.

As in the Byzantine period, walls built of rubble-work are frequently faced with ashlar. The border-work, not as massive as the Roman, shows combinations of tiles and headers, whose chronology Valazquez Bono has contrived to establish, for Cordova (Valazquez Bono, *Medina Azahra y Alamo*, Madrid 1912) (B, B', B''). Almohad bond-work is of alternate thick and thin courses, which from Morocco pass into Tunisia.

To these materials we should add wood: longitudinal beams are sometimes sunk in walls; at al-Kayrawān heavy planks form architraves above the capitals; small beams form ceilings and sometimes lintels, a practice not without risk to the solidity of the building concerned.

Walls, the composition of which we have just indicated, are often flanked by buttresses. Projecting semi-cylindrical abutments of the old Mesopotamian type were added to the stone outer walls of the Syrian Umayyad strongholds, and the brick ones of the mosques at Sīmrā. The great mosque at Tunis (3rd/9th century) has at its four corners rounded buttresses of apparently the same origin, and they are found again in a building of the Ka'fa of the Banū Hammād (5th-6th/11th-12th century). The great mosque at al-Kayrawān was given massive rectangular buttresses, partly later than the original construction. The mosque at Cordova has similar buttresses at regular intervals around its periphery.

Among the supporting members found principally in the halls of mosques, columns deserve first mention. In early centuries in such regions as Syria, Egypt, Ifrīkiya and Spain they were taken from nearby pagan or Christian buildings. When these quarries of shafts and capitals were exhausted Muslim sculptors made their own. Columns are generally cylindrical and not entablature. In the 10th/16th century and after they were imported from Italy to North Africa.

The re-employment of columns of limited size in a hypostyle hall intended to produce an impressive effect led to these supporting members being prolonged upwards. It was doubtless from Egypt ('Amr mosque) that the builders of al-Kayrawān borrowed the technique of superimposing, as in the classical entablature, the support (= architrave), the impost (= frieze) and the cornice, with wooden ties bedded in the impost (C). The architects of the mosque of Cordova were perhaps inspired by the Roman aqueducts to superpose two rows of arches linking the masses of masonry raised above the columns (D). The Almohad mosque of Hassan at Rabat (6th/12th century) shows a rare example of columns formed of superimposed tambours.

The pillar, a masonry support of square, rectangular, cruciform, or divided plan or flanked by false columns, is in general use in Persian architecture. From the 6th/12th century it replaces columns in prayer-halls in the Maghrib. Tunisian mosques retain columns. The situation is found in the inner courtyard of houses.

Apart from the straight lintel formed by a single stone or oblique arch-stones surmounted by a relieving arch (Egypt, Syria), arches assume very varied forms (semi-circular, horseshoe, Persian arch with rectilinear divisions, etc.). These forms are not dictated by constructional requirements, but serve as ornamentation according to the architect's caprice. The arch-stones they contain are often purely decorative in function.

To cover prayer-halls Syria, the Spain of the Umayyad period, and, no doubt in imitation of the latter, the Maghrib regions, had recourse to timber-work protected by tiled saddle-back roofs. Square buildings had pavilion-shaped roofs, *i.e.*, with four slopes. Egypt and Ifrīkiya retained terraces, which were preferred also by the Turkish masters of Algiers in the towns along the Algerian coast. The scarcity of timbers of the necessary dimensions led architects to bring closer together the walls carrying them, and to give narrow, long proportions to enclosures with ceilings (naves, rooms, etc.). The use of wagon-vaults or small domes placed together answers the same need.

The problem of vault and dome was solved in different ways within the Sāsānid and Byzantine traditions, but Iranian genius was to add noteworthy variations.

The question alluded to above of suitable timbers or rather of their scarcity is the determining factor in building the vault, whether semi-cylindrical or elliptical. Setting up a stone arch or vault demands the use of a wooden form on which the arch-stones are successively placed. The use of bricks, their lightness and the fact that they can be mortared together, allows another method which dispenses with the former: the construction of the 'edge vault'. This is frequent in Sāsānid architecture and finds its most logical use in the specifically Iranian type, the *fadeh* (the form so constantly used in Muslim Egypt). It is a three-walled room open on the fourth side, like a large niche with a flat back surface). The builder cements a first row of bricks on the rear wall, tracing out the curve of the vault; a second row is then cemented to the first, a third to the second, so that row by row the vault advances across the space to be covered (G).

Apart from the wagon-vault Muslim architecture uses the groined vault so familiar to Roman and Byzantine builders (two semi-cylinders intersecting at right angles [E]), and more rarely the cloister-arch vault (in which the four walls curve in above the space to be covered) (F) which occasionally serves as the end and culmination of the wagon-vault.

As for the dome, the fine examples constructed in the Byzantine era were the prototypes of the Turkish domes, but this feature also was the subject of variations which Muslim art owes to Persia.

As is known, there are two main types of solution to the problem of how to place a semi-circular or eight-sided vault on a square base: the pendentive (H), the customary practice in the Byzantine world (cf. St. Sophia at Istanbul), and the more specifically Iranian squinch (I). This squinch, a quarter sphere the head-arc of which projects over the corner of the square supporting it, sometimes assumes with its

radiating flutings and indented edge the grace of a marine shell (J). In the Grand Mosque at Damascus and that at Cordova it takes the form of a small niche. North-African and Sicilian architecture knew the squinch as a half groined vault (a groined vault cut diagonally) (K). Finally Persia contrived the super-position of several ranks of cell-like niches, the probable origin of the *misharab* (= stalactites) (L). Above this zone where square and circle are brought into union there frequently rises a circular zone pierced with windows to allow the entry of light, and surmounted by the dome proper.

Persian architects, providing for the advantages offered by brick, showed great ingenuity in erecting widely differing domes. Such is the ribbed dome, of light arches crossing above the space to be covered, and supporting counter-arches which fill the intermediary gaps. This type of dome, which was known from the time of the Sāsānids (A. Godard, *Voltes sassanides*, in *Al-Bihar*, I, 1919), passed from Persia to Spain (3rd/9th century), then from Cordova and Toledo became known in the 6th/12th century in the Maghrib and about the same time throughout south-west France.

(G. MARGAÏN)

**BINBAŞI**, 'head of a thousand', a Turkish military rank. The word appears at an early date among the Western Turks, and is already used in connexion with the military reorganisation said to have been made by Orkhan in 729/1289 (e.g. Sa'd al-Din *Ta'rik al-Turk*, I, 126: 'binbaşlı, yubbaşlı, and binbaşlı were appointed to them. . .'). In the form *binbaşlı* the term also occurs among the Eastern Turks, and is used, for example, of a rank in the Safavid forces in Persia (V. Minorsky, *Tadhkirat al-Muluk*, London 1943, 36, 74, 135). The title *miš-başı*, with a similar meaning, also appears in the memoirs of Bābur. The term *binbaşlı* does not seem to have been much used in the regular Ottoman forces of the classical period. It reappears, however, in the 18th century, and is used to designate the officers of the newly raised *miri 'askeris*, a treasury-paid force of infantry and cavalry. In the campaign of 1769 there were already ninety seven regiments of *miri 'askeris*, each commanded by a *binbaşlı*. The *binbaşlı* received 2000 piastres of pay for the campaign, plus a tenth of the ray of his regiment (Djéwhani, *Ta'rik al-Jihad al-Imperie Ottoman*, vii, Paris 1824, 382-2; cf. Konrad Hensel, *Khalid al-Fihri*, Istanbul 1286, 22 ff.). From the end of the 18th century, (Djéwhet, *Ta'rikh*, vi, 307), *binbaşlı* became a regular rank in the new, European-style armies, given to battalion-commanders. After the accession of 'Abd al-'Aziz, the pay of a *binbaşlı* was fixed at 1250 piastres a month, or 4,166 francs a year (Chichin, *Lettres sur la Turquie*, no. 19). In Egypt the title *binbaşlı*, along with other Turkish military terms and commands, was used in the army of Muhammad 'Alī Pasha, and remained current under subsequent régimes. In the Arab countries it is sometimes pronounced *binbaşlı*, presumably through a distortion of the Turkish *binbaş nân* (n = ن). (B. LEWIS)

**BINGÖL**, name of a town in ancient Turkish Armenia, previously called Capakür, capital of a *vilâyet* partly filled by the mountain range of Bingöl Dağı. It is situated on the Göküsu, a tributary of the Arasani Arsanus-Marid Su, and on the road joining Elazığ with Mush via Palu. (M. CANARD)

**BINGÖL DAĞI**, name of a mountain massif, a raised but not volcanic plateau, which stretches south of Erzurum across the *vilâyet* of Erzurum, Mush and Bingöl (Capakür). Its highest peak in the

east is Demir or Timur Kâle or Ka'fa (Fortress of Iron), over whose height there is some disagreement among different writers: 5660 ms. according to H. and R. Kiepert, *Formae orbis antiqui*, pl. V, 1910. Abos Mons, cf. above, 355; 3650 ms. according to the Erzurum sheet of the Harita Genel Müşavirliği, 1907; 3250 ms. according to the road-map of the Karayolları Genel Müdürlüğü, 1951; 3700 ms. according to Bause; 2977 ms. according to Blanchard. It dominates the high plain of Varto (formerly Güngör). The western peak, Bingöl or Toprak Kâle (Fortress of Earth) is almost as high. The northern part of the mountain is cut off by two circular depressions separated by a sharp ridge.

Bingöl Dağı is a true water-shed. It contains numerous little lakes from which it gets its name of mountain (dağı) of a thousand (*bin*) lakes (*göl*). The Araxes (Aras, al-Rass) in the north, the Tuzla Su, a tributary of the northern Euphrates, and the Bingöl Su in the west, the Göküsu Su in the south-west, the Çarğahar Su in the south, and the Kizil Su, the four last tributaries of the Murad Su, in the east and north-east, all rise here. Armenian legend makes it the site of the earthly paradise. In classical geography it is called Abos Mons. The Armenian name is Smanac' (Greek Σμνακίον). Arab geographers and historians do not refer to it, although there is some mention in the wars between the Hamdanids and the Byzantines in the 4th/10th century of the place *Halğöl* (Arm. Havalç) situated to the south of Kälälä-Erzurum and in the Bingöl Dağı at the source of the Araxes. Tavernier is the first among European travellers to give the name of Bingöl Dağı. The Kiliz-Blağ (4,6) lived in this region.

(B. CANARD)

**BINYÄMIN**, the Benjamin of the Bible. In its narration of the history of Joseph ('Yusuf, [s.c.]), the Qur'ān gives a place to the latter's uterine brother (23, 8, 59-79), without ever mentioning him by name. Tradition embellishes without any great variation the biblical story concerning him (it is aware notably that his birth cost his mother her life) and moreover also Agadic additions (summarised notably in the *Encyclopaedia Judaica*, iv, 112-124), such as the etymological confusion of the names of his sons with the lost elder brother. In Muslim mysticism, the pair 'Yusuf-Binyāmin symbolises the primordial relationship between God and the sinner.

African and art encountered especially in eastern Tunisia from Bizerta to Djérba, on the coast of Tripoli, in the *haws* of Marrakesh, in the north-west Sahara (Tafilalet, *mrāb*), in the Touarg country, in the oases of southern Cyrenaica, in part of the southern Sahara, especially Lower Mauritania, and on the borders of western Sudan.

Wells with a balancing-beam, like the Egyptian *ghadī*, have various names: *ghadīra* (pl. *ghadīr*) in the Fezzān and the Souf, *gharghar* in the regions of Zibān and Gourara. The balancing-beam, made of a thin pole pivoting on a little wall or on a wooden cross-bar resting on two uprights, has a counter-weight at its base, and at its other end some sort of receptacle for drawing the water (*hama* in the Fezzān, *gawne* at Gourara), which only holds between 5 and 10 litres of water. It works more quickly than a *dah* but it is not usually capable of irrigating more than a few hundred square metres, for it is used where the underground water-level is not very deep (a few metres) and has a small yield. It is primarily for the poor man's well; one man can dig it, set it up and work it, and it needs neither an animal nor an expensive *dah*. Well-known not only in Europe but as far afield as China, this type of well is very rare in the Maghrib and on the coast of Libya. It is found in the Sahara the Lower Dra (Morocco) and in the region of Sauria at Tindouf, and in southern Mauritania, in the regions of Touat and Gourara, at Ouargla El Golea and at Ghadames, both in the north and the south of the Fezzān, in the oases of Cyrenaica at Koufra, in the regions of Air, Tibesti and Borku.

The noria or Persian well, chain-pump (*nā'ira* and sometimes *sinaya*) is an apparatus with buckets fixed onto a revolving chain, worked by an animal-driven wheel drawn by a horse, mule or camel. The traditional type is made of wood (most commonly olive-wood) with earthenware buckets fixed by means of ropes. It is being more and more replaced by a cast-iron apparatus with metal chain and buckets worked by an oil or electric motor, at least on the coastal plains of Morocco, Algeria and northern Tunisia, where it is sometimes used by European market-gardeners of Mediterranean origin who were accustomed to using it in their native country. It has to compete there with various types of pumps. In the Sahara it is only to be found in northern areas such as Tafilalet, Oued Righ and Tripolitania. In Morocco, large hoisting wheels with well-bass fins, worked by river-power, are also called *noria*. They are only used in the neighbourhood of Fez.

As for artesian wells, they were only to be found at one time in the region of Oued Righ (282 of them were active in 1856), and in small numbers in the eastern parts of the Shāhī (Fezzān) where they are called *'ayūn* (sing. *'ayn*); they were dug by specialists and were very fragile. They have increased in number, but are nowadays drilled and harnessed according to modern techniques, throughout the Lower Sahara from El Golea and Ouargla to Zibān, and from the Hodna to the Djérba and Nefzāwa; some have been drilled in Tripolitania and in the Fezzān.

**BIR MA'UNA**, a well on the Mecca-Medina road, between the territories of 'Amir b. Sa'sa'a and Sulaym, where a group of Muslims was killed in 549/605. The traditional account is that the chief of 'Amir, Abū Barā', (or Abū 'I-Bārā'), invited Muhammad to send a missionary group to his tribe, promising his personal protection for them. So a group of 'Kur'-an-readers' (*kurā'*) was sent from Medina. When they reached Bir Ma'una, they were massacred by clans of Sulaym, led by 'Amir b. al-Tufayl, who had failed to induce his own tribe of 'Amir to violate their protection for the Muslims. The Prophet grieved over the slain, and cursed the Sulamīs daily until Kur'an, iii, 169/163 was revealed.

This account has been interpreted to give a military failure the aura of religious martyrdom. The sources number the *kurā'* variously as 70, 40 and 29, but Wākidī names only 6. A large number cannot yet have existed, and was unnecessary for a religious mission. It was, indeed, an actual campaign, described as a raid (*sariyya*, *ghazwa*) in the sources; one specifically says its leader was sent 'as a spy among the Najdī folk'. Muhammad had apparently been invited to intervene in an internal dispute of Sulaym, but the incident is also mixed up with the quarrel within 'Amir between Abū Barā' and 'Amir al-Tufayl. The latter cannot have led the attack, but may merely have encouraged the Sulamīs from the background, since Muhammad did not curse him, unhesitatingly paid him the wergilds for two 'Amirites slain, on the way home, by the sole survivor of Bir Ma'una, and did not seek wergilds from him for the slain Muslims.

**BIR MAYMUN**, a well in the environs of Mecca. Although the well was famous in early Islamic times, the name no longer occurs in the Meccan area. Available sources fail to show whether Bir Maymun has been abandoned or is still in use under another name. The location of the ancient well is also uncertain. Much of the evidence places it between the Great Mosque and Mīna, somewhat closer to the latter. The account given by al-Tabarī, iii, 456, of the death of the Caliph al-Manṣūr at Bir Maymun in 258/775 indicates that the well lay inside the Sacred Zone (*al-Haram*) and suggests that it was on the main road for pilgrims from Iraq (another version has the death of al-Manṣūr take place at the hill of al-Hudayr, not at Bir Maymun—see Wüstenfeld, *Gesch. der Stadt Mekka*, Leipzig 1862, 160). Other evidence situates Bir Maymun farther north of Mecca near Marr al-Zahrān (now called Wādī Fāṭima). According to al-Hamadī, i, 128, Bir Maymun was one of the two oldest wells in the world; according to al-Bakrī, *Mu'daww*, Cairo 1945-51, iv, 1285, it was much older than Zamzam. If it was of any such antiquity, it must have been

dug originally by someone earlier than Maymun the brother of al-'Alī b. al-Hadrami, one of several Maymunīs named as the digger. The history of Mecca by al-Kuṭaybī, i, 141m, Mecca n.d., 282, states that Bir Maymun was connected to the main water system for Mecca, first constructed by Queen Zubayda. Bir Maymun has been identified by some commentators as the place mentioned in the final verse of the Kur'an.

**BIR AL-SAB'**, the Arabic name of Beer-sheba, in southern Palestine. At this place were the springs which Abraham is said to have dug with his own hands; many legends are current about them. The place was uninhabited from the 8th/14th century, but was rebuilt by the Turks in 1319/1901 as an administrative centre for the south. This step was no doubt influenced by the dispute with Britain over the Egyptian-Palestinian frontier and by the need for closer surveillance of the southern tribes. In October 1917 a decisive battle was fought in the neighbourhood of Beer-sheba between the British and Turkish armies. Under the British mandate the Beer-sheba sub-district contained about half the area of Palestine, with a nomadic population estimated at 75,000-100,000. The population of the town was put in 1940 at 3,000, many of them semi-nomads.

**AL-BIRA**, the name of several places, generally in districts where Aramaic was once spoken, for al-Bira is a translation of the Aramaic *birḥā* = 'fortress', 'citadel'. The best known is al-Bira on the east bank of the Euphrates in North-west Mesopotamia, the modern Birejdik (5,600); on other places, bearing the name Bira, cf. Yāqūt, *Mu'daww* (ed. Wüstenfeld), i, 787; Nöldeke in the *Nachr. der Götting. Ges. der Wiss.*, 1876, 11-12 and in *De Geoe*, BGA, iv, (Gloss.), 441; Le Strange, *Palestine under the Moslems* (1890), 423.

(M. Streck)

**BIRDJAND**, District and town in the IXth *asān* of Persia. The town is situated at 59° 15' E. (Greenwich) and 32° 52' N. It is on the northern side of an arid valley and is built on two low hills between which is a torrent-bed. The altitude is 1490 metres.

The early Arab geographers made no reference to Birdjand, and Yāqūt (i, 785) is apparently the first to mention it (ca. 625/1226). He described it as one of the finest towns of Khūstān, which was then part of the great province of Khurāsān. Hamd Allah Mustawfi, writing ca. 740-1340, stated (*Nuzha*, 143) that Birdjand was a provincial town, round which much saffron and some corn were grown; in the villages around grass and fruit were produced. Like the town of Kān (7,25), which lies 90 km. to the north, Birdjand was for some time under the control of the Assassins. It was the birthplace of the poet Nizārī, who, as his name

indicates, was an Ismā'īlī; he died about 719-50/1320. Birdjand was for long eclipsed by Kān, but in the 19th century it took the place of the latter as the chief town in Khūstān. It is now administrative centre of the districts (*gholishikhs*) of Birdjand and Kān, under a *fārmāndār* or governor. In 1946 the population was 23,485, but is now lower, due to the migration of some of the inhabitants to Mashhad and elsewhere. The town has a piped water supply, the water being obtained partly from *handis* from the Kāh-i Bakrān to the south, and partly from a deep well in the town itself.

As in former times, the country round produces much saffron, and nuts of all kinds are also grown. The district has been famous for the quality of its carpets and rugs, most of which are made in the village of Darakshāh, 80 km. to the north-east; it is also renowned for its *barabā* (garments made of camel's hair). Birdjand enjoys some prosperity due to its being on the main road between Mashhad and Zāhidān; it is also connected by road with Kirmān.

Smith, *The Perso-Afghan Mission*, 1871-72, in *Eastern Persia, an Account of the Persian Boundary Commission 1870-71-72*, London 1876, vol. i, 334-7; E. Reclus, *Nouv. géogr. univ.* (1894), ix, 217-9; Le Strange, 361; P. M. Sykes, *Ten Thousand Miles in Persia*, London 1902, 399; Rasmāzī and Nawā'ih, *Fārhang-i Dīwānī* (1913), i, 72.

**BIREDJIK**, a town in Mesopotamia, on the left bank of the Euphrates. The name Birejdik (amongst the local population, Beledjik; also, according to Sachau, Bārdjik in the Halaḥ (Aleppe) dialect) means 'little Bira', i.e., 'small fortress' (Aramaic *bira*, with the Turkish diminutive suffix). The Arabic name 'al-Bira' (5,600; Bīrāh in the later Syriac writers) derives from the Aramaic 'Birḥā' = 'fortress'. Birejdik, known to the Romans as 'Birḥa', is to be identified (according to Cumont) with a certain Makodonopolis mentioned in some of the Byzantine sources. The town is called 'Bīr' in the Latin chronicles relating to the Crusades.

At Birejdik one of the main routes from northern Syria into Mesopotamia crosses the Euphrates. The river here flows out of the mountains into the Syrian-Mesopotamian plain. It is here, too, that the Euphrates first becomes navigable, after leaving behind the cataracts formed where it breaks through the Taurus range. An isolated cone of calcareous rock, which rises sheer out of the river at Birejdik, has been fortified from remote times as a protection for this important passage of the Euphrates. A bridge of boats existed here in Seleucid times, running from Zeugma on the right bank of the river to Apamea (= Bīrḥā) on the left bank (the Seleucid name Apamea was perhaps never in current use and disappeared in favour of the Aramaic 'Birḥā'). Apamea, at first a suburb of Zeugma, came in due course, owing to its possession of the fortress, to be far more important than Zeugma, which faded out of existence. There is evidence (cf. Khallāl al-Zahrī) that a bridge was still to be found at the river passage of Birejdik in the second half of the 13th century.

The older geographical works in Arabic make no mention of al-Bira. This name first appears in such treatises about the middle of the 13th century, e.g., in al-Dimashqī and Abū 'I-Fidā'. References to al-Bira in historical literature make their appearance, it

would seem, at the time of the Crusades. The Latin Counts of Edessa held the town from 1147-1159 until 1451/59, when the Christians, unable to maintain it after the loss of Edessa to the Muslims in 539/1144, surrendered it to the Byzantines, who soon lost it, however, to the Urtukid lord of Mardin. During the Mongol invasions of the 13th century al-Bīra, with its almost impregnable fortress, was a notable stronghold in the Muslim defenses. The Mandilūs of Syria and Egypt, in the reign of Sultān Kaʿbī Bāy, had to defend al-Bīra against the Ak-Koyunlu Turcomans under Uzun Hasan. Kaʿbī Bāy inspected the fortresses along the Euphrates in 882/1477-78 and later strengthened and repaired the defenses of al-Bīra in 887/1484. The fortifications of al-Bīra contain six Arabic inscriptions, the oldest dating from the time of the Mamlūk sultan Baraka Khān (676-678/1277-1279) and the most recent from the years 887-888/1482-1483 in the reign of Sultān Kaʿbī Bāy. As a result of the campaigns of Sultān Selīm I in 920-923/1514-1517, al-Bīra came under Ottoman rule and was included in the *sandak* of Urfa which formed part of the *vilayet* of Haleb (Aleppo). The Ottomans maintained at Bireğik a small naval arsenal to meet the needs of their river flotilla on the Euphrates. Not far from Bireğik, the Egyptian forces under Ibrahim Paşa won a decisive battle against the Ottomans at Nisib in 11 Rabiʿ II 1255/24 June 1839. Bireğik, where the ruins of the ancient fortress are still to be seen, lies now within the territories of the present Turkish Republic. The town had, in 1925, a population of approximately 10,000 inhabitants.

**BİRGE** (Birgi, sometimes also Bērg or Birkā, a small town in western Asia Minor situated in the valley of the Kizilirmak Menderes, in the centre of a *subye* belonging to the *hukū* of Ödenişli in the province of İmr (Smyrna). Here stood the ancient *Δύε Τεγόν* in Lydia. The town was known in Byzantine times as *Χρυσόπολις* and also as *Περγύον*. It was raised to the status of a metropolis set between 1193 and 1199, being raised from the ecclesiastical control of Ephesus, but it became once more a suffragan bishopric of Ephesus in 1387. The Catalans under Roger de Flor drove the Turks from the town in 1304 and at the same time plundered it. Birge passed thereafter into the hands of the Turkish Beys of Aydin. Monuments dating from the period of their rule—namely the 176 *İsmāʿ*—are still to be seen in the town. Birge came under the control of the Ottomans in 793/1391 and remained in their possession thereafter, save for a brief interval during which princes of the house of Aydin, restored to power by Timur Beg, held the land once more (1402-1425). The town suffered considerable damage in the years 1920-1922 during the course of the war which was then being waged between the Greeks and the Turks in western Asia Minor. Birge had, in 1945, about 2150 inhabitants.

**BİRGEWİ** (Birgöl, Birgöl), MEHMET B. PIR ʿAlī, a Turkish scholar whose fame still lives among the common people. Born at Balıkesir in 928/1512 (or 936/1520 if Kāth Celālī is correct in saying that he died at the age of 58), he began his education at home, but soon distinguished himself among his teachers and went to Istanbul, where he attached himself first to Aḥmad-zāde Mehmed Efendi and then to the *bīdī* ʿAshar ʿAbd al-Rahmān Efendi. Having completed his education he taught in the *medreses* of Istanbul, and during this time was initiated into the Bayramiyya by Shaykh ʿAbd al-Rahmān Kāndāl. Through the influence of his master ʿAbd al-Rahmān Efendi he obtained the post of *kassab* to the army at Edirne, but soon afterwards desired to withdraw both from this office and from teaching. His shaykh however would not consent to his totally abandoning teaching and preaching, and when his fellow-townsmen ʿAlī ʿAlī Efendi, the tutor of Selīm II, offered him the position of *medrese* in the *medrese* he had built at Birgi, he accepted. His career of teaching, writing and preaching at Birgi, (whence his appellation of Birgewi) came to an end in 981/1573, when he died of the plague.

Like Ibn Taymiyya, he set himself firmly against all sacrilege in order to protect the sacred law, and no considerations of rank would cause him to connive at any non-observance of the faith. Towards the end of his life he even made the journey from Birgi to Istanbul to advise the grand vizier Mehmed Paşa about the rectification of some irregularities which he had observed. Birgewi, an utter fanatic in religious matters, would not tolerate the slightest deviation from the *shariʿa*. The *risāla* which he devoted to the theme that it was *ḥarām* to teach the Kurʾān for money, or to accept payment for any act of worship, brought him into a controversy with the scholars of the day which gave rise to much gossip. One of the most famous *khāṣṣ* of the time, Balı-zāde, emerged as his chief opponent and wrote *risāla* in which he endeavored to refute his opinions. The Shaykh al-Islām Abū ʿIsaʿūd Efendi also took a hand in the dispute and, seeing that the *awāḥ* would suffer loss if Birgewi's views prevailed (in particular, his view of the illegality of making a *waḥ* of coined money or other movable property), pronounced a *fatwa* against him. Thereupon Balı-zāde went so far as to claim that Birgewi had been acting hypocritically.

Of Birgewi's works, the one which keeps his fame alive to this day is his Turkish manual of the rudiments of theology, entitled *Wasiyyat-nāme*, which still fills the needs of the common people in questions of religion. Commentaries on it were written by Kādzī-zāde Ahmed Efendi and Shaykh ʿAlī Efendi of Konya, the latter being in turn the subject of a commentary by the mufti of Çomankpazar, İsmāʿīl Niyazi. Often printed, the *Wasiyyat-nāme* was also translated into northern Turkish by Toktamış-oghlu [ed. Kazan 1804 and 1806; see Zecher, *Bibliotheca orientalis*, I, 1463 f., II, 1192 f.; *JA*, 1843, II, 32, 35; 1859, I, 544; Dieterici, *Charakteristik Othomane*, 38 f.; for translations see especially the French version by Garnier de Tassy, *L'Islamisme d'après le Coran . . .* (1874). Two grammatical works of his, the *Isḥār* and the *ʿAsmāʾ* were used in *medreses* for many years and considerably facilitated the study of Arabic, by the period. His *al-Tarīkh al-Muhammadiyya*, containing his sermons and homilies, in Arabic, was highly esteemed by the learned. ʿAlī al-Nīdī wrote a long *ḥayda* in which he made clear Birgewi's position among the scholars of Islām. Commentaries were written on *al-Tarīkh al-Muhammadiyya* by Khālidī Mehmed Efendi and ʿAbd al-Fāḥ al-Bāḥ. Emin Efendi adopted it as his guide to conduct, and was consequently dubbed 'Tarkīfatī'; after him there even came into being a festival of the same name.

**Bibliography:** ʿAlī, *Hadīth al-habīb* (1268), I, 179; ʿAlī B. Bāl, *ʿAbd al-mawṣi* (in the margins of Ibn Khālidī, Cairo 1370, II, 430); Kāth Celālī, *Māʾin al-hak* — G. L. Lewis, *The Balance of Truth*, London 1957, chap. 20; Sidiqī-ʿAlī, *ʿUḥmānī*, *ʿUḥmānī*, *maʾdīfī*, I, 235; Shems al-Dīn Sānī, *Kānī al-ʿAlam*, I, 140 f.; A. G. Ellis, *Catalogue of the Arabic Books in the Brit. Mus.*, I, 408; C. Rieu, *Suppl. to the Cat. of the Arabic MSS in the Brit. Mus.*, nos. 979 and 980, 619; *idem*, *Cat. of the Turkish MSS in the Brit. Mus.*, 68 f. (KASIM KUDREVI)

**BİRR** (Kurʾānic term), "pious goodness" (R. Black's translation; see Kurʾān, II, 189). In the analysis of the spiritual states (*awāḥ*) and the attitude of the soul towards God, it must at the same time be compared with and distinguished from *taḥwīd* (q.v.). (L. GARDET)

**BIRS**, also called Birs Nīrēdī, in the older literature Birs, a ruined site 3 miles S.W. of the town of Hilla on the Euphrates, about 12 miles S.W. of Babylon on the eastern shore of the Lake of Hinnidiya.

The place is the ancient Borsippa, the sister town of Babylon. Its immense ruins, the largest that have survived from the Babylonian period, were thought by the Arabs to be the palace of Nimrod b. Kaʿnān (arab. Nimrod, Yāqūt, I, 146) or of Būlkhamar (Yāqūt, I, 155). Even in modern times they were thought to be the ruins of the Tower of Babel and this erroneous view used to crop up even after H. Rawlinson had proved from inscriptions that they were the ruins of the tower of the Temple of Nīro of Borsippa. Whether there was still a town on the ancient site in the early Islamic period is not quite clear. Balīdhīrī early speaks of the *ʿAdāmāt* Birs (Asyr. *agummi*), the land around the marshy lakes of Birs which were taken possession of by ʿAlī. Upper and Lower Birs appear in Kudāma and are called al-Sibayn and al-Wukūf by Ibn Khuradādhbih in the lists of taxes, as districts (*ḥawāḍir*) of the circle (*astān*) of central Bīkhūdhī.

Even in ancient times the district of Babilonia and in particular Borsippa was famous for its textile industry (e.g., Strabo, xvii, I, 7). This in-

dustry survived into the Arab period. The garments made in the district of Burs were, according to Ma'sūdī (*Murūdī*, vi, 59) called Bursiyya or also Khutariyya, after the district between Burs, Bābil and Hilla (following G. Hoffmann's emendation). In Yāqūt, iv, 773, Narsīya should therefore be emended to Bursiyya.

Hilprecht, *Explorations in Bible Lands*, 182 ff.

(E. HERZFELD)

**BIRŪN**, in Persian 'outside', the name given to the outer departments and services of the Ottoman Imperial Household, in contrast to the inner departments known as the *Endam* [e.g.]. The *Birūn* was thus the meeting-point of the court and the state, and besides palace functionaries included a number of high officers and dignitaries concerned with the administrative, military, and religious affairs of the Empire.

(J. LEWIS)

**AL-BIRŪNĪ** (BIRŪNĪ) ABU 'L-RAYḤAN MUHAMMAD B. AHMAD, also sometimes called by the nisba **AL-KHŪWĀRIZMĪ** by certain Arabic authors (e.g., Yāqūt) and also, at the risk of a confusion of names, by some modern Orientalists (see *al-Khwarizmi*), was one of the greatest scholars of mediaeval Islam, and certainly the most original and profound. He was equally well versed in the mathematical, astronomic, physical and natural sciences and also distinguished himself as a geographer and historian, chronologist and linguist and as an impartial observer of customs and creeds. He is known as *al-Ustād*, "the Master", and was born of an Iranian family in 363/973 (according to al-Ghazālī, on 3 *Ḥuḥ* al-*Ḥijr* al-*Ḥijr* 4 September — see E. Sachau, *Chronology*, xiv-xv), in the suburb (*ḥiṣn*) of Kāth, capital of Khwārizm (the region of the Amu-Darya delta, now the autonomous republic of Karakalpakstan on the southern shores of the Aral Sea). He spent the first twenty-five years of his life in his homeland, where he received his scientific training from masters such as Abū Naṣr Maṣ'ūd b. 'Alī b. 'Irāk Ḍiḥānī, the mathematician. Here he published a few early works and entered into correspondence with Ibn Sīnā, the young prodigy of Bīhārā, his junior by seven years.

It would appear that he went in person to see the Sāmānīd sultan Maṣ'ūd II b. Nāḥ (387-396/977-990), whom he praised as his first benefactor. Next, he went for a long stay to Ḍiḥān, south-east of the Caspian Sea, apparently in 388/996 when the Zayrid sultan Abū 'l-Ḥasan Kābūs b. Waḡḡir ḡhams al-Ma'ālī returned from exile; from there he was able to go as far as Rayy (near Tehran). It was at the Court of Ḍiḥān that he wrote his first great work, on the subject of calendars and eras, and important mathematical, astronomical, meteorological and other problems. This was dedicated to Kābūs, probably about 390/1000, without prejudice to much later emendations and alterations; the *K. al-*

*Āḡār al-Bāḡiya 'an al-Kurūn al-Khāṣiya* (*Chronologie orientischer Völker*, published by Edward Sachau, Leipzig 1878, reprinted by Beilan, Leipzig 1923; English translation entitled *The Chronology of Ancient Nations*, London 1879). Brought up in the Iranian dialect of Khwārizm, al-Birūnī spoke Persian, but deliberately chose to use the Arabic language in his scientific writings, though some later works may have been written in Persian or in Arabic and Persian simultaneously. Having returned to his own country before 399/1008, and having been received by Prince Abū 'l-Ḥasan 'Alī b. Ma'mūn, he was able to give his services for seven years to the brother of this prince, the Khwārizmshāh Abū 'l-Aḥḥās Ma'mūn b. Ma'mūn, and was entrusted, because of his "golden and silver tongue", with delicate political missions.

After the assassination in 407/1016-17 of the Khwārizmshāh by his rebellious troops and the conquest of the country by the powerful ḡhazawid sultan Maḥmūd I, Subuktāgin, many prisoners were led away to Ghazna in Sijistān (Afghanistan) in the spring of 408/1017, including learned and wise men among whom were al-Birūnī, Abū Naṣr already mentioned, and the physician Abū 'l-Khayr al-Ḥusayn b. Bābā al-Khannār al-Baghdādī. Ibn Sīnā must have left Ḍiḥān early for Ḍiḥān of his own free will in 398/1008 together with the Christian physician, Abū Sahl 'Isā b. Yahyā al-Maṣṣīḥ al-Ḍiḥānī. This physician had collaborated closely with al-Birūnī, even to the point of writing a series of works in his name, as did also Abū Naṣr (see below). Al-Birūnī, henceforth retained at the Court of Ghazna, possibly as official astrologer, accompanied Sultan Maḥmūd on several of his military expeditions to north-west India. Here he taught the Greek sciences and received in exchange, with his initiation into Sanskrit and various dialects, the incalculable sum of knowledge which he put into his *Description of India*, completed in 421/1030 shortly after the death of Maḥmūd: the *K. Ta'wīḡ al-Hind* (*Al-Beruni's India*, ed. E. Sachau, London 1887; English translation, 2 vols., London 1888, 2 1910). The previous year, al-Birūnī had written an abstract of geometry, arithmetic, astronomy and astrology: the *K. al-Taḥṣīn li-Aṣnā' al-Sinā'at al-Tandīm*, English translation facing the text by R. Ramsay Wright, London 1934.

It was to Sultan Maṣ'ūd b. Maḥmūd (421-432/1030-41) that the Master dedicated this third principal work in 421/1030, retaining the right to add the finishing touches later: the *K. al-Rasā'id al-Ma'ādī fi 'l-Hay'ā 'an 'l-Nadīm* (Canon Masdicus, Haydarābād [Dn] 1934-36, 3 vols.). According to Yāqūt, Maṣ'ūd offered the author an elephant-load of silver pieces for this work, but al-Birūnī refused the gift. In spite of this, he was provided with the means of carrying out his scientific and literary work to the end of his life. The treatise on mineralogy which he wrote during the reign of Sultan Maḥmūd b. Maṣ'ūd (432-441/1041-49) has come down to us; it is the *K. al-Djāmi'at fi Ma'arifat al-Djauhar*, ed. F. Krenkow, Haydarābād, [Dn] 1936. In a last important work, still unpublished, the *K. al-Sayda li-'l-Fah* on medicinal drugs, (see H. Bevelin, *Das Unbekannte von Al-Biruni*, *Die Welt* 1902, 133; H. Meyerhoff, *Das Unbekannte von Al-Biruni* [ed. and trans.], Berlin 1936) the Master declared himself to be over 80 (lunar) years old. The date of his death, usually fixed in 440/1048, according to al-Ghazālī, must therefore be put back a little. Al-Birūnī must have died after 442/1050, probably at Ghazna.

The total number of his works is considerable. In his *Risāla fi Fihrist kutub Muhammad b. Zakariyya al-Rāzi*, ed. P. Kraus, Paris 1936) he includes (in 427) the *Fihrist* of his own writings, of which 103 are completed, 10 unfinished (among which are the *Chronology* and the *Canon Ma'ādī*), 12 have been written in his name by Abū Naṣr, 13 by Abū Sahl and 1 by Abū 'Alī al-Ḥasan b. 'Alī al-Ḍiḥī; making a total of 138.

Taking into account works written after the *Fihrist*, and also certain omissions in this list, the total number of works is 180, differing widely from another list in length, including brief treatises on specialised matters to major works embracing vast fields of knowledge. Apart from the edited texts referred to above, 4 mathematical and astronomical treatises have been published in Haydarābād (1948) in a single volume entitled *Rasā'id al-Birūnī*: 1. *K. fi 'l-Had al-Mahāl fi amr al-aḥd*; 2. *Fi 'l-Riḡāḡ al-Hind* (cf. E. Wiedemann, *Über die Lehre von der Proportion nach al-Biruni*, in *SBPMS Erlg.*, *Beiträge*, 48, 1-6, 1910); 3. *Tamhīd al-Mustaharr li-Tahhīḡ ma'nā al-mamarr*; 4. *Mahāla fi Istiḡhāt al-aḥd fi 'l-Dā'ira bi-Khawāṣṣ al-ḡhaff al-Mumhāt fi-hā* (translation and commentary by H. Suter in *Bibliotheca Mathematica*, ii, folio XI, 31-78, Leipzig 1930-31). A volume entitled *Rasā'id al-Naṣr li-'l-Birūnī* was published separately in Haydarābād in 1948. This includes 15 mathematical and astronomical treatises by Abū Naṣr among which are most of these written in the name of al-Birūnī. Manuscripts, some partially edited, others unedited, of about twenty other works of al-Birūnī have come down to us, among which are: the *K. Tahdīd Nihāyat al-Amālin li-Masā'il Masā'il al-Masā'il* (geographical treatise, in *Biruni's Picture of the World* by A. Zaki Velidi Togan in *Memoirs of the Archaeological Survey of India*, no. 53, New Delhi, 1941; the MS. Fāṭih 3586 completed at Ghazna in 416 is possibly in his own hand); the *K. fi 'l-Fah al-Waḡḡ al-Mumhāt fi Sa'at al-Aḡār* (cf. E. Wiedemann and J. Franks, *Allgemeine Betrachtungen von al-Biruni in seinem Werk über die Astronomie*, in *SBPMS Erlg.*, *Beiträge*, 52-53, 97-121, 1920-21); the *Mahāla fi 'l-Nisab al-Hay'ā bayna 'l-filzāl wa 'l-ḡardīr fi 'l-baḡḡ* (cf. E. Wiedemann, *Über Bestimmung der spezifischen Gewichte*, in *SBPMS Erlg.*, *Beiträge*, 38, 163-166, 1906); the *Tarḡamat K. Bāḡḡ al-Fah al-Fah al-Fah* (cf. H. Ritter, *La traduction du Livre de Ptolémée par Biruni*, communications in *Revue de l'Institut de l'Est*, 1922, 133-134; Tehran 1953).

**Bibliography:** Since lack of space makes it impracticable to provide an exhaustive list of the work done on al-Birūnī, of which there is a fair volume, though very inadequate for such an important figure, refer the reader to my study: *Le Livre de al-Biruni*, *Essai Bibliographique*, in *MIDEO*, ii, 161-250 and iii, 397-505, 1956; taking up the work of H. Suter and E. Wiedemann, *Über al-Biruni und seine Schriften*, in *SBPMS Erlangen*, *Beiträge*, 52-53, 55-96, 1920-21, we have listed 180 works of the Master, provided a bibliographical index as complete as possible for each one, with tabular summaries in *Revue de l'Institut de l'Est* and works as a whole of al-Birūnī are listed below, as well as a few studies of special subjects.

A. *Bibliographies and Studies of the Works as a Whole:* Birūnī, *Risāla fi Fihrist*, op. cit. ed. P. Kraus; the Arabic text and the autobiographical section are also to be found in E. Sachau's introduction to the *Chronology* (Arabic text); German

trans. in H. Suter and E. Wiedemann, op. cit. 71-79; biographical development in the other sections of this work, and also in E. Sachau's introductions to the *Chronology* (Arabic text and English translation) and in *India* (Arabic text and English translation); Ibn Abū 'Uyayna, *Uyayna 'an Abū 'l-Ḥasan*, 20-21 (cf. E. Wiedemann, *Biographie von al-Biruni*, in *SBPMS Erlg.*, *Beiträge*, 44, 117-8, 1912); Yāqūt, *Irḡād al-Arḡ*, ed. Margoliouth, iv, 308-14 (German trans. by E. Wiedemann and J. Hell, *Über al-Biruni*, in *MGWJ*, 31, 314-21, 1912); *Zāhir al-Dīn al-Bayhākī in his Ta'wīḡ al-Hakam* al-Jalīm, MS. Berlin, 1005 (cf. E. Wiedemann, *Einige Biographien nach al-Bayhākī*, in *SBPMS Erlg.*, *Beiträge*, 42, 160, 1910); 'Alī b. Zayd al-Bayhākī, *Taḥṣīn Ṣiḡāt al-Hikma*, ed. Muḥ. Shāfi', Lahore 1935, 62-4; Suyūṭī, *Baḡḡ al-Wu'd*, Cairo 1326, 20; Brockelmann, i, 475, S. I, 820-1; Suter op. cit. 6; Sartori, *Introduction to the History of Science*, Baltimore 1927, i, 707-9; L. Leclerc, *Histoire de la médecine arabe*, i, 480-4, Paris 1876; Carra de Vaux, *Penseurs de l'Islam*, ii, 75-87, 215-7; Syed Hasan Barani, *Al-Biruni: His Life and Works* (in Urdu), 'Aligarh 1927; idem, *Ibn Sina and al-Beruni. (D. J. BOUTON)

**BIRZĀL**, Baxō, a Berber tribe of the Zenata group mentioned as living in the Lower Zab (south of Media) at the beginning of the 4th/10th century. These Berbers, in conflict with the Fātimid Caliph, 'Ubayd Allāh, who built the fortress of Milla as a look-out against them, supported the Khāridjite agitator, Abū Yazīd [q.v.], and offered him refuge when he was pursued by the Fātimid Caliph, al-Mansūr. Although the latter pardoned them, they nevertheless took part in the rebellion of the governor of the Zab, Dja'far Ibn al-Awladūsī [q.v.] in 360/971. Fātimid repression forced them to flee; they found refuge in Spain where they formed a corps of Berber troops at the service of the Umayyad monarchs. Their chiefs supported the party of Ibn Abd 'Asmār at the death of the Caliph al-Hakam II; one of them was rewarded for this by being made governor of Carmona. During the period of anarchy in Andalusia at the beginning of the 5th/11th century, the Birzāl formed a little independent state at Carmona which tried to resist the ambitions of the 'Abbāsidīs of Seville. They were finally obliged to surrender to the king of Seville in 450/1059 and they had formerly disappeared from the Maghrib.

**AL-BIRZĀLĪ**, 'Alam al-Dīn al-Kāsim b. Muḥammad b. Yūsuf, also called Ibn al-Birzālī, Syrian historian and *hadith* scholar. He was born in Damascus in Djumada I or II, 665/February-April, 1267. A case could be made for the earlier date, sometimes mentioned, of 663/1265, but al-Birzālī himself evidently maintained that he was born in 665. His ancestors belonged to the Birzāl [q.v.] Berbers. His great-grandfather, Zakī al-Dīn Muḥammad b. Yūsuf (b. ca. 577/1181-82, d. in Hama in 636/1239),

had settled in Syria at the beginning of the 7th/13th century. Zakī al-Dīn's additional *nisba*, al-Ighlīlī, shows that he himself, or one of his ancestors, had once lived in Seville. A work of his is preserved in Damascus (cf. G. Makdisi, in *ISOAS*, xviii/1959, 22); copies of two volumes of Ibn 'Asākir's *History of Damascus* written by him are preserved in Baskipore (cf. *Cat.*, xii, 144 ff., nos. 800-801; cf. also v, 2, 223, no. 487). Al-Birzālī's grandfather, who succeeded his father in the position of *imam* at the Fālās Mosque (Fīlā) [q.v.], according to the localisation indicated by J. Sauvaget, *Les monuments historiques de Damas*, Beirut 1932, 60; cf. al-Nu'aymī, *Diris*, i, 86, ii, 361, Beirut 1932, 60; cf. al-Nu'aymī, *Diris*, i, 86, ii, 361, 1245-46, leaving al-Birzālī's father, Bahā' al-Dīn, to be brought up by his maternal grandfather, Bahā' al-Dīn, an official of the judiciary and accomplished scholar, died 699/1300 in his sixtieth year (cf. Ibn Kādī Shuhba, *Yām*, anno 699).

As a member of a family of scholars, al-Birzālī, together with his sister Zaynab, received his instruction from his father and other famous scholars. Ibn Taymiyya, for instance, lectured in his home (Baskipore, *Cat.*, v, 2, 280). He started out very young, but precocious as he was, he retained his love for scholarship all his life. He went through the full curriculum of religious studies, travelled in pursuit of his studies to other Syrian cities and to Egypt, served for a while as an official witness, but spent most of his life as professor of *hadith* in Damascus colleges, his principal position being that at the Nūrīyya (*al-Jāz*) from his courses there in Baskipore, *Cat.*, v, 2, 50 f., 198 f. He undertook the pilgrimage several times and died at Khulays in the holy territory on 4 Dhū 'l-Hijja 739/13 June, 1239. His children, among them Muḥammad and Fāḥim, both gifted scholars, had died before him. Among his many students and colleagues were the most prominent scholars of the time, among them al-Dhahabī. There is unanimous agreement among his biographers that he was an unusually attractive person, good-looking, modest, generous with his books and his knowledge, blessed with a good handwriting, extremely industrious as a scholar, and enjoying the confidence of all scholarly factions, even those that were mutually hostile.

No list of his writings is available, and none of the preserved works has been published so far. His great *History*, ending with the year 736/1335-36, was often quoted. It was abridged and continued by later scholars. Its actual title appears to have been *al-Mubtala* (cf. al-Sakhāwī, in E. Rosenthal, *A History of Muslim Historiography*, 414, but al-Nu'aymī, *Diris*, i, 578, refers to a work entitled *al-Mundakā* [= *al-Mukhtalaf*] as if it were different from the *History* often quoted by him). The *Mubtala* is preserved in MS. Topkapısarayı, Ahmet III, 2951 (cf. al-Munajjidima, in *Revue de l'Institut des Manuscrits arabes*, 1956, 101 f.). His voluminous *Ma'ādh*, which was highly praised and often cited as a reference work for contemporary scholarly history, is not preserved. A small *Ma'ādh* of his early teachers is preserved in Damascus (cf. Y. al-Ishāh, *Fikrīst maḥḥallāt Dīr al-Kutub al-Zahiriyya*, al-Ta'rikh, Damascus 1366/1947, 228 f.). A *Ma'ādh* al-Buldān wa 'l-Kurā is cited by Ibn Tūlūn, *Lama'at* (Damascus 1348), 33 and 43. A small historical work on those who participated in the battle of Badr is ascribed to al-Birzālī on the strength of the handwriting of a manuscript in Damascus, said to be similar to other autographs of al-Birzālī in the Zāhiriyya Library (cf. al-Ishāh,

*op. cit.*, 46). Among his works on *hadith* an *Arba'ūn Buldāniyya* is mentioned. Two selectors of *awā'id* al-*hadith* collected from his teachers and a *Tajdith* (*ḥayy* mis *Musnad Ahmad b. Hanbal*) are preserved in Baskipore (*Cat.*, v, 2, 294 ff., no. 462, 2, 3, and 6). A *fiqh* work, on al-Shāfi'ī, is extant in Cairo. Other works can be confidently expected to turn up in the future. However, al-Birzālī published less than he wrote, and the preservation of his works, therefore, remained a matter of chance. Al-Nu'aymī (*Diris*, i, 113) considered it worth mention that he came across the last volume of the *History* in 894/1489.

*Bibliography*: For the family history, cf. in particular, the biography of Zakī al-Dīn in *Dhahabī, Nuhul*,<sup>2</sup> Ms. ar. Yale University, L 571, vol. 2 (Cat. Nemoj, 1177), fols. 330b-331b. The following biographies deserve mention: Ibn Fadl Allāh al-Umarī, *Masālik*, Ms. ar. Yale University, L 341 (Nemoj, 1188), fols. 179b-180b; Hamaḥī Dimaṣhī, *Dhahī Tabakāt al-Firafir*, Damascus 1347, 18-21; Kutubī, *Fawā'id*, Cairo 1951, ii, 260-64; Subhī, *Tabakāt al-Shāfi'iyya*, iv, 246 f.; Ibn Kadhīr, *Bidāya*, xiv, 183 f.; Ibn Ḥadīr, *Durar*, ii, 237-39; Nu'aymī, *Diris*, Damascus 1367-1370/1948-1951; Ibn Kādī Shuhba, *Yām*, MS. Oxford, Marsh 143, anno 739; i, 112 f. Some of the unpublished works of Dhahabī, who wrote a biography of al-Birzālī in monograph form (cf. Rosenthal, *op. cit.*, 323), and the *Wāḥ* of Salafī may also contain valuable information. Cf., further, Brockelmann, II, 45, S II, 34 f.; G. Vajda, *Les certificats de lecture*, Paris 1957, 35 and 56; id., *JA*, 1957, 143-46. (E. ROSENTHAL)

#### BISAT (see KAL)

**BISHARAK**, or HARIGARABHĀS KAYABE, also called KARKASĪ, Indian author who wrote in Persian; the correct pronunciation of his name in Sanskrit is Vighvarai (Rajah of the world), son of Harigarbhas (slave of God), of the well known family of Kayastha, which was particularly noted for its Persian culture. His surname Karkasī signifies "he who has ears as big as hands". He translated into Persian, in 1061-2/1651-2, during the reign of Shāh-Jahān, the Sanskrit tale *Vikramādityam*, making use of the work of his predecessors. (The Sanskrit original also bore the title *Vikrama-charitam*, that is to say, the life of Vikram, the Rājā Vikram Aditti in whose reign commenced the Bikrami era, which has now reached the year 2013.) His work is also known by the name *Singhasan Ratn* (Sanskrit *Singhasan-battisi*, 32 tales of the lion throne), and has been translated into French by Lessaulier (*Le Trône enchaîné*, New York 1817). For the various editions of this Sanskrit tale, and the Persian translations, see the works mentioned below.

**BISHA**, an oasis in western Arabia stretching about 25 miles along the banks of the *wādī* of the same name immediately north of 20° N. Lat. The headwaters of the *wādī* are east of Abhā in the highlands of 'Asir, and the channel extends c. 400 miles north to its junction with Wādī Karayā, whence the combined channels turn inland to Wādī Taḥlīb and Wādī al-Dawāsir (see al-Dawāsir). The tributaries Hargīb and Tarḡī, coming from the east and west respectively, empty into Wādī Bishā south of the oasis of Bishā, and Wādī Tabāla (see TABALA) joins Wādī Bishā in the heart of the oasis. The early poets mention Bishā frequently, but on occasion confuse

it with the *wādī* and settlement of Bayḥ in Tihāmat 'Asir (see A. Sprenger, *Die alte Gegend Arabien*, Bern 1875).

The oasis of Bishā is noted for its dates, which are transported as far as Bayrūt, and the nearby 'Isodoun raises a famous breed of white camels known as *anwīk* (i.e., eaters of *arab* leaves). Bishā, at the junction of routes from al-Taḥlīb and al-Riyād to Abhā, Naḡrān, and all of south-western Arabia, has been an important stop on incense, pilgrimage, and invasion routes. Nimrīn and al-Rawḥān (Yakīr's Rāḥīn?) are the principal towns of the oasis, the former with the most important market of the region and the latter the site of Ka'at Bishā, where the Saudi Arabian Amīr of the district is established. Al-Rawḥān is divided into Rawḥān Al Maḥdī and Rawḥān Bānī Salīf. Among other towns and villages are al-Dajaw, 'Aṭf al-Jahārah, al-Rukayyā, al-Nakī, al-Shakīka, and al-Dunaynī. Yāḥyā lists the tribes of Bishā as *al-Bishā*, *Hilāl*, *Suwā'a* b. 'Amr b. Sa'sa'a, *Salūl*, 'Ukayl', *al-Hibāl*, and *Banū Hāghīm* of Kurayyā. At present elements of *Shāhrān* and *Aldub* (both of which stem from *Khaḥ'ani*), *Bānī Salūl*, and *Kaḥṭān* predominate.

*Bishā* *Biography*: In addition to Hamdānī and Yāḥyā, Fuḥd Hama, *Fi Bilād 'Asir*, Cairo 1931; M. Ibn Bishā, *Salāt al-Bishā*, Cairo 1370-3; 'Umar, *Riḍā*, *Khabāla*, *Dughāḥiyya*, *Shah Dīstār* al-'Arab, Damascus 1364; Admiralty, *A Handbook of Arabia*, London 1916-17; H. Philby, *Arabian Highlands*, Ithaca, New York 1952; M. Tamišir, *Voyage en Arabie*, Paris 1840. (W. E. MULLIGAN)

**BISHAR** (Pers.), a term not often used, and then mainly in a pejorative sense; it is a compound of the Persian privative prefix *bi* ("without") and the Arabic *shar*, the canon law of Islam. It denotes in particular those Sūfīs who declare that the law of Islam does not exist for persons illuminated by mysticism (antinomians). This somewhat colloquial term seems primarily to denote the adepts of the Sūfī sect of the Malamattīyya, who were given to keeping secret their acts of worship, and hence to neglecting the official ritual. The term occurs very occasionally in the technical terminology of Sūfism. (SAID NAFICY)

**BISHĀRĪN**, a nomadic Bedja [q.v.] tribe, now occupying two areas: (a) the 'Athābī, or western slopes of the Red Sea Hills, between approximately 23° and 29° N; (b) the banks of the 'Athārā and adjoining lands between about 17° and 16° N. The tribe is divided into two main clans: (a) Umm 'Alī, in the north-eastern 'Athābī; (b) Umm Nāḡlī, in the south-western 'Athābī and on the 'Athārā. Tribal genealogies indicate a connection with the Arab Awlad Kāhīl (Rawāḥīl), who in the 12th century lived near 'Asaylāh. The original Bishārī homeland was in this region, around Djabal Abba. In the 19th century they apparently expanded into the 'Athābī, displacing the Balaw, who may represent the Ḥadīrī of medieval Arab writers. Their further expansion into the richer 'Athābī lands was carried out by force of arms under Ḥamad 'Isrān, probably c. 1760-70. After Muḥammad 'Alī Pasha's conquests in the Sudan, the 'Athārā Bishārī fell under Egyptian control, while those of the 'Athābī remained virtually independent. The expansion of the Ummārī into the Ayyāb district, in the early 19th century contributed further to the separation of the two groups. Neither group played an important part in the Mahdiyya, although 'Ummān, a Dīna had some control over the 'Athārā Bishārī. The

separate treatment of the two groups continued under the Condominium until in 1928 a single chief (*edat*) was appointed over the whole tribe. The recent history of the Bisharin has been uneventful.

**BISHBALIK**, Bishbalk, the Soghdian (?) Pandjikat (both meaning 'Town of Five'), a town in eastern Turkistan frequently mentioned between the 2nd/8th and 7th/13th centuries (concerning the name cf. Minorsky in *Hudud al-'Alam*, 271 f. and 272 f.). It was rediscovered in 1908 by Russian explorers, with the aid of information found in Chinese sources. Its position is 47 km. to the west of Kūghang (Chinese Ku-t'ung) which was founded in the 18th century, and 100 km. north of Tashkent near the village of Hu-pao-tse. Its ruins (known as P'-o-t'ung-tse) have a circumference of 30 km. (B. Dolbežev in the *Izv. Russk. Komiteta dlya izučeniya Sredney i Vostochnoy Azii* IX, April 1909, 65 f.; Ed. Chavannes, *Documents*, 11; *Zap. Ak. Nauk* XXIII, 1915, 77-121; Sir Aurel Stein, *Innermost Asia*, 1928, 354-59).

From the 2nd century A.D. onwards, Bishbalk was mentioned in Chinese sources as the residence of local princes. From 658 onwards, it was the centre of a Chinese administrative area (with a Chinese or Turkish governor). This was due to its position as capital of a 'Five-Town-Area', and as one of the Chinese 'Four Garrisons'. The town is also mentioned in the Orkhon Inscriptions (II, E 28; Kül-Čur Inscription; cf. Wilhelm Thomsen in the *ZDMG* 1924, 153); A. N. Bernstamm, *Socialno-ekonomičeskii stroj orkhon-yenisejskikh Tyvov VI-VIII vekov* (The social and economic structure of the Orkhon and Yenisey Turks from the 6th to the 8th century), Moscow and Leningrad 1946, index. The Chinese names Kinnan, and in particular, Pei-tung (northern court) for Bishbalk, appear from this time onwards.

According to the T'ang-shu (Chavannes, *Doc.*, 96-99) the Scha-tu ('people of the Sandy Desert'; cf. below) lived near Bishbalk between 712 and 818. After long disputes (cf. Chavannes, *Doc.*, 113 f.; Kūghang, *Diwan*, I, 103, 317, (ed. Brockelmann 242); Marwanji, 73; *Hudud al-'Alam*, 227, 272) the town fell into the hands of the Tibetans in 791 (Chavannes, *Doc.*, 303), and later it became the residence of the Turkish Ilkhanid princes, whose inheritance was taken over (with the title of Idgh Kut, 'Holy Majesty') by the Uigurs in 860. According to a report by a Chinese mission in the year 982 (for list of translations cf. Wittfogel, 194), the town possessed more than 300 Buddhist temples, a Buddhist monastery, Manichaean shrines and one (artificial) lake. Some inhabitants, making use of the artificial irrigation, made their living by growing vegetables, others bred horses and did metalwork. The only early Islamic mention of the town (in *Hudud al-'Alam*, 17, a, trans. 94) dates from the same year. It is mentioned as being the residence of the ruler of the Toghruz (p. 1). Concerning this, and a comparison between the Toghruz and the Scha-tu, cf. V. Minorsky in *Hudud al-'Alam*, 266/72, 481. The mention of it made by Idgh Kut, 490, 502, is presumably based on a different report, namely that of Tamin b. Balr al-Mutaww'il (cf. bibliography).

As the northern residence of the ruler (Idgh Kut, Idgh Kut, or Idgh Kut) of the western Uigur part of the state, Bishbalk came under the Kara Khitay (p. 1) (there is mention of a Chinese work on this by Wang-

Kuo-wei in Wittfogel 675, bottom left). In 1209, the Uigur ruler handed the town over to the Mongols of his own free will, and took part in their campaigns. Bishbalk came in close contact with the Islamic world within the Mongol Empire, and Islam gradually penetrated into the town in the 13th century, despite the resistance offered by the Uigurs, who realised that they would thereby lose their spiritual leadership of the Mongol Empire. After the Mongol governor of Central Asia, Ma'ad b. Mahmud Yalavai ('Ambassador'), had taken up his office in Bishbalk in 1252/53, the Idgh Kut is said to have issued a secret order in September 1258, for the murder of all Muslims in the order of the Grand Khān Mongke, he was taken and executed, but his dynasty remained (Djawayni, II, 34 f., 88; II, 60 f.; Raḡhib al-Din (ed. Blochet), II, 304 f.; Hamd Allāh Mustawī Kazwī, *Tarīkh-i Guzīda*, 577; R. Spuler, *Die Mongolen in Iran*, Berlin 1955, 239).

After 1260, the town appears to have enjoyed a period of independence between the empire of the Grand Khān and the Gāghatay state. It repulsed an attack from the west in 1275. At that time, Bishbalk was the starting point of the postal route from China to Central Asia (Bretschneider, *Not.* 208). The region of Bishbalk then apparently belonged to the state of Gāghatay. Nothing is known about the subsequent fate of the town itself. It apparently vanished at the same time as the dynasty of the Idgh Kut, in the 14th century. Thereafter, the Chinese used the name Pei-tung only as a regional designation for an area which (according to Muhammad Haydar Dughlat, *Ta'riḡh Raḡhib*, trans. E. Denison Ross, London 1895, 365) was known as Moghūlīstān in the 16th century, and in which Islam was now firmly established. There is no further mention of Bishbalk itself.

**AL-BISHIR**, scene of a battle in eastern Syria in 750/62 between the Arab tribes of Sulayman and Taghlib. Khalid b. al-Walid campaigned here in 12/63 (Tabari, I, 268, 267-3). Yāqūt describes it as a range of hills stretching from 'Uqf near Palmyra to the Euphrates, corresponding to the modern Djabel al-Bishir. The battle is also sometimes called after al-Kabbib, a local water-course.

The 'Day of al-Bishir' was the climax of several clashes between the two tribes. This strife lay to some extent outside the Kays-Kalb tribal feud of the period; both tribes were accounted North Arabian, and its immediate cause was Sulaym's encroachment on Taghlib's pastures in al-Djazīra.

An uneasy peace was broken through the Christian Taghlib ruler handed the town over to the Mongols of his own free will, and took part in their campaigns. Bishbalk came in close contact with the Islamic world within the Mongol Empire, and Islam gradually penetrated into the town in the 13th century, despite the resistance offered by the Uigurs, who realised that they would thereby lose their spiritual leadership of the Mongol Empire. Blochet), II, 304 f.; Hamd Allāh Mustawī Kazwī, *Tarīkh-i Guzīda*, 577; R. Spuler, *Die Mongolen in Iran*, Berlin 1955, 239).

After 1260, the town appears to have enjoyed a period of independence between the empire of the Grand Khān and the Gāghatay state. It repulsed an attack from the west in 1275. At that time, Bishbalk was the starting point of the postal route from China to Central Asia (Bretschneider, *Not.* 208). The region of Bishbalk then apparently belonged to the state of Gāghatay. Nothing is known about the subsequent fate of the town itself. It apparently vanished at the same time as the dynasty of the Idgh Kut, in the 14th century. Thereafter, the Chinese used the name Pei-tung only as a regional designation for an area which (according to Muhammad Haydar Dughlat, *Ta'riḡh Raḡhib*, trans. E. Denison Ross, London 1895, 365) was known as Moghūlīstān in the 16th century, and in which Islam was now firmly established. There is no further mention of Bishbalk itself.

**AL-BISHIR**, scene of a battle in eastern Syria in 750/62 between the Arab tribes of Sulayman and Taghlib. Khalid b. al-Walid campaigned here in 12/63 (Tabari, I, 268, 267-3). Yāqūt describes it as a range of hills stretching from 'Uqf near Palmyra to the Euphrates, corresponding to the modern Djabel al-Bishir. The battle is also sometimes called after al-Kabbib, a local water-course.

The 'Day of al-Bishir' was the climax of several clashes between the two tribes. This strife lay to some extent outside the Kays-Kalb tribal feud of the period; both tribes were accounted North Arabian, and its immediate cause was Sulaym's encroachment on Taghlib's pastures in al-Djazīra.

An uneasy peace was broken through the Christian Taghlib ruler handed the town over to the Mongols of his own free will, and took part in their campaigns. Bishbalk came in close contact with the Islamic world within the Mongol Empire, and Islam gradually penetrated into the town in the 13th century, despite the resistance offered by the Uigurs, who realised that they would thereby lose their spiritual leadership of the Mongol Empire. After the Mongol governor of Central Asia, Ma'ad b. Mahmud Yalavai ('Ambassador'), had taken up his office in Bishbalk in 1252/53, the Idgh Kut is said to have issued a secret order in September 1258, for the murder of all Muslims in the order of the Grand Khān Mongke, he was taken and executed, but his dynasty remained (Djawayni, II, 34 f., 88; II, 60 f.; Raḡhib al-Din (ed. Blochet), II, 304 f.; Hamd Allāh Mustawī Kazwī, *Tarīkh-i Guzīda*, 577; R. Spuler, *Die Mongolen in Iran*, Berlin 1955, 239).

(J. W. FOCK)

**BISHIR b. AL-BARĀ'**, Medinese Companion, of the Khazrajite clan of Banī Salama. Both he and his father al-Barā' b. Ma'rūr [p. 2] accepted Islam early and were among the seventy odd Medinese who were present at the second 'Akaba meeting with the Prophet. Later, Bishir fought at Badr, Uhud, the siege of Medina, (Battle of the Ditch), and at Khaybar in 7/62. There he ate from a poisoned sheep which a Jewess offered to the Prophet in an attempt to venge her lost relatives. The Prophet tasted the poison and spat out the meat, but Bishir swallowed it and died, according to some sources immediately, according to others after suffering for a year.

Bishir was a famous bowman, and an enthusiastic Muslim who is quoted as arguing with the Jews of Medina. The Prophet described him as the *sayyid* of his clan, the Banī Salama, al-Shirā'ī (al-Muḥaddith, Cairo, II, 176-7) quotes the case of Bishir as a precedent for making that method of poisoning a capital offence.

*Bibliography:* Ibn Hishām, 309, 378, 499, 764-5; Ibn Sa'd, III, 2, 118-119; Tabari, I, 253-4; Ibn al-Aḥḍir, al-Kāmil, I, 170; Yāqūt, *Tarīḡh*, II, 57; *Ud al-Ghābi*, I, 180; Nawawī, 173-4; Caetani, *Annali*, index. (W. 'ARAFAT)

**BISHIR b. GHIVĀTH** b. ABĪ KARĪMA ABĪ 'ABD AL-RAḤMĀN AL-MARISI, a prominent theologian belonging to the Murji'a [p. 2]. His father, a fuller and dyer in Kūfa, is said to have been a Jew, and Bishir, on his conversion to Islam, to have become a *muwālī* of Zayd b. al-Khaṭṭāb. He lived

separate treatment of the two groups continued under the Condominium until in 1928 a single chief (*edat*) was appointed over the whole tribe. The recent history of the Bisharin has been uneventful.

**BISHBALIK**, Bishbalk, the Soghdian (?) Pandjikat (both meaning 'Town of Five'), a town in eastern Turkistan frequently mentioned between the 2nd/8th and 7th/13th centuries (concerning the name cf. Minorsky in *Hudud al-'Alam*, 271 f. and 272 f.). It was rediscovered in 1908 by Russian explorers, with the aid of information found in Chinese sources. Its position is 47 km. to the west of Kūshang (Chinese Ku-t'ung) which was founded in the 18th century, and 100 km. north of Tū-ma-sa, near the village of Hu-pao-tse. Its ruins (known as P'ao-t'ung-tse) have a circumference of 30 km. (B. Dolbežev in the *Izv. Russk. Komiteta dlya izučeniya Sredney i Vostochnoy Azii* IX, April 1909, 65 f.; Ed. Chavannes, *Documents*, 11; *Zap. Ak. Nauk* XXIII, 1915, 77-121; Sir Aurel Stein, *Innermost Asia*, 1928, 354-59).

From the 2nd century A.D. onwards, Bishbalk was mentioned in Chinese sources as the residence of local princes. From 658 onwards, it was the centre of a Chinese administrative area (with a Chinese or Turkish governor). This was due to its position as capital of a 'Five-Town-Area', and as one of the Chinese 'Four Garrisons'. The town is also mentioned in the Orkhon Inscriptions (II, E 28; Kül-Čur Inscription; cf. Wilhelm Thomsen in the *ZDMG* 1924, 153); A. N. Bernstamm, *Socialno-ekonomičeskii stroj orkhon-yenisejskikh Tyvov VI-VIII vekov* (The social and economic structure of the Orkhon and Yenisey Turks from the 6th to the 8th century), Moscow and Leningrad 1946, index. The Chinese names Kinnan, and in particular, Pei-tung (northern court) for Bishbalk, appear from this time onwards.

According to the T'ang-shu (Chavannes, *Doc.*, 96-99) the Scha-t'u ('people of the Sandy Desert'; cf. below) lived near Bishbalk between 712 and 818. After long disputes (cf. Chavannes, *Doc.*, 113 f.; Kūshang, *Diwan*, I, 103, 317, (ed. Brockelmann 242); Marwanji, 73; *Hudud al-'Alam*, 227, 272) the town fell into the hands of the Tibetans in 791 (Chavannes, *Doc.*, 303), and later it became the residence of the Turkish Ilkhanid princes, whose inheritance was taken over (with the title of Idgh Kut, 'Holy Majesty') by the Uigurs in 860. According to a report by a Chinese mission in the year 982 (for list of translations cf. Wittfogel, 194), the town possessed more than 300 Buddhist temples, a Buddhist monastery, Manichaean shrines and one (artificial) lake. Some inhabitants, making use of the artificial irrigation, made their living by growing vegetables, others bred horses and did metalwork. The only early Islamic mention of the town (in *Hudud al-'Alam*, 17, a, trans. 94) dates from the same year. It is mentioned as being the residence of the ruler of the Toghruz (p. 1). Concerning this, and a comparison between the Toghruz and the Scha-t'u, cf. V. Minorsky in *Hudud al-'Alam*, 266/72, 481. The mention of it made by Idgh Kut, 490, 502, is presumably based on a different report, namely that of Tamin b. Balr al-Mutaww'il (cf. bibliography).

As the northern residence of the ruler (Idgh Kut, Idgh Kut, or Idgh Kut) of the western Ugar part of the state, Bishbalk came under the Kara Khitay (p. 1) (there is mention of a Chinese work on this by Wang-

Kuo-wei in Wittfogel 675, bottom left). In 1209, the Uigur ruler handed the town over to the Mongols of his own free will, and took part in their campaigns. Bishbalk came in close contact with the Islamic world within the Mongol Empire, and Islam gradually penetrated into the town in the 13th century, despite the resistance offered by the Uigurs, who realised that they would thereby lose their spiritual leadership of the Mongol Empire. After the Mongol governor of Central Asia, Ma'ad b. Mahmud Yalavai ('Ambassador'), had taken up his office in Bishbalk in 1252/53, the Idgh Kut is said to have issued a secret order in September 1258, for the murder of all Muslims in the order of the Grand Khān Mongke, he was taken and executed, but his dynasty remained (Djawayni, II, 34 f., 88; II, 60 f.; Raḡhd al-Din (ed. Blochet), II, 304 f.; Hamd Allāh Mustawī Kazwī, *Tarīkh-i Guzīda*, 577; R. Spuler, *Die Mongolen in Iran*, Berlin 1955, 239).

After 1260, the town appears to have enjoyed a period of independence between the empire of the Grand Khān and the Gaghatai state. It repulsed an attack from the west in 1275. At that time, Bishbalk was the starting point of the postal route from China to Central Asia (Bretschneider, *Not.* 208). The region of Bishbalk then apparently belonged to the state of Gaghatai. Nothing is known about the subsequent fate of the town itself. It apparently vanished at the same time as the dynasty of the Idgh Kut, in the 14th century. Thereafter, the Chinese used the name Pei-tung only as a regional designation for an area which (according to Muhammad Haydar Dughlat, *Ta'riḡh Raḡhd*, trans. E. Denison Ross, London 1895, 365) was known as Moghulistan in the 16th century, and in which Islam was now firmly established. There is no further mention of Bishbalk itself.

**BISHIR b. ABI KHAZIM** (see 'Abd al-Kādir, *Khizmat al-Adab*'), II, 262) the most considerable pre-Islamic poet of the Banū Asad b. Khuzayma in the second half of the sixth century. al-Farazdaq, *Diwan* (ed. Sawī) 721, mentions him amongst his predecessors. Abū 'Amr b. al-'Alāī counts him among the classics (*ḥabīb*). His poems were collected by al-Ash'ari and Ibn al-Sikkīt (*Fihrist* 138, 6). Abū 'Ubayda wrote a commentary on his *Diwan* which was utilised by 'Abd al-Kādir Lc. II, 262, 4. The *Mufaḍḍaliyyāt*, Nrs. 96-99 ed. Lyaal, contain four poems of Bishir; the last of them (seriously coupled with Nr. 100) is also found in the *Diwan* of al-'Arāb 104, whilst Ibn al-Shadīr in *Hamasa*, Cairo 1306, 65-85, gives a selection of six poems. The numerous verses, quoted in dictionaries, commentaries and books of *Adab* have not been collected so far.

Of Bishir's life little is known besides what we learn from his poems, whilst the reports about him are often inconsistent and unreliable. From his vivid description of the victory of his tribe at al-Nisr in *Maḍ*, Nr. 96, *Yas*, 9-22 it seems certain that he took part in this battle, which is dated by Lyaal about 575 A.D. References to other deeds of the Banū Asad do not yield any date. There looms large in his poems the figure of Aws b. Hāritha b. La'm, chief of the Tayyī, the neighbours of the Banū Asad. 'Abd al-Kādir Lc. IV, 317, 1 quoting the commentary (of Abū 'Ubayda) states that a raid of the Tayyī on some confederates (*ḥulafā'*) of the Banū Asad caused Bishir to compose a poem against Aws b. Hāritha in which he threatened to satirise him if he did not come to terms (see also *Mufaḍḍaliyyāt* I, 293, 10 and Lane 1126). Such satires are extant in *Muḥḥarrat* 66 f. and 68 f. The origin of this feud is told quite differently by Muḥarrat, *Kāmil* I, 122 f. (and further embellished by Ibn al-Adīr, *Kāmil*, I, 169 f.); according to this report, which makes Bishir a contemporary of al-Hutay'a (*Id.*, 30/650), the quarrel started at the court of al-Nu'mān b. al-Mundhir (r. 580-602). Aws b. Hāritha raided the Banū Asad, got hold of Bishir but spared his life. Bishir then made amends for his five satires by composing five odes in praise of his benefactor. Whether the truth may be

there are indeed among Bishir's poems some elegies on Aws b. Hāritha (*Muḥḥarrat* 75; Ibn al-Shadīr, *Hamasa* 103) and fragments of a similar ode (cf. 'Abd al-Kādir Lc. I, 455; II, 265; IV, 111 and Muḥarrat, *Kāmil*, 133) which however is also ascribed to Djundab b. Khāritha al-Ta'ī. If his apology is authentic (Murtadā, *Amāl*, II, 114) then these elegies are later than the satires. Another satire (Kāfī, *Amāl* II, 233; *Mufaḍḍaliyyāt* I, 340, 584, 760; Freytag, *Proc. Arabum* I, 231) is directed against 'Uḥa b. Malik b. Dja'far b. Kilāb. The son of this 'Uḥa was 'Uḥa al-Rabbāb who was slain by al-Hārith b. 'Amr about 590 A.D. Abū 'Amr b. al-'Alāī (in *Aḡḥān* xix, 73 f.) says that after his murder which led to the second war of the *Fijār* al-Barrād asked Bishir to warn Harb b. Unayya and other leaders of the Kuraysh against the revenge of the Kays 'Ayyin. The Banū Asad were in league with the Kuraysh (see Ibn Sa'd II, 81, 9). Finally there is an elegy on himself (*Muḥḥarrat* 81-3) which he is said to have composed when he was mortally wounded during a raid against the *Abnā'* of the Banū Sa'sa'a (see 'Abd al-Kādir Lc. II, 262; *Mufaḍḍaliyyāt* I, 31, 6; Marzubān, *Ma'djān al-Shu'arā'* 222). Legendary is the account how Bishir, 'Abd b. al-Abras (died c. 550-60) and al-Nisābīq al-Jubayyī were rescued by Hātim al-Tayy (the *Kutayba*, *Shi'r* 124; *Aḡḥān* xxi, 28). Untenable also is Abū 'Ubayda's assumption, that the 'King' 'Amr b. Unm Iyās, whom Bishir addressed in at least two poems, was a grandson of Hudr al-Murīr (*Aḡḥān* ix, 87; see also 'Abd al-Kādir Lc. II, 182). Occasionally verses of a later poet of his tribe were attributed to him (*Naba'id* 241; 245 Brevat).

(J. W. FOCK)

**BISHIR b. AL-BARĀ'**, Medinese Companion, of the Khazrajite clan of Banū Salama. Both he and his father al-Barā' b. Ma'rūr [p. 2] accepted Islam early and were among the seventy odd Medinese who were present at the second 'Akaba meeting with the Prophet. Later, Bishir fought at Badr, Uhud, the siege of Medina, (Battle of the Ditch), and at Khaybar in 7/628. There he ate from a poisoned sheep which a Jewess offered to the Prophet in an attempt to venge her lost relatives. The Prophet tasted the poison and spat out the meat, but Bishir swallowed it and died, according to some sources immediately, according to others after suffering for a year.

Bishir was a famous bowman, and an enthusiastic Muslim who is quoted as arguing with the Jews of Medina. The Prophet described him as the *sayyid* of his clan, the Banū Salama, al-Shīrāī (al-Muḥaḍḍab, Cairo, II, 176-7) quotes the case of Bishir as a precedent for making that method of poisoning a capital offence.

**BISHIR b. GHIVĀTH** b. ABI KARIMA ABO 'ABD AL-RAHĀN AL-MARISĪ, a prominent theologian belonging to the Murji'a [p. 2]. His father, a fuller and dyer in Kūfa, is said to have been a Jew, and Bishir, on his conversion to Islam, to have become a *mawla* of Zayd b. al-Khaṭṭāb. He lived

Malati, *K. al-Tanbih*, 30; al-Kurtubi (Abū 'Amr), *K. Dīwān Bayan al-ʿIlm wa-Faḥḥih*, Cairo 1346/1928, 62; al-Shahrastānī, *al-Mīdāl* (in the margin of Ibn Hānī), Cairo 1347/1910, I, 50, 61; Ibn al-Murtaga, *al-Muṣṣa wa-T-ʿamal*, Haydarābād 1316/1899; chapters on the Mu'tazila; Ahmad Anṣārī, *Duḥā al-ʿIlm*, Cairo 1938, III, A. Nader, *Le Système Philosophique des Mu'tazila*, Beirut 1958, 38 'et passim.

**BISHR b. AL-WALID** b. 'Abd al-Malik, Umayyad prince, one of the numerous sons of the Caliph al-Walid and brother of the Caliph Yazid III and Ibrahim. His learning earned him the title of scholar (*ʿālim*) of the Banī Marwān. He led many military expeditions: certainly in 927/1011, al-Ya'qūbī, II, 330, and in 957/14-15 against the Byzantines: al-Tabarī, II, 1269 etc.). He was nominated *amir* of the pilgrimage by the father in 95/714. His name does not appear in the sources until the conspiracy against his cousin al-Walid II in 126/743-44. Despite the prohibition of his brother al-ʿAbbas, the famous general, he joined the opposition to the Caliph which supported Yazid b. al-Walid (the future Yazid III). He was not, however, the only member of the family to do so, since Yazid was supported by thirteen brothers.

He was governor of Kinnaṣrīn when Marwān b. Muḥammad, the governor of Armenia and Mesopotamia, took the field against Yazid's successor Ibrahim in 127/744-45. Marwān, having succeeded in winning over the garrison of the town, largely composed of Kayrites, persuaded their leader to hand over to him Bishr and his brother Maṣrūr, and threw them both into prison. The date of Bishr's death is not known, but as Marwān in the course of his march after the battle of ʿAsn al-Djarr took over the caliphate, it is presumed that the two captives never recovered their liberty and died in prison.

**BISHR AL-HAFI**, full name: Abū Naṣr Bishr b. al-Hāfiḥ b. 'Abd al-Rahmān b. 'Aṭā b. Hūlāl b. Maṣnū b. 'Abd Allāh (originally Ba'ṣūr) al-Hafī. He was a Sūfī, born in Bakrī or in Mābarsīm, a village near Marw (al-Shāhūdān) in 150/767 (or 152/769), and died in Baghdād (some sources say that he died in Marw, but this seems unlikely) in 226/840 or 227/841-42. Little is known about his early age. He is said to have belonged to some young men's association, or a gang of robbers, whilst still in Marw. He has also been described as a great friend of wine. Another tradition has it that he earned his living by making spindles. We do not know how this fits in, or to which period of his life it belongs. It is a known fact, however, that like his maternal uncle 'Alī b. Khashram (165/784-258/872) he was a traditionist. With the exception of 'Abd Allāh b. al-Mubārak (who came from Marw but travelled a great deal), his teachers lived in the Arabic-speaking regions; so Bishr is certain to have continued his *ḥadīth* studies after he left his home,

and it may be these very studies that induced him to go away. He had already made a name for himself when he reached Baghdād from 'Abbādin for the first time, for a Baghdād traditionist was anxious to meet him. Bishr is also said to have studied under Mālik b. Anas (who died in 179/795) and to have gone with him on a pilgrimage to Mecca. For chronological reasons Abū Ḥanīfa cannot possibly have been one of his teachers, as Hujwiri and 'Aṭṭār assert.

It is also not clear how and when he became a Sūfī. There is no mention anywhere of a spiritual guide and two completely different events are mentioned as the reasons for his conversion. According to one version a certain Isḥāk al-Maghallī (who is, unfortunately, otherwise unknown to us) wrote a letter to him in which he asked him how he meant to earn his living if he lost his sight and his hearing and was no longer able to make spindles. According to the other version he picked up a pit of devils in the street (one report of this even says that he was drunk at the time) with the name of God on it; he perfumed it and kept it reverently, with the result that either Bishr himself, or someone else, had a dream promising the exaltation of Bishr's name. In each case, the result mentioned is Bishr's conversion to a pious way of life. Quite apart from these contradictions, we do not know what form this piety took—*i.e.*, whether it included *ḥadīth*—and we have no proof that these events actually were the beginning of his life as a Sūfī. From Bishr's sayings which have survived we merely see that at some point, at the latest in Baghdād, he did turn away from traditionist studies, he buried his *ḥadīth* writings, and concentrated on Sūfī devotions. Traditionist studies, he says, do not equip one for death, they are merely a means to gain worldly pleasure, and they impair piety. He asked his former colleagues to impose a "poor-rate" on the *ḥadīth*, that is to say, to follow truly 2½% of the pious verses which they had learnt and which they declaimed with their professional self-complacency. He refrained from teaching *ḥadīth* for the very reason that he so greatly wished to teach them, and promised to return to them as soon as he had overcome his longing to teach them: "Beware of the *ḥaddithān*, for in the *ḥaddithān* there is embedded a particular sweetness". He admitted the science of *ḥadīth* only as far as the sake of God, and quoted *ḥadīth* only in conversation, where this would fit into the general framework of a training for a pious way of life. Still, as we do not know whether his earlier traditionism might not have been practised with this same idea in mind all along, we ought perhaps not to speak of an actual breach with his past.

Bishr's Sūfī piety is based upon the acceptance of the laws of Islam and the Sunnī Caliphs, but he is also said to have held the family of the Prophet in loving veneration. He was greatly respected not only by Ahmad b. Hanbal, but also by Ma'nūn (Mu'ta-alla, Shī'a). The statement that he took Faith to mean a positive confession, a belief in its truth and its, when formulated in this way, hardly true, although it is justifiable with regard to his practice. The decisive factor for Bishr was the deed itself. As an absolute minimum in this respect, he demanded that man should at least not sin, and to accomplish this he advised contemplation of God's greatness before which he himself trembled, despite his own ascetic life, up to the very point of death. Before

the choice between God or the world, he made his choice unreservedly in favour of God, and he despised all forms of worldly ambition and selfishness. He preached poverty, which was to be learned with patience and charity, and it is said of him that when one day he met a man suffering from cold, and could not help him in any other way, he undressed himself to show his sympathy and to give an example; he died in a borrowed shirt because he had given his own away to a poor man. He spoke against the avaricious, the very sight of whom "hardens the heart of the hearer"; and he advised a man about to start off on a pilgrimage to Mecca, to give his money instead to an orphan or to a poor man, for the joy caused thereby was worth a hundred times more than a pilgrimage. By saying this he hardly meant that the one pilgrimage to Mecca, which the law prescribes, could be replaced by some social act, as some other Sūfīs have taught, but must have referred to some additional pilgrimage. Tāwīs b. Kaykān already (who died in 105/724) is said to have refrained from going on a pilgrimage because he chose to stay with a sick friend instead (*Ḥilyat al-Awliyā'*, 4, 10; cf. Meier, *Zwei islamische Lehr-ansichten bei Tulayf*; in *Asiatische Studien*, 1958). He might call this pilgrimage the holy war of woman, but, unlike for instance Ḥaṭṭāb al-Sāḥib (al-Kāḍi al-Nu'mān: *Daḥīm al-Idām*, I, 346-47), he put the giving of alms above both pilgrimage and the holy war—because alms could be given in secret, without other people getting to know of it. The very wish to have one's good deeds known by other people is, for Bishr, an example of worldliness. In this he sees an element capable of destroying even the good deeds of man. He condemned the wish to be well thought of by one's fellow men to the extent of advising one against mixing with them at all—even if only to give testimony and lead the prayers. Here his teachings come close to the Māṣnawīyā: "Do not give anything merely in order to avoid the censure of others"; "Hide your good deeds as well as your evil ones". He confesses that he himself still attaches a certain importance to the effect he makes on others, and to his appearance as a pious man, but he wages an unrelenting war against all this "pretentiousness" (*isāna*)—in himself as well as in others. He only recognises those who wear patched cloaks (*muṣaḥab*) as sharers of his views, when one of them has told him of his resolution to live up to this symbol of dedication to God's service by an active furtherance of religion. He himself refrained, on one occasion, from accepting dates in the dark at the back of a shop, in order not to be different in secret from what he was generally considered to be. His abstinences (*taṣawwuf*) went beyond mere abstinence from dubious things by putting a limit to the unrestrained enjoyment of what was permitted: "what is permitted", he says, "does not tolerate immolation (*irḍā'*)". Of everything he ate a little less than his conscience would have permitted, thereby creating the *"ṭabaṣṣa"* which had already been recommended in the Jewish *Pirke Aḥbāh*, and which was also observed by numerous other Islamic ascetics. Destitute, he often lived on bread alone, and sometimes he was starving. Where the question of faith in God's providence (*taṣawwuf*) arose, he distinguished three types of the poor: (1) those who neither beg nor accept anything, yet receive everything they ask for of God; (2) those who do not beg but accept what they are given; (3) those who held out for as long as they can, but do then beg (Sulamī:

*Tabakhāt*, 47; 'Aṭṭār: *Ṭaḥḥira*, I, 110), describing those who belong to the middle group as people trusting in the providence of God, however, another place (*Ṭaḥḥira*, I, 110, 24-25). In he characterises this confidence as being the resolution not to accept anything from any man; whilst in a third place *ṭabakhāt* appears to be compatible with manual work provided the deed be done under the will of God (*Ḥilya*, 8, 351)—but the explanation of that oracular definition *idhrāḥ bilā takān wa takān bilā idhrāḥ* does not seem to me to be beyond all doubt. Admittedly, Bishr is said to have begged only from Sarī al-Sakātī, knowing that this man would rejoice in the loss of any worldly possessions; but some stories suggest that he lived largely on the earnings of his sister Muḥibba, who looked after him and lived by spinning. (Bishr had three sisters who are all said to have lived in Baghdād). The question of begging links up with the one concerning "giving and taking", which played a great part in Sūfism, especially later on (cf. Meier, *Die Vita des Scheich Abū Ishāq al-Kāḍirī*, in *Bibliotheca Islamica*, 14, 1948, Introduction 57-61). In spite of taking a great interest in the lot of the poor, Bishr did not—unlike Kāḍirī—for example—function as their spokesman and mediator, but rather withdrew into himself. He refrains from admonishing princes, he does not even drink of the water for which a prince has dug the channel. As a consolation when the cost of living is high he advises contemplating death. He knows that there is no way of satisfying mankind, and regards his own time (on a well-known pattern) as particularly far removed from the ideal of contentment: "Even though a cap should fall from heaven on to somebody's head, that man would not want it"; nor, like Muḥibbī, does he have much to say in his days in favour of the readers of the Qur'ān: "Rather a noble robber than a base-minded reader of the Qur'ān". He finds true piety restricted to the very few: "In these days, there are more dead within than without the walls". A Sūfī is one who stands before his God with a pure (*sāfi*) heart, and perfect is only he whom even his enemies no longer fear; but in Bishr's own days not even friends, he says, could trust each other. The opposition which a pious man has to overcome lies in his inclinations (*ḥawāḍir*): only those who have erected an iron wall against these inclinations, says Bishr, can feel the sweetness of the service of God. He advises silence to those who derive pleasure from speaking, speech to those who enjoy being silent. He declines teaching *ḥadīth*, because he does not wish in give to a desire to do so; he eats no subergines in order to fight his craving for them, and no fruit in order not to satisfy the fruit's own longing. He does not, however, advocate the repression of sexual desire, and does not even object to a harem of 4 women—though he himself remained unmarried.

In spite of the fact that Bishr puts the deed before knowledge, he is considered both knowledgeable and intelligent. This does not refer to his theological knowledge, but also to his ability to experience and expound religious feelings and to his pious way of life: "A wise man is not one who merely knows good and evil, but he who both does the former and refrains from doing the latter"; "First to know, then to act, then really to know". Ahmad b. Hanbal is said to have claimed for himself greater theological knowledge, but to have referred to Bishr for knowledge concerning the reality of things, the higher facts (*ḥakāḍir*). Without question, though only a few dicta and some verses in the style of the *ṭabakhāt*

have survived, Bighr played his part through his word in expanding the teaching of the mystical shaping of man in Islam. Some sayings of his, however, belong to an earlier tradition which he simply passes on—one of his frequently quoted Sūfī teachers is Fudayl b. 'Uyād. The men who learn from him are recognizable from the *tawā'id* of his dicta.

With regard to the origin of Bighr's cognomen "the barefooted" (*hāfi*), Ibn Khallikān tells the following story: Bighr once asked a cobbler for a new strap for one of his sandals, but the cobbler called this a nuisance, whereupon Bighr threw down both his sandals and barefooted walked barefoot. Much speaks in favour of this report, even if the explanation is not clear in every detail. Did Bighr fly into a rage at the cobbler's answer, and then, being a pious man, did he draw the consequences? Or did he, blaming only himself, soberly come to the decision never to inconvenience a cobbler again? Later referring to Sura LXVI, 19 "And God made the earth your carpet", he said that one did not step onto a king's carpet wearing shoes. As a further reminder he also says that at the "time when the pact was made" they too were barefoot. This probably refers to the pact of obedience which human beings are said to have made with God before their appearance on God's earth (Sura VII, 172: *al-ādā'a bi-rubūbiyyihim*). Such justifications belong to the symbolical associations which Sūfīs later attached to the various parts and colours of their clothes (cf. Meier, *Ein Kette zur Sūfī*, in *RSO* 32, 1937, 483-524). The statement made by Hudgway and repeated by 'Attār that Bighr went barefoot because he was so deeply moved in contemplation of God, is hard to understand—and, together with the explanations given by Hudgway and 'Attār, more likely, Bighr is to have called himself "the barefooted" and to have been called to account for this by a girl who said "All you have to do is to buy a pair of sandals for two *dīnār*, but then you would no longer have your beautiful name". Al-Hafī is also the name of the dervish in Lessing's *Nathan der Weise*. Although Reiske's *Abulfatā Annalen Moslemica*, I, Leipzig 1754, where, for the first time, the name Bishr al-Hafī (see *rudā'at*) *dīnār*, had already appeared by the time Lessing's play was written, it can hardly be regarded as its source. Lessing is more likely to have sought Reiske's advice personally, or to have derived the name from d'Herbelot (cf. *Baṣhar al-Hafī* and *Hafī*).

**BISKRA**, town and oasis of the Zibān in the south-east of Algeria and on the northern fringes of the Sahara. It is situated at an altitude of between 100-120 metres on the alluvial cone and the west bank of the Oued Biskra, at the mouth of a wide depression which extends from the Awrās massif to the western Saharan peaks of the Atlas Mountains. This has always been a route much used by nomads and conquering shepherds. Its blue sky, seldom streaked with clouds, its mild winter climate (mean temperature for January 12.5° = 52° F.), that of it a winter resort (it has numerous hotels); but its summer climate is torrid (13.5° = 92° F. in July) and favourable to the ripening of dates. Rains are fairly rare (156 mm. = 6.14 ins. per year) and, above all, irregular. The palm grove which covers an area of 1300 hectares, numbers more than 150,000 palm trees and thousands of fruit trees; it is irrigated by the waters of canals and springs. In the cold season, the surplus water makes it possible to irrigate vast fields of wheat and barley at the southern end of the oasis, where the harvest begins in April. The European town, which has grown into the administrative, commercial and tourist centre, is laid out on a grid plan; it was built upstream from the palm-grove, near the old Muslim cultivation of the village, in houses of crude brick. These are mainly to the south, surrounding the ruins of an ancient Turkish fortress. These villages are: Msid, Bab al-Darb, Ras al-Guerria, Sidi Darkat, Medjeniche, and Gueddacha; on the perimeter, a little apart, are Beni Mora, al-Kora, Filahat and Aliya. Biskra, which is the chief centre of the Zibān group of oases, is a township of 12,500 inhabitants in all, among which are a few hundred Europeans. It is served by the railway which runs between Touggourt and Constantine, and by the pipeline, since 1958, has carried the petrol of Hassi-Messoud to the port of Philippeville, and will soon extend to Bougie.

Biskra is built on the site of the old city of Vescera, one of the Roman towns of the desert, which was not occupied by the Byzantines. Its name dates back to the 3rd/11th century when it was conquered by the Aghlabids of al-Kayrawān with the whole of the province of Zāb (pl. Zibān) whose capital at that time was Tubna, in eastern Hodna. Under the Hammādiyya, Biskra was autonomous, with a council of *shaykhs* on which two families, the *al-Buḥārī* and the *al-Bakrī* (Slane's translation and ed., 11-12) speaks of its beauty and prosperity at that time and also describes its ramparts, the richness of its oasis and the Berber shepherds, Maghāra and Sadra, who led a nomadic existence round about. In the 6th/12th century Biskra succeeded Tubna, in the aftermath of the Muslim conquest of Tabna, known in antiquity as Tabudoss; according to al-Idrīsī, it was always well fortified. The Zāb had just been occupied by the Aṭṭabī (Hilalian) Arabs coming from the east. A settled family of the Latf tribe (from the Aṭṭabī confederation), the Banū Muzāl, sought to take over authority from the Banū Rūmān who had old ties with the country. They succeeded in the 7th/13th century with the support of the Hafsids of Tunis. Biskra became the principal town of the whole south-western region of the Hafsīd states but was, in effect, the capital of a prosperous and virtually independent principality, to which caravans came to barter the products of the Sahara for those of the Tell.

In the 8th/14th century, the Banū Muzāl committed more than one act of disloyalty to the Hafsids for the benefit of the rulers of Bougie, Tlemcen or Fez. Then, in 804/1402, the king Abū Fāris re-established the authority of Tunis over Biskra; he led away the last of the Banū Muzāl as his captives and replaced him, as elsewhere, by a *Kā'id* of his own entourage.

With the decline of the Hafsids at the end of the 9th/15th century, Biskra and the Zāb became the fief of the nomad Arabs, the Dawāwida. The town was still "decently populated" but the people were poor, wrote Leo Africanus in the middle of the 16th century (trans. E. Fagnard, 440). This was the point at which the Turks, following the two expeditions of Hasan Aghā in 949/1542 and Salāh Ra'īs in 959/1552 took over to establish a garrison and construct a fort. In practice, power was in the hands of the chiefs of the Bu 'Ukkā family, who were given the title of *Shaykh al-'Arab*. In the eighteenth century, the Bey Salāh of Constantine, finding them too powerful, set up a rival family, that of Ben Ganah. Biskra suffered from this rivalry and from the abuses of the Turks: its inhabitants gradually abandoned the town to put a greater distance between themselves and the *haya* and dispersed to small villages spanning the oasis.

After the French landing at Algiers (1830), the rivalry continued in the village, in the hands of the Bū 'Ukkā family, finally appeared to 'Abd al-Kādir, but the Ben Ganah family joined up with France in 1835, following the capture of Constantine. Biskra was occupied by the Duke of Aumale in 1844, in the following year a permanent garrison was established and a fort built on the site of the old castle. The Ben Ganah retained their position as the most influential family and held most of the key appointments in the region. They have recently become reconciled with the Bū 'Ukkā family (1938) whose allies they now are. Biskra has become a prosperous centre, chief town of a district, then of an annex of the military territory of Touggourt, centre of a mixed economy and a community with full powers. It has just become the chief town of the *sous-préfecture* in the new Department of Batna (1956). It is the economic capital of the Zibān.

(J. DESROIS)

#### BISMILLĀH [see BISMALĀH].

**BISTĀM** [also BISTĀM, rarer BISTĀM]. A town of c. 4,000 inhabitants (1950) in Khurāsān, in the district (shahristān) of Shāhristān and county (khāshāh) of Kārdān-nāg. It is located 6 km. N. of Shāhrudd at 55 E. Long. (Greenw.) and 36° 30' N. Lat., on a spur of the Elburz mountains.

The pre-Islamic history of the town is unknown. According to one tradition the town was founded by Bistām, governor of Khurāsān during the rule of his nephew Khurāsān II Farwā, c. 590 A.D. Yāqūt attributes the town to Shāhrudd II (cf. Schwarz, 521). During the Arab conquest Suwayd b. Mukarrim occupied the town before his invasion of Džundī, but the date is uncertain (Tabarī, refs. in Schwarz).

During the 'Abbāsīd caliphate Bistām was the second town of Kūmis province after the capital Dīngīnān. Little is known of the town except as the burial place of the Banū Bistām in the Yawn Fard (cf. R. A. Nicholson, *London-London* 1905, 1, 106-114). After the Mongol invasion the town declined and later it was replaced by Shāhrudd in importance. On the sanctuary of Bāyazīd see Houtum-Schindler in *JRAS*, 1909, 161.

At present in addition to the tomb and sanctuary of Bāyazīd, there are remains of a citadel from the

6/12th century, and of an Imāmshāda Muhammad. The mosque probably dates from the 18th century but a minaret and adjacent tomb are much older. On these monuments see E. Herzfeld in *Der Islam* 11 (1921), 168-9.

**Bibliography:** Le Strange, 1905; Schwarz, *Iran im Mittelalter*, vi, Leipzig 1926, 820-2; *Farhang Dīghrān* (1951) *Iran*, ed. Razmāzī, III, Tehran 1951, 47.

**BISTĀM** b. KAYS b. Mas'ūd b. KAYS, ANU 'L-SAHNĀ' or ANU ZIK (according to Ibn al-Kalbi, *Dīnkhārā* 203, nicknamed "al-Mutakammir")—pre-Islamic hero, poet and sayyid of the Banū Shāyban. His family was considered one of the three most noble and aristocratic Bedouin families (*al-Aghnī*, xvii, 105). His father is known *al-Muḥabbab*, 253) as one of the "dhawī 'l-Ākāl" (enjoying grants of the foreign rulers) and was granted by the Sāsānid kings as well as the Umayyads and the adjacent border territories (Ta'fī Safawī) against the obligation to prevent marauding raids of his tribesmen. Failing to fulfil this obligation in face of the opposition in his own tribe, and being suspected of plotting with Arab chiefs against Persian rule, he was imprisoned and died in a Persian gaol (*al-Aghnī*, xi, 740).

It is a significant fact that Bistām did not avenge the death of his father. On the contrary, Persian diplomacy succeeded, despite the Arab victory at Ṭhū Kār, in securing the collaboration of Bistām, and a fairly trustworthy tradition (*al-Nahā'id*, 580) shows that the Shāybanī troops were equipped by the Persian *šāmī* at 'Ayn Tamm. Born in the last quarter of the 6th century A.D. (T. Nöldeke, in *Der Islam*, xiv, 125) Bistām became a leader of his tribe at the age of twenty (Ibn al-Kalbi, *op. cit.*) and succeeded in uniting his tribe: he is known as one of the "dharrīn" (*al-Muḥabbab*, 250). Abandoning the idea of fighting the Persians he directed all his activities against his neighbours of the Banū Tamīm.

His first raid against the Banū Yarbū', a branch of the Banū Tamīm, was—according to al-Balādhurī—at al-A'ghāh (*Anṣāb*, x, 99b). The Shāybanī troops were defeated, Bistām himself captured and released; his tribe was not attacked. His second raid was probably at Kuḥāwa (*Anṣāb*, x, 100b). Here it is clearly mentioned that Bistām commanded the attacking troops, but the raid itself was insignificant and ended with seizing of camels of a clan of the Banū Salīṭ. To the same early period belongs apparently the encounter with al-Akrā' b. Hādhil at Salāmīn, in which al-Akrā' was captured. A more serious enterprise was the raid of Ghāblī al-Madara (known as the Yawn Fard) (*al-Balādhurī*). A tribal federation of the *Tha'alib* was attacked and overcome by the troops of Bistām, but when the attackers proceeded against the Banū Mālik b. Hanzala they met resistance and were put to flight with the aid of warriors of Banū Yarbū'. Bistām, captured by 'Uṭayba b. al-Hārith, had to pay a very high ransom and was compelled to promise not to attack the clan of 'Uṭayba any more (*Anṣāb*, 998a, 988a, 995b, 996a). Breaking his promise he attacked after a short time a camp of 'Uṭayba's son at Ṭhū Kār (*Anṣāb*, 995b, 998a) and succeeded in seizing the camels (the raid is also known as Yawn Fard). Not content with this victory, he prepared an attack on the Banū Tamīm in order to capture 'Uṭayba; but he was defeated in this battle at al-Samūd (or Ṭhū Tuḥ) and barely escaped with his life (*Anṣāb*, 998a). A further battle at al-Uṭāka (known as the battle of al-Ghāblīyān or al-Uṭāka), prepared and aided

by the Persian *šmūd* at 'Ayn Tamar, ended with the defeat of the attackers and with the escape of Bistām (*Anašā*, 1004 b). Bistām fought his last battle at Nakā al-Hasan. He was killed by a half-witted Dabbī, 'Asim b. Ḳhalifa, who is said to have boasted of his deed at the court of 'Uthmān. The date of his death must be fixed at *circa* 613 A.D. Very little is known about the posterity of Bistām. His grand-daughter Badrā, the daughter of his son Zih, was about to marry al-Farazdak, but died before the appointed date.

Bistām is said to have been a Christian. He was the *sayyid* of his tribe; when the news of his death reached his tribe they pulled down their tents as an expression of their sorrow. Many elegies were composed on his death, and his person was glorified as the ideal of Bedouin courage and bravery. But in the times of al-Ḳhābīz, in the urban mixed society of the towns of 'Irāk, his glory faded away, and the common people preferred to listen to the story of 'Antara (*al-Bayān*, I, 34) which came closer to their social exaltation tendencies (cf. *EL*, v, 'Antara, R. Blachère).

**ABD AL-BISTĀMĪ, 'ABD AL-RAḤMĀN B. MUḤAMMAD B. 'ĀLĪ B. AḤMAD AL-HANAFĪ AL-HURĪ** was born in Antioch and appears to have witnessed the sack of Aleppo, by Ṭūmar, in 803/1400. He studied in Cairo and went to Bursa, then the Ottoman capital and imperial residence. There he gained the favour of Sütlü Murād II, a patron of learning, to whom several of his works are dedicated; there he died in 858/1454.

He was a mystic, belonging, as his name indicates, to the Hurūfī (g.v.) order of dervishes, who attributed a mystical significance to the letters of the alphabet and to combinations of these (cf. his *Kaḡhāʾi Asrār al-Hurūf* and his *Shāh al-Ḳubāʾ fī Ṣin al-Hurūf*, written in 826/1423). Among works of this type is also his *Muḥabbi al-Djār al-Djīmī*. He wrote a number of Sūfī works, perhaps the best-known being *Mandibīdī al-Taḥṣīb fī Maḥabibīdī al-Tarassul*, and also wrote on history and geography, the most important work being the encyclopaedia entitled *al-Fawā'id al-Miḥsiyya fī 'l-Fawā'id al-Matḥiyya*.

**BISUTŪN**, (Βερούνη of the Arabic geographers, Bistūn in present local parlance), a mountain ca. 30 km. E. of Kirmānshāh on the main road from Baghdād to Hamadān.

The name is found in Greek sources (Diodorus 2.13 and Isidore of Charax) τὸ Βερούτων ὄρος, and in early Islamic authors (as al-Ḳhāwīmī and Hamza al-Iṣṭahīn) where we find the archaic form Baghistān, Old Persian \**bāgastāna* "place of the gods", (or one divinity in particular). Later Islamic authors have the form Bihistān (Bahlstān) which in modern times became Bistūn (Bistān). The site is mentioned many times in Arabic literature since it lay on the main road from 'Irāk to Ḳhūzistān.

High above the road is the famous bas-relief of Darius the Great with cuneiform inscriptions in three languages, Old Persian, Achaemenid, and Elamite. Beside the road below was the relief of the Parthian king Gotarzes, unfortunately now almost obliterated by a modern New Persian inscription.

Bistūn was regarded as a world wonder by the Muslims. In the books of those authors who follow Abū Zayd al-Balāḡ appears a short description of the sculptures which is fanciful since the Bistūn sculptures are confused with those of nearby Tāk-i Rustān (considered Khuraw II Poros) with his horse, a work of Kattib b. Simmur. Ibn Hawkal gives the curious explanation of the Darius relief with his captives as a teacher and pupils. Most Islamic authors thought the sculptures depicted Shīrīn and Khuraw II.

The trilingual inscription of Darius provided the key to the decipherment of all cuneiform inscriptions.

Kent, *Old Persian*, New Haven, Conn. 1953, 208. For photographs see F. Sarre & E. Herzfeld, *Iranische Felsreliefs*, 189-198, plates 33-5.

(E. HERZFELD [R. E. FRYE])

**BITIK, BITIKČI**, Turkish words derived from the verb *bitt* "to write". A deverbal-noun *būg* "written document book" is found in the Orkhon inscriptions and in the Turkish texts of Turfan. *Bitik*, is a *nomen agentis* in -i signifying "scribe, secretary". It is first found in *Qutadgu būg* under the form *būg*. The forms with a final *ur* (*bitik, bitikur*) are well attested in middle Turkish notably in Cacaṭay and Coman. The verb *bitt* and its derivatives have almost disappeared from modern dialects. Khakas has preserved *pitik*, book, writing, document" as well as *pitikči* "cultured, literate" and in Tuvin we have for example *bisik* "official document".

The etymology of *bitt* is unknown. The much quoted derivation from the Chinese 𠬞 *pi* (> \**piu*) "writing brush" must be treated with caution. Comparison with Indo-European forms, such as Khotanese *pitāha* "written, document", Sanskrit *pitāha* "collection of canonical books", or Greek *πιτταχον* "letter", is tempting but unsubstantiated by the phonetic history of these words.

In written Mongol the verb "to write" is *bitt*, a form which corresponds with the Turkish *bitt*. The deverbal noun *būg* "written document, writing, letter, missive" occurs from the time of the Secret History of the Mongols and a *nomen agentis* *būgici* "scribe, secretary, copyist" is found in the Mongol administrative documents of the Il-khāns. Mean-

while in Mongol-administered Persia the Turkish form *bitik* seems to have been preferred to the Mongol form. One may see in this an indication of Uighur preponderance in the administration of the Mongol Empire. The two words of literary Mongol are clearly observable in modern dialects. For example: modern Khalkha *būg* and *bitik*, Buryat *buug* and *bišile*, Kalmyk, *būg* and *bitik*, Orkhos *būg* and *bitik*.

The most ancient Tungur form is Ju-chen \**bidgei* "book". Mandju *biche* "written document, as the book, document, letter" must be a loan-word as the derivation cannot be explained by the facts of Mongol. On the other hand *bichik* "scribe, secretary" is a regular Mandju *nomen agentis*. In Evenki *bich* "to write" and *bispa* "written document" are borrowed from the Mongol, while the Oroch *bitik*, Olchea *bitik* "written document, letter", is directly connected with Mandju forms.

It is reasonable to conclude that the Turkish words implanted in Mongol by Uighur scribes, followed the Mongol conquests, which enabled them to become technical administrative terms. — These found ready use in the highly developed states of the Ju-chen and the Mandjins. See further BERAT. (D. SINOR)

**BITILIS** (see BIRILIS).

**BITOLJA** (see MANASTIR).

**BITOLAWSE** in Spanish Pedroche, a little place in the administrative district of Posadano, 60 kms. north of Cordoba, on the Cordoba-Toledo road, and the same distance from Dar al-Bakar near El Vacar. According to Idrizi, it was a heavily populated fortified town with high walls; situated in the region of Faḡs al-Balāḡ of which Ḳhāḡik (now Belalokar) was the capital, it was the seat of a provincial judge. Its inhabitants like those of Ḳhāḡik had won renown for their bravery in repelling the attacks of the Christians. Its mountains and plains were, and to a great extent still are, covered with a variety of oak trees distinguished by the quality of their acorns, which the inhabitants cultivated with great care, and which in years of famine served them as food, for as al-Rāzi affirms, they were the best in all Spain. Abū Ḥafṣ 'Umar al-Balāḡ, who came originally from Pedroche, occupied Crete with the survivors of the 'Battle of the Suburj' (*al-rabaḡ*) and there founded a dynasty which lasted until 350/961. The Berbers settled in the district of Los Pedroches took part, under an Andalusian mystic called Abū 'Alī al-Sarḡidī, in a rising against the *amir* 'Abd Allāh which ended in the rout and death of their chief in front of the walls of Zamora (288/901). Of its history during the Almoravid and Almohad periods, we only know that at the beginning of the year 550/1155, the governor of Cordoba, Abū Zayd 'Abd al-Raḡmān B. Igit, made a sortie with Almohad troops against the forth of Pedroche and those of the Faḡs al-Balāḡ region, of which Almohad VII had just taken possession in the course of a rapid invasion which had also annihilated him to take Andujar. Ibn Igit routed the Count, the lord of Pedroche, whom Alfonso VII had left there as governor, and in the course of his assault on the fort, took him prisoner and sent him to Marrakūsh.

**BITRIK**, Arabised form of Latin *Patriarius*. The *Patriarius dignitas* was instituted by the Emperor Constantine (A.D. 306-337), an honorary dignity, not connected with any office, and conferred for exceptional services to the State.

1.—It is certain that no Arabs in the service of Rome were endowed with the patriarchate before the Ghassanids (g.v.) and no Ghassanid before al-Ḳhāḡib b. Ḳhalifa, who was honoured with the dignity ca. 540 A.D., as was also his son and successor al-Mundhir ca. 570 A.D. The assumption of this high Roman honour by the two Ghassanid dynasts is the most telling indication of their place and importance in the Roman hierarchy. Al-Ḳhāḡib and al-Mundhir are the only figures in the history of the Arabs before Islam whose patriarchate can be established with certainty; there is no positive evidence in the sources that the Romans conferred it again on a Ghassanid after al-Mundhir.

II.—As the Muslim conquests in the seventh century changed the status and rôle of the Arabs in their relation to the Romans from subjects and "allies" to conquerors, the patriarchate, which in the pre-Islamic period had been greatly coveted by Arab princes as a symbol of their Roman connexions, naturally ceased to be assumed by them. Instead, it survived as a term in the literature. Almost a *happas legumensis* in pre-Islamic poetry, *bitrik* acquired three broken phrases and found its way into the literature of the Muslim period. It was woven into the texture of Arabic poetry by al-Mutanabbī and Abū Fīrās and was frequently mentioned by the historians and the geographers. Indeed, in the military annals of Arab-Byzantine relations it became the regular term for a Byzantine commander. Although other terms occur, like *مَرْغِيوس* *στρατηγός* *domesticus*, and *دوقس* *dux*, paradoxically enough it was *bitrik*, a non-military term, which received the widest vogue.

III.—The frequent occurrence of *bitrik* in Arabic authors was, however, attended by confusion and inaccuracies. The patriarchate was conceived as though it were (a) an office (b) hereditary (c) applicable to the Persians, and (d) interchangeable with *batrak* (patriarch). The truth, of course, is that the patriarchate was a dignity, non-hereditary, peculiarly Byzantine, and non-ecclasiastical. But it is important to draw a distinction between the reckless use of the term in literary works of the type of al-Tanḡilī's *Farḡd* and the careful use of it in the serious works of the historians and the geographers. These have preserved information of some interest and relevance to the Byzantinist for the history of this dignity with particular reference to the term *στρατηγός*.

IV.—*Bitrik* was recognised by the Arabic lexicographers as a foreign term and was considered as such as a homophone and homograph of a supposedly indigenous Arabic word, which, *inter alia*, means "a proud and self-conceited man".

**Bibliography:** B. Kühler, *Patrius, patrius*, in Pauly-Wissowa, vol. 18, pt. 4, cols. 223-32; Th. Nöldeke, *Die Ghassanischen Fürsten aus dem Hause Gafnān*, Abh. Fr. Ak. W., Berlin 1887, 13-14; note 1 on 13 is inaccurate. For the occurrence of *bitrik* in Arab authors, see A. A. Vasiliev,

Conard, *Les aventures d'un prisonnier arabe et d'un patrie byzantin à l'époque des guerres bulgares-byzantines*, Dumbarton Oaks Papers, (Harvard University Press, 1950) vols. 1-6, particularly, 62, n. 137; 66; 68, n. 28. Lane, *Arab-English Lexicon*, New York 1935, 1, 1, 217-8.

**al-BİTRİKİ**, Nūr al-nās Abū Isḥāq, called Alpetragius by medieval European authors, a Spanish-Arab astronomer, the disciple and friend of Ibn Tulay (about 1000/1000). His astronomical theory, the origins of which must be sought in the return to Aristotelianism initiated by Ibn Bādīja and other Arab philosophers of Spain like Ibn Tulay and the astronomer Djabir b. Aflah, involved the reintroduction of the idea of imperfect roughly formulated by Ptolemy (2nd century A.D.), the view that the celestial spheres revolve around different axes, thus producing a spiral movement (*haraka laḥabīya*). The work in which he sets forth his principles, entitled *Kutub fi 'l-Hay'a*, was translated by Michael Scot; Carnoy published in 1952, at Berkeley, a critical edition of this translation compared with the Arabic text. In 675/1279, Moḥib al-Dīn translated the work from Arabic into Hebrew, and in 914/1528, Kalonimos ben David made a Latin translation, based on the Hebrew version, which was printed at Venice in 1531, at the same time as the *Treatise on the sphere* of Sacrobosco.

**Bibliography**: see the works quoted by E. J. Carnoy, *al-Bitrīkī, De Mōdobus Caelorum*, Berkeley 1952; Sartori, *Introduction to the History of Science*, II, 390 and index. (J. VERMEER)

**BİYABANAK**, an area in the central desert of Iran (Daḡdā Kawr), with some twelve oases. The area is included within E. Long. (Greenw.) 54° 15' and 55° 15' and N. Lat. 33° 5' and 34° 10', roughly 70 miles by 90 miles. The date palm and underground supplies of water, some hot but all salty, have enabled the oases to flourish isolated from the rest of Iran. The word is probably a diminutive meaning "little desert", but the name does not appear before the 16th century (Tavernier).

We find no references to the area in pre-Islamic times, though local tradition claims that it was a place of banishment under the Sāsānids, and the existence of site names such as Atashkādā (6 km. south of the oasis of Mihrjān), attest pre-Islamic occupation.

A history of Yazd (see below) claims that the Arabs in pursuit of Yazdadjīd passed through the central desert area and obtained the submission of the local inhabitants. This, however, may apply only to Tabbas since local tradition (oasis of Farrūkhī) claims that the Bīyabānak was only converted to Islam in the 19th century in the time of the Imām 'Alī al-Ridā, and conversion was accomplished only by warfare. Ibn Hawkal says there are three villages at five stages from Nā'īn on the desert road to Khurāsān, Bīyadāk, Dīrnāq, and Arīzāb, each within eyesight of the other. The palm trees are especially noteworthy here. Nīsīrī Khurāsān mentions the village of Karmāh, 41 farsakhs from Nā'īn, and says that the area was infested formerly with Kūfūdā (Kūfs), but in his time (5th/11th century). Amīr Gilāki of Tabbas had rid the region of them. Later the area suffered from Balūči raids until the 1920s. Apparently Arab tribesmen from Khuzistān raided

this area as well, for European travellers in the last century report Arabs living here and local tradition tells of a tribe called the Bī-i Nasrī which terrorised the area under the Kādjars.

At present there are perhaps 10,000 people living in the oases, the time principal oases being Dīrnāq, Farrūkhī, Dīrnāq, Urdī, Irād, Mihrjān, Bīyabān, Čūpīnān, and the administrative centre Khūr. Dialects are spoken in all of the oases save Dīrnāq where Persian is spoken. The date palm provides the principal livelihood for the people of the oases.

**BOBASTRO** [see BARASTASTUR].

**BODRUM**, a small town situated on the west coast of Asia Minor, opposite the island of İstanköy (Ros). It stands near the site of the ancient Halicarnassus in Caria. When the Turks overtook western Asia Minor in the years around 1300, this region came under the rule of the Begs of Menteşe [405]. The Ottomans seized the emirate of Menteşe in 792/1390, lost it after their defeat in battle against Timur Lang at Ankara in 804/1402 and did not recover full and direct possession of Menteşe until 829/1425-1426. This second and definitive annexation of the emirate was not, however, destined to include the old Halicarnassus, for the Knights of St John at Rhodes, under their Grand Master Philibert de Naillac (1396-1424), had meanwhile occupied the site of the ancient town, and had built close at hand a fortress which received the name of "Castellum Sancti Petri" (Gr. Πτερύγος). It has been suggested that the name Bodrum derives either from the vault-like arcades among the ruins of Halicarnassus (cf. the Turkish *bodrum*: a subterranean vault, a cellar) or from the Latin name for the new fortress ("Sanctum Petrum").

The Venetian admiral Pietro Mocenigo, during the course of his sea campaigns in the eastern Mediterranean (1427-1478), ravaged the Ottoman-held hinterland of Bodrum. In 885/1480, the Ottomans, returning to Istanbul from their unsuccessful siege of Rhodes in that year, attempted, but without avail, to take the Castle of St Peter. Bodrum came under Ottoman rule only in 929/1522, when the Knights of St John, after a long and desperate resistance, surrendered Rhodes, together with its dependent possessions, to Sütlü Süleyman Kânîdân. Evliya Çelebi mentions that a naval engagement occurred in the harbour of Bodrum during the Ottoman-Venetian war of 1055-1080/1645-1669. Bodrum suffered bombardment from the Russian squadron operating in the eastern Mediterranean in the course of the Ottoman-Russian war of 1182-1188/1768-1774. It was again bombarded during the

Great War of 1914-1918, the fortress on this latter occasion receiving considerable damage, which was, however, repaired when Italian forces occupied the town in 1919-1920. Bodrum, under Ottoman rule, belonged to the *sandjak* of Menteşe in the *eyâlet* of Anadolu. It had later the status of a *kadî*, when this *sandjak* was subordinated, in 1864, to the newly formed *vilâyet* of Aydın (Smyrna). The town is now included in the present Turkish province of Muğla and had in 1950 a population of about 4,800 inhabitants.

**BOĞHA AL-KABİR** [see BOĞHA AL-KABİR].

**BOĞHA AL-SHARABİ** [see BOĞHA AL-SHARABİ].

**BOĞHAZ** [see BOĞHAZ-İCİ].

**BOĞHAZ-İCİ** (BOĞHAZICI) ("interior of the strait") is the expression used in Turkish to denote the Bosphorus, and especially the narrow waters, bays and promontories which constitute its middle section. The name Bosphorus (Gr. Βόσπορος, Lat. Bosporus, Bosphorus) derives from a word of Thracian origin (cf. Pauly-Wisowa). This narrow channel, the Thracian Bosphorus (so-called in order to distinguish it from the Cimmerian Bosphorus, i.e., the strait of Kerch between the Sea of Azov and the Black Sea), enters the Sea of Marmara (the ancient Propontis, Marmara Denizi in Turkish) and the Black Sea (the Pontus Euxinus of classical times, the Kara Deniz of the Turks). The Byzantines often referred to it simply as τὸ Στεῖνον, "the strait", while, to the Latins at the time of the Crusades, it

was known as the "bosphorus S. Georgii" (cf. Tomaschek). It is mentioned under a number of different names in the Turkish sources, e.g., *Khalidj-i bahr-i siyah*, *Khalidj-i Kustantiniyye*, *Kustantiniyye boğazi*, İstanbul boğazi, etc. The word *boğaz* means "throat" or "gullet" in Turkish, but has in geographical names the sense of "defile", "strait" (cf., e.g., Kilek Boğazi, the Cilician Gates, or Canak-kale Boğazi, the Dardanelles).

The Bosphorus has a mean length of about 30 km. and a width which varies from approximately 700 to about 3550 metres. A strong current (3-5 km. per hour) flows down the centre of the channel from the Black Sea to the Sea of Marmara, but a counter-current runs in the opposite direction below the surface and along the shores. The more notable localities which border the strait can be enumerated as follows (the names are given in the modern Turkish form): on the European side, in order from south to north, are to be found Tophane (the Byzantine Argemopolis), Beşiktaş (Byz. Duplikonion), Ortaköy (Byz. Hagios Phokas), Arnavut-Köy (Byz. Anaplos), Bebek (Byz. Chalki), Rumeli-Hisar (Byz. Phocaea), İstinye (Byz. Sosthenion), Yeniköy (Byz. Neapolis), Tarabya (Byz. Therapsall), Büyük-Dere (Byz. Kalos Agros) and Rumeli-Kavağ; on the Asiatic shore, in sequence from north to south, are present Anadolu-Kavağ (Byz. Hieron), Beykoz, Paşa-Bahçe, Çubuklu (Byz. Irenaeon), Kanlıca, Anadolu-Hisar, Kandilli (Byz. Brochthol), Çengel-Köyü, Beşlerbeyi, Kuşçumruk (Byz. Chrysokoranos) and Üsküdar (Scutari: Byz. Skutiarion, an imperial palace in Chrysopolis). The Bosphorus proper ended, according to the view held in ancient times, at the present Rumeli-Kavağ and Anadolu-Kavağ, the waters beyond this line, towards the north, being considered as a part of the Black Sea.

The Byzantines fortified the northern end of the Bosphorus in the region of Rumeli-Kavağ and Anadolu-Kavağ, where the strait narrows to a width of about 1000 metres. Traces of a Byzantine fortress can still be discerned to the north of Rumeli-Kavağ. There is in fact a tradition that the Ottoman Sultan Mehmed II demolished this ancient fort ("Eski Kale"), the material thus acquired being used in the construction of Rumeli-Hisar in 856/1452 (cf. Gabriel, 77 and 81). A Byzantine fortress also existed at Anadolu-Kavağ. It was known to the Ottomans as Yoros (Yeros) Kal'esi (cf. Byz. Hieron) or Djeneyiz Kal'esi. This latter name arose from the fact that the Genoese, in 1350, had taken over from the Byzantines control of the defences in the northern zone of the Bosphorus.

It was only with the rise and growth of the Ottoman empire in the 14th-15th centuries that the lands bordering on the Bosphorus came under Muslim rule. The Ottoman Sultan Bayezid I (791-805/1389-1405) built on the Asiatic shore of the strait a strong fortress called Anadolu-Hisâr (also known as Güneşli Hisâr), to which Sultan Mehmed II made various additions and improvements in 856/1452. On the European shore, opposite Anadolu-Hisâr and at the site which the Byzantines called Phonnus (Φωνός; also Φωνάρι and Φωνάρις), Mehmed II constructed, in this same year, the fortress of Rumeli-Hisâr (often called Boğaz-Kesen, i.e., "which cuts the throat" or "which cuts the strait"). The Sultan furnished these two fortresses with artillery capable of firing across the Bosphorus, here compressed to its narrowest width (about 700 metres). After the fall of Constantinople in 857/1453

the Black Sea became in effect an Ottoman lake. Mehmed II brought to an end the former Genoese imperium over the Black Sea in 865/1461 and 880/1475. Moreover, in this latter year, the *Khân* of the Krim Tatars was reduced to the status of an Ottoman vassal. Rumeli-Hisari and Anadolu-Hisari, together with what remained of the old Byzantine defences at the northern end of the Bosphorus, now lost their earlier importance.

After a long interval of calm, danger threatened from the north, when Cossack sea-raiders plundered Serrae on the south shore of the Black Sea in 1023/1614 and ten years later, in 1033/1624, carried fire and sword into the Bosphorus itself, ravaging Sarıyer, Büyükdere, Tarabya and Yeniköy on the European shore of the strait. To ward off this menace, the Ottomans, in the reign of Sültân Murâd IV (1023-1049/1623-1640), built two new fortresses, one in the region of Rumeli-Kavâğı, the other near Anadolu-Kavâğı. These forts (not to be confused with the former Byzantine defences in this section of the Bosphorus) are described in Ewliya Çelebi (I, 461) as the *ka'f-i kâid al-harb*, 'the forts (which are) the lock of the sea' (*ka'f-i kâid*, the Kara Deniz or Black Sea). No trace of them now remains, both having been demolished in the course of the 19th century (Gabriel, 82).

During their unsuccessful war against Russia in 1182-1188/1768-1774 the Ottomans began to reorganise the defences of the Bosphorus. New fortifications arose, in 1187/1773-1774, at Kilyos (Ka'f-i Baghdâdî) on the Asiatic shore of the Black Sea, just outside the strait itself, and also at Fener-i Rumeli and Fener-i Anadolu on the northern exit from the strait. Additional forts soon made their appearance at Garıpe and Büyükdere-Liman on the European, and at Poyraz-Liman on the Asiatic side of the Bosphorus above Rumeli-Kavâğı and Anadolu-Kavâğı. This defence system received the name of 'Ka'f-i Seb'a' (the seven fortresses). A sustained effort was made during the reign of Sültân Selim III (1203-1222/1789-1807) to extend and perfect the new defences of the Bosphorus. At the same time the older fortifications situated within the Bosphorus proper, southward from Rumeli-Kavâğı and Anadolu-Kavâğı in the direction of the Marmara Sea, underwent a process of repair and modernisation. These years witnessed, however, the emergence, in its modern form, of the Eastern Question. The control and defence of the Straits, i.e., of the Dardanelles as well as of the Bosphorus, was now to become a matter of prime concern, not to the Ottomans alone but also to the powers of Europe, who, during the 19th-century Great Powers of Europe, who, during the 19th-century, imposed on the Straits a much debated and often altered system of international control.

BOĞHAZ KESEN (see KEMELİ HİSAR).

BOĞHDÂN, originally Boğhdân-ili or Boğhdân-sultânî (the land of Boğhdân), Turkish name of Moldavia, so called after Boğhdân who in 760/1359 founded a principality between the Eastern flanks of the Carpathians and the Danube (Turla). The name Boğhdân-ili appears in the *hûkûm* of Mehmed II dated 859/1455 (Kazaltı, *Ösm. Tarih*, I). The name Kara-Boğhdân is found in the letter of İsmâk dated 881/1476 (Hefleten, no. 3-4, 644) and in the Ottoman chronicles generally.

The principality suffered its first raid (*akın*) by the Ottomans in 823/1420 (unsuccessful siege of Ak-Kirmân). In 831/1428 the *Khân* of the Golden Horde, Uluğ Muhammad, proposed to Murâd II that they should act in concert to destroy the Vlach infidels dwelling between them (cf. Kurat, *Yarlık ve Bülâk*, 8). Hâdîdî Çerç [g.e.] made an alliance against Boğhdân-ili with Mehmed II, and an Ottoman fleet attacked Ak-Kirmân in 858/1454. As a result the *soyvoide* Petru Aron accepted Ottoman suzerainty, agreeing to pay an annual tribute of 2000 ducats (autumn 859/1455) (Fr. Babinger, *Beitrag zur Frühgeschichte der Turk. in Rumänien*, 21). and the sultan granted the merchants of Boğhdân freedom to trade in the Ottoman dominions (Kazaltı, 664).

Stephen the Great (1457-1504) renewed the vassalage to the king of Poland, repulsed an attack by the Crimeans in 873/1469, entered into diplomatic relations with Uzun Hasan (g.e.), and defeated the Ottoman beylerbeyi of Rumeli on 2 Ramsâdân 879/

10 Jan. 1475. Finally Mehmed II invaded Boğhdân and burned its capital Su'aveva (Rab' I, 881/1476). In 889/1484, as a result of the joint action of Bayazid II and his vassal the Crimean *Khân* Ak-Kirmân and Kili were occupied by the Ottomans, and Kawhân and Tombasar by the *Khân*. In 897/1492 Stephen, by sending tribute and his son to the Porte, acknowledged Ottoman suzerainty. Under the Ottomans Ak-Kirmân and Kili became more actively engaged in the commerce of the Levant (this can now be seen from the records of the Ottoman customs houses of this period at the Bayvekalet Arşivi İstanbul, Malive no. 6). With its exports of cereals, meat, butter and was the trade of Boğhdân became, under a monopoly system, more and more dependent on the Istanbul market.

Ottoman-Boğhdân relations rested on the Islamic principle of the *dir al-'ahd* [g.e.], as expressed in the 'ahd-nâmes granted by the Ottoman sultans and the *berâts* issued to the *soyvoide* (cf. the *berât* of Alexandru VI Ilah in Feridun, *Menzeh*, II, 398). The *berâts* attaching the *soyvoide* to the Porte were made still stronger when he received his appointment directly from the sultan, the first *soyvoide* so appointed being Petru IV Rareș (933/1527). The *soyvoide*'s whole authority emanated from the sultan. The sultan, in his *berât*, enjoined upon all the *boya*s, priests and people that they should recognise the *soyvoide* as their ruler (892) if they failed to do so their land would be regarded as *dir al-harb*. The *soyvoide*'s symbols of authority were the standard, the robe of honour (*âbâ'î*), and the red *berk* (felt cap). An *âghâ* accompanied the *soyvoide* to his capital, seated him on his throne, and had the proclamation read to the people. As late as the 16th/17th century it was felt to be important that the *soyvoide* should be a descendant of a former *soyvoide* (cf. Feridun, II, 398, 446). Nevertheless the wishes of the local *boya*s were taken into consideration. The Ottomans, assisted by the Crimean Tatars, had no great difficulty in removing pretenders supported by Poland or the Cossacks and *soyvoide* who refused to recognise the sultan's order of deposition. After the treasury of Dimitri Kantemir in 1123/1711 the *soyvoide* were selected exclusively from a few families of Phanariot Greeks (the Mavrokordati, Kallimachi, Hypsilanti). In this Phanariot period (1123-1236/1711-1821) the *soyvoide* were reduced to being merely Ottoman officials. They were frequently changed, but after 1217/1802, as a result of Russian pressure, they were appointed for periods of seven years.

The tribute which the Moldavians paid as *akî al-'ahd* was regarded as *âharâdî maktâ*, farmed by the *soyvoide*, who, acting as *îsmîl* (tax-farmer), was expected to raise the maximum amount of tribute that the country could support. In 859/1455 the tribute was fixed at 2000 ducats; it was increased under Stephen the Great to 3000, under Petru IV Rareș to 10,000, and in 1028/1619 under Gaghar to 40,000 ducats. In the 12th/13th century it was 65,000 *ghurek* [g.e.]. Boğhdân also paid tribute (7000 ducats annually) to the Crimean *Khân*. The gifts (*ghîzâgh*) which the *soyvoide* made to the Sultan, the *soya*s and other influential people became an established usage, and nearly equalled in amount the sum paid as *âharâdî*.

The 'ahd-nâme granted to the *soyvoide* also prescribed that he should be 'the friend of the sultan's friends and the enemy of his enemies', and should supply military aid when called upon, the

*soyvoide* serving in person when the sultan himself took the field (Na'mâ, vi, 322). But the *berâts* emphasised that Ottoman officials were not to interfere in any way in the internal affairs of the principality. The *soyvoide* had a representative (*kapu-hetâhuddul* or *kahya*) in Istanbul to attend to matters arising between the *soyvoide* and the Porte.

The people of Boğhdân were regarded as *âharâdî-gûsâr na'yyet* of the Sultan, who was obliged to defend them against their enemies and to depose *soyvoide* who oppressed them. The *boya*s never formed a hereditary nobility. In the 9th/15th century they were no more than a class of wealthy peasants. The Porte was able to strengthen its control of the country by playing off the *boya*s against the *soyvoide* and *vice versa*. In the 12th/17th century the *boya*s became great landowners and the peasants were reduced to serfdom; but the Phanariot *soyvoide* tried to break the power of the *boya*s, and in 1253/1740 Constantine Mavrokordato abolished serfdom and freed the peasants from their control. From then on the *boya*s looked for support more and more to the Christian powers, especially Russia. By the *Regulamentul Organic* which was drawn up in 1247/1831 during the Russian occupation, the council of *boya*s was given the right to elect the *soyvoide*.

In the course of time the Ottoman state had absorbed various parts of the principality into the *dir al-'ahd*. Süleyman I's campaign of 945/1538 represents a turning point in many respects: the *soyvoide* was brought into direct dependence on the Porte, and the district of Buğdâk [g.e.] was annexed to ensure the security of the port of Ak-Kirmân. In 1030/1621 'Oghmân II rescued Khotin from the Poles to give to Boğhdân, but annexed to the Ottoman dominions the area north of Ismail. In order to recover Buğdâk, Dimitri Kantemir in 1125/1711 secretly recognised the protection of the Czar. After the treaty of the Pruth, the Porte placed Khotin and the surrounding district as far as the Pruth under an Ottoman *Paşâ*. In 1189/1775 Austria seized the north-western part of the country (Bukovina), and in 1227/1812 Russia annexed Bessarabia. After the Treaty of Kütahya-Kaynarğa (1188/1774) Russia posed as the protectress of Moldavia, and eventually after the Treaty of Ak-Kirmân (5 Rab' I 1242/ Oct. 1826) Ottoman suzerainty over the principality became nominal and Russia was recognised as the Protecting Power. In 1276/1859 the twin principalities of Wallachia and Moldavia (*Moldolavayn*) were united, though the Sultan did not recognise the union until two years later (28 Rûmûlâ 1278/2 Dec. 1861).

(HALLİ İSALCIK)  
BÖĞRÂ, town and head-quarters of the district of the same name in East Pakistan, situated in 24° 51' N. and 86° 23' E. on the west bank of the Karâôya. Population, (1951) was 12,36,581 for the district and 25,303 for the town. The town is pre-

dominantly Muslim; even before the partition of the sub-continent in 1947 it had the largest number of Muslims in the whole of Bengal. They are mostly converts from the Kōṣ or Rājādhāns of the northern areas although there are some Pathāns and Sayyids also. The district and the town are both liable to cyclones and floods, sometimes of a terrible nature. In 1281/1284 many houses and trees were levelled to the ground by the cyclone which swept over the district. In 1294/1296 the town was inundated when 18" of rain fell within a short span of 1½ hours. Earthquakes of great intensity have also frequently occurred. The severe earthquakes of 1895, 1888 and 1897 did considerable damage to both life and property. Many of the brick buildings in the town were destroyed in the earthquake of 1897.

The district seems to have been converted *en masse* to Islam in the 7th/13th century as most of the villages still bear Hindu names but have no Hindu inhabitants. In 1603/1596 when the district was re-conquered by Rājā Mān Singh, the Mughal viceroy, he built a mud fort at Shīrpur and named it Salmāgar after Dīghājūr. A fort was also built at Mahāst'hān, now desolate. Shīrpur, to the south of Bōrā, was founded by Shīr Khān, the Afghan ruler of Bengal (c. 600-700/1568-72). These two places abound in archaeological remains while in the town itself the "Bōra Palace", the seat of the Cawdhari family, is the only place of some antiquity and interest.

**BOHORĀS** (Bōhrās, Buhrah), a Muslim community in Western India (mainly of Hindu descent, with some admixture of Yemenite Arab blood), for the most part Shī'īs of the Ismā'īlī sect, and belonging to that branch of the Shī'īs which upholds the claims of al-Musta'īl (487-495/1094-1101) to succeed his father al-Musta'īr in the Fātimid Caliphate of Egypt. (For the history of the Fātimids, see the articles Fāṭimids and Ismā'īlīs). Musta'īl opposed his brother Nūr, whose adherents (the so-called Assassins) are represented in India by the Khōdās (q.v.). The name *bohōrā* denotes a "trader, merchant" (from the Gujjarātī *bōhrō*, "to trade") and records the occupation of the earliest converts to Islam. This is clearly mentioned in an Arabic work, *al-Tarjama al-Zakara*... (see below, and cf. Asaf A. A. Fyzee, *Ismaili Law of Wills*, Oxford 1953, 3, footnote 2). The appellation however is not confined to Muslims, and in the Census Report of 1901, 6,652 Hindus and 27 Jāyans returned themselves as Bohorās. The exact figures are a matter of some doubt, as Hindu Bohorās, Sunnī Bohorās (of Gujjarāt and particularly of Rāndhēr) and Dīyānī Bohorās are occasionally confused with Ismā'īlī Bohorās. The number of Muslim Bohorās was given in 1902 as 146,255, of whom 118,307 resided in the Bombay Presidency. Under the communities the following figures are given:

Bohorā (British Districts)	1911	1921	1931
	92,081	108,750	110,124

In the Census Reports of 1941 and 1951, the distribution of the communities is not given, with the result that it is now impossible to give accurately the figures for India. An approximate figure allowing for the natural increase in population would be 150,000 in India, and 200,000 for the world, including the trading communities of Ceylon and East Africa.

The Bohorās fall broadly in two main groups, the larger of which, belonging to the mercantile class, is Shī'ī; the other, composed mainly of peasants and cultivators, is Sunnī. Some of the Sunnī Bohorās of Rāndhēr (Gujjarāt) traded in Burma and made large fortunes. Certain families of Ismā'īlī Bohorās claim to be descended from refugees from Arabia and Egypt. It is difficult to substantiate this claim; but intermarriage, particularly with Yemenite Arabs of the Musta'īlīan branch, has taken place in a number of well-known cases. Recently among the Sulaymānīs, intermarriage has taken place with Sunnīs, Iḡnā 'Aḡhar Shī'īs, Hindus and even with Europeans; but the large majority of the Bohorās do not marry outside their communities.

The majority of Bohorās are undoubtedly of Hindu origin, their ancestors having been converted by Ismā'īlī missionaries. The first of these is commonly stated to have been sent from Yemen by the Imām of the Musta'īlīan sect and to have been called 'Abd Allāh. It is related that he landed in Cambay (Western India) in 400/1007 and actively engaged in propaganda. This story is given in varying forms, one of which is preserved in an Arabic booklet entitled *al-Tarjama al-Zakara li-Firāh Borkat al-Bāhira*. A copy exists in the library of the Bombay branch of the Royal Asiatic Society. It has been translated into English by K. M. Jhaveri, *A Legendary History of the Bohoras*. *Journal Bombay Branch Royal Asiatic Society*, 1933, New Series, Vol. 9, 37-52. The text has been edited by H. M. Fakhr (Tālib), in the *Journal Bombay Branch Royal Asiatic Society*, 1949, N.S., Vol. 16, 88. Other accounts give Muhammad 'Alī, whose tomb is still revered in Cambay, as the name of the first Musta'īlīan missionary in India (died, 532/1137). The Čāḡkya dynasty of Anahīlvāda was then ruling over Gujjarāt and the Ismā'īlī missionaries seem to have been allowed by the Hindu government to carry on their propaganda without interruption and with considerable success. In 1227 the Hindu Kingdom came to an end and for a century Gujjarāt remained more or less in subjection to Dāhīl. However, under the independent Kings of Gujjarāt (1396-1572), who favoured the spread of the Sunnī doctrine, the Bohorās were on several occasions exposed to severe persecution.

Up to 948/1539, the head of the sect resided in the Yemen, and the Bohorās made pilgrimages to him, paid tithes and referred their disputes for decision and settlement. In 946, however, Yusuf b. Sulaymān migrated from the Yemen to India and settled in Sindhūr (Bombay State). About fifty years later, a schism occurred after the death of the dā'ī Dā'ūd b. 'Aḡlab Shāh in 990/1588. The Bohorās of Gujjarāt, in fact the large majority of the community, chose one Dā'ūd b. Kutb Shāh as his successor, and sent the tidings of his appointment (Ar. 1029) to their co-religionists in the Yemen; but the latter, including a small proportion of the community in India, supported the claims of a certain Sulaymān, who claimed to be the rightful successor in virtue of a

formal mandate from Dā'ūd b. 'Aḡlab Shāh. This document is still in the possession of the Sulaymānī dā'awt (the communal administration is called dā'awt; the *t* is pronounced by the community), but its authenticity has never been subjected to a scientific, critical or legal examination. Sulaymān died in Ahmādābād, where his tomb and that of his rival, Dā'ūd b. Kutb Shāh are still revered by their respective followers. Those who recognise the claims of Sulaymān are called Sulaymānīs and their dā'ī is in the Yemen. His chief agent in India is called the *marṣūf*, and the seat of the Sulaymānī dā'awt is in Baroda, where there is a good library of Ismā'īlī MSS. Another difference is that the Dā'ūdīs use a form of Gujjarātī language which is full of Arabic words and phrases, write in the Arabic script for all official purposes and deliver their sermons in this language, whereas the Sulaymānīs use Urdu for the same purposes.

The head of the Dā'ūdī Bohorās resides generally in Bombay, but his headquarters are in Sīrat and are known as the *Dārī*. In both places there are good collections of Ismā'īlī MSS. There is at Sīrat an Arabic *madrasa* known as the *dars-i sayf*, named after the present dā'ī, Sayyidnā Tāhir Sayf al-Dīn. The dā'ī al-muḥall, to give him his official designation, is commonly known as the Mullājī Shāh or Sayyidnā Shāh, and is greatly revered by his followers. In large numbers, a large number of the sectarians perform a form of obeisance, the *ḥabīb al-arḡ*, which has apparently come down from Fātimid times and differs but little from the traditional *sajda*.

As regards marriage and death ceremonies, and ritual prayers, the Bohorā community is in general well-served by local officials, called *imāds*, who are appointed by the Mullājī Shāh and are the servants of the dā'awt. They perform duties similar to those of the *khāḍis* of the Sunnīs, but in addition refer disputes to the Mullājī Shāh and have a much greater hold over their "parishioners". A feature of the Bohorā community both in India and elsewhere is that they form themselves into guilds, have little to do with others, and do not intermarry even with other Muslims, much less with adherents of other religions, and take little part in public affairs. In general, they restrict themselves to trade; but in some parts of India, Ceylon and East Africa, and particularly amongst the Sulaymānīs, certain families have entered public life and taken to Government service.

Two insignificant secessions from the Dā'ūdīs may be mentioned: (i) The 'Alīyā Bohorās, who in 1624 supported the claims of 'Alī, the grandson of Shāykh Ādam, the head Mullā, in opposition to Shāykh Tayyib, whom Shāykh Ādam had nominated as his successor, and (ii) the Nāḡōshīs, who broke away from the 'Alīyās sect about the year 1769; their name indicates that they consider the eating of flesh as sinful. The Dā'ūdī Bohorās are mainly descended from the Dā'ūdī Bohorās who became Sunnīs in the reign of Murzafer Shāh (810-813/1407-1411) and succeeding Kings of Gujjarāt, but they have received accession to their numbers from Hindu converts. They derive their name from a saint named Sayyid Ahmād Dīyār Shīr (15th Century), whose descendants they reverence as their spiritual guides.

The Bohorās keep their religious books secret, but recently some of their works on law (such as *Dā'īm al-Idām*), history (such as *Sīrat Sayyidnā al-Mu'ayyad*) and philosophy (such as *Rakāt al-'Alī*

and *al-Risāla al-Djāmī'a*) have been printed. Further details will be found in the bibliography by W. Ivanow, *Guide to Ismaili Literature*, London 1933, of which a second edition is contemplated. For their religion and doctrines see Zāhid 'Alī, *Hamārī Ismā'īlī Maḡhāb aur aḡlī Ḥabīb* (Urolo), Haydārbād, Decan, 1953/1973. In this work a full exposition of the *ḥabībāt* (the Ismā'īlī term for their secret philosophical doctrines) has been given by a learned Bohorā. Recently A. A. Fyzee has given his collection of Musta'īlī Ismā'īlī MSS. numbering 160 to the Library of Bombay University.

**Bibliography:** General works: Nūr Allāh b. Sharīf al-Shayḥatī, *Madfīl al-Mu'minin (Madfīl-i Dāwran)*, ad fin.; All 'Muhammad Khān, *Mir'ād Ahmād*, Bombay 1307, II, 87; A. K. Forbes, *Rās Mīdī, or Hindoo Annals of the Province of Goerat*, I, 343-344 (London 1856); *Gazetteer of the Bombay Presidency*, Vol. 18, Bombay 1899, Part II, 24 ff.; D. Menant, *Les Bohoras du Gujarat*, in *RMH*, 3, 465 ff.; See also the articles Fāṭimids, Ismā'īlīs and Kādī Nu'wās; Zāhid All's work, cited above; Sh. T. Lokhandwalla, *The Bohoras, a Muslim Community of Gujarat*, in *S. Isl.* 1955, 117-135; 'Abbas H. al-Hamūdī, *The Ismā'īlī Dā'wa in Northern India*, Cairo 1956.

History of the dā'awt: No exhaustive history of the Bohorās has been written so far on scientific lines. See however an Arabic work still unpublished, *Mundazāt al-Aḡḡār* (2 vols., see W. Ivanow, *Guide*, no. 335), on which is based the Gujjarātī work lithographed in the Arabic script, *Mawṣim Bahr fī Aḡḡār al-Dā'ūdī al-Aḡḡār*, 3 vols., by (Miyān Shāh) Muhammad 'Alī b. Dīghābāḥ, Bombay, n.d.

The literature of the dā'awt is still mostly unpublished, but has been described by W. Ivanow, *op. cit.* (with addenda by Paul Kraus in *R.E.I.*, 1932, 483-90). For further bibliographical material see A. A. Fyzee, *Materials for an Ismaili Bibliography, 1920-1934*, *Journal of Bombay Branch of the Royal Asiatic Society*, 1935, 59-65, and *ibid.*, 1940, 99-101. Several important texts have recently been edited and published by Dr. Muhammad Kāmil Husayn (Cairo).

Law: al-Kāfī al-Nu'mān, *Dā'īm al-Idām*, vol. I, ed. A. A. Fyzee, Cairo 1951. The second volume is in the press. (A. A. FYZEE)

**BOHTAN** (see KURDS)

**BOLOR DAGH** (see FARMIR)

**BOLU** (Boli, near ane, Bithynium, later Claudopolis) 40° 15' N 31° 30' E. The capital of a forested NW Anatolian *vilayet*, elevation 710 m., area 11,740 sq. km., lying between the Sakarya river bend and the Black Sea. In 1935 the population was 11,884 (town) and 148,612 (province). Boli lies in a plain on the Boli Suyu and is subject to severe earthquakes, notably that of May 26, 1937. It is on the highway 263 km. from Istanbul and 208 from Ankara. It boasts 32 mosques, a bath dated 791/1388-9, a women's teachers college, forestry school, other fine primary and secondary schools, a hospital, and new "brickworks" and lumber factories. Boli is the home of Kōrēhli, 'Aḡḡālī Derōlī and good cooks. Lake Abant lies 37 km. SW. Atatürk visited Boli from 17-19/viii/34 and İnönü from 5-7/viii/39. Its *hādīs* are Akchakdja, Boli, Dīdja, Gerece, Göynük, Kōrēhlik, Mengen (where lignite has been exploited since 1956) Mudrun, Seben and Yūğludja. Boli fell to the Ottomans circa 726/1325, to the

to September and the coldest months whose coolness is increased by the NE. winds then blowing continuously and frequently heavy with sand. The index of aridity compares with that of Tanzeout, but the country differs from the central Sahara in that it does not have long series of dry years; the rains, even if the fall is slight, come each year at least from May to September. This regularity is not in itself enough to explain the existence of profuse vegetation which round the springs takes on an almost tropical aspect. Water in fact is abundant: salt lakes at the foot of the Eni Koussi, pure or natronated springs of the central depression, layers of water saturating the sands of the valleys or appearing on the surface on the southern basins, the lakes of Ouinaiga. These waters apparently have their origin in the spates of the *wadis* of the Eni Koussi, which soak between the volcanic outcrops and percolate through the sandstone to reappear in the depressions.

The character of the steppe changes from north to south. The 'bad' which preponderates in the north and which supports a few species of grassy plants gives way about the 17th parallel to the 'crum-crum' (*leucurus biflorus*). Then Sahelian species appear, forerunners of the savannah; the domain of the ariels and ostriches begins. Islets of woodland in the northern valleys and especially in the central depression—down palms and particularly handsome acacias—seem to bear witness to at one time more extensive and denser woodland.

Oases and pasture have attracted the populations of the neighbouring mountains since the 10th century. The nomad tribes of eastern and central Tibesti (the two branches of the Tübbi people: Teda and Daak) occupied the oases of Gouni then the central oases (Woun), pushing back the Donza who seem to have been the aboriginal inhabitants, towards the palm groves to the south of the Eni Koussi, their present habitat. The nomads belonging to the lowest caste clans have become sedentary, sometimes partially, being abetted by the 'bad' and supplies of natronated water close by to keep their camels. The others have drifted to the southern steppes which are richer in pasture. Some tribes have reached as far as the Chad lowlands where they have changed from camel to cattle rearing.

Other populations, coming down from Ennedi and Wadai, have mixed with the Tübbi. The Anak-kaza, who constitute the most important group in Borkou, were formed in this way, whereas the Gauda seem to be descended from the Tundji of Kanem. Borkou has thus been a melting-pot in which, however, Tübbi influences have predominated. The Darä language is spoken by most of these populations, their customs are those of the Tübbi, and the Tübbi physical type—non-negroid black—is the commonest. One can understand that the Arabs should have lumped the whole of the Borkouans together under the single name of Kura'än. According to official statistics the Borkouans now number about 20,000.

The nomads live by stock rearing supplemented by the resources of the oases, whether they still enjoy over these vicerain rights acquired in the past, or whether the gardens are cultivated for them by the sedentary Kamadias, whose origin, though certainly servile, is ill-known. The Kamadias, who had become share-croppers of the nomads, have gradually freed themselves from their tribute obligation with the support of the French administration. The palm groves contain at present about

1,000,000 productive trees of which 90 per cent are in the central depression. They produce 30,000 quintals of dates per annum. The irrigation channels in the gardens are fed by balance-arm wells and produce on the average 120 tons of wheat and 200 tons of millet per annum; vegetables (onions, tomatoes, sweet potatoes, and pimientos) are also grown. Salt-pans from which salt is obtained by evaporation are numerous in the northern valleys, and their product, joined with that of Ennedi, represented (in 1930) half the Saharan production. The nomads of the southern steppe bring meat, butter, and tanned skins to the oases to exchange for their products. Sedentary and nomadic populations alike obtain their tools and arms from the despised smith caste. These smiths, known in the Tübbi domain as *Azzas*, deprived of local supplies of ore which are now exhausted, use as their raw material scrap iron or raw iron plates brought in Borno.

These exchanges suffice for local needs. 1,200 miles from the Mediterranean coast by the economically unimportant Kufra track, detached from the trade routes joining the Sudan with the Mediterranean (which avoid Tibesti and its brigands), detached from the tracks leading to the Nile lands passing to the south of Wadai, Borkou has always lived turned in on itself. For this reason archaic modes of life have survived in these oases until the present day and paganism had not retreated before Islam, in the 19th century. This isolation has of late years been twice violently broken. For half a century after 1842 the country was ravaged by the waves of the Awlad Sulaymān who swept down from the Fezzan in flight from the Turks. Then, about 1900, the Sanusiyya, falling back from Kanem and Maure, settled themselves firmly at the two ends of the central depression, at N'Galdaka and at Woun (alias Faya, later Largaou). They made their *zawiyas*, especially that at Gouni, agricultural centres as well as intellectual and religious centres from which Islam was propagated. But they indulged in raids which, by forcing the nomads to choose between the palm groves occupied by the Sanusiyya and the pasture lands to the south controlled by France since her occupation of Wadai and Bahr al-Jabal, disorganized and so ruined economic life. The Sanusiyya had the backing of the Turks, who placed garrisons in the country in 1911, but the Italo-Turkish conflict brought about the withdrawal of these garrisons in 1912, and in 1913 France re-occupied the whole of Borkou.

**BORNEO**, the corrupted form of Brunal (which is a town in British North Borneo at about Lat. 5° N. and Long. 113° E.) applied to the largest of the greater Sunda Islands in Indonesia, probably as early as the 14th century, and in any case by the Portuguese since the 16th century. The greater part of the island is now called Kalimantan and constitutes a province of the Indonesian Republic. From the view-point of Muslim studies the importance of the island is small, as practically the whole population of the interior of Borneo is pagan. Islam and Christi-

anity penetrated in the coast areas whence they have been slowly spreading into the interior; since 1912 political conditions favour the propaganda of Islam rather than the spreading of Christian denominations. The character of the local Islam is not different from what we find elsewhere in Indonesia [p.s.]. The only important centres of Muslim activity is Pontianak [p.s.] on the West Coast (C. C. Hoan).

**BORNE**, or Barnd, the name of doubtful etymology the root of which reappears in Berberi (= Barbari) as their neighbours call the Kanuri—given to a region in the hinterland of West Africa and used:

(a) loosely, of an area never precisely defined in geographical terms, where there was established one of the major states of that part of the Western Sudan, —see para. 6 below,—and

(b) of a province,—area, according to 1931 census, 45,900 square miles—lying between latitudes 10° and 13.5° N. and longitudes 10° and 14° E., in Northern Nigeria, containing that part of (a) west of the Anglo-German and south of the Anglo-French original international boundaries, plus an adjacent narrow strip on the eastern frontier of the former German Kameruns mandated to Great Britain after the war of 1914-18; including the Shaykhdoms of Borno and Dikwa, together with some other administrative units.

2. **Geography.** Borno consists in the main of a vast sandy plain drained by two rivers—the Yobe running from west to east in the north and the Vederram from south to north in the south,—into the marshy shores of Lake Chad which lies in its north-eastern corner. The only mountainous features occur in the extreme south and south-east of the Province. In earlier times the Shari River which also flows from south to north into Lake Chad was regarded as the eastern border of Borno, dividing it from Bagirmi [p.s.] country. The early medieval geographers and historians were cognisant of the region under this name, which appears on the Catalan atlas of Charles V (1375 A.D.), and is mentioned by al-Umari (d. 1348 A.D.), Ibn Khaldun (d. 1406 A.D.), al-Makrizi (d. 1442 A.D.) and others. It was described (1803 VII) by Leo Africanus (d. circa 1552).

3. **Transport and Trade.** The main modern motor road (Kano-Maiduguri-Port Lany) runs from west to east across the region, with feeders from north and south, as did the former caravan route (Kano-Kukawa-Bilma). There is a permanent aerodrome at Maiduguri and numerous landing grounds elsewhere. Of old slaves and ivory were the main exports, now groundnuts, hides, gum, cotton and numerous minor items have replaced these. Imports consist of manufactured articles, especially cotton goods. There is a considerable internal trade in dried fish from the Lake Chad area, salt and kola nuts.

4. **Economy.** The region is not industrialised and contains no cities. It is self-contained so far as the necessities of life are concerned, and its population is mainly agricultural. In the 1932 census, of 790,361 males, 376,561 are shown as engaged in agriculture and fishing. Its capital wealth consists in numerous herds of cattle, sheep and goats, together with the fisheries of Lake Chad.

5. **Ethnography.** (a) The population of the region described in para. 2 (b) above comprises the Kanuri, Fululā, Hausa [p.s.], Shuwa Arabs and some other tribes. At the census of 1932, the salient figures for the Borno Province of Nigeria were—Kanuri 752,683; Fululā 168,944; Hausa 84,729;

Shuwa Arab 98,999; Bura 89,826. Total—including other less numerous mostly pagan tribes situated mainly in the hilly south and south east of the Province,—4,595,708. The comparable total in the 1931 census was 2,118,360.

(b) **Languages.** Kanuri [p.s.] is the major language of the region, but of importance also are the colloquial Arabic spoken by the Shuwa Arabs, and Fulafulde spoken by the Fululā [p.s.]. Hausa is little spoken except by the trading elements in the towns. The pagan tribes have their own tongues. English is also used by those who have been educated in the more advanced schools.

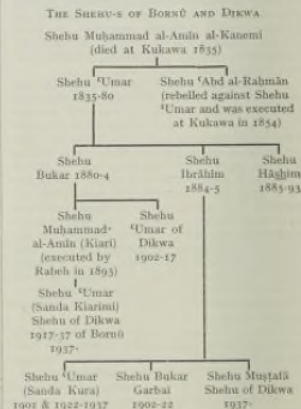

6. **History.** The early history of Borno is linked with that of the Kanem Empire. In 666 A.D., 'Ulka b. Nalī' penetrated the east-central Saharan desert as far as Tibesti in the Tebu country to the north of Lake Chad, the inhabitants of which, according to legend, were the So, a giant race originating from the Fezzan. According to tradition the first king of Kanem in this area was one Sayf, claiming descent from Sayf b. Dhī Yazan of the Bari Himyar. This tradition may be post-Islamic and fabricated. The ruling class of old in this area was called the Maghami, a word the root of which appears in the Kanuri words Mai (ruler) and Maghira, the title of the Borno Queen Mother, an office which carried and still carries considerable power. There is strong traditional and some written evidence that this ruling class was 'white-skinned', and a reasonable supposition is that it was originally matrilinear and probably of origins connected with the Tawarik, (plur. from sing. Tarki, vulg. Tuareg). The Saifawa were a nomadic people who absorbed or conquered the Tebu peoples to their north, and founded the Empire of Kanem, with capital at Nijmī. Their rulers are said to have given 'the Sultan of the Berberi' permission to settle, and tradition speaks of an invasion by Muslim Berberi from Yaman via Fezzan and Kuwar in 800 A.D. The Empire of Kanem had received Islam by the 11th century if not earlier, and by the 13th century was powerful enough for its influence to reach as far as Egypt in the north east and Dikwa in the south. Ibn Khaldun speaks of the 'King of Kanem and the Master of Borno', the last word apparently describing the southern part of the Kanem empire from Lake Chad to Dikwa. But, circa 1389 A.D., the Sayf dynasty was driven out of Kanem by a kindred tribe, and the consequent tribal movements resulted in the advance of the Kanuri nation to the west of Lake Chad, and finally to their founding, circa 1470 A.D., on the River Yobe, of Borno N'garargana as the capital of Borno and of the Kanuri nation. It remained their capital for three centuries, though, circa 1507 A.D., Nijmī itself was recaptured by the Kanuri, and old Kanem became a province of the new Borno Empire.

In the 16th century and under a succession of able 'Mats' or rulers (Muhammad 1526-45, Dumaqa 1546-63, 'Abdallah—in whose reign the first settlers in Borno are first mentioned—1564-70) the Borno Empire expanded greatly, and this process was no doubt helped by the conquest, in 1592 A.D., by Morocco of Borno's rival in the western Sahara, the empire of Souhagay. Of these rulers the greatest was probably Mai Idris Atuma, (ob. 1602), who successfully campaigned as far afield as Kano, and also subdued the tribes of Air [p.s.] and the Tebu. Mai Idris made the pilgrimage to Mecca and was buried in Aka Lake near Maiduguri. This peak was followed by two centuries of quiescence (Mai Ali, 1643-84 A.D., made the pilgrimage thrice), during part of which

at least the Bornu Empire seems to have been on the defensive, for 'Ali was besieged unsuccessfully in his own capital by the Tawiriki and the Kwararafa. Contributing causes may have been a series of severe famines,—one is recorded of seven years' duration,—and the general dislocation which followed the Moslem conquest of Songhay. The Fulani *ghazal* further to the west at the beginning of the 19th century soon had repercussions affecting Bornu, the suzerainty of which over the Hausa states lying between Bornu and Sokoto was challenged. In 1808 the Fulani in Bornu assembled at Gujba, defeated Mai Ahmad b. 'Ali and sacked his capital at N'garariman. (One of the successful Fulani leaders in this campaign later founded the Iwra and amirate of Katsam with the title of Sarkin Bornu.) Mai Ahmad fled to Kanem where he invoked the aid of a leading chief there, Muhammad al-Anin al-Kanemi, a man who had travelled extensively in the Muslim world and had a wide reputation for learning and piety. He reinstated Mai Ahmad and expelled the Fulani, who, however, on Mai Ahmad's death soon after, returned to defeat his successor, Dunama b. Ahmad. The last named in turn sought the aid of al Kanemi, and at this point the modern history of Bornu may be said to begin. Al-Kanemi, victorious again over the Fulani and Bagirmi, restored the old Sayf ruling house as titular kings and established himself at Kukawa, where he was visited by Dohi in 1822, as the power behind the throne. His further attempts, circa 1826, to re-establish the empire of Bornu over the Hausa states were less successful, and, after being defeated, he died in 1835, and was succeeded by his eldest son 'Umar who made peace with the Fulani. During the absence of 'Umar on these negotiations, the Sayf royal house called in the ruler of Wadai to help them expel the house of al-Kanemi. This plot failed. The then Mai, Ibrahim, was executed in 1846, and the last of the Sayf dynasty, his son 'Ali, was killed in battle. 'Umar now became *de jure* as well as *de facto* ruler of Bornu, adopting the title Shehu (= Shayikh) instead of Mai, thus inaugurating the Kanembu dynasty. He rebuilt Kukawa which had been destroyed by the men of Wadai, and was visited here by Dr. Barth in 1851 and 1853. War with Wadai was almost continuous, seriously weakening the strength of Bornu, and the outlying western territory of Zinder became virtually independent. In 1893, Rabeah (g.n.) entered Bornu from Wadai with a well armed and trained force of some two thousand men, which was altogether too strong for any forces with their antiquated weapons which could take the field against him. He defeated a general of the then Shehu, Haghim, at Anja, next Haghim himself near Ngala. He then took and plundered Kukawa, after which he returned to Dikwa where he made his headquarters, and built the first city that can still be seen. A cousin, Muhammad al-Anin nicknamed Kiar, of Shehu Haghim caused the latter, now a fugitive, to be severely wounded and himself advanced against Rabeah from Geidan. The two forces met at Gashegar and Kiar's troops had some initial success, even taking Rabeah's camp, but were finally put to flight by Rabeah's army. Kiar himself was taken and executed. This ended the resistance to Rabeah in Bornu. Rabeah established a military regime at Dikwa and sent out serious and predatory raids. His rule was entirely destructive and caused incalculable loss and dislocation over a wide area. In 1900, Rabeah was defeated and killed by French troops under Commandant Lamy. Rabeah's son, Fadl Allah, fled westwards before the

French, was pursued and finally, on 3 Aug. 1901, killed by them under command of Captain Dangeville in an engagement at Gujba in Nigeria, (130 miles on the British side of the Anglo-French boundary which, though approved on paper, had not yet been delimited by boundary commissions on the ground, thus causing considerable confusion in the then so unsettled state of the country). The French authorities offered restoration to Sanda, a son of the late Shehu, but he was unable to meet their conditions, and finally the Kanemi dynasty was restored by the British authorities with Shehu Bakar Garbai, his brother. Shehu Bakar set up first at Montegi, then moved to Kukawa and finally, in 1907, to Verwa near Maiduguri which has remained the capital of Bornu to the present time. Dikwa became part of the German Kamerun, which, after the German defeat in the 1914-18 war, were mandated to Great Britain and France by the League of Nations, Dikwa falling into the former's area. Details on the history of Bornu in the present century will be found in the reports of the Government of Nigeria.

7. Religion. Islam is the religion of the Kanuri, Fulani, Shuwa Arabs and Hausa, and their *madhhab* Maliki. Of the Tarika, the Kadiyaya (g.n.) and the Tijaniyya (g.n.) are the best supported, though representatives of others will also be found, including the Sanusiyya (g.n.) and the Shadhiliyya (g.n.). The Church of the Brethren (American Protestant) Mission operates among the Bura tribe in the south of the Province. It seems certain that, in modern conditions, the animism of the pagan tribes will gradually disappear.

8. Miscellaneous. Notable European explorers who visited Bornu were Denham, Clapperton (1822), Barth, who made long stays at Kukawa between 1851 and 1855 and collected much information about the history and circumstances of the region, Vogel (1854-6), Beumann (1860), Rohlf (1866), Nachtigal (1879-2), Mathieu and Masani (1880-1), Monteil (1892).

## BOSNIA (BOSNIA AND HERZEGOVINA).

### 1. General outline.

Bosnia and Herzegovina, with a total area of 51,329 km<sup>2</sup>, lies within the latitudes 43° 20' and 45° 15' North and longitudes 15° 44' and 19° 41' East; it thus occupies the western—largely mountainous—region of Yugoslavia, rich in mineral resources, water-power, and forests. It is divided into two geographical and historical entities—Bosnia and Herzegovina. The name of Bosnia refers to the larger northern part of the country, while Herzegovina comprises the southern districts with the basin of the river Neretva. The name "Bosnia" is derived from the river Bosna (of uncertain meaning but doubtless of Illyrian origin) which flows through the central part of the country. It was round the source and the upper basin of the river that traces have been found of a district called Bosna (first mentioned by Constantine Porphyrogenitus who thought it belonged to Serbia, inhabited by early settlers, members of Slav tribes. After many changes of fortune brought about by a succession of foreign and native rulers, the region became an integral part of a new State bearing its name, which—under the reign of King Tvrtko I (1353-1391)—comprised not only the present territory of Bosnia and Herzegovina, except for a small district in the north-west, but also a large part of the Adriatic coast with the neighbouring districts in the south and south-east. Under Turkish rule, Bosnia was one of the *sandjaks* of the Ottoman Empire, and from 988/1580 an *eyalet* which comprised a larger area than that of the present Bosnia and Herzegovina, not only before but even after the loss of territory suffered in the second decade of the 18th/century. The name of Herzegovina dates from the middle of the 15th century when the magnate Stjepan Vukčić Kosača rebelled against the then king of Bosnia and had himself proclaimed "Herzeg (Duke) of St. Sava". The region later came to be called "Herzegovina" (the land of the Herzeg) and in Turkish, *Herz* or *Herzegovina*. The present territory of Bosnia and Herzegovina roughly corresponds to the area that constituted the province of Bosnia and Herzegovina under Austrian rule (1878-1918) and which was part of the Kingdom of Serbs, Croats and Slovenes (from 1918). The boundaries and the extent of the region remained unchanged during the later centuries. Under the new Kingdom (under the so-called Vidovdan Constitution). After the suppression of parliamentary rule in Yugoslavia (1929), an authoritarian Kingdom of Yugoslavia emerged, made up of nine large administrative units called "banovinas". This division altered the boundaries of the country, for the two banovinas with their seats within Bosnia and Herzegovina (those of Sarajevo and Banjaluka) now comprised parts of the neighbouring area, with the result that part of Bosnia and Herzegovina territory came to belong to the banovina the seat of which was in Split, while part of Herzegovina was included into the banovina whose seat was in

Montenegro. In present-day Yugoslavia a separate people's republic of Bosnia and Herzegovina has been formed within its traditional historic boundaries.

The social and political organisation of Bosnia and Herzegovina as one of the republics of Yugoslavia, is based on the written Constitution of the Federal People's Republic of Yugoslavia, passed 15th January 1946, the Constitution of the P.R. of Bosnia and Herzegovina dated 31st December 1946, the Constitutional Law of 13th January 1951 concerning the foundations of the social and political organisation of the F.P.R. of Yugoslavia and the federal organs of government, and the Constitutional Law of 29th January 1953 concerning the social and political organisation of the P.R. of Bosnia and Herzegovina and the republican organs of government.

The P.R. of Bosnia and Herzegovina has, as does each of the Yugoslav republics, its own People's Assembly with its Executive Council and Secretariats in Sarajevo, the capital city of the Republic. The country is divided into 12 districts and 134 communes (1951).

The population of Bosnia and Herzegovina shown by the census taken in 1953 was 2,847,790. Serbo-Croat is the language spoken by the people (except for small numbers of Slovenian and Macedonian settlers and national minorities) who are, however, divided—as regards nationality—into Serbs (largely of the Orthodox Church, the rest being Muslims), Croats (largely Roman-Catholics, the rest being Muslims) and those that abstained from declaring their nationality (very largely Muslims).

According to the preliminary results of the census of 1953 there were in Bosnia and Herzegovina: 80.3 per cent of no denomination, 35.1 per cent Orthodox, 21.4 per cent Roman-Catholics, 32.3 per cent Muslims, and 0.9 of other denominations.

The official and final results, now in print, of the census taken in 1953 are as follows:

Serbs	1,264,372—44.3% (including 35,228 Muslims)
Croats	654,229—23.0% (including 15,677 Muslims)
Undeclared	
Yugoslavs	891,800—31.4% (of whom 860,486 were Muslims)
Others	37,389—1.3%

The common language and close ethnical affinity of the population notwithstanding, the people are split into three groups owing to historical influences but mainly to different religious beliefs which were responsible for the formation of national differences between Serbs and Croats. The Islamisation of Bosnia and Herzegovina—the centuries-old borderland of the Ottoman Empire, situated at the very confines of East and West with their respective influences—came to introduce yet a third denominational element. Under Austro-Hungarian rule, the population of Bosnia and Herzegovina was officially classified according to denominations—except for a small number of settlers whose nationality was duly recorded—although the greater part of the people was becoming nationally conscious, i.e., the Orthodox population professed to be Serbs and the Roman-Catholics Croats. Up to the World War II, Belgrade and Zagreb had each claimed national kinship with the Moslems of Bosnia, hence it came that a certain part of the Muslim population—mostly urban intelligentsia had declared themselves Serbs and Croats respectively.

and feudal systems. This resulted in great changes in economic and social relations. Mining, next to agriculture the most important branch of former Bosnian economic activities, was taken over by the new rulers, and all the mines became the property of the sultan. The days of high and powerful feudal lords, masters in their own districts, were gone. In agrarian relations, the *timâr* system was introduced controlled by a central authority. The *sandjaks* were administered by governors directly controlled by the sultan, whose incomes were the largest next to those of emperors. Governors used to be replaced all too frequently. On the other hand, the pressure on the peasant class and sheep-raising began to improve. In the countryside generally, patriarchal ways of life and a measure of autonomy became apparent.

At the same time, great religious and ethical changes occurred involving the whole population. There was a large-scale Islamisation. An improvement in animal husbandry in certain mountainous districts, particularly in those of Herzegovina, became evident, sheep-breeds were resettled in fertile agricultural districts which had been laid waste by wars and the like. Settling down on fertile lands, thousands of sheep-raisers turned to tillage, thus providing fresh manpower for the improvement of devastated areas. In view of the great importance attached to their work as colonisers, the settlers were allowed to retain their former privileges as sheep-raisers; however, with the growth of the feudal system and more settled conditions the settlers very largely became common *re'âyâ*. Because most of these settlers were Orthodox Serbs, many districts which had been devoid of Serbs now became peopled with them.

On the other hand, Islamisation helped the reigning religion to win adherents and partisans among all classes: peasants, feudal lords and townspeople. The Islamisation of Bosnia and Herzegovina has not been the subject of comprehensive studies so far, so it still presents a problem awaiting solution. Before the World War I the generally accepted opinion was that the followers of the heretic Church, the so-called Bogomils had passed over to Islam in a body, allegedly because of a similarity of views on moral law, and owing to the earlier persecutions on the part of the Church of Rome. This opinion is still shared by many scholars today (A. Soloviev and others). By passing over to Islam *en masse*, Bosnian nobles had been allowed to retain their estates, and the traditional pattern of land-tenure in Bosnia and Herzegovina had thus remained unchanged until the 17th/18th century. The *timâr* system was only introduced as a superstructure. One of the chief supporters of this theory, before the World War I, was C. Truhelka. According to Truhelka and others, Bosnia had from the very beginning enjoyed a separate status in the Ottoman Empire.

During the interval between the two world wars some Yugoslav historians (V. Gubrdović, V. Skarić) sought to prove the groundlessness of these views. They were of the opinion that (a) the Islamisation had been carried out gradually, (b) the Bosnian nobles had not retained their estates after the conquest because of the setting-up of the *timâr* system, and (c) the system of land-tenure, such as prevailed during the 18th century and was continued in the following century, had developed only gradually within the framework of the old agrarian system.

Attention has been drawn by modern Yugoslav historians to Turkish sources of the first order, particularly to cadastral registers, which are likely

to throw light on the history of the Yugoslav peoples during the period in question; however, the results of the investigations have not all been made public as yet.

Before 1667/1463, while the Turks held part of Bosnia under their control, there were no *sipâhî timârs* in the outlying districts of the borderland governed by 'Isâ Bey, the only *timâr* being those owned by men of the garrison of the fort at Hodidje. Moreover, in the interior of the borderland, within the estates of 'Isâ Bey, there were a number of *sipâhîs*, mostly Muslims with a few Christians. After the conquest, it was mainly from here and Macedonia, then from Serbia and other regions that the bulk of *sipâhîs* were drawn. Among the *sipâhîs* that were sent to Bosnia there were many of Slav origin. After liquidating the leading representatives of the old Bosnian nobility during and after the conquest, *sipâhîs* and a good number of the old minor feudal landowners in possession of their estates. The conquerors also gave lands to headmen of sheep-raisers. This accounts for the presence at the time of many Christian *sipâhîs*, particularly in Herzegovina.

The coming over of Bosnian feudatories to the side of Turks began rather early, at a time when they had to rely on influential Turks in the settling of disputes. Thus the land of the ducal family of Pavlović was recorded in the cadastral register of 859/1455 as land paying tribute in a lump sum (*muhalla'a*) (see Bayveket arşivi, Mâlîye def. 544). Herzeg Stepan's line of policy was for long one of complete reliance on the Turks. His sons had some time to rely on the Turks as well. His youngest son went over to the Turks, embraced Islam, and as Hersekide Ahmed Paşa held the office of Grand Vizier five times during the reigns of Bayezîd II and Selim I. A considerable number of natives of Bosnia and Herzegovina belonging to Muslim feudal families, as well as boys collected from the *re'âyâs* by *dergâh* and educated at the Court, were to hold the offices of Viziers at Grand Viziers, Mehmed Paşa Sokolović (Sokollu), one of the foremost Ottoman statesmen, Grand Vizier 972/1564-987/1579, was descended from a distinguished Serbian family in Bosnia, whose Christian relatives were Patriarchs of Serbia after the restoration of the Patriarchate of Peč (1557). The bonds of blood and kinship between men of Bosnian descent who held high offices and their kinsmen helped greatly to raise the fortunes of certain Bosnian families.

Although the ranks of *sipâhîs* were partly filled with foreign newcomers, the majority were of native descent, raised from among the old Bosnian feudatories or the new *sipâhîs* created during Turkish rule. In the earliest cadastral registers of the *sandjak* of Bosnia, the names of Islamised *sipâhîs* and their Christian relatives are recorded. Likewise, the members of their whole families are found grouped around the names of outstanding dignitaries (see Bayveket arşivi, Tapu def. 28 and 24). During the period there were in Bosnia, adjacent to Sultans' and *Sandjak-beys'* estates, a number of *timâr*s held by feudal landlords and others; some of the *sipâhîs* likewise owned *timâr*s in addition to *timâr*s, but most of the latter contained no *timâr*s as a rule. The *timâr*s were hereditary possessions and remained as such even should the *sipâhî* have lost possession of the *timâr*. On the whole it would seem that a number of earlier feudatories, converted to Islam, had kept their inherited land in the form of *timâr*s. The latter, however, were few in number and consisted of

small estates, thus the theory can hardly be upheld, as C. Truhelka would have it, that the Bosnian nobles had remained in possession of their estates at the time of the conquest and had succeeded in holding them till the 13th/16th century. As a matter of fact, the number of *timâr*s continued to increase, however slightly, until the beginning of the 16th/19th century when, during the reign of Sültân Süleyman the Lawgiver, the *timâr*s of this kind were finally abolished. Such *timâr*s, however, were to serve as a basis and pattern for the future development of new agrarian relations out of the old.

Muslim descendants of Christian *sipâhîs* and members of Islamised families who had mended their fortunes under Turkish rule were to be found later as *sipâhîs* and *zâvîs*, as *desâirs* of fortresses and higher functionaries. The importance attached to Bosnia as a frontier land favoured the rise to influence and power of the native Muslims. True, after the break-through of the Turkish armies and the invasion of areas under Hungarian rule, a great many *sipâhîs* were ordered to settle in newly conquered regions, yet this was not followed by the same consequences as in Serbia where the process of Islamisation virtually stopped with the Turkish invasion of Hungary. In Bosnia and Herzegovina Islamisation had resulted in the creation of a broad basis of Muslims recruited not only from the townspeople but also from the peasantry.

The creation of conditions necessary for the development of town communities in Bosnia—particularly those of mining centres—had begun during the period preceding the Turkish conquest. After the establishment of Turkish rule, Bosnian towns began to develop and grow. Turkish craftsmanship, particularly the handicraft characteristic of the Near East, was far advanced as compared with the craftsmanship of the earlier Bosnian period. Consequently, handicrafts and trade guilds of an original type developed greatly over the first two centuries of Turkish reign in Bosnia and Herzegovina. Great progress was made in trades related to the manufacture of leather, in goldsmiths' work, and in crafts connected with the production of military equipment and of goods required by townspeople. On the other hand, the Ottoman mining industry was less developed than in Bosnia or Serbia where Saxon settlers had introduced their mining technique and rules. Owing to the introduction, by the Turkish authorities, of bureaucratic administrative measures in mining areas which became merged with the Imperial domains (*hâssâs*), the mining industry suffered a setback in the first century of the Turkish rule, with a consequent falling off in production and, more particularly, in the output of precious metals; the production of iron, however, showed a slight increase. For these reasons, the growth of towns in Bosnia and Herzegovina during the period of Turkish rule was associated—apart from military considerations, which were the most important factor in the mining and building of towns—not with the development of the mining industry but rather with the advancement of crafts and the related trade. The towns built by the Turks were all situated on sites ensuring good communications. Over the second half of the 16th/17th century, the Islamisation of the old Bosnian mining market-towns proceeded not slowly and was less conducive to their future development than in the case of new towns built by the Turks on the sites of former market-towns. A good instance are the towns of

Sarajevo and Banjaluka, among others, which, as the seats of Turkish authorities and military garrisons, expanded and developed into crafts centres and trading settlements. Besides the Muslims civil servants and soldiers, the populations of similar towns continued to grow because of the migration of Muslims from various places who brought in Oriental customs and ways of life. At the beginning however, it was the merchants of Dubrovnik who were the only traders on a large scale.

The building of the most important towns in Bosnia and Herzegovina was due to the initiative of individual governors. It was in and around these towns that governors had their estates, mills, houses, *hamams* and shops, which they would bequeath and leave, during their lifetime, as religious and charitable endowments (*vakıf*). Thus a great number of mosques, *tekkes* and religious schools were built, with libraries adjoining mosques or schools. Devshî orders introduced mystic rites and ceremonies likely to please the urban population. Briefly, the towns of Bosnia became the strongholds of Turkish power and the mainstays of Muslim culture. The towns also had an influence on the countryside and attracted great numbers of peasants and people from rural areas. Most of the migrants were peasants converted to Islam, and the non-Muslims soon became converts as well, Christians and Jews living in towns were few in number.

The earliest Turkish cadastral registers of the *sandjaks* of Bosnia and Herzegovina provide documentary evidence bearing out the contention that the Islamisation *en masse* had its origin in towns and its surrounding country districts. At the beginning of the period, as shown in the records, converted peasants in the *sandjak* of Bosnia were to be found only around the town of Sarajevo. In 894/1489 there were in the *sandjak* over 25,000 Christian houses, 1,300 odd Christian widows' houses, and over 4,000 unmarried Christian men, as compared with approximately 4,500 Muslim houses and over 2,300 single Muslims (cf. Bayveket arşivi, Tapu def. no. 24). The earliest cadastral register of the *sandjak* of Herzegovina for the year 882/1477 (Tapu def. no. 3) clearly shows—and so do the other cadastral registers—that the Islamisation was not instantaneous; nor there any evidence to prove the assumption that the conquerors had been joined by masses of partisans that belonged to the heretic Church of Bosnia. Only in some mountain villages of Herzegovina, as shown by the registers, were to be found the "devoted believers of the Church of Bosnia" (*krifiani*); also, some believers of the Church of Bosnia were recorded to have lived in a deserted village in the *sandjak* of Bosnia, this being the only instance. It would seem that twenty years' persecution of Bosnian heretics during the reigns of King Stjepan Tomaš and King Stjepan Tomašević had broken up the heretic Church of Bosnia; the change-over to Orthodoxy of Herzeg Stjepan Vučić must also have had its share in weakening the position of the Bosnian Church in Herzegovina. The Turkish government recognised the Serbian Orthodox Church. Under the Sultan's *berât* [e.g.], the Orthodox Church enjoyed considerable rights and privileges. The Catholic Church was also granted certain privileges by Mehmed II the Conqueror. It is evident from data in the cadastral registers that the "devoted believers of the Church of Bosnia" had retired into remote secluded districts of Herzegovina. There is no recorded evidence of any Islamisation of those parts of the country or the people at the time. The inference

could therefore be drawn that the Bosnian heretics in most areas had already been brought into the fold (Orthodox or Catholic), which would exclude the possibility of a general conversion to Islam of the followers of the Church of Bosnia.

However, the probability is that the earlier persecutions on the part of the Catholic Church, combined with the pressure brought to bear by the Orthodox Church, which had the right to collect church-taxes, had created conditions favouring the conversion to Islam of the former followers of the Bosnian Church. At all events, the development of towns as centres of Islam, and their influence on the surrounding countryside resulted in a steady spread of Islam among the peasantry of certain areas as early as the 9th/15th century. Thus a foundation was laid for a major Islamisation of the peasantry. The Islamised peasants were given the distinctive name of *potur*. Their religion was a mixture of Islamic and other elements, christianised pagan, Christian and heretical-Christian. It was on these grounds that the Muslim feudatories and religious intellectuals were inclined not to regard the Muslim peasantry as their equals.

During the reign of Süleyman Kanûnî measures were taken to check the growing power of the feudal class, which had been completely Islamised by then. Bosnian sipahis were made to move to newly conquered areas, the vacant timars being made over to sipahis from other districts. *Çiftliks* were transformed and made part of *re'âyî* lands. It was at this time—and to a greater extent later on—that by graft and bribe a number of courtiers began to acquire estates in Bosnia. However, at the same time concessions had to be made in view of the needs of defence, particularly those of the borderland, and the existence of many devastated areas. Over the second half of the 16th century the number of *çiftliks* in possession of feudal lords and army officers continued to grow, particularly in frontier districts. The post of *kapudan* (captain), formerly concerned with service on rivers in the borderland, came to be that of an officer in command of forts and defensive works of a district. The native feudal class could always rely on the *kapudan's* office for effective support. The setting up of the *eyâlet* of Bosnia added greatly to the ever increasing importance of the native nobility.

The second half of the 16th/17th century proved to be a period of rapid growth and development of certain Bosnian towns. There followed a steady rise in the volume of trade with Italian towns by enteringprising house traders and Dubrovnik merchants. Being in the majority, the Muslim inhabitants of towns enjoyed certain privileges and lived in special quarters apart from the Christian population. Owing to the influx of newcomers certain guilds closed their doors, hence a migration of Muslim population to places and towns beyond the Sava.

In the second half of the 16th/17th century, the signs of a crisis in the Ottoman general administrative structure became increasingly apparent in the country's finances. One of its effects was a considerable weakening of Turkish military power. This crisis became evident in Bosnia as well. The last military ventures and offensive operations made under the leadership of Hasan Paşa Predojević, the *beyler-bey* of Bosnia, ended in the capture of Bihać. In the following year (1602/159), a Bosnian army led by Hasan Paşa suffered a heavy defeat at Sisak, which brought about the war between the Habsburgs and Turkey.

(b) *The period of crisis in the Turkish state and military defeats of the Ottomans*

The administrative structure and extent of the *eyâlet* of Bosnia, which took definite shape at the beginning of the 17th/17th century, remained unchanged until about the end of the century. At this time, the governor of the *eyâlet* bore the title of *Vizier*, and the seat of government was transferred from Banjaluka to Sarajevo.

The crisis in the economic and financial affairs of the Ottoman Empire and the cracks in the Osmanli structure were also reflected in the conditions that prevailed in Bosnia where disorders were frequent and corruption rife. Owing to financial difficulties and the rising costs of maintaining control over wide areas of the conquered territory, the central government had to extend the system of lease of all public and imperial revenue and to raise the taxes and introduce new ones. The system of lease was extended to include the renting of local rates, and even the incomes from *timars* and *re'âyî* lands acquired by courtiers, officials attached to central offices, and by many other prominent men living in the capital.

The widespread centralised bureaucratic system, designed to control and check oppression, became a source of corruption practised by local authorities as well. From the second half of the 16th/17th century on, the financial burdens and exploitation of the *re'âyî* (peasantry) increased, the pressure being put on the sheep-raisers of the autonomous districts likewise. The long war (1595-1606) was a constant drain on Turkish resources and manpower, with Bosnia bearing the brunt. In her exposed position. Owing to the war there was much unrest and many risings of the Serb people in Herzegovina both during and after the war. Over the first two decades of the 17th/17th century, former rebels from Anatolia were sent to Bosnia as governors and would turn rebels in Bosnia as well; they could always rely for support on a large number of malcontents among the native sipahi class who were embittered because courtiers and those near to central authorities would be given *timars* and *re'âyî* lands as a present, thus enabling individuals and local bureaucrats to acquire estates as large as several *timars* put together. Turkish governors, whose term of office was rather short, were anxious to amass riches and exploited the country for their own profit, as did the officials of the central government sent to investigate malpractices and causes of unrest.

Despite such conditions the native feudal class continued to prosper and grow in strength. The process of transformation of peasant lands into *çiftliks* owned by military commanders, sipahis and wealthy citizens was gaining ground as was alienation of free *bağlılıklar* (inherited possessions) of *hüres* (village headmen) and other categories of land. Peasant tenants (*çiftçi*, hence) of such *çiftliks* were required to deliver one third of a fourth (at a later period a fifth, or a sixth in some instances) of crops to their owners (*çiftlik sâhibi*) besides being forced to work on *çiftlik* belonging exclusively to the *çiftlik* owner. Such tenants were bound to pay *şahîr*, *sâlârîye* and other duties of the *timâr* system to their sipahis (*çiftlik-i arî*) should the *çiftlik* happen to be part of a *timâr* or a *re'âyî*, which was usually the case. The system of government by *kapudans* was extended and came to be applied in the inland areas of the country, for the central government could not afford the means required for the upkeep of as large an army of mercenaries as was needed.

In the circumstances, *kapudans* tended to grow overbold and defy orders issued by Paşas.

Yielding to the demands of Bosnian sipahis supported by the Paşa, Sültân Ahmed (1603-1717) issued a firman establishing *timars* with rights of family succession (*şahâdât*), the successors being sons or brothers of the deceased, or else kinsmen living with the family (*şahâdât*).

Changes in land tenure and economic policy mainly affected the Christian peasantry; the land of Muslim peasants was seldom interfered with. Increased taxation and growing exploitation deepened the existing divisions between the two classes of peasantry, hence the frequent flights of Christian peasants over the border and increasing numbers of outlaws (*haydut* in Turkish), who as highwaymen became a menace to safety on the roads.

The trends of development in agriculture and other branches of national economy, apparent in the earlier period, became more pronounced during the second half of the 16th/16th century and during the 17th/17th century. Mining industry continued to decline and was at its lowest at the end of the century.

The towns grew and developed during the second half of the 16th and the first half of the 17th centuries as a result of the expanding trade and commerce. The opening of the port at Split (1592), a rival to the port of Dubrovnik, proved an event of great importance to Bosnian trade. The town guilds came under the exclusive control of the janissaries, and this led to the further transformation of guilds into closed organisations. Town notables (*şeyh*, *şeyh*) and powerful *aghas* made their appearance in growing numbers. However, part of the inhabitants of towns were Christians, some of whom were craftsmen and tradesmen. Following the increasing migration of country people into towns the tax on abandoned land was very increased. Over the second half of the 16th/16th and the first half of the 17th/17th centuries, some of the towns grew both in extent and importance, particularly the town of Sarajevo. The amassed money-capital, however, served to advance the practices of usury. Besides the prosperous Muslim class, there were in towns certain Christian families of rich traders and merchants—Christians, however. The urban social pattern showed a marked tendency towards a sharper division between the wealthier, politically influential class and the lower class of the urban poor. In the 17th/17th century there occurred several serious outbreaks of disorder and rioting among the poor of Sarajevo, largely Muslim.

While in the first half of the 16th/16th century the Thirty Years War in Europe provided a major military undertaking against the Turk, in the second half of the century two long wars caused much suffering and lowered the standard of living conditions and the economy of the *eyâlet* of Bosnia. The war against Venice (1644-1669) and the shorter war against the Habsburgs (1663-1664) were waged in areas belonging to the *eyâlet* of Bosnia, where resultant incursions took place. The consequent flights of Christian population across the frontier resulted in the enlistment of many of the fugitives, called *asker*, in the military service of Venice. In Herzegovina also there was unrest and rising of the people. After the wars there followed a 14-year period of welcome peace, which on the whole resulted in consolidation of Turco-Bosnian power. The attack on Vienna started the new war with the Holy Alliance which was to last a long time (1683-1699). For once the Bosnian territory south of the Sava

escaped being the main scene of the operations, but a Bosnian army had to take part in the war and defend the frontiers. Austrian troops temporarily occupied some districts south of the Sava (in 1688), and nine years later Prince Eugene, after the battle of Senta, advanced as far as Sarajevo, burning it down in 1697/1697. The Christian population, particularly the Roman Catholics, migrated and retreated (1697) before the invading armies. The long wars left an epidemic of plague in their trail.

Under the terms of the peace-treaty of Karloveci (1110/1699) the *eyâlet* of Bosnia retained, with minor changes, the present frontiers of Bosnia and Herzegovina on the north and west. However, on these frontiers new fortifications began to be built and the old ones repaired; more "kapodanships" were established. The *eyâlet* now consisted of five *sandjaks* (Bosnia, Herzegovina, Kila, Zvornik and Bihać), the last being abolished soon after. It was at this time that the residence of the Bosnian vizier was transferred from Sarajevo to Travnik.

Muslim refugees from the ceded areas of Hungary, Slavonia, Croatia and Dalmatia came to settle in Bosnia on lands abandoned or sparsely populated, which they were allowed to hold as *çiftliks*. The new settlers were embittered against the Christian Powers and the insurgents, which added to the division and differences between Muslims and Christians. A number of settlers came to stay in towns, for the most part tradesmen, craftsmen and soldiers.

The exposed position of the *eyâlet* of Bosnia called for great efforts on the part of the Muslim population. Under the peace-treaty of Pođarevac (1130/1718) Austria was given a belt of territory south of the Sava, and some areas around the western frontier were also lost to Austria and Venice. Despite the ravages wrought by the plague coupled with a succession of bad harvests and heavy loss of life suffered by Bosnian sipahis, a Bosnian army led by Hekim-oghlu 'Ali Paşa gained a decisive victory over the Austrians at Banjaluka in 1230/1737. The treaty of Belgrade (1152/1739) deprived Austria of all the territories held under the treaty of Pođarevac, except for the castle of Furjan.

Bosnian feudal nobility and Muslims in general had by now lost confidence in the power of the Empire. The arrival of janissaries from the abandoned regions strengthened the privileged position of certain towns, particularly that of Sarajevo, which were now granted virtual autonomy, the greatest power being yielded by municipal *şeyh* and military commanders ("bahadır") with *kapudans*. These dignitaries came to be the main representatives of the power of the Bosnian nobility in the Empire. The political power. In the time of 'Ali Paşa a Council of *şeyh* was set up, composed of municipal *şeyh*, *kapudans* and men of note from different parts of the *eyâlet*. The Council was meant to exercise control over the vizier himself and was given powers to determine certain vizier's incomes.

Sprung from this privileged class, the new native Muslim nobility was founded on the subjection of peasantry and depended on further extension of villanage. *Bey*s and *aghas* as land and *çiftlik* lords took over or seized new *çiftliks*, causing peasants from stock-rearing districts to settle on deserted land, and generally acting independently of the central authority. *kapudans* usurped the powers and functions of officers of state, renting the state's revenue, taking over *çiftliks*, and acquiring property by every means. Certain families of *kapudans* recorded in the first decades of the 17th/17th century

had reached a high position in society by the end of the century.

In order to acquire riches and indemnify themselves for taxes paid and bribes offered to obtain the appointment to the office, viziers of Bosnia would raise the rate of taxation and impose new rates, taxes and other dues. Indeed, immediate delivery of certain goods was often demanded as advance payment for taxes 6-9 months before they were to fall due. This provoked a series of revolts and risings of poor citizens and Muslim peasantry over a period of ten years about the middle of the 17th/18th century.

Such circumstances had an adverse effect on trade in town and country alike. The prevailing conditions acted as a serious set-back to economic growth of the country.

In the war between Austria and Turkey (1788-1791) the responsibility for the defence of the frontier districts rested with the Bosnian forces. Apart from capturing certain frontier castles (1788-1790) the Austrian armies had but few successes. Under the terms of the peace-treaty of Svishtov (1791) Turkey surrendered a little part of her territory, and Austria evacuated the captured frontier castles.

At the beginning of the 19th/20th century Sultan Selim III introduced a series of reforms and measures largely designed to curb the power of janissaries. The policy of the proposed reforms ran counter to the established foundations and prevailing influence of Muslim nobility and the privileged position of Muslim population of towns in the Bosnian *eyâlet*.

(\*) *The Period of Reforms in Turkey and Risings in Bosnia.*

The new Turkish reforms could not but be met with indignation by Bosnian Muslims, interfering as they did with the established military structure and being directed against the janissaries and the *sipâhî* army. In several campaigns against the insurgents in Serbia, Bosnia, *agâzar* and the urban population took part in large numbers; however, the Bosnian army suffered a heavy defeat at Mišar (1806). A short time after, several risings of Serb peasantry occurred in Bosnia but were soon put down. Far greater efforts were needed for the final suppression of the rebellion of the Drobjaks in Herzegovina. Bosnian Muslims also took part in the suppression of the rising in Serbia in 1813.

The transit trade improved during the period of Napoleonic continental blockade. Bosnian roads were chiefly used at the time for the transport of cotton, undertaken by Serbian and Jewish traders, many of whom grew rich in consequence. Muslim tradesmen in towns were dependent for their prosperity on the preservation of privileges and special rights. Sarajevo, the most important town, had acquired a large measure of independence in regard to viziers; there were frequent cases of serious differences and quarrels between the citizens and the vizier, which at times led to armed resistance. With the appointment and arrival of Djâli al-Dîk Pašja in 1820 law and order was restored at a great sacrifice of life. The abolition of the order of Janissaries was the cause of another rising of the people, particularly in Sarajevo, which was suppressed by 'Abd al-Rahmân Pašja. The general dissatisfaction and resistance to the reforms continued none the less. In 1820/1831, when attempts were made to carry the reforms into effect and reorganise the army,

a rebellion broke out headed by Bosnian Muslim nobles under the leadership of Husayn-kapudan Gradašević. The insurgents demanded complete autonomy for Bosnia and Herzegovina and the right to elect their own vizier; Bosnia had to pay a yearly tribute to the Sultan. The demands, if met, would have safeguarded the privileges of the nobility and the existing military structure. However, at the very start of the conflict the *kapudans* of Herzegovina, led by 'Ali Agha Kirvanbegović, separated themselves from the movement. Despite the victory of Husayn-kapudan over the imperial troops and of the understanding reached with the Grand Vizier, the initial great successes soon came to nothing because of personal ambitions of the leader (elected to the viziership in the early part of Džumâdâ I 1247/5-17 October 1831) and the rivalry between Bosnian leaders. The insurrection was put down (1831) and the movement proclaimed a *pašadâr* to be governed by 'Ali Pašja Kirvanbegović (1833).

After the suppression of the insurrection the hereditary *kapudanlik* was abolished (1835) and replaced by *mislimlik*. Many former *kapudans*, *agâzar*, and *sipâhîs* as well (after the abolition of their order) were appointed *mislims* and given posts of commanders. The iron hand in a velvet glove was the means used by the Ottoman Porte in dealing with Bosnian nobles and stubborn malcontents. Nevertheless, the conflicts still continued, particularly between the citizens of Sarajevo and the viziers. The resistance was finally broken by 'Umar Pašja Latas, a former Austrian petty-officer, born in Lika (Croatia). Sent to Bosnia (1850-1851) with special powers at the head of considerable forces, 'Umar Pašja succeeded in breaking the great political influence of Bosnian nobility and carrying the reforms into effect. He had 'Ali Pašja put to death, and abolished the *pašadâr* of Herzegovina. Bosnia was divided into six *kâimakimlik*s and Herzegovina into three *kâimakimlik*s. The town of Sarajevo became the official residence of the vizier.

Further reforms were made in the administration of the *eyâlet* of Bosnia during the tenure of office of the Vizier Topal 'Oghlan Pašja (1861-1869). The country was divided into seven *sandjaks*. The *vilâyet* Council was set up in 1866—an advisory body of representatives, on denominational basis. A start was made with modernisation of living conditions, health service and communications (the first railway—Banjaluka-Novi—was opened in 1874). In the sixties of the century the *vilâyet* printing-office was set up and a number of schools opened.

The reforms and measures taken favoured the development of certain branches of national economy. Commerce and trade improved, but the guilds were endangered owing to the development of the market. Many urban Serb families rose to prosperity and, as a result, the influence of Serbian citizens began to make itself felt in rural districts.

Yet the reforms were not far-reaching enough to deal with the essence of agrarian structure and its problems. With the abolition of the order of *sipâhîs* the *agâzar* (tithing) was made a tax of the state, and to indemnify the *sipâhîs* for loss of income a pension scheme was introduced in lieu of the rents. However, to recoup themselves for their losses, the *sipâhîs* proceeded to convert into *çiftlik*s the remaining peasant free-holdings. By the middle of the 19th/19th century the process had been completed; thus feudal land-tenure and tenantry came to be

associated with Christian peasants, for the Muslim peasantry had remained in possession of their *çiftlik*s. The burden of heavy taxation was meant to be borne largely by the peasant. Moreover, the amount of rates and other dues exacted from the *hmet*s (tenants) was not fixed but collected arbitrarily. Such conditions were a cause of general discontent among the peasantry, and provoked frequent rebellions.

Tâhir Pašja, Vizier of Bosnia, undertook (in 1848) to settle the agrarian question. Under his new scheme *çiftlik* owners were to collect a third part of the annual crop, and forced labour was to be abolished except in Herzegovina, where the *hmet*s were allowed to hand over less than a third of the crop. Certain obligations of the *çiftlik* owner in the district of Sarajevo, e.g., to provide his *hmet* with seeds, oxen and dwellings, were to apply to all Bosnian districts. However, *çiftlik* owners proceeded to collect the third of the crop everywhere, insisted on forced labour and failed to perform their own obligations. This caused much discontent among the peasants; not were the *çiftlik* owners satisfied. Several unsuccessful attempts had to be made before the question was finally settled—after the passing of the Agrarian Act (during the Ramadan of 1274)—by decree proclaimed in the month of Safar 1276/September 1859, enacting the customary practice in regard to *hmet*s. No provision was made, however, for a uniform system of taxation and other dues applicable to the whole of Bosnia and Herzegovina. The regulations of the decree in regard to this system of land-tenure remained in force until 1918.

The unsatisfactory conditions gave rise to a series of peasant risings about the middle of the 19th century. The great rising of 1875 among masses of Christian peasants, *hmet*s of *agâzar* and *beys*, joined hands, was given a political colouring by the participation of the Serbian town population, particularly following the entry of Serbia and Montenegro into war against Turkey. True, the rising in Herzegovina was a mass movement, while in Bosnia it was only the frontier districts that were involved. The rising called forth the intervention of the Great Powers. The Treaty of San Stefano stipulated that Turkey should grant autonomy to Bosnia and Herzegovina.

Under the terms of the Congress of Berlin, Bosnia and Herzegovina was mandated to Austria-Hungary. The Austro-Hungarian troops sent to occupy the country met with unexpected resistance from Bosnian Muslims. The rebels were led by men of the lower classes—since prominent Bosnians were unwilling to take sides after the withdrawal of Turkish authorities and the army—who incited the people to rise against the invader and set up a government of the people in Sarajevo. The occupation began on July 29th and was completed on October 20th, 1878. drastic measures were taken to break down the strong resistance offered at some places, particularly around and in the town of Sarajevo.

**Bibliography:** Historical studies relating to the period of Turkish rule in Bosnia and Herzegovina are far from being complete though much progress has been made of late. Most of the relevant historical material dealing with the period has not yet been published. The collecting and editing of the material is in charge of the Oriental Institute of Sarajevo. For the early part of the period of particular importance are the Turkish cadastral registers (with *hâsin-nâmas*), kept in

the Bayvekkâlet arşivi in Istanbul, *waşf-nâmas* (reported on by F. Spaho, H. Kreševljaković, G. Elezović, H. Šabanović, and others), and documents stored in the archives of Duhovnik (reported on by Č. Trubelka, F. Kraljević, V. Škarić, G. Elezović, H. Šabanović, J. Radonić, and others); also important are the *isâid sâidîs* of the 17th century with fragmentary records from the 18th century, and public records material (Oriental Institute, *Rhusew-bey Library*, etc.). Some public records of the *vilâyet* of Bosnia (from the middle of the 19th century) are kept in the Oriental Institute of Sarajevo. Valuable information concerning the later part of the period is to be found in the unpublished chronicle entitled *Ta'rih-i Diyar-ı Bosna*, written by Şâlih Sîddîk Ef. Hadžihusejinović, known by the name of Muvekkit, at the second half of the 19th century, the autograph of which is kept in the Oriental Institute of Sarajevo.

The more important collections of sources are the following: Č. Trubelka, *Turško-drobovski spomenici dubrovačke arhive*, Glasnik Zem. muzeja Bosna i Hercegovina 1911; H. Šabanović, *Najstarije zakupname u Bosni, Prilozi za orijentalnu filologiju*, II (1951), III-IV (1952); *Monumenta Turcica Historiarum Slavorum Mer. Illustrata*, I, Kanoni i kanun-name, Vol. 1 (edited by Oriental Institute of Sarajevo, Sarajevo 1957); J. Marasović, *Fajničha registera, Spomenik Srpske Akademije Nauka*, I, Ili (1930); inscriptions in oriental languages discovered in Bosnia have been published by M. Mujezinović, in *Prilozi za orijentalnu filologiju*, II (1951), III-IV (1952-53), and others. Among the more important travel-books containing valuable information and data are those by Kurjević (1930) and Kevlâ Celabi (from the middle of the 17th century). The sources concerning the beginning of the Rising in 1875 have been published by H. Hadžibegić, *Turki dokamenti o počatku ustanka u Hercegovini i Bosni 1875, Prilozi za orijentalnu filologiju*, I (1950).

General histories of Bosnia: S. Balagić, *Kratka upućna i prošlost Bosne i Hercegovine*, Sarajevo 1907; M. Prelog, *Povijest Bosne u doba osmanlijske vlade*, I-II, Sarajevo 1912, 1913. Both are out of date. V. Corović, *Historia Bosne i*, Belgrade 1940 (published first book only, to 1282); *Istorija naroda Jugoslavije* I, Belgrade 1953, 514-576 (to 1482 also). An outline of the history of Bosnia and Herzegovina under Turkish rule is to be found in *Istorija naroda Jugoslavije*, Book II (in print); the 15th, 16th and 17th centuries are by N. Filipović, the 18th century by H. Kreševljaković, and the history of culture by H. Šabanović. Unpublished Turkish historical material has been used, particularly cadastral registers, and references given concerning sources and bibliography.

### 5. Islamic culture in Bosnia and Herzegovina

The islamisation of part of the population of Bosnia and Herzegovina, one outcome of the Turkish conquest, was to lay its impress on the country's pattern of life and culture. The style of living, both public and private, of the Muslims in Bosnia and Herzegovina during the period of Turkish rule was very much the same—particularly in towns—as in the other provinces of the Ottoman Empire. The mainstays of Islamic culture in Bosnia and Herzegovina were town settlements, for the manifest features of the culture were predominantly urban in scope and character. The way of living of Muslim peasantry had some definite particularities of its own. Owing to europeanisation however the elements of oriental culture—particularly in Christian—tended to disappear in the post-Turkish period, and did so to an ever-increasing extent after the country became a constituent part of Yugoslavia. Nevertheless, the characteristic elements of oriental culture have not disappeared even to-day, and what is more, not even among Christian population, to say nothing of the Muslims. Many features of oriental ways of life are still very much in evidence, such as the style of living, furniture, cooking, drinking habits and certain old customs. Oriental practices are still in frequent use in the goldsmith's craft, carpet weaving and many other branches of applied arts.

The most lasting traces of the influence of Islamic culture are to be found in the field of architecture and town-planning. Some principles of oriental town-planning have found ready application because of prevalence of terraced sites. Many Bosnian towns still

show the former typical lay-out with a division into two quarters, viz. the *Casha* (shopping or commercial centre) and the *Mahalla* (the residential quarters).

In town-planning and building generally over the period of Turkish rule three stages can be distinguished: (a) the initial period until about the end of the 16th century, (b) the second until the end of the 17th century, and (c) the third until the end of the Turkish rule in Bosnia and Herzegovina. During the initial period of development of Muslim town settlements it was the Governor-Generals and high Turkish dignitaries who erected places of worship and public buildings, the representative examples of monumental architecture. From this period date the finest monuments of the Islamic style of architecture in Bosnia and Herzegovina, e.g., the Aladža mosque (1550) at Foča, the Ghāfī Khusew-bey mosque (1530) and the 'Alī Paşa mosque (1561) in Sarajevo, the Ghāfī Khusew-bey Medresa (1537) called "Sel-džukija" and later "Kursimulija" with Ghāfī Khusew-bey's *hamām* (before 1557) and the Brusa *beristan* (1551) in Sarajevo, and many others. With the growth and rapid development of guilds in the second period, it was largely the traders and merchants who were responsible for the erection of public buildings. The examples dating from this period are less monumental in appearance except for a few edifices erected by Governor-Generals or some high Turkish dignitaries, as for example the Hadī-Sinan's Tekiye (1640) in Sarajevo. The architecture of the third period shows signs of decadence and, towards the latter part, of the penetration of European ideas as well as imitation of styles prevalent in the towns of Turkey. There are also signs of direct influences. The period nevertheless has produced many interesting examples of technical ingenuity. The development of the town of Travnik, as the official residence of the Vizier, is typical of the period. The Süleymaniyya mosque (the present building—dating from 1816) has been constructed over a *beristan*. A number of ancient mosques were restored during this period. In the construction of monumental public buildings the Islamic architects displayed the fundamental features of the Ottoman artistry, though not all of the latter's forms and characteristics found expression in Bosnia and Herzegovina. Smaller mosques and public buildings, as well as dwelling houses, were built by native master builders, hence certain individual features of this style of architecture. In the post-Turkish period the examples of Islamic architecture show unmistakable signs of decadence. The Austro-Hungarian Governments attempted to develop the characteristics of Islamic architectural art by copying the Moorish style. The buildings in this style contrasted with both the earlier examples of Islamic architecture in Bosnia and Herzegovina and those of the latter period of the Austrian rule, besides being in disharmony with Bosnian inland scenery and unsuited to climatic conditions. Buildings in this style proved a failure. The most representative example of this style is the Sarajevo Town Hall. The Bosnian and Herzegovinian style of architecture, as applied to dwelling-houses, held its own a little longer before it finally disappeared.

A very large number of words and idioms of Turkish, Arabic and Persian origin are in everyday use in Bosnia and Herzegovina, and to a greater extent than in other areas where Serbo-Croat is spoken. The early literary style also made full use of such borrowings. With the development and

under the influence of standard Serbo-Croat, since 1878, and more so since 1918, words and phrases of Turkish origin have been falling out of use in everyday speech. During the period of Turkish rule a cursive Cyrillic alphabet was in use in private correspondence among Bosnian and Herzegovinian Muslims, particularly among native Muslim nobles. Arabic characters were used in the writing of Serbo-Croat literary texts done by Bosnian and Herzegovinian Muslims. The same characters were used in certain Serbo-Croat religious texts written during the period of Asian rule and that of pre-war Yugoslavia. Some religious books printed in these characters are still available. The orthography was rather arbitrary at first but gradually became standardised. Since 1930 however, the characters have hardly ever been used even in religious texts.

No comprehensive study has so far been made of the literary production, in Serbo-Croat or oriental languages, of Bosnian and Herzegovinian Muslims.

In their devotion to folk-songs and popular poetry the Muslims of Bosnia and Herzegovina differed little from their Christian compatriots. The earlier epic compositions of Bosnian and Herzegovinian *guslars* have all the basic characteristics of traditional Serbo-Croat epic poems. The difference mainly lies in a different religious and political attitude, a more frequent use of Turkish idioms, and a tendency away from heroic poems towards ballads. *Hasanaginica*, a popular Bosnian poem, is well known in the world of literature. Popular epic poems of the earlier type are preserved in the south of Bosnia and Herzegovina. A later type of popular Muslim epic poetry developed among the people of a western frontier district called Kraljina. Such poems were recited with a *lambarica* (mandolin) accompaniment, and differed in several respects from the popular poems of the *guslars*. Popular lyrics of Bosnian and Herzegovinian Muslims, when compared with those of their compatriots, likewise show—and to a higher degree—a number of characteristic features of their own. The most familiar and popular among these are the love poems called "*sevdalinhas*". Apart from oriental influences of language, motifs, and music apparent in their composition, the *sevdalinhas* are essentially typical poems of Bosnian and Herzegovinian Muslims, liked and enjoyed throughout Yugoslavia.

Judging by the results of studies published so far, the Bosnian and Herzegovinian Muslim poets who wrote in oriental languages did so mainly in Turkish, to a lesser extent in Persian, and in a few instances in Arabic. Among Turkish writers, there were several of Bosnian origin, some of whom were noted poets, as for example Derwish Paşa, son of Bayazid Agha (killed in 1012/1603), born in Mostar (Herzegovina), and the well-known stylist Mehmed Nersiz (died 1044/1634), born in Sarajevo. Not only were they born in Bosnia and Herzegovina but also held office for rather a long time, the former as Paşa of Bosnia and the latter as Müderris and Kādī. Likewise of Bosnian origin was Ahmed Sâdī (died 1005/1596-7), the well-known commentator on the Persian classics. One of the most copious writers of poetry in the Persian language, who also wrote in Turkish, was the shaykh Fawzi of Mostar (died about 1760/1747).

Ahmed Wabedit (died 1007/1598-9) of Dobrun near Vilegrad, as well as some other poets of Bosnian origin, deviated from Muslim orthodoxy. Hasan Ka'ini of Sarajevo (died 1103/1691-2) and Uskufi Bosnevi, also called Havâ'î (died about 1061/1650-1), born in Tuzla Donja, as well as a number of other

Bosnian and Herzegovinian poets, wrote both in Turkish and Serbo-Croat. The latter compiled a Serbo-Croat dictionary written in Turkish verse. In the 13th and 14th/19th and 20th centuries up to the present time there were a number of poets who wrote religious poems in the spirit of old traditions. Of this poetry worthy of note are the poems in praise of the birth of Muhammad (*mawlid*), the compositions of the early period being more versions imitative of the Turkish texts, latterly followed by some original writings.

The early prose of the Muslim writers of Bosnia and Herzegovina mostly in Arabic, is largely concerned with Islamic theological subjects, *shari'a* laws, State administration, and history. Many of the writers, natives of Bosnia and Herzegovina, lived and worked in Istanbul and other parts of the Ottoman Empire, as for example 'Abd Allah Bosnevi—died in 1054/1644—a writer of mystic-philosophical tracts and commentator on the *Fusûl al-Hikam* by 'Ibn al-Arabi. Noted as a writer on law and politics was Hasan Kâfi, born in Prusac (Akhisar), whose literary merit gained him a lifelong *hâdîk* in his native place, where he died in 1025/1616. In addition to his other writings, Kâfi was the author of the well-known work *Nisâm al-'Ilam*. As many as forty authors might be mentioned who were active in the field of religious and law studied during the Bosnia and Herzegovina literary period. A number of well-known Ottoman historians were descended from Bosnian Muslim families (e.g., Ibrahim Peševli); however, the historiography in the Turkish language in Bosnia and Herzegovina is of a later growth. A noted Bosnian historiographer of the 12th/18th century, who wrote in Turkish, was the Kādī 'Umar of Novi, the author of *Çavanvâli-i Hekim-oglu 'Alī-paşa*, a work dealing with historical events in Bosnia from the beginning of Muharram 1149/1736 to the end of Džumâdî I of 1152/1739. The first printing of the work was done by Ibrahim Müteferrika (1154/1741); it was later reprinted and translated into English and German. During the transitional period between the end of the 12th/18th and the beginning of the 13th/19th centuries, a few prominent chroniclers (Mustafa Başheki, Sâlih Sidki) on record, who wrote accounts of contemporary events. Among the historians dealing with the latter period of Turkish rule and the events following the Austrian occupation of the country are the following: Sâlih Sidki Ef. Hadî, ihusejović (died 1305/1888), Muhammad-Fawzi Kādī (1271/1855-1349/1931), a collector of historical material which he transcribed himself (28 books—a copy of the manuscript is housed in the Ghāfī Khusew-bey Library, Sarajevo). The transition from the old historiography to be noted in the work of the shaykh Saif al-Din Ef. Kemur (died 1335/1917). Likewise, certain characteristics of the earlier Islamic studies and some conceptions of the earlier historiography are also manifest in the works of Dr. Safvet-bey Rašagić (1870-1934), the first modern historian of the Turkish period and the first oriental scholar in Bosnia and Herzegovina, who was a poet as well.

However, since 1878, and particularly since 1918, the literary activities of Bosnian Muslims—apart from the romantic school of thought which still clings to earlier beliefs (with Dr. S. Rašagić as the outstanding representative)—have tended more and more to become merged into Serbian and Croat literatures. A. F. Džabić (died 1918), mufti of Mostar and fighter for religious autonomy, attained

prominence in Turkey as professor of Arabic language and literature. He also brought out a collection of choice poems of Muhammad's contemporaries.

The nurseries of Islamic education and culture in Bosnia and Herzegovina, as in every Turkish province, were the *mektebs* and *medreses* and religious institutions (mosques, *tekiye*, and the like). As a rule adjacent to mosques, the *mektebs* provided primary education mainly consisting of instruction in the reading of the Kur'an, writing and basic religious principles. *Medreses*, the secondary and higher schools, were also set up on the Turkish model. The earliest *medrese* on record in Sarajevo dates from the first quarter of the 10th/16th century. By the *nahiye* of 943/1537 the *Ğazi Khusrev-bey Medrese* with its own library was founded by Ğazi Khusrev-bey, the *sandžak-bey* of Bosnia. The building was completed in the following year and is still standing opposite the entrance gate to the harem of the Khusrev-bey Mosque. The Medrese Library has since been made into an independent public institution of Ğazi Khusrev-bey's *sandžak*, which has helped to extend its scope. The present inventory comprises the original stock of volumes, in oriental languages as well as a large number of additional copies, manuscripts and Turkish documents acquired from *sandžaks*, *medreses* and private libraries. The number of *medreses* went on increasing, yet the most famous among them was the *Ğazi Khusrev-bey Medrese*, which is now used as a secondary school for the study of theological subjects. Various surveys engaged in by the *medrese* in mystic teachings and studies of the Persian language. The first dervish *tekiye* appears to have been erected before the final downfall of Bosnia. Interesting structural details shows the *Ğazi Khusrev-bey* built by the *Ğazi Khusrev-bey*. The expenses of upkeep, religious teaching and education were defrayed by the *sandžak*.

The main development of publicly provided education and educational building dates from the viceroyship of Topal Ođman Paşa with the setting-up of the first *rüşdiyye* and the *mekteb-i hukuk* (administrative law-school), followed by the opening of the public reading-club and the Printing Office. Under the provisions of the Education Act (1286/1869) the responsibility for educational services and maintenance of schools lay with the State, but private schools or those of denominational character were not interfered with but were subject to State control. The provisions of the Act were not wholly carried out in Bosnia and Herzegovina, though *seyin mektebi* and *rüşdiyyes* were established, as well as some technical and training schools. According to official returns there were towards the end of the Turkish rule 917 *mektebs*, 41 *medreses* and 28 *rüşdiyyes*. In addition to the above there was in Sarajevo a military school of the lower grade, a training college for *mekteb* teachers, and a trade school.

Without interfering with denominational schools the Austro-Hungarian authorities began by introducing their own system of State education. Religious instruction in State schools was obligatory. *Mektebs* as well as *medreses* continued as religious schools. Under the statutory regulations of 1909 attendance of Muslim children at *mekteb* schools was compulsory, and no Muslim child could enter a secondary school without previously attending a *mekteb*. Certain measures were taken to reform the *mekteb* schools but in the majority of cases were not implemented.

In 1909 there were about 1,000 old *mekteb* (*seyin mektebi*) as well as about two schools of the reformed type (*mekteb-i ihiddi*). The *rüşdiyyes* were counted among the elementary schools for Muslim children and were retained as such—with their programmes reformed—only in county boroughs and the district town of Brčko. The *medreses* served as training schools for humble religious functionaries, and in 1887 a college was established for the students of the *ğazi*'s law and future *ğazi*'s court judges. The *sandžak* Board founded in 1892 a *mekteb-teachers'* training college, Muslim pupils of the State grammar school of Sarajevo had the choice of being taught Classical Greek or Arabic.

During the successive Yugoslav governments after the World War I only the State primary schools were given recognition, though the small number of such schools could not cope with all the children of school age. Religious instruction was provided for all children attending the primary schools. The *mektebs* became preparatory or non-educational institutions for the teaching of Kur'an reading. Religious instruction was also given in all secondary schools. A State *ğazi*'s secondary school was opened at Sarajevo in 1918. The *ğazi*'s judges' training college continued in existence until 1927 when the High School of *ğazi*'s and Islamic theology—of faculty grade—was established. The *sandžak* Board bore the cost of running the *mekteb teachers'* training college and the *medreses*—now secondary schools for the study of, mainly, theological subjects. Preliminary reforms concerning the *medreses* were introduced in 1913; a definite programme was adopted in 1929 whereby they were to be of the comprehensive type, similar in character to secondary schools of the lower grade. The *Ğazi Khusrev-bey Medrese* was an exception in that it provided senior secondary courses. A number of Bosnian and Herzegovinian Muslims are known to have graduated from various eastern universities. The rôle of granting scholarships to Muslim pupils and students, as well as bearing the cost of upkeep and running of boarding schools and providing other educational facilities, which had been confined to the *sandžak*, was gradually taken over—in the field of secular education, at any rate—by various Muslim societies, such as "Gajret", "Udžanica", and others.

In the new Yugoslavia religious bodies and societies are separate from the State, but the latter may render assistance to religious communities. Religious instruction may be given only in the immediate vicinity of places of worship (under the provisions of the Religious Communities Act of 1933); however, the religious communities are free to open schools for the training of religious functionaries and staff. The *mektebs*, attendance at which was considered compulsory for Muslims by the Islamic religious community, were in existence until 1952, when they were abolished in the whole of Bosnia and Herzegovina.

During the Austro-Hungarian administration and in pre-war Yugoslavia, the study of Islamic branches of knowledge concerned with religion and oriental languages was closely associated with the activities of the above mentioned schools and colleges. At the same time, the Zemaljski Muzej of Sarajevo was engaged in collecting oriental manuscripts and records from Turkish archives. Among the staff of the museum there were a number of workers who studied oriental literary and historical records. It was here that conditions were created for the development of modern scientific studies and work

in this field (Č. Truhelka, V. Škarić, F. Spaho, R. Maderžović, and others).

Over the past years after the World War II increasing attention has been devoted in Bosnia and Herzegovina to oriental studies concerned with Islamic peoples. Thus the grammar school of Sarajevo provides courses of oriental as well as western classical type. In the University of Sarajevo (founded in 1949) there is a chair in oriental philology (Turkish, Arabic and Persian languages and literature), and the chair in history also offers Turkish courses, besides giving special attention to studies bearing on the history of Yugoslav peoples during the period of Turkish rule. The Sarajevo Oriental Institute, founded in 1950, has a valuable collection of oriental manuscripts and Turkish historical material taken over from the Zemaljski Muzej of Sarajevo. Besides publishing its year-book, the Oriental Institute has been engaged in editing a systematized collection of Turkish records and sources bearing on the history of Yugoslav peoples (*Manuscripta turica historiam Slavum Meridionalium illustrantia*). Thus a wide field of studies—concerned with Turkish, Arabic and Persian languages, the history of Yugoslav peoples during the period Turkish rule, and many other Islamic branches of knowledge—once within the scope of religious institutions and bodies, is now under secular control.

4. The Islamic religious community in Bosnia and Herzegovina since 1878.

The Sultan's sovereign rights over Bosnia and Herzegovina were recognised until 1908, when the province was annexed by Austria-Hungary. Nevertheless, the position of Bosnia and Herzegovina within the Dual Monarchy remained undefined, largely because of the dualist constitution of Austria-Hungary.

Bosnia and Herzegovina were under a dual control exercised by the Austro-Hungarian Ministry of Finance, both before and after the annexation. Each of the two powers had definite rights regarding administrative policy, the building of railways and matters concerned with the country's trade and finances.

The Austro-Hungarian system of government in Bosnia and Herzegovina was bureaucratic and police-ridden throughout the period. A military commander was responsible for the government, the number of departments being four, and later six. A Governor's "civil adlatus", was appointed in 1882, who was in effective control of the Civil Service. For administrative purposes the country was divided into six *oblasti* (departments)—Banjaluka, Ribna, Mostar, Sarajevo, Travnik, and Tuzla—and these in turn into *veći* (districts) and *ispokanas* (the smallest administrative units). Only in 1906—the administration of justice was separated from the government of the country. Following the annexation, a Constitution with a "Sabor" (Assembly) was granted in 1910. The Sabor consisted of seventy-two deputies and twenty appointed (ex officio) members, the latter being partly religious representatives (among Muslims: the *re'is al-'alamâ*), the Director of *waft* administration, and three *mufitis*), and partly high officials. The deputies were elected to three "curiae" according to their ranks, the first of which was of two classes, the Muslim owners of large estates belonging to the first. The curiae were organised by electoral districts on a denominational basis. The constitution restricted within narrow limits the powers of the assembly in respect of the Government, at the same time imposing many restrictions on the authority of the latter in respect of the Austro-Hungarian Ministry of Finance.

In 1912 the Governor was given additional powers concerning the Civil Service. The Assembly was adjourned and did not sit during the World War I.

Despite the fact that the Austro-Hungarian government introduced a modern system of administration, developed trade (and mining and timber industries in particular), built roads, railways, and established schools and a number of scientific institutions, the framework of society remained in many respects unchanged. True, the Austro-Hungarian authorities were by this means able to win over to their side the greater part of the Muslim nobility, yet the unresolved agrarian question led to the stagnation of agriculture and told heavily upon the peasantry and in particular upon the *kmeti* (mostly Orthodox Christians). Nor was the solution of the agrarian problem brought any nearer by the passing of the Facultative Redemption of Land Act, 1911, whereby only minor changes were effected in the existing relations.

From 1882 to 1903 the leading rôle in the direction of Austro-Hungarian policy in Bosnia and Herzegovina was played by B. Kallay, the minister of finances of the Dual Monarchy, otherwise a well-

known historian. In order to keep Bosnia and Herzegovina as a *corpus separatum* within the Dual Monarchy and to check the spread of Serbian and Croatian nationalism, Kallay attempted to create a "Bosnian nation" and a "Bosnian language". This policy, however, failed to attract a sufficient number of partisans among the native population, for the Serbs and Croats had become nationally conscious, and the nationally "undecided" majority of the Muslims looked on Turkey as their mother country. Moreover, many Muslim families had settled in Turkey and Muslim leaders had always stressed the sovereign rights of the Ottoman Sultan over Bosnia and Herzegovina. Only a small part of the Muslim intellectuals and landowners adopted the cause of "Bosnian nationalism".

The Serbian political movement directed its main efforts towards achieving autonomy in Church matters and freedom to conduct Serbian community schools. The idea found supporters among the great mass of the Serbian population and the new-born intelligentsia, but it was the Serb *gasdas* (moneyed men) who thrust themselves forward as leaders. There was general discontent among the latter because their usurious trade practices were obstructed by the predominance of Austro-Hungarian moneyed interests and trade capital. The efforts of the movement proved successful, and autonomy was granted in matters of religion and denominational instruction in 1905.

Muslim opinion became increasingly suspicious of certain measures taken by the Austro-Hungarian authorities. In order to gain control over Muslim religious institutions, the Government, in 1882, created the office of *re'is al-'ulema*, the supreme religious head of Bosno-Herzegovinian Muslims, as well as the highest religious authoritative body (*ulema medlis*) presided over by the *re'is al-'ulema* with four members. This organisation went so far as to control the rights of the *Wahf* Board. Dissatisfied and alarmed, the Muslims presented a petition to the Emperor (in 1886) asking to be granted autonomy in matters concerning the administration of the *waqfs*. A resolute struggle for the achievement of autonomy, religious and educational, for all Muslims in Bosnia and Herzegovina began in 1899 under the leadership of A. F. Džabić, the *mufiti* of Mostar. The struggle became linked with the Orthodox (Serb) movement. Džabić insisted on demanding maximum concessions but was outwitted. In 1900 a draft statute for the Islamic religious community was presented to the Minister Kallay, wherein a special emphasis was paid on the Sultan's sovereignty over Bosnia and Herzegovina, a principle which the Austro-Hungarian authorities were unwilling to accept. When Džabić, the *mufiti* of Mostar, left for Istanbul to consult the Sultan, he was forbidden to re-enter Bosnia and Herzegovina. From 1906 onward the movement took a more organised and definite shape. An Executive Committee of the Muslim people's organisation was elected, presided over by 'Ali Bey Firdis. While championing the interests of the propertied classes, the organisation at the same time entered into negotiations with the Government for the granting of religious autonomy. The negotiations broke fire, for the Austro-Hungarian authorities refused to lend an ear to the slightest hint about the Sultan's sovereign rights over Bosnia and Herzegovina. Following the annexation, the negotiations were brought to a satisfactory conclusion with the Emperor's sanction of the Statute concerning Autonomous Government of

Muslim Religious Affairs in Bosnia and Herzegovina *Vahf-Mearif*. Under the statute the supreme administrative authority as regards *waqfs* and endowments of schools and colleges was vested in a *Vahf-Mearif* Assembly (*Sabor*) consisting of eight nominated (*ex officio*) members (the *re'is al-'ulema*), six *mufitis* and the Director of the *Vahf Board* and twenty-four members elected by district board committees. The president of the *Sabor* was the *re'is al-'ulema* *ex officio*. The *Vahf-Mearif* Committee was both the administrative and the executive organ of the *Sabor*. Other minor bodies of the *Vahf-Mearif* Board were the district committees, elected by district assemblies, and, among the latter, the *dimal* assemblies and *dimal medlis*. The highest religious authority was exercised by the *Ulema Medlis*, consisting of four members, with the *re'is al-'ulema* at its head. The *Re'is* and members of the *Ulema Medlis* were elected by a separate electoral body consisting of six *mufitis* and 24 elected members. Three (elected) candidates for the post of *re'is* were submitted by electoral body to the Emperor, one of whom was appointed *re'is* by decree. The *re'is* entered upon his duties only after obtaining the authorisation (*menharsa*) for the performance of religious duties from the *sheikh al-Islam* of Istanbul. The relevant petition had to be conveyed to Istanbul through the Austro-Hungarian Embassy. A vacancy in the *Ulema Medlis* was filled by appointment, on the part of the joint Ministry of Finance, of one of two elected candidates. Each *okrag* (department) had its *mufiti*, who were selected by the Government from among candidates submitted by the *Ulema Medlis*. The salaries of higher religious functionaries and civil servants came from the provincial budget. The statute also settled the question of Muslim denominational schools, as well as the rights of religious functionaries in respect of *ghari's* judges.

With the incorporation of Bosnia and Herzegovina into Yugoslavia the question of the Islamic religious community was in the forefront again. Moreover, there were Muslims in Yugoslavia outside of Bosnia and Herzegovina. However, the statute of 1909 remained in force in Bosnia and Herzegovina until 1920. There was a separate Muslim religious organisation covering Serbia, Macedonia and Montenegro. The putting into effect of the agrarian reform hit some Muslim property owners much harder than it did the *waqfs* in Bosnia and Herzegovina, for most of the latter's property consisted rather of town sites than land in the countryside. Nevertheless, the decentralization of the *waqf* administration in Bosnia and Herzegovina, as well as disordered financial management and malpractices caused serious damage to *waqf* property.

Following the abolition of the parliamentary régime in Yugoslavia a law was passed in 1930 concerning the Islamic religious community and its Constitution in the Kingdom of Yugoslavia. Thus the former autonomous Muslim religious communities were united under one head—the *re'is al-'ulema*—and one supreme authoritative body composed of the *re'is* and the two presidents of the *Ulema Medlis*. The official residence of the *re'is al-'ulema* and the seat of the Board of the Islamic religious community were transferred to Belgrade; however, there existed, in addition, two *Ulema Medlis* and two *Vahf-Mearif* Councils with their administrative committees, whose central offices were in Sarajevo and Skopje. Lower in authority were the *mufitis*, the district *Vahf-Mearif* board with

a *ghari's* judge at its head, and the *dimal-medlis* presided over by the *Dimal Imam*. The main features of the Act and Constitution are to be seen in the fact that the majority of posts were held by appointment, and also, that the office of *re'is al-'ulema* took precedence of the *Ulema-Medlis*. The *re'is* was, in fact, the head and symbol of a unified Islamic religious community in the State, while the administration was dual (Sarajevo and Skopje). Special enactments regulated the election of candidates for the post of *re'is*, of *Ulema-Medlis* members and of *mufitis*. The electoral body was expected to choose three candidates for the office of *re'is*, one of whom was then appointed by royal decree on the recommendation of the minister of justice and that of the prime minister. Also nominated by royal decree were the members of the *Ulema-Medlis* and the *mufitis*, on the recommendation of the minister of justice.

With the passing of a new law and Constitution in 1936 changes were brought about which, however, did not interfere with the unity expressed by the function of the *re'is* or with the diarchy of the other governing bodies. The chief organs of the Islamic religious community were now the following: the *Dimal-Medlis*, the District *Vahf* Commission, the *Ulema-Medlis* in Sarajevo and Skopje, the *Vahf-Mearif* Assembly (Sabor) in Sarajevo and Skopje, with the assembly committees, *waqf* boards, and the *re'is al-'ulema* with a select or full Council. The official residence of the *re'is* was in Sarajevo. The function of *mufiti* was dispensed with. The main feature of the regulations was the selectivity of governing bodies and functionaries. For the election of members to the *Ulema-Medlis* each Assembly selected an electoral body of ten members, who in turn formed one electoral body for the election of three *re'is* candidates. As before, one of the candidates (usually the one with the majority of votes) was appointed *re'is* by royal decree on the recommendation of the minister of justice. It was through this organization that the Yugoslav Muslim Organization, the party led by M. Spaho, secured its position in the religious community.

In the new Yugoslavia, the position and privileges of the Islamic religious community have been safeguarded by provisions made in the Constitution and regulated by the 1933 Law concerning the legal position of the different religious communities. Religious organisations are separated from the State, the holding of religious beliefs being regarded as a private matter. Religious communities may conduct schools for the training of religious functionaries and staff. The State may also lend its aid to religious communities.

The Islamic religious community in Yugoslavia is governed by the provisions of the Constitution of the Islamic religious community in the Federal People's Republic of Yugoslavia, made and passed by the Supreme *waqf* Assembly in 1947. Some of the regulations have since been changed and others added. The Constitution has effected the unity of the religious organisation of Muslims in Yugoslavia not only through the function of the *re'is al-'ulema*, but also through the establishment of the Supreme *waqf* Assembly, allowing at the same time for the federal structure of the State. In 1947, separate *Ulema-Medlis* and *waqf* assemblies have been set up in the four republics where Muslims form a considerable part of the population. The supreme authority is vested in the *re'is* and four members from the four *waqf* assemblies. The *re'is al-'ulema*

and the four members of the supreme authority are elected by the Supreme *waqf* Assembly (see YUGOSLAVIA).

(HABIBULAN DUKIĆ-IV)

**BOSNA-SARAY** (see SARAJEVO)

**BOSPHORUS** (see BOSGAZ-ICI)

**BOSRÄ** (Bostra), a town of southern Syria in the fertile plain of the Nukra, in the province of Hawran (Hauranitis of the *Notitia dignitatum*), the Idumea of the Bible. Situated in 32° 30' N., 36° 28' E., and called today Bosra Eski Şhün (to distinguish it from Bosra al-Hariri on the southern edge of the Ladjß, 12½ miles from Ezra), Bosra is 19 miles north of the present frontier of Jordan on the road joining Dar'fa on the west to Salghad on the east. It is close to two intermittent streams, the Wadi Zaydi and the Wadi Butim, tributaries of the Yarmuk. The name Bosra is attested in the sense of 'citadel' (De Vogüé, *Inscr. Palm.*, 25). The town, fortified since its foundation, seems to have been a strongpoint towards the north of the 'Arab', i.e. Nabataean, kings. Damascus (*Vita Ista*, § 109), writing in the 6th century, describes it as an ancient fortified town provided with ramparts by the Arab kings. The book of Maccabees (I, v, 26) makes it dependent on the great fortified region of Parra and calls it Bosorra. The extensive Nabataean countries which surround it are evidence that it belonged to the kingdom of Nabatene. Two inscriptions from the neighbouring town of Salghad (Salcha of the Romans) bear, for the eighth decade of the first century, the name of king Malkhß (Malchus of Damascus) (Littmann, *Semitic Inscr.*, in *Syria*, iv, A. nos. 23 & 28). The use of Nabataean was kept after the Roman conquest (*ibid.*, 12, 192, 193, 196). Certain Nabataean inscriptions include a Greek text.

When Bosra had been introduced into the Roman empire, after the annexation of the old Nabataean kingdom, by Cornelius Palma in 105-6 A.D. (Pauis-Wissowa, s.v. *Bostia*, II, 359, 11 E.) it was recognised on the initiative of Trajan. Writers on Roman history differ as to the date of its foundation. R. Ritter (*Erldkunde*, xv, 99) sees it as a town of Roman foundation. Damascus assigns to Alexander Severus the honour of incorporating it as a town. The latter did indeed confer on Bosra the title of Colonia Bostra concurrently with that of Nova

Trajanus Alexandrinus (222-35 A.D.). Malalas takes its foundation back to Augustus.

It is certain that the town of Bostra was enlarged at the time of its incorporation into the Roman Empire, as a study of its plan shows. Though it remained a stronghold in the 4th century—the most important in the province of Arabia, with Gerasa and Philadelphia '*murorum firmitate firmatissimas*' (Ammianus Marcellinus, xiv, 813)—the withdrawal towards the south of the true line of defence made of it no longer simply a garrison town, station of the Third Cyrenensis Legion (*Notitia Dignitatum*, Pridem, v, 27, 7), but an important centre, soon to become Christian, and seat of the government of the province of Arabia under the name of Nēa Trajanē Bostra. The Era of Bostra (105 A.D.) testifies to its importance. Thanks to the trade routes which attached it to Philadelphia and the Persian Gulf and those which gave it access to the Mediterranean across Palestine, it was also an important centre of commerce dependent on Damascus, to the north, to which it was joined by two roads. It had extensive markets, of which the ruins subsist; it had its own coinage; that struck by the emperor Philip 'the Arab', who was a native of Bostra, gives to it the title of Metropolis as well as that of Colonia (Butler, *Syria*, A iv, Bostra, cap. II, xvi, nos. 41, 42). Philip the Arab stationed a squadron of cataphractaries there.

At the time of the first form of the Manichean controversy (Tert., bishop of Bostra (about 360), took up (*Part. graca* xviii, 1069-1264) a doctrinal position and engaged in activity which placed him in the front rank of the ecclesiastical writers of his time by his knowledge, his philosophical training, and his secular activity. Before Basilides (222-32), under the influence of Origen, had testified against the heresy by returning to orthodoxy. Byzantine Bostra played the part of a frontier market where Arab caravans and pastoralists alike came to buy provisions under the watch of the troops stationed there.

As an administrative centre Bostra included a large population of functionaries and civic officials. It was the centre of a bishopric subordinate to the patriarchate of Antioch. An edict of Anastasius (Butler, *op. cit.*, no. 561) secured the stability of offices there by ridding them of corruption and devoting to them revenues derived from the annona and the grain trade, as also from the 'twelfth'. Romano-Byzantine inscriptions are testimony of the administrative importance of the town. It was the residence of the governor of the Provincia Arabia, who besides the titles of *legitimus* and *dux* (Gr. *δουξ*) bore the military title of *scholasticus* (488). As a municipium the town had its *praeses* (*prohedrus*) and a college of four *synarchontes* to which was joined a council (*boulerai*). For the time when Christianity had won, yet triumphed, over paganism, inscriptions are to be found to the official gods of the Empire and to those of Hawrān by their original or Hellenised names (D. Sourdel, *Cultes du Hawrān*, Paris 1952). Later, during the Christian epoch, numerous inscriptions mention the reconstruction or restoration of churches dedicated to the Virgin and Sergius or anonymous patron saints, and also of two monasteries of which at least one, dedicated to Saint Cyriacus, was for girls. To judge by funeral inscriptions the population had kept its old Semitic basis, sometimes partially Romanised, with infusions of new blood from Italy, Asia Minor, Coriouth, and even (thanks to the transfer of a

garrison) from Pannonia. By virtue of its archbishopric Bostra for a long time kept a basilica, of which substantial remains remain, and a bishop's palace of which nothing much is left. The convent possibly dedicated to Saint Sergius stood not far from there. It had a big church of which the walls and the apse are still standing. It is there that folklore places the sojourn of the monk Bahārā (g.r.), he who, as is well known, was one of the Christian witnesses to the Prophet's mission. (His name, which is still unexplained, may conceal that of Bahārā attested by a Nabataean inscription from Salghad (Littmann, *Nabat.*, 24) and likewise, Bartholomew of Edessa, P.G., 104, 1429). The Muslim epic legend later made of the taking of this town, 'the first Byzantine centre conquered by the Arabs', a sign of the divine mission of Islam (Pseudo-Wāḥidī, *Kutub Fuṭūḥ al-Shām*, Cairo 1954, 16-17).

The Arab conquest and then the establishment of the Umayyad power brought about its decline, in spite of the advantages accruing from its position on the pilgrim route, by depriving it of its status of provincial capital and permanent major frontier garrison. It preserved a certain prestige because of two legends, that of Bahārā and that of the 'kneeling' of the camel bearing the 'Syrian' copy of the Qur'ān (Nöldeke-Schwally, *Gench. des Koran*, II, 112 ff.). This seems to have made of it the seat of a popular folklore which is attested by the accounts of pilgrimages (e.g., al-Harawī, ed. J. Sourdel-Thomine, 27) and the names of its mosques: al-'Umarī (Sauvaget, in *Syria*, xxii, 41), Fāṭima, *Khidr*, al-Mabrak, and the popular tales attaching to them. Numerous inscriptions bear witness to their restoration from the time when the Saljūq princes of Damascus exercised suzerainty over Bostrā and devoted themselves to strengthening it against the Fāṭimids whose possession (in theory) it still was. The spoliation of the town by Abū Ghānim's Carmathians had made this needful. The 'Umarī mosque, anterior to 128/745 (date of a restoration by 'Ughaym b. al-Hakam, Ar. inscr., Littmann, no. 30), was renovated in 504/1114, the rebuilt in 618/1221 under the Ayyūbids with the supervision of an Egyptian architect. In 526/1132 the mosque of *Khidr* was restored by the *amir* Gümüştekin. The 'very old' Mabrak mosque had a Hanafī *madrasa* built beside it in 550/1156 (Sauvaget, in *Syria*, xxiv, 231).

The Ayyūbid governors made the town richer by another Hanafī mosque in 630/1233 (Littmann, *op. cit.*, no. 38). The college mosque known as the 'Dabbāgha' dates from 655/1257. The Mabrak mosque was—and still is—surrounded by a celebrated cemetery which formed a pair with the 'Martyr's cemetery' to the south of the town. Inscriptions attest the construction and restoration at this time of other monuments now lost.

The period of these constructions was that when the town regained under the Ayyūbids a major importance due to its military rôle, whether in face of the Crusaders or in the course of the conflicts between Saladin's successors. The great witness to this military function is the citadel of Bostrā. Under the governors representing the Aḥabaks of Damascus, the old Roman theatre on an esplanade to the south of the town outside the ramparts had been adapted for defence by a wall and three flanking towers. Between 483/1089 and 649/1251 the princes who successively held Bostrā under their sway enlarged this citadel which ended by becoming one of the chief military monuments of the Muslim world. In

1956 it still remained the most complete authentic document on the successive techniques of fortification from the Fāṭimid period to the Mamlik. After the Mongol invasion of 659/1261, which left the fortress badly damaged, Baybars sent a mission from Egypt which restored, made even bigger, and strengthened this monument (A. Abel, *La citadelle égyptienne de Bostrā Eski Cham*, in *Annales archéologiques de Syrie*, vi, (1956), 93-138, XI pl.). This restoration, by using up a huge quantity of material, no doubt completed the destruction of the old Roman hippodrome which once stood to the south of the theatre. The extensive ruinification and depopulation consequent on the brief Mongol invasion seem to have plunged the town once more into obscurity. The restoration of the citadel 'outside the walls' was partially concerned it (al-Makrizī, *Hist. des Sultans Mamlouks*, tr. Quatremère, I, 141). However, the town enjoyed a certain importance in the 13th century, for it furnished the Mamlik administration in Syria with several notable personages bearing the family name of al-Buṣṭānī. It remained the place through which pilgrims passed on the old Roman road from Damascus to Philadelphia-'Ammān. Its Birkat al-Hādīdī still bears their graffiti.

The development of Egyptian trade by the Red Sea and the fact that the Holy Cities, becoming more and more impoverished, lived principally on Egyptian aid, deprived it, however, of the character of trading centre which it had originally. The Ottoman invasion and conquest turned it into a minor provincial centre, the exile of obscure functionaries who did not always possess the means to defend the town.

The administrative centre of Hawrān was transferred to Mazyrib and Merkes in the 10th/16th century.

In the 11th/17th century the 'Anaṣah Bedouins, with their flocks, pushed to the edge of Hawrān. The threat of their pillaging expeditions hung over the whole region on dwellers and travellers alike. The pilgrims then adopted the western route by Sana'ayn and Mazyrib which has remained till today the '*darb al-hādīdī*' and alongside which the Hejaz Railway was built at the beginning of the present century.

Today the agricultural centre of Bostrā earns its living by the cultivation of the fine wheat fields of the Nukra when the rain is sufficient. It enjoys also an excellent water supply which allows the maintenance, in confinement, of a fair number of livestock. It has kept its fine vines and still produces a small quantity of very good wine.

The town is of enormous archaeological interest. Since the beginning of the 19th century travellers have been struck by the sight of its Roman ruins and have passed with interest before its gradually crumbling ramparts and its citadel. The Princeton Expedition (1904-5, 1906) published a great number of inscriptions in Greek and Latin (Littmann, David Macie Jr., and Duane Reed Stuart), Nabataean (Littmann), and Arabic (Littmann). The efforts of the members of the Institut Français d'Archéologie de Beyrouth have contributed in Syria, in the publications of the Institut de Damas, and more recently in the *Annales Archéologiques de Syrie*, to the increase in our knowledge of the town. Restorations due principally to the work of J. Sauvaget, have been successfully carried out to the 'Umarī mosque. The Syrian Service of Antiquities has made extensive excavations.

The exact study of ancient and medieval hydrological techniques, of the nature of the monuments and their chronological assignment, and, above all, of the successive levels of construction, still remains to be carried out within the framework of a master plan.

(A. ABEL).

**BÖSTÄNDJİ** (Bāstāndjī, from Persian *bāstān* 'garden'), the name applied in the old Ottoman State organisation to people employed in the flower and vegetable gardens, as well as in the bathhouses and rowing-boats of the Sultans' palaces. As long as the law of *devşirme* (forcible recruiting, g.r.) remained in force, these were recruited in accordance with its provisions. The *bōstāndjīs* formed two independent *ođaks* (g.s.), of which one was in Istanbul and the other in Edirne (Adrianople), commanded by the *bōstāndjī-bāğdī*. Only the strongest and most vigorous of those forcibly recruited were accepted in the two *ođaks* of the *bōstāndjīs*, either directly or from the *ođak* of the '*adamlı-oghāns*' (g.s.). There were nine grades in the *ođak* of the *bōstāndjīs*. New recruits were round their waists a belt made of the fringe of State cloth (*heyb*), while *bōstāndjīs* of the highest rank wore a green belt known as *muhaddem*. After a specified length of service the *bōstāndjīs* were promoted to the *ođak* of the Janissaries. Each man received on promotion the sum of 1,000 *akbes* for his equipment. At the end of the 17th and in the 18th century there were cases of *bōstāndjīs* assigned to the mounted *ođak* of the *kaptan-pašas* (g.s.). *Bōstāndjīs* were employed both inside and outside the palace. Others worked directly in flower and vegetable gardens, in bathhouses or in connexion with them. There were also *bōstāndjīs* in Sultans' estates, as for example, in Amasya, Manisa, Bursa and Izmit. Apart from the services mentioned above, the *bōstāndjīs* of Istanbul, were entrusted with duties such as guarding the palace, transporting material for the construction of palaces and mosques for the Sultans, working in boats used for the transport of timber from the environs of Izmit (v. *Kānūnname-i 'Alī-i 'Othmān*, ed. 'Arit Bey, TOEM, appendix 2, 25). Two different classes are shown in the paybooks of

the *bostândjîs*, the *ghilmân-i bîghîr-ê khâna* (boys of private gardens) and *ghilmân-i bostâniyân* (garden boys). In a paybook dated 954/1576 those employed in the Sultan's private gardens are shown as 30 *bûks* (g.s.), and those working in the vegetable gardens as 25 *dîmâ's* (g.s.). At that time there were 645 *ustas* in the private gardens and 971 in the vegetable gardens. Paybooks for 1174/1760 and 1192/1778, show 20 *bûks* in the private gardens and 64 *dîmâ's* in the flower and vegetable gardens outside. *Bostândjîs* were also concerned with keeping order in the places where the gardens in which they were employed were situated. There was a *dîmâ'at* in each district, commanded by an officer known as *usta* (master). The *ustas* performed functions analogous to those of police commanders of the districts. These *ustas* were appointed from among the four *halâdjîs* (g.s.) of the *odjak* of the *bostândjîs*. Terms such as "the *usta* of Kadi-Köyü or the *usta* of Bebek", seen in some documents refer to the *ustas* of the gardens in these districts. The retinue of each *usta* consisted of 20 to 30 *bostândjîs*, in accordance with the importance of the district. The *bostândjîs* of the bathhouses and the rowing-boats were specially chosen for these jobs, and pulled the oars of the 24-oar private boat of the Sultan, under the command of the *hamâdjî-bağî* (chief carman), when the Sultan wanted to travel by sea or to have a sea trip. Thévenot says that '*adjan-aghâs* sat by the right oars, and Turkish youths by the left oars, but this is not certain.

A record of the revenue of the flower and vegetable gardens run by the *bostândjîs* was presented every year in November to the Sultan through the *bostândjî-bağî*, and the money paid into the privy purse. Of this money, one purse (500 piastres) was bestowed on the *bostândjîs* and one purse given to the *wakf* of the Da'ud Pasha mosque. In this way, when the revenue was presented, property tenable on a life tenure was bestowed on the twelve most senior *bostândjîs* who were then promoted to the mounted *odjak* of the *kaptî-bûks* or to the rank of *muderrîs* (g.s.).

When the occasion arose, *bostândjîs* were sent on expeditions, e.g., in 1152/1739, 3,000 of them were dispatched by ship to Bender to fight against the Russians (v. Sübbî, *Ta'rih*, 127).

The numbers of the *bostândjîs* varied from time to time. At the beginning of the 16th century there numbered 3,596, at the middle of the century 2,947 and at the end 1,998. At the beginning of the 18th century there were 100 *bostândjîs*.

The independent *odjak* of *bostândjîs* at Edirne had its own organisation. It numbered considerably fewer people than the Istanbul *odjak*: 445 at the beginning of the 17th century, 751 at the end of the century, 751 at the beginning of the 18th century. There were 10 *bûks* of *bostândjîs* working in the Sultan's private gardens at Edirne, apart from whom there were *bostândjîs* employed in three other gardens. *Bostândjîs* were a hat known as *barala*. Those recruited originally among the *dergîme* conscripts were celibate. Later marriage was allowed. Apart from their commanders, the *bostândjî-bağîs*, *bostândjîs* had officers known as *kehlbûd* of *bostândjîs*, *khâssî-bağîs*, *hamâdjîs*, *kara-bağîs*, *bagh-târs* and *oda-bağîs*. Four senior members of the *odjak* were known as *halâdjîs*. At times the *bostândjîs* took part in mutinies and looting, in consequence, the confidence of the Sultans. For this reason, Ahmed III was obliged to make changes among them. Among the murderers of Selim III

there was a *bostândjî* known as Deli (mad) Mustafa. *Bostândjîs* were also opposed to the private garden organisation measures, known as the *nîzâm-ı dîvânî* and *seghîr-ı dîvânî*. When the *odjak* of the *bostândjîs* was abolished and the organisation of the new Ottoman army, '*askâr-ı manîre* (victorious army), was extended, these took over the task of keeping order in the districts previously entrusted to the *bostândjîs*, the latter officials' functions being now restricted to gardening and acting as night watchmen. As from Muharrar 1222 (August 1826), *bostândjîs* were incorporated in the new organisation. According to the new law, 1,500 persons chosen among the *bostândjîs*, commanded by a major, *hîbbâdjî*, were entrusted with the task of guarding the palace and its environs (Orta-Köy and Dolmabahçe). These formed the nucleus of the corps of guards, known in Ottoman times as *khâssa 'ashîrî*. A ministry, known as the Ministry of *bostâniyân-ı khâssa* (*bostândjîs* of the Sultan's palace) was formed to look after them. The *odjak* of *bostândjîs* at Edirne was at the same time abolished.

(I. H. UZÜNKARSLI)

**BOSTÂNDJİ-BASHİ**, the senior officer of the *odjak* (g.s.) of the *bostândjîs* (g.s.). His retinue consisted of *bostândjîs* of several classes. His residence was at Yallı-Köskü on Seraglio Point in Istanbul. As the person responsible for the maintenance of order on the shores of the Golden Horn, the Sea of Marmara and the Bosphorus, he used to patrol the shores in a boat with a retinue of 30 men, as well as inspecting the countryside and forests round Istanbul. When the Sultan travelled by rowing-boat, the *Bostândjî-bağî* was entitled to hold the *rudîr* (*Kânûn-nâme*: *Âlâ-i 'Oğmân*, *TOE*, Appendix 2, 24). He had consequently the opportunity of speaking to the Sultan in private and of passing on to him such information, true or false, as he chose. Important State officials, including the Grand Vizier, had, therefore, an interest in conciliating the *Bostândjî-bağî*. Whenever the Sultan went out of the Palace, the *Bostândjî-bağî* was allowed to hold his arm or his stirrup.

The *Bostândjî-bağî* was invariably promoted from the *odjak* of *bostândjîs*, which would not allow an outsider, not even a member of the *odjak* in Edirne, to get the post. In 1072/1661, during the Vicerate of Fâdî Ahmed Pasha, Mehmed IV did not on one

occasion find enough animals to hunt during a journey from Edirne to Istanbul. Incensed, he dismissed the *Bostândjî-bağî* Şah'bân Ağâ, replacing him by Bodur Sinân Ağâ, the *Bostândjî-bağî* of Edirne. Veteran *bostândjîs* objected, however, on the grounds that it was not customary to appoint a commander from another *odjak* (Sâlihâr, *Ta'rih*, i, 223).

*Bostândjî-bağîs* used to entertain the Sultan every spring at a banquet at Kâğıtlıçine (the Sweet Waters of Europe) in Istanbul (Wâfî, *Ta'rih*, i, 13). When *Bostândjî-bağîs* were appointed to an outside post they were usually given the rank of *Kaptî-bağî* or *Sandjak-bey*. Those favoured by the Sultan were appointed to the rank of *Bayîr-bey*. Later, when the rules of organisation became more lax, there were cases of *Bostândjî-bağîs* becoming Grand Viziers. Such were the Pashas Dervîş, Hasan, Topal Redjeb, Khallî, Moldovandjî 'Alî, Hâfîz, Ismâ'îl and 'Abd Allâh.

*Bostândjî-bağîs*, apart from commanding *bostândjîs* proper, were also in charge of the *odjaks* of Topkapî, Yallı-Köskü, Septetler, Soğuk-Gesme, Başçelî, İsmâniye, Barsâniye, Küşine, Gulhâne, Inçilli, Dolap-Değirmen, Balıkhane, Merzûbe-Kesân etc. According to Enderûnî 'Aîâ, this responsibility was passed on to the *Bostândjî-bağî* by busy palace officials, such as the *sâkhâr* (Chief Armourer), the *kapî-bağî* (Master of the Wardrobe), the *kapî-âğâh* (Chief White Eunuch) or the *kehlbûd* (intendant) of the *kapî-bûks* (Imperial Wardens). The *Bostândjî-bağî* also commanded a group of *khâssîs* (members of the Sultan's bodyguard). Among the *odjaks* commanded by the *Bostândjî-bağî*, that of Balıkhane (fish market) had an evil reputation. Ministers and Grand Viziers sent to be exiled or executed were taken there. The fate of the Grand Viziers detained in this *odjak* was indicated by the colour of the sherbet offered to them by the *Bostândjî-bağî*. A white sherbet meant exile, while a red sherbet meant death.

When the *Bostândjî-bağî* was dismissed or transferred, he was usually replaced by the *kehlbûd* (intendant) of the *bostândjîs* or the *agâs* (commander) of the *khâssîs*. There were, however, exceptions to this rule. It was customary for newly appointed *Bostândjî-bağîs* to be invested with their robe of honour (*khîrâf*) in the presence of the Grand Vizier ('Aîâ, *Ta'rih*, i, 110). There is a register in existence of the coastal residences of the *Bostândjî-bağî* in Istanbul.

The *Bostândjî-bağî* of Edirne was responsible for the maintenance of law and order in Edirne and its environs. Edirne, as the second capital of the State, was not subject to the Will of Rîmîlî, the government of the city being directly in the hands of the *Bostândjî-bağî*. The *Bostândjî-bağîs* enjoyed great revenues and were in a position to commit great abuses. New recruits were, for example, sometimes farmed out against payment.

**Bibliography:** Sâlihâr, *Ta'rih*, i, 223 & ii, 347; Wâfî, *Ta'rih*, i, 13; Râşid, *Ta'rih*, iii, 89, 144; v, 90; Râşid and Celebi-zâde, *Ta'rih*, 61, 371; 'Aîâ, *Ta'rih*, 246, 287; for other works see *bostândjî*, bibliography.

(I. H. UZÜNKARSLI)

**BOSTÂNZÂDE**, the name of a family of Ottoman '*ulama*' who achieved some prominence in the 16th and early 17th centuries. The founder of the family was (1) Mustafa Efendi, born in Tire, in the province of Aydin,

in 904/1498-9, and known as Bostânî (or Bostânî); his father was a merchant called Mehmed (thus in the text of 'Aîâ') and on the tombstone preserved in the Türk-Islâm Eserleri Müzesi in Istanbul; the heading Mustafa b. 'Alî in 'Aîâ' is no doubt an error due to confusion with his namesake Mustafa, known as Kâğıt Bostânî; 'Aîâ' 131; cf. Huseyin Gazi Yurdaydın in *Bell.* xix, 1955, 129, n. 126). After studying under various teachers in his native town and in Istanbul, he held a succession of teaching and judicial appointments, and in 954/1547 became Kâdî'asker of Anatolia and shortly after of Rumelia. His appointment was terminated in 958/1551, in connection with an unfavourable ruling given by him in a case in which the Grand Vezir Rüstem Pasha was interested. Though exonerated by subsequent enquiries, he was not reinstated, and died on the 25th Ramadan 977/5 March 1570 (thus the tombstone; 'Aîâ' 3 says 27th Ramadan 977; 'Oğmânî Müdallîfî puts his death in 968). He was the author of several works of Kur'ân commentary and theology, some of which have survived in manuscript in Istanbul libraries. Recently it has been suggested that he was the author of the *Saleymân-nâme* previously attributed to Ferîdî (Yurdaydın, *Bell.* xix, 1955, 137 ff.).

**Bibliography:** 'Aîâ', *Dihât al-Shukhâ'*, 129 ff.; Yurdaydın, *loc. cit.* 189 ff.; 'Oğmânî Müdallîfî, i, 253; Sîdîkî-i 'Oğmânî, iv, 346.

(2) Bostânzâde Mehmed Efendi, the son of the preceding, was born in 942/1535-6 and graduated, i.e., obtained his *muderrîs* (g.s.), at the early age of 21. After holding various teaching appointments, in 981/1573 he abandoned the teaching in favour of the judicial branch of the '*ilmiyye* profession, and became Kâdî of Damascus. His subsequent promotions were rapid; after serving as Kâdî in Bursa and Edirne, he became Kâdî of Istanbul in 984/1576, Kâdî'asker of Anatolia in 985/1577, and of Rumelia in 988/1580. The following year he was retired and in 991/1583 sent as Kâdî to Egypt, where he stayed for three years. In 995/1587 he was reappointed Kâdî'asker and in 997/1589 became Şaykh al-Islâm. In 1000/1592 he was retired (on the circumstances see Na'mâ *anno* 1000), but returned to active duties as Kâdî'asker of Rumelia and, in 1001/1593, for the second time became Şaykh al-Islâm. He remained in office until his death in 1006/1598. In addition to poems in Arabic, Persian, and Turkish, he prepared a translation of the *Thyâ al-'Ulûm* and a commentary on the *Mulhâd*. Hâdjîjî Khallîfâ mentions a *fatâvâ* in verse declaring coffee licit (*Miftâh al-bâh*, ch. VI, tr. G. Lewis, 60, 62). **Bibliography:** 'Aîâ', 410; Râşid, *ibid.*, *ibid.* al-Maghâzî 331; '*ilmiyye Sâlemânî* 410; 'Oğmânî Müdallîfî, i, 256; Sîdîkî-i 'Oğmânî, iv, 133; Hammer-Purgstall, index.

Other eminent members of the family of the Şaykh al-Islâm Mehmed Efendi were his younger brother (3) Mustafa Efendi (946/1539-40-1004/1605-6), who rose to the posts of Kâdî'asker of Anatolia and Rumelia ('Aîâ', 306-7; Sîdîkî, iv, 381); his sons (4) Mustafa (960/1572-3-1000/1601), who taught at the Şahnî-Thamân (g.s.) and then became Kâdî of Üsküdar ('Aîâ' 449), and (5) Yahyâ (d. 1049/1639) who became Kâdî of Istanbul and then

generally known as Sultān to foreigners, Sa'id was still living in 1226/1811 but died during the next ten years. Hāmid (d. 1206/1792) was succeeded by his uncle, Sultān, who captured Ġālibār, Hormuz, Kishn, Bandar 'Abbās and Bahrayn. Persia agreed to lease Ġālibār and Bandar 'Abbās to the Bū Sa'id, who already held Gwādar. In 1215/1798 he concluded a treaty permitting the British to build and fortify a factory at Bandar 'Abbās and promising not to allow the French or Dutch to establish factories in his realm so long as they were at war with Britain. In his last years he was in constant danger from Wahhābī attacks. He was killed in a sea fight near Lingāh (1219/1804). The ensuing struggle for power was won by Badr b. Sayf with Wahhābī support but he was murdered by Sa'id b. Sultān who ruled jointly with his brother Sālim until the latter's death (1236/1821) and then alone.

Sa'id was the greatest of his dynasty but in Arabia his position was often insecure, either because of family dissension or Wahhābī attacks. The former resulted in the temporary independence of Sulhār [g.u.] under the family of Kays b. Ahmad, while the Wahhābīs were sometimes bought off and sometimes restrained by the fear of British intervention. Sa'id was a firm ally of the British and assisted their expeditions against the Kawkāsim in the Persian Gulf. Under strong British pressure he restricted the slave trade (1218/1802) and the export of slaves from Africa was forbidden from 1203/1847. Sa'id's greatest achievement was the extension of his African dominions into a commercial empire supported by sea power. The conquests of the Ya'rūbī Imāms in Africa had mostly been lost during the Persian invasion of 'Uman. Sa'id at his accession controlled only Zanibar, part of Pemba, perhaps Mafia and Lamu, and Kilwa, which had been lost and regained. He gradually asserted his authority over the Arab and Swahili colonies from Makdūshū (Mogadishu) to Cape Delgado; the most serious opposition was at Mombasa [g.u.], the Hamitic and

Rantu tribes hardly recognised his authority on the mainland. Even on the principal islands Sa'id merely received tribute from the chiefs of the Wahādīn (the Maweyi Mkuu), the Wapemba (the Diwani) and the Watanbata (the Shela). In the middle years of the century the coast from Vanga to Pangani was, except for Tanga, held jointly by Sa'id and the King of Usambara, who sent representatives whom Sa'id confirmed in office. Sa'id's attempt to obtain Nossi Ibé was foiled by the French. In 1220/1854 he decided the Kuria Muria Islands to Britain.

On Sa'id's death (1227/1856) his son Thuwaynī remained in control at Maskat and his other son Mājid at Zanibar. By the decision of Lord Canning, to whom the dispute was referred, Mājid kept Zanibar and paid annual compensation, specifically stated not to be tribute, to Thuwaynī. Mājid's successor was Barghash who had tried to seize power on Sa'id's death and again a few years later. The influence of the British representative, Sir John Kirk, became paramount and in 1290/1873 the slave trade was prohibited. German penetration in E. Africa resulted in the appointment of an Anglo-Franco-German Commission to delimit Bū Sa'id territory. By its decision Barghash was recognised as ruler of Zanibar, Pemba, islets within 12 miles of them, the Lamu archipelago, the coast from Tumbi to Kipini to a depth of 10 miles, Kismayu, Barawa, Marka, Makdūshū and Warshayhū. Lamu was later ceded to the British East Africa Co. and the Somali ports to Italy. In 1307/1890, in accordance with another Anglo-German agreement, Bū Sa'id's possessions north of the Umba River were purchased by Germany, and almost all the rest became a British protectorate. The mainland territories were then leased. In 1309/1892 the administration was reorganised and a British First Minister (Gen. Lloyd Mathews) was appointed. Khālid b. Barghash attempted to seize power in 1310/1893 and in 1313/1896; by a second revolt led to the bombardment of the palace by his

British warship. In 1314/1897 the legal status of slavery was abolished. The British minister was Regent during the minority of 'Alī b. Hāmid (1320/1902-1323/1905). In 1331/1913 responsibility for Zanibar was transferred from the Foreign to the Colonial Office.

Thuwaynī, who had kept 'Uman under the Canning award, was assassinated. His son Sālim was suspected of complicity and expelled after a short reign by 'Azzān b. Kays, who was himself killed in a civil war. In 1288/1871 Turki agreed to partition 'Uman with 'Azzān's brother Ibrahim. The latter retained Sulhār, but lost it to Turki two years later. During these disorders the Persians resumed the lease of Bandar 'Abbās (1285/1868) and recaptured Ġālibār (1288/1872). In 1290/1873 the slave trade was prohibited under British pressure. About 1319/1902 a dissident movement began in the interior under 'Isā b. Sālib. In 1331/1913 Sālim al-Kharbī was elected Imām and in 1333/1915 Maskat was attacked by the rebels and saved only by an Indian detachment. Sālim was murdered in 1338-9/1920; his successor, Muhammad b. 'Abd Allāh, made an agreement with Sayyid Taymūr by which the tribes of the interior enjoy autonomy. Modern 'Uman includes Zufār and is bounded by the territories of the Sultān of Kishn, the Shaykh of Ra's al-Khays and the Sultan of Kishn. The coast of the Arabian Peninsula constitutes a separate Trucial state.

**Al-Bihar and the Arabs.** The chief Arabic authority for the period to the death of Sayyid Sa'id is the chronicle of Ibn Razik, translated by G. F. Badger as *History of the Imāms and Seyyids of 'Uman*, Hakluyt Society, 1871. The Arabic text has not been published and is now Camb. Univ. Add. MS. 2892. Ibn Razik is, however, careless about dates, some of which can be corrected from an anonymous MS. B.M.; Add. 23,391. On the dates of Imām Ahmad, C. F. Beckingham in *JRAS*, 1941. 'Abd Allāh b. Humayd al-Sālimī, *Tahsil al-A'yān bi sirat al-'Uman*, Cairo 1350; R. Coupland, *East Africa and its Invaders, and The Exploitation of East Africa*; L. W. (C. F. BECKINGHAM)

**BU'ATH**, the site of a battle about 637 A.D. of Aws and Bāshir. It lay in the south-eastern quarter of the Medina oasis in the territory of the Banū Qurayza. The battle was the climax of a series of internal conflicts. The Aws, whose position had deteriorated, were joined by the two chief Jewish tribes, Qurayza and al-Nadīr, and by nomads of Muzayna; their leader was Hudayr b. Ushayb. The opposing leader 'Aur b. al-Nu'mān of Bāshir was supported by most of the Khazraj, and by some nomadic Djuhayna and Ash'ajja, but 'Abd Allāh b. Ubayy [g.u.] and another Khazraj leader refused to join him. The Awsite clan of Hāritha also remained neutral. In the fighting, the Aws were at first forced back, but eventually routed their opponents.

Although the leaders of both sides were killed, the war ended with an uneasy truce rather than a definite settlement.

**BUDAPEST** [see *YEMIN*]

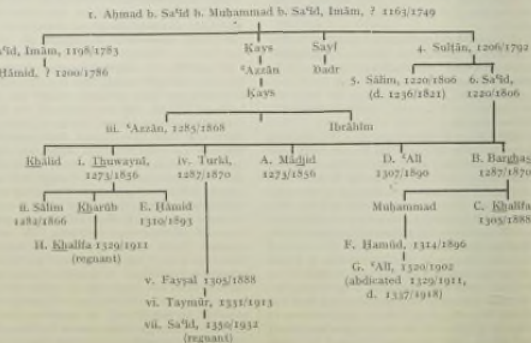

**BUDAYL b. WARRAK'**, chief of the Banū Khuzā'a, a tribe living near Mecca, who served Muhammad as spies, kept him informed of the enterprises of the Quraysh, and, after the agreement at Hudaibiya (628), were his allies. Budayl appears for the first time in the camp at Hudaibiya, to tell Muhammad that the Meccans are about to resist him. On his return he carried the Prophet's proposals to Mecca, where he had a *dār*. The Banū Khuzā'a took refuge there during their war with the Banū Bakr, when the Quraysh took the side of the latter, their clients, against the former. This was a breach of the treaty of Hudaibiya, by which the Banū Khuzā'a had been recognised as allies of Muhammad, and thus gave the latter an opportunity to attack Mecca. Budayl hurried to Medina to make an arrangement with Muhammad and on the way met Abū Sufyān [g.u.] who was on the way to Medina on a similar errand. Apparently they both came to an arrangement with Muhammad in Medina regarding the terms of a peaceful surrender of Mecca, for which they offered their services. Muhammad advanced against Mecca at the head of 10,000 men with the declared purpose of avenging the Banū Khuzā'a. On the day before his arrival at Marr al-Zuhār (middle of Ramaḍān 8/beginning of June 630) Budayl went out with Abū Sufyān to reconnoitre. If the two had not been secretly in agreement, the Unsurayd would not have been able to persuade the chief of the Khuzā'a, who was the cause of the campaign, to go with him at such a critical moment. After they entered the Prophet's tent, they are both said to have paid him homage and adopted Islam. The conversion of Budayl cannot have taken place earlier, because he is mentioned among the "Muslims of the conquest (*fak'h*)" of Mecca. It was granted him that his house in Mecca should be recognised as a place of asylum for the belligerents. After the capitulation of Mecca, Budayl accompanied Muhammad with his adherents to Hunayn. He was not present at the siege of Ta'if because he had to guard the booty taken at Hunayn, in the camp of Jil'ā'ina. He is not mentioned again and must have died before the Prophet, *i.e.*, between the years 9 and 11 (630 and 632).

**BUDDO** [pl. *buddā*]; Pers. *budh* is used in Arabic in three different senses: it denotes either a temple, a pagoda, or Buddha, or an idol (not necessarily the Buddha). The principal instance of the use of the word in the sense of pagoda occurs in a passage in the *Merveilles de l'Inde* (ed. trans. M. Devic, 3; *Mémoires de l'Institut*, i, 192); this sense appears

#### GENEALOGICAL TABLE OF THE AL BÜ SA'ID DYNASTY

Arabic numerals indicate rulers of 'Uman and Zanibar, Roman numerals rulers of 'Uman only, and letters rulers of Zanibar only. The dates are those of the accession of each ruler.

to be the rarest, although given as the primary sense in the *L.A.*

*Budd* denotes the Buddha in authors such as al-Djāhiz (*Tarīf*, ed. Pellat, 790, al-Mas'ūdī, al-Bīrūnī, al-Shahrastānī; al-Mas'ūdī, speaking of the temple called "the house of gold" at Mūltān (*Tanbih*, 201; cf. al-Bīrūnī, *India*, trad. Sachau, I, 368, ii, 18; Reinaud, in *J.A.*, 1844-5), says that the appearance of the first Buddha among the Indians dates back 12,000 times 15,000 years. Al-Bīrūnī, though possessing such a good knowledge of Buddhism, knew little about Buddhism; the reverse is true of al-Shahrastānī (ed. Cureton, 416; ed. in the margin of Ibn Hazm, ii, 240), who defines the Buddha: a person of this world, who is not born, does not marry, does not eat or drink, and does not grow old or die; the first Buddha, who appeared 5,000 years before the *hijra*, was called Shākhim (= Cakya Mani; al-Shahrastānī also knows of, under the name of Būdhā'sīya (I), the Bodhisattvas, who are inferior to the Buddhas; they are men who seek the path of truth and attain their elevated rank by the practice of ten virtues and the avoidance of ten sins. The hagiographer, who adds that Buddhists believe in the eternity of the world and in the rebirth of one's acts in another life, states that Buddhists appear in various forms in the palaces of the kings of India, and compares them with al-Khadir (q.v.) as envisaged by Muslims. Although Muslims possessed only rudimentary ideas about Buddhism, it is noteworthy that they adapted to their own religious history, by dint of making Adam come down in Ceylon, the Buddhist tradition which regarded "Adam's peak" (SARANAKO) to the person of the Buddha (see *Akhbār al-Sin wa'l-Hind*, ed. trans. Sauvaget, 39).

Finally, the word *budd* is often used in the sense of idol. We should probably read *budd Kusayr* "idol of Kusayr" in al-Djāhiz (*Tarīf*, 40), and Ibn Durayd (apud *L.A.*) renders *budd* by *janam*. The author of the *Akhbār al-Sin wa'l-Hind*, 24, calls *budd* an idol worshipped in India to which courtisans were sacrificed. The idol of Sannath was well known among the Muslims (see Sa'ādī, *Būstān*, ed. Platts, 238 ff.; Eng. trans. R. Levy, London 1918, 67 ff.; Fr. trans. Barbier de Meynard, 354); al-Dinawarī, *Cosmographie*, ed. Mehren, 170-1, describes it accurately and gives the name of *budd* to the principal object of worship, which consisted of two stones representing the male and female organs of generation. — On the legendary founder of the religion of the Sabaeans, Būdhā'sīf/Yūdāsāf = Bodhisattva, see BILAWHAR WA-YŪDĀSĀF.

*Bibliography*: in the article.

(B. CARRE DE VAXU\*)

**BUDHAN**, SHAYKH, of DIJAWUPĪ, a holy man belonging to the order known as Shattā'īyah (q.v.), (*Akhbār al-Ahghār* 191; *Akhbār-i Ahrar* 284 ff.). He was descended from Shaykh 'Abd Allāh Shattā'ī (d. 890/1485, in Māndō), who himself was the seventh descendant of Shaykh Shihāb al-Dīn 'Umar b. Muḥammad al-Suhrawardī and came to India from Persia towards the end of the 9th/15th century (for him see *Akhbār al-Ahghār*, 171; *Akhbār-i Ahrar*, 161, 286; *Mas'ā'id al-Wāḍiyā*, 1, 135; Muftī (Shuhān Sarawān), *Qasā'id al-Aṭīyah*, Lahore 1283, 947; 'Abd al-Hayy, *Nuḥd al-Khawāṣir*, Haydarābād-Deccan 1931, iii 93 f.). Shaykh 'Abd Allāh was the first to introduce the Shattā'ī *maghārah* in India. Shaykh Budhan received his literary education from, and was initiated into the Shattā'ī order by, Shaykh Hafīz DijawupĪ, a vicegerent (*khālifā*) of the

above Shaykh 'Abd Allāh and in his turn practised the teachings of the order, handed them down to others, and led sections of Truth to the Shattā'ī path. Shaykh Rīz al-Allāh Muḥṭabī, the paternal uncle of the famous Shaykh 'Abd al-Hakīm of Delhi, was instructed in the method of "the remembrance of God" (*dhikr*) by him. Shaykh Budhan, who flourished under Sultān Sikandar Lodhī (regn. 894-923/1489-1517) is described by Khwāṣṭh as "a saintly and blossomed person" (*muwīdī bāṣur wa mudabbarān*). He died in Dihlī at a very advanced age. His *dhikr*, Shaykh Wālī (d. 950/1540), carried on his work in the town of Badolī and left several *khāṭīfās*.

**BUDHĀSĀF** (see BILAWHAR WA-YŪDĀSĀF)  
**BUDIN** (Budūn, Bedin, Bodin, Budim, from the Slav Budin), the Latin and Hungarian Buda, the kernel of that part of the present Budapest which is situated on the right bank of the Danube, was conquered three times by the Turks in the second quarter of the 16th century (1526, 1529 and 1541). It was declared an Ottoman possession on 29 August 1541, and made the centre of that part of Hungarian territory which was converted into an Ottoman province (*Budin vilāyati*).

The Hapburgs, who were the Central European power most concerned with the expansion of the Turks, and who laid claim to the Hungarian throne, made in 1542 an unsuccessful attempt to recapture Budin. No further attack was launched for the next fifty years. It was only at the turn of the 16th and 17th centuries, at the time when the Ottoman Empire was at war with the Hapsburg Empire (Nemcs), that the coalition armies led by the House of Hapsburg again repeatedly laid siege to Budin (1595, 1602, 1603). These attacks were, however, repelled by the defenders of the fortress (the most violent attack, that of 1602, was driven back under the leadership of Kádizade 'Alī and Lālā Mehmed). Following this, the Turks enjoyed undisturbed possession of Budin for a fairly long period and the fortress was made to face the assaults of Kara Mustafa's defeat under the walls of Vienna in 1683. While the siege of 1684 failed against the resistance of the defenders (Siyāwush Paḡha and Shēyṭān Ibrahim Paḡha), the next siege brought victory to the attacking armies. 'Abd al-Rahmān Paḡha, the defender of the castle, was killed in action, and Budin, termed at the time the "splendour of the Ghāzīs" and the "strong wall of Islām", passed into the hands of the Holy Alliance on 2 September 1686.

The fortress of Budin was built on the castle hill running along the Danube from north to south. The foundations of the fortress were laid in the 13th century by Béla IV; it was developed by subsequent Hungarian Kings and converted, especially by Sigismund of Luxemburg and Mathias Corvinus, into a central royal residence in renaissance style, rich in artistic buildings.

The fortress was protected by high ramparts erected on the upper slopes of the steep castle-hill. During the Turkish occupation the southern part of the castle-hill, with the medieval royal palace and its

dependencies inside the walls, formed the closed inner fortress (*al-baḡ*); it was here that the gun-foundries (*ḡalāḡ-hān*) and magazines were placed. The rest of the castle-hill was called the middle fortress (*orta hisār*) and served to some extent as the residence of the civilian inhabitants as well. The town (*sarāf*), situated at the foot of the castle-hill, next to the Danube, formed the outer fortress (*diḡ hisār*) which was surrounded by a simpler town wall and fortified with bastions at the gates. To protect Budin from sudden attacks, guard-houses had been erected at some distance, around the northern thermal springs (Barutkhāne or Bunar Hisār, Welī Bey meterisi), further in the neighbourhood of the present Castrāka (Čardak) and on the Gellért-Hill (Görz Rya's tepesi).

Although Budin was always considered by the Ottomans an important fortress of the Empire, and a former royal city of great repute, they cared little for the development of the castle and the town. Some of the more active Turkish provincial governors, especially in the 17th century, fortified or reconstructed some points here or there on the castle-hill; a record of these activities was preserved for a considerable length of time in topographical denominations (Welī Bey kalesi, Murād Paḡha kulesi, Siyāwush Paḡha kulesi, Karakāḡ Paḡha kulesi, Kāsim Paḡha kulesi, Mahmūd Paḡha kulesi etc.). The governors, however, were able to do but little towards the fortification of Buda, because their building activities lacked co-ordination and guidance from a central authority and because they were not permitted by the Turkish Governments to remain long at the castle. Not less than 75 persons, several of them repeatedly, enjoyed the rank of Paḡha of Budin during the 145 years of occupation, so that the average length of their office was scarcely a year and a half. Thus there was never a general modernisation of the castle, and its system of fortification remained on the same basis at the termination of the Turkish rule as it had been centuries before under the Hungarian Kings. Both material supplies and general equipment were at all times antiquated and deficient. (Pieces of ordnance a hundred years old were found in the artillery stations at the recapture of the fortress).

The Turkish régime did not leave behind it any architectural works of artistic value, and this applies not only to the case of religious services but to other kinds of buildings as well. The medieval Royal Castle and the buildings of the town, taken by the Turks in 1541 intact, exceeded the modest needs of the conquerors and were thus easily able to meet the requirements of a provincial headquarters. Slight alterations were needed to make the churches suitable for the needs of religious services (the Church of Our Lady under the name of Sultān Süleymān Dīḡāmī' or Büyük dīḡāmī', the Church of the Royal Castle under that of Saray dīḡāmī' or Enderin dīḡāmī', the Church of Saint George under that of Orta dīḡāmī', the Church of Mary Magdalen under that of Felihyay dīḡāmī' etc.); other public buildings could be used as barracks, while the empty office buildings and the derelict private houses provided homes for the officials.

Still, even the little building activity that was manifested in the transformation or refurbishing of various buildings (e.g., minarets added to the churches), the Muslim thermal bathing establishments added to the thermal springs (erected, at the very beginning of the Turkish period by Welī Bey and

Şokollu Muṣṭafā) as well as the new constructions necessitated by conflagrations, earthquakes, etc. succeeded in giving the town, in the course of one century and a half, a new exterior sufficient to make it appear a new-style Muslim city in the eyes of any visitor coming down the Danube from the west. As regards appearance and general atmosphere, Budin was indeed a Turkish and Muslim city.

Being at a great distance from the Turkish capital, a centre in the borderlands, it was usual for the Governments to appoint persons of distinction to be the heads of the province of Budin, persons "who were prominent among their contemporaries". Important special tasks were entrusted to the Paḡhas of Budin, the guardians of that western borderland of the Empire, which was at the same time the most important frontier zone. At the termination of the period of occupation, when the Ottoman dynasty enjoyed preponderance over the Hapsburg dynasty, their task was to maintain this preponderance, whereas after the Peace of Zsitvatorok (1606) by which the Hapsburg rulers—called up to then Kings of Vienna (İsṭ kiralı)—had become exempt from the obligation to pay a yearly tribute, and when Turkish preponderance disappeared, the Paḡhas of Budin were given the task of counselling the weakening of the Empire. To this end the Paḡhas utilised and inspired controversies among local elements and supported the movements of the discontented Hungarians against the Hapsburgs. The dealings of the Turks with the Vienna Court of the Hapsburgs and the Court of the Princes of Transylvania resulted in a number of inter-state agreements, the ground for which had been prepared by the Paḡhas of Budin (Peace of Zsitvatorok in 1606, the agreements of Vienna in 1616 and Konáron in 1618, the peace treaties of Gyarmat in 1623 and Szöny in 1627 and 1642).

The population of the town underwent a radical change under Turkish rule; it is to be noted that Budin was not a populous city before the Turkish occupation, the number of inhabitants being probably below 5,000. A part of them had already left Budin during the civil wars, while a still greater part, viz. the employees of the Royal Household, the soldiers and officials as well as the persons in the employment of the Church, emigrated after the Turks had taken Budin. The oldest known list of Turkish tax-assessments enumerates among the inhabitants of Budin 235 Christian (*ghor*), Hungarian, 23 Jewish and 60 gipsy (*ḡipṭi*) heads of families. As the military personnel of the Turkish garrison (about 2,000 men at the beginning), the employees of the Turkish offices, and the Muslim religious functionaries outnumbered the original or native population at the ratio of 5 to 1, the change in the population was far-reaching from the very first days of the occupation onwards. Budin had thus become a Turkish military town, the population of which was nevertheless far from being Turkish in origin; most of the people in Budin with Muslim names were but newly converted Slavs from the Balkans. (This is clearly evident in the case of the gipsies, the majority of whom bore the theophoric name N. b. 'Abd Allāh). Turks of pure extraction formed a minority in the population of Budin, as did the Hungarians, Jews, Albanians, Greeks etc. and they remained in the minority throughout the period of occupation.

The spiritual life of the town was not remarkable. The magistrates and public offices were occupied by the "men of the pen" (*adā' kalmān*): viz. the officials of the administrative authorities, the

Pasha's divan, the local financial administration, the school-masters and the employees of the mosques. We know of religious works (mostly copies only) written in Budin, and we are also aware of certain exponents of religious life at the very beginning of the epoch. Both the names and locations of several dervish establishments are known; the names and memory of a number of *bábás*, together with the mystery clergies, to their persons, lived for a long time, the memory of one of them, that of *Gül-Baba* [g.u.], having survived the age of the Turkish occupation by many centuries. We even possess some sparse data concerning secular intellectual life. We know that folk-singers and minstrels recited epic poems to the frequenters of coffee-houses and of *lonczakozás*, in which poems the history of past centuries and the daily fights of the neighbouring borderland were commemorated; it is further known that Budin's beauty was glorified in meditative songs by local poets (Wüdjüdi and perhaps others as well). In the towns and the border provinces traditional Turkish folk songs were sung and new ones probably composed. Of works in prose we know the rather sketchy biography of Sokollu Mustafa, the able Ottoman governor of Budin (1566-1578). It was most probably compiled in Budin in Sokollu Mustafa's lifetime. There is only one among Budin's literary figures who achieved universal repute: Ibrahim Pefewi (g.u.), the historian. He was employed by the local *defterhâne* for some time, lived for many years in Budin, and, after having left it, returned to Budin on many occasions because of his family connections.

The spiritual life of the Christians (oriental and western) and of the Jews was, as far as can be judged from the sporadic records, rather primitive.

The Turkish occupation meant a radical change in the town's economic life as well. The markets had to satisfy the new needs of the new inhabitants of the town, the soldiers of the army of occupation, who brought with them some tradesmen of their own. The craftsmen dealing in household articles and clothing imported not only patterns and fashions but also a quantity of various materials, such as cloth from Bosnia, *Đjambolu*, *Salonica*, freeze carpets, finished leather-goods, household articles, vessels, arms etc. These articles were certainly more numerous on the local market than the scientific, literary, musical and fabric imports from the West.

Industrial development adapted itself to the new requirements. While the artisans from the Balkans (tailors, shoemakers, barbers, tinsmiths, gunsmiths), manufactured clothes, boots, vessels and arms that suited Balkan and Turkish taste, the market of Budin could offer similar articles (Hungarian apparel, Hungarian boots) manufactured in the Hungarian style for the Hungarian inhabitants of the countryside. However, only one or two of the new industries succeeded in taking root, e.g. the production of simple broadcloth (*qayash*) as made by the Jewish women in Budin, and further the dressing of skins. The Turks had methods of skin-dressing that were different from, and superior to, the methods employed by the tanners who worked in Hungary before their arrival; the new type of leather industry was then adopted not only in the towns inhabited by the Turks but also in the country, as is evidenced by the topographical term "tabán" (the Turkish *debbi* [dabbane]) still preserved in many Hungarian townlets.

During the sieges of 1684 and 1686, Budin fell completely into ruin, its medieval buildings,

together with those built in the Turkish era, were destroyed, and its Turkish and Muslim inhabitants were either captured or emigrated at the termination of the hostilities. The Buda of later times and the Budapest of our time have hardly anything to show in the way of records and remnants from the Turkish era.

#### Bibliographical references

There are scattered data concerning the external history of the town in the writings of the Turkish and Hungarian authors of the epoch [Ljéblázde about the occupation in 1541, Pefewi and the Hungarian Miklós Istvánffy on the fights around 1680, Káldi and, more extensively, Süldádr, especially as regards the siege in 1684]. All this has been adequately summed up by M. Cavid Bayazid (A. A. II, Istanbul 1942, 745-50). A great amount of topographical data will be found in the works of Ewliya Celebi and Süldádr, as well as in the military maps made during the years of the reconquest. The best Hungarian works are *A magyar nemzet napjai a mohácsi vérszínben* (The Days of the Hungarian Nation after the Catastrophe of Mohács), by Miklós Jancsó, Pest 1846; *Buda és Pest 1686-1686-ban* (The Retaking of Buda and Pest in 1686) by Árpád Károlyi, Budapest 1886, second edition in 1936; bibliographical material for the lives of the Pashas of Buda in Antal Gévay's *Versuch eines chronologischen Verzeichnisses der Türkischen Statthalter von Ofen* (in J. Chmel's *Der österreichische Geschichtsforscher*, Vienna 1841, II, 26-90). All these contributions were summed up by Lajos Fekete who, in his work: *Budapest a törökökben* (Budapest during the Period of the Turks) — published in Budapest in 1944 as the third volume of *Budapest története* (The History of Budapest) — also utilised Turkish archive material containing many additional data about the composition of the population and its material and spiritual life (G. Flügel, *Die Arabischen, Persischen und Türkischen Handschriften der k. k. Bibl. in Wien*, vol. II, 441 ff.; *Türkische Rechnungsbücher*). **BUDJÁK**, southern Bessarabia (the name Bessarabia formerly denoting only Budjak). In Turkish *budjak* (Budjak) in the Turkish of the Kumans who had settled here earlier means 'corner'. This area, from 638/1241 on, had formed part of the empire of the Golden Horde (see *BATU*). When it was in decline, the area was occupied temporarily by the *coyovode* of Wallachia (ca. 746/1345), and later by the *coyovode* of Boghdán (g.u.) around 802/1400. As a result of the joint action of the Ottoman and the Crimean Tatars

first Ak-Kirmán and Kili in 889/1484, and then the whole of Budjak in 943/1538, came under direct Ottoman rule (see *BOGHDÁN*). Budjak formed the Ottoman *sandjak* of Ak-Kirmán (g.u.), the boundary running from Solukça on the Butna through Gradishtë to Kili (Chilia); the Crimean *Khán* who had co-operated with Süleymán I during the 945/1538 campaign settled the Noghay tribes in Budjak (the Masúrs, the Orks, the Kasáys, the Masáys, the Or-Moheds, the Tatúds, the Yediks, the Džan-boyluk) (cf. *Al-Sab' al-ayyár*, 106), thus reinforcing the earlier Tatar inhabitants. In 1067/1657 Ewliya Celebi reported (V, 106) that these Tatars formed 200 villages and were very wealthy; the villages towards Bender contained some Tatars or were composed entirely of Wallachs; the villages of Ismail were wholly Tatar. Toward 978/1570 Bender and Ak-Kirmán were centres of *sandjaks* under the *beglerbegi* of Özü (g.u.), whose seat was at Ak-Kirmán or Silistre. The Tatars of Budjak were under the administration of a *Yalı-aghaz* appointed by the Crimean *Khán*, and later under the second heir to the *Khánate* (the *Núr al-Din*), who resided at *Khán-kishlak*, south of Bender.

The struggles against the Kazaks (Cossacks) and Poles in 1600, the *bag* of the Noghays, Kasmir distinguished himself, and the Ottomans supported him against the Crimean *Khán* and made him *beglerbegi* of Özü, in an endeavour to wrest control of the Noghay Tatars from the *Khán*. In 1111/1699-1113/1701 the Noghays of Budjak (4000 families) threw off their obedience to the *Khán* and asked to be recognised as Ottoman subjects; on this occasion the Porte did not encourage them, and Dewlet Geray (Giray) forcibly transferred 700 to 800 families to the Crimea (*Al-Sab' al-ayyár*, 262-66).

In 1184/1770 Budjak was temporarily invaded by the Russians, and thereafter Orthodox Christian Gagauz Turks and Bulgars began to immigrate from Dobruja (g.u.) into Budjak. By the Treaty of Bucharest (28 May 1812) the Porte ceded Budjak to Russia, and the majority of the Tatars emigrated to the Dobruja, Bulgaria and Anatolia.

**BUDJNÖRD** (BOGHDÁN). 1. Town in *Khurásán* situated at the northern foot of Mt. Aláhdž, 57° 17' E. Long. (Greenw.) 37° 20' N. Lat., alt. 698 m.

We find no information about the town before the time of the Safavids, when the Shadfi tribe of Kurds was settled in this area by Shah 'Abbás. It is uncertain whether Budjdnör was called *Büzdandj* before this time, but the ruins of an old citadel (*arg*) and other structures indicate that the town is old.

2. District of which Budjdnör is the capital. The population of the *shahrstán* has been estimated ca. 150,000 (1930), composed of Turkománs, Kurds and Persians.

**BUDÖH** (see SUPPLEMENT).

**BUDUKH** (see SHAN DAGU).

**BUGHÁ AL-KABIR** (the elder), a Turkish military leader who played a political rôle during

a troubled period under the 'Abbásid caliphate. Under al-Mu'tasim and his successors, he distinguished himself in several expeditions against rebellious tribes in the region of Medina in 230/844-45, in Armenia in 237/851-52, and against the Byzantines in 244/857. About at the time of the assassination of al-Mutawakkil in 247/861, he returned subsequently to Sámarrá and, making common cause with the other Turkish officers, compelled the succession of al-Mu'ta'ín in 248/862. He died in the same year.

His son, Músh b. Bughá, came also to occupy an important place in the political scene at Sámarrá, and to direct for a time the *harid* service.

**BUGHÁ AL-SHARÁBÍ** (the cup-bearer), also called AL-SAGGIL (the younger) a Turkish military leader who bore the title *mauid amir al-mu'minin*, and who is not to be confused with his contemporary of the same name, Bughá al-Kabir. After having fought, under al-Mutawakkil, against the rebels of *Khaybar*, he led the plot against this caliph, whom he suspected of wishing to reduce the influence of the Turkish officers, and had him assassinated. With his ally Wañf, he subsequently held power under al-Mu'tasim and al-Mu'ta'ín. Al-Mu'taziz, however, ascending the throne in 232/846, sought to rid himself of this ancient enemy, the murderer of his father, and after relieving him of his functions and privileges, succeeded in 254/868 in having him imprisoned and put to death.

**Bibliography:** Tabarí, index; Ya'qútí, index; *Buldán*, 262; Baládhurí, *Futuh*, 130; Mas'údí, *Murád*, vii, index; Ibn al-Aghír, index; A. Amin, *Zuh al-idám*, I, 11, 20-22; D. Sourdel, *Le vizir 'abbáside*, I, Damascus 1959, index. (D. SOURDEL)

**BUGHURÁ KHÁN** (see KARAKÁNDI).

**AL-BUGHITRÍ, MAERIN b. MUHAMMAD**, *Ibádite* historian and biographer born in the village of Bughitira (also: Buktira) in the western region of the *Đjabal Nafisa* (g.u.). According to the *Kutab al-Siyar* of Abu 'I-'Abbás Ahmad b. Abi 'Uthmán al-Shammákhí (g.u.), an important historical biographical *Ibádite* work of the 10th/16th century, al-Bughitir was a pupil of two scholars of *Ibádite* history and biography, namely Abi Yahyá Tawfik b. Yahyá al-*Đjannawí* and Abi Muhammad 'Abd Alláh b. Muhammad b. 'Abd Alláh b. Mas'úd (also called al-Muhammád). While studying with the first of these masters, in the village of *Idnawán* also *Đjannawí*, today *Idnawán* in the *Đjidd* region, al-Bughitir wrote during the month of Rabi' II 599/December 1202-January 1203 his principal work on the biographies of celebrated *Ibádites* born in the *Đjabal Nafisa*. This work, known by the names of *Kutab siyar maghuyih Nafisa*, *Siyar Nafisa*, or perhaps more often *al-Siyar*, is lost today; it constitutes one of the principal sources of the *Kutab al-Siyar* of al-Shammákhí, who has given us substantial extracts from it, especially in the middle part of his work (143-144). The copy of the work which al-Shammákhí had at his disposal, was probably made in the first years of the 8th/14th century by Yahyá b. Abi 'I-'Izz al-Shammákhí of Tigherim, a famous *Ibádite* copyist and scholar of the *Đjabal Nafisa*.

**Bibliography:** Abu 'I-'Abbás Ahmad al-Shammákhí, *Kutab al-Siyar*, Cairo 1307/1883,

**BUGI** [see *CELEBES*].

**BUHAYRA** (Ar.), lake, is probably the diminutive, not of *bahr* "sea", as one would expect, but of *bahra*, which is applied to a depression in which water can collect. Thus, in North Africa, *bhira*, pl. *bhāyir* denotes a low-lying plain, in eastern Algeria, northern Tunisia and part of southern Morocco; its most common meaning, however, is that of "vegetable garden, field for market gardening" or "field for the cultivation of cucurbitaceous plants (melons in particular)" (see W. Margais, *Textes arabes de Tanger*, Paris 1911, 227). (Ed.)

The word *buhayra* (lake) underlies a toponym which is often encountered in Spain and Portugal in the forms *Albufera* (Valencia, Alicante, Majorca), *Albufera* (Almería, Albora), *Albufera*, and *Bajador*, *Albajora* (Almería), and *Albufera*, a coastal town in Algarve, Portugal; a diminutive of the diminutive appears also in *Albufera* (Alicante). The most important of these lakes is that at Valencia (see *BALANSIYA*), about 9 kms. from the town, the last remnant which is left (about 13 sq. kms.) of the great lake which used to cover the deep valleys of the Turia and the Júcar in prehistoric times. It was one of the biggest lakes in Spain, but of late years its area has been diminished in order to provide more rice fields on the north-western and southern shores. Nowadays its diameter is only 6 kms.

Ibn Mardāwī [c. 10] drowned his sister's two sons there when he saw himself abandoned by his people, just before the loss of his throne and his death. When Valencia was divided, James I (the Conqueror d. 1276) reserved the estate of *Albufera* for himself. At the beginning of the 19th century the crown relinquished this fine property to Godoy, and Napoleon offered it to Marshal Suchet before it became a national patrimony once more.

The word *buhayra* meant an irrigated garden in Almoḥad times. The battle in which the Almoḥads were routed by the Almoravids in 524 (1139) is known by the name of the Battle of the *buhayra* of Marrakush; the *buhayra* of Seville, subsequently called Huerto del Rey, was improved by Yūsuf I, son of Abd al-Mu'min. (A. HICER MORALES)

**BUHAYRA** (Behray), name of the western province of the Egyptian delta. This was first a pagarchy (*thara*) of small extent, limited to the north-eastern portion of the outskirts of Alexandria; the name may be an allusion to the lake of Abūkir, called also *buhayrat al-Ishandariyya*, and Yākūt was well aware that this last name applied to a series of neighbouring cantons of the town.

At the time of the division into provinces in Fatimid times, *Buhayra* was an extensive region, situated west of the Rosetta branch, and reaching from the point of the delta right to Alexandria but excluding it. The great port was rarely associated administratively with this province, of which the capital was and remained Damādhūr.

The region of Tarrina, and further north the wādī Natrān, possessed nation deposits, which were worked in the Middle Ages.

'Umari and Kalkashandī give precise information on the Arab (in the strict sense) population of *Buhayra*.

During Manlik times risings of Arab tribes and Bedouins of the Western Desert are frequently recorded. These rebellions began towards the end of the 9th/15th century; there were terrible punishments: summary executions, the enslavement of women and children, and confiscation of flocks. In the Ottoman period the troubles quite often provoked punitive expeditions, and the province was far from being quiet during the French occupation, as one sees from the massacre of the small French garrison of Damādhūr. After the departure of the French great importance was accorded to the Bedouin of the district, in whose favour an imperial firman was promulgated, confirming their ownership of their territories. But their turbulence, of which the Manlik bey Muḥammad Aḥīf momentarily took advantage, could scarcely be overcome. Muḥammad Aḥīf made no attempt to conciliate the Arabs of the province in his struggle against Muḥammad 'Alī.

**AL-BUHAYRA AL-MAYYITA** (or *AL-MUNTINA*) (see *NAHR LOT*).

**BUHLŪL**, *al-Muḥabbir* *al-Kāfī*, the name of a lunatic of al-Kūfa. We first meet him in the *Bayān* of al-Djāhīz (ed. Hārūn, ii, 230-1), who depicts him as a simpleton exposed to the rough jokes of passers-by, and definitely as a *Shī'ī* (*yahghayya*). It is possible that he met Hārūn al-Raḡhīd at al-Kūfa in 188/804, as Ibn al-Jawād reports (*al-Aḥbāṣ*), ed. 1277, 180 ff.; see *JRAS*, 1907, 15), and perhaps he even addressed some remonstrances to him (al-Shā'irān, *Tabāḥīṭ*, 53); but it is certain that legend, as far back as the 4th/10th century and maybe even before, set on his name to make of it a kind of prototype of the "wise fool" (*al-ḥakīm al-madīnī*) and to attribute to him a number of anecdotes, some pious and edifying stories, in addition to some didactic verse (see Charvin, *Bibl. ar.*, vii, 126 ff.; MSS. Berlin, *passim*; *Bibl. nat. de Paris*, 615, n° 365). It is likewise claimed that he produced some traditions (al-Dhahabī; Ibn Taghribirdī) but it is probable

that he has been confused with various characters similarly possessing the name of Buhlūl, and among whom are to be found genuine traditionists (see particularly Ibn Ḥaǧǧar, *Lisān al-Mīdān*, s.v.). One of them, who lived in Ifrīkiya and who died in 183/799, was named Buhlūl b. Raḡhīd, which perhaps explains the persistent tradition (see Ibn Taghribirdī, i, 518; *EDMG*, xlii, 115) which identifies Buhlūl with al-Sabtī, legendary son of Hārūn al-Raḡhīd (see Charvin, *Bibl. ar.*, vi, 193, and *ibid.* quoted).

Buhlūl's tomb in Bagdhād has been described by Niebuhr (*Reisebuch*, ii, 301 ff.; Le Strange, *Baghdad*, 350), and an inscription dating from 501/1100-8 designates him as the sultan of the *madīdhāt* and as an "obscure, dim soul" (*nafs mutammasa*). People called him Buhlūddīna, "the wise fool", and they made of him the kinman and the buffoon of al-Raḡhīd, and they told stories in the coffee houses about his wit and subtlety. The culmination of the development of the legend of Buhlūl was reached when he became the hero of erotic tales as in *al-Rawḍ al-Ḍīr* (ed. 1315, 9) of al-Nafzāzī (8th/14th century), who makes him a contemporary of al-Ma'mūn (see also Meissner, *Neurab. Geschichten*, v and 73-83).

The word *buhlūl* is given in Arabic dictionaries with the meaning of "merry, jolly" (*dāḥabī*), "a generous and distinguished man", and it is still this sense which Redhouse (*Turkish and English Lexicon*, 476a) and Dozy offer (following Boettcher), although the latter does not fail to call attention to the meanings of "booby", "idiot", etc. which are already encountered in the 14th/20th century. Ibn Khaldūn (*Muḥaddithin*, ed. Opstendörfer, i, 201 ff.). Currently, and particularly in North Africa, it has the general meaning of "simpleton", "ninny", etc., and H. Wehr, *Wörterbuch*, gives "wag, clown, buffoon". Owing to the fact that *bahlūl/bahlūlāt* still sometimes denotes an intense hilarity (see Douit, *Mazmūn*), D. B. Macdonald (*IEJ*, 8.v.) infers that the present use of the word rests also on its literal sense and not on the existence of an historical Buhlūl. It is of course possible that there may be some confusion with *buhlūl/bahlūl*, which have the same meaning, but it is probable that the modern meaning proceeds from the proper name.

**Bibliography:** Add to the references given in the text, Brockelmann, *S.*, 101, 102, 103, 104.

**AL-BUHŪTŪRĪ**, *Abū 'Alī* *al-Walīd* b. 'Umayyad (ALLAH), Arab poet and anthologist of 3rd/9th century (266-284/821-827), born at Manbij (some state his birthplace to be the neighbouring village of Hurdūfān), into a family belonging to the Buḥtur, a branch of the Tayyī; not only did he never completely sever connexions with his native town, where the fortune amassed during his long career as court poet allowed him to acquire property, but he took advantage of his tribal origin to make useful connexions for himself.

After having dedicated his first poetic efforts (223-6/327-40) to the praise of his tribe, he sought a patron, and found him in the person of the Tā'ī general Abū Sa'īd Yūsuf b. Muḥammad, known as al-Dhahīl (g.n.), at whose house he met for the first time the poet Abū Tanmūn, who also claimed to be a Tā'ī. Abū Tanmūn, attracted by his youthful talent, apparently recommended him at first as a panegyrist to the notables of Ma'arrat al-Nu'mān, who made him an allowance of 4,000 dirhams, but nothing remained of his output during this period. In any case al-Buḥtūrī was not slow in

joining Abū Tanmūn in the retinue of his patron Mīlik b. Tawī, governor of Mesopotamia, and then in following him to Bagdhād, where, by attending the courses of the most celebrated scholars (notably Ibn al-A'fābī) and by striving to acquire the manners of the capital, he prepared himself to extol important personages in the hope of getting close to the caliph.

However, he had scarcely any success with Ibn al-Zayyāt, and instead allied himself to a family of his own tribe, the Banū Ḥumayd, some members of which were established in Bagdhād, and he dedicated several odes to their chief, Abū Nahāḡīl; then he left 'Irāq at the same time as Abū Tanmūn, in 230/844, to return to al-Thaḡūrī, then at Mosul.

Contrary to all expectation he does not seem to have grieved at the death of Abū Tanmūn (232/845), from whom nevertheless he had received his first encouragement, and part of his poetic training; this was the first instance of the ingratitude and opportunism of which he gave ample proof later.

No sooner had al-Mutawakkil succeeded than he returned to Bagdhād, and thanks to the good offices of Ibn al-Munajjidīm won the favour of al-Faṭh b. Khāḡān, who introduced him to al-Mutawakkil, probably in 234/848. Thus it was that a brilliant career as court poet began for al-Buḥtūrī.

In spite of a passing odour in their relationship caused by inevitable jealousies, he enjoyed the constant patronage of al-Faṭh, to whom he dedicated his *Ḥamāsa* and a number of panegyrics; he also praised numerous great figures of the empire, but it was for the caliph that he kept the greater part of his poetic output; he lived on familiar terms with him, enjoying his confidence, supporting government policy even when this clashed with his personal views which had a *Shī'ī* bias, and proclaiming the virtues and rights of the 'Abbasids. The verse of this period contains many allusions to political happenings—the rebellion at Damascus (236/850), the revolt in Armenia (237/851), his rising at Hims (240/854), the caliph's visit to Damascus (242/858), the building of al-Mutawakkiliyya (245-6/859-60), etc.

Whereas heretofore the erotic prelude to his *ḥayās* had been dedicated to a conventional *ḥan*, there now appeared in his verse a woman of flesh and blood, 'Alwa bint Zurayka, who lived at Aleppo and had a country house in the district, at Ḥīṭyās; without doubt he used to see her during his journeys in Syria, for his stay in 'Irāq was never interrupted, and it is possible that he had a great passion for her, although he mocked her in a somewhat indecent poem.

After having been concerned, as al-Mas'ūdī reports of him, in the assassination of al-Mutawakkil and al-Faṭh (247/861), he thought it prudent to retire to Manbij, but he reappeared soon afterwards with a panegyric of al-Mu'tasir, and afterwards addressed his praises to the *naṣir* Ahmad b. al-Khāṣṣ, against whom, incidentally, he did not hesitate to incite al-Musta'in some time later. He tasted fame once more under al-Mu'tasir, to whom he dedicated numerous poems, in which are echoes of the unrest which was watering the provinces on the empire with blood, but which by no means prevented him from welcoming al-Musta'īf as if nothing had happened, and from becoming temporarily a poet of piety to humour the new caliph. His fame declined under al-Mu'tasim, whose fiscal policy caused him some anxiety over his fortune, and his last poem dedicated to a caliph is in praise of al-Mu'taḍī (279/892). He then left 'Irāq and became court

post once again with Khumrawayh b. Tulūn, and finally then returned to his birthplace where he died, after a long illness, in 383/97.

At the beginning of his career, al-Buhturi wrote, almost exclusively, vainglorious poetry or poems about his desert wanderings (a notable example is the famous poem of the jackal, *l. 120*), but as soon as he became court poet the paeueyric became the main form of his work. In this style he respected, except perhaps at the end of his life, the topographical form of the *hamsa*, relating a conventional portrait of his various patrons; however, the paeueyric is successfully heightened by splendid descriptions (in particular of the palace) where, thanks to a fine sense of poetic imagery and picturesque detail, al-Buhturi stands unobalanced; it was only later that he devoted an entire poem to describing a palace, the *Twin of Chosroes* (see 'Abd al-Kādir al-Maghribī, in *MMLA*, 1926, 77-88, 241-52, 427-36, 577-85). Though the ideas he expounded were generally without originality, his style, characterised by a simple vocabulary and musical and sonorous verse, is his great virtue, and puts him above the other court poets with whom at first he had to compete. He excelled equally in elegy but scarcely succeeded with invective, which he wrote only in the paeueyric, and most often addressed to a former prospective patron who had not fulfilled his hopes; and as a matter of fact, according to one story, on his deathbed he advised his son to destroy all his satires. Occasional poems are few in his *diwān*; likewise, love themes are only found in the prologues to the *hamsas*, and it was as a mere concession to fashion that he sang the praises of a few ephemes.

Western critics, who, after all, have taken little interest in al-Buhturi, class him among the neo-classic poets, and this label suits him perfectly. For their part, Eastern critics consider him, with Abū Tammām and al-Mutanabbī, as one of the most important poets of the 'Abbasid era; the comparison between him and his master Abū Tammām is a favourite subject for discussion, after having been a point of controversy even while al-Buhturi was alive; in his own opinion his best works were inferior to the best work of Abū Tammām, while he thought his own most mediocre poems to be better than the worst of Abū Tammām. This theme is treated in detail in two works which tend respectively to favour Abū Tammām and al-Buhturi: *Abū Tammām et al-Buhturi*, Cairo 1356/1937, and *al-Mawāḍi'a bayna Abi Tammām wa'l-Buhturi* of al-ʿAmīdī (Cairo 1363/1944).

Al-Buhturi had this in common with most of his fellows, that he begged ceaselessly and rejected no means of getting money; this greed for gain destroyed his moral fibre and led him to dissimulate in order to follow slavishly the fluctuations of the religious policy of the caliph who was his patron.

His success as court poet earned him bitter enemies among his competitors (though he seems always to have been on good terms with the Shīʿī poet Diʿbāl (q.v.)); naturally it also brought him into contact with all the eminent figures of the empire, sultans, generals, governors, courtiers, secretaries, and scholars. His contacts also allowed him to be conversant with many political facts, of which one hears echoes in the *diwān*; this last, independently of its literary value, presents an undeniable documentary interest (cf. M. Canard, *Les relations de la guerre byzantine chez les poètes Abū Tammām et Buhturi*, in A. A. Vasiliev, *Byzance et les Arabes*, I, Brussels 1935, 397-403).

Indeed it forms a useful supplement to the chronicles of the time to which it often adds details, whether in giving the full names of personalities, or in describing monuments, or in mentioning occurrences which historians appear to have overlooked.

The *Diwān* was published at Constantinople in 1882, then at Beirut and Cairo in 1911, but these editions are rather faulty and incomplete, so that a new publication taking into account the various MSS. (notably that in the Bibliothèque Nationale in Paris) would be most welcome. A commentary compiled by Abū 'l-'Alī al-Ma'arri, 'Abū al-Walīd, was published at Damascus in 1355/1936.—Of the *Hamāsa* only one MS. (University of Leiden) has been discovered, which is evidence of the lack of success of this anthology, to which the verses are grouped according to their themes and not according to their genres, as in that of Abū Tammām; there have been three editions: Leiden 1909, Beirut 1920, Cairo 1929.—A third work attributed to al-Buhturi, *Ma'āni al-Sha'ir* (or *al-sha'ar*), is lost.

Achar (unpublished). (Cf. PELLAT)

**BÖK**, the generic name for any instrument of the horn or trumpet family. Wind instruments played by means of a cup-shaped mouthpiece may be divided into two classes, viz.: 1. the horn or conical tube type; and 2. the trumpet or cylindrical tube type.

1. The horn type. Where the *pūr* and *nāṣir* mentioned in the Qur'ān (vi, 71; ix, 18; lxxviii, 16) are the horns, Abūnūd al-Hamālī (d. 241/855) and al-Jawharī (d. ca. 396/1005) say respectively, the early Persians and Arabs certainly knew of a conical tube instrument of the animal horn type. An example may be found in Greek art of the 14th century B.C. in which an Asiatic warrior is displayed sounding such an instrument, whilst a Greek warrior is sounding a straight trumpet (Gerhard, *Afrique*, *Yazem*, fig. 11). The Arabs appear to have known the crescent-shaped horn as the *harn* (Seybold, *Glossarium Latino-Arabicum*, 579), cognate words being found in the Akkadian *harnu* and the Hebrew *harn*. This instrument is still used by the perambulating dervishes in Persia. According to Turkish tradition the *dārūsh harnu* (bārīn) (dervish horn) was invented by Manāḥ (the legendary Persian king (Ewliya Celebi, iii, 238). For a design of the instrument see Advielle, 9, and Lavignac, 3075, by whom it is wrongly called a *naṣir*. Actual specimens may be found in museums, e.g., the Crosby Brown Collection, New York, no. 2454. There is a large Hispano-Moorish horn of ivory of the 4th-6th/10th-11th century in the Victoria and Albert Museum, London (no. 2925/1862). Much larger instruments were also in use. Ibn

Battāta (d. 779/1377) describes such an instrument of the Sūdān made from an elephant's tusk (Poyages, iv, 121), hence the term elephant horn. An Andalusian Arab, al-Shakandī (d. 629/1212), speaks of a monster horn (*harn*) known as the *abū harn* ('father of horns') as related by al-Makkārī (*Analectes*, ii, 144), which would be comparable to the monster horn (*bāḥ al-habir*), the height of a man, referred to by Muhammad al-Saghir (*Tadhkirat al-Nisrin*, 45).

A horn made out of a shell was known to the Arabs of the Pyreneas in the mid-9th century. Al-Layth b. al-Mata'arif says that it was used by sailors, and that it was a spiral conch resembling the *moshāf*, apparently something like the *ghanzh* of India (Day, *Music and Musical Instruments of Southern India*, 151). It was probably the instrument which the Arabs called the *bāḥ*. It was not a warlike instrument in the early days of Islām, as the Arabs did not use horns in battle at that time (Ibn Khaldūn, *Muḥaddima*, xvii, 44). A poet quoted by al-Aḡma'ī (d. 828) says that the *bāḥ* was used by the Christians for that purpose, and, according to al-Jawharī, the Arabs borrowed that usage from them. In fact the word *bāḥ* appears to have been derived from the Greek *βαυχή* or the Latin *buccina* (Day, *Suppl.*, 121), which in the *Tah al-Arṣ*, a Persian word, *bāḥ* is considered to be the etymological original, an 'obviously improbable' derivation (Lane, *Lexicon*). In the 4th/10th century the Ikhwān al-Sha'fī refer to the *bāḥ* to illustrate their discussion on acoustics (Bombay ed., i, 89). From that time the *bāḥ* began to play an important part in martial and processional music in all Islamic lands (see *Antiquity*, in the *Art de Laya* ou *Laya* (ed. Marneghien, i, 80, ii, 382, 405) it is in constant use for those purposes, whilst the *naṣir* or trumpet is only mentioned once (ii, 656). Yet it should be understood that the term *bāḥ* was used for all instruments with a conical tube, whether crescent-shaped or straight, irrespective of the material of its facture,—shell, horn, or metal. Incidentally, the metal horn (*ṭārīq*, *parīq*; *harn*) is claimed to have been introduced by the Seldjūqs of the 5th/11th century (Ewliya Celebi, xii, 238). In view of the use of metal instruments by both Persia and Byzantium much earlier, that statement cannot be accepted. The *bāḥ* is mentioned in Persian as early as Firdawsī (d. 417/1026) and one supposes that the instrument was slightly different from the *ṭārīq* which is depicted on the Tāki Bustin sculptures (590-628 A.D.), and is still the type to be found there (Advielle, 9; Lavignac, 3075). In Moorish Spain the *bāḥā* of Al-Hakam II (d. 369/979) were mounted with gold. It was this monarch who, having devised the boring of the tube with finger holes and the insertion of a beating reed at the blowing end instead of a cup-shaped mouthpiece, introduced an instrument of the saxophone type (see MIZÉAN). The Spanish *albuque* is its lineal descendant.

The Turkish and Persian equivalent of the *bāḥ* was the *hōrā* (*bārī*) (Hādjdī Khalifa, i, 400; Meninski, s.v. *bār*; Ewliya Celebi, xii, 238; Toderini, i, 338). The word is to be found in modern Egyptian and Syrian Arabic (Anauy, *English-Arabic*, *Focus*, *hōrā*, s.v. *bagle*; *Conversations*, *MFOL*, vi, 29). It has become the Balkan *hōr* and *hōrye* (cf. the Sanskrit *bharīyā* and the Ghanaian *hōr*). The *burghū* or *būrgū*, a Cağatay word, was a huge horn introduced into the Islamic armies during the Mogul and Tatar regime. Ibn Ghaybī (d. 1435) says that it was larger than the *naṣir*. The name survives in the *burunga* of India (Day, 153; Lavignac, 358) where it

is another name for the *harnā*. Another instrument of the same group mentioned by Arabic authors is the *ghāfir*. Al-Jawharī says that it is a non-Arabic word, which Ibn al-Aḡlir Majdī al-Ḥafī (d. 1310) has rightly surmised was borrowed from the Hebrew *gophar*. Firdawsī includes the *ghayfir* among the ancient martial instruments of the Persians. The existence of the Arabic word *ghafir*, as mentioned by A. X. Idolsin (*Jewish Music*, 495, and J. Reider (*JQR*, Jan. 1934), must be accepted with reserve. Fāris mentions a modern Arabic trumpet under the name *ghāfir* (*Hist. pōn.*, i, 157), but see Mahillon (i, 182; and the *Saturday Review*, June 1882, 696).

2. The trumpet type. The chief instrument of the cylindrical tube class was the *naṣir*, although the name is frequently given to the straight instrument of the horn type (see *Hist. Nachrichten von Marokko* of Frey, pl. xxix). The name *naṣir* in this connexion occurs first in the 5th/11th century under the Seldjūqs, although the type may have been known earlier. Kurt Sachs (*Reallexikon der Musikinstrumente*, s.v.) erroneously derives the word from *naṣaba* ('to blow'). Originally the term *naṣir* meant 'a call to war', and so a trumpet used by such was called a *bāḥ al-naṣir*, i.e., 'a military horn or trumpet'. Ibn al-Tahkāk, Ibn al-Fahri (30) speaks of a large *bāḥ* similar to the *bāḥ al-naṣir*, from which we may reasonably deduce that the ordinary *bāḥ* was smaller or shorter than the *naṣir*. The bright incisive tone of the *naṣir*, which was due to its cylindrical tube, was better for signalling purposes than the hoarse sound of the *bāḥ* with its conical bore. The difference between them may well be illustrated by the verbs used to describe their sounding. We read for instance that the *bāḥ* player 'blew' (*naṣaba*) his horn, whilst the *naṣir* player 'cried out' (*yāka*) with his trumpet. For the respective numbers of the *naṣir* and *bāḥ* used in the Islamic army bands, see *TARĪKHĀSA*. In the time of Ibn Ghaybī the length of the *naṣir* was 108 cm. (= 2 cub).

The *harnā*, according to Ibn Ghaybī, was a trumpet folded in the centre of its tube into a 'S' shaped figure. Some of them were of enormous length. The Persian dictionaries give the form as *harnānā*, and it is thus vocalised in the *Shāh-nāma* of Firdawsī. It is generally acknowledged (Ruhle, 28; Schlesinger, xviii, 226, 353; Golpin, 200) that the cylindrical horn instruments were borrowed from the East. Perhaps those *buccina Turca* and *corn saracenis* which the Crusading chroniclers record included the *naṣir* and *harnā*. Richard Cour de Lion, in the Third Crusade (1189-92), was well equipped with *robaz*, *lits*, *corns* and *buccinas*, but at Messina in Sicily, we read of a *trump* which was different from the tube. Could this have been the *naṣir* of the Hohenstaufen Saracen troops on the island? Yet if the Occident was indebted to the Orient for the cylindrical *naṣir*, the compliment was returned, since we know that Morocco, under Sultān al-Manṣūr (1576-1602) had a *trumpeta* (= Spanish *trompeta*) which was made of brass and was as long as the *naṣir* (*Tadhkirat al-Nisrin*, 127; the translator writes *negy*). Turkey also knew of the European trumpet (*ütrümpala* *borasu*) as well as the English trumpet (*ingiliz borasu*), the latter being the modern wreathed instrument (Ewliya Celebi, xii, 238). Both Niebuhr and Villoteau give designs and descriptions of the 17th-18th century instruments.

**BUKA**, one of the leaders of the group of the Uḡuz of Khurāsān which after the capture and death of its leader Arslan b. Balḡh (127/1037-7) was expelled from the province by Ghaznavid troops on account of its depredations, and continued its pillaging across central and western Iran as far as the borders of Armenia and Upper Mesopotamia, where it was annihilated by the Bedouin and Kurds in 435/1044. See *IF*, s.v., the article *SAḤḤ* (1819), and Cl. Cahen, *Le Malinchah et l'histoire des origines seldjūqides*, in *Oriens*, 1949, 37.

(CL. CAHEN)

**BÜKA**, a place, no longer extant, in northern Syria, whose name is very probably a word of Syriac origin meaning "mosquito", from which fact H. Lammens has inferred that the region was a marshy one. It figures in the Arabic texts of the first centuries of Islam. Nothing is known of its more ancient history, but it is mentioned in the narratives of the conquest by Abū Ubayda of the provinces of Antioch and Kinnastrin, and appears to have had a certain importance in Umayyad times. Then it was near the territory of the Ḍarādījima, placed by al-Balḡhūrī in the Ḍjabal al-Lukhām (Anāns) between Bayḡ and Būḡā. It was one of the places chosen for the establishment under Muʿawīya or

al-Walīd of the Zutt [g.s.] from Sind, who arrived there from ʿIrāk and installed themselves with their buffaloes. Later its defences were strengthened by the caliph Hishām, who built a fortress there. The Byzantines besieged it in 338/949-50, during a raid on Syria by Leo Phocas, and it then belonged to the territory of the ʿAḡshīm [g.s.], but the mentions made of it in the 6th/12th century by Ibn Shaddād and Yāḡūt seem to reflect an earlier state of things. Although it is not known in what circumstances it fell into ruins or was abandoned, by the time of the Crusades it had lost its previous importance, and H. Lammens (*EP*) could establish only by conjecture, based on literary data, the site which it presumably occupied in the ʿAuk [g.s.] depression, not far from the lake of Antioch.

**Bibliography:** Balḡhūrī, *Fuḡh*, 149, 159, 162, 167, 168; *BG*, indices; Ibn Shaddād, *asud* Ch. Ledī, *Maḡrib*, xasii (1934), 179 ff.; Yāḡūt, i, 762; G. Le Strange, *Palestine under the Moslems*, London 1890, 424; M. Canard, *Histoire de la dynastie des Hamdanides*, i, Algiers 1951, 227, 229, 762. (J. SOURDEL-THOMAS)

**BUKA** or **BAGʿA**, denotes according to lexicographers a region which is distinguishable from its surroundings, more particularly a depression between mountains, and *habḡa* was applied especially to a place where water remains stagnant. The word appears frequently as a toponym, as well as its diminutive *bubayʿa*. (J. SOURDEL-THOMAS)

**BOKALĀ**, a term employed in Arabian Arabic (cf. *Baṣṣalā*) to denote a two-handled pottery vase used by women in the course of the divinatory practices to which it gave its name. The operation consisted, basically, of the woman who officiated improvising, after an invocation, a short poem which was also called *bōkālā* and from which portents were drawn. These practices, which seem to have enjoyed a certain vogue during the period when piracy was at its height (women wanted to have news of their men who were at sea), developed into a parlor game. They were recently the subject of an excellent study by S. Benchenen, in *AEO*, Algiers 1956, 19-111 (with numerous texts in translation). (E.G.)

**BOKALAMŪN** (see *ABŪ RALAMŪN*).

**BUKAREST** (see *BOKHREṢṬ*).

**al-BUKAYʿA** (a. *Bukayʿa*) denotes a little plain situated north of the Būḡā [see *Būḡā*] and south-east of the Ḍjabal Ansariyā, at an average altitude of 250 m. It is characterised by an abundance of springs which there give birth to the Naḡr al-Kabīr. It was known in the time of the Crusades by the name *Buqēs* and was dominated by the Hish al-Aḡrā [g.s.] whose ruins still overlook it today (see M. van Berchem and E. Fatio, *Voyage en Syrie*, Cairo 1914-5, 42; R. Dussaud, *Topographie historique de la Syrie*, Paris 1923, 92; J. Weulersse, *Le pays des Aboites*, Tours 1940, index s.v. Bouqalā).

The name *Bukayʿa* is found likewise in Transjordan, where it denotes a small inland plain to the north of the plateau of al-Būḡā in the neighbourhood of Suwayḡil (see F. M. Abel, *Géographie de la Palestine*, i, Paris 1913, 91).

(J. SOURDEL-THOMAS)

**BUKAYR b. MAHĀN**, *Amīr* Hāḡim, propagandist of the ʿAbbāsids at the end of the Umayyad caliphate, was a native of Sijistān and had at first been secretary of the governor of Sind al-Ḍunayd b. ʿAbd al-Raḡmīn. In 102/720-1 he was converted to the anti-Umayyad cause by Maysara

al-ʿAbdī and Muḥammad b. Khunays, and he put at the disposition of their party the fortune which he had amassed in business in Sind. After the death of Maysara he was entrusted with the direction of the movement in 105/723-4 and he was unusually active in gaining supporters among the population of Khurāsān. In 107/725-6 he also sent many emissaries to this region, who with one exception, ʿAmmār al-ʿAbdī, were at once taken and put to death by the governor Asad b. ʿAbd Allāh. Later, in 118/736, he appointed ʿAmmār b. Yazīd as chief over other agents who had been first imprisoned and then succeeded in freeing themselves. ʿAmmār established himself at Marw, took the name of Khālid, and met with some success, but having adopted the doctrines of the Khurramīs [g.s.] was in his turn imprisoned, tortured, and put to death by the governor Asad. This situation disturbed the *imām* Muḥammad, who was not content with the explanation offered in 120/738 by the delegate of the Khurāsān, Saduḡmīn b. Kabīr [g.s.], and despatched Bukayr himself to repudiate publicly the doctrines of Khālid. Bukayr was badly received the first time but the second time succeeded in convincing the ʿAbbāsīd partisans. Afterwards, in 124/741-2, having returned to ʿIrāk and being held responsible for political meetings which took place in a house at Kūfa, he was imprisoned, found on coins, over to his cause ʿIsā b. Maʿīn, from whom, according to an unreliable tradition, he bought a slave, the future Abū Muslim [g.s.]. Set at liberty, he went to Khurāsān in 126/743-4 to announce the death of the *imām* Muḥammad to the partisans of the ʿAbbāsīs, and to make them swear allegiance to his son Ibrahim. He returned to ʿIrāk with the money he had collected in Iran. He died soon afterwards, in 127/744-5, after nominating as his successor Abū Salama Hafṣ b. Sulaymān [g.s.], a choice which Ibrahim later accepted.

**BUKAYR b. WISHĀH**, Governor of Khurāsān at the beginning of the caliphate of ʿAbd al-Malik b. Marwān. A former lieutenant of ʿAbd Allāh b. Khāzim [g.s.], this Tamīm of the tribe of the Banī Saʿd made himself noticed during the troubled time which was marked by the insurrections of the Tamīm, both when he commanded the troops of Muḥammad b. ʿAbd Allāh b. Khāzim at Harāt and when he was the delegate of the governor in Marw after the recapture of the town from the rebels. In 72/691-2 the triumph of the Umayyad caliph ʿAbd al-Malik, who had firmly established his power in ʿIrāk and Arabia, gave him the opportunity to be nominated as his own *amīr* over the province at Marw, and to substitute by force his authority for that of Ibn Khāzim, who had refused to pass over to the Umayyads and was soon to be killed while fleeing towards Tirmidh. But as troubles continued in the region, where the Tamīm were engaged in a veritable civil war, Bukayr was deposed, and, nominated in compensation governor of Tadjikistān, was obliged to cede his place, without doubt in 74/693-4, to the Kurayshite Umayyā b. ʿAbd Allāh b. Khālid, sent by the caliph and perhaps, according to some sources, earmarked for this post since 72/691-2. In circumstances of which the details vary according to the accounts, the evicted *amīr* afterwards profited

by the absence of the new governor, who was away in 77/696-7 fighting against Bulghār, to arouse for his own ends the inhabitants of Marw, and to compel Umayyā to return as quickly as possible to lay siege to the rebellious city. The capitulation which followed was made with honourable conditions for Bukayr, but he continued to intrigue and in the same year was treacherously assassinated by one of his enemies.

**BUKHĀRĀ**, a city in a large oasis in present day Uzbekistān on the lower course of the Zarāfshān River. The city is 722 ft. (222.4 m.) above sea level and is located at 64° 38' E. long. (Greenw.) and 39° 43' N. Lat.

We have few references to the city in pre-Islamic times. In the time of Alexander the Great there was another town in Sogdiana besides Marakanda (Samarkand) on the lower course of the river but it probably did not correspond to the modern city of Bulghār. The oasis was inhabited from early times and towns certainly existed there.

The earliest literary occurrence of the name is in Chinese sources of the 7th century A.D., but the native name of the city, *buḡʿyā*, found on coins, indicates on palaeographic grounds that the name may have been used several centuries earlier. The derivation of this word from Sanskrit *bhūḡra* "monastery" is not improbable in spite of linguistic difficulties, since there was a *dhāra* near Nundīkād, a town apparently the predecessor of Bulghār, and which merged into the latter (cf. Frye, *Notes in HJAS*, below).

The native dynasty was called Bulghār Khudāt (or Bukhārā Khudāt) by the Islamic sources; on the coins we have *buḡʿyā* *yuḡ*, Sogdian for "Bulghār king", indicating that the local language was at least a dialect of Sogdian. Although the names of several of the pre-Islamic rulers occur on inscriptions and in later sources (cf. Frye, *ibid.*) it is only after the Arabic conquests that the history of the city can be reconstructed.

The accounts of the first Arab raids across the Oxus River are partly legendary and require critical examination. The first Arab army is said to have appeared before Bulghār in 54/674 under ʿUḡayd Allāh b. Ziyād. The ruler of Bulghār at that time was the widow of the late ruler Bādīn, or Baddīn. (In Tabarī, ii, 169, in place of her *Kabādī* Khāṭim is mentioned as the wife of the reigning king of the Turks. Perhaps this name is to be read *Kaylīgh* or *Kaygh*, as the Turkish tribal name 70.) According to Narghshī (ed. Scheler, 7, trans. Frye, 6) she ruled for 15 years as regent for her infant son Tughlakhī (Tabarī, ii, 169), has *Tūḡ* *Siyāḡ*; cf. discussion by G. I. Smirnova, *K iumeni soghskoyu khkhkhida Tughlakhida*, in *Trold Akad. Nauk Tadzhikskoy SSR*, Stalinabad 1953, 209). This same Bulghār Khudāt appears again in al-Tabarī as a youth in 91/710 when Kutayba b. Muslim, after overthrowing his enemies, installed him as prince of Bulghār. The rule of Islam in Bulghār was first placed on a firm footing by Kutayba. In Ramaḍān 121/Aug.-Sept. 739, Tughlakhī was murdered in the camp of the governor of Khurāsān, Naḡr b. Sayyār. During his long reign several rebellions against the Arab suzerainty took place and the Turks invaded the country several times. In 110/728-9 the town of Bulghār itself was lost to the Arabs and they had

to besiege it but regained it the next year (al-Tabarī, ii, 1524, 1529).

The son and successor of Tughlqāda, called "Kutayba" in honour of the conqueror, behaved at first like a good Muslim. When in the year 13750, the Arab Sharh b. Shaykh raised a revolt in Bukhārā against the new dynasty of the 'Abbāsids, the rebellion was put down by Ziyād b. Silih, lieutenant of Abū Muslim, with the help of the Bukhār Khudāt. Nevertheless the latter was a short time later accused of apostasy from Islam and put to death by order of Abū Muslim. His brother and successor Buwayt (although another brother Sānā, reading uncertain, may have ruled a few years between) met the same fate during the reign of the caliph al-Mahdī (probably in 166/782), for the Caliph had him put to death as a follower of the heretic al-Mukanna'. After this period the Bukhār Khudāt appear to have been of little importance in the government of the country but they an influential position because of their great estates. In the early years of the reign of the Sāmānids Ismā'īl, mention is made of the Bukhār Khudāt who was deprived of his lands but allowed the same income (20,000 *dirhams*) from the state treasury, as he had previously derived from his estates. It is not known how long the government fulfilled this obligation.

Besides the native prince there was of course in Bukhārā, at least from the time of Kutayba b. Muslim, an Arab *amir* or *šahin* who was subordinate to the *amir* of Khurāsān whose headquarters were in Marw. On account of its geographical situation Bukhārā was much more closely connected with Marw than with Samarkand. The Bukhār Khudāt had even a palace of his own in Marw (al-Tabarī, ii, 1688, 147; 1087, 7; 1091, 16). In the 3rd/9th century, when the *amir* of Khurāsān transferred their seat to Nishāpūr, the administration of Bukhārā remained separate from that of the other parts of Transoxania. Till 260/874 Bukhārā did not belong to Sāmānī territory but was under a separate governor immediately responsible to the Tāhirids. After the fall of the Tāhirids (259/873) Yāqūt b. Layth was appointed only for a brief period in Bukhārā as *amir* of Khurāsān. The clergy and populace applied to the Sāmānī Nāg b. Ahmad who was ruling in Samarkand and he appointed his younger brother Ismā'īl governor of Bukhārā. Bukhārā was henceforth ruled by the Sāmānids until their fall. Ismā'īl continued to live in Bukhārā after the death of his brother Nāg in 279/892 when the whole of Māwarān-nahr (Transoxania) passed under his sway, and also after his victory over 'Amr b. Layth in 287/900 when he was confirmed by the Caliph in the rank of *amir* of Khurāsān. The city thus became the seat of a great kingdom although it never equalled Samarkand in size or wealth during this period. It was Bukhārā that the New Persian literary renaissance blossomed.

The Bukhārā of the Sāmānī period is described in detail by the Arab geographers and we also owe much to Nargahāh and later editors of his work. A comparison of these accounts with the descriptions of the modern town (particularly detailed is N. Khanikov, *Opisanie Bukharskogo Khana*, St. Petersburg 1843, 79 ff.) shows clearly that in Bukhārā unlike Marw, Samarkand, and other cities, only an expansion of the area of the town and not a shifting from one place to another, may be traced. Even after destruction Bukhārā has always been rebuilt on the same site and on the same plan as in the 3rd/9th century.

As in most Iranian towns, the Arab geographers distinguish three main divisions of Bukhārā, the citadel (NP *kakawān*, from the 7th/13th century known as the *arḡ*), the town proper (Arabic *madīna*, Pers. *shahr*), and the suburbs (Arabic *raḥāl* lying between the original town and the wall built in Muslim times. The citadel from the earliest times has been on the same site as at the present day, east of the square still known as the "Rīstān". The area of the citadel is about one mile in circumference with an area of ca. 23 acres. The palace of the Bukhār Khudāt was here, and, as Isfahāhī shows (106), it was used by the early Sāmānids. According to Mukaddasī [280], the later Sāmānids only had their treasuries and prisons there. Besides the palace there was in the citadel the oldest Friday mosque, erected by Kutayba, supposedly on the site of a pagan temple. Later this mosque was used as a revenue office (*divān al-ḡharāj*). The citadel was several times destroyed in the 6/12th and 7/13th centuries, but was always rebuilt.

Unlike most other towns, the citadel of Bukhārā was not within the *ghabrīstān* but outside. Between them, to the east of the citadel, was an open space where the later Friday mosque stood till the 6th/12th century. One may determine what part of the modern town corresponds to the *ghabrīstān* for, according to Isfahāhī (107), the water running under the surface of either the citadel or the *ghabrīstān* because of their height. According to the plan given by Khanikov, this high-lying portion of the town is about twice as large as the citadel. It had a wall around it with seven gates, the names of which are given by Nargahāh and the Arab geographers.

According to Nargahāh (text, 29, trans., 30) at the time of the Arab conquest the whole town consisted of the *ghabrīstān* alone, although there were scattered settlements outside which were later incorporated into the city. Nargahāh gives us a fairly detailed account of the topographical details of the *ghabrīstān*. A new Friday Mosque was built by Arslān Khān Muḥ. b. Sulaymān in 315/1122 in the *ghabrīstān* probably in the southern part of it where the Madrasa Mir 'Arab, built in the 10th/16th century and the great minaret still stand.

It was not till 235/849-50, according to Nargahāh, that the *ghabrīstān* was linked with the suburbs to form one town and surrounded by a wall. In the 4th/10th century another wall had been built enclosing a greater area; it had eleven gates, the names of which are given by Nargahāh and the Arab geographers.

Besides the palace in the citadel there was one in the Rīstān from pre-Islamic times. The Sāmānī Nāg II (301-331/914-943) built a palace there with accommodations for the ten state *divāns*, the names of which are given by Nargahāh (text, 24, trans., 26). During the reign of 'Amr b. Nūh (399-469/1000-60), this palace is said to have been destroyed by fire, but Mukaddasī tells us that the Dār al-Muḥ was still standing on the Rīstān and he praises it highly. During the Sāmānī period there appears to have been another royal palace on the Dīwān Māyān Canal to the north of the citadel.

In the reign of Mansūr b. Nūh a new *musallā* was built at the *arḡ*, but not covered by a multitude of believers. The new area of prayer was built in 360/971 at one-half *farsakh* (ca. a mile) from the citadel on the road to the village of Samath.

In the 4th/10th century the town was overcrowded and insanitary, with bad water and the like. Mukaddasī and some of the poets (al-Tha'libī,

Yalima, iv, 8) describe the town in the most scathing fashion.

Nargahāh and the Arab geographers give information on the villages and country around the city. Isfahāhī (30) gives the names of the canals which led from the Zarafshān to water the fields. According to Nargahāh some of these canals were built in pre-Islamic times and many of the names have survived to the present. Traces also survive of the long walls which were built to protect the city and surrounding villages from the incursions of the Turks. According to Nargahāh (text, 29, trans., 33) these walls were begun in 166/782 and completed in 171/788. The town itself was not in the centre but in the western half of the area enclosed within the walls. After the time of Ismā'īl b. Ahmad the walls were no longer kept in repair. At a later period the ruins of these walls were given the name Kanparak, and as Kanpar Dāwād ("wall of the old woman") traces survive to the present on the borders of the steppes between the cultivated areas of Bukhārā and Karmina.

On the fall of the Sāmānids (389/999) the town lost much of its earlier political importance and was governed by governors of the Ilk Khāns or Karaghānids. In the second half of the 5th/11th century Shams al-Mulk Nāg b. Ibrāhīm built a palace for himself to the south of the city and prepared a hunting ground; it was called Shamsābād, but fell into ruins after the death of his successor Khidr Khān. A *musallā* was made of the hunting ground in 513/1119.

Even during the period of decline Bukhārā retained its reputation as a centre of Islamic learning. In the 6th/12th century a prominent family of scholars known as the Āl-i Burhān (see *at-ta'rikh*) succeeded in founding a kind of hierarchy in Bukhārā and making the area independent for a time. After the battle of Katwān (5 Safar 536/9 Sept. 1141) the Karā Khān ruled Bukhārā through the *padr* (pl. *padars*) or head of this family. The *padars* maintained good relations with the pagan overlords and in 1207 took refuge with them when they were driven out of Bukhārā by a popular (Shī'i) rising (Yāqūt, *Ladhi*, ii, 285). In the same year the city passed under the rule of Muḥ. b. Takash Khwārmīr Shāh. He renovated the citadel and erected other buildings.

According to Ibn al-Aḥfir (xii, 230) Bukhārā submitted to the army of Cingiz Khān on 4 Dhū l-Hijja 616/10 Febr. 1220. The citadel was taken until 24 days later. The town was sacked and burned with the exception of the Friday Mosque and a few houses. Bukhārā soon recovered and is mentioned as a populous town and a seat of learning under Cingiz Khān's successor.

In 636/1238 a peasant revolt occurred under the leadership of one Mahmūd Tarabī who posed as a religious leader. After initial successes, mainly against the aristocracy, the revolt was suppressed by the Mongols (cf. Djauwaynī, i, 86, trans. J. A. Boyle, 109). Little is known of early Mongol rule in Bukhārā; *muḥlis* and *sayyids*, like the clergy of other religions, were exempted from all taxation. A Christian Mongol princess even built a *madrasa* called the Khāwāyī in Bukhārā at her own expense (cf. Djauwaynī, iii, 9, trans. Boyle, ii, 553).

On 7 Rajab 671/1273 Jan 1273 Bukhārā was taken by the army of Abū Bakr, Mongol Il-Khān of Persia, and the city was destroyed and depopulated. It was rebuilt and again ravaged in Rajab 716/19 Sept.-25-Oct. 1316 by the Mongols of Persia and their ally the Chaghatay prince Yashwir. Bukhārā seems

otherwise to have been of no importance in the political life of Transoxania under the rule of the house of Chaghatay or later under the Timūrids. The *Kith-i Mullāsāda* of Mu'īn al-Fukārā, written in the 9th/15th century, gives information about the town in this period (cf. Frey in *Asiatica Commenioration Volume*, Iran Society, Calcutta 1935). Bahā al-Dīn Nakshband (d. 791/1389) and his order of *derwishes* (see NAKSHBANDIYA) flourished in Bukhārā. Ulugh Beg (d. 853/1449) built a *madrasa* in Bukhārā in the centre of town.

Towards the end of the year 905/summer 1500 Bukhārā was taken by the *Uzbeks* under Shīrkhān and remained with them till the Russian Revolution except for two brief periods, after 918/1510 when Shīrkhān was killed, and in 1153/1740. The dominions of the *Uzbeks* were regarded as the property of the whole ruling family and divided into a number of small principalities. Samarkand was usually the capital of the Khān (usually the oldest member of the ruling house), but the prince who was elected Khān retained his hereditary principality and frequently resided there. Two princes of the house of Shīrkhān, 'Ubayd Allāh b. Mahmūd (ruled 928-946/1512-1539), and 'Abd Allāh b. Iskandar (ruled 964-1006/1557-1598) had their capital in Bukhārā. Through them Bukhārā became again a centre of political and intellectual life. The prince of the *Uzbeks* dynasty, the *Qajans* or Ashkharhānids, also ruled from Bukhārā while Samarkand lost its importance.

The materials for the history of Bukhārā during the Uzbek period are mostly in manuscripts, such as the *Ta'rikh-i Mir Sayyid Sharif Rūhm* from 1113/1701, the *Hadith al-Wahab* of Wasīf, and the *Rah al-Arīf fi Manāḥib al-Ahḡār* of Amir Wafā. On these works see Storey, 381 ff.). A. A. Semenov has translated into Russian two important works on Uzbek history of special value for Bukhārā, the *Ubaydalla-nama* of Mir Muḥammad Amin Bughārī, Tashkent 1957, and *Mukhimkhana satoriya* of Muḥammad Yusuf Munshī, Tashkent 1957.

From the 10th/16th century there was trade intercourse between Russia and the Uzbek principality. In the 17th and 18th centuries many merchants and emigrants from Central Asia whose settlements were to be found as far as Tobolsk were known to the Russians as "Bukhārjars". The same name was also extended to the inhabitants of Chinese Turkistan which was called "Little Bukhārā".

The reign of Khān 'Abd al-Azīz (1055-97/1645-89) was recorded by native historians as the last great period of their history. After him various princes made themselves independent and the Khān in Bukhārā ruled only a small portion of his former kingdom, and even then the authority was rather in the hands of an Atalik ruling in his name.

In 1153/1740 Nadir Shāh conquered Bukhārā but after his death the *Uzbeks* regained their independence but under a new dynasty, for the Atalik Muḥ. Rahīm of the tribe of Manḡit had himself proclaimed Khān. His career has been recorded by Muḥ. Wafā Karmīnāgī under the title *Tahyat al-Khān*. His successor Dāniyār Beg was content with the title of Atalik and allowed a scion of the house of Cingiz Khān to bear the sovereign title. His son Murād or Mir Ma'Yūn, however, claimed the royal title for himself in 1199/1785 and called himself *amir*.

Under his successor Haydar (1215-1242/1800-26) the observance of religious ordinances was much more harshly enforced than under his predecessors. He was the last ruler of Bukhārā to strike coins in his own name till the last *amir*. His successor Nāg

Allāh (1242-1277/1287-1286) succeeded in strengthening the power of the throne against the nobles and in extending his domains. The native chroniclers agree with European travellers in describing Nasir Allāh as a bloodthirsty tyrant. Instead of tribal levies a standing army was created.

In 1275/1282 the capital of the rival Khānate of Khokand was taken but the conquest could not be held. When Nasir Allāh's successor Muḥammad al-Dīn (1286-1289) ascended the throne the Russians had already secured a firm footing in Transoxiana. After being repeatedly defeated the Amirs had to submit to Russia and give up all claims to the valley of the Sir Daryā which had been conquered by the Russians. He had to cede a part of his kingdom, with the towns of Tjark, Ura-tūbe, Samarkand, and Katta Kurghān (1286) to the Russians. In 1273, however, Bukhārā territory was increased in the west at the expense of the Khānate of Khiva. In the reign of 'Abd al-Allāh (1285-1290) the boundary between Bukhārā and Afghanistan was defined, England and Russia agreeing that the river Panj should be the boundary.

The relationship between Bukhārā and Russia was also defined during the same reign. Beginning 1287 a railway was built through the Amir's domains but the station for Bukhārā, ten miles away, is now a town called Kagan. In 1290 Mir 'Alim succeeded his father after having been educated at St. Petersburg. He ruled until the Revolution drove him to Afghanistan where he lived in Kābul till the end of World War II. Since the Revolution Bukhārā has become part of the Uzbek SSR with its capital in Tashkent. It has become a large cotton producing area vying with Farghāna and other parts of Central Asia in cotton production.

The archaeological and topographical investigation of Bukhārā has made great progress from the 1930s, and the work of Shihāhin, Pugačenkova, Sukhareva, and others, has greatly added to our knowledge. The existing architectural monuments of Bukhārā which are of importance are: 1) the "so-called" mausoleum of Ismā'īl Samāni from the 4th/10th century; 2) the mausoleum of Ismā'īl b. 'Alī (45.3) high (16th/17th century); 3) Mosque of Maḥall Atīr (the last construction of which dates from 1547); 4) Mosque of the Namāzgāh (*muḥallā*), dating from 1119 A.D.; 5) Mausoleum of Sayf al-Dīn Bukhārā (d. 1261); 6) Mausoleum at the site of Caḡma Ayyūb (end of 14th century); 7) Madrasa of Ulugh Beg, restored in 1583; 8) Maḥallī kolan, 16th century (the oldest ancient minaret); 9) Madrasa Mir 'Arāb, (cf. 1513); 10) Maḥallī Khwāja Zayn al-Dīn, many times restored. Other monuments exist in great numbers outside the town, mostly in ruins.

**Bibliography:** References to Bukhārā down to the Mongol invasion, with extensive bibliography, can be found in R. N. Frye, *The History of Bukhara*, Cambridge, Mass. 1954 (a translation of Narshahī's work). A bibliography of Russian works on Bukhārā can be found in O. A. Sukhareva, *K istorii gorodov bukharskogo khannstva*, Tashkent 1958. On the early coinage see Frye, *Notes on the Early Coinage of Transoxiana*, New York 1949, with additional notes in the *American Numismatic Soc. Notes* 4 and 7. On the name and pre-Islamic history see Frye, *Notes on the History of Transoxiana*, *osiana*, in *Harvard Journal of Asiatic Studies*, 19 (1956), 106 ff.

**AL-BUKHĀRĪ, MUHAMMAD B. 'ABD AL-BĀKĪ** ARB. 'U-MĀ'ILĪ 'ALĀ' AL-DĪN AL-MARKĪ, Arabic writer who in 971/1583 composed a treatise on the eminence of the Abyssinians (after al-Suyūṭī and others), entitled *al-Tarīkh al-Manḥūḡ li-Mahabbat al-Hubbūh* and existing in numerous manuscripts. The work has been translated by M. Weisweiler, *Bundesdruckerei*, . . . Hannover 1924; extracts from the text in *Bibliotheca Bodlianae, cat. med. or. vol. II*, 1365. An extract, by Nūr al-Dīn al-Halabī (d. 1044/1635; see al-Halabī, s'f'r al-dīn) was printed in Cairo, 1307.

**Bibliography:** Flügel, in *ZDMG*, v, 81, xvi, 696-709; Brockelmann, II, 504, S. II, 519.

(C. BROCKELMANN)

**AL-BUKHĀRĪ, MUHAMMAD B. ISMĀ'IL** B. ISMĀ'IL B. 'ABD MUḤALLĀF B. BAKHTIYAR ARB. 'AMU ALLĀH AL-DJŪ'FĪ, a famous traditionist, b. 793/310, d. 256/870. He has the *nisba* DJŪ'FĪ because his great-grandfather al-Maḡhīra was a *maḡhīra* of Yamīn al-DJŪ'FĪ, governor of Bukhārā, at whose hands he accepted Islam. Al-Bukhārī began to learn traditions by heart at the age of ten, and seems to have been a very precocious boy, for he is credited with having been able at an early age to correct his teachers. He had a remarkable memory, and companions of his are said to have corrected traditions they had written down from what he recited by heart. At the age of sixteen he made the Pilgrimage to Mecca with his mother and his brother, and when they returned he remained for a time in the Hijāz. He travelled widely in search of traditions, visiting the main centres from Khurāsān to Egypt, and claimed to have heard traditions from over 1000 *ṣaḥābūh*. In later life he suffered opposition in Naysabāb from Muhammad B. Yahyā al-Djūhālī who was jealous of the large numbers who went to hear him. Because al-Bukhārī held that although the Kur'ān is uncreated this does not apply to the recitation of it, he was accused of heterodoxy and had to leave Naysabāb. There the governor, Khālid b. Ahmad al-Djūhālī, asked him to bring his books to him, but he refused, saying it was an indignity to convey learning to people's houses, so if the governor wished to learn he should come to his mosque or his house. The governor asked him to hold sessions specially for his children, but al-Bukhārī refused to give them preferential treatment. He was then expelled and went to Khartank, a village about two parasangs from Samarkand, where he stayed with relatives. It is said that, being oppressed by the hostility he had experienced, he was heard one night praying that God might take him, and died within a month.

His most famous work is the *Saḥīh* which took him sixteen years to compile. It is said that he selected his traditions from a mass of 600,000, and that he did not insert a tradition in the book without first washing and praying two *rak'as*. This famous collection of traditions is arranged in 97 books with 3430 *ḥabīs* (chapters). There are 7397 traditions with full *isnāds*, but if repetitions are omitted the total is 2762. This work, which claims to contain only traditions of the highest authority (*muḥallā*), is of the *muḥallā* (classified) type which arranges the material according to the subject-matter. As certain traditions contain material on more than one subject it is not surprising that they should appear in more than one *ḥabī*. The work in the main is arranged according to the various matters of *ḥabī* (i.e.), but it

also contains other material, such as on the beginning of Creation, on paradise and hell, on different prophets and, in greater detail, on Muhammad, on Kur'ān commentary, etc. Although al-Subkī includes al-Bukhārī among the *Shāfi'ī* *ṣaḥīh* this is not accurate, for he did not hold consistently the doctrine of any particular school. The titles of the *ḥabīs* are meant to indicate the subject-matter and teaching of the traditions they contain, but al-Bukhārī has sometimes been criticised because the contents of the traditions do not always seem to be relevant to the title. Some *ḥabīs* have a title but no traditions, which may mean that al-Bukhārī drew up the scheme of his book and left blanks when he had no sound traditions to illustrate a particular subject, hoping that he might yet find some relevant material of sufficient authority. There have been many commentaries on the whole or part of the *Saḥīh*, notable among which are those of al-Aynī, Ibn Ḥajar al-'Askalānī and al-Kaṣṣālī. While the *Saḥīh* was considered in al-Bukhārī's time as just one among others, it was soon recognised as outstanding, and by the 4th century it came to be placed along with Muslim's *Saḥīh* at the head of collections of Sunnī tradition. In time, although criticisms have been made on matters of detail, it was accepted by most Sunnīs as the most important book after the Kur'ān, but in the West it was not known until the 19th century. Al-Bukhārī wrote his *Ta'wīḡ*, which gives biographies of the men whose names appear in *isnāds*, when a young man, saying he wrote it on moonlight nights at the Prophet's tomb. Other smaller works are detailed by Brockelmann. In his lifetime al-Bukhārī was recognised as an outstanding traditionist, noted for his minute knowledge of detail and his perspicacity in detecting defects in traditions.

**Bibliography:** Al-Khaṭīb al-Baḡdādī, *Ta'wīḡ* *Ḥaḡḡāḡ*, II, 4-34; al-Subkī, *Tabaḡāt al-Shāfi'īyya al-Kubrā*, II, 2-19; Ibn Khallikān, 541; al-Dhahabī, *Tadhkirat al-Juḡfā*, II, 122-124; Ibn Ḥajar, *Taḡḡīb al-Taḡḡīb*, IX, 47-55; Ibn al-'Imād, *Shuhūd*, II, 134-136; Ahmad Amin, *Duḡā al-Islām* (Cairo, 1371/1952), II, 110-119; F. I, 260-265).

(J. ROBINSON)

**BUKHĀRĪLĪ** (or Bukhārīlīs of Siberia). A small ethnic group, Muslim (Sunnī) of the Khamti school, made up of the descendants of merchants and caravaners originating from Turkistan and established in western Siberia since the 16th century, when the commercial relations between the Emirate of Bukhārā and Siberia were flourishing.

The Bukhārīlīs live in contact with the Tatars of Siberia (i.e.) to whose Islamisation they have contributed, and with whom they have many similarities. They live principally near Tobolsk, Tūmen and Tara, and an isolated group of Bukhārīlīs are found close to Tomsk.

In 1926, the Soviet census numbered 12,012 of them. The Bukhārīlīs speak the local Tatar dialects, but with the difference that they preserve in their

own speech a large number of Persian terms. They employ the Tatar of Kāzan as their literary language.

(A. BESIMBOGOS)

**BUḤĪL** (Ar.; also vocalised *buḥūl*, *buḥūl*, *buḥūl* and *buḥūl* [pl. *buḥūl*]; less often *buḥūl*, pl. *buḥūl*) mean respectively 'avarice' and 'avaricious, miserly'. Just as in the ancient poems the virtue of generosity is constantly sung, so avarice furnishes a theme for satire which is widely exploited by the poets, though it seems that this fault, at least in its most sordid forms, was scarcely widespread among the ancient Arabs. It is however a fact that it is castigated in a number of Kur'ānic verses aimed at combating avarice in the full sense (xvii, 102/100; lvii, 24) or simple hoarding (ix, 35, civ, 1 ff.), or at the encouragement of generosity in general (ix, 77/76; ix, 9) and almsgiving in particular (ix, 40/38, 175/180; iv, 127/128; lxiv, 16 f.); moreover, numerous *ḥadīṡ* against avarice are attributed to the Prophet (especially *ayyā* *ḍaḥḍaḥ* *min al-buḥūl*); these condemnations and exhortations, however, seem to result less from an absolute moral principle than from the necessity in which the newly-founded Islamic community found itself of receiving spontaneous gifts and then of collecting regularly the contributions of its members (see *Ṣaḡāḡ*, ZAKAT, and cf. *ḥab* al-*mal* in the *ḥadīṡ* collections).

After the conquests the Arabs were brought by the entry into Islam of new racial elements into contact with peoples of a somewhat different temperament, and when, brought before the bar, they had to put up a defence, shrewd minds did not fail to single out the generosity of the Arabs in order to contrast it with the avarice of the non-Arabs. It is doubtless not by mere chance that, under the 'Abbasids, it is the Khurāsānīs who supply the anthologies with anecdotes about misers. The relationship: generosity=Arabs/avarice=non-Arabs takes practical shape in the polemics of which al-Djāḡīb gives several specimens in his remarkable *Kātib al-buḥūl*, the first and probably the only attempt in Arabic literature to analyse a character and portray him through anecdotes, though with political undertones. This psychological analysis which had its origin in al-Djāḡīb, was ignored by later writers who, in their *adab*-books and then in the popular encyclopaedia, confined themselves to reproducing the Kur'ānic verses, *ḥadīṡ*s, anecdotes, and poems about misers (see for example Ibn 'Abd Rabbih, *ʿIḍā*, *passim*; al-Buhārī, *Muṣṭafā*, I, 235), not omitting, however, to mention that history knows but four (sic) Arab misers: al-Hafṣa'ya, Humayd al-Arkaṭ, Abu 'Aṣwad al-Du'ālī, and Khālid b. Ṣāwān.

(CR. PELLAT)

**BUKHIT-NAS(S)AR**, the Nebuchadnezzar of the Bible. The Kur'ān does not mention him. He is a very complex figure in Muslim tradition and here we can record only the outstanding points. It retains here the first place the main Biblical features, using to an unusual degree the texts of the prophets Jeremiah and even Isaiah, and establishing a connexion between Bukhit-Nasar and Sennacherib, whom it makes the great-grandfather of the former. It also confuses him sometimes with later rulers such as Cyrus and Ahasuerus. To these Biblical extracts, much more corrupted and simplified, are added features borrowed from the Jewish Maggaba (for example, Bukhit-Nasar was one of the universal monarchs, cf. Babylonian Talmud, *Megilla* 31a; he was tormented to death by a mosquito which got into his skull, this being a transfer of the rabbinical legend about Titus, the destroyer of the Second

Temple) and some elements of a folkloric character (an obscure Babylonian man of the people, for a long time hopelessly ill, he believed that he heard his future glory proclaimed and achieved it by his intelligence and a remarkable concurrence of circumstances). In the second place he is found forming part of the epic cycle of the ancient kings of Persia (the deformation of the name of which Buḫṭ-Nasār is the result seems to indicate some imaginary Iranian etymology); he is then reduced to the rank of satrap (*maršān*) of Bighṭīsh or of his father (Luhrāsh), or even of Bahrām, the son of the first named. In the third place he is said to have led an expedition against the Arabs (to which Kur'ān xxxi, 11 ff. would refer). There is perhaps here a memory of Babodūn's settlement at Taynāṣ (cf. above, art. al-'ARAB) combined with that of Arab infiltrations into the region of the Euphrates, Al-Ma'sūdī and al-Bīrūnī know an era of Buḫṭ-Nasār (cf. the article of Carra de Vaux in *E.P.*). Al-Bīrūnī sought also to disentangle the chronological difficulties raised by the confused traditions of which he had knowledge.

Tannery, *Recherches sur l'histoire de l'astronomie ancienne*, Paris 1893, 158, 162.

(G. VAJDA)

**BUKHṬIŠHĪC'**, the name borne by several physicians of a celebrated Christian family originally established at Djuḡdaysābūr. It was from there that Djuḡdīs b. Djuḡbīl b. Buḫṭiṣhāḫ, who was director of the hospital of this town and well known for his scientific writings, was called to Baghdad in 148/765 to attend the caliph al-Manṣūr, ill with a stomach complaint. By successful treatment he won the confidence of the sovereign, who asked him to remain in the capital, but he wished to revisit his native land in 152/769.

Buḫṭiṣhāḫ b. Djuḡdīs, to whom his father had left the direction of the hospital at Djuḡdaysābūr at the time of his departure for Baghdad, was called in his turn to the capital when the future al-Hādī was gravely ill, but the hostility of al-Rhāyruṣnī, who favoured the physician Abū Kuraysh, prevented him from establishing himself there. Nevertheless, in 171/787, Hārūn al-Raṣīd, suffering violent pain, had him brought back to Baghdad and appointed him physician-in-chief, a post which he held until his death in 185/801.

Afterwards Djuḡbīl b. Buḫṭiṣhāḫ, whom his father had recommended to Dhu'ar the Barmakid in 173/791, succeeded in 190/803 in winning the confidence of the caliph, following a successful treatment of one of his slaves, but he fell into disgrace during the last illness of Hārūn at Tūs, because he did his duty as a doctor with too much frankness. He was condemned to death by the caliph because of the accusations of a bishop, but was saved by al-Faḍl b. al-Raḥīṣ, who stayed the execution of the sentence, and he then became al-Amin's physician. At the time of al-Ma'mūn's triumph he was imprisoned, not to be set at liberty until 202/817, when al-Hasan b. Sahl had need of his services. Three years later he was again in disgrace, and was replaced by his son-in-law Mūḥṣīl, but was recalled in 212/827 because Mūḥṣīl was unable to cure an illness of the caliph. He was reinstated, and his goods, confiscated after his fall, were restored, but he had not long to enjoy the prince's favour for he died the

same year, and was buried at al-Maḍā'in in the monastery of Sergius.

His son Buḫṭiṣhāḫ, who took his place, accompanied al-Ma'mūn on his expeditions into Asia Minor, then, under the caliphate of al-Wāḡiḫ, was exiled to Djuḡdaysābūr. Recalled during the caliph's last illness, he arrived in the capital too late, but remained there, nobly esteemed for twelve years, under al-Mutawakkil, until his exile to Babayan. He died in 236/850.

Buḫṭiṣhāḫ had a son, 'Ubayd Allāh, who was a finance official of the caliph al-Mu'tadī, and whose fortune was confiscated after his death. His widow married a physician, and his son Djuḡbīl followed in the footsteps of his fathers, but received his training only in Baghdad, where he had taken himself penniless after his mother's death. Having treated an envoy from Kirman successfully, he was called to Bīrāz by the Buwayhid 'Adud al-Dawla, but returned to Baghdad, which thereafter he only left for short periods of consultation, declining even the offer of the Fātimid al-'Azīz who wished to establish him in Cairo. He was, however, retained at Mayyīḫārīn by the Emir al-Manṣūr al-Muḥammad al-Dawla Abū Manṣūr who had summoned him there, and he died on 8 Rāmādān 306/8 June 1006.

Abū Sa'īd 'Ubayd Allāh b. Djuḡbīl, a friend of Ibn Butlān (s.c.), lived at Mayyīḫārīn and died in the second half of the 5th/11th century, leaving some known works, in particular a dictionary of medico-philosophical terms and a treatise on love.

Another member of the family, Buḫṭiṣhāḫ b. Yahyā, was physician to the caliph al-Rāḍī and was held responsible for the death of prince Hārūn in 324/936.

**BÜKRİ** [see **ARABIA**].**BUKOVINA** [see **GROTES**].**BUKRAT** [see **SUPPLEMENT**].

**BÜKREŠH** (BUKAREST) a town in Wallachia on the Dâmbovitza river about fifty km. north of its mouth. It is mentioned for the first time in 760/1368 by the name of Cetatea Dâmbovitzei, a name used side by side with Bucharest until the 15th century, when it became the seat of the Wallachian princes. Vlad the Impaler issued documents from there in 863/1459 and 865/1461 and Radu the Handsome, the prince installed by Mehmed II in 866/1462, established himself in that town, protected by a Turkish garrison from Giurgiu. For more than two centuries the history of Bucharest was linked to the relations of the Roumanian princes with the Porte. Those princes who rebelled against Ottoman suzerainty preferred Târgoviște, less exposed to Turkish raids. At the end of the 16th century, Bucharest witnessed the massacre of Michael the Brave's creditors and Sinan Paşa's occupation. Sorely tried by the revolts against the Turks, as well as by epidemics and fires, the city had a turbulent history. With the Treaty of Berlin (1877) the last vestiges of Ottoman suzerainty disappeared. The peace conference convened at Bucharest in 1913 relieved Turkey of the greater part of her European possessions.

Information on the population during the earliest periods is lacking. The sources mention the presence of Greek, Armenian and native merchants. Towards 1050/1640 Bucharest had 12,000 houses; fifteen years later only 6,000 are mentioned, and Ewliya Çelebi speaks of 12,000 houses and 1,000 shops. During the 17th century the population of Balkan cities increased, and became quite significant in the 18th. Popular revolts broke out, inspired by members of corporations discontented with the competition of foreign traders protected by the Phanariot princes. At the end of the 17th century the town had 50,000 inhabitants. The number varied between 20,000 and 60,000 for the end of the 18th and between 50,000 and 100,000 for the first half of the 19th.

Absorbed for three centuries in the Ottoman Empire, Bucharest acquired an oriental imprint which became stronger under the Phanariots during the 18th century, when the town became an important centre for the study of Greek. The princes initiated the publication of religious books for Christians in the Ottoman Empire, and monastic revenues provided for the monasteries of Athos, Constantinople, Trebizond and the Holy Land. The Austrian and Russian occupations introduced the first occidental influences and a knowledge of French, which, in the first half of the 19th century, supplanted Greek. Under the impact of ideas engendered by the French Revolution, the town became the centre of the struggle for the political unity of Roumania which led to the union of Moldavia and Wallachia (1859).

(N. BELICERANU)

**BÜKÖM**, AC- (sing. Büküm), a tribe in Western Arabia, traditionally held to be descended from al-'Azī. Although considered a Hijāzī tribe, the Büküm range over the region east of al-'Azī and in the vicinity of the lava fields of Harrat Ḥaḍn and Harrat al-Büküm, where the boundaries between the Hijāz and Najd are not clearly defined. The tribe is estimated to have close to 10,000 people, of whom less than half are nomads. For at least several centuries a majority of the Büküm have been engaged in oasis cultivation in the district of Wādī Turaba (also Taraba), with the town of Turaba (N. 21° 14', E. 41° 37') being their main centre of population. The Büküm are subdivided into two sections: al-Mahāmid and Al Wāzi.

During the early period of Wahhābī expansion, the Büküm were victorious of the Sharīf Dhuḥlī in his wars against Najd. From 1228/1813 the Büküm defended their territory against the troops of Muḥammad 'Alī, the Ottoman Viceroy of Egypt, during which campaign a woman named Ghāliya notably distinguished herself. The Büküm finally surrendered and Turaba was occupied in 1230/1815. In the early years of the present century the loyalty of the Büküm was divided between 'Abd al-'Azīz Ibn Sa'ūd and the Sharīf Husayn, the Mahāmid having declared for the Sharīf, while Al Wāzi fought for Ibn Sa'ūd. The Mahāmid surrendered to Ibn Sa'ūd after his victory at Turaba in 1337/1919, and

members of both sections of al-Büküm participated in the later Sa'ūdī campaigns in the West.

In 1959 the chief of the Mahāmid was Husayn b. Mahyī, while Muḥammad b. Ghannīm was chief of Al Wāzi.

**BÜLAK**, a small town quite close to the Cairo of Mamlūk and Ottoman times, and its port on the Nile for traffic with Lower Egypt. It was built on the sand which the Nile left when its bed shifted one to one-and-a-half kilometres westwards between the time of Saladin and the 8th/14th century (see al-KAHRIB). It was separated from Cairo by the Nāṣirī canal, dug in 723/1325 by the sultan Muḥammad b. Kalā'ūn, who encouraged people of affluence to build their villas (*manāṣir*) at Bülāk, to which were added later mosques, *hamāms*, etc. The customs transferred there from Cairo. About 1800 Bülāk had some 24,000 inhabitants, 24 mosques (including that of Abū l-'Alā, a place of pilgrimages and *maṣāhid*), 'okelles', depôts for agricultural products, shipyards, etc. Muḥammad 'Alī built workshops and foundries there, designed to modernise Egyptian life.

Bülāk is well known for its printing works, the first established in Egypt after the short-lived ones of Bonaparte's expedition. A small Egyptian team, trained at Milan, returned in 1821 with presses. In 1822 the Bülāk Printing Press was able to work at full capacity, under the direction of Nicolas al-Maṣlūh, of Lebanese origin (d. 1830). Owned by the state, modernised several times, it was transferred to private ownership in 1862 (to 'Abd al-Rahmān Ruḡḡīḫ Pāshā, then in 1865 to a son of the Khedive Ismā'īl). The state took it over again in 1880, and it was further developed after 1894 under English directorship, then under Egyptian ones more. It was founded for army needs (manuals, etc.), and for the administration (official journal, *al-Faḥāṣ al-Miṣriyya*) and was an important factor in the modern Renaissance. It printed on its own account or on that of individuals translations and numerous classical works in Arabic, Turkish, and Persian, and some books in European languages. The rapid growth of the private presses which made Cairo the centre of the Arabic book trade eventually deprived it of the virtual monopoly which it enjoyed.

At the present time Bülāk is no longer anything more than a quarter of modern Cairo.

**BULANDSHAHR** (BARAN), an ancient town in India situated in 28° 15' N. and 77° 32' E. on the main road from Agra and 'Aligarh to Meerut. Population (1951) was 34,496. Its old name was Baran (by which it is even now sometimes called but only in the *maḥal* Baran) given to it by its legendary founder, one Ahilbaran. Its antiquity is

established by the discovery of inscribed copper-plates of the 5th century A.D. and coins of much older dates. It came to be called Bulandshahr ("high town") from its elevated position near the bank of the Kām Nadi, which flows past the town. This name is clearly Muslim and appears to have been given to the town sometime during the Mughal period, although Sulṭān Rāy's *Khulāsat al-Tawārīkh* (compiled as late as 1700/1699) still mentions it as Baran. It was conquered by Mahmūd of Ghazna in 409/1018 when the Hindu Rājā, Har Datt, offered submission and accepted Islam with 10,000 of his followers. The town was restored to Har Datt whose descendants forsook Islam and Candār Sēn, the last of the line, was killed while defending the town in 590/1193 against Kāth al-Dīn Aḡbak, a general of the Ghūrī Sulṭān Muḥammad b. Sām, who bestowed it as an *ikṭā'* on Bētmiṣh [q.v.], his son-in-law and successor. Dīwānī, a kinsman of Candār Sēn, accepted Islam and was rewarded, for betraying the garrison to the invaders, with the headmanship of the town. His descendants still flourish in Bulandshahr. During the reign of Muḥammad b. Tughlūq [q.v.], it was the centre of a peasants' rebellion; this was ruthlessly suppressed by the king who laid waste the country all around and perpetrated horrible atrocities on the residents of Baran. In 802/1399 the rebel amir Ḳubāḡ Khān (Fajl Allāh Balghī) took refuge here when he rose against Sulṭān Nāsir al-Dīn Muḥammad (641/1246–662/1266). In 1504/1507 the town was occupied by Sulṭān Ḥabīb Shāh Shārkī of Dīwarī (602/1402–825/1430) but he had to vacate it hastily on learning that Muḥammad Shāh I of Guḡjārāt was about to attack Dīwānpūr.

Thereafter nothing is heard of the town as it continued to enjoy a period of peace and tranquillity during Mughal rule. Awarangzib's proselytising zeal won a large number of converts, mostly among the Rājapūts, in and around Bulandshahr. During the 12th/18th century when the entire country was disturbed the Marāṭhās overran and captured Bulandshahr and administered it from Kolī ('Allgarh). With the fall of the fort of 'Allgarh, Bulandshahr came into the possession of the British in 1218/1803. During the upheaval (Mutiny) of 1257 the town was badly disturbed and Walīdād Khān of Mīllāgarh drove out the British garrison and assumed the reins of government. He and his confederates, the Guḡjārās and Muslim Rājapūts, proved irreconcilable enemies of the British and surrendered the town only after a five months' resistance.

This town is familiar to students of Indo-Pakistani history as the birth-place of Dīr al-Dīn Baranī [q.v.], the scholar-historian of the 9th/15th century. There are some very old mosques and tombs including a *dargah* of the Khwāḡja Lal Barand, which was built in 590/1193 to commemorate the Muslim victory. A small town at the commencement of the British rule, it is now a thriving centre of trade and commerce.

(A. S. BALMER-ANSARI)

**BULĀY**, the Arabic transcription of Poley, the old name of a stronghold in the south of Spain the site of which (as has been shown by Dozy, *Rech.*, 1, 307, on the strength of information supplied by a charter of 1238) is the modern Aguilar de la Frontera, a small town in the province of Córdoba, 12 miles N.W. of Cābra and of Lucena. The town, which played a considerable part in the rising of the famous 'Umar b. Ḥafṣūn [q.v.] against the Umayyad amirs of Córdoba, is again mentioned in the 6th/12th century by the geographer al-Idrīsī. The ruins of a fortress, which dates from the Muslim period can still be seen there.

**Bibliography:** al-Idrīsī, ed. and trans. by Dozy and De Goeje, text, 205, transl., 253; Ibn Ḥayyān, *Mukhabis*, Bodleian MS., *passim*; R. Dozy, *Hist. Mus. Esp.*, 2, 62 ff.; E. Lévi-Provençal, *Hist. Esp. Mus.*, 1, 338, 372-6.

(E. LÉVI-PROVENÇAL)

**BULAYDA** (BLIDA), a town in Algeria, 51 kms. S.W. of Algiers, at the southern end of the plain of the Mitidja. There was no ancient settlement on the site. It has been identified with the town Mitidja known in the Middle Ages, which was ruined at the time of the campaigns of the Banū Ghāniya (beginning in the 7th/13th century). According to tradition the place which in 942/1535 was called Bulayda (little town) was founded by a religious personage known as Sidi Ahmad al-Kabir. He, after many wanderings, came to stay in the valley of the Wādī al-Rumānīn, nowadays the Oued el-Kebir. He was joined by his disciples, then by Andalusians coming from Tipasa fleeing from the attacks of the Kabyles of the Chenoua. Sidi Ahmad al-Kabir obtained from the Uṣṭā Sulṭān who occupied the region the land necessary to build houses for the new arrivals. The beylerbey of Algiers, Khayr al-Dīn, made of this settlement a veritable city, by providing it with a mosque, *hammam*, and public bakery. Bulayda prospered quickly thanks to the Andalusians, who planted orange orchards around it and applied there methods of irrigation of their own country.

Under Turkish domination Bulayda formed part of the *āyā al-mitidja*, that is to say the region administered directly by the bey of Algiers, who was represented there by a *bākhim* of Turkish origin. A detachment of janissaries had a garrison there. The population, composed of the descendants of the Andalusians, Moors, Jews, and Mozabites, was renowned for its urbanity and love of pleasure. A saying attributed to Sidi Ahmad b. Yūsuf praises it and calls it Urida (little rose). The town offered a pleasant sojourn to the élite of Algiers, who possessed country houses there. Officials of the Regency who were interned there found their exile easy to bear. It suffered many earthquakes, of which the most severe almost entirely destroyed it in 1827. It was shaken again by an earthquake in 1865.

After the occupation of Algiers by the French, Blida remained for some time independent under the administration of its *bākhims*. It was effectively occupied in 1839.

**Bibliography:** Trumelot, *Blida*, 2 vols., Algiers 1887; J. Desparmet, *Ethnographie traditionnelle de la Mitidja*, in *RAfr.*, 1915-25.

(G. VYER-G. MARÇAIS)

**BULBUL**, the nightingale. To the nightingale belongs a large place in Oriental literature, particularly Persian and Turkish literature. The characteristics of the bird are its beautiful voice and its tuneful and harmonious song. In the season of roses it laments the whole night long; the hours before dawn are enlivened by its singing. It is in love with the rose. This love is its most outstanding characteristic. Its other characteristics are grouped around this.

In Persian literature the nightingale is treated according to the poet's indication. In some it sings of figurative love which has no aim, in others of figurative love which is a stage on the path to real love. To understand its meaning in Sūfi writing, we must look at the *Manḡsh al-Tayr*, written in the year 583/1187-8 by one of the important Sūfi writers of Persian literature, Farīd al-Dīn 'Aṣṭār (died 627/1230). In this work the nightingale's main characteristic is that it is drunk and ready to lose its material substance because of the perfection of its love for the rose (see Garcin de Tassy, *Le langage des oiseaux*).

The Persian poet Khwāḡjī Kirmānī (679-732/1260-1352), in a work entitled *Rawdat al-Anwar*, represents the bird of the meadow (*mawḡh al-tamaw*) as a bird tired by passion and desire, that sings at night and drives away sleep; then he likens the nightingale and the rose to the fabulous lovers Wānīk and 'Adhḡr. In a *hiḡa* of Sa'dī of Shirāz (died 690 or 691/1291-1292), who speaks of the nightingale fairly often especially in his *ghazals*, the poet treats the moth as the real lover. Ḥazīnī al-Bīḡlī (died 1202/1796) speaks near the coast of the nightingale and the moth, saying, "The nightingale complains because it has only just learnt of love. We have never heard a sound from the moth". Mawlānā Rūmī b. Barīz has a work too (*luḡhāt* of Shāh Muḥammad Karwīn) which contains disputes between nightingale and rose, candle and moth. The Persian poet Zamīnī-Yāzdi also confronts the nightingale and the moth.

Ḥāfiḡ (died 791/1389) raises the nightingale somewhat towards real love in this verse: "Settling on the cypress branch last night the nightingale chanted the lesson of spiritual stations with the Pahlawī warrior". One of the poets of the circle of Mahmūd of Ghazna, Farroḡhī b. Sīstānī (died 470/1070), also imagines the nightingale on a cypress branch: "Nightingales are *ākhīrs*, reciters *khāsh* upon trees". Now the nightingale recites the *Tawrīt* upon the cypress.

In one of his *ḡaydas* Manūḡhīrī (died after 423/1031) gives its song a religious significance, saying "On the rose branch the nightingale performs the *paḡā*". In Anwarī (died after 580/1184) a characteristic of the nightingale is its eloquence: "The nightingale catching the scent of spring has grown eloquent, the rose entering the garden has grown fresh".

The Persian Sūfi poet Muḥammad Shīrīn Maghribī (died 809/1406) likens the soul to the nightingale, fallen into the cage of flesh. Here the cage of flesh is the spirit, that has fallen from the world of unity into the world of elements. Another Sūfi poet, Kamāl Khwāḡdī (died 803/1400), brings out another characteristic of the nightingale in the verse: "Kamāl recites no *ghazals* unless he has fallen in love with a face of roses. The nightingale does not sing when it is not drunk". Sa'dī too in one of his *ghazals* puts spring and the nightingale side by side: "The trees are in bud, the nightingales are

drunk, the world has grown young, the lovers are lost in joy and merrymaking". He views the nightingale essentially as the harbinger of spring. The giver of bad news is the owl. Ḥillālī-Ghaḡṭayī (died 939/1531) also makes this contrast in the verse: "The nightingale nests in the garden, the owl in the ruins, everyone makes his home according to his desires". It is appropriate in this connexion to mention the proverb: "Of the nightingale's seven chicks only one becomes a nightingale" (*Dihlīyeh, Anḡhāl son Ḥabās*).

The nightingale has provided an opportunity for more delicate and refined conceits among poets writing in the 'Indian style'. In this literature with its generally Sūfi colouring, the nightingale occupies a position between figurative and real love. The seventeenth century poet Shāwkiat Bulḡhārī sings thus of the nightingale in a verse of his *ghazals*: "How long will the beloved wait to recognise the lovers that are its prisoners? As the nightingale sorrows and sheds its tears its nest comes to resemble a basket of roses. The rose branch is a seat that gives rest to the nightingale's aching head".

The idea that the nightingale is hunted and caged because of its beautiful voice has passed into literature; thus in a verse of Bāḡhlī (1134-1195/1727-1781): "Because of its lament it is captured and deprived of its freedom".

The bird is encountered in the oldest Turkish literary texts. In various Turkish dialects the nightingale is called as follows: in the *Kutadgu Bilig*, *samsal*, *sinal*, *sandaul*. In other dialects *andag* (see Kaz.), *sandag* (Tel.), *sandaul* (Rab.), *sandaul* (S.S.). In his Dictionary, Şevkiyî Suleymânî Bulḡhārī Ghaḡṭayī mentions this as a bird like the nightingale and explains that it is the canary. The verse in *Kutadgu Bilig* (1059/1070) "The nightingale sings in the flower garden in thousands of voices (*hasir destin*) as though reciting the Masnawī night and day" (v. 79) recalls the Pahlawī warrior and the *Tawrīt* as we found in Persian literature.

Entering the Islamic period, Turkish literature in time lost the *sandaul* and used in its place the words '*andah*, *hasir* (only in classical literature), and *bihālī* (in both classical and folk literature). In folk literature the nightingale is the lover of the rose, it is a stranger, in spring time it sings at night and before the dawn (Karaḡajī Ogḡlūn). In both folk and classical literature the nightingale in the cage is like the soul in the body. The characteristics of the nightingale in Turkish *Dīwān* literature may be seen in the *mathnawī* "The rose and the nightingale" composed by Fadlī for Sulṭān Sūleymān's son Mustafā (960/1553). According to this work the nightingale "is a heart-sore and agitated creature, it is its nature. Its voice is lovely, its ways are pure and charming. It is a witty fellow, a drinker. Love is the place of its frequenting. Love has set a polish on the mirror of its heart. Its dream is a dervish's cloak of felt (*namad*) so that the mirror inside the felt may not grow rusty". After numerous adventures the nightingale and the rose are united. In this work Fadlī uses the nightingale to express a purely Sūfi idea. In this allegorical treatment the nightingale is the heart, the rose the spirit.

When we come to *Dīwān* literature of the seventeenth century, the nightingale is a lover consumed by the fire of love. This is embodied in the poetic concept that the rose resembles fire in its colour, and kindles the nightingale and burns it to ashes. The nightingale is the colour of ash. There is a pun

between *göl*, rose, and *kül*, ash. The elimination of the material existence of the lover (tossing up his ashes) is an idea that comes from Söfiem. Consequently the likening of the nightingale to ashes has become so firmly established that the word *şâkîstâr*, ash, has come to mean nightingale.

The *ghazals* with the *redif* 'bulbul' by Nâ'îlî (died 1594) and Neshîrî (died 1674) are both major works of the literature of that period, tending towards the Indian style. The last verse of Nâ'îlî's *ghazal* reveals to us the Söfi connexion of the nightingale and the rose.

In the 12th/13th century Nedîm (died 1143/1179) mentions this bird in a number of his poems. In a *ghazal* with the same *redif* he writes: "Do not suppose that the nightingale's nest is filled with bloody tears. That nest is a pot of red ink made ready to write down the secrets of longing. Do not fancy that the cup-bearer of spring poured dew upon the rose; he filled the nightingale's cup with *rahî*!"

After the *Tançınâit*, in the poets of the *anjonâmî* *Şâ'arâ'* who imitated older literature, the nightingale shows no new development. Like Maghrîbî among Persian poets, one of these, Herâkî 'Arîf Bîkânî (1839-1903), in a poem entitled *Hasb-i Hâl*, treats the nightingale from an entirely Söfi point of view. Reşîdîzâde's poem with the *redif* "*bûlbul*" bears the somewhat shallow marks of his melancholy temperament and slender poetic gift. In these there is nothing new, but 'Âbîd al-Hakk Hâmîd [g.c.] in the *anjonâmî* wrote to Herâkî's *Hasb-i Hâl*, and in the poem *Walking through Hyde Park*, produces new ideas appropriate to his age with regard to the nightingale: "In the morning it recites the *adân*. Its nest in the darkness is a sublime symbol for patriotism. Its songs have become the model for love-*hayâtas*. The form of its expression is as new as modern literature (*edgâddad ed-biyâdî*). It is God's poet. Its *kasîdes* are read from the page of nature" (*Nâzi'at-Hasb-i Hâl*).

(ALI NİYAT TARLAN)

**BULBUR** [see BURBUR].

**BULGARIA**, a country in the Balkans. It drew its name from the Bulgars, a people of Turkic origin, who first invaded the Dobruja [g.c.] under Asparukh or Isperikh in 679 A.D. and founded an independent state in the Byzantine province of Moesia. Adopting Orthodox Christianity from Byzantium (865) and identifying themselves with the native Slavs who had previously settled Bulgaria, the Bulgars built up a strong empire in the Balkans which extended from the Danube to the Adriatic Sea under Czar Symeon (893-927).

The first Islamic accounts of Bulgaria belonged to this period through the reports of Muslims al-Jahiz (about 215/831), Hârûn b. Yahyâ (349/960) and Ibrahim b. Ya'qûb (349/960). Hârûn reported (in Ibn Rusta, ed. De Goeje, 127) that the Christianised Slavs, *al-Saklîth al-Mutanacîra*, had adopted Christianity after Süs, the ruler of the Bulgars. Incorporated into the Byzantine empire between 1018 and 1186 Bulgaria was organised in two themes, the theme of Bulgaria with its centre at Skopje (Üsküb) and that of *Paristrion* or *Paradunaea* with its centre at Silistria.

The invasion and settlement of the Cumans in the lower Danube prepared the way for the creation of the so-called second Bulgarian empire under the Asensids (1185-1218).

In 1262 Michael VIII, the Byzantine emperor, took Anchialus and Mesembria from the Bulgarians

and settled in the Dobruja the Anatolian Turks who had taken refuge in Byzantium with 'Izz al-Dîn Kaykâwûs II [g.c.]. Most of them returned to Anatolia in 707/1307 and those who remained were thought to be the ancestors of the Gagauzes [g.c.]. (P. Vittek, *Yashligluh 'All on the Christian Turks of the Dobruja*, in *ISIOAS*, 310/3).

Tertîr I (1179-1190) resumed Noghay's [g.c.] overlordship (1185) and gave his daughter in marriage to his son Caka, who later took refuge in Tmovo and seized his father-in-law's throne (1300), but soon was ousted by Tertîr II (1309-1326).

In the contemporary Arabic sources (Baybars, *Zubdat al-Fîtra*, in I. H. Imridi, *Al-Bihar*, . . ., Ist. 1941, 221; Abû 'l-Fidâ', 295) Bulgaria is shown as the land of the *Qitab*, and the Bulgarians are considered as the same people as the *Qitab*. We know that Kalojan had called himself *imperator totius Bulgariae* at Vlachia (G. Ostrogorsky, *Hist. of the Byzantine State*, 358). It appears that the Christianised Cumans in Bulgaria, must have been shown under the general term of Vlach.

The Shishmanids (1342-1395) came to the Bulgarian throne with Shishman, a Cuman magnate in Vidin.

The Anatolian ghâzi Turks came in contact with the Bulgarians when Aydinoglu Umûr [g.c.] allied himself with Cantacuzens. First in 742/1341 Umûr aided him against Ivan Alexander, the Bulgarian Czar, and, then, on 5 Rabi' I 746/July 7, 1345 destroyed Monclio, the Bulgarian adventurer who had been dominating the Rhodope region (P. Lewalle, *L'Emirat d'Aydin*, Paris 1937). The Ottomans replacing Umûr in his alliance with Cantacuzens appeared to come into contact with the Bulgarians first in 753/1352 when these came to support his rival John V. After the conquest of Edirne [g.c.] in 762/1361 Lâli Shâhin seemed to be active in the direction of Zagbra (Berbova) and Filibe [g.c.] (different dates in the chronicles: 763/1362, 765/1364, 766/1365), but the Byzantine-Bulgarian clash in 765/1364 is thought to be connected with an Ottoman-Bulgarian agreement. In 766/1365 Czar Ivan Alexander divided his realm between his two sons: Stratsimir got the Vidin region and Shishman the Castrum of Tmovo. Dobrotic in the Dobruja and Varna were actually independent. The same year Hungary seized Vidin, threatened Tmovo, and Amadeo of Savoy not only occupied Ottoman Gallipoli but also Mesembria, Sopolis and Anchialus for Byzantium in 767/1366. With Ottoman auxiliary forces Shishman tried to recover Vidin (769/1368), and gave his sister Thamar in marriage to Murâd I. According to the Ottoman chronicles (see *Safâ al-Dîn*, I, 14-17) the Ottomans reached the main Balkan passes by taking Kizilbagat-yeniçisi, Yanbol (Iambol), Karli-ovâd (Karnobati), Aydos (Altos), Sözebol (Sopotolis) under Timûrtâsh in about 770/1368. Ihtiman and Samakov under Lâli Shâhin in 772/1370 and 773/1371. Filibe on the one side and the Yanbol-Karli-ovâd region on the other were then the main *ahls* [g.c.] where the *ahls*idîs, Yûrûks [g.c.] and *ahls* were settled in large numbers. Nâh was taken by the Ottomans only in 787/1385 (Neshîrî, Taeschner ed. I, 58). Sofia was still in Shishman's hands in 780/1378 (C. Jireček, *Gesch. der Bulgaren*, Prague 1876, 339). It seemed to surrender between this date and 787/1385. In 789/1387 when Murâd I found that his vassals Shishman in Bulgaria and Ivanko in Dobruja were not on his side against the Serbians he hastily sent an army under 'Alî Pâsha to

secure his rear. Our information on this expedition comes from Neshîrî and Rîhl who both used here a detailed and well informed source, and there is no need to question its chronology (cf. F. Bahinger, *Beiträge zur Frühgesch. der Türkenherrschaft in Rumelien*, Munich 1944, 29-35). In the winter of 790-1/1388-9 'Alî Pâsha took Provadia (Pravadi), Venčan, Madera and Shumûl (Shumen) and passed the winter in the latter. In the spring of 791/1389 he sent Yakkûbî Beg against 'the son of Dobruja' in Varna, then went to meet the Sultan in Yanbol. Shishman came there, too, and made his submission to Murâd I. But on his return he did not surrender Silistria (Silistria) to the Ottomans as he promised. Upon this 'Alî appeared before Tmovo (Tmovo), Shishman's capital; The infidels brought him the keys of the city' which meant submission. Accepting the submission of several other towns on his way 'Alî came and laid siege to Nikebôl (Nikopol, Niropolis) where Shishman had taken refuge. He asked pardon which was granted. 'Alî was to join Murâd's army.

After the battle of Kosovo Bayazid was detained in Anatolia while Mircea, supported by Sigismund, took Silistria and the Dobruja and made a successful raid on the *ahls*idîs of Karli-ovâd, in 793/1391. Only 795/1393 was Bayazid able to come and take Tmovo by force (6 Rana'dî 797/July) and he also subjugated the Dobruja and Silistria. But still Shishman was left in his stronghold, Nikebôl, as a vassal. He then appeared to Sigismund; this caused Bayazid's [g.c.] invasion of Transylvania and the battle of Argeş against Mircea (26 Rabi'ab 797/17 May, 1393). We find in a newly discovered document (Topkapı Sarayı Archives, Istanbul, no. 6374) the following 'Crossing Arghîsh river Yildirim Shân came before the fortress of Nikebôl the ruler of which was a lord named Shishman. He was paying tribute to the Sultan in the same way as the *Proyode* of Wallachia. The Sultan asked him to send ships, which he furnished. As soon as the Sultan was on the other side he fetched Shishman, beheaded him, and seized Nikebôl and transformed it into an Ottoman *sandjak*. The Slave sources (see J. Bogdan, *Archiv f. slav. Philol.*, xiii, 496) dated Shishman's death as 12 Sha'bân 797/3 June 1395 which fits in with this Ottoman evidence.

The battle of Nikebôl (24 Dhu 'l-Hijja 798/28 September 1396) sealed the fate of Bulgaria. After his victory Bayazid invaded Stratsimir's Vidin too. He settled in Vidin, Silistria and Nikebôl the powerful *Ödî-begs* against Hungary and Wallachia. In 847/1443, when a Hungarian army advanced into Bulgaria, the Bulgarian *re'âyâ* and *re'âyâs* in the region of Sofia and Radomir joined the invaders, who appointed a 'Vladika' in Sofia for them. They were soon repressed by the Ottomans (see Isakick, *Fatih Devri*, Ankara 1954, 20).

During this period, and especially after 805/1402, Bulgaria became strongly ottomanised. In Eastern Bulgaria the Muslim population was definitely in the majority as the surveys of 1520s show (see Ö. L. Barkan, *İhtisat Fihristi Mecmuası*, vol. XI, nasp.). In 819/1425 in Filibe there were 600 Muslim households as against 20 non-Muslim. Bulgaria was divided into the *sandjaks* of Çirmen, Sofya, Silistria, Nikebôl and Vidin in the *eyâlet* of Rûmêlî [g.c.]. In the 11/17th century the *sandjaks* of Nikebôl and Silistria were included in the *eyâlet* of Özü which was created against the Cossacks. Its capital was Özü and Silistria. The *sandjak* of Silistria included Pravadi, Yanbol, Harsova, Varna, Akhyoll (Anchialus),

Aydos, Karli-ovâd and Rûst-kârî (Rhosoukastron) in 924/1518. Bulgaria was put under typical Ottoman administration with the *hînde* [g.c.] system (see the laws and regulations in Ö. L. Barkan, *Kanunlar*, Istanbul 1941, 255-289). Most of the members of the pre-Ottoman military class were integrated in the Ottoman military organisation (see my *Fatih Devri*, 136-184), *frontiers* as *himar*-holders, *sevînks* as Ottoman *re'âyâs* [g.c.]. As to the bulk of the Bulgarian population, they were given the status of *ghîlime re'âyâ* [g.c.]. But among them many groups enjoyed financially a special status as *derhendâgî* (guardians at the mountain passes) or suppliers of rice, meat etc. for the palace or the army (see *şavâhid*), and the *Dewghîms* [g.c.] was also extensively applied in Bulgaria.

As Istanbul and the army was dependent for a great proportion of their food supply on Bulgaria the government put restrictions on the export of the Bulgarian meat and rice. In 973/1566 the appointed sheep owners in western Bulgaria were ordered to provide 174,230 sheep for the army (A. Refik, *Türk İdariside Bulgaristan*, Istanbul 1933, document no. 3). The rice production in the upper Maritza (Merik) valley brought to the state as *mahdû'a* [g.c.] a yearly revenue of about one million *akça* (20 thousand gold ducats) in about 887/1483 (T. Gökbelgin, *Edirne ve Paşa Lîzan*, Istanbul 1952, 131). Timber from Shumûl, Hazargard, Tmovo (Tmovo) and iron from Samakov were supplied for the construction of the warships at Akhyoll in 979/1571 (A. Refik, doc. 19, 22). An industry of cloth and felt developed in Filibe, Shumûl and Islayme (Sliven) in this period which was exported in other parts of the empire (A. Refik, doc. 28). Bulgaria experienced neither an enemy invasion nor an insurrection from 1450 to 1595. The Bulgarian towns, especially Filibe, Sofya and Silistria, developed as military and commercial centres on the main routes in Rûmêlî [g.c.]. In these cities new Muslim districts sprang up around *ghîmî*'s *mevârit*, *bedestins* and bazars with rich *males* (see Evliyâ Çelebi's detailed description in 1061/1651, vol. III, 301-421, and H. J. Kissling, *Beiträge zur Kenntnis Thrakiens im 17. Jahr.*, Wiesbaden 1926). According to the Ottoman census in 1520 (see Ö. L. Barkan, *JESHO*, vol. I, Part 1, 1957, 32) the *sandjaks* of Silistria, Çirmen, Nikebôl, Vidin and Sofya had about 125 thousand households altogether including the population in the places belonging to Pasha in Bulgaria.

From the end of the 16th century onwards the rate of several taxes was raised and the complaints of the Bulgarian *re'âyâ* from the exactions of the local officials and soldiers began (A. Refik, doc. 37, 38, 41, 43, 46, 47). In 1014/1605 the *re'âyâ* of the Sofya region complained that the agents of the Patriarch were trying to raise the rate of duty from 6 *akça* to 12 for the *re'âyâ* and from 60 to 400 for the local priests (A. Refik, doc. 58). The first important uprising in Bulgaria took place at Veliko-Tmovo in 1003/1595 when Michael, Wallachian Prince, made successful raids in Bulgaria. Sinân Pâsha [g.c.] put down the insurrection and thousands of Bulgarians took refuge in Wallachia. Also in 1014 this time on the Bulgarian *haydûks* or *eghbîrîs* begin to be mentioned more frequently in the Ottoman sources (A. Refik, doc. 52, 54, 75). Now almost with every enemy invasion the *re'âyâ* were joining them and when they withdrew large groups of *re'âyâ* followed them in spite of the assurances on the part of the Ottoman government (for example in 1100/1688 the *re'âyâ* of the region of

Vidin, Kutlodja, Piroi and Berkojda (A. Refik doc. 59) in 1430/1737 the *velâyet* of the region of Izobil (Znepolje) (A. Refik, doc. 81, 82); in 1206/1793 those of the region of Ismail and Stannakia). In 1245/1829, seventy or eighty thousand Bulgarians followed the Russian army to settle in Bessarabia; in 1861 ten thousand of them left their homes for the Crimea.

In the second half of the 18th century the *ayâls* were particularly powerful in Bulgaria. As *multazims* [g.n.] and hereditary possessors of the large state lands, *zâbiks* [g.n.], they became real masters of the country since the government had to rely on them to collect the taxes of the *velâyet* and most powerful of them such as Trevelin-oghlu İsmail, Bayraklı Mustafa [g.n.], Rusluk, İsmail Çınar in Hozargrad even maintained private armies to which the Sultan had to have recourse at critical moments (A. Refik, doc. 90). The Rhodopes and the Balkan mountains sheltered an increased number of bandits called *Kırdalı* in this period. Profiting from this anarchy a soldier of fortune, Farwand-oghlu or Fışân-oghlu Oğlman [g.n.] rebelled, and then, as the Poşla of Vidin, ruled over Western Bulgaria between 1212/1792-1221/1807 (Djedwet, *Ta'vîd*, viii, 217, 249, 250, viii, 126-48). Under Mahmud II [g.n.] the *ayâls* were eliminated and the central authority was established in Bulgaria. In the period of the *Tanzimat* in 1263/1846 Bulgaria was reorganised as the *vilâyet* of Silistre, Vidin, Nish with the provincial councils in which the Bulgarian representatives were admitted. But the administrative reforms did not prevent unrest among the Bulgarians. An insurrection in the Nish region in 1257/1841 and a more violent one in the Vidin region in 1266/1850 broke out partly because of the provocation of the revolutionists in Serbia and Wallachia, and partly because of the abuses of the *çiftlik* system maintained there by the Muslim *aghas* or *göğdars* (see my *Tanzimat ve Bulgar Medenîti*, Ankara 1943).

Many observers in the middle of the 19th century (N. V. Michoff, *La population de la Turquie et de la Bulgarie*, 3 vols. Sofia 1913-1929) came to the conclusion that one third of the population of Bulgaria was Muslim. Out of this about 400 or 500,000 were the *Pomaks* (Pomati), the native Bulgarians who had accepted Islam in the 10th, 11th and 17th centuries in the central and western Rhodopes. Muslims were in the majority in the cities of Filibe Vidin, Şumnu, Rusluk, Ragrad, Varna, Plevne, Osman-bazar, Eski-djuma'a, Yezigazra and in the minority in those of Gabrovo, Nish, Sofia, Tırnova, Karnobat (Karlin-oval) by 1293/1876. After the Crimean war the Ottoman government had settled in Bulgaria 70 or 80,000 Circass and about 100,000 Tatars (in A. H. Midhat, *Midhat Paşa*, Cairo 1323/1904, 35; 350,000 immigrants). Tension between these and the native Bulgarians was exploited by the Bulgarian revolutionists who had finally organised a Central Committee of Revolution in Bucharest in 1286/1869. In 1287/1870, the new administrative reform was for the first time applied in Bulgaria. The *sandjaks* of Rusluk, Varna, Vidin, Tulci (Tulca), Tırnova (Tırnova) formed the *vilâyet* of Tuna and those of Sofia and Nish that of Sofia. Midhat Paşa [g.n.], first governor of the *vilâyet* of Tuna, made it the most progressive province of the empire (A. H. Midhat, 24-26). Although the tax revenue of the *vilâyet* increased fifty per cent under his administration, the peasantry had to pay more and do forced labour for the construction of the new routes. In 1287/1870 the struggle for an independent

Bulgarian church resulted in the establishment of the Exarchate which was regarded as a national victory. In the same period the increased activities of the Bulgarian revolutionists, *komitadjis*, supported actively by the Russians, resulted in the great insurrection of 1293/1876 (April-May). Bulgaria became the main field of operations of the Ottoman-Russian war of 1293/1877. It caused an exodus of the Muslim population to the south. With the Treaty of San-Stefano Russia attempted to create under her protection a great Bulgaria from the Danube to the Aegean Sea. But the great powers replaced it by the Treaty of Berlin which created a principality of Bulgaria, *İzmirli Emirliği*, under the Sultan's suzerainty, and the autonomous Province of Eastern Rumelia (*Rumeli-i Şarkî Vilâyeti*). It united with the Principality as a result of a revolution in Filibe in 7 Şuh 1302/18 September 1885 (A. F. Türkeldi, *Mesail-i Muhimme-i Siyasiye*, Ankara 1957, 193-246). At the time of the revolution of 1326/1908 in İstanbul Prince Ferdinand declared the independence of Bulgaria and assumed the title of Czar (Ş. Ramazanoğlu, 23 October 1908).

**BULGHÄR**, in Islamic literature the name of a Turkic people by whom two states, one on the Volga, the other on the Danube, were founded in the early middle ages.

Early historians. The original Bulgars seem to have arrived in the south Russian steppes with one of the Hunnic waves. They are mentioned for the first time by Joannes Antioch (Müller, *Fragm. Hist. Graec.* iv, 619) in the year 481 A.D., when they helped the Emperor Zeno in his fight against the Goths. The centre of the Bulgar country was then the steppes in the vicinity of the Danube river and the Maeotae (Azov Sea), but some of their borders dwelled also in the region of lower Danube and in the Caucasus. In the Byzantine chronicles

their original country, Kuban, is known as Great Bulgaria (Thoponous, Nicomedia). After the death of Khân Kuvrat in 642 A.D. the unity of these Bulgars was brought to an end, probably under the pressure of the growing power of the new Khazar kingdom. One section of the Bulgars remained in their ancient settlements on the Kuban and in the Maeotis till the 10th century. At this time this country was called by Constantine Porphyrogenitus (1049, 12, 48) "Black Bulgaria", and the Russian chronicles give them also the name of "Black Bulgars". This section of the Bulgars did not play any great part in history and was probably absorbed by the successive waves of Magyars, Pechenegs and Cumans. By far the greatest group of Bulgars, under Khân Isperukh, left their home country in 675 for the Balkans and the Danube, where they founded a state among the South Slavonic tribes. In a comparatively short time the numerically weak group of Turkic Bulgars was assimilated and absorbed by the more numerous Slavs. In Islamic sources this state and its inhabitants are known as Bulgär.

The third and smallest group had retreated along the Volga to the north (this fact is now confirmed by archaeological data) and settled down by the confluence of the rivers Kama and Volga. There they subjugated the Finnish aboriginal population and founded a new state. This group are the Bulgars of Arabic, Bulkar of Persian sources, and this name is applied also to the country and to the capital of their state.

**Sources.** Our outstanding authority on the Bulgar is Ibn Fadlän, who in 399-1021-922 took part in an embassy sent by the Caliph al-Muktadir bilähi to the Bulgar king. A little earlier is the source preserved in Ibn Rusta, *Hudud al-'Alam*, Gardizi, al-Bukri and Marwazi. Some decades younger than Ibn Fadlän are the accounts of al-Istakhr, al-Mas'udi and al-Muqaddasi, and from the second half of the 11th/12th century we have the report of Ibn Hawkal. Beside these main sources we find some few remarks in other Arabic and/or Persian works, such as those of al-Biruni, Bayhaqi, Ibn al-Nadim etc. In the 6th/12th century Bulgar was visited by Abü Hämüd al-Andalus and two centuries later by Ibn Battüta, but the report of the latter is not free from the suspicion of invention. The historians of the Mongol epoch, such as Ibn al-Ağir, Abu'l-Fidä, Rashid al-Din, Djuvayni and others, inform us about the end of Bulgar state. European sources are represented only by the Russian chronicles, which are valuable for the time before the Mongol invasion and after. As our sources come chiefly from the 11th/12th century, the following picture of the internal state of affairs in Bulgar is drawn from these and applies to later times only indirectly.

**Territory and population.** The centre of the Bulgar kingdom was formed by the triangle between the Volga and the Kama and the country south of the confluence of both these rivers. As to the frontiers of the Bulgar territory, our sources leave us entirely in the dark, and chapter 31 in the *Hudud al-'Alam* (erroneously captioned *Hurid*) is totally useless in determining its neighbours. Nevertheless we can gather some indications about these neighbours and their relation to the Bulgar kingdom. To the north lived various Finno-Ugrian tribes, as *Wäsi* (in Russian sources *Ves*, today *Veps*) and *Yürs* (Russ. *Vugra*); both of them at different times were under Bulgar domination, at least nominally. In the east, the *Basğit* (Bashgirs) were subject

to the Bulgars, and to the south-east some Pecheneg and *Çuuz* tribes led their nomadic life quite independently of the Bulgars. Between the Bulgars and the Khazars, in the forests, dwelled the more primitive *Burtis* (Burtas, probably ancestors of the Mordva); they were subject to the Khazars and the object of frequent raids by the Bulgars and in later times also incorporated in the state of the latter. According to al-Istakhr it was 15 days' journey from the land of the Khazars to the land of the *Burtis* and thence another 15 days' to the limits of this people, probably to the north-west. To the west lived various Slavonic (Russian) tribes, but the limits of their eastern colonisation are uncertain. That some of these were in the 10th century subject to the Bulgars is evident from the fact that the Bulgar ruler is frequently called by Ibn Fadlän *malik al-Saklabä* (king of the Slavs).

The Bulgars were divided into many hordes and groups, known under different names to Islamic authors. *Bartäla*, *Ighid* (or *Ashli*) and *Bulkär* are the three main groups named in Ibn Rusta and his epigones and Ibn Fadlän mentions, apart from *Ashli*, the tribe of *Savär* and a group or a large clan, called *al-Ikrazadjar*, who were already Muslims and had a wooden mosque. In the forests dwelled the subjugated Finnish tribes and in the towns (at a later period) a mixed population formed by merchants and craftsmen from Russia, Khazaria, Central Asia and even from Baghdad.

**Political institutions.** The Bulgar ruler bore the title *yülkär* (in Ibn Fadlän *Khazär*), a Turkic title known also in the form *alghar* from the Öghuz inscriptions. This title indicates the status of a lesser prince, vassal of a *khäbän*, in this instance of the Khazar *khäbän*, and shows also that the Bulgar country originally formed only part of a greater empire and that their ruler was not entirely independent. The Bulgars paid to the Khazars a salary for from each house as a tax, and their dependent status was manifested also by the fact that a son of the Bulgar king lived at the court of the Khazar *khäbän* as a hostage. These feudal relations were probably loosened by the Bulgar alliance with the caliph in Baghdad, but it seems that only the fall of the Khazar empire in 965 allowed them to become an absolutely independent state. The changed position of the Bulgar ruler after the alliance with the Caliphate is expressed also in the change of the old title *yülkär* to the new one *amir* as a symbol of the cessation of the former allegiance to the Khazar *khäbän*.

The state of Bulgar did not form a political unity, since the tribal leaders (Ibn Fadlän calls them *maliks*) did enjoy a large independence and freedom; this is apparent from Ibn Fadlän's report of the refusal of the *maliks* of the tribe *Ashli* to obey an order of the king. Although the Russian chronicles mention continuously only one Bulgar state, we read *amir* *amir* 1183 of a war waged by one Bulgar prince, allied with the Komans, against the Great Town of Isbügar and in the Mongol epoch that another state, that of Zhozkoti (Zhuze-Tau), was founded.

In Ibn Fadlän's time the relation of the ruler to his people was still quite patriarchal. He used to ride through the capital (a town of tents) alone, unaccompanied by a bodyguard or escort; at the sight of their ruler his subjects rose from their seats and bowed their heads. The ruling class was formed, besides the family of the king and the tribal leaders, of 500 important families.

**Economy and trade.** Until the first half of

the 10th century the Bulgars led a nomadic life, like other Turkic peoples in the Russian steppe, and cattle-breeding was their chief occupation and the foundation of their economy. This is clearly shown in the earlier sources, for according to Ibn Rusta the taxes were paid in horses. Ibn Fadlān already found the society in a state of change from nomadism to settled life. Many customs of the former way of life were then still surviving, i.e., no permanent capital served as the seat of the ruler, who wandered from one place to another and lived in a large tent. Al-Isfahānī mentions that the inhabitants spent the winter in wooden houses and the summer in tents. In the latter part of this same century Bulghār was already a flourishing agricultural and trading centre.

The chief products were millet, wheat and barley (Ibn Rusta, Ibn Fadlān) and these formed also the main food together with horse-meat. From the produce of their fields the people paid no sort of taxes to the king. According to archaeological finds agricultural technique was on a fairly high level of development, which permitted also the export of crops; in 1024 the Russians of Suzdal' where there was a famine, brought wheat from Bulghār and thus saved their lives.

Although agriculture predominated, cattle-breeding still played an important rôle in the economy. It formed the basis for various branches of manufacture, mainly tanning and also for export. At a later period Bulghār leather (the modern Russian leather *yul'*) and the Bulghār shoes (Pers. *mizra-i bulghārī*) were particularly well-known, especially in the East. Archaeology has brought to light many other industrial products such as copper-ware, ceramics, jewels and implements of a comparatively high degree.

The main source of the country's wealth was, however, international trade. The river Volga is one of the most ancient trade-routes in the world and the favourable site of the town of Bulghār at the cross-roads of east-west and north-south trade was fully exploited. The Bulgars themselves traded mainly in the north and in a lesser degree also in Central Asia, but the importance of Bulghār was due in the first place to its function as a meeting-place of foreign merchants, Russians, Khazars, and the king levied a duty of 10% on all water-borne merchandise: for instance the Russian merchants paid from every ten slaves one slave 25 tax. The chief caravan-route led to Central Asia (Khwarezm) and to Kiev. From northern countries the Bulgars imported furs of martens, sables, beavers, foxes and squirrels, and exchange with these northern peoples, such as the Witig and Yura, was made by dumb barge (see Ibn Fadlān, Birind, Marwazi, Abū Hamid, Ibn Battūta). The Russians, too, brought furs and as another chief item slaves, who were re-exported to Central Asia by the caravan-route or to the Caspian provinces by the Volga. Al-Mukaddasī, 325, gives a long list of Bulghār exports: furs of many different kinds, horse and goat skins, shoes, halatunae, arrows, swords, armour, sheep, cattle, falcons, kingfish, fish-teeth, birch wood, walnuts, wax, honey and Slavonic slaves. Many of these items are mentioned also by other sources and as Ibn Rusta, al-Isfahānī, Abū Hāmid etc.

From Islamic countries the chief imports were textiles, arms, luxury goods and ceramics.

The unit of currency was, as in other parts of Eastern Europe till the 12th century, the fur (especially that of foxes, martens and squirrels).

There was also silver money current which had been imported from Muslim countries, this money being used to buy the goods of the Russians and Slavs. From the beginning of the 11th/10th century there were struck in Bulghār imitations of Sāmānid dirhams with the same of the original mint and original date, but with the name of the Bulghār amir Mikhā'il b. Dja'far (probably the son and successor of Dja'far b. 'Abd Allāh, the ruler in the Fadlān's time). From 337/948-49 we have the first dirham from a Bulghār mint (Suwār), struck in the name of Tālīb b. Ahmad, and further coins till the year 337/968. Other coins bear the names of Mu'īn b. Ahmad (366/976-77), struck in Suwār and Bulghār, and of Mu'īn b. Hasan (between 366/976-77 and 370/980), struck in the same mints (see Vasmer, *Wiener Num. Zeitsch.* 57, 1924, 631). Besides the names of the rulers there also appear on the coins the names of 'Abbāsid caliphs.

At the time of his visit Ibn Fadlān did not notice any towns or villages, as the Bulgars led a nomadic life. It seems that the building of the fortress, which was one of the principal tasks of the Baghdad embassy, laid the foundation of the future town of Bulghār. The non-existence of towns in Bulghār prior to the embassy is confirmed on the one hand by the silence of the Ibn Rusta group of sources about this, and on the other hand by the use of the name Bulghār: this name signifies to Ibn Rusta and Ibn Fadlān always the country or the people, never the town. Al-Isfahānī is the first author who mentions the existence of the towns Bulghār and Suwār, with wooden buildings and mosques and 10,000 inhabitants. This account is then repeated by all subsequent authors with some small additions (*Ḥudūd al-'Ālam*: 20,000 inhabitants; Gardīzī: 300,000 families). The Russian chronicles know a number of Bulghār towns, but owing to their lack of details it is impossible to ascertain their locations. The most important of these towns was *Veliky gorod Bolgary* (the Great town of Bolgary), which is mentioned many times in the chronicles.

During the past half-century the Russians have undertaken numerous archaeological excavations on the sites of the ancient towns in Bulghār territory. The ruins near the village of Bulgarskoe, a distance of 6 km. from the town, show a high culture in the 13th and 14th centuries. All the buildings such as palaces, mosques, baths as well as the walls were of stone; the town had a circumference of about 6 miles and was surrounded by suburbs to the north and west. It must have had a population of some 50,000 souls at this time. The more recent discoveries in Bilyar and Suwār are richer than those in Bulgarskoe and it seems that Bulghār (i.e., the ruins at Bulgarskoe) was the capital only in the 10th and 11th centuries and then in later times its rôle was transferred to Bilyar in the central part of the country, on the river Cherechgan. Which of these two was the "Great town of Bolgary" of the Russian chronicles is difficult to tell.

Religion: According to our oldest sources (Ibn Rusta, ca. 950/92, but with an older source) Idān was well established amidst the Bulgars and there were some wooden mosques on their territory. This is fully confirmed by Ibn Fadlān, who during his visit found many Muslims, mosques, and a *khān* and *mu'addhin*. The early Arabic sources are silent about the beginning of Islamisation in Bulghār and only the 12th century traveller Abū Hāmid relates a legendary account, connected with a popular etymology of the name Bulghār; this

legend, however, is not known to the later Tatar traditions. One of the purposes of the Baghdadī embassy and especially that of Ibn Fadlān, was the strengthening of Islam, the introduction of Islamic law, the building of a mosque and a *mihrab* and the Islamisation of the whole country. It seems that this task was successfully accomplished. It was from Central Asia that Islam first reached Bulghār; the manner in which the *adhān* was performed clearly followed the *madhāb* of Abū Hanīfa, then ruled amongst the Central Asian Turks. Because Ibn Fadlān followed the Shāfi'ī *madhāb*, a disputation arose between him and the Bulghār *mu'addhin*, backed by the king. The Bulgars remained true to their Hanafī *madhāb* throughout the whole of their history. In towns there were mosques and Friday mosques, and the *Ḥudūd al-'Ālam* confirms that the inhabitants of Bulghār and Suwār were zealous fighters for the faith. According to Ma'addī (*Marāḡi*, II, 16) a son of the Bulghār king had made the pilgrimage to Mecca during the reign of al-Muktadir; another proof of the religious zeal of their rulers was the presentation to the mosques of Sabzavār and Khwarezmdīd, of a gift in 415/1024 by the Bulghār amir Abū Ishāk b. Shārdin b. Muḥammad b. Bīrīk (see *Ta'rikh-i Bayhaq*, ed. Tehrāni, 63). It seems that the Bulgars exercised a decisive influence on the conversion of nomadic Turkic tribes, such as Pechenegs and Kumans, to Islam, and they also nursed hopes of spreading the Muslim faith in Russia, in the 10th century still pagan. In the year 986 an embassy was sent to Kiev in order to convert prince Vladimir to Islam, and some time later this same ruler, searching for a suitable religion for himself and his people, invited Bulghār Muslims to explain to him the principles of their faith and to take part in a religious disputation between the representatives of the chief religions.

This northernmost Islamic country posed some ritual problems, owing to the short days and long nights during the winter and *vice versa* during the summer. To perform the daily five prayers in a short day was not an easy task and it was impossible to hold to the prescribed times; similar problems arose in Ramadan. This peculiarity of high latitudes, unknown in other Islamic lands, soon attracted the attention of Muslim writers and led to lengthy discussions as to what should be the right solution of these problems. As late as 1866 the Kazan historian Marjani wrote a treatise concerning this problem (see Togan, *Ibn Fadlān*, 170, where there are further references).

Language and literature: The language of the Bulgars, like that of the Khazars, has left very few remnants, mainly in toponymy and onomastics, and, beginning with the 12th century, also a fair number of epitaphs. The linguistic affinity of their language remained a problem a long time. Al-Isfahānī, 225, tells us that the language of the Bulgars resembled the speech of the Khazars, but both are unlike the languages of Burtās and Rūs. (An analysis of Kāshgharī's account of the Bulghār language together with a discussion of the whole problem is to be found in Pritsak, in *ZDMG* 100, 1939, 92-116). It is, however, now established that the Bulghār language belongs to the so-called "Bolgarian" group of the Western (or West-Hunnic) branch of Turkic languages, the other groups being Ghuz, Kipchak and Karluk. The "Bolgarian" group consists, apart from the Khazarian, of the following languages: 1) Proto-Bolgarian—the language of the Proto-Bul-

garian inscriptions and of the so-called "List of Princes" of the Bulgars of the Danube, found in an ancient Russian chronicle (see O. Pritsak, *Die bulgarische Fürstendynastie*, Wiesbaden 1955); 2) Kuban Bulgarian; remnants of this language are found in loan-words in Hungarian, and 3) Volga-Bulgarian, the language of the epitaphs, written in Arabic script, found on the territory of Bulghār. The degree of affinity between this language and that of the modern Cavghaz has not yet been satisfactorily investigated and explained. As the Cavghazs have been very little affected by the highly developed Muslim culture of the Bulgars, it is improbable that they are descendants from these; a greater right to claim such descent belongs to the modern Kazan Tatars.

With the sole exception of the above mentioned tomb-inscriptions, dating from the 12th until the 14th centuries, we do not possess any remnants of literary activity of the Bulgars. Ibn al-Nadīm mentions in his *Fihrist* that the Bulgars, prior to their Islamisation, used the script of the Chinese and of the Manichaeans, but no sample of this writing has come down to us. Abū Hāmid reports a *Ta'rikh-i Bulghār*, a work of Kādī Ya'qūb b. Nu'mān al-Bulghārī from the beginning of 12th century, in the year 595/1195. Shārd al-Dīn Husnān al-Dīn al-Bulghārī composed in the Tatar language a *Risāla-i Tawārīkh-i Balghariyya*, which contains nothing but fabulous stories about the propagation of Islam and the lives of saints; it was printed in Kazan in the year 1902.

History: The scarcity of our sources does not permit us to follow the course of Bulghār history closely. The Bulgars came into the light of written history only at the time of Ibn Fadlān's visit; at this period their ruler was Yūsuf al-Mursh b. Shārdīn, who subsequently changed his title and name into amir Dja'far b. 'Abd Allāh. The coins supply the name of his son and successor Mikhā'il b. Dja'far and also the names of another three rulers: Tālīb b. Ahmad, Mu'īn b. Ahmad and Mu'īn b. al-Hasan (for the dates see above, section on economy). The Bulgars remained till the fall of the Khazar khānate a vassal state of the latter. In the year 964 the country in the Volga basin was devastated by the Kievan prince Svyatoslav; an echo of this is found in Ibn Hawkal's story of the conquest of Bulghār, Burtās and Khazar in the year 358/968-69. This is, however, not the date of the Russian expedition but that of the year in which Ibn Hawkal received the information of these events. This invasion had no lasting effects on the prosperity of Bulghār; similarly the second Russian campaign, led by Vladimir, the son of Svyatoslav, in the year 985 did little damage. On the contrary, the Bulghār gained by the downfall of Khazar khānate; as the Russian armies after their victory retreated, the place of the mighty Khazars was occupied by the Pecheneg nomads, representing no real danger to the Bulgars. For a short period the relations between the Russians and Bulghār improved, as is shown by the trade treaty concluded in the year 1006 on equal terms. Yet both these states were in the same way threatened: the trade in the north and this led to continuous fighting since the second half of the 11th century; Bulghār history is from this time a history of their wars with the Russians.

In 1085 the Russian town of Murom was captured by the Bulgars, but remained in their hands only for a short time. After this event they were on the defensive and on many occasions in the years 1110, 1164, 1172, 1183, 1220—the town of Bulghār was

besieged by the Russians. Only two instances of a Bulghar offensive are mentioned: in 1107 they unsuccessfully attacked the town of Susadul and in 1213 they sacked the town of Ust'-yag, situated far in the north. The further fighting with the Russians was interrupted for nearly two centuries by the Mongol invasion.

Abū Hānūd, who visited the town of Bulghar and the Volga basin in the first half of the 12th century, says nothing about political history except the statement that in the town of Salān on the lower Volga there lived a Bulghar *amir* and stood a Bulghar mosque.

When the Mongols were returning to the east after the victory over the Russians on the river Kalka (1224) they were ambushed by the Bulgars and suffered heavy losses (Ibn al-Adīr, xi, 254). This was avenged in a most sanguinary fashion: in 1229 the Bulghar vanguard on the river Yāyik (Ural) was put to flight, and, in 1236 according to Muslim sources, in 1237 according to Russian chronicles, the Mongols attacked the Bulghar state and destroyed the capital with all its inhabitants.

From then on the country of Bulghar formed part of the kingdom of the "Golden Horde", the Mongol empire in the Eastern Europe (see BULOI). The capital Bulghar appeared to have then to a flourishing condition in a relatively short time; the archaeological finds show a high culture dating just from this period, and the majority of the epitaphs is dated in the Mongol epoch. The subsequent history of the country and the capital is very little known and we are not even told when and why the town was abandoned by its inhabitants. It was not affected by Timur's campaign of the year 1397, but Bulghar was soon afterwards, in 1399, destroyed by the Russians. The town probably suffered more from the rise of Kazan (called also Noviy Bulgar, New Bulghar), which was founded just before this time by Batu-Khan, than from these wars. The selection of this town as capital of an independent Tatar state, founded by Ulugh Muhammad (died 1446), sealed the fate of the town of Bulghar, its importance as the greatest market on the central Volga passed first to Kazan and then to the Russian town of Nizhny-Novgorod (today Gorkiy).

The word Bulghar still remained in use in literature, though only as the name of a country, and as late as the 19th century the Tatars called themselves Bulgars.

**Bibliography:** Muslim sources: Ibn Rustā; Ibn Fadlān; al-Mas'ūdī, *Murūj*; al-Istakhri; Ibn Hawkal; al-Mukaddasi; *Yūsuf al-ʿAlam*; al-Bīrūnī; Gardīzī; al-Bakrī; Abū Hānūd al-Andalusī, *Tuhfa* (ed. (1) ʿUMAR b. KASLĀN b. NAsIR b. ŠALIH, SIRAGI AL-DIN ABD HAFS AL-KANANĪ, born 12 Šaʿbān 724/4 August 1324, died 12 Dhū l-Kaʿda 805/7 June 1409. He studied at Cairo under the most famous scholars of the day, including Ibn ʿAKIL [q.v.], whose daughter he married, and served as *maʿūn* during Ibn ʿAKIL's brief tenure as Grand Kādī in 759/1358. Appointed Mufti in the Dar al-ʿAdl in 795/1363, he became the most celebrated jurist of his age (cf. Ibn Khaldūn, *Muḥaddima*, ch. 6, § 7 [Quatrecentième iii, 8]), but except for a short term as Šāhīnīe Grand Kādī at Damascus in 769/1367-8 (made notable by rivalry with his teacher Tādj al-Dīn al-Suhāfi) he was never promoted Grand Kādī, but only to the lesser (though lucrative) office of Kādī l-ʿAskar, in addition to a number of teaching posts. In later life, however, he was honoured with the title of Shaykh al-Islām, ranked along with or above the Grand Kādīs, and regarded by some as the *Muʿaddid* of the eighth century. With his stupendous knowledge, he was seldom able to finish any literary work, and besides a treatise on *Mahāsin al-Isṭiḥāq* left only an uncompleted work, *al-Tadhīn*, on Šāhīnīe fikh. He was the founder of the family's *madrasa* in Hārat Bahā' al-Dīn Karākhūsh.

**Bibliography:** Šāhīnī, *Daw' Lāmī*, v, 89-90; al-Dīn Taghribardī, *Nuḡām*, I, 105-106; v (= Cairo xii), index; vi, 156; *Maḥād*, *Sāh*, index; vii, 172 (with family table and additional bibliography); Ibn Ḥadjar, *Durar Kāmina*, ii, 267, 427; Suyūṭī, *Ḥuṣn al-Muhādara*, i, 248 (135); Brockelmann II 93, S II 410; Ibn Ḥadjar, *Inṣāḥ al-Ḥuṣn* (IM, MS. Add. 7321), 1234, b.

(2) MUHAMMAD b. ʿUMAR, BAHR AL-DIN, 757/1356-797/1389, eldest son of (1), succeeded him as Kādī l-ʿAskar and Mufti Dār al-ʿAdl in 779/1377.

**BULUGĠIN b. MUHAMMAD** (see HAMMADIS).

**BULUGĠIN** (in Arabic: Bulūḡīn) a. ZIRI b. MANAN, first Zīrid of Ifrīkiyya (eleventh century). As a reward for distinction in the service of the Fātimids as *amir* of the Sanhājīya against the Zanāta he was nominated governor of Ifrīkiyya by al-Muʿizz li-Dīn Allāh. As he was almost always on campaigns in the central Maghrib, he entrusted the administration of al-Kayrawān and eastern Ifrīkiyya to a vice-*amir* whose power continuously increased. The principal events of his life are as follows: Bulukkin founded Ajlūn, Milana, and Medea (1109/960), fought against Abū Khazar (1138/968-9), and boat the Zanāta (1160/971). His father Ziri was killed by Dīyāʾ b. ʿĀLĪ b. Ḥamdūn al-Andalusī, the rebellious governor of Maṣla and the Zab (Ramādān 360/June-July 971). The new *amir* of the Sanhājīya ejected the Zanāta from the central Maghrib (end of 360 autumn 971) and obtained Maṣla and the Zab. On 20 Dhū l-Hijja 361/2 Oct. 972 he was invested, under the name of Abū T-Fatḥ Yūsuf, with the Fātimid west except for Sicily and Tripoli. He campaigned in the Maghrib (362-3/973-4), appointed ʿAbd Allāh b. Muḥammad al-Kātib governor of Ifrīkiyya, fought the Kutāma (364-5/974-5), gained Tripoli, Sort, and Ajlūn (367/977-8). During his last campaign (368-73/979-84) he took Fez, Sijilmāssa, and Basra, beat the Barghawāta, and died on the return journey on 21 Dhū l-Hijja 373/25 May 984. He was succeeded by his son al-Manṣūr.

**Bibliography:** Ibn ʿIdrīs (ed. Levi-Provençal & Cufin), i, 228-34, 239, 296, ii, 243; 293 (Ziry's gained Tripoli, Sort, and Ajlūn); al-Buhārī (167/977-8). During his last campaign (368-73/979-84) he took Fez, Sijilmāssa, and Basra, beat the Barghawāta, and died on the return journey on 21 Dhū l-Hijja 373/25 May 984. He was succeeded by his son al-Manṣūr.

**AL-BUNDĀRĪ**, AL-FATĪH b. ʿĀLĪ b. MUHAMMAD AL-ʿISFAHĀNĪ, KĠWĀM AL-DIN, a historian who wrote in Arabic and is primarily known for his revision of the History of the Šāhīnīdīs written by his compatriot ʿImād al-Dīn al-Isfahānī. Relieving it of certain stylistic embellishments, he dedicated it in 623/1226 to the Ayyūbīd al-Muʿazzam (ed. M. Th. Houtman in *Revue de Textes relatifs à l'Histoire des Saljuqides*, ii). He says that he had previously similarly treated the History of Salāhīn, al-Barī al-Šāhīnī, by the same author. He had also written a continuation to the (biographical) History of Baghdad by Khātib Baḡdādī (autograph MS. dated 639/1241-42, Paris Bibl. Nat. Arab. 6132). Finally he is the author of an Arabic translation of Firdawsī's *Šāh-nāma* which he also dedicated to al-Muʿazzam in 642/1227 (ed. ʿAbd al-Wahhāb al-ʿAsʿam, Cairo 1350). We know nothing more of his life, which he seems to have spent divided between Syria and ʿIrāk. The date of his death is unknown.

**Bibliography:** Houtsma, *op. cit.*, preface; Brockelmann, i, 321, and S I, 354 (where the author is incorrectly distinguished from Taʿībī); *Baghdād* from the *Ḥisāb* to al-Khātib, cf. *ibid.* 563). (M. TH. HOUTSMA [cf. CHAMBERS])

**AL-BUNT**, Spanish Alpuente, a small *municipio* in the north-west of the province of Valencia, on the eastern slopes of the mountains forming the valley of the Guadalquivir-Turia; it belongs to the *partido judicial* of Chelva, 87 kilometres from the chief town. Situated at the junction of two mountains, Monte del Castillo and loma de San Cristobal, its castle stands on a crag sheer on all sides, which can only be reached by the steep and narrow ascent of an artificial covered way defended by a tower of dressed stone. In the ruins one can see traces of Roman and Arab masonry. It was reached by a drawbridge, some 40 metres long, which has perhaps given its name to the place.

It has no history before the time when, at the beginning of the *fifteenth* which put an end to the Unmayyad caliphate, the Banū Kāsim, Kutāma Berbers, bound by a long-standing alliance with the Arab tribe of Fihri, became independent in their small, steep territory, which formed part of the *haya* of Santipetia.

Of the four petty kings who ruled it, the first was ʿAbd Allāh b. Kāsim al-Fihri, an ʿĀmirid *mamlūk* who took the title of *hādīd* and ruled as an independent sovereign. After the caliph al-Murtada was routed before Granada and killed at Cadix, his brother Abū Bakr Hādīd sought refuge in Alpuente and, having been proclaimed by the Cordovans as caliph at the end of Rabiʾ II 418/June 1027, lived peacefully in this obscure place for over two and a

half years, welcomed and well-treated by the 'Amīrid *amūd*, who was a supporter of the Marwānid dynasty notwithstanding the harm which the last caliphs had done to his predecessors. When he at last decided to make his official entry into Cordoba it was with a retinue as small and courtly as the place from which he came; he was quickly deposed and it was thus that the Umayyad caliphate came to an end.

'Abd Allāh b. Kāsim, who ruled with the title of Nizām al-Dawla and died in 421/1031, was succeeded by his son Muhammad b. 'Abd Allāh Yūsuf al-Dawla, who died early in 424/1032, leaving a son six years old. The son was deposed after a few months by his paternal uncle 'Abd Allāh b. Muhammad, who married the queen mother and lived on good terms with the neighbouring *reyes de taifa* until his death in 485/1092.

Alpuente next passed into the hands of the Almoravids and then into those of the Almohads. When the Almohads were expelled from Andalusia, the *sayyid* who was governor of Valencia, Abū Sa'īd Zayd, grandson of 'Abd al-Mu'min, allied himself with James I the Conqueror and offered Alpuente to him; afterwards, when he sought refuge at his court and turned Christian, he submitted Alpuente to the jurisdiction of the bishop of Segorbe, Don Guillem.

There is another Al-Bunt, a farm near Granada, where in 428/1037 Bādīs, the successor of Habbās, and his brother Buluggin treacherously killed the 'Amīrid *faṣā* Zuhayr, lord of Almería.

#### BCR [see BA'Ā]

AL-BURĀK, the beast on which Muhammad is said to have ridden, when he made his miraculous "night-journey". According to Sīra xxi, 1, the "night-journey" led the Prophet from the sacred place of worship, i.e., Mecca, to the "remote place of worship". This latter place has been identified by B. Schrieke and J. Horowitz with a point in the heavens, and by A. Guillaume, recently, with a locality near Dīr'āna on the border of the sacred precinct of Mecca. The addition of the phrase "the environs of which we have blessed" makes it probable, however, that the passage refers to a place in the Holy Land, namely Jerusalem (cf. Sīra xxi, 71, 81; Sīra vii, 137; Sīra xxxiv, 18; *al-lahī bīrānī fīhī*). Be this as it may, the "remote place of worship" has always been understood, in the indigenous tradition, as a reference to Jerusalem. It was accepted, moreover, that Muhammad made the journey from Mecca to Jerusalem and back, not merely in a dream, but accompanied by Gabriel—in the living flesh and within the space of a single night. The miraculous speed of such a feat was held to be explicable on the ground that Muhammad rode a beast of exceptional fleetness. It was in this connexion that the legend of al-Burāk arose.

In one of the numerous *ḥadīths* that Tabarī, in his *Kutub al-kutub*, gives on the "night-journey", Muhammad's mount is described simply as a horse (xv, 1, 1). Most *ḥadīths* of the earlier times call it, however, al-Burāk and define it as "a beast (in size intermediate) between a mule and an ass", sometimes with the further detail that it is white. It is also

declared to be long (Muslim, *Imān*, 259), with a long back and long ears (Ibn Sa'd, i, 1, 143), with shaking ears (Tabarī, *Ta'isr*, xv, 10), saddled and bridled (*ibid.*, 12). The *raḍā*-poet 'Aḍḍādī (d. 97/715) speaks, in connection with Abraham, of the "bridled Burāk" (cf. Abūwardī, xxv, 107-11; if genuine, the oldest dated evidence). The earlier Prophets have themselves made use of this beast (Tabarī, *Ta'isr*, xv, 10; Ibn Hishām, 263). Its speed is said, as a rule, to be such that "with one stride it moved as far as its gaze reached". In Ibn Hishām, 264, in Ibn Sa'd, i, 1, 143 and in Tabarī, *Ta'isr*, xv, 3 it is also described as a beast having "wings on its shanks, with which it drives forward its legs". These words are intended to mean, of course, only that al-Burāk could move its legs extremely quickly, and not that it was capable of flying. Genuine wings are first ascribed to it only in later texts. It is generally depicted in miniatures as a winged creature (see below). Grammatically al-Burāk is construed both as masculine and as feminine.

It is reported in some *ḥadīths* that al-Burāk at first resisted the attempt of the Prophet to mount him and was therefore brought to obedience by Gabriel. Muhammad, after the arrival in Jerusalem, is said to have dismounted and tied the beast to a rock (*ṣaḥāba* Tabarī, *Ta'isr*, xv, 7), or "to the ring, to which the Prophets were wont to tie it" (Muslim, *Imān*, 259; Tabarī, *Ta'isr*, xv, 10; Ibn Sa'd, i, 1, 143 f.). Al-Burāk, in certain *ḥadīths* transmitted by Buḥārī and Muslim, serves as the steed for Muhammad's actual "journey to heaven". The legends of the "night-journey" (*isrā'*) and of the "journey to heaven" (*mi'rāj*) became combined at an early date. Al-Burāk was also included in this confusion of legends, and thus developed gradually into a flying steed. The ascent into heaven (*mi'rāj*), in the original form of the legend, occurred however by means of a ladder.

The etymology of the name Burāk is not yet fully elucidated. E. Blochet believed it to come from the Middle Persian *bīrag*, "steed". J. Horowitz has rightly questioned this interpretation and has declared himself in favour of a derivation from the Arabic root *baraka*, "to lighten, to flash". According to this view, Burāk could be explained as a (rare) diminutive form. "The miraculous beast would thus have received its name 'the little lightning-flash' on account of its fleetness or of its brilliant colour". Yet even this explanation is not wholly convincing. The possibility must also be envisaged that the name Burāk goes back to a pre-Islamic tradition now unknown to us. In general, much that is reported about the steed of the miraculous "night-journey" will derive from pre-Islamic tradition. It is, however, difficult to uncover the various links in all their detail.

The later development in the conception of the Burāk is to be discerned rather in figurative representations than in literary documents. This statement is also valid in relation to the fact that eventually al-Burāk received a "human face". Horowitz has pointed to a *ḥadīth* of Ibn 'Abbās, transmitted by Ḍa'ūd (d. 1035), as the earliest literary evidence declaring that al-Burāk had "a cheek like that of a man". Buḥārī, in his description of the ruins of Persia's burning of the 6th-century city, designates the monster in the gateway of Xorras, "whose face resembles a human face", as Burāk. The earliest picture yet known of al-Burāk dates from the year A.D. 1314 (in a MS. of the *Ḍiḥān* al-Tawḥīd of Raḥīd al-Dīn). None of

less, it is clear that the real development occurred within the sphere of the visual arts. The decisive stimuli arose out of those forms of representation which—from the figures guarding the gates of Assyrian palaces onwards—remained alive in the shape of crests, griffins or sphinxes and have again and again appeared as artistic forms. The winged creatures, which in the course of time became petrified into a formal element no longer understood, obtained at last a new meaning in connexion with the legend of the *mi'rāj* of the Prophet. In illustrations to Persian poetry, and especially to the works of Nizām al-Burāk with his rider and with Gabriel as guide came to be a much cherished subject. The splendidly composed picture of the "journey to heaven" in the Nizām MS. Or. 2265 of the British Museum constitutes the highest point of artistic achievement in this evolution.

BURĀK (or, more correctly, BARAK) **MĀRĪT**, the first of the Kutubg Khāns of Kirmān. By origin a Kara-Khitay he was, according to Dīwāynī, brought to Sultān Muhammad Khwārm-Shāh after the defeat of the Kara-Khitay on the Talas in 1220 and taken into his service, in which he rose to the rank of *hājib* or chamberlain. According to Nasawī he had held this same office at the court of the Gūr-Khān or ruler of the Kara-Khitay. Being sent on an embassy to Sultān Muhammad he was forcibly detained by the latter until the final collapse of the Kara-Khitay and was only then admitted into his service. When the sultan had met his death in flight before the Mongol armies and his son Dīāl al-Dīn Khwārm-Shāh (q.v.) had taken refuge in India, another son Ghlyāth al-Dīn Pr-Shāh succeeded in establishing himself in Persian Turk (winter of 1222-3). Here he was joined by Burāk, whom he appointed governor of Isfahān. On account of a quarrel with Ghlyāth al-Dīn's vizier, Burāk obtained permission to leave for India in order to enter the service of Sultān Dīāl al-Dīn. Attacked en route by the governor of Kirmān he not only defeated

his assailant but made himself master of his territory, and he then renounced the idea of proceeding to India (1222-3). This is Dīwāynī's version; Nasawī represents Burāk as being appointed governor of Kirmān from the outset. When Sultān Dīāl al-Dīn appeared in Kirmān in 1224 he confirmed Burāk's appointment, though not without some misgivings. In 1226, whilst campaigning in the Caucasus, he received information that Burāk had risen in revolt. In his haste to deal with the rebel he travelled, according to Dīwāynī, from Tiflis to the borders of Kirmān in the space of 17 days. He then turned back, either because of Burāk's conciliatory attitude or because of the strong defensive measures he had adopted. In 1228 Ghlyāth al-Dīn, having quarrelled with his brother, came as a fugitive to Kirmān. His mother was forced to marry Burāk against her will and was then accused, together with her son, of complicity in a plot against his life. They were both put to death though Dīwāynī and Nasawī disagree as to the details. According to the former Ghlyāth al-Dīn was executed first; according to the latter he was kept a prisoner for a time after his mother's death and there was even a rumour that he had escaped to Isfahān. Dīwāynī relates that Burāk now approached the Caliph announcing his conversion to Islam and asking to be recognised as an independent sultan. The Caliph granted his request and gave him the title of *bulugh sultān* ("Fortunate Sultan"). In 630/1232-3 the Mongol commanders operating in the Siltān area called on Burāk to submit to the Great Khān. He excused himself from proceeding to Mongolia in person but sent his son Rukn al-Dīn instead. Rukn al-Dīn was still en route when he received the news of his father's death, which occurred in the late summer or early autumn of 1235.

(W. BARTHOLOMÆ, J. A. BOYLE)

BURĀK (or rather BARAK) KHĀN, a ruler of the Chaghatay Khānate. A grandson of Möste'ken, who fell before Hāmān, his father, Yesin-To'a, had been banished to China for his part in the conspiracy against the Great Khān Möngke. Burāk himself began his career at the court of Möngke's successor, Kublāy Khān (1260-94). When in March 1266 Muḥarrak-Shāh, the son of Kara-Hölgei, was elected to the Chaghatay Khānate, Kublāy dispatched Burāk to Mā war? al-Nahr with a *yarlīg* or rescript appointing him co-regent with his cousin. Burāk at first concealed the *yarlīg* and then, having gained the support of the military, attacked Muḥarrak-Shāh, whom he defeated and captured at Khujand in September 1266.

Although he owed his throne to Kublāy, Burāk was soon involved in hostilities with the Great Khān. He expelled the latter's governor of Chinese Turkestan and defeated the army which Kublāy sent to restore him. In his war against Kublāy's great adversary, Kaydu, the head of the House of Ögödei, who had now possessed himself of Semirechye, Burāk was less successful. He gained an initial victory but Kaydu obtained help from the Golden Horde; Burāk was defeated on the Sir-Dar'āy and withdrew into Mā war? al-Nahr, where he prepared to offer desperate resistance. However a reconciliation was effected between the two princes and at a *kuriltay* held on the Talas in the spring of 1269 there

was organized, under the suzerainty of Kayda, a kingdom completely independent of the Great Khan. Kayda and Burak bailed each other as *anda* ("blood brother"), and an agreement was reached that the princes should live in the mountains and on the steppes, keep their herds of horses out of the cultivated areas and not exact from the population anything beyond their legal dues. Two thirds of Mä warä al-Nahr were left to Burak but the government of the cultivated areas was placed in the hands of Ma'ad Beg, a governor appointed by Kayda.

At the time of this hostility Burak had expressed his intention of invading the territories of Abaka, the Il-Khan of Persia, and had been encouraged by Kayda, who hoped to see the back of a dangerous rival. Ma'ad Beg was sent to Persia, ostensibly to collect the revenues due to Burak and Kayda, but in reality to spy out the land. Soon after his return Burak crossed the Oxus and occupied parts of Khwarizm and Aghlänistan. However he received little support from the troops sent by Kayda and was soon left in the lurch. On 7 Rabi' al-Hijrid 668/22 July 1270 Abaka inflicted a crushing defeat on his opponent, who withdrew across the Oxus with only 5,000 men.

Accounts differ as to how Burak passed the last year of his life. According to Wansil, he spent the winter in Bulghara, where he adopted Islam and assumed the title of Sultan. Ghayyiq al-Din, in the following year he undertook a campaign in Sibir, but his plans were frustrated by the defection of several princes and he was obliged to throw himself upon the mercy of Kayda, who caused him to be poisoned. According to Maghrib al-Din's more circumstantial account the defection of the princes took place immediately after Burak's return across the Oxus. He appealed for help to Kayda, who advanced very slowly at the head of a large army, his intention being not to assist Burak, but to profit by the situation. Having in the meanwhile suppressed the revolt Burak begged his *anda* to turn back, but Kayda continued to advance. His troops finally entered Burak's camp and when they entered it the next morning they found that he had died during the night, of fright, as it was said. His death took place according to Ghazal Karaji at the beginning of 670, i.e., on or after the 9th August 1277. He was buried, by Kayda's command, on a high mountain after the Mongol and not the Muslim fashion.

**BĀRĀN**, wife of the caliph al-Ma'mun and daughter of the Persian secretary al-Hasan b. Sahl (g.). According to some her real name was Khadija and Baran simply an appellation. Born in Safar 192/December 807, she was married from the age of ten to the caliph whom her father had faithfully served during the first part of his reign. The wedding celebrations, the splendours of which are described with relish by many authors, did not take place until Ramadan 210/December 825-January 826, on al-Hasan's estate at Fum al-Sih, near Wasit, at a time when the former secretary had retired from public life, but when the caliph was still desirous

of showing his attachment to the family. It was on this occasion that Baran, according to tradition, interceded for Ibrahim b. al-Mahdi (g.). Baran died in Rabi' I 271/September 884, aged nearly eighty. She lived in the former palace of Haffar the Barmes, long their heads of horses out of the cultivated areas and not exact from the population anything beyond their legal dues. Two thirds of Mä warä al-Nahr were left to Burak but the government of the cultivated areas was placed in the hands of Ma'ad Beg, a governor appointed by Kayda.

**BURAYDA**, the present capital of al-Kasim district of Saudi Arabia, is located at 26°20' N, 47°58' E, on the left bank of Wadi al-Rumal just west of where it flows into the sand of Nafid al-Sir. The city lies on a ridge of Nafid Burayda, 25 km. north of its traditional rival, the city of 'Unayza on the opposite bank of "the Wadi", as it is usually called in al-Kasim. In the alluvial flats scattered among the dunes of Nafid Burayda there are gardens and villages called collectively al-Khadija (sing. khadija). These fertile plots were formed by the Wadi flood, from which they continue to derive their copious water supply.

The altitude of Burayda is 670 m. at the airstrip. North and west of the city there is excellent grazing and an ample supply of fine salt which once made the city a famous market for horses, camels, and even cattle. The livestock, the agricultural produce and water from al-Khadija, the central position of the city on the Basra-Medina route has all factors in developing Burayda into one of the great trading centres of Arabia. The mixed population, comprising settled elements of Harb, 'Anaza, Mutayr, 'Uyayba, and Bani Tamim, traded throughout the Arab world. Men from Burayda belonging to the corporation of 'Uyayl became known from Cairo to Bombay as livestock dealers and caravan men.

The origin of the city is not clear. Yaqut mentions Burayda as a watering place of Bani Dahina of the tribe of 'Ahs, and the modern Arab geographers, al-Khadija and Ibn Balayhid, accept this toponym as the source of the present city's name. Without further evidence, this identification appears still unestablished. The date of the city's founding is confirmed by no sound evidence, although local tradition and Western travellers agree roughly that the 10th/16th century is a reasonable possibility. Casket places the founding of Burayda in 930/1543-4, without citing his source. In any event, the city is first mentioned as a political power by the chief historian of modern central Arabia, Ibn Khaldun, who gives a brief note on a battle between Burayda and 'Unayza in 1207/1693-6.

The local history of Burayda is to a large extent the story of four families and their participation in the politics of central Arabia, either independently or as provincial governors. The first was Al al-Durayhi (or perhaps al-Burayhi) v. Ibn La'biha, 221, from al-Anakir of Bani Tamim, whose ancestor, Rashed al-Durayhi, Coranics credits with the founding of Burayda. Little is known of this family other than the fact it carried on an intertribal struggle with its cousins, Al 'Uyayyin of al-Anakir. The personal feud with 'Unayza caused Al al-Durayhi to ask for military assistance from Al Sa'ud in 1182/1768-9. This step soon brought Burayda into the Sa'udi orbit, placed Al 'Uyayyin in power, and made al-

Kasim the cockpit of the long struggle between Al Rashid of Djabal Shammar and Al Sa'ud.

Al 'Uyayyin ruled Burayda from 1189/1775-6 to 1280/1864 as governors of Al Sa'ud and, at times, under the Turkish-Egyptian invaders from al-Hijaz. Their unreliability brought about the appointment of Djabat b. Turki Al Sa'ud as governor of al-Kasim from 1285/1869-70 to 1270/1853-4 and the establishment of the family of Muhanna of Al Aba al-Khail of 'Anaza as governors of Burayda from 1280/1863-4 to 1336/1919-9.

Neither Al 'Uyayyin nor Al Aba al-Khail were able to place service to Al Sa'ud above their ambitions for local supremacy. During the long war between Al Sa'ud and Al Rashid they served both masters with equal duplicity.

When Al Sa'ud finally regained al-Kasim in 1320/1905-6, the redoubtable 'Abd Allah b. Djabat Al Sa'udi, son of the founder of the dynasty installed in Burayda as governor of al-Kasim in order to eliminate permanently the local intrigues in this strategic area. 'Abd Allah was succeeded by his cousin, 'Abd al-'Aziz b. Mus'ad Al Sa'ud, the present Governor of 'Hijaz, and later by 'Abd Allah b. 'Abd al-'Aziz b. Mus'ad, now Governor of the Northern Frontiers.

The anarchical years preceding the consolidation of the kingdom by King 'Abd al-'Aziz Al Sa'ud discouraged the commerce of Burayda, and his subsequent conquests of al-Hash and al-Hijaz gave central Arabia unrestricted access to ports on both coasts, cutting into the entrepreneurial trade of al-Kasim. Since 1374/1954-5 the destruction of the city's most famous landmarks, the great city walls and citadel of Al Muhanna and the construction of modern government buildings, schools, and hospitals have altered the formerly grim face of Burayda. Only the broad market square of al-Qarada and the winding, narrow streets of shops west of it recall the great trading centre of the past. The population remains fairly stable at an estimated 25-30,000, of whom perhaps half are residents of the hamlets of al-Khadija.

**BURAYDA** n. al-HUSAYB, a Companion of the Prophet, was chief of the tribe of Aslam b. Afia who, together with about eighty families who were with him, accepted Islam when the Prophet halted at their settlement of al-Ghulam on his way from Mecca to Medina. (According to Ibn Hadjar, however, he accepted Islam after the battle of Badr.) Burayda did not join the Prophet in Medina until after the battle of Uhud, but then he resided there and took part in all the Prophet's campaigns. In the year 6/630 he was sent to collect taxes from Aslam and Ghifar, and then again to call on them to join the campaign to Tabuk. After the Prophet's death, Burayda continued to reside in Medina until the foundation of Basra, where he moved and built himself a house. Later he camped in Khurasan and settled in Marw where he died in the reign of Yazid b. Mu'awiya, 60-63/680-3. Some sources (Baladhuri and Ibn al-Akhi) state that he moved to Khurasan in the year 51/671, with al-Rabi' b. Ziyad, as one of fifty thousand who moved from Basra and Kufa together with their households on the

orders of Ziyad b. Abihi. According to Ibn Hadjar he died in 63/683.

(K. V. ZETTERSTERN-[W. 'ARABAT'])

**AL-BURAYMI**, an oasis in eastern Arabia, the principal town of which bears the same name and lies in Lat. 24°14' N. Long. 53°40' E. The town of Hamal lies west of al-Buraymi town and on the edge of the same grove of date palms. The only other centre in the oasis which may be considered a town, by virtue of its market, is al-Ayn, the south-easternmost of all the settlements. The oasis covers an area of roughly 6 km. by 9 km. and includes also the villages of Sa'ida, Hill, al-Ka'atira, al-Kini (pronounced locally al-Dhimi), and al-Ma'arad. Cultivation has been revived at al-Dhimi (pronounced locally al-Yahili), and members of Al Bū Fāhī, the ruling family of Abū Zāby (see Abū Zāby), have an estate at al-Muwayyihā. The oasis depends on water brought by underground aqueducts (*saqiya*, see al-Arslan) from the mountains of al-Hadjar and to the east and from the imposing rocky ridge of Djabal Hafit, rising in isolation above the plain immediately to the south.

Al-Buraymi is near the western end of the pass of Wadi al-Dijr, which leads to Suhr on the coast of al-Batina; it also lies on the principal route from Dubayy through al-Zahira (g.) to Dink, 'Hiri, and Naswa, the capital of Inner Oman and long the seat of the Imams of the Dhakir. The inhabitants of the oasis, numbering about 10,000, belong in the main to the tribe of Nu'aym (the two major divisions of which are Al Bū Khurayb and Al Bū Shāma), some of whose members are nomadic or semi-nomadic, or to the tribe of al-Zawahir, a settled folk not found in any number outside the oasis. Other elements in the oasis belong to Bani Kitab, Bani Ka'ib, Al Bū Hamir, Al Bū Fāfā, and Al Bū Fāhī.

The network of aqueducts running under the settlements has resulted in an interdependence of the villages, some of which are in a position to control the vital water supplies of others. Dates, alfalfa, vegetables, and fruit—including mangoes and sweet and sour oranges—are exported from the oasis, the principal port of which is Dubayy (g.). The town markets do a good business in livestock and are redistribution centres for the tribes and communities of the interior.

Al-Buraymi has been identified as the place early Arab geographers and lexicographers call Tuḥm (L4 gives the variant Tuḥm, and other variants listed in Lane), described as a centre for the purchase of pearls (whence *tuḥmīya* as a synonym for *is'fū'a* and *durra*). The accuracy of this identification seems open to question, with the possibility existing of confusion with some place actually on the Persian Gulf. Authors from eastern Arabia also give al-Djwaw and al-Djawi (g.) as old names for the oasis.

Very little is known of the history of the oasis before the nineteenth century. According to local historians it was occupied by the army which the Caliph al-Mu'tadid sent overland from al-Bahrayn in 280/893.

Between 1353/1934 and the outbreak of World War II, discussions took place between Saudi Arabia and the United Kingdom, acting on behalf of the Ruler of Abū Zāby, regarding the southern

and eastern boundaries of Saudi Arabia, but Buraymi was not then specifically at a point at issue. In 1372/1952, a Saudi Arabian official (*waṭni*) arrived in the oasis and established himself in Hamūsa to assert Saudi sovereignty against that of Abū Zāby and Muscat. In 1372/1954 the United Kingdom and Saudi Arabia agreed to refer to arbitration the dispute arising out of this action and out of conflicting claims to over 70,000 sq. km. of territory to the southwest of al-Buraymi. Thanks to the arbitration, the geography, history, and demography of al-Buraymi have been recorded in great detail, both sides having submitted to the arbitral tribunal elaborate memorials in which these matters are treated. Saudi Arabia contended that the whole oasis is an integral part of its Kingdom. The British maintained that exclusive sovereignty in the oasis should be vested in the ruler of Abū Zāby and the Sultan of Muscat. The British held that the traditional loyalty of Nu'aym (predominant in al-Buraymi town, Hamāsa, and Sa'ra) is to Muscat, and that of al-Zawāhir (predominant in most of the other settlements) is to Abū Zāby.

Following British charges of Saudi bribery and other misconduct, the British member of the tribunal resigned, whereby the substantive issue of the sarrām 1375/September 1955 without the tribunal having had an opportunity to pass an opinion on the charges or the merits of the case itself. In Rab' I/October 1955 troops of the Trucial Oman Levies under the command of British officers occupied the oasis, which was partitioned between Abū Zāby and Muscat. The Sultan of Muscat appointed a *ṣaḥb* in al-Buraymi town, and the ruler of Abū Zāby designated one of his brothers as his representative in the oasis. Saḥr b. Sulṭān, the paramount *shaykh* of Nu'aym, and other *shaykhs* with adherents went into exile in al-Dammām, the capital of the Eastern Province of Saudi Arabia.

(G. RENTZ and W. E. MUELLER)

**BURDA**, *n.* A piece of woollen cloth used since pre-Islamic times, which was worn as a cloak by day and used as a blanket by night. That of the Prophet has become famous. As a reward for Ka'b b. Zuhayr's [g.e.] poem, he made him a present of the *burda* he was wearing. It was bought from the son of the poet by Mu'awiyā and was preserved in the treasury of the 'Abbasid Caliphs until the occupation of Baghdad by the Mongols. Hulegü caused it to be buried but it was afterwards claimed that the real *burda* of the Prophet was saved and is still preserved in Constantinople.

**Bibliography:** Dozy, *Dictionnaire des noms de vêtements chez les Arabes*, Amsterdam 1845, 59-64; R. Basset, *La Biṣṣat Sa'ād*, Algiers 1910, 90-91 and the authors quoted. On the sacred relics in Istanbul, see Tahsin Öp, *Hikāṣ Saadet Dairesi ve Esmā'at Mühürleri*, İstanbul 1953.

2. The name of a celebrated poem by al-Bisrī [g.e.]. According to the legend he composed it when he was cured of a paralytic stroke which had seized him by the Prophet's throwing his mantle over his shoulders as he had done on a previous occasion for Ka'b b. Zuhayr. The fame of this miraculous cure spread and the poem, which was entitled al-ḥaṣṣūn al-durrīya fī maḥāḥi al-ḥayrīya, came to be known as *burda*. Its verses are supposed to have supernatural powers. They are still employed at the present day as charms and recited at burials. No other Arabic poem has attained such renown. Over ninety commentaries have been written on it in Arabic, Persian, Turkish and Berber; the *ṭahṭhīs*, the *ṭahṭhīs* and the *ṭahṭhīs* that have been made from it are innumerable. The poem begins with the usual *naṣīb*, in the style of ancient Arabic poetry; the author then proceeds to regret his youth and confess his faults. His career is contrasted with that of the Prophet, whose miracles, related according to tradition, fill the following verses. The poem concludes with a supplication to Muḥammad and several verses in his honour. There is no trace of Sūfism in it. Among the chief commentaries may be mentioned the first in point of date, that of Abū Ṣhāna 'Abd al-Raḥmān b. Ismā'īl al-Dimishqī (596-665/1199-1266) copies of which were preserved in Paris (Bibl. Nat., no. 1620) and Munich (no. 547); that of Ibn Marṭūk of Tlemcen (died 842/1499-1500) described by Dozy as "stupendus et borendus"; that of Ḥalīd al-Aḥmā (died ca. 908/1499-1500) which has been several times printed, occasionally with that of Ibrāhīm al-Bāḡūrī (died 24 Dhū 'l-Qa'da 1276/13 June 1860); that of Ibn Aḥmār (Cairo 1296). The text was published for the first time at Leiden by Uri in 1761 under the title, *Carmen Mysticum Burda Didum*, with a Latin translation. Since then it has often been reprinted, particularly in the East, and there is hardly a *Maḥjam* of edifying texts which does not contain it. In the West, von Rosenzweig's edition may be mentioned: *Funkelnde Wandelsterne zum Lobe des Besten der Geschöpfe* (Vienna 1824), with a German translation and notes. The best edition is that of Rofis, published after his death by Behnauer, *Die Burda*, ein Lobgedicht auf Muḥammad (Vienna 1866), with translations in French, English and German. It does not however contain the series of apocryphal verses given by von Rosenzweig. The *Burda* has been translated into various languages; without enumerating all the translations, we may mention, in addition to those mentioned above, that of de Sacy (at the end of the *Exposition de la Foi musul-*

*mane* by Pfr Ali Birgevi, translated by Garcin de Tassy, Paris 1822) and that of R. Basset, with a commentary (Paris 1894); that of Rodhouse, *The Burda* (in W. A. Clouston, *Arabian Poetry for English Readers*, 322-341, Glasgow 1881); G. Gabrieli's Italian translation, *al-Burdatayn* (Florence 1902), 30-85, with notes.

**Bibliography:** R. Basset, *Les Manuscrits Arabes des Bibliothèques des Zaouias d'Ain Madfū et Temacine*, Algiers 1886, 46-54; J. Goldziher, in *Revue de l'Histoire des Religions*, Vol. xxvi, 394 ff.; Broeckelman, *l.* 264-266. (R. Basset)

**BURDĪ** (pl. *burādī*, *abridī*, and *abridā*), square or round tower, whether adjacent to a rampart or isolated and serving as a bastion or dungeon.

Special meanings: each of the twelve signs of the zodiac, considered as solar "mansions"; more or less fortified country house standing alone amidst gardens (Eastern Maghrib); tower used in a light-house (*burdī al-masār*); tower used as a dovecot, especially for carrier pigeons (*burdī al-hamīd*; see J. Sauvaget, *La poste aux chevaux dans l'Empire des Mamelouks*, Paris 1941, no. 157); masonry pier of a bridge; mode (in music); slice, quarter of certain fruits having natural divisions (melons, oranges); row of grains in a head of corn.

In the diminutive form *burdī* al-ḥayrīya was the name given by the Moroccans to the fortress of Mazagan (see al-ṭarāṭī) during its occupation by the Portuguese.

The word certainly seems to be connected with the Greek *βύργος* and the Latin *burgus* (whence Germanic *burg*) and has also passed into Hebrew and Aramaic (see Fraenkel, *Arām. Fremdwörter im Arab.*, 215). But the foregoing must be very old, for it is to be found already in Sabaean inscriptions (see De Landberg, *Glossaire Dictionnaire*, i, 148).

(G. S. COLLIS)

## BURDĪ

### I. Military architecture in the Islamic Middle East

The different forms of towers which the word *burdī* signifies in its usual sense (especially in inscriptions) have always formed the principal elements in the fortifications which were erected in Islamic territories from the years following the Conquest and which were to remain of real importance until changes gradually arose in military ideas as a result of the development of heavy and field artillery. The importance of the protective role played, in the middle ages proper, by these lofty and massive edifices in defending towns and citadel ramparts, in serving as defensive strongholds (donjons), or on occasion standing as isolated defensive works (watch-towers, signal towers), should not distract attention from the fact that towers less strictly military in their functions had long existed in the same regions, the buttress-towers which have sometimes happened to be confused with simple architectural devices. To this category—disregarding the minarets of mosques, which have a separate evolution of their own—belong the first specimens of Muslim towers preserved in the Middle East in the ruins of the Umayyad residences, which have a rectangular plan and have their exterior walls appointed with semicircular salients (see ARCHITECTURE).

These castle-towers, and the towers of fortified enclosures (*ḥayr*), most frequently of modest dimensions, are disposed symmetrically so as to lend rhythm to the blind façades and to give height

to the entrances, and are usually solid at the base, or else equipped at ground-floor level with strongholds to which access was not easy (entrances being blocked by partition walls or even opening into residential rooms), and are at times used as latrines; they differed greatly in effect from the defensive towers of the Roman and Byzantine camps, which were, on the other hand, conceived with chambers on all storeys and were easily accessible to the troops of the garrison who could, in the last resort, extricate themselves therein. They must rather be considered as the adaptation of those round buttress-towers which had been known in the Middle East for centuries, an adaptation that the fortress towers of Sāsānīd Iran, less perfect in their arrangements than the *castra* of the *limes*, had always employed. Without being absolutely devoid of any military efficacy, since their upper platforms did allow of fire being brought on their assailants, or at least of a watch being kept on the approaches to a castle, and again without differing very much from the towers of the Umayyad forts erected at a similar period on the Byzantine frontier, they became indispensable accessories of princely buildings, secular as well as religious, whose appearance they enriched.

The essentials of this style, typical of the great Umayyad residences, were however soon to become more flexible. Indeed, the custom of strengthening walls in this way, of a particularly happy effect when it was a matter of avoiding the monotony of large surfaces in regular coursed brick, was not to disappear completely, for one finds it recurring in an 'Abbasid building of a function as unmarital as the great mosque of al-Mutawakkil at Samarra, the perimeter wall of which is punctuated by forty-four semi-cylindrical brick towers; but especially it persists in the partially fortified residences, the tradition of which was to be continued later by *ribāḥs* and caravanserais, and of which an excellent example is provided, at the end of the 20th/8th century, by the 'Irāḳī palace of Uḡayyid, with numerous half-round towers (angle towers 5.10 m., intermediate towers 3.15 m. in diameter) each with a small firing chamber on the top to which access is given by a covered gallery itself equipped with loopholes, and a device providing for downward fire throughout the length of the gallery which almost amounts to continuous machicolation, (see Creswell, *A Short Account of Early Muslim Architecture*, in Bibliography).

We thus meet again classical flanking towers which in their turn had been retained in mediaeval Arab fortification, having played a part in the Byzantine defences, where their defensive equipment assured, whatever their size and shape (square, polygonal, circular), an increased protection of the sectors of the curtain walls included between their salients. Not only did the new conquerors retain this principle without improvements, most often they were content to keep up or to restore by makeshift means the remarkable circumvallation walls of the towns they had occupied, in the Syrian sites of Aleppo and Damascus as well as later in Asia Minor (Kayseri) or in Upper Mesopotamia (Amid). There are, however, as many cases where it remains difficult, in spite of frequently copious epigraphical evidence, to establish a firm difference between previously existing work and later repairs of the Muslim era, which reflect the hazards of the much confused historical events. However, clear differences are evident between one region and another, and the provinces which had been longest under Byzantine occupation were to be also those where the tradition

of the older military architecture was to establish itself most distinctly, only rarely allowing the Seldjuk and Artukid creations to display originality in this field. Their towers, which are distinguishable only by a few details of structure and ornament, are similar to the preceding types with their superimposed vaulted casemates, with variations that are essentially related to the configuration of the terrain and to the particular problems to which the latter gives rise.

More interesting are the remains of the Fatimid era preserved in the Syro-Egyptian lands. Certainly there is often a straightforward accumulation of re-utilised materials, later integrated within more complex systems which render their study difficult.

Fig. 1. Ayyübid flanking tower at the citadel of Damascus (from J. Sauvaget)

One can, however, make out in the Roman theatre at Bosra, which has been transformed into a citadel, a primary phase of construction (inscriptions of 481/1089 and 544/1147-8) in which towers mounted on high terraces support a rampart with two ranks of loopholes and a *chemin de ronde*. Also entirely Muslim are the towers, in an excellent state of preservation, which are adjuncts to the gates of Cairo: Bab al-Nar, Bab al-Fatih, Bab Zuwayla. These were erected by Badr al-Djamil in 480-3/1087-92, and are connected with the new enceinte built at the same time. These works, of moderate dimensions (height 8 m. approx.), some rectangular, others round, but all solid up to two storeys of their height, combine defensive possibilities in their two upper stages (superimposing a platform adapted for firing on a square chamber covered by a cupola and furnished with loopholes) and solidity of basements (stone

evenly coursed, rows of columns laid across to guard against the collapse of the walls in case of sapping), all set off by a restrained use of ornament. Here we see a straightforward employment, without quest for the novel, of formulas which were to continue in vigorous use until the revolution introduced in the military architecture of the Middle East by the improvements of the Ayyübid period.

At this time the experience acquired by the builders during a permanent state of war with the Frankish kingdoms of Palestine, where the Western master-engineers had introduced their own traditions, together with the sudden rise of the Ayyübid principalities, led to the erection of imposing fortifications which reflected the recent advances in ballistic technique. In the considerable works undertaken at the beginning of the 7th/13th century by al-Malik al-'Adil (especially the citadels of Cairo, Bosra, Damascus and Mount Tabor) and al-Malik al-Zahir (at the citadel of Aleppo) towers are seen to attain gigantic proportions; to strengthen their defensive sectors, but at the same time to make room for large airy quarters capable of housing permanently a large number of troops who would be assured of communication with the galleries of the enceinte, and with the magazines of the interior, by subterranean passages or covered stairs; and eventually to compensate, by the thickness of their walls and the quality of their construction (by then constructions in fine ashlar were normal), for the weakening which the multiplication of fortified chambers and gangways could have caused. This is shown for example by the two towers of the citadel of Damascus (dating from 606/1209-10) shown here in section.

The first (Fig. 1), an asymmetrical salient of great size (rectangular plan of 27 m. by 13 m., walls 3.40 m. thick, projecting 8 m. from the curtain wall, attaining a height of about 25 m.), composed of three vaulted rooms, easily accessible and defended by five loopholes pierced in tunnel-vaulted recesses; its balcony, rising 18 m. above the level of the courtyard, is surrounded by a *chemin de ronde* equipped with loopholes (five in number, as in the lower rooms), leading to four machicolated brattices and bearing a crenellated parapet with 15 arrow-slits in the merlons, an arrangement completed by roughvallings in wood, thus showing the importance attached to the upper works in the general plan of the construction. The second tower (Fig. 2), which well deserves the name of donjon, is distinguished from the former only by its approximately square form (21 m. by 23 m.) and by the presence of a large central pillar, sufficiently massive for a small cell to have been contrived within it at its top storey. To these enormous rectangular bastions, where one occasionally notices, as in the donjon of Bosra (612/1215-6), the existence of reception chambers, must be added the less powerful salient towers, which could command the *chemin de ronde* without obstruction, and the isolated post-towers whose role is essentially one of surveillance.

After this the Mamluk period, where no innovations in the means of attack and defence are at first apparent, was content to continue this splendid heyday of military architecture in Syria. The towers underwent the effects of a slow transformation which substituted small smooth blocks for the powerful courses and the rugged embossments of Ayyübid masonry, and which delighted in showing off, by sheer virtuosity, a variety of constructional techniques, while enriching the whole with delicate relief

ornaments and equally extraneous polychromatic devices. Mention must, however, be made of a work so remarkable as the Tower of Lions (*burj al-siba'*) at Tripoli, a coastal fortification of large dimensions (28.50 m. by 20.10 m.) and of an imposing appearance due to the equilibrium of its proportions and a sure

which saw also the erection by the sultan Kayt-bay of an impressive fortification over the entrance of the citadel of Aleppo in place of the towers of al-Malik al-Zahir. About this time there appeared the embrasures for pieces of ordnance, and turrets to bear heavy cannon, which marked the vain

Fig. 2. Ayyübid donjon at the citadel of Damascus (from J. Sauvaget)

feeling for ornament, agreeing perfectly with a complex interior composition which corresponds, in its two great upper rooms (Fig. 3), to variations imposed by the requirements of the defence (numerous firing ports, arrangements assuring the safety of the floors on the ground and other storeys) and the inclusion of living quarters (the cistern, mosque, and windows lighting the upper part). The style may be recognised as that of the end of the 9th/15th century,

attempt to adapt the tower to those very conditions of warfare which were to bring about its rapid disappearance.

Meanwhile, however, a somewhat weak synthesis, though more westernised in certain constructional details, had been conceived by Ottoman military architecture, which had been able to erect, in order to command the passage of the Bosphorus and maintain the investment of Con-

Fig. 3. Longitudinal section of a Mamluk tower at Tripoli (from J. Sauvaget)

stantinople, the last specimens of fortresses where the utilisation of caisson was reconciled with adherence to the principles of mediaeval fortification. The towers of the two castles of Anadolu Hisârî (began 793/1590-1) and Rumeli Hisârî (dated by its inscription of 856/1452), to which may be added those of the castle of Yedi Kule (erected shortly after this by Mehmed II Fâtih) within the enceinte of his new capital of Istanbul, are characterised by the perfection of their system of defence (Fig. 4), realised at Rumeli Hisârî on a colossal scale (diameters

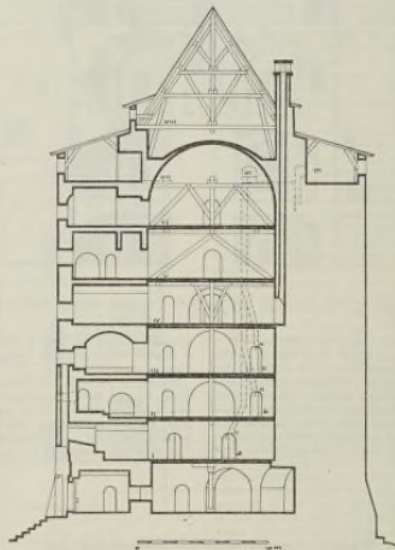

Fig. 4. Reconstructed section of an Ottoman tower of Rumeli Hisârî (from A. Gabriel)

of three dojons ranging from 23.80 m. to 26.70 m., thickness of walls varying from 3 m. to 7 m.), and by certain features (hollow cylindrical interiors divided into many storeys by joists, circular *chemin de ronde* surrounding, at the upper level, a covered drum with conical roof) which show the imitation of the flanking towers of the Genoan esecrine of Pera.

## II. Military architecture in the Muslim West

1. The background.—The Muslim West found, in Barbary and in Spain, a tradition of fortification going back to the Late Roman Empire, and in Tunisia to the Byzantine reconquest by Justinian. Roman fortifications of the Late Empire were numerous. Though simple in their lines, they had no regular plan as had the Roman camps except for the rather small *castrum* situated on the plains; more often than not they were adapted to the shape of the area to be protected and to the configuration of the terrain. The buildings, when not composed of re-utilised materials, were constructed of a solid core between two rubble facings, sometimes levelled to course by brick snicks. The curtain walls were

sometimes as much as ten metres high, with crenellated parapets; their thickness was considerable, averaging three metres. Towers, set at intervals a bowshot apart—say 20 m.—about the curtain walls; generally they were semicircular, 5-6 m. in diameter, less usually square or oblong, and most usually built on the outer side of the ramparts. The angle towers were often large bastions, solid at the base, containing at least one defense chamber, and higher by one storey than the curtain.

The gates gave access to the interior of the enceinte by a direct passage with an open section between two covered rooms, which made it possible to overwhelm any opponent who might have forced his way into the building; these were flanked by towers with several tiers of defence. The solid mass of the gateway itself gave on to the interior of the ramparts. Tower gates sometimes returned to the monumental arrangements of those of the Roman empire, opening by a double or triple passage.

No fortifications are known which could have been erected in the Mediterranean provinces of Spain after the reconquest by Justinian; but the Byzantine fortresses of Africa are well known to us. The plans of the plain fortresses or *castella* are very regular in form. Only the square tower is used, exterior to the curtain and projecting markedly; it is always solid at the base. The construction is of stone with no additional brickwork. When older materials are not re-utilised, coursed rubble preponderates, strengthened by freestone facing-courses. The curtain, less thick than in the Arabic and Abūth centuries, bears a *chemin de ronde* with crenellated parapet which gives access to the towers' defensive chambers. The gate is no more than a simple passage, with straight corridor. In all this we see only the survival, and frequently the impoverishment, of the methods of the Late Empire.

2. Ifrikiyan fortification from the 3rd/9th to the 6th/12th century, and its continuations.—The Aghlabid fortresses.—Aghlabid fortification is known from vast complexes, the enclaves of Susa and Sfax, which go back to the 3rd/9th century in the main lines of their construction: e.g., the ramparts of unprepared or roughly prepared rubble, with facing-courses at the corners, and with freestone turrets. The curtain is flanked with oblong towers—canted with a batter in exceptional cases—one storey higher than itself. In Susa the *chemin de ronde* is in places carried on a deep arcade. Some small *ribāḥs* are very similar to Byzantine forts.

Mixed with these local traditions are some Western influences, especially in the Susa *ribāḥ* and the primitive *ribāḥ* at Monastir. Their rectangular enclosures are flanked, at the corners and at the middle of each side, by bastions which are nearly all semicircular. Within there are some buildings against the four walls, leaving the large courtyard free. The influence of the Umayyad castles of Syria, themselves derived from the Roman *castrum*, is noticeable here. The pyramidal form of some towers, imitated from the lower stages of minarets of the same period, reveals Egyptian influence.

Rammed earth (*taḥ*) would have been used in some rapidly erected fortifications. In the ramparts of al-Kayrawān and in the government towns of al-ʿAbbāsiyya and al-Rakkāda it is probable that bricks of mud or baked earth replaced stone. The old traditions of the desert countries paved the way for other eastern influences coming from Mesopotamia and Persia.

All this Aghlabid fortification is a happy and

lively synthesis of a still dominant local tradition and of importations from the East.

Fortification under the Fātimid and the Ṣāhābiyya dynasties.—Various ramparts in Aghir and the *Kaḥa* of the Banū Hammūd, built of rubble, continue, care in less construction, the fortification technique of the preceding age. In mountainous country flanking towers are rarer. The palace of Ziri at Aghir is contained within a rectangular enceinte flanked at regular intervals by oblong towers, with an interior courtyard. Some innovations, however, were brought in at the creations of the Fātimids themselves. The outer wall of al-Mahdiyya is built of rubble, flanked with powerful towers, at least one of which is decorated with high niches, which were later to decorate the walls of the *manār* at the *Kaḥa* of the Banū Hammūd, for the new plastic art applied to walls with great success in civil architecture was often transferred to fortresses. The only town gate which has been preserved is surmounted by a powerful high structure; its exterior face is framed by two battered towers, and the archway of the gate gives on to a long vaulted corridor braced with tie-beams, formerly cut off by iron-barbed folding-doors. Gateways in the Roman and Byzantine tradition were never as powerful as this.

It seems that there was in Fātimid construction the germ of a new military architecture; but, except in their new towns situated at some distance from the old centres of civilisation, the Ṣāhābiyya dynasties rarely built great fortified works, and the Hīlālī invasion was to stop the architectural development of Ifrikiya for a long period.

Thus under the Fātimid and Ṣāhābiyya dynasties, the new eastern influences, which seem to have been more noticeable in the Caliphs' own regions, were not able to supplant the local traditions and the formulas derived from the Aghlabids.

3. The fortification of Muslim Spain and its expansion in Africa.

i) The 3rd/9th century.—Muslim fortification in Spain is understood here as not beginning until the middle of the 3rd/9th century, with the Conventual of Mérida, built by the *Amir* ʿAbd al-Rahmān II. His castle, which guards the approach to the bridge over the Guadiana, forms an almost regular oblong. The curtain-walls are flanked with oblong towers which do not project far beyond them and are very closely spaced. Without doubt the architect was inspired by the counterfort towers which punctuate the walls of the great mosque of Cordova. At the entrance one finds the arch of horseshoe shape (the intradosal curve being greater than a semi-circle) which is as dear to Umayyad as to Visigothic art. Pilasters support the springing of the entrance arch and protect the hinges of the door-leaves. The construction is in freestone, which is employed by preference in Visigothic architecture and to which the initial phase of Umayyad art remains faithful. Here, however, it is a question of the reutilisation of stone from previous work, and the arrangement of it as headers and stretchers, dear to the Cordovan architects, is never regular.

ii) The 4th/10th century.—Under the Cordova caliphate, military architecture was rapidly developed, as indeed was all monumental art. There are many variations in the plans employed: in mountainous country the enclaves are adapted to the irregularities of the terrain, whereas in the plains they tend to a geometric regularity which is fully realised in works of the more modest dimensions.

The towers, oblong or very rarely polygonal, project more noticeably than those at Merida and are more widely spaced out. The enclosure is never doubled and has no keep, and no buildings are erected in the interior.

The gateway gives on to a straight passage of little depth. In the larger enclosures it opens between two towers, and in the smaller castles is protected by a bastion. The curtain is of various height, from 7 to 10 metres, and bears a *chemin de ronde* with its exterior parapet capped, as on the towers themselves, with pyramidal merlons. This form of merlon, different from those which were employed in the Middle East and Irtikya, seems to be derived from the crenellated *chemin de ronde* of the Byzantine Empire, the capping of which was pyramidal in form.

The stone header and stretchers courses, regularly arranged, which are at their best in the great monuments of this dynasty, are employed in the finest fortresses. But usually a more economical material is preferred, a concrete of gravelly soil and lime, consolidated in formwork; this had very ancient Iberian origins and doubtless never ceased to be employed in the construction of provincial and popular buildings. In certain fortifications in mountainous sites rubble appears. Frequently also dressed stones, in varying proportions, are used together with the concrete cast in forms.

All the Umayyad fortresses succeed, in their simplicity, by the precision of their proportions—often very different from one fortress to another—and by the happy balance of their masses. The very spirit which is exhibited in military architecture is that which inspired the whole art of the caliphate, a twofold solicitude for originality without exclusiveness and for faultless harmony.

(ii) *The 5th/11th to 7th/13th centuries in Spain.*—The 5th/11th century, under the *mudh al-Jahsh*, sees the emergence of the palace-fortresses which, in a complex of moderate dimensions, array a whole range of rooms against the ramparts. This type of isolated palace perhaps existed also in the preceding period. When one sees a *Mudajjar* castle, like that of Santa Maria del Puerto, following the lines of the *Sûs rihâf* (itself inspired by the Syrian Umayyad fort), one is tempted to believe that the fortress in question has had a Muslim ancestry within Spain itself, doubtless deriving from the last founder of the dynasty who had tried to recreate in Andalusia something of his lost motherland. The castle of al-Rusafa, which preserves the name of a palace of his ancestors, did manage to recapture the plan of the great rural residences of the Caliphs of Damascus.

Outside the *Castillejo* of Murcia stands a fortress of regular oblong plan with towers closely spaced; but living quarters fill the entire space of the ramparts and the patio, the voids of the towers are used to break up the largest rooms medially, and the courtyard is replaced by a garden of sunken parterres with crossing paths.

On the other hand, the enclosures of towns or of large fortresses no longer tend to a geometrical regularity as in the days of the caliphate; the trace of the curtain walls is adapted to the lie of the land. Sometimes they are still flanked by narrow, closely-spaced towers, but more frequently the bastions are of greater size, and, while defending a more or less regular interval, they strengthen the irregularities in the trace or the weaker part of the ramparts. Occasionally there is a double enclosure with inner and outer wall, and the more vulnerable points may be strengthened by barbicans. The *bayla*, forming

an acropolis above the town and containing the royal residence, has always its own single or double enclosure.

The bastion with superposed vaulted rooms makes its appearance at this time. These powerful works are arranged round the enclosure itself, and not as donjons or keeps. Muslim Andalusia brings in a new form at the same period, the *albarana* tower, which projects in front of the curtain to which it is connected by a wall, through which usually runs an arcade. The vaulted bastions and the *albarana*, which give excellent flanking protection, may be combined.

The gate, which opens sometimes between two towers, sometimes under the wing of a sharply projecting bastion, has always an angled passage; at the entrance and exit are two arches with springing on pilasters, which enclose the housing of the door-leaves. The portcullis is not found.

Freestone becomes increasingly rare, except in the gateways, and is sometimes combined in facing courses with ashlar or concrete. This latter material almost always preponderates.

Thus, perhaps as a matter of necessity—for Christian pressure had become more and more formidable and had extended its conquests—the fortification of Muslim Spain made great progress in the 5th/11th and 6th/12th centuries.

(iv) *The 5th/11th to 7th/13th centuries in Africa.*—The same type of Spanish fortification tended to spread, from the beginning of the 6th/12th century, in the African empire of the Almoravids and the Almohads, the rulers of Muslim Spain. The first Almoravid fortresses are still rubble, and still remain within the Maghrib traditions in their coursework and in other details; but in fortification, as in mosques and palaces, Andalusian influences quickly asserted their superior sway. This is the great period of concrete enclosures with strongly projecting oblong towers, arranged at more or less regular intervals. In Africa the lines of this fortification tended to be simplified, as large vaulted bastions and *albarana* towers do not appear. However, some innovations occur in the fortified gateway, where the opening is always framed by two towers, usually strongly projecting, and the gate itself constitutes a massive bastion which extends to the rear of the curtain and contains a passage with two or three bays, with an undivided gallery. The arch of the gateway, its jambs, and their framing show a new decorative treatment of carved stone. The great Almohad gateways of Rabat and Marrakech are among the finest—certainly the richest—of fortified gateways of Islam.

4. Fortification in the Muslim West from the 8th/14th to the end of the 9th/15th century.—In spite of the fundamental unity of the architectural styles then current in Muslim Spain and the Maghrib, the evolution of fortification was different in the Peninsula and in Africa. Spanish Islam was then confined to the small kingdom of Granada, a vassal of Castile but often in revolt against its suzerain, which depended on the shelter of a fortified frontier. A good number of the castles of this frontier initiated some of the Christian fortresses which confronted them. Built of stone, with a double enclosure and a donjon, they appeared as strangers, almost, in the Muslim fortification of the West. But soon Christian influences, far from revitalising the traditions of Muslim Andalusia, became degraded into bastard types. They are not found in the capital itself, nor in the works of rather later date.

We have here the forms created in the 5th/11th and 6th/12th centuries reproduced without much modification. The gateways with their sinuous passages are powerful works. At the Alhambra in the 8th/14th century, and at the castle of Gibralfaro at Malaga, large bastions, widely spaced, replace the smaller and closer towers of the common enclosures. Where the introduction of cannon gave no time for modifying the fortification, rudimentary cannon platforms were installed at the feet of the earlier works.

In North Africa, in the kingdom of Fez and Tlemcen, Almohad traditions were maintained almost unchanged. Curtains and towers were made of concrete. The gateways, always imposing and with sinuous passages, were rather more often constructed of brick than stone. Irtikya, while admitting some Almohad influence, remained faithful to stone and to her traditional forms of detail.

Thus, in this long period, fortresses, as well as palaces and sanctuaries, scarcely went beyond a mere repetition of the forms of the past.

5. Fortification in modern times in the Muslim West.—The development of artillery brought about a profound transformation of ideas of fortification in all European countries; but North Africa created new forms, being content to imitate more or less faithfully the models which Europe provided. Again, she admitted these importations only when it was necessary to defend herself against a European nation, as in the coastal regions. Everywhere else, however, the older mediaeval fortification continued to prevail; the governments which divided Barbary had only to keep order among, or to bring to subservience, tribes who were without cannon.

In Morocco, the fine fortifications which the Portuguese erected in the 10th/16th century at different parts of the coast were initiated only accidentally at the Sa'idi kasaba of Agadir. All other coastal forts were the work of Europeans, often renegades, in the service of the sultan. In the 18th century the fine complex at Mogador, planned by a Frenchman, was the work of an English renegade and Italian architects. These European-inspired types of fortification were initiated in the 19th century by local master-builders.

In Algeria and Tunisia the Ottomans introduced a modernised type of fortification more or less inspired by European models, and fairly close to the works which were being erected here and there on the Moroccan coast. The gun bastions and the enclosures, often defended by ditch and counterscarp, were still high; low-built fortifications in the Vauban style were unknown in North Africa.

Thus the Muslim West, in its fortresses as in all its military organisation, showed its archaism. The few borrowings it made from Europe were overlaid on mediaeval traditions, but did not modify them.

6. The fortified Berber works.—North Africa, Morocco in particular, had fortified buildings also in several mountainous regions and in the oases bordering the Sahara. Some stone villages and trading stations, or a plan almost always irregular, had no enclosure as such except the constructions whose joint exterior wall formed the rampart; but almost everywhere this old architecture made way for buildings in pisé and mud-brick brought from the oases. Some villages, especially in the hills, are irregular in form and are made of an assembly of houses presenting a continuous front. But the archi-

ecture of the oases has its own very characteristic design and decoration. On the plain the fortified villages (*bayra*) are of very regular plan; they are surrounded by an enclosure pierced with gates which are often of great size and protected by the means of angle bastions. The influence of Hispano-Moorish fortification is here very apparent.

The isolated residential castle, the Moroccan *ghrib*, has a more distant origin. It has the form of a *castrum* with four angle-towers, less commonly with two. If the plans are in the Roman tradition, the plastic art is of a more ancient stock: the pyramidal towers, often with an entablature, derive without doubt from Pharaonic Egypt. The minarets of the early centuries of Islam in Barbary were also often truncated pyramidal towers. In the gates and on the wall cappings of some *basin* one finds in many cases in the Moroccan oases a rich ornament in mud-brick, derived from Hispano-Moorish geometrical elements. The older Berber buildings have taken in, at different times, forms of the Muslim middle ages which had been adopted by official works of fortification in the country.

Hence Barbary, Morocco in particular, is an astounding museum of fortifications inspired by very ancient traditions.

### III. The tower in Islamic architecture in India

1. General.—The word *burgi* in Urdu, whence it has spread into other languages of India, means always 'tower' or 'bastion', including those towers on the walls of fortified palaces whose function is decorative and residential rather than functional in any military sense, those bastions which, taking the form of a protuberance in the trace, may in fact include several tower-like buttresses, and also those massive bastions within the enclosure, built after the introduction of cannon, as mountings for heavy pieces of ordnance.

The following accounts relate to the use of towers only; the history of Islamic fortification in India is treated in a separate article (see *INDIA*). Minarets (Urdu *minar*) have a different development and are not considered here.

2. The Delhi Sultanate from the 6th/12th to the 10th/16th century.—The earliest Muslim invaders had found a land already well provided with fortified works, of which Hindu India had a long tradition which remained active later wherever Islam had not spread; their earliest static military enterprise was the occupation and modification of existing works. In Delhi, for example, it was the old fort of Prithviraj Cauhān, Rājā's Rāj Pithorā, which was garrisoned first by Muslim troops, and within the citadel of which (L.116.01) the earliest Indian mosque, named Khusraw al-Din Aybak. The curtain here is flanked by closely spaced towers, defended by a broad ditch, with gates set in the re-entrant angles of powerful bastions formed

by a bulge in the trace with several small counterforts towers. Most of the standing fortification is probably of the period of 'Ala' al-Din Khālidī, c. 704/1304 (Beglar, *ASI Report IV*, 1874), probably following the trace of the Hīndī work; however, as the tower is for the most part counterforted, the projections are not the same as the new ones. The new capital and the new bulwark at about the same time to the north-east of the old capital (Campbell, *Notes on the history and topography of the ancient cities of Delhi*, in *JASR*, xxiv, I [1866] argues that Sirī was the name given to the 'Kūth citadel', i.e., Lāikot, and that the site now generally accepted as Sirī was built by Bahādd Lāid in the 10th/16th century; this is convincingly refuted by Cunningham, *ASI Report I*, 1871); some stretches of the wall are still visible, and the bastions are spaced about a bow-shot apart, capped like the walls with merlons, and with a continuous

Fig. — Section of angle bastion at Tughlukabad  
A — Battlements; B — Mural gallery; C — Exterior gallery (access from mural gallery in curtain);  
D — Inner vaulted corridor; E — Bobber plinth;  
F — Rock scarp.

*chemin de ronde* supported on an arched gallery. The principles employed are similar in the new capital, Tughlukabad, built in 720/1312: 'Adil-shah al-Din Tughluk, and its appendage 'Adil-shah built by Muhammad b. Tughluk in c. 728/1315: the walls of both, of rubble core faced with rough quartzite ashlar, are punctuated with strongly projecting semicircular bastions, and these and the walls, both of which are strongly battered, have three tiers of defence consisting of external gallery, main mural gallery, and battlements, the latter with two ranks of loopholes. The rook outcrop below the wall trace is scarped, over which is a bolster plinth

faced with masonry to the base of the wall proper, forming both a continuous buttress and a protection against sapping (see Fig.). The bastions are most closely spaced around the citadel. Gates open between two bastions, and are often defended by barbicans. <sup>4</sup>Adlabbā is defended further by a bailey and outer wall. Within many of the towers are the remains of grain silos. The tomb of Ghayṭ al-Dīn forms a strong fortified outwork to the south of Tughlukkābād, with similar bastions except for the absence of an outer gallery.

Besides Ādilābād, Muḥammad b. Tughlq formed yet another 'city of Dīhlī' with the building of *Ḥaḥāpanānāh* (725/1325), the walls of which enclosed the ground between Kū'lā Rāy Pithorā and Sirī; these have semicircular counterfort bastions similar to those of Ādilābād, though without the external gallery, and are at one point interrupted by a dam and sluice, called Sāt Palāh, obviously to retain water within the walls for the use of the defenders.

This reign saw the Delhi diaspora and the transfer of the capital to Devagiri, renamed Dawlatabad (a.c.). The three lines of defences between the pass and the acropolis consist of walls with regularly spaced battering round bastions, projecting less than in the contemporary northern work, and without exterior galleries. Bastions round the gates are larger and of greater projection, some being of the form of a half ellipse; a succession of rounded bastions forms a hornwork with two courts where the city is entered over the lower moat. The many modifications made during the Bahmani period are referred to below.

Firiz Shah Tughluq was responsible for building yet another 'Dihli', his new capital of Firizābād (753-74/1354-70), which was later sacked by Timur and of which no traces remain beyond his citadel or *kohli*, much ruined. Walls and towers here have a strong batter; the towers are semicircular, and it is probable that they were crowned with op-  
kloks (*khatri*). Traces of low barbicans outside the gates have a single tower in smaller diameter, pro-  
tected by a ditch, at the least. The contemporary com-  
plex housing the Ka'da-m-i-Sharif, which, protected  
by its sanctity, escaped the Timurid sack, is protected  
by a strong bastioned curtain which shows the  
principles of Firizā's fortification better than the  
ruined *kohli*; walls and towers have lost the bolster  
plinth, and defence against sapping is effected by  
small box-machicolations. Many buildings of this  
period, especially tombs and *dargahs*, are contain-  
ed within fortified enclosures. At this time the *burj* is  
developed as an ornamental feature: mosque en-  
closures and *ḍaghā* walls regularly show angle  
towers, capped by circular or square *khatri*  
by low domes, always with the typical Firizāid  
batter, which is imitated in those purely decorative  
buttresses, where the slope is carried up into a  
*gulistan* finial, which flank the gates of Firizāid  
mosques in Dihli (Begumpur, Khirki, Sandgar,  
Kalan *maḥsūd*): see DILLI, MOMENTS, of which  
echoes appear in the Lōdī buildings at Dihli, and in  
Dhawar (*q.v.*) and elsewhere. Firiz Shah Tughluq  
is known to have restored many of the buildings of  
his predecessors, and, though he speaks of having  
restored the tomb of Abū al-Faṭḥ Mahmūd Naṣir al-Dīn  
at Malikpur—it is probable, from the style, that the  
corner towers, are, at least, of their upper stages,  
Firiz's work.

It seems that the later Tughloks and the 'Sayyids' created no new fortified works, except that it is recorded that Muḥarrar Shāh in 824/1421 replaced the walls of Lāhaur, destroyed by Timur, by a mud fort. His own town (850/1433), however, lies in the fortified complex of the small town of Muḥarrar-khān, yet another 'city of Dhill', where the towers are small but otherwise differ little from preceding patterns. Sikandar Lōdī is said to have built a fort at Agrā in 908/1502; but there had already been a fortress here, and the present fort is the work of Akbar, and it is thus difficult to assess how much of the trace is due to Sikandar.

3. The Diwan forts from the 8th/84th to the 17th/17th centuries. — Here again there were many fortified Hindu works which the Muslims found and later occupied, and to some extent modified, even added to. The most important initial position seems to have been at Gulburgā [g.w.], where the thick (16 m.) walls are doubled, with towers on the inner curtain. All towers are very solidly built, of semicircular form; many have barbettes added later for the use of artillery, and this modification is to be attested by the inscription on the Kaḥ pahār Burjī claims that in 1066/1065 'Muḥammad rebuilt every burjī, wall and gate' (Hāig, EIM, 1907-8). Within the enclosure, on high ground, stands a large isolated masonry bastion, the mounting for a large piece of ordnance. In 1212/1211, fully a thousand years after its capture, the fort was transferred by 'Almūd Shāh al-Wāfi, there had been a double line of Kakatiya fortifications in 723/1322 (Dīyā al-Dīn Barī, *Tārīkh-i Firāz Shāhī*, Bibl. Ind., 449) when it first fell into Muslim hands; in the rebuilding of 832/1429-32 Persian and Turkish engineers are supposed to have been employed in the rebuilding in the time of Muḥammad Shāh III (866-97/1453-82) by his wazīr Mahmūd Gāwān, after the introduction of gunpowder in the Deccan. The older round bastion is largely superseded by the polygonal variety, although the round and square tower at the base of the bastion is almost certainly of the older work. The wall gives way to smaller rubble set in deeper beds of mortar in the repairs and restorations. The towers are solid at the base, defended by chambers at the same level as the curtain battlements and by their own battlements one stage higher; like the curtain wall they are decorated with niches and machicolations. At the angles of the irregular trace, and also standing free within the enclosure, are large and massive bastions, some of imported trapezoidal and others of the local red laterite, built as mountings for heavy pieces of ordnance; these may be, as for Kalyānā Burjī, of the 16th century. The successive machicolated curtains, and may provide room for the accommodation of a large number of troops. The walls of Bidar town are of the Barīd Shāhī period (built 962/1555-56); the 37 bastions include the massive Muḥdā Burjī of two defended stages, approached by steps built on the back wall of the bastion itself, which mounts a cannon. The towers at the corners of the bastion are here, as in the case of the fort curtain, variable; they are closest at those points in the curtain most vulnerable to attack. The *Caḥwārā* in Bidar town, presumed to be part work of 'Almūd Shāh's defences, is a tall conical watch-tower, 23 m. high, commanding a view of the entire plateau and highlands. It is surrounded by a circular plain of guard-rooms and an internal stairway. There was much activity in the construction

military work in the Deccan in the heyday of the  
 Bahmanī dynasty (c.1395): Dawlatābād, Hīdjar, Gwāghar, Elchpur, Narānā, Pārenda, Naldarg, Panhāli, Warangal, Gohādhā, Mūdgāl, Rāyūr, etc. At Dawlatābād the old defences were strengthened  
 and heightened, in smaller stone or brick, and one  
 striking example of this is the building up of a  
 bastion in the second court of the entrance horowork  
 enclosing the old chambers, the bastion being a  
 height of three storeys, the curtain adding a high  
 upper storey while maintaining the batter of the walls, and  
 building a projecting arched oriel supported on  
 corbels of re-utilized Hindu work as a further watch  
 chamber. There are thus two upper defence  
 chambers, pierced with embrasures for small cannon,  
 over the solid base. At Pārenda the most important  
 parts, built in the early sixteenth century, are the  
 Gārtā, but in fact probably earlier—the towers on  
 the fausse-braye and curtain are defended by heavy  
 bartizans. At Kandahār (Yazdani, *Hyd. Arch.*  
*Dept. Rep.*, 1337-38 F/1922-4 A.D., 3) are circular  
 bastions on the fausse-braye and bastionary bastions  
 on the curtain, with inscriptions of 998/1588 giving  
 Turkish names as the responsible engineers. At  
 Kalyani polygonal and circular bastions are  
 placed by box machicolations on corbels,  
 while a corcopicous bastion within the  
 barbican has a mural chamber defended by bartizans,  
 with a barbette on the battlements, which have  
 two tiers of loopholes. The old Kakatiya fort of  
 Gohādhā (q.v.) ceded to the Bahmanīs in 766/1394,  
 has three successive curtain walls which show a  
 variety of towers: square, cylindrical, conical,  
 polygonal—the tower before the citadel is a  
*hergi* in the form of a fort, the citadel being a  
 square tower. In the later enclosure, a 'rimlobed'  
 bastion of strong projection, each of whose 'lobes'  
 is a quarter-circle on the exterior face. This last  
 feature is found also at Naldarg. At Hīdjarpur  
 (q.v.) the city walls, of the time of 'Alī 'Adī Shāh I.  
 (completed 975/1566), which are of uneven quality  
 since each notch was responsible for one section,  
 have some 96 bastions, mostly square, and  
 embrasures for small guns, and some 100  
 bastions to take heavy guns (inscriptions of  
 Muḥammad and 'Alī II), one, the Farangī or Tābūt  
 Burdī built to commemorate several large *gungis*.  
 On high ground, well within the walls, is the Uprī or  
 Haydar Burdī, a massive cavalier oval in plan and  
 some 24 m. high, built (c. 992/1583) to mount a  
 large (over 9 m. long, 15 cm. bore) piece of  
 the Sherāfī or 'Alī Shāh type. It is built out  
 from the curtain, to which it is connected by a  
 broad ramp forming a 'head and neck'.

Later fortifications in the Deccan, constructed or rebuilt during the Marāṭhā supremacy, generally follow the patterns of the Muslim period.

4. North India from the 10th/11th to the 12th/13th century.—Bābur's conquest in 932/1526 brought no new style of building in its early days, although his interest in the Hindu fortress of Gwalior communicated itself to his successors who developed the palace-fort *par excellence*. He son Humāyūn began yet another city of Dhilli, called Diya-pānāh, but this was razed by the Afghans under Sher Shāh, who commenced building his own capital, which now little but the citadel remains, constructed on a site identified with the ancient Indraprastha and known as the Old Fort (Purānā Kīl'ā, Kīl'ā-i kuhān). The walls and widely spaced bastions of the trapezoidal trace are of roughly

coursed rubble, while the gates, each flanked by two strongly projecting bastions, are of red polychrome ashlar. The towers are semicircular, solid to a height of 3 m., with several tiers of superposed rooms and galleries, with small box machicolations; one gate has an internal machicolis, a rare feature in India. Humayūn's re-occupation of the Purānā Kila' added nothing, and Mughal building of forts started with Akbar. Sikandar Lodī's fort at Agrā had fallen into ruin, and was raised and rebuilt; work started in 972/1564. There are semicircular bastions on the inner and outer curtains, the same height as the walls; the inner ring is much higher than the outer, reaching 30 m. Outer and inner bastions are concentric, and both have crenellated battlements defended by two or more ranks of loopholes, some protected by stone beds for downward firing. The inner Dihlī gate on the west is defended by two magnificent half-octagonal bastions, with a blind arcade at ground-floor level finely decorated with marble and polychrome ashlar, a wide arch in each face on the first floor with an exterior balcony, and a defended chamber above with two ranks of loopholes. The battlements above have some merlons equipped with stone hoods, and others pierced with loops. Each of these towers is topped by a *chattri*. The work throughout the walling is in red sandstone ashlar over a rubble core. Akbar's new city (979-1571) of Fatehpur (Fatḥ-pur) Sikrī is undistinguished in its fortification: the outer single curtain is incomplete, and its half-round bastions are simply bulges in the trace. The citadel was enclosed rather than fortified, though boasts one gate bastion, the Saigir Burdj, semi-octagonal with an internal hall, for a guard which was probably ceremonial rather than defensive. The new city was soon abandoned, and Akbar moved back to Agrā, which was later occupied by his son Dīshāhūr. From his time presumably dates the Muḥammadian Burdj (later called Samān 'jasmine') Burdj, a half-octagonal projecting on the river side of the fort surrounding a semicircular buttress; it is of two storeys with open arcades on each face, with fine *pietra dura* decoration. Some of this work is probably of the time of Shāhjahān, whose principal buildings were, however, at Dihlī (g.e.) and Lāhawar (Lahore) (g.e.). The New Fort at Dihlī (Laī Kila') was commenced in 1048/1638 and completed within two years. The nearly rectangular trace has semicircular bastions at regular intervals, defended by one tier of loopholes at about half their height and by two rows in the battlements; the merlons are decorated by cusping. Each tower is surmounted by a *chattri*. Similar towers on the barbicans are of the time of Awrangzib. The north and south bastions on the river front are larger, two storeys in height above the level of the courtyard, crowned by *chattris* Shāh Burdj, Asad Burdj; between them is a larger half-octagon, the Muḥammadian Burdj, originally known also as Burdj-i Tili on account of a gilded copper dome; the five sides which overlook the river are filled with marble screens. Lāwhr fort, built by Akbar at about the same time as Agrā fort (Abu 'l-Faḍl *Asfat Akbari*, Blochmann's trans., i, 538) has a similar Shāh Burdj, also called Muḥammadian Burdj, now showing completion 1041/1631-2, of great size (45 m. diameter). Manucci in his *Storia dei Mogor* says of these works: 'At each place [Dihlī, Agrā, Lāhawar] there is a great bastion named the Xaaburg [Shāh Burdj]... they are domed and have architectural ornaments of curious oriental work, with many precious stones. Here the King holds many audiences

for selected persons, and from it [sic] he views the abundant light... (Twelve years later, it is said). Certainly also the Muḥammadian Burdj in Dihlī was used for the emperor's daily *darḡan* (ceremonial showing himself to the people).

These Mughal *burj*s had no pretence of being fortified works, and thus what started as a grim military work was transformed into a vehicle for Mughal art. The walls of Shāhjahān's Dihlī were bastioned, certainly, but the rebuilding of Dihlī in the British period that it is not possible to recapture the Mughal arrangements.

**Bibliography:** S. Toy, *The strongholds of India*, London 1937, describes some Muslim fortifications as sites, little information on towers; historical details unreliable, no history of fortification. **BURDJ** [see *burdj* (g.e.)].

**BURDJIYYA.** The Burdjīyya regiment was second in importance only to the Bahriyya (g.e.) regiment throughout the history of the Mamlūk sultanate. It was created by Sultān al-Manṣūr Kālā'ūn, who selected for this purpose 3,700 of his own Mamlūks and quartered them in towers (*burdj*, sing. *burdj*) of the Cairo citadel. Hence its name. The source mentions the creation of this unit only when they sum up Kālā'ūn's career at the end of his rule, without specifying any date. It was composed of Mamlūks belonging to Caucasian peoples (*al-Dīshāz* wa 'l-*As* = Circassians and Abkhāz), Al-Maḥrīf (*Kutaf*, ii, 214, li. 22-26) mentions Armenians (*Arman*) instead of the *As*. The Bahriyya and Kipčāks mentioned by him in the same passage as performing duties pertaining to the Kibāshīyya (g.e.) do not seem to have belonged to the Burdjīyya.

During the reign of Sultān Kālā'ūn (678-89/1279-90) and that of his son al-Aḡrāf Khālāḥ (689-93/1290-93), the participation of the Burdjīyya in the affairs of the state was not very conspicuous. Immediately after Khālāḥ's death, however, they are mentioned as the main body supporting *amir* Saḡḡār al-Shudhī, while the main supporters of his rival, *amir* Kitbughā, were the Wāfīdiyya (g.e.) Tatars and the Shāhrāzūrī Kurds. Kitbughā defeated Saḡḡār, ascended the throne after having deposed the boy-king al-Nāṣir Muḥammad b. Kālā'ūn (694/1294) and retaliated against the Bahriyya by expelling a part of them from the citadel and quartering them in different parts of the

capital: Mayḍān al-Lūk, al-Kabḡh and Dār al-Wazīra.

This was the first blow inflicted upon the regiment. Kitbughā, however, was soon deposed and replaced by Lāḡḡh (695/1296) and the Burdjīyya recovered their former position. They became extremely powerful after having murdered Sultān Lāḡḡh (698/1298) under the leadership of their commander Kurḡḡ Makkaddam al-Bahriyya. During the second reign of al-Nāṣir Muḥammad b. Kālā'ūn (698-702/1298-1302), the leaders of the regiment gradually became *de facto* rulers of the Mamlūk sultanate. In the struggle between the *amirs* Baybars al-Dīshāhnākīr and Sallār over the Mamlūk throne, the Burdjīyya naturally were on the side of the first, who was one of their number, whereas the second was supported by the Shāhīyya (the remnants of the Bahriyya regiment, created by al-Salāh Naḡm al-Dīn Aḡrāḡh) and by the Zāhīyya (the Mamlūks of al-Zāhīr Baybars). Baybars defeated Sallār without difficulty and succeeded al-Nāṣir Muḥammad as sultan (708/1308).

Under al-Muḥaffar Baybars, the Burdjīyya reached the peak of their power, but their success was short-lived, for al-Nāṣir Muḥammad soon succeeded the throne for the third time (709-741/1309-1340) and dislodged the Burdjīyya from their powerful position. As al-Nāṣir subsequently ruled for more than thirty years without interruption, the Burdjīyya gradually degenerated, and after his reign they are hardly mentioned by the sources.

Orientalists usually call the first two centuries of the Mamlūk rule "the Bahri and Burdjī periods". This terminology is hardly ever used by the Mamlūk sources, which call the early part of that rule, as well as the whole Mamlūk rule, *Dawlat al-Turk*, and its latter part *Dawlat al-Dīshāz*.

**BURDUR**, a town in S.W. Asia Minor, distant about 4 km. from the south-eastern shore of the lake Burçuk, 168-79 cited in *Jorge, GOR*, i, 207; I. H. Erancıgil, *Osmanlı Tarih*, i, 61, 69; I. H. Danişmend, ... *Kronoloji*, i, 47-8; Burgas played a minor role in Ottoman history, serving as a

near the modern Burdur is of doubtful value (cf. *Kırsarı*, Pauli-Wissowa, s.v. *Limbura*) and *Hicnām* (Hicnām). The present name of the town, Burdur ("Buldur" in the speech of the local Turkish inhabitants and in the accounts of various travellers who have visited this region; also "Purdur" (Πορδούρ) amongst the Orthodox Christians who lived here formerly), points towards an identification with the Polydoron (Πολυδρόν) of medieval times. As to the lake of Burdur, it is the old 'Araxos' λίγυρ in Psidia. Burdur, in the course of the long conflict between the Byzantines and the Turks in Asia Minor during the 11th-12th centuries, passed into the hands of the Salḡḡḡ sultans of Rūm. The town came thereafter under the rule of the Begs of Hamid early in the 14th century and, still later, of the Ottoman sultans in the 15th century. The population of Burdur included in former times a considerable number of Orthodox Christians, who spoke Turkish as their language (Cunet noted that the town contained 4,000 Greeks and also approximately 3,000 Armenians). Burdur, under Ottoman rule, was at first a *hads* of the *sandak* of Hamid in the *eyālet* of Anadolu and, subsequently, a *sandak* in the *vilāyet* of Kōnya. It is now the administrative centre of the present Turkish province of Burdur. The town had, in 1955, a population of almost 20,000 inhabitants.

(MURHAMAD SHAFI)

**BURHĀN AL-DĪN AL-MARGHĪNĀNĪ** [see AL-MARGHĪNĀNĪ].

**BURHĀN AL-MULK**, Mīr Muḥammad Aḥmad b. SAYYID MUḤAMMAD NAṢIR AL-MURĀWĪ, was a ḥafiz of Nighāpūr who founded the Awadh dynasty of Navevāb-Wāḍir (1336/1724-1267/1754). The exact date of his arrival in India is not known, but it is clear that he was in the service of Sarbuland Khān, commandant of Karā-Munkpur, in 1223/1717. On the accession of Farrukh-siyar to the throne of Delhi (1224/1713-1231/1719), he managed to obtain the post of a *nā'ib-harārī* (a revenue official), through the good offices of Muḥammad 'Alī Shar, a *mansabdar*. In 1232/1719 he was appointed commandant of Hudaib Rayyān when he reduced to submission the turbulent Rājput and Dīpt *zamindars* of the area. For the rôle that he played in the conspiracy to murder the *amir al-umara*ḥ Husayn 'Alī Khān Bārha, one of the Sayyid king-makers, he was awarded in 1235/1720 the title of Sa'adat Khān Bahādūr with the personal rank of 5,000 and the command of 3,000 horse. The same year he was appointed governor of Akbarābād (Āgra) with a rapid promotion in rank, and only after a month (Muharram 1235/November 1720) the title of Bahādūr Dīrang and the insignia of *mahī marātib*, were conferred on him. He in 1235/1722 he was appointed governor of Awadh when he ruthlessly suppressed the *shaykhzādes* of Lucknow. He also ordered a fresh revenue survey of the province, thereby increasing the imperial income from land, and the emperor Muḥammad Shāh rewarded him for his services with the title of Burhān al-Mulk.

After bringing the whole of Awadh, then in a state of turmoil, under his control, he punished the refractory feudal lords of Banāras and Dīwanpur. In 1245/1725 he was given charge of the district of Kāraḥ-Dahābād, whose landlord, Bhagwant Rāy, had been responsible for some trouble; he was ultimately killed in an encounter with the troops of the Nawwāb. The same year Burhān al-Mulk, flushed with repeated successes, waited on Muḥammad Shāh at Delhi in the hope of securing increased royal patronage. In 1249/1727 he attacked the Marāṭhās, who had seized a part of the Dākā, defeated and expelled them with heavy losses. The Marāṭhās in order to avenge this defeat soon afterwards attacked Delhi.

In 1252/1739, when Nādir Shāh Afshār invaded India, Burhān al-Mulk marched out from Awadh with a strong contingent of 30,000 troops. Although his baggage was looted by the enemy before it reached the imperial camp at Karnāl, Burhān al-Mulk decided to lose no time and to give battle to the

invaders. In the thick of the action he was, however, recognised by a fellow-townsmen from Nighāpūr and his elephant was, without any resistance, driven away into the enemy's camp. On Nādir Shāh's victory, Burhān al-Mulk, from ulterior motives, prompted the invader to increase the amount of indemnity (5 million rupees) which had been agreed upon between Nādir al-Mulk and Nādir Shāh, the emissary of Muḥammad Shāh, and the Persian invader, on the ground that the stipulated sum could be easily paid off by a single *amir* of the Mughal court. Burhān al-Mulk himself had to pay 33 million rupees in hard cash as his own share to the invader. He, however, suddenly died on 10 Dhu l-Hijja, 1252/19 March, 1739, soon after his return to Delhi. His almost sudden death has given rise to many speculations. He is reported to have committed suicide, unable to bear the insults which Nādir Shāh heaped upon him for his failure to arrange the full amount of indemnity (200 million rupees) which he had foolishly promised the invader. Other authorities, including the *Ma'āthir al-Umūr* (I, 466) maintain that he died of an old neglected wound which had erupted again. The latter statement, however, appears to be an attempt to mitigate his responsibility for actions which brought untold misery and grief to the citizens of Delhi.

Burhān al-Mulk, an otherwise good man, was ambitious to the extreme degree and his passion for self-aggrandisement did not spare even a person like Husayn 'Alī Khān, whose favourite and client he had been both as *Sayyid* and as *Shīr*. A disused canal in a part of the city of Delhi is still known after him as Nahr Sa'adat Khān. It appears to be an extension of the Fayd Nahr, the main source of the water-supply system of Delhi during the later Mughal period.

**BURHĀNPŪR**, town in Madhyā Pradesh (India) situated in 23° 18' N. and 76° 14' E., along the north bank of the Tapti, with bathing-steps (*ghāṭ*) on the river-side and a solid masonry wall, pierced by a number of massive gates and wickets, on all the other sides. This wall was constructed by Nāṣim al-Mulk Āṣaf Dīkh I [q.v.] in 1241/1728, during his governorship of Burhānpūr. The population in 1951 was 79,066. While the walled town occupies an area of 2½ sq. miles, numerous remains outside show that the suburbs, which may comprise *Āṣafpūr*, must have been very extensive.

This town, which was of great strategic importance

during the medieval period, was founded by Naṣir Khān al-Fārūkī, founder of the Fārūkī dynasty of Khāshab (renamed Dāūdīsh by Akbar after his son Mīrā Dāūdīsh, but the name never caught the popular fancy) in or about 801/1398-9 and named after the Deccan saint Burhān al-Dīn Gharrīb [q.v.]. Another town on the other side of the Tapti was also founded at the same time and called Zaynābād, after Shāykh Zayn al-Dīn Dā'ūd al-Shīrāzī, one of the *ghulāt* of Burhān al-Dīn Gharrīb.

In 969/1561, Burhānpūr was sacked by Mīr Muḥammad Shīrāzī, a servant of Bayrām Khān [q.v.], who massacred the inhabitants and carried off immense booty. It continued to be the capital of the Fārūkī dynasty till its overthrow by Akbar in 1010/1601 when the kingdom was annexed to the Mughal empire, although the town itself had been occupied by the imperial forces under the command of Abu l-Faḍl 'Alīkhān [q.v.] in 1008/1599. 'Abd al-Rahīm, *Khān-i Khānā*, [q.v.] was appointed governor and stayed in Burhānpūr for a very long period. It was here in Burhānpūr that his eldest son, Mīrā Jādī (entitled Shāhnuwās Khān), died; his father built a tomb over his grave. Sir Thomas Roe, the English ambassador, had waited on Farwiz, [q.v.] in 1021/1616. Shāhjahan, then prince Khurram, made it his general headquarters during his Deccan campaigns. Prince Farwiz died here in 1036/1626 and Aurangzib accused his father Shāhjahan, after the latter's deposition, of having poisoned him. In 1040-2/1630-2 it again formed the base of Shāhjahan's military operations against the Deccan when a great famine, resulting in an extremely heavy death-roll, devastated the town. In 1041/1631 the empress Mumtāz Mahal, consort of Shāhjahan, died here and was temporarily interred in Zaynābād, before the removal of her dead body to Āgra for a permanent burial. In 1046/1636 Aurangzib, then a youth of 18 years of age, was appointed governor of the Deccan, including Khāshab, and he made Burhānpūr his headquarters. It was during his viceroyalty of the Deccan that Aurangzib came to know Shāykh Nāṣim Burhānpūrī, who remained in his employment for nearly forty years and was subsequently appointed chairman of the board of 'ulama' and jurists responsible for the compilation of *al-Fatawā al-'Ālamiyya* [q.v.].

It was again in 1092/1681 that Aurangzib encamped at Burhānpūr before invading Bīhār [q.v.]. Soon after the emperor left the town in 1096/1685, it was sacked by the Marāṭhās. There followed a series of battles in its neighbourhood, and peace could only be restored to the harried town in 1213/1719 when the demand of the Marāṭhās for levying the *ṣāḥṣ* (one of the taxes) was formally conceded. In 1240/1726 when Nāṣim al-Mulk Āṣaf Dīkh I was appointed to the government of the Deccan, he also made it his headquarters. After his return from Delhi in 1257/1724 till his death in 1261/1748 Burhānpūr continued to remain an important outpost of the new principality which Āṣaf Dīkh founded, and also served occasionally as his headquarters. After the death of Āṣaf Dīkh I it was occupied by the Marāṭhās, who were only dispossessed by Lord Wellesley in 1218/1801. It then changed hands several times and became finally a British possession in 1277/1860. In 1266/1849 it was the scene of a terrible Hindu-Muslim riot which claimed many lives. In 1265/1849 a great fire completely gutted Sindhpūr, a quarter of the town peopled mainly by the descendants of early migrants from various towns in Sind. Next

year a large number of houses in Dawūdāpūr were gutted, while the third fire of 1214/1897 destroyed a part of Lohār Mandī, including the mosque in the Cawk. In 1321/1903 bubonic plague took a very heavy toll of life.

Burhānpūr contains a large number of tombs and shrines of saints and mystics, many of them, from Sind and Goghrāt, find mention in the *Gulshān-i Aḥwar*, whose author, Muḥammad Gharrībī, visited Burhānpūr frequently. Among other buildings of note are the tombs of Mubārak Shāh al-Fārūkī and Rājā 'Alī Khān entitled 'Adī Shāh al-Fārūkī, the Dīyārī Masjid, built by the latter in 997/1588, and the old fort, along the bank of the Tapti, now in a state of utter disrepair. A caravansarai built by the *Khān-i Khānā* 'Abd al-Rahīm is still extant.

Dīkhānī's system of water-supply for the town, completed in the 17th century by the *Khān-i Khānā*, compares favourably with any modern waterworks system. During the Mughal period Burhānpūr housed a number of Imperial factories which produced quality and expensive cloth for the royal household. The workers in these *kārkhānas* were mostly skilled weavers from Thar (Sind), who had migrated to Burhānpūr during the governorship of the *Khān-i Khānā*.

**BŪRĪ AL-AYYŪB** [see AYYŪB].

**BŪRĪ TĀDĪ AL-MULŪK** [see MŪLŪK].

**BŪRĪ-BARS** R. AL-ARSLĀN, the Saḥlīqū, was sent by Barkīyārūk against Arslān Argūn, another son of Alp Arslān, who was trying to make himself independent in Khurāsān. In the struggle between the two brothers, Būrt Bars was at first successful, but in the second encounter, in 488/1095, his troops were scattered and he himself was taken prisoner and strangled by his brother's orders.

BÜRİ TAKİN [see KARAKHĀNIDS].

**BÜRDİS**, a dynasty of Turkish origin which reigned in Damascus from 1071/1104 to 1154/1154. Its founder was the *atabeg* [q.v.] of Şams al-Mulk Dukāq, son of the Saljūqīd sultan Tutuq (see SALJŪQĪD). This *atabeg*, named Tughtakīn and called Zahr al-Dīn, was the confidant of sultan Tutuq, and was entrusted with the direction of affairs in Damascus as early as 488/1095 by Dukāq, whose mentor he had been. After the death of Dukāq (12 Rabi' al-Thani 1095 June 1294), Tughtakīn continued to exercise power in the name of the deceased prince's young son, Tutuq, who in turn died shortly after his father. From that moment, Tughtakīn became the master of Damascus. His dynasty was founded, and it endured until the capture of Damascus by Amir Nūr al-Dīn Zankī on 10 Safar 519/25 April 1134. Tughtakīn ruled until his death, 8 Safar 527/12 February 1128. He was replaced by his son Taqī al-Mulk Būrdī, who died as a result of an attempt made against his life on 21 Rabi' al-Thani 526/6 June, 1132. Just before he expired he named as his successor his son Abu l-Faḍl Ismā'īl, called Şams al-Mulk, who was himself assassinated by his slaves on 14 Rabi' al-Thani 529/20 January 1135, by order of his own mother. His brother, Shihāb al-Dīn Mahmūd, followed him, and was murdered by three of his servants on 23 Shawwāl 533/23 June 1139. His brother Qāsim-al-Dīn Muḥammad, governor of Baḥbak, was summoned to replace him, and died as the result of an illness 8 Sha'wān 534/29 March 1140. The military chiefs then raised to power the son of Qāsim-al-Dīn, 'Abd al-Dawla Abu Sa'īd Abū, called Muḥḥir al-Dīn, who left the responsibilities of administration to his *atabeg*, Mu'īn al-Dīn Unur, until the death of the latter on 23 Rabi' al-Thani 544/30 August 1149. He then took the direction of affairs into his own hands, but was very soon obliged to accept the domination of the Zangid Nūr al-Dīn, by whom he was driven from Damascus in 1154.

During the fifty years that the dynasty lasted, the Būrdī rulers received their investiture from the caliph and from the sultan of Baghdad, who, in exchange for considerable gifts, did not interfere in the internal affairs of the principality.

Throughout this period, the Būrdī princes were confronted by situations which often were very difficult. When Tughtakīn assumed authority, the territory of Damascus was in immediate proximity to the Frankish states of Antioch, Tripoli, and Jerusalem. The Franks of Jerusalem menaced the regions from which Damascus clearly acquired its food provisions; that is, Hawrān and the plains of Upper Jordan and of Yarmūk. In order to avoid risking the entire loss of these indispensable territories, and to safeguard the communications of Damascus with Egypt and Arabia, the Būrdī princes were induced to negotiate with the Franks on several occasions, and even to conclude with them genuine treaties of alliance. They made them all the more easily since the treaties were not always looked upon with very much apprehension by their Muslim neighbours. Tughtakīn did try to co-operate with the Egyptian garrisons, who still held some coastal positions, Tyre for example, but with little success or effect. On the other hand, the masters of Baghdad were prejudiced by the tortuous politics of the Damascus rulers, so much so that the latter were repeatedly obliged to appear before the sultan and the caliph to justify their actions. Finally, from 544/1130, when the Zangid amir, 'Imād al-Dīn and

his son Nūr al-Dīn became masters of Aleppo, they grew progressively more threatening toward Damascus. With the exception of Şams al-Mulk, who was preparing to deliver the city to 'Imād al-Dīn when he was assassinated, the Būrdī princes were therefore not displeased to find support in the Franks against the covetousness of the princes of Aleppo. However, the unprofitable attack by the Franks on Damascus during the second Crusade (July 1148) ended this policy and hastened the taking of Damascus by Nūr al-Dīn.

The internal situation of the city was no less troubled during the Būrdī epoch. The lower orders of the town, organised into a sometimes very turbulent militia (*ahdāt*), frequently participated in the political life of the city under the direction of those enterprising persons known by the term *ra'īs*. Over against the militia and actively opposing it, at least on one occasion, was a rural class. Led into action by the Ismā'īlīs [q.v.] or Būḥniyya, this group also played an important rôle, particularly in 522/1128, with the complicity of some highly placed persons. It was not the first time that the Ismā'īlīs used Damascus as the arena of their activities; several political murders had been perpetrated there by them, notably that of Amir Ma'wūd the ruler of Mawālī, on 18 Rabi' al-Thani 507/23 October, 1113. Amir Taqī al-Mulk Būrdī was also their victim in 1132.

Until the end, or until just a little before the end, the Būrdī princes could count on the support of their Turkish troops whose loyalty was unswerving, and on the neutrality, growing steadily less benevolent, of the bourgeoisie. The latter were not opposed to the dynasty so long as it maintained order and assured, as best it could, the security of commercial transactions. But as the situation deteriorated after the death of Taqī al-Mulk Būrdī, the middle classes of Damascus showed themselves to be increasingly impressed by the prestige of Nūr al-Dīn, and facilitated his entrance into Damascus.

Thus, as long as the Būrdī dynasty was represented by men of ability such as Tughtakīn and his son, it had no difficulty in retaining its power in Damascus; but the last twenty years, apart from the administration of Mu'īn al-Dīn Unur, were characterised by sometimes bloody rivalries and by growing economic difficulties. Also the population of Damascus, principally the bourgeoisie, who had never wholeheartedly supported the Būrdīs, no longer saw any reason for linking its destiny with that of the dynasty. The last prince, Muḥḥir al-Dīn, left the city amid indifference, if not hostility.

**AL-BÜRİNİ**, AL-HASAN R. MUHAMMAD AL-DI-MASĠG'IL AL-SAFFIRI BADER AL-DIN, an Arab historian and poet, born in the middle of Ramadan 663/July 1566, at Saffiriyā in Galilee, came when he was older with his father to Damascus, where he received his education at the Madrasa al-Sālībiyya. After the completion of his studies, which he had to interrupt in 974/1567 by a four years' stay in Jerusalem on account of famine, he lectured in various madrasas. In the year 1020/1611 he acted as Kādī to the Syrian pilgrim caravan. He died on the 13th Rabi' al-Thani 1021/June 1612. His chief work is the collection of biographies entitled *Tarāḡim al-'A'yān min Abnā' al-Zamān*, containing accounts of 205 individuals which he had collected at long intervals and completed in 1023/1614; it was edited by Faḍl Allāh b. Muḥibb Allāh in 1078/1667 and published with a supplement (cf. Ahlwardt, *Vorlesungen der arab. Hist.*, no. 9889; Flügel, *Die arab. Arab. und türk. Hist.*, no. 1190; *Fihrist al-Kutubkhāne al-Khādiyya*, v. 33; his *Diwān* is preserved in Istanbul (Köprülü, no. 1287). There are some of his poems in Berlin (*Mawāḍi' on the Saffi Muhammad b. Abi l-Barakāt al-Kādi*, s. Ahlwardt, *op. cit.* no. 7858, 3), Gotha (poetic epistle to Aḥmad b. Mu'īn al-Dīn al-Thifirī al-Dimashqī, with the latter's reply, Perle, *Die arab. Hist. der herzog. Bibl.*, no. 44, 23) and London (*Catalogue Coll. Or. Mus. Brit.*, ii, no. 630, 2). Lastly he also wrote a commentary on the *Diwān* of 'Umar b. al-Fārid, lith. Cairo 1279; he completed the commentary on the *Tā'īyya al-Suḡrā* in 1002/1593, cf. Derenbourg, *Les Mss. Or. de l'Escurial* no. 420, 4.

**BURMA**. Islam made its first major impact in the early 15th century through the King of Arakan, Nyaung-U. This monarch returned from exile in Bengal in 1430, accompanied by Muslim followers. He set up his capital at Mrohaung, where the Sandikhan mosque was erected. Subsequent Arakanese kings, although Buddhists, used Muslim designations, and even issued medallions bearing the *kalima*. Muslim influence was intensified when Prince Shogūn, brother of Nyaung-U, fled to Arakan in 1660. Shogūn was murdered by King Sandathudamma and his treasure sequestered, but his followers were retained at court as Archers of the Guard, in which rôle they frequently intervened as kingmakers. Descendants of these Mughal courtiers remain distinctive to this day. Before the 19th century, Muslim presence in Burma proper was confined to small numbers of Gadjah traders and certain gunners and other foreign technicians conscripted into the service of the Kings of Ava. The British annexation of Arakan in 1826 led to an influx of Muslims from Cittaung into coastal towns, particularly Akyab. The annexation of Lower Burma (1852) was followed by large-scale Indian immigration from the 1880's onwards. 1911 Census (the last to be completed in detail) gives a Muslim population of 584,839, out of a total of 14,667,146. Of the Muslims, 396,584 were of Indian origin; 1,474 were Chinese (Panthay); and 186,861 were indigenous, mainly Arakanese. Muslim

Arakanese were among the early officials and police officers under the British; they took advantage of higher education and many were prominent in government service, banking, and business. Cittaung Muslims supplied almost all the crews of the coastal and river steamers. Ismā'īlīs [q.v.] and Gadjahs dominated the retail trade. The 1930's were a decade of depression and some resentment was vented upon Muslims, conspicuous in the economy. Violent riots occurred in 1930 and '38; the latter lasted from July to December, and were fiercest in Rangoon and Mandalay; some 200 Muslims were killed. Following the Japanese invasion (1942) many Indians fled; numbers returned after the war, but they are less than before. The total Muslim population in 1958 is probably slightly higher than in 1931, perhaps 600,000 (the Census of 1953-4 is quite incomplete). About half are from India and Pakistan. A political organisation, the Burma Muslim Congress, was formed in 1945 and is affiliated to the Anti-Fascist People's Freedom League, the government coalition party. Two Muslims have been Cabinet Ministers during the greater period since independence: M. A. Raghid (b. 1912) a leading trade unionist and business man, and U Khin Maung Lat ('Abd al-Laṭif, b. 1913) a lawyer. The leaders of independent Burma, notably U Nu, lay great stress upon their Buddhist heritage; Muslims are accepted as equal citizens, but a number of irritants to good relations have existed. The Muḡlāḥid revolt in northern Arakan led by Kāsīm, a fisherman, aimed at union of this area with Pakistan. The Muḡlāḥid terrorised the Buthidaung-Maunglaw area from 1918 to '54, but with the imprisonment of Kāsīm in a Pakistan jail their activities were greatly reduced. In September 1954, a national political crisis was created by widespread monastic protests against Islamic teaching in state schools, but in general relations are harmonious. In Arakan, where Buddhists and Muslims are intermingled, many Muslim customs are followed by the Buddhists, even beef-eating. But in Lower Burma, beef-eating and animal sacrifice at the 'Id are actively discouraged. The Burma Muslim Dissolution of Marriages Act, passed in March 1955, gave Muslim women equal rights to those of Buddhists: equal opportunity to divorce their husbands, and the right to retain their marriage portion on dissolution of the union. The act evoked Muslim protests outside Burma, but was accepted by the Burma Muslim Congress. Married Burmese Muslim women do not take the veil or observe purdah. In 1955, U Nu as Prime Minister initiated a project to translate the *Kur'ān* into Burmese.

**BURSA**, also called NIĞDE, was founded by the Ottomans after the ancient city of Prusa (295/52a) on the northern foothills of Mysian Olympus, became the main capital of the Ottoman state between 726-805/1326-1402.

It was mentioned by Ptolemy along with Nicaea and Philadelpheia as one of the three principal cities still in the hands of the Byzantines when the Turkish borderers invaded the whole of western Anatolia about 699/1300.

According to 'Aḥlik Paḥadāde (ed. Fr. Gies, 22-23) the Ottomans were able to lay siege to Bursa for the first time when they invaded the Bursa plain after their victory over the Byzantine Tekfur [q.v.] of Bursa who, in alliance with the other Tekfur had

(H. İNALCIK)

**BURSUK** (Eastern Turkish = "badger"), one of the chief officers of the Great Saljuqs, whose descendants also played a notable rôle at the beginning of the 6th/12th century. Bursuk,

although youthful, entered history as one of the principal *amirs* in the service of Tughril-Beg, who after restoring control in Baghdad following the death of the years 450/51/1058-59, made Bursuk his first *dişina* (military commander) in Baghdad. However, under the pacified Saljuqid organisation, the essential power belonged to the *şahîd*, the civil administrator, and it is not certain that there had been a *ghisva* with any permanence in Baghdad for a dozen years. In any case, Bursuk did not remain in the position since we find him in 455/1063 as *hâdîdî* of the sultan whom he accompanied (Sibt Ibn al-Djawrî, *Mu'it al-Zamân*, Bibl. Nat., Paris, Arab. 1506, 87v.1); then, in 456/1064, he was charged by the new sultan, Alp Arslan, to go and extract from a vassal arrears of tribute (*ibid.*, 99v, 100v). Then, without our being able to explain the reason, silence overshadows him for 15 years. We discover him again only around 471/1078, under Malikshâh, sent to Anatolia against the Saljuqid rebel sons of Kutlu-mush, one of whom, Mangûr, he killed but without being able to crush the other, Sulaymân (Bar Hebraeus, *Chronography*, trans. Budg., 227). In 479/1086, together with Bûzân, he led the advanced guard of Malikshâh's army, which on the death of Sulaymân occupied Aleppo; and probably from there was dispatched to Asia Minor to combat the heir of süymûn al-Nisâ'î, who, despite the efforts of the sultan, was supported by Alexius Comnenus, the Byzantine Emperor (Anna Comnena, *Alexiad*, Bonn ed., 302-11). It was probably on this occasion that he obtained from Constantinople the tribute of 300,000 *denars* about which Bundârî speaks (*ed. Houtsma*, 70). A little later Bursuk organised the celebrations in Baghdad honouring the marriage of the caliph to a daughter of Malikshâh. Following the death of the sultan, in the quarrels among the latter's heirs he took the part of Barkiyûrk, particularly in the resistance to Tutuq, and followed his prince to Isfahân, there falling victim to the Assassins. His sons avenged him by participating two years later (490/1097) in the execution of the Shûh *wasayî* of Barkiyûrk, Najid al-Mulh al-Ishâhân, whom they suspected of having been the instigator of the murder of Bursuk and of others as well.

The sons of Bursuk—Zenghî, Akbîrî, İbîkî, and Bursuk—appear, generally speaking, as a close-knit family group, which remained attached to Barkiyûrk as long as he lived, but which was more normally established on their *ihdâ* of the province of Abwâz, which, with Tustar, foremost town of the province, was acknowledged to be hereditary, either legally or by fact of possession. Bursuk assisted Barkiyûrk in recapturing Rayy from his brother Muhannad. Probably it was for this reason, when in 498/1105 Muhannad succeeded Barkiyûrk who had died, that we find Zenghî incarcerated by the new sultan. But the family found a way to reconcile itself with Muhannad by refusing to follow the rebel Mangubars and by betraying him to the sultan. Zenghî, who would have been put to death, was set free, and although the sultan demanded from the Banû Bursuk the return of their *ihdâ*, in exchange he conceded to them Dînasar. Furthermore, even this exchange appears to have been provisional; for we find the Banû Bursuk subsequently once more in possession of Tustar. Meanwhile, Bursuk (the son of Bursuk) was made by Muhannad governor of the province of Hamadhâna, one of the capitals of the Empire (Ibn al-Kalâkânî, *ed. Anedroz*, 574).

Firmly installed in power, Sultân Muhannad sought to organise war against the Franks in Syria. Bursuk b. Bursuk was one of the principal participants of the expedition of 509/1115, which miscarried because of quarrels among the chiefs and the jealousy of the Syrian princes toward the "Easterners"; moreover, he was ill almost the whole time. But he received command of the expedition of 509/1115. Again the circumstances were difficult, Bîghârî, the principal chief of the Diyâr Bakî Turkomân, Tughtakûn of Damascus, and Lu'lu', regent of Aleppo, having made an alliance with the Franks against him. With such bases as Hama, where the camp was his friend, and Hama, which he conquered, Bursuk attempted to dislodge the coalition army. He succeeded only on making contact, withdrawing, returning, and finally being overrun at Dînâfî, to the east of the Orontes, by Roger, Prince of Antioch. He was preparing to take his revenge when he died, as did his brother Zenghî, in 510/1116. This death and that of Sultân Muhannad, two years later, meant the end of political intervention by the Sultanate against the Franks.

It is only on the occasion of the dissensions among the Saljuqids that the last heirs of Bursuk are heard of again, re-established in Khûzistân. Akbîrî and some of the sons of Zenghî and İbîkî found in the army employed by Sultân Mahmûd against his uncle Seljuq, and Bursuk b. Bursuk participated in the complicated quarrels of Lower 'Irâk. At the death of Mahmûd, the brothers Tughrîl and Bursuk were found in the party of Tughrîl, who protected Sanjar; then, when he (Tughrîl) died, they joined the party of Dâ'ud, who had the support of the Caliph. Nevertheless, they were able in time to reconcile themselves with the conqueror. Mas'ûd was (529-33/1134-1136). We cannot say whether it was one of these two whose death, under the name of Hamza b. Bursuk, is mentioned by Ibn Abî Tayyîl (cited by Ibn al-Furât, NS. Vienna II, 1135\*), as lord of Tustar in 533/1139. In any case, it appears this is the last mention of a member of the family whose heirs are no longer encountered among the vassals of the subsequent sultans.

It was as an officer of the first Bursuk that Ak-Sumkur al-Bursuk [s.c.] began his career.

**Bibliography:** In addition to the references given in the article: Ibn al-Akhrî, *Kâmil*, s. xi, Index; 'Imâd al-Dîn al-Ishâhân in Bundârî's version (Houtsma, *Recueil*, ii, index); Râwandî, *Rihât al-Sudûr*, ed. Muh. Ibbîl, index. For the sultan's campaigns, the sources are collected in Cl. Cahen, *La Syrie du Nord etc.*, 253-3, 271-4; cf. also Grousset, *Histoire des Croisades*, i, 463 ff., and 493 ff.

**AL-BURSUKI** [see AK BURSUK].

**AL-BURTÎ, pl. al-Burtât**, a Spanish-Arabism derived from the Latin *portus*, the meaning of which the Arab authors explain as the equivalent of Arabic *hâdî*, pl. *shuhûd*, the triangular shape which the Arabs gave to the Iberian peninsula is well known. Following Ptolemy, they fixed its points at Tarifa in the south, at Cape Finisterre in the west, and in the east in the Narbonne area according to some, or the valley of the Llobregat according to others, or at Port-Vendres (Portus Veneris/Haykal al-Zuhârî according to a third group. The disagreement over the fixing of the third point arises from two causes, to which nobody has given the attention they deserve. In the first place, the Arab geographers of the Middle Ages had no clear idea of the Pyrenees, nor did they give a definite name to them; in the

second place, they show the north-east frontier in ways which differ markedly according to the ideas of the times in which they lived and the political situation of the region.

Some, the earliest, such as al-Râzî and after him Ibn Hayyân and al-Yaqûbî, follow the Visigothic tradition and take the limits of the peninsula, as in Wamba's time, to the Narbonne area. Others, coming later, such as al-Bakrî, who knew of the Frankish conquest of the Spanish marches, and had travelled through the country several times by land and sea, on hearing the Catalans of Barcelona and of the Pyrenean countries called Frank and taken for such, place the north-east limit on the line of the Llobregat; on this frontier al-Bakrî mentions al-Burt (the Gate) in the Catalan coastal range; and in order to leave no room for doubt that the frontier between al-Andalus and the continent (*al-arḍ al-khabîra*) stands on that river whose Latin name (Hiberitatis) he knew, he states that the gates (*abwâb*) of the *ġabal* al-Burt are the islands of Mallorca and Minorca. This testimony is confirmed by Ibn Sa'îd, and al-Makkârî accepts it as the most accurate since it is corroborated by many travellers. Ibn al-Akhrî mentions more than once the famous battle during which the Almoravids *amir* Ibn 'Ayyûb died and calls it *waḥdat al-Burt* (Christian sources refer to it as the battle of El Congost de Martorell) and Ibn Khaldûn mentions the embassy which the Frankish count of Barcelona who was living on the other side of al-Burt sent to 'Abd al-Rahmân III. al-Idrîsî, on his part, who was writing in the second half of the 6th/12th century, and witnessed the independence of the Catalan-Aragonese kingdom, takes care not to call the Catalan Franks and puts the frontier of Spain at Port Vendres; in enumerating the 26 provinces or *ihlâm* of Andalusia he puts Tortosa, Tarragona, and Barcelona in the *ihlâm* of al-Burtât, further south than the Pyrenees, appearing to show that this *ġabal* al-Burt or al-Burtât was the centre of the *ihlâm*.

**Bibliography:** Idrîsî, text 176, tr. 224; Makkârî, *Anatolien*, 252-3 (quotations from Râzî, Bakrî, and Ibn Sa'îd, i, 82-3); Ibn al-Akhrî, *Tahmila*, in *BAH* iv, 55, 309; Ibn Khaldûn, *Ibar*, iv, 142; Chronicle of Ripoll and Chronicle of Tortosa in Villanueva, *Fuente literaria*, v, 247.

(A. HUCI MIRANDA)

**BURTAS**, or BURDAS (in al-Bakrî FURDAS), pagan tribe of the Volga basin. For an account of the Burtas and their neighbours the Khazars and the Bulgars, to the north and south, see BOLGHAR. Al-Mas'ûdî (*Murâdj*, ii, 14 & *Tanbih*, 62) lists Burtas also as a river flowing into the Ird (Volga); Marquart identifies this stream with Samara (*Streitsage*, 336). The sources do not mention any adherents to Islam among the Burtas, which contrasts with their accounts of the Khazars and Bulgars. Yâqut's report on the Burtas (i, 567) is based on a misunderstanding, as he applied Ishaq's remarks on the Bulgars (225) to the Burtas. The sources in which they are mentioned, Ibn Rusta (140 ff.), al-Bakrî (Kunîk & Rosen, *Ishtiyaq al-Bakrî*, etc., i, 44) and Gardizî, (Barthold, *Ölüt o poyeshdâk v Srednyaya Asiya*, 96 ff.) content themselves with saying on the subject of the Burtas religion that they adhere to the same beliefs as the *ġiyas* (Turks) and that some of them burn while others bury their dead. They allowed themselves to be outdistanced by their neighbours more in contact with civilisation. They lacked government authority, the direction of affairs

being entrusted to the elders of each tribe. The only commercial dealings of any importance between the Muslim World and the Burtās was the traffic in furs—the *furā* mentioned by Yāqūt (loc. cit.).

The majority of authorities (V. V. Holmsted, A. P. Smirnov, P. P. Stepanov) identify the Burtās with the Finnish Morde-Moksha (the "Moles" of Ruteniquis), class which at the beginning of the Middle Ages inhabited the area between the upper basins of the rivers Khoper and Medveditsa and the right branch of the Volga, extending so far northwards until the Finns were the immediate neighbours of the Slavs. Others (A. I. Popov, A. E. Alilgova) locate their place of origin in the northern Caucasian steppes and argue that the Burtās emigrated northwards only at the time of the Golden Horde; others again (Shoer, Rittich) place them among the ancestors of the Cossack. Tokarev believes that the Burtās were a Finnish tribe more or less Turkicised, and which finally was assimilated partly by the Morde-Moksha and partly by the Cossack. Russian chronicles from the 13th century onwards mention the Burtās as vassals of the Golden Horde. After the downfall of Kazan, their land was conquered and colonised by the Russians in the 16th century. At the beginning of the 18th one reads of insurrections among them but from that time the name Burtās ceases to figure in Russian documents.

The present Mordeve (Morzins) in Estonia are divided into two distinct groups: the Moksha and the Erzia, numbering about 1,450,000 souls (Soviet census 1939), living in an autonomous Soviet Socialist Republic (Autonomous SSR of the Mordeve, capital Saransk). A large number of the Mordeve, however, live outside their republic, notably in Tataristan, Bashkiriya and Siberia.

The Mordeves were subject to strong Russian cultural influences, and from the 17th century adopted the Orthodox faith. One must, however, mention the existence of another Mordeve-Moksha group living in the Tatar region (in the district of Kamsho-Ustinsk of the autonomous SSR of Tatarstan)—the Karatā. These from the 17th century have been subjected to Tatar influence and were completely "Tatarised". The Karatā have lost the use of their Finnish language and speak the Tatar of Kazan. Considered officially as Christian Orthodox, they are in fact crypto-Muslims.

(W. BARTHOLOLMEU C. QURLEQJAV)

**BURUKĀL**, the name given by the Arabs to an ancient town (Cale or Calasa, Portus Cale, modern Oporto) at the mouth of the Douro, and later to the kingdom of Portugal. Before the establishment of an independent Portugal in the 12th century, the history of the region belongs to that of Spain (see AL-ANDALUS). At the Arab conquest the whole of the territory of modern Portugal must have passed rapidly into Muslim hands, though details are lacking. We hear only of resistance in the south (see HĀĠĠA) and of the occupation of Évora, Santarém and Coimbra by 'Abd al-Raḥmān b. Mūsā b. Nuṣayr (governor of al-Andalus, 95/714-97/716). According to a notice in a late author, but cited on the good authority of Muhammad b. Mūsā al-Rāzi (3rd/yth century), Santarém and Coimbra had before this been exempted from a general division of the conquered land among the soldiers of Mūsā b. Nuṣayr, apparently under a treaty (cf. E. Lévi-Provençal, *Hist. Esp. Mus., iii, 202-203*, and see below).

Political confusion in al-Andalus and especially, from about 750 onwards, the withdrawal owing to famines of large numbers of the new inhabitants of the NW (mostly Berbers) provided conditions for the beginning of the Reconquista. Alfonso I of Asturias (739/737) or, according to Ibn Rayyān (Makkatī, *Nafh, i, 213*), his son Fruela I (737-760) made himself master of the north of modern Portugal, including the towns of Oporto and Braga north of the Douro and Viseu south of the same river. Another son of Alfonso, Aurelio (reigned 768-774), is given by Ibn al-Khaṭīb (A'māl al-4'44m, 373) as conqueror of 'and Burtalāh'. Alfonso II (791-842) is said to have taken Lisbon (842) and to have sent a message to Aix-la-Chapelle announcing the news to Charlemagne. But these successes, if authentic, were transitory. It was not till the time of Alfonso III that the line of the Douro was more or less effectively held by the Christians, after the definitive capture of Oporto in 868.

Kulmuriya (Coimbra) fell in 868/878 but was retaken in 375/975 by al-Mansūr, whose extraordinary march from Cordova to Shant Ya'qūb (Santiago de Compostella) was directed via Coria and Viseu. Al-Ughbina (Lisbon), which still belonged to the expiring Caliphate in 400/1000, the time of the *Muḥall al-Tawā'if*, a dependency of the Alṭafids of Badajoz, who disputed control of the W. of al-Andalus with the 'Abbāsidah of Seville, and after the final loss of Coimbra in 456/1064 (Ibn 'Udhayr, iii, 239) remained with Shantarān (Santarém) as a Muslim enclave N. of the Tagus, till both were captured by Alfonso Henriques, the first king of Portugal, in 547/1147. Alfonso Henriques is usually said to have taken the royal title after a victory over the Muslims at Ourique near Beja (July, 1139). Before his death (1185) the Portuguese were in possession of most of the South. The fluctuating fortunes of war earlier are illustrated by the case of Lamego, S. of the Douro, which appears to have been captured by Alfonso III in 904. It was afterwards lost, but was retaken by Ferdinand I in 1038, when its king or governor was permitted to remain as vassal of the Christian. Some time before 1103 it passed again under Muslim control, being finally recovered to the Count Don Henrique in that year (cf. Fernandez y Gonzalez, *Mudajarras de Castilla*, 29). For the deep-rooted Arabism of the region we may compare an account in the 12th century writer al-Mawā'aynī (Pons Boigues, *Historiadores*, no. 189) of certain Arabic

speaking Christians encountered by al-Mu'tadid of Seville on an expedition into Portugal circa 1020 at Hīṣay al-Ighwān, now represented by Alalones or Alalões (≠ Alajones), N. of Viseu, who claimed to hold their land by treaty from Mūsā b. Nuṣayr (cf. above) and, though doubtless Mozarabs, alleged their descent from 'Iṣḥāq b. al-Aḥyān, a Christian Arab of Syria contemporary with Muhammad (Fernandez y Gonzalez, *Ibid.*, cf. Dory, *Les de Abbadides*, ii, 7).

Under the Caliphate several āḥās (i.e., provincial districts with chief town, governor and garrison, see ART. AL-ANDALUS, 2, iii) belonged in whole or in part to the territory of modern Portugal. 1. In the extreme S., corresponding to the present-day province of Algarve, was the *hāra* of Ughyūmā (Ozemboba), so called from the ancient town of that name, inland from modern Faro. The town declined in importance after the Arab invasion and gave way to Shīb (Silves) as provincial capital, but was still in existence in the 5th/11th century (Ibn 'Udhayr, iii, 215). Silves, situated more to the W. near the estuary of two small rivers, is first mentioned as a port at the time of the descent of the Norsemen in 229/844 (see AL-RĀH al-SUḤṬI), and grew to be a flourishing city, especially perhaps after the fall of the Caliphate under the 'Abbāsidah of Seville. Other towns or large villages in the province were, according to Ibn Sa'īd (al-Mughrib fi Hādā' al-Maghrib, al-Aḥḥāṣ al-Arāḥ, x, Cairo 1953-1955, i, 460 ff.), Shammāḥ or Shammās (≠ Shammās, for São Brás), Kamāḥ, Shantamariyya (Santa Maria de Algarve, now Faro), al-'Uḥyā (Londē) and Kastalla (Carda). Al-'Uḥyā (circa 1154) in his description of Silves mentions that the inhabitants of its villages, as well as the townspeople, spoke pure Arabic. 2. Immediately N. of Ughyūmā, i.e., corresponding to modern Baixo Alentejo, was the *hāra* of Bēja (Beja), with principal town of the same name (see HĀĠĠA). This province, according to Ibn Sa'īd, included Mārtula (Mértola), which is placed by Ibn al-Khaṭīb (A'māl, 287) in the *hāra* of Shaghūna (Sídona). 3. Further N. lay the *hāra* of al-Ughbina or Lisbon (Makkatī, *Nafh, i, 90*), which included Shantarān (Santarém), Shantarān (Coimbra) and al-Kabāḥ or al-Kabāḥ (cf. al-Kabāḥ = Alcázar de between Cordova and Granada). Other *hāras* in Portugal are not named. Yābura (Évora) N. of Beja is included by Ibn Sa'īd in the kingdom of Badajoz, and perhaps in Caliph times formed part of a *hāra* of Mārida or Merida (cf. Makkatī, *Nafh, i, 103*). While it still belonged to Islam before 264/878 Kulmuriya (Coimbra) may have been the centre of a *hāra* (cf. E. Lévi-Provençal, *Exp. Mus., iii, 31*).

Like other outlying parts of al-Andalus, Muslim Portugal affords plenty of examples of particularism throughout its history. Partially successful attempts to assert independence of Cordova were made in the 3rd/yth century by 'Abd al-Rahmān b. Marwān, often called Ibn al-Dīlīm (‘son of the Gallin’), and his descendants, operating widely from Badajoz, and by the Banū Bakr at Santa Maria de Algarve in the same century. Much later a militant religious movement in the W. headed by Ibn Kāṣi, who resided at Mertola in 539/1144, contributed to the downfall of the Almoravids. Ibn Kāṣi became master of Silves, and he and his contemporary Ibn Wāṣi were perhaps the only Muslims to coin money on Portuguese soil.

The last period of the struggle in Portugal between Christians and Muslims was marked by a great

though unsuccessful effort of the Almoravid Abū Ya'qūb Yūsuf in 580/1184. The Almoravid fleet, it seems, failed before Lisbon, and the main land assault on Santarém had to be abandoned. In a Portuguese attack on the *alca* or rearguard of the Almoravids Abū Ya'qūb received a wound from which he died near Évora on the march back to Seville.

The set-back in Portugal was contrary to general expectation, for at this time Almoravid power and prestige stood high. In 1180, the year in which it first fell into Portuguese hands, Silves was described by an anonymous Crusader ('Anonymous of Turin') as much stronger than Christian Lisbon and ten times as rich. After the victory of the Christians at al-'Iḥāb (Las Navas de Tolosa) in 609/1212, in which Portuguese forces took part, the issue of the prolonged struggle came within sight. Silves fell finally in 1219 and the Muslims lost Algarve, their last holding in the territory of modern Portugal. At a battle fought near Tavira on the Rio Salado in 741/1340 the Portuguese under their king, Alfonso IV of Portugal, joined forces with the Castilians to oppose the African troops of the Marinid ruler of Fās, Abū 'I-ḥasan 'Alī and the contingents of Yūsuf I, Sultan of Granada. Ibn al-Khaṭīb describes how the Andalusians almost broke the ranks of the Portuguese at the first charge, but their colour was in van and the day was lost (A'māl al-4'44m, 389). Hereafter there was no hope of restoring Muslim rule in the West of al-Andalus.

The principal towns of Muslim Portugal produced a respectable number of literary men, whose names are given in the Arabic biographical works. Among the best known are the historian Ibn Bassim, Abū 'I-Walīd al-Bīḍī (see AL-ĠĠĠI), Ibn 'Ammār, the poet and friend of al-Mu'tamid b. 'Abbad, and Ibn Kāṣi, already mentioned, author of the *Khaṣṣ al-Na'ayn fi 'I-Taqawwūf* and other works.

Some itineraries in 10th century Portugal are given by al-Iṣḥāqī (BGA, i, 46) and Ibn Hawkal (ed. Kramers, i, 116-117).

(D. M. DUNLOP)

**AL-BURUKĀL** (see BURUKĀL).

**BURUKĀL** (see BURUKĀL).

**BURUKĀL**, i.e., Proclus (A.D. 410-485), head of the pagan philosophical school at Athens (the 'Platonic Academy'), outstanding scholar

systematiser of Neoplatonic thought and one of the chief links between ancient and medieval philosophy. Although it would be premature to attempt a monograph about the influence he exercised upon medieval Arabic thought, the information at present at our disposal is not so scanty that its complete neglect in R. Beutler's comprehensive article on Proclus (*Pauly-Wissowa-Kroll* 45, 1957, col. 186 ff.) appears justified. Better information is available in E. Zeller, *Philosophie der Griechen* 111, 24, 839 n. 1 and E. R. Dodds, *Proclus the Elements of Theology*, Oxford 1933, xxviii f.

A list of those works by Buruklus which in some way became known to Arabic scholars is to be found in Ibn al-Nadīm, *Fihrist*, 252; Flügel (= 333 Egypt, ed.); it was reproduced, with a few omissions, by Ibn al-Kifā'i, *Ta'riḡh al-Ḥukamā'*, 89, (ed. Lippert).

## 1.

Some works by Buruklus appear in Arabic under very inappropriate false names.

a. The work referred to by the bibliographers as *Kitāb al-Ḥalāḡiyya* and ascribed by Ḥaḡḡi Khalifa, v, 66 (Flügel) to Proclus and (!) Alexander appears to have been the systematic manual of Neoplatonic metaphysics known as *Elements of Theology* (Ἐλεγεῖαις Θεολογικαῖς). The Arabic text of propositions 15-17 (16-20 Durlin) has been published by A. Badawi, *Arīḡḡ ḡndā l-Ḥārāb*, Cairo 1947, 291 f. from a 11th century Damascus MS., where it is wrongly attributed to Alexander of Aphrodisias. The truth was discovered independently by B. Lewin (*Orientalia Suecana* 1955, 101 ff.) and S. Pines (*Oriens* 8, 1955, 195 ff.). The translator was Abū Ḥijāb Sa'īd b. Ya'qūb al-Dīnashīrī, a minor member of the school of Hunayn.

b. A work K. al-Idāb fī l-Ḥayr al-Maḡd, based on 31 propositions of the *Elements of Theology*, is known in the West since the days of Gerard of Cremona (second half of s. xii) as Aristotle's *Liber de sensu*. A critical edition of the Arabic text (which ought to be based on the Latin and Hebrew versions as well and be minutely compared with the Greek) is being prepared by G. C. Anawati (cf. *Mélanges Masson*, Damascus 1956, 73 ff.). For the time being we have to be content with O. Bardeleben's edition (Freiburg-Breisgau 1882, reprinted recently) and A. Badawi's text (*Islamica* 19, 1955, 1 ff.). A résumé of the Arabic text (ascribed to Aristotle), composed about A.D. 1200, was discovered by P. Kraus (*Bulletin de l'Institut de l'Égypte* 23, 1949, 277). The question whether the work as we have it was originally translated from an older re-arrangement of extracts from Proclus or compiled by an early Arabic philosopher cannot be decided at present.

## 2.

a. Proclus himself is mainly familiar to Arabic thinkers as proclaiming the eternity of the world. His 15 propositions about this tenet (Ἐπεξεργαστα περὶ ἀδιόλετου κόσμου), which are lost in the Greek original, were as well known to the Arabs as John Philoponus' reputation (*De aeternitate mundi contra Proclum*)—of which the Greek MSS. lack the beginning. The first nine propositions are now published in Iḡḡāḡ b. Hunayn's Arabic version by A. Badawi (*op. cit.*, 35 ff.); eight of them were known from John Philoponus' quotations but the first is preserved in Arabic only (cf. G. C. Anawati, *Mélanges A. Dis*, Paris 1956, 21 f.). Muhammad

Ibn Zakariyā al-Rāzi in his book "On doubts which arise against Proclus" (K. al-Shakāḡ aladī 'alā Buruklus) referred to this work (cf. S. Pines, *Beiträge zur islamischen Atomlehre*, Berlin 1936, 93, n. 1)—he may have made use of John Philoponus—and so does, for instance, Al-Shahrastānī (K. al-Mīāl wa'l-Nihāl, 338 ff. Cureton), who rightly points to Ibn Sīnā's use of Proclus' arguments; Al-Ghazālī was familiar with them as well (cf. S. van den Bergh, *Avicenna's Tahafut al-Tahafut*, London 1954, 1, xviii; cf. 1).

b. Additional proof for the popularity of Proclus among Arabic philosophers is provided by the chance discovery of fragments of some other writings. There are eight Προκλήδεια φωνικά evidently part of a larger treatise which may well be genuine, published by A. Badawi (*op. cit.*, 43 ff.). c. B. Lewin, *Orientalia Suecana* 6, 1248) has found a small fragment about the concept of ἀγάπη from the *Letter to Eurylochus*, mentioned by the Arabic bibliographers (Badawi, *op. cit.*, 257). F. Rosenthal made known, in English translation, a passage from his work *On the immortality of the Soul according to Plato*, and a small section of the lost part of his huge commentary on the *Timaeus* is available in German (see article ARISTOTELIS). The Arabs knew of his commentaries on the myth of the Gorgias and on Plato's *Phaedo* but neither Syriac nor Arabic remains of them have hitherto been traced. A commentary on the pseudo-pythagorean *Golden Verses* is a misattribution, due to the misreading of B. for the less known Neoplatonist Hierocles (which can be easily explained). (R. Walzer).

**BURULLUS** (BURULLUS). The name given to a district and to a lake to the north of the Delta of Egypt. The lake stretches between the mouths of the Rosetta and Damietta branches of the Nile, and is separated from the Mediterranean only by a narrow band of dunes.

The Arabic name is the transcription of the Greek *Paralos*, transmitted through Coptic, and this word, which signifies "the maritime littoral", is applied quite naturally to this region. It may be noted that Yāqūt and Ibn Battūta were acquainted with the vocalisation *Barullus*, which has not survived.

It was the administrative centre of a pagarchy (*bīra*) before the division of the country into larger districts. Burullus was then made part of *nastārā*-siyya, and in the 8th/14th century the *ḡndā* took the name of its chief town, Aḡḡim Tannāḡ; now the region of Burullus belongs to the province of ḡḡariyya.

In the Middle Ages the lake was called Buhayrat Nastārāwa, after the name of a locality which no longer exists today. To Ibn Hawkal, it was the lake of Bughmur, another designation for this swampy country.

Fishing in this lake was farmed out, a practice which represented an ancient fiscal organisation, predating the Muslim era. It can hardly be supposed that the various governments deprived themselves of such a productive source of revenue, and when the sources speak of the creation of this system, in the 3rd/9th century, they are probably referring to an aggravation of fiscal pressure. In the same way, references to the suppression of the tax probably denote an alleviation.

The tombs of the Twelve Companions of the Prophet described by al-Harawī very likely recall some episodes of the Arab conquest, although according to the traditions, the chief of Burullus made terms with the conquerors. There may, how-

ever, have been battles following the landing of the Byzantines in 53/673.

The inhabitants of Burullus had the reputation of being expert trackers.

**al-BURZULI**, ABU 'U-SAYYID B. AHMAD B. MUHAMMAD, of the tribe of the Banū Buziḡa, a Maliki author. Born in al-Kayrawān, he studied under the 'Arāfa for thirty or forty years and under other great masters, and became himself a teacher of Islamic law in Tunis and an *imām* at the Zaytūna mosque. In 506/1105, he passed on the pilgrimage through Cairo, where he issued several *ḡḡāḡas*. He died in Tunis in 841/1438 (according to others, in 842 or 843 or 843), at the age of 104, of 105 years. He is famous on account of his collection of *fatāwā* and *ḡndāḡ* entitled *ḡḡimā' Mas'ūḡ al-Aḡḡim minnāḡ nāḡal min al-Kaḡḡi bī-Muḡḡin wa'l-ḡḡḡim*, in which, in numerous manuscripts of which are known; it is one of the main sources of the *Miḡyā* of al-Waḡḡarīḡī (I, 914-1508); two extracts were made from it in the 9th and in the 12th century. The innumerable *ḡndāḡ* which al-Burzuli mentions there together with the names of their authors, famous jurists who can easily be situated in space and in time, make his work the most important source for the history of society in Ifriḡiyya under the Zirids of al-Kayrawān and al-Mahdiyya (10th-12th cent.) and the Hafsiḡ 13th-14th cent.).

(H. R. Idris)

**BŪSHAIHR** (BŪḡḡān), district and town in the VIth *Uḡḡā* (Fārs) of Persia. The position of the town is lat. 28° 30' N, long. 50° 52' E. (Greenwich). BŪḡḡān stands on a low outcrop of sandstone at the northern end of a long and narrow peninsula. So low is the isthmus connecting this peninsula with the mainland that it is sometimes flooded at high tide, and a raised causeway had to be built across it in order to maintain communication between BŪḡḡān and the hinterland at such times. At the southern end of the peninsula, 7½ miles south of BŪḡḡān, are the ruins of the ancient town of Rīḡḡān, where burial urns and cuneiform inscriptions dating back to the Babylonian era have been found. Rīḡḡān may perhaps be identified with the "Greek town"

(Γḡḡḡḡ) of Isidore of Charax. It was founded anew by the Sāsānid king Ardāshīr and was given the name of Rīḡḡān, of which Rīḡḡān is a contraction. In the 10th/16th and 11th/17th centuries the Portuguese had a settlement and fort there.

The derivation of the name BŪḡḡān is uncertain. As "Abū Shahr" ("Father of the Town") does not make good sense, the suggestion has been made, on the analogy of Rīḡḡān, that the original name was BŪḡḡān-ardāshīr ("Ardāshīr has delivered"), but this etymology, though possible, is doubtful. British seamen in the 19th century corrupted the name to "Bushier" and "Busher".

The earliest reference to BŪḡḡān is apparently in Yāqūt (I, 593). The place remained no more than a village until 1734, when Nādir Shāh [q.v.] made it the base of his navy in the Persian Gulf and gave it the name of Bandar Nādirīyya (see the *Greenhouse Diary* of the English East India Company, 51th/17th July 1734, in vol. IV of the *Persia and the Persian Gulf Records*, India Office Library, and L. Lockhart, *Nadir Shah*, London 1938, 92-3). Subsequently, an unsuccessful attempt was made to build a large warship at BŪḡḡān, using timber that had been brought overland from the forests of Māzandarān at a vast expenditure of labour. Sir W. Courtenay saw the remains of this vessel when he landed at BŪḡḡān in 1811 (see his *Travels in Various Countries of the East, more particularly Persia*, London 1819, Vol. I, 188). Although this shipbuilding experiment failed, BŪḡḡān prospered in consequence of the attention that Nādir Shāh gave to it. Moreover, it subsequently benefited commercially when the English and Dutch East India Companies transferred their factories there from Bandar 'Abbas [q.v.]. Another factor of great importance in the development of BŪḡḡān at those times was the fact that Shīrāz, with which it was connected by a caravan route, became the capital of Persia in the reign of Karīm Khān Zand [q.v.]. The consequence was that BŪḡḡān took the place of Bandar 'Abbas as the chief port of the country, a position which it was destined to hold for over a century and a half. Abraham Parsons, who visited BŪḡḡān in 1775, stated that, when approached from the sea, the houses were sighted before the land itself came into view. So shallow was the sea there that large vessels had to anchor some 3 miles off shore. He estimated the population in normal times at nearly 20,000, but when he was there two-thirds of the inhabitants were absent at the siege of Basra [q.v.]. See his *Travels in Asia and Africa*, London 1808, 187-8.

In the 19th century BŪḡḡān easily maintained its supreme position as a port. During the brief Anglo-Persian war, British forces occupied the town in December 1856, and held it until the conclusion of peace in the following March. The British connexion with BŪḡḡān, at first only commercial, but later also political (for it became the headquarters of the Political Resident in the Persian Gulf), increased in importance as time went on. Other nations too participated in the trade of the town. Particulars of this trade and also of the movement of vessels in the latter part of the 19th century are to be found in the *Administration Reports* of the British Resident from 1876 onwards; these reports were published in Calcutta in *Selections from the Records of the Government of India*, Foreign Department (the tables covering the years 1893 to 1897 in *Freiherr M. von Oppenheim's Vom Mittelmeer zum persischen Golf*, Berlin 1900, II, 310-17, and in these publications).

For the first quarter of the 20th century Būshahr continued to prosper, but, with the completion of the Trans-Iranian Railway in 1938 and the development of Bandar Shāpūr and Khurramshahr, it lost its position as the principal port of the country. Unlike Būshahr, both Bandar Shāpūr and Khurramshahr have wharves and jetties where large vessels can berth, and they are, moreover, connected with Tehran and other places in the interior by rail.

In 1946 the population of Būshahr was 15,000. It is understood that the Persian Plan Organisation intends to improve the port and other facilities of the town, but it seems unlikely that, even if this project is fully carried out, Būshahr will ever regain its former predominant position as a port.

(L. LOCKHART)

**BUSHĀK**, FARJID AL-DIN ARMAH B. HALLĀDĪ AḤI ISHĀK (*ḥunay* contracted into the *ḥashūsh* Būshāk). Born in Shīrāz, he lived principally in Isfahan at the court of Iskandar b. 'Umayr Shāykh, grandson of Thaur and governor of Fārs and Isfahan, where he died (827 or 830/1424 or 1427). That is almost all we know concerning him (apart from an anecdote reported by Dawlatshāh). According to Hidayat (*Risāla*), he maintained relations with the mystic poet Shāh Nūr al-Dīn Allāh (g.c.). From the name Hallādī, a noun of occupation, it can be assumed that he was a cotton-candler. In dictionaries of the Persian language (*farhang*) he appears as an authority on culinary matters; hence the nickname *bushāk-i al-'ama* or simply *al-'ama* (prepared dishes) given him. A good edition of his works (*diwān*) was prepared and published at Istanbul in 1303/1885-86 by the learned Mirzā Habib Isfahānī, who added a glossary of technical terms with Turkish and Arabic equivalents (H. Feré had translated some fifty). This *diwān* contains *Kanz al-'aṭṭār* ("Treasury of Appetite") with a preface (trans. by Feré and by Browne) which shows that the various poetic genres had already been made famous by his precursors and that all he had to say had been said before; he merely transferred the inspirations of a number of great poets (for their names see Browne) on to a culinary and gastronomical plane. He deals, therefore, in parodies. This applies not only to the "Treasury" but also to the second part of the work—the third being composed of two short works in prose mingled with verse, of the same inspiration, and having a conclusion followed by an amusing glossary of

culinary terms (some of these have been trans. by Feré). If one considers 'Umayr al-Zāhid as the master of satire, one can, while admitting the existence of several earlier parodies, regard Būshāk as the creator of this genre to which he devoted all his literary activity. He may have lacked the distinction and "moderation" evinced in the French poet Berchou's *Gastronomie* (Paris 1800), but he nevertheless excelled in the minor genre he had chosen, revealing humour and originality. A practiced stylist, he handled with ease all poetic forms, both in the classical language and in the dialect of Fārs. Finally he rescued from oblivion a series of technical terms, as did his imitator Mahdūd Kāfī, who wrote his "*diwān al-Dīn*" (*diwān-i al-'ama*) on a plan analogous to that of Būshāk's *diwān*.

**Bibliography:** H. Feré, *Shāh's Anar, poète satirique, et Recueil de poésies gastronomiques d'Abou Isḥaq Hallādī Chirazi*, in *JA*, 1886 (a selection of poems well translated); P. **BÜSHANDJ**, also known as Fūghānj, in Middle Persian probably Pūshang, ancient Iranian town to the south of the river Harīrūd, and to parasaṅga (= one day's journey) W-S. of Harāt (Yāqūt, I, 758) which lies north of the river. The town already existed in pre-Islamic times, and, according to legend, was founded either (considering its name) by the hero Faghānj (the son, though in the epos the father, of Afrāsiyāb), or else by the Sāsānid ruler Shāpūr I (242-271) (J. Marguier, *Erānshāhr*, 49). In the year 588, the town is mentioned as the seat of a Nestorian bishop (*libā*, 64; it is, however, not referred to by Jean Dautville, *Les provinces Chaldéennes "de l'Estrieux"*, in *Mémoires Cavaillera*, Toulouse 1948, 279-282). Wilh. Tomaschek, (*Zur historischen Topographie von Persien*, I, Vienna 1881, 78), connects it with the Πουσανδία of Theophrastus.

Round the year 650 AD, the town came into the hands of the Muslims, and it remained for 20 years on the frontier between the Arabs and the not fully conquered east-Iranian mountain regions. Here it found support, when in 41/661-2 and again in 160/775-7, it revolted against the Arabs. From 92/791 until 94/793, the place was in the hands of the Khārijites, and it entered into a quieter period only when the Islamisation of the area was largely completed under the rule of the Fāhimids (g.c.). whose founder was a native of the place. Later, Būshānj was connected with Shāhān, and came under Ghāmawid rule in 392/1002 (cf. B. Spuler, *Iran in früh-islamischer Zeit*, Leipzig 1952, 29, 25, 51, 53, 71 f., 111, 301, with reference to sources).

At that time, the size of Būshānj was roughly half that of Harāt, and throughout the Middle Ages it was known as a strong fortress with three gates. Economically, the town was important as the junction of the roads from Harāt to Nīshāpūr and Harāt to Kūhestān (Yāqūt, 267, last line, 268, line 8; Ibn Rosta, 172, line 17; *Ḥudūd al-'Ālam*, 64, 104, 327; Hamid Allāh Mustawfī, *Nuḥa*, 152 f., 177, 220 = trans., 151, 171, 212). In addition, Būshānj had timber and furniture industries, kept going by supplies from the nearby woods (Mukāṣ-

ḥasā, 307 f. (based on Istakhrī); Spuler, *op. cit.*, 408; Le Strange, 431).

After the Mongol conquest, under the vassal-dynasty of the Kurts (or Karti (g.c.), 1213-1259), Būshānj had a comparatively quiet period until it was conquered and ruthlessly destroyed by Thaur in the middle of 730 'Hijjā (732/March 1381). It was rebuilt soon afterwards. It is also repeatedly mentioned in the 13th century by Hāfiz Abū, (g.c.), and a *riḥl* supposedly founded by Abūshāh 'Alīshāh, *Rasād al-'Aṭṭār*, *Herāt*, printed in *JA*, v, 16 (July-Dec. 1860), 491 f. was shown nearby in 897/1491-2. Later on, the place vanished from history; it was presumably destroyed during the Ōzbek and Türkmen raids. According to W. Tomaschek (*Topographie*, I, 78), the modern Ghūriyān is situated on its site. (W. BARNHOFF-B. SPULER)

**BÜSHĀRĀKĪ**, "patriot" (*ḥisrā* de *yarb* y *de pāst*), is the origin of the Spanish name Alpujarras; the Arabic toponym really applies to all the mountainous region which forms the extension of the Sierra Nevada southwards to the Mediterranean, from Motril to Adra and Almería; but more particularly designated by this name are the many fertile valleys which issue thence, for in 1903/1 Alpujarras = Orgiva - Cádiz and Ujijar - Alceda - Lantjar - Camijar - Rágol - Gádor; in the Middle Ages the Alpujarras were of greater extent because the capital was Jaén, and in addition to many fortresses it had more than 600 silk-producing villages. Ibn Hāfṣān (g.c.), who succeeded in seizing Jaén, must have mastered this region or at any rate fought partisans there, for in 1903/1 Alpujarras = Al-Rakmānīn Hī captured his emissaries at Fīfāna, crossed the Sierra Nevada, and besieged Juviles where, after a short siege, he captured and beheaded the Christian garrison which Ibn Hāfṣān had placed there. The belligerent inhabitants of the many villages in these valleys which intersect each other in all directions, the Alpujarras, had in fact in Arab times rebellious tendencies, and after 1492 revolts continued to mark their history, in particular the great rebellion of 1568-70 which was directed by Ibn Ūmayyā and 'Abd Allāh b. 'Abbā, and which was suppressed with the shedding of much Moroccan blood by the Marquis of Mondejar and Don John of Austria (see MORISCO). (C. F. STACCOLO-(A. HUCET MIRANDA))

**BÜSHĀR** or **ABÜSHĀR**.

**BÜSHĀR** or **ABÜSHĀR**, the name of several places in Egypt, which is not unnatural since it refers to places in which the god Osiris was the object of special veneration.

The name Abūshār is found in the large suburban area west of Alexandria, a memory of the site of *Tapeiris Magna*.

Būshār, on the west bank of the Damietta branch of the Nile, in the province of al-Gharbiyya. In the middle ages this small town was connected to a neighbouring settlement, Bānā, so that one spoke of Būshār-Bānā. Famous in antiquity, Būshār was an episcopal seat and the administrative centre of the pagarchy (*lōra*).

Būshār al-Sidr, in the province of al-Djīza where there are still pyramids. The description of it by 'Abd al-Latīf is a document of the first order, as are also the discoveries which he mentions in the cemetery of the town.

Būshār, called Būshār-Kūrdīya in the Middle Ages, and from the 11th/12th century at least, Būshār al-Malak, is located at the entrance to the Fayyūm, within the western strip of Middle Egypt. Owing

to the great number of places called Būshār, Arab authors have found it difficult to situate exactly where the Ūmayyad caliph Marwān died. It is more than likely—and is in addition supported by a local tradition—that Marwān spent his last days at Būshār al-Malak. The information is already given by Kudāma. About this town developed a small, ephemeral province, Būshāriyya, which lay between those of Aḥlū and Bahariyya.

Opposed to this documentation, another school of writers places the final defeat of the Ūmayyads in a locality also called Būshār, opposite Aḥmīnāyā, on the other bank of the Nile, about 70 kilometres south of Būshār al-Malak. The region claimed to be the place of origin of Pharaoh's "magicians" and, according to al-Iḥrī, the inhabitants of his time had a certain reputation as sorcerers. This particular Būshār has left no traces.

Finally, there is a Būshār-Badaḥsh in the province of Fayyūm.

**AL-BÜSHĀRĪ** (see SUPPLEMENT).

**BUSR** b. ABĪ ARTĀT or B. ARTĀT (there is less authority for the latter form), an Arab general of the Quraysh clan of the Banū 'Amīr, was born in Mada in the last decade before the Hijra. Only traditions which have been influenced by Shī'ī prejudices deny him the title of Shāhī. He went with the relief column into Syria under Khālid b. al-Walīd, distinguished himself there by his bravery and afterwards took part in the conquest of Africa. His bravery earned him a *du'ā* and rewards from 'Umar. During the civil war he vigorously declared himself on the side of Mu'āwīya for whom he won over the influential Kindī chief, Shurābbīl b. al-Simt. At Siffa he found him in the Syrian camp. He afterwards helped 'Amr b. al-'Ās to reconquer Egypt for Mu'āwīya. Busr is perhaps the most striking figure among the lieutenants of this Caliph. He was a typical Bedouin of the old school, utterly impervious to pity, if Shī'ī tradition has not exaggerated the details of the portrait of this fiery opponent of 'Alī. Sent into Arabia against the latter's partisans, Busr waged a war of extermination against them. He destroyed the dwellings of the enemies of 'Ujīma in the sacred towns of the Hijāz and displayed a loyalty to the Ūmayyads which was only surpassed later by Muslim b. 'Ukba and Ḥajjādīd. In the Yemen he put to death the two young sons of 'Ubayd Allāh b. 'Abbās. During the brief campaign, which was terminated by the abdication of Hasan, son of 'Alī, he commanded the vanguard. As a reward, he received the governorship of Basra where he established a dictatorial regime. He spent little time in the Irāk but returned thither to seize the children of Ziyād b. Abīhi and by this drastic

to the gardens. He was, however, transferred to Kābul before the canal reached Lahore. On completion, a year later, it cost the Imperial exchequer a sum of 100,000 rupees. The garden with all the buildings, walls etc. was completed in 1050/1642-3, when it was visited by the Emperor. The name of the first terrace was changed to Farah Bahāsh by the emperor, Shāhjahān; the second and the third terraces, added later, were named Fayd Bahāsh. The Farah Bahāsh measures 330 yds. sq. and in the days of Bernier had 8 buildings, four in the middle of the side walls and four at the four corners. This garden suffered most damage during the Sikh rule, most of its marble having been looted and taken to Amritsar [g.v.]. The canal of 'Alī Mardān Khān, which had silted up, was reopened by Rājā Singh in 1806. The present gate is a later construction built by W. L. McGregor, Deputy Commissioner of Lahore, in 1849.

The other Mughal gardens of the Indo-Pakistan sub-continent include Pīndāwar, near Ambāla [g.v.]; Gulābi, Sādā Harā and Dilkushā in Lahore; Rawāḥan Arāb, Tālkatārā and Mahtab in Delhi; Nāgīn, Wārī Nāg, Aḥḥibāl, Habbāl, and Parī Mahāil, in Kashmir.

The Mughal gardens follow a definite plan, a salient feature being the construction of a central channel and shallow tanks in the centre surrounded by soft green turf, a lofty boundary-wall, cypress trees, artificial pools and numerous fountains. The Mughal garden is generally arranged in squares or geometric patterns, usually in the form of terraces placed in such a way as to make the distribution and flow of water easy. Each terrace has four divisions, to conform to the traditional plan of the *Chahār Bāgh* or four-fold garden. Taken as a whole, the garden looks like a combination of rectangles and straight lines; no curved paths or even circular parterres are allowed.

Great care was taken in the selection of the sites, and the foot of a wooded hill, or a charming cliff, served as the background. The Kashmir Shāhīnā is the best specimen of Mughal horticulture.

**AL-BUSTĀNĪ.** [see SUPPLEMENT].

**AL-BUSTĪ,** ABU 'L-FATH 'ALĪ B. MUHAMMAD, Arabic poet of the 10th/11th century. He was of Persian origin and a native of Bust [g.v.] where he studied *kāfiyā*, *fiḥr* and *adab*. He was a pupil of the traditionalist Ibn al-Hibhān, who was living at Bust from 340/951 till his death 354/965. Another traditionist, al-Shāṭibī (d. 388/1007), was Bustī's friend. In law he followed the Shāfi'ī school. As a young man he became secretary (*kalīb*) to Bāyūnā, the lord of Bust. When in 367/977 Bust was taken by Subuktigin, al-Bustī went over to the victor. Owing to some intrigue he was compelled to retire to a village in the Rūghhahad district, but after a few months was called back by Subuktigin and remained in office together with al-'Uḍī till the reign of Mahmūd. In this capacity he composed his much admired state letters announcing the spectacular victories of Mahmūd. Later on he fell again into disgrace and was banished to the 'land of the Turks' i.e., Transoxania. He died in 400/1010 or 401/1011 (or even as late as Shawwāl 403/Feb.-March 1016) in Rūghhahad. According to al-Manīn, *Sharḥ al-Yamīnī* (1286/1589-70) vol. i, 73, 2 he died in Urgend where his tomb was shown.

His varied writings both as a poet and letter-writer show all the traits of rhetorical artificiality typical of the poetry and oratory of the 10th/11th century. He was much praised for his skill in applying the *taḍwīn* (paronomasia) and especially the *taḍwīn mutadāḥib* i.e. the use of homonyms for the sake of puns. This technique he developed gradually after having heard in his youth a quibble from the poet Shu'ayb b. 'Abd al-Malik al-Bustī (*Yatīmāt al-Dahr*, iv, 233 f.). He was on friendly terms with Ḥafṣ al-Bustī, who composed his *Aḥsan maṣnū'* on his instigation and gives of Bustī's art an appreciative selection in his *Yatīmāt al-Dahr*. His *Dīwān* was published at Beirut in 1294/1877-8. Especially famous is his didactic poem *al-Nāṣiḥa* or '*Uḥūd al-Riḥān*'.

Bustī wrote also some poems in his mother-tongue, Persian, but they were never collected (see H. K. Edin, in *Morgenländische Forschungen*, Festschrift H. L. Fleischer, 1875, 15-27). He is sometimes confounded with his namesake Abu 'l-Fath al-Bustī (*recte* al-Baynī) an Egyptian poet of the 5th/11th century (see Ibn Rashīq, *al-'Umda* i, 200, 18 and Ibn Sa'ūd, *Mughrib* 103 Talqīnī).

**BUT** [see BUTNĀN].

**BUTAYN** [see BUTNĀN].

**BUTNĀN**, the name of a wadi located thirty kilometres east of Aleppo. At this place springs feed a large stream, Nahr al-Jihāb, which flows southwards and empties into the salt lake of Djabāl. These natural conditions have permitted the development

of essentially agricultural villages (fruit trees and cotton), of which the most important are the market-towns of Bāb and Buzā'a. A convenient stage about a day's march from the valley of Kuwayk, it was always a halting-place on the routes from Edessa and Raqqa, and the revenues drawn from the saltbed of Djabāl formed consistently an appreciable support for the finances of the governors or rulers of northern Syria.

Popular etymology relates Butnān to the root *bṭn* and gives it the meaning of 'low-lying ground'. In fact the name preserves the memory, beyond a Byzantine Batnai and a Roman Batnae, of the principality of Pato.

Conquered by Ḥafṣ b. Madama, Butnān fell very soon under the influence of the new centre, Aleppo, and henceforth played only an episodic rôle. In 706/69-90, the caliph 'Abd al-Malik wintered in the valley, during a struggle against Mu'ā'ib b. al-Zuhayr. The Carmathians made a disastrous raid, it was devastated by Niophora Phocas in 966/955. In the time of the Mirdāsids the valley was the scene of confused struggles, and fell under the authority of Tutuḥ in 1080/472. The Crusades and the Frankish occupation of Edessa and Antioch opened a period of insecurity which began in 1098/491-92 with an Armenian raid, doubtless in connexion with the siege of Antioch. A prompt response by the Salḡūks of Aleppo ended in the extermination of the large Ismā'īlī community at Bāb. Burned by Joscelin of Tell Bāḡle in 1125/518, Buzā'a as well as Bāb was taken by the Emperor John II Comnenus in 1138/532. The arrival of Nūr al-Dīn in Aleppo brought back security. The Butnān of this period is known owing to the descriptions, as numerous as they are stereotyped, of the Arab geographers (cited by Le Strange and Dussaud).

With the Mamliks, Butnān disappeared from the political scene. The region was administered by two Mamlik *djunds*, appointed by the *miṣr* of Aleppo, one for the towns of Bāb and Buzā'a, the other for the neighbourhood of Djabāl. The Turks made it a *ḥaḍr*, where a *ḥā'im* or *ḥā'im* subordinate to the Paḡha of Aleppo kept an eye on the salt-mines of Djabāl (400-500,000 pounds annual revenue for the exchequer in the middle of the 19th century). He resided at Bāb, which had 6,000 inhabitants at this period.

(J. Hottot)

**AL-BUTR**, the name given to one of the two groups of tribes who constitute the Berbers [g.v.], the other being called al-Barīnīs [g.v.].

The chief groups of whom al-Butr was composed were the Lawāṭa, the Naḥṣa, the Naḥṣa, the Buḥā Fāṭin and the Mikāna. Their earliest habitat is the region of steppe and plateau which extends from the Nile to southern Tunisia; they were there originally Libyan Berbers. But, very early, several of these peoples (Mikāna, Buḥā Fāṭin, and a part of Lawāṭa) moved towards the west—to Algeria (the areas round Aurès, Tiarret and Timenon) and Morocco (the Moulouya basin, the Saharan country between Sūjjimāsa, Fīgī and Twāt, and the Sebou basin), and from the western Maghrib many elements penetrated into Spain. An attempt has been made to present the Butr as the Berber nomads and camel-drivers par excellence. This was perhaps their primitive way of life, which is no doubt why Arab historians have attached to this group peoples of definitely nomad habits, such as the Hawwān and the Zanāta. The Naḥṣa, the Naḥṣa and a part of the Lawāṭa appear nevertheless to have become established rather early in the mountains of Libya, perhaps at the time of the Arab conquest. As for those who moved into Algeria and Morocco, they were soon settled and even established a number of small towns.

The greater part of the tribal names of which this group is composed are still current, but the collective name itself has disappeared. It is the plural of the Arabic (b) adjective *al-bṭr*, the alleged surname of Mādgīth, whom these peoples recognised as their common ancestor. The word means 'he whose tail is docked, mutilated, he who has no descendants'. The last sense is hardly suited to an eponymous ancestor of the other group, Barīnīs, the ancestor the first two are supposed to have been. However, the name coincident with the Arabic word (an early borrowing from the Greek *barnos*) designating the garment which we call burnous. Thus, the Barīnīs might be 'the (wearing of) burnous, or long garments' and, in contrast, the Butr would be 'those clad in short garments'. In fact, in the Arabic dialect of north-west Morocco, there is an adjective *ḥḥḥ* (a quadrilateral expansion of the root *bṭ*) meaning 'the who has his tail cut short', and is applied in particular to the very short *jellabas* of the mountaineers (cf. W. Marçais, *Textes de Tanger*, 430).

For other ethnic appellations derived from

peculiarities of dress, note that of the Sanhūdja Berbers [g.n.], who are called *malathimān* ["those who wear a veil over the mouth"]; and that which has been suggested for the Maymūda [g.n.] Berbers, who are called *Shūfūh* (cf. *Mélanges Godefroy-Dumortier*, Cairo 1939, 305).

(G. S. COLLIS)

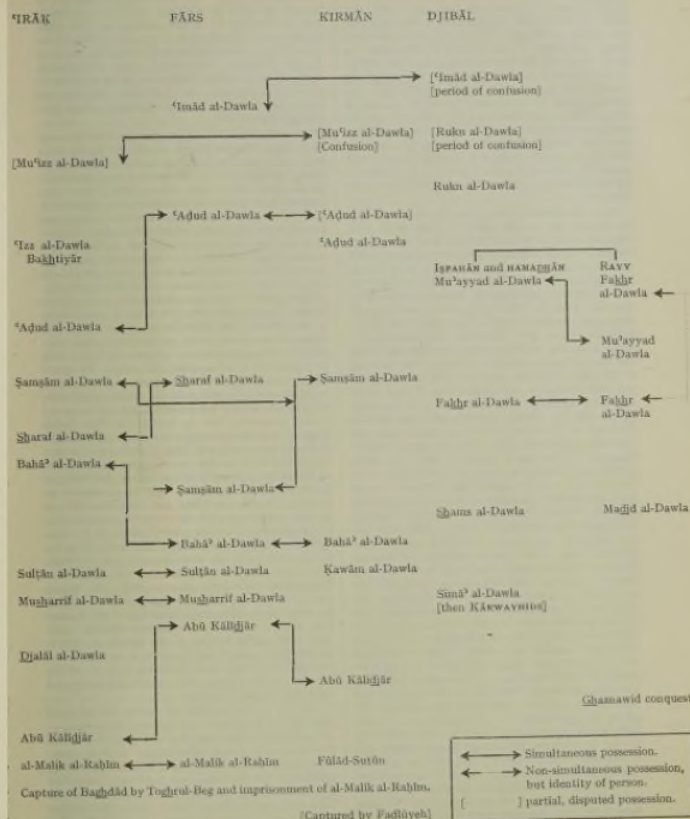

**BUWAYHIDS or BÜYIDS**, the most important of the dynasties which, first in the Iranian plateau then in 'Irāk, side by side with the Sāmānids of Khurāsān and of Māwarā' al-Nahr, marked the "Iranian intermezzo" (Ménarsky) between the Arab domination of early Islam and the Turkish conquest of the 5th/11th century. Its name derives from Buwayh or Būyeh, the father of three brothers who founded it, 'Alī, al-Hasan, and the youngest, Ahmad. *Condottieri* of humble birth, they belonged to the population of the Daylamites [g.n.] who, newly won over to (Shī'ī) Islam, were at that time enlisting in large numbers in all the armies of the Muslim East, including those of the Caliphate.

To some extent, it was the Daylamites who, with the advent of the Buwayhids, assumed power and imposed on the régime something of their own character. While the Daylamites remaining in Daylām formed small principalities, sometimes extending as far as Kilīsbahān, the others, in Iran and 'Irāk, developed in consequence into a political factor of growing importance. The Buwayhids, who, to begin with, had followed one of their compatriots, Mākin b. Kākī, who had entered the service of the Sāmānids, and then their Gilānī ally Mardāwīdī [g.n.] in his struggle against their common enemy, the Zaydī state of Tabaristān (sometimes extending as far as Ray), continued to follow the Gilānī Mardāwīdī when he carved out for himself in central Iran a vast autonomous principality. Soon, however, they began to adopt a somewhat intractable attitude towards him. Having become for a time master of Isfahān, then, more permanently, of Fārs, and 'Alī, to protect himself against Mardāwīdī, and in spite of being a Shī'ī, got his authority in the government of the province recognised by the Caliph, as the 'Abbāsīd armies would have been incapable of reconquering it. He still had possession of it when in 334/943 Mardāwīdī was assassinated. After confused struggles (see the articles 'IMĀD AL-DĀWLĀ, MU'IZZ AL-DĀWLĀ and RUKN AL-DĀWLĀ) against the remnants of allies of the Sāmānids or of the various clans who shared among themselves an influence with the Caliphate, 'Alī, the eldest, kept the province of Fārs, while his brother al-Hasan occupied almost the whole of Dībil and the youngest, Ahmad, entrenched himself on the one hand in Kirmān and on the other in Khūzestān. These important strongholds, and more especially the last acquisition, drew the Buwayhids into the interplay of factions for power in 'Irāk and the other territories of the Caliphate under the successive *amīr al-umara'*. Only a very close study can determine whether, in the general post of intrigues and betrayals, the Buwayhids were allied to any one specific faction. However that may be, in 334/943, Ahmad entered Baghdad. The régime which he set up there lasted until 447/1055. The new era was at once inaugurated by a change of name: Ahmad, 'Alī and al-Hasan respectively had bestowed on them simultaneously by the Caliph the honorific titles (*lahabs*) of Mu'izz al-Dāwlā, 'Imād

al-Dāwlā and Rukn al-Dāwlā, by which they were henceforth known to history. Before long, 'Imād al-Dāwlā died without an heir, leaving Fārs to 'Aḍud al-Dāwlā, son of Rukn al-Dāwlā. When the latter died (366/977), after Mu'izz al-Dāwlā, 'Aḍud al-Dāwlā, finding himself head of the family, dispossessed his nephew, 'Izz al-Dāwlā Bahhūtīyir, of 'Irāk, and only allowed his brother, Mu'ayyid al-Dāwlā, to remain master of the rest of Buwayhid Iran, by virtue of his incontrovertible loyalty. 'Aḍud al-Dāwlā, who was the most distinguished personality of the dynasty, achieved the fullest unity that the family was to enjoy.

Outside 'Irāk, the new principalities merely joined the number of those which, for a century, had been carving up the 'Abbāsīd Empire. The Buwayhid principality of 'Irāk in a sense did little more than implant in this last 'Abbāsīd redoubt the form of government which had triumphed elsewhere. But there was, in this instance, a factor of greater importance, in that Baghdad was the very centre of the Caliphate. It is true that its seizure by the Buwayhids did little more than set the seal on the developments which had, in effect, placed the Caliphate under the domination of the army chiefs, promoted *amīr al-umara'*. But this time there was the added fact that the Buwayhids were professing Shī'ism, so much so that it might have been asked whether they were not about to suppress a Caliphate whose legitimacy had no special meaning for them. Nothing of the sort happened. Doubtless Mu'izz al-Dāwlā was aware that the Shī'is were in the minority, and that, had he destroyed the Caliphate in Baghdad, the institution would have reappeared elsewhere. It was better therefore to keep it under his thumb, both to legalise his authority over the Sunnis in his states and to strengthen his diplomatic relations with the world outside by the weight of the respected moral authority which the Sunnī princes still enjoyed by right. In fact, deriving their official authority from the Caliphate, the Buwayhids behaved as though they believed genuinely in the legitimacy of the 'Abbāsīd Caliphate.

The question of the relations between Buwayhids and Caliphate is moreover bound up with that of their religious adherence. It has sometimes been said that the Buwayhids were Zaydis because Daylām had been the scene of the activity of the emissaries of these same Zaydis who had set up political hegemonies in Tabaristān and, on the very borders of Daylām itself, by those of their rival al-'Utrūsh, around the year 900. All the same, there were also Ismā'īlīs (Misk., II, 32-33) in Daylām and, in the entourage of al-'Utrūsh or his descendants, Twelvers (I.F., s.v. al-'Utrūsh), and Mardāwīdī, affected perhaps by Ismā'īlī propaganda, had at any rate joined the Sunnī Sāmānids in fighting the Zaydis of Tabaristān. At this time, Twelver theology proper was only just beginning to be elaborated, and there is consequently nothing remarkable in the persistence, in later Buwayhid society, of Zaydī doctrinal influences or, linked to these, Mu'tazilī influences. But, for the Buwayhid conquerors, politics took precedence over religion. The notion, for a time entertained, it is said, by Mu'izz al-Dāwlā, of considering the Caliphate as a certain Zaydī 'Alid in his entourage was set aside, never to be taken up again, precisely because it would have been necessary to obey such a Caliph. The distinction between the various branches of Shī'ism was probably not yet clearly defined outside the Zaydī states (leaving Ismā'īlism aside), and the Twelver tendency, certainly in

'Irāk and Fārs were united from 367 to 372, 376 to 379, 388 to 413, and 435 to 447.

'Irāk and Kirmān were united from 334 to 356, and 380 to 388. Kirmān was united with Fārs from 338 to 367 (to 372 with 'Irāk), 380 to 403, 419 to 440; it stood alone from 403 to 446 and from 440 to 448.

'Irāk stood alone from 334-367, 379 to 380, 416 to 435. Fārs stood alone from 328 to 338 and from 372 to 380.

A union between 'Irāk, Fārs and Kirmān was achieved from 367 to 372, 388 to 403, 433 to 440.

The Dībil always stood alone, except during the early days of the dynasty.

'Umayyad, except for a short time under Saḥm al-Dāwlā, when it was united with 'Irāk, was united with Fārs.

Basra and Ahwāz, after 'Aḍud al-Dāwlā, were often separated from 'Irāk or constituted an autonomous government at the heart of the 'Irākī kingdom; they were often incorporated in the kingdom of Fārs.

Complete genealogical tables are to be found in Zambaur 212-16 and Q.

Mesopotamia and probably in central Iran, was the majority form of Shi'ism. In fact, about the time when the Buwayhids were seizing power (and was this purely fortuitous?) the doctrine was spreading among adherents of this movement that after the period in which the imāns were present in person, followed by that in which they were represented by a *wakil*, the time of the "great occultation" was coming, when nothing more would be known of them. Thus, if the 'Abbasid Caliph was not, strictly speaking, legitimate, at least, if he tolerated Shi'ism, there was nothing discreditable in putting up with him. It is certain that the Buwayhids followed somewhat indiscriminately Shi'is or Mu'tazilis of different shades of opinion, but politically they were Twelvers.

At no time did the Buwayhids plan the persecution of the Sunnis by the Shi'is — both sects were represented in their army; rather they intended to set up a sort of 'Abbasid-Shi'i condominium, which freed the Shi'is from the obligation of a certain *lahiya* and provided them, as well as the Sunnis, with an official organisation. Basically, they were reviving, from the Shi'i angle, what had been the dream of many 'Abbasids from the time of al-Ma'mun. Thus, they believed, they acquired a strong following, without at the same time alienating the rest of the population. Without the smallest doubt, Twelver Shi'ism owes to the Buwayhid régime not only this organisation, but even a part of its doctrinal structure. The importance of the rich Shi'is and the *Sharifs* towards the end of the 'Abbasid era is well-known. It was upon them that — leaving aside the army — the Buwayhid régime depended in its social relations with the local population. The régime organised the 'Alids — or as they are more usually called, the Tālibids — into an autonomous body to counterbalance the 'Abbasids, whereas formerly this family unit was merely integrated into, though, of course, dominated by, the 'Abbasids. On the doctrinal level, the presence of Imāns in the 3rd half century and the fact that the Twelvers had for a long time been, to a somewhat negative fashion, those among the Shi'is who had not joined in active rebellion, had obstructed the work of the traditionalists and theoreticians. The Buwayhids now made up for lost time. While al-Kulūbī, the first of the great theologians whom the Twelvers recognised as specifically their own, died at the dawn of the Buwayhid régime in Iraq, the second and more important, Ibn al-Hakam (Ibn al-Hakam) was encouraged in his work by the Buwayhids in the third quarter of the century. He was followed by others among whom — also important in Iranian Shi'ism — were Arabs from the old 'Alid circle of Kumm. In Baghdad, the brother *gharib* al-Rāfi and al-Murtadī were, throughout the whole of the first quarter of the 11th century, the real masters of the town, acting as intermediaries between the Buwayhids, the Caliphs and the population, at the same time as the Shi'i scholars and traditionalists. It is said that at this moment when the four schools remaining to the Sunnis were beginning to be defined by them as exclusively orthodox, they would have wished that their form of Shi'ism might be recognised in the heart of the *sunna* as a sort of fully authorised school. More readily apparent from the outset of the régime is the organisation or recognition of forms which are still those of Shi'ism to this day. Influenced perhaps by Daylamite practices, Mu'izz al-Dawla openly created or consecrated the lamentations of the 'Aggā'ka'. He also created the festival

of Ghadir Khumm. The 'Alid *mayshads*, genuine or conjectural, were embolished, and 'Adud al-Dawla was the first to be buried there after 'Alī. Shi'i schools were created, such as the Dār al-'Ilm of the vizier Sābūr, endowed with *waqfs*, a replica (1022/993) of the Fātimid "University", and considerably earlier than the Sumi Nizāmiyya of the Saljūqids; and in the mosques, the Shi'i cult, including the public call to prayer, was in dangerous competition with the Sunni cult.

Naturally, it was out of the question that the recognised Caliph should govern effectively. In the same way as the *lahak* of Nāsir al-Dawla, the first of its kind conferred on the Hamdanids, the Buwayhid *lahaks* show that, while it was the Caliph who legalised their power, they alone were its custodians. Al-Murtadī, the Caliph who welcomed them, had joined forces with many others before them. He was replaced by his personal enemy al-Mu'izz, who nineteen years later himself had to yield the throne to al-Tā'i for having backed the wrong side in the struggle between the heirs of Mu'izz al-Dawla. Al-Tā'i in his turn abandoned the throne to al-Kādir. Nevertheless, the life-span of the Caliphs in the time of the Buwayhids — three and a half reigns in a century — was appreciably longer than that of their predecessors precisely because they no longer ruled in anything but name. As to the *lahaks*, they became more numerous as they declined in value. As each prince in the family, then little by little princes of other dynasties, claimed them too, it was necessary first to double and then treble those of the head of the Buwayhids. Thus 'Adud al-Dawla was also called al-Tā'i al-Mu'izz etc. The last Buwayhid went so far as to claim that he had conferred upon himself a title ending in *dhā*, faith, — a procedure and implication (a condemnation of Sunnism) which obviously the Caliph could not accept. In the same way, the supreme prince marked his superiority over his *amars* relatives by proclaiming himself from 'Adud al-Dawla onwards, *malik*, and even, in Iraq though not in 'Irāk, *shāhshāh*, the old Sāsānid title. The last of the Buwayhids committed the sacrilege of styling himself al-Malik al-Rāfi, a title properly reserved for Allāh alone. The exalted position of the Buwayhids was shown also in the mention of their name, after that of the Caliph, in the *dhawā*, except in the Caliph's quarter, and on coins, as well as in the privilege of having the *fatā* beaten in front of the princely residences at the three principal, and later five, hours of prayer.

To turn to the exercise of power, the essential point is that there was no longer any instrument of government in Baghdad which depended even in law upon the Caliph — though for a time under Nāsir al-Dawla this had been the case. Everything, especially the *waqf*, was now an institution directly attached to the *amirate*, though this transfer did not in itself mark any change in the distribution of functions. Topographically, everything in Baghdad was now at the Dār al-Mandaka (see below). During the period in which the power of the régime conferred on the *waqf*, as on the principality, a certain stability, there were Buwayhid *waqfs* who were by no right-ranking officers were sometimes granted the right to the taxes of a full district, with no further obligation than to pay the standard Muslim tithe to the public Treasury. The Buwayhid régime, following in the footsteps of the Hamdanids, extended and ruthlessly intensified this practice. Many districts were systematically distributed as *dhawā* of this new type, now without even title obligations to

of the Buwayhids, principally 'Adud al-Dawla, the greatest of them all, preferred to keep the co-ordination of the instruments of government in their own hands and, in practice, divided the functions of the *waqfs*, with or without the title, among two or three high dignitaries. Their inadequate knowledge of Arabic had made it impossible for the Buwayhids of the first generation to do more themselves than reap the benefits of the work done by their more effective *waqfs*. Under the last of the Buwayhids, the *waqf* was more unstable although *waqfs* were frequently drawn from a single family. Of course, the Caliphate still kept a secretariat and a Chancery, but these were exclusively occupied with the administration of matters pertaining strictly to the Caliphate or with international correspondence on behalf of the *amirs*.

The functions of the Caliphate comprised the administration of its goods and the organisation of the palace, the representative duties which devolved upon the Caliph, the control of the good works and religio-legal life of the Sunnis and a certain moral share in the administration of Baghdad. The income of the Caliph, apart from family and private means, was no longer what he set aside for himself out of State revenue, for it was no longer the Caliph who authorised wages and salaries. On the contrary, as was already the case in the time of Nāsir al-Dawla, no allowance was granted to him by the *amir* out of the public funds which, in former times, had been administered by himself. The total was smaller than before though still worthy of his station — two or three hundred thousand *dirhams* under the early Buwayhids — to which must be added the numerous gifts made to him by the entire Muslim world and by the foreign ambassadors, as well as what he received from the Buwayhids themselves at festivals and investitures. Against these however, must be set the forced contributions extorted by the Buwayhids in times of crisis. As to his religio-legal powers, they consisted in the nomination and control of the personnel of the mosques and the holders of the office of *kāfi* for the Sunnis, in particular in Baghdad where the Caliph, al-Kādir compensated for his powerlessness to oppose the Buwayhid government by a drive to enforce the letter of Sunni orthodoxy, especially among the Mu'tazilis and the Isma'ilis.

The transfer of government from the Caliphate to the *amirate* did not *ipso facto* alter the character of the government. In practice, the Buwayhid régime established the absolute supremacy of the *amir* in the government. However, since the general functions of public administration still had to be carried out, this supremacy meant also that, in a sense, the military authority now extended its competence to fields which previously had been outside its province. The innovation which probably had the most serious consequences was the transference of the *dhawā* régime. For a long time, faithful supporters and, increasingly, the military chiefs, had been rewarded by the Caliphate with the grant in quasi-ownership of lands appropriated from the state domain. In fact, for the last hundred years or so, this source having been inadequate, high-ranking officers were sometimes granted the right to the taxes of a full district, with no further obligation than to pay the standard Muslim tithe to the public Treasury. The Buwayhid régime, following in the footsteps of the Hamdanids, extended and ruthlessly intensified this practice. Many districts were systematically distributed as *dhawā* of this new type, now without even title obligations to

the Treasury. Miskawayh, or, before him, Thābit b. Sinān, have described perfectly some of the consequences of this system. From the point of view of the central administration it meant the loss of control of fiscal transactions in part of the country and, in the long run, even of factual knowledge of the nature and extent of the tax levied. In so far as the fiscal value of each district remained roughly calculable, it tended no longer to be within the province of the *diwān* of Taxes, but that of the Army. The *diwān* of Taxes, deprived of part of its functions, correspondingly reduced its staff and the number of its departments. Nevertheless, the Buwayhid *dhawā* was not a tie, but an assignment of salary; the beneficiary would exchange it, at his own or the government's wish, if the revenue of the district were no longer equal to the balance due to him, or for any other expedient cause. He had no permanent ties with the district and therefore no interest in its development. At best, the means thus placed at his disposal enabled him to build up more stable properties. Nevertheless, they were not yet either *dhawā*-holders of the provincial governments — these functions, when they exercised them, were paid in the normal way — nor bound to maintain their troops out of their *dhawā*. Each soldier received his pay direct from the Treasury in whatever form it might be given to him. One should not exaggerate: a variable proportion of the pay was still paid in kind, a part of the land was still administered in the traditional manner by the traditional authority, of which some fiscal handbooks for this period have been preserved for us.

With these reservations, socially and economically, a new and more powerful aristocracy, that of the military leaders, was gaining ascendancy over the middle-class and slowly declining aristocracy of the great merchants, civilian landlords and high-ranking officials who had been at the height of their power in the 'Abbasid era. But, under the great Buwayhids, the princes exercised a *dean-cut* authority over these leaders and made it their business to see that the new aristocracy respected their strict control in such matters as the police, public order (*banda*) and even taxation. There was, of course, no question of relaxing the tax on all subjects which was the basis of the upkeep of the army, whether this applied to pay or *dhawā*; and, for the taxpayer, a change of tax-collector and beneficiary did not mean any corresponding change in the fiscal system. The great Buwayhid *waqfs*, after the period of conquest during which their masters behaved as common thieves and looters, applied themselves to establishing a sound administration, which was made possible by the restoration of public order; side by side with new taxes, we hear of the remission of others, and the currency of the early Buwayhids was sound. Nevertheless, it may also be observed that the successors of 'Adud al-Dawla provoked riots in Baghdad by their attempts to tax the cloth manufacturers who were responsible for the livelihood of thousands of artisans in the capital. State revenue, under the great Buwayhids, slightly exceeded that of the Caliphate over an equivalent area. In agriculture, disturbances dating back to before the Buwayhid conquest had resulted in damage to the irrigation works. Repairing the damage and building new canals, etc., were among the burdens which fell upon the Buwayhid administration. The roads and bridges used for commercial traffic were also restored, and the capitals, Baghdad, Shirāz and Isfahān benefited from the presence of the princes,

who built themselves sumptuous palaces. In east Baghdad the whole group of these buildings formed the *Ḍār al-Manāshih*, as opposed to the *Ḍār al-Khāḍiḥ*, and the buildings erected at the gates of *Shīrāz* by 'Aḍud al-Dawla at Kard Fānāshūrāw enchanted al-Muqaddasī. The close union of 'Irāk and Fārs resulted in some attempts to introduce 'Irākī customs into Fārs, although no administrative unification was ever achieved. This union, from which local industries may have derived some profit, is in contrast with the periods which preceded and followed it, when the ties between 'Irāk and Iran were directed, across the central plateau, towards Khurāsān.

Culturally, the early Buwayhids were rough fellows without education, but their successors were moulded by the cultured indigenous aristocracy of Iran. In contrast with the remote Iran of the Sāmānids, the Buwayhid sphere of influence in Iran—not to mention, *a fortiori*, in 'Irāk—had the appearance of a strongly arabised area. We have already observed that the early Buwayhids, with Ibn al-'Amlid and Ibn 'Abbād as their wazirs, thus commanded the services of two of the most illustrious Arabic scholars of their day. Furthermore, a galaxy of Arabic poets were present at their court. It was under the Buwayhids that Abū 'I-Faragī al-Ishfahānī's "Book of Songs" and al-Nadīm's *Fihrist*, two treasures of Arabic literature, were compiled. If Abū Ishāq al-Sābī had grounds for complaint against 'Aḍud al-Dawla, his grandson, the historian Ḥidā al-Sābī lived comfortably in the Baghdad of the later Buwayhids, who also protected the philosopher-historian al-Miskīnī. Generally speaking, sagas were well-received by the Buwayhids, especially those whose special knowledge could be put to practical use. Such—leaving aside the religious sciences—were the geographer, Istakhfī, the mathematician, Abū 'I-Wafā' al-Būghdī, al-Nasawī, who disseminated the "Indian numerals", the astrologers, for whom Sharaf al-Dawla built an observatory in Baghdad, the physicians (such as al-Maḥḥāḥ), who had cause for self-congratulation especially on the foundation by 'Aḍud al-Dawla of a remarkable hospital in the ancient palace of Khuld at Baghdad, and another at *Shīrāz* (see *al-Maknāsāt*). The libraries of *Shīrāz*, Kayy, Ishfahān, organised by successive Buwayhids, excited universal admiration. It is common knowledge that Avicenna found sanctuary and high preferment (as a wazīr?) under Shams al-Dawla. The great patron-wazīr were scarcely less munificent as long as they did not see in their protégés possible rivals for glory (Abū Ḥayyān al-Tawhīdī as against Ibn 'Abbād), Ibn al-Bawwāb, a high Buwayhid dignitary, was one of the inventors of *naḥḥī* calligraphy.

But, while the Buwayhids and their ministers patronised literature and science of a traditionally Arabic character, they also showed a genuine interest in neo-Persian literature. If the first Daylamite generation were not sufficiently polished to have any such pretensions, those who followed were in the widest sense more fully Iranian than Daylamite. It was not for nothing that, as Mardāwīdh had dreamed, they revived the title of *Shāhshāh* and caused to be drawn up for themselves a Sāsānid genealogy which, however, was universally recognised by their contemporaries as being historically unsound. Though their rôle in literature cannot be compared with that of the Sāmānids, they nevertheless had their Persian poets, and Firdaws found a welcome at the court of Bāhā' al-Dawla. The indubitable

decline of Zoroastrianism, still flourishing in the Fārs province at the dawn of the Buwayhid régime, is probably in part linked with the fact that henceforth it was possible to form a separate block within Islam itself, under a "national" dynasty.

The place of the Buwayhid era in the history of Persian art would perhaps seem equally great if more thoroughly reliable testimony were available. Their buildings have already been mentioned in another connection in which their places of worship perhaps count for less than their palaces, fortresses, hospitals, etc. Recent finds of textiles have now made it possible to study in actual examples this apparently traditional branch of Iranian craftsmanship. A good recent study on the art of the Buwayhid period is that of E. Kühnel (see *Bibliothèque*), to which the reader is referred.

More generally, it is certain that, among the Buwayhids as elsewhere, the establishment of regional principalities, by setting up many new courts and cultural centres outside what until then was the more or less unique cultural centre of Baghdad, enriched and disseminated the life of the spirit, and by bringing it into contact with the varying requirements of different peoples, conferred upon it a new vitality.

The foreign policy of the Buwayhids seemed scarcely to have been affected by doctrinal considerations. In Iran, their great opponents in the 4th/10th century, were the Sāmānids with their Ziyārid (descendants of Mardāwīdh) and Šāffīrid (of Sāḥān) vasaals. Very naturally, they supported the Khurāsānid rebels, especially the Sāmānids, against the Sāmānids. They took advantage of the ascendancy of the Ghaznawids at the beginning of the century and of the final ruin of the Sāmānids at the end. In the north-west, their policy was to establish or maintain a vague protectorate over the small Daylamite dynasties, so as to have them on their side in the fight against the Ziyārids on the one hand and the Kurds on the other. The struggle against the Kurds falls partly under the heading of "foreign policy", on the *Āḥbariyyān* side, and partly of internal security—in other words mere public order—on the *Dībāl* side (the Hasanawid Kurd). The same is true of the hostilities, carried out for the most part in the time of 'Aḍud al-Dawla, against the Kūh and the *Ḥāḥ* of Kirmān and Makāsh. Finally, the occupation of the 'Uman, or more precisely of the vital strategic coastal area of the region, at times by the Buwayhids of Fārs, at others by those of 'Irāk, was clearly related to considerations of economic security. In Mesopotamia, following the liquidation of the Barīdīs of Basra, the main efforts of the two first generations of Buwayhids were aimed at the neutralisation and then the liquidation of the Hamadnids who, though *Shī'īs* like themselves, were Arabs, and had been by only recently their rivals in Baghdad. Naturally, a small semi-permanent war was essential for the maintenance of order on the borders of Arabia, and, in 'Irāk itself, in the Baḥḥā as also in the Persian Gulf against the Carnathians of Bahrayn.

The appearance of the Fāṭimids in 968 in Egypt, then in Syria, confronted the Buwayhids of the second generation, and their descendants with a problem unknown to the first. The claim of the new dynasty to be 'Alid could not fail to excite interest among all *Shī'īs*. Nor could this dynasty, with its "imperialist" ambitions, fail to try and further its own expansion by claims of this kind. It would, however, have been necessary for all *Shī'īs* to accept

the heterodox doctrines of the Imā'īs which were the official doctrines of the Fāṭimid State, and, further, it was difficult to avoid clashes between two powers bent on dominating the territories between Egypt and 'Irāk. The Buwayhids occasionally joined forces with the Carnathians, when they quarrelled with the Fāṭimids, and also, of course, with the Arab tribes fighting the Fāṭimids on one front and the Hamadnids or their heirs fighting them on another. It is difficult to assess just how far the anti-Fāṭimid manifesto of the Caliph al-Kādirī (455/1051) was an exact reflection of Buwayhid policy or whether it was also instigated by the desire to counteract Imā'ī infiltration. At any rate, there is nothing to support a view that it was done against the wishes of the Buwayhids, and it is remarkable that it was signed jointly by the Sunnī and Twelver sages. It was not until the end of the dynasty that a Buwayhid, Abū Kāldjār, lent a complacent ear to the explanations of al-Mu'ayyad al-Šīrīnī, the Imā'ī missionary, though, officially at least, nothing came of it (*Sīra* of al-Šīrīnī; al-Balḥī, 118; Abū Shudjā, 232). And the fact that after the fall of the dynasty in Baghdad their Turkish general, al-Basāḥīrī (q.v.), thoroughly abhorred, against the Salḡūkhid conqueror, to the Fāṭimid Caliphate, which alone was capable of coming to his aid, cannot be regarded as characteristic of Buwayhid policy in general.

However stable the Buwayhid dynasty may have appeared from the outset, however brilliant some of its achievements, it was not without its weaknesses. Some of these were common to other régimes, others were peculiar to itself, others again came not from within but from without. In this last category was the maritime trading crisis which had an appreciable effect upon the end of the Buwayhid era. It is certain that towards the year 1000 A.D. trade with the West from the Indian Ocean ceased to flow mainly through the Persian Gulf, being diverted to the Red Sea (see B. Lewis, *The Fatimids and the Route to India*, in *Revue de la Fac. de Sc. Econ. d'Istanbul*, 1951). The persistent troubles of Lower 'Irāk and the presence in Bahrayn of the Carnathians, whom the Buwayhids were never able to control, must certainly have had something to do with this, as had also the complete segregation of Syria and Mesopotamia brought about by the Fāṭimid and Buyyid conquests. Probably an even more significant influence, however, was the economic imperialism of the Fāṭimids and the favourable conditions which attracted the attention of the merchant ships of Italy. When a natural catastrophe (in about the year 1000) ruined *Shīrāz*, which up to that time had been the great Persian port of the Gulf, the town was not rebuilt, and the mastery of the Gulf belonged henceforth to the Lord of the Island of Kish, who seems to have been more or less a Corsair chieftain. Although we cannot accurately assess the consequences of these facts, it is scarcely likely that they were not serious both for the merchant classes of society, who were doubtless henceforth less well able to resist the growing power of the military aristocracy, and for the internal economy of the Buwayhid régime and consequently its general stability. Even before the year 1000, the Buwayhids were unable to avoid the devaluation of their silver coinage, and doubtless it was for this reason that in the 10th century, gold was used more and more, though one wonders how it came there. The Buwayhids were increasingly

forced, in order to raise taxes, to have recourse to tax-farming, selling offices, etc.

A more domestic and congenial weakness in the Buwayhid régime as to most of the near-eastern régimes of this period, lay in that very army which had brought about the ruin of the Caliphate. The Buwayhid army, in spite of the pay being supplemented by *thā'f*, was no more easily satisfied than its forerunner, the army of the Caliph. Like its predecessor, it knew itself to be the cornerstone of the system, and took advantage of its position. It was not, however, united. The original Daylamite nucleus was not adequate for long and, even before the conquest of Baghdad, the Buwayhids, like Mardāwīdh, had added to it the corps of Turkish slaves indispensable to every Muslim army in the East. These, on the one hand, could be used against the Daylamites in the event of a breach of discipline (and vice versa), and on the other hand, and even more important, they were mainly horsemen, while the Daylamites, who came from the mountains and forests, were infantrymen. Occasionally, Kurds, Kufs, etc., were also recruited. To the rivalry between this diversity of ethnic groups, must be added the fact that, at the beginning at least, the Turks taken over by the Buwayhids from the Caliphate were Sunnīs. Finally, for reasons which are still unexplained, the recruitment of Daylamite troops dried up progressively. The last descendants of the princes who owed their power to them were surrounded almost entirely by Turkish soldiers.

The third cause of weakness, rather more peculiar to the Buwayhid dynasty, was the splitting-up of power. From the beginning, it has been noted, there was not one but three Buwayhid principalities. The circumstances of the conquest may have had something to do with this, but another factor must surely have been a patrimonial or familial conception of power. When strength and chance combined to permit 'Aḍud al-Dawla to establish an almost complete unity to his own advantage, he did no more than his predecessors to perpetuate this unity, which was disrupted at his death. This splitting-up of power, which distinguishes the Buwayhid dynasty from all the other Muslim dynasties before the Karakhanid and Salḡūkhid Turkish conquests, inevitably brought about internal strife, once the three founder-sons were dead. It goes without saying that the army and all the trouble-makers benefited, so much so that this flaw in the dynastic organisation in its turn aggravated the vices born of the military régime and the other internal weaknesses of the system. The disturbances among the urban population, a harsh warning to the early Buwayhids, started up again; a revolt of Istakhfī caused the destruction of the old metropolis, and Baghdad was at times in the power of the *Ḥayyirān* (q.v.). If the late *imānīs* of the *fatimān* are to be believed, Abū Kāldjār was one of them. The policy of religious equilibrium followed by the Buwayhids in practice did no more than foster in this same town and elsewhere the struggle between *Shī'īs* and Sunnīs, and the Banḥālī extremists went so far as to burn the maḥḥāḥ of Husayn and the tombs of the Buwayhids. The later Buwayhids, especially in 'Irāk, were virtually powerless to command obedience from anyone.

This powerlessness to some extent beset the Caliphate. The Caliph, who sometimes arbitrated in dynastic disputes, required some measure of influence, at least in the affairs of 'Irāk. Finally the Caliph al-Kāḍirī was able to have once more in his service after the lapse of a century a war in the

person of the intransigent Sunni Ibn al-Musallim. Hope of a partial recovery of the Caliphate as an institution now became something more than a utopian dream, witness the treatise *al-Abhān al-Sulḥiyya* of the great kādī al-Mawārdī, closely associated with the policies of the Caliph. It was even possible, in Sunni circles, to look forward to the removal of the heretical protector. True, the weakness of the Buwayhids was not sufficient to restore to the Caliphate the material power needed for the reconstitution of an autonomous government; but it was possible to hope at least that an orthodox and more respectful guardian might be found.

There was no lack of candidates to succeed the Buwayhids, some having only local ambitions, others aspiring to the unification of the Muslim East to their own advantage. Barely twenty years after the fall of the Hamdānids, faced by the Marwāzī Kurds of Diyār Bakr, it became necessary to recognise the power of the 'Ukaylid Arabs in Dīqlāra. Twenty years after the fall of the Hasāwayhid Kurds of Dībāl, the ascendancy of the 'Amāzīd Kurds had to be recognised in the same region; not to mention the various Isma'ili tribes who held the 'Irāk al-Ahī or 'Irāk-Sayrān borderlands and the frontiers of the almost independent principality of the marshes of the Baḥlā at the gates of Baghdad.

In Iran, a family related to the Buwayhids and for this reason called Kākwayhids or Kākūyids (from Kākūyeh; in Daylamite: maternal uncle), had taken over first Isfahān and then Hamadān. But the gravest danger came from the east. Here, the Ghaznawids had become a power to be reckoned with, and Mahmūd of Ghazna now openly aspired to liberate the Caliphate. Meanwhile, he took advantage of the quarrels and imprudences of the Buwayhids to send his son Ma'wūd to occupy Ray. His forces massacred the Shī'īs and burnt the treasures of their library as well as those of the Mu'tasils (420/1027). The death of Mahmūd, followed by the defeat of Ma'wūd by the Saljuqids, gave a brief respite to the rest of the Buwayhids. But the triumph of the Saljuqids enabled them to take up on their own account and with greater efficiency the plans for a sound empire. They had supporters in the *entourage* of the Caliphate. Buwayhid acceptance of Saljuqid suzerainty was of no avail. In 1053, Tughril-Beg entered Baghdad without striking a blow, and imprisoned al-Malik al-Rāḥim Fāris, in spite of fortifications set up at Shīrāz, also fell, being attacked from the north and from Kirmān. The Buwayhid dynasty was at an end.

**Bibliography:** Sources: We are fortunate in possessing three collections of correspondence and official documents: that of Abū Ishāk al-Sābi, secretary to the Caliphs al-Mu'ti and al-Tāi; important for the study of diplomatic history; some extracts edited by Shakhī Arslān, 1898, the greater part unpublished; that of the waḥī Ṣābi Ibn 'Abdūl al-Dawla only have been preserved, ed. 'Abd al-Wahhāb 'Azām and Shawkī Dayf, Cairo 1947, of considerable interest for the study of home administration; finally that of 'Abd al-'Azīz b. Yūsuf, a high official under 'Adud al-Dawla (summary by Cl. Cahen in *Studi Orientalistici in onore . . . G. Levi della Vida*), all three from the third quarter of the 11th century. See also Kalkaghānī, *Sabk*, xiii, 129 & 139.

Nevertheless, the principal sources are the chronicles. The fundamental chronicle is that of

Ḍābiḥ b. Sīnā, continued by Hāḍ al-Sābi until 447 A.H. All that has been preserved pertaining to the Buwayhid period is an extract relating to the period from the end of 396 to the beginning of 393, but whose general substance seems to have been carried over into the later chronicles who made use of it, first the *Tadhīr al-Umm* of Miskawayh and his successor Abū Shujā' al-Rudhawarī, the single manuscript of which links up with the fragment of Hāḍ al-Sābi (the scholar ed. trans. Margolin), *The Eclipse of the 'Abbasid Caliphate*, 7 vols, 1920-21, but also, completing and often correcting the *Tadhīr*, the *Tahmila* of Mub. b. 'Abd al-Malik al-Hamadānī (preserved only up to 397) [ed. Kan'an in *Machriq*, 1935-58], the *Kāmil* of Ibn al-Aḥfār, the *Mu'īd al-Zamān* of Sibt Ibn al-Jawālī (unpublished for this period, more complete than the *Mudawwan* of his ancestor Ibn al-Jawālī from which it also derives); these last three sources only cover the years after 393 A.H. An apology for the early Buwayhids in the form of a chronicle was composed (in order to obtain his release from prison) by Abū Ishāk al-Sābi, under the title of *al-Kutub al-Tadhīr* (for 'Adud al-Dawla, Taḍīl al-Milla), the beginning of which, recently rediscovered in the Vatican, is in the possession of Dr. Minovi (it was not accessible to me); the work seems to have been known by later historiographers. Among the remaining mass of Arabic historiographical literature, the following deserve special mention: Ma'wūd, *Murādī*, 13, 1-14 (origins); Yahyā of Antioch; Ibn Zābir, *al-Fawa'id al-Musallāh* (relations with the Fatimids); unpublished but used by Wüstenfeld, *Geschichte der Fatimiden-Califen*; Ibn Khallikān (lives of Mu'izz, Rukn and 'Imād al-Dawla); Ibn Tiktākā' (late, but Shī'ī traditions); al-'Uṭbī (relations with the Ghaznawids); and the unduly neglected *Nestorian History* of Marī b. Sulaymān, ed. Gieseler, Rome 1903.

Persian historiography comes into the picture with the anonymous *Madjāl al-Tawārīkh* [ed. Bahmanyār, 1940], linked as regards Buwayhid history to al-Hamadānī, and with the chronicles of the border states, the Ghaznawids (Gardīzī, *Paygah*), Zivārī and other southern Caspian dynasties (Ibn Isfandiār). Moreover, several important local histories have come down to us in Persian, as examples of these: the *Ta'wīḥ* of Kāwīm of Ḥasān b. Mub. Kummī, ed. Dīdād al-Dīn Thīrānī, 1934, and the anonymous *Ta'wīḥ-i Sīdān*, ed. Bahār, 1937.

In parallel literature, some information is to be found in al-Tanūkhī's *Niḥayāt* (41, 151, 157, 166) and also in the Damascus 1930 volume, 1501, and in the autobiography, *Sīra*, by the Fatimid missionary al-Ma'wūd al-Shīrāzī, ed. Kamāl Husayn, Cairo 1946 (relating to propaganda in the time of Abū Kāldjār). The *Divans* and anthologies of such poets as al-Tha'libī (Yūsuf), al-Balḥārī (Dumay), al-Tawhīdī (especially K. al-Indā) are also useful; there is also some original information in the *Iḥṣāl* of Yāqūt, ii, 273 f., iii, 180 f., v, 147 f., vi, 220 f., etc.

To the great general classical geography, *Itāḥṭāḥ*, Ibn Hawkal and al-Muqaddasī—all three contemporaries of the Buwayhids (the first mentioned were his subject)—may be added Nisrī Khuraw's *Safar-nāma* and some information contained in Yāqūt's *K. al-Bulān* (especially iii, 149, art. Samirān), and in Ibn Balḥār's *Fisṣalāna* [ed. Nicholson; historical passage, 117-119].

Among juridico-institutional works, al-Mawārdī, *al-Abhān al-Sulḥiyya*, in which see *supra*, and, recently discovered at al-Azhar, the *Rasām Dār al-Khādja* by Hāḍ al-Sābi or his son Mub., on the etiquette of the Caliphate and the rules of the chancellery up to the Buwayhid period (which was made accessible to me by the courtesy of Prof. Duri, Baghdad). The financial history of the era can be studied through the treatises on fiscal mathematics by Abū 'I-Wāḥ al-Baḥḍān (unpublished) and the anonymous *K. al-Hāwā* (analysed by Cl. Cahen in *AIEO*, Algiers 1952). See also Nizām al-Mulk's *Siyāsāt-nāma* (ed. Scheler), especially 183. For religious history, see the theological works cited above, especially those of Ibn Bāhawayh.

Epigraphical material is to be found in *RCEA* (v, 1831-32, 1877, 1916-17, 1079, 2177, vii, 2577), to be supplemented by G. Wiet, *Soieries Persanes* (cited below). For numismatic material, incompletely published, see, in addition to the *Catalogue of the British Museum* by Lane Poole, G. C. Miles, *A Numismatic History of Rayy*, 1938.

Modern Studies. No detailed comprehensive study of the Buwayhids exists, apart from the summary of V. Minorsky, *La domination des Daylamites*, Paris 1912, readers should consult those sections of R. Spuler's *Iran in früh-Islamischer Zeit*, 1952, and of A. Mez's *Die Renaissance des Islams*, devoted to the Buwayhids. More specialised aspects are dealt with in Mohsen Azādi, *La domination arabe et l'épanouissement du Califat musulman*, 1948, 1949; *Survey of Persian Art*, Vols. ii & iii, G. Wiet, *Soieries Persanes*, 1948, 99-178 (much more general than the title suggests); A. Duri, *Ta'wīḥ al-'Irāk al-Ḥisānī* b. 'I-Karn al-Rāḥī al-Hidri, Baghdad 1948; C. Elgood, *A Medical History of Persia*, 1951; Donaldson, *The Shi'ite Religion*, 1813; R. Struthmann, *Die Zawiya-Schāfi'i*, 1925 (summarised in *ET*, art. 201A); H. Lauth's introduction to *La Profession de Foi d'Ibn Bāḥa*, 1958; Cl. Cahen, *L'évolution de l'Iḥṣāl*, in *Annales ESC*, 1953; and E. Tyan, *Institutions de droit public musulman*, ii, 1957, Chap. 1 (but cf. *Arabica*, 1958, 70 ff.).

From his unpublished London University thesis entitled *The Buwayhid dynasty of Baghdad from the accession of 'Izz al-dawla to the end*, Maḥ. Kāldjār has abstracted several articles, in particular *Cultural Development under the Buwayhids of Baghdad*, in *Journal of the Asiatic Society of Pakistan*, 3, 1956.

Special studies to be noted are H. Bowen, *The last Buwayhids*, in *JRAS*, 1929; N. Abbott, *Two Buwayd coins* (with detailed historical commentary), in *AJS*, lvi, 1931; Cl. Cahen, *Notes pour l'histoire de la hémaya*, in *Mémoires Muséum*, 1; Anedon, *Three years of Buwayhid rule*, in *JRAS*, 1901; idem, *Der Vezier Ibn al-'Amīd*, in *Der Islam*, 10; M. H. Al-Yasīn, al-Sāḥib Ibn 'Abdūl, Baghdad 1376/1957 (solely from the cultural point of view); E. Kühnel, *Die Kunst Persiens unter den Buwayiden*, in *ZDMG*, 1956; Kurkū 'Awadī, al-Dār al-Ma'wūdī b. Baghdad, in *Sumer*, 2, 1950-2. On foreign relations, Mub. Nizām, *The life and times of Mahmūd of Ghazna*, 1931; M. Canard, *Les Hamdanides*, 1, 1951; A. Kasezāwī, *Shahriyār-i gumdim*, Tehran 1335/1928 (on *Shahriyār* in the 4th/10th-5th/11th centuries).

(CL. CAHEN)

**BUXAR**, a town on the south bank of the Ganges in the Shāhābād district of the Patna division of the Indian State of Bihār. Population: 18,087, (1951 Census). It seems to have been a place of great sanctity in ancient times and was originally called Vedagarbha 'the womb of the Vedas'. Local tradition derives the name of the town from a tank originally called *aktar*, or *effacer of sins*, which was later changed to Baghar, the tiger tank. It was at Buxar, on 23 October 1764, that the forces of Mir Kāsim, ex-nawāb of Bengal, and Shujā' al-Dawla, nawāb-wazīr of Awadh, were defeated by Major Hector Munro. This victory completed the work of Plassey. Henceforward the English were the unchallenged rulers of Bengal. It also placed Awadh at the disposal of the English Company.

**Bibliography:** C. E. A. W. Oldham, *The Battle of Buxar*, in *JORS*, Vol. xii, 1-38; A. L. Srivastava, *Shujawad-Daulat*, Calcutta 1939, Vol. 1, Ch. viii. (C. COLLINS DAVIES)

**BÜYÜDS** (see BUWAYHIDS).

**BUYURULDU'** (بُيُورُلْدُو), also BUYURULTU, BEYURUTU, etc., order of an Ottoman grand vizier, vizier, *beglerbeg*, *daherdar*, or other high official to a subordinate. The term is derived from the word *buyurıldı*, 'it has been ordered', in which the order usually ends and which gradually developed into a conventional sign. *Buyurultus* are of two main types: a) decisions written in the margin (*der henüz*) of an incoming petition or report, often ordering that a *termin* (or *berat*, etc.) be issued to a certain effect (cf. *Kânu-n-nizâm*, II: 'Uḡmān, *TOEM*, Suppl. 1310, 16); b) orders issued independently (*ter'sen, heyâz âzîre*). The form of many of the latter was modelled on the Sultans' *terims* [q.v.]. Many *Buyurultus* had a seal and/or a *tağrı*-like substitute of a signature, the so-called *pençe* [q.v.], affixed. Sometimes the word *saḥb*, 'it is correct', was added for authentication. *Buyurultus* deal with various administrative matters, especially appointments, grants of fiefs, economic regulations, safe passage, etc. Originals are preserved in many archives in Turkey and elsewhere. The *Dişmehmet Arşivi* [q.v.] at Istanbul also possesses numerous volumes of *Buyurultu* copies. Other texts are found in *inşid* works (e.g. library of Turk Tarīh Kurumu, Ankara, MS no. 70; Bibl. Nat., Paris, suppl. turc. MS no. 90) and in the records (*siğird*) of *Sherrī'a* courts.

**Bibliography:** L. H. Uzunçarşılı's articles in *Belleten*, iv (1940), 497 ff., v (1941), 101-57, 289-318 (with photos.) and his O. D. *Merkuz ve Bahriye Tarihîsân*, Ankara 1948, index; L. Fekete, *Erményország és az oszmán-török diplomácia*, Budapest 1926, lii-vi; J. Deny, *Sommaire des archives turques du Caire*, le Caire 1930, 147-8; U. Heyd, *Ottoman Documents on Palestine 1552-1653*, Oxford 1939, index. See further *DIPLOMACY*.

(U. HEYD)

**BUZĀ'Ā** (or BUZĀ'Ā), a locality in northern Syria about forty kilometres east of Aleppo in the rich valley of the Nahr al-Dīḥab or Wādī Butnān [q.v.], which has lost its former prosperity in favour of its western suburb Bāb al-Buzā'ā, today the small town of al-Bāb. The freshness of its gardens and its commercial activity attracted the attention of Ibn Dīḥayr who stopped there in 580/1184, on the caravan route from Manbij to Aleppo. Half town and half village according to that writer, and dominated by a citadel from which its strength was derived, it managed to withstand after the establish-

ment of the Crusaders in Syria numerous attacks resulting either in the plunder of its territory, or even, in 532/1138, its seizure by the Franks, followed in the same year by Zuhār's reconquest. An inscription there mentions in 567/1171 the name of Ismā'īl, the son of Nūr al-Dīn, before the town fell in 571/1175 to Salāh al-Dīn, and passed after that into the hands of the Mongols in 657/1258. It is also known that in 578/1183 there was a massacre of the Ismā'īlīs there who seem to have dominated the country forcibly, and that in the vicinity the *mughād* of 'Aḳbī b. Abī Tālib was venerated.

It was during the period of the Mamlūks that the village of al-Bāb, whose name was not separated from that of Buzā'ā in the medieval texts, appears to have clearly taken the lead. The importance of this place, which was the principal town of the 24th district of the province of Aleppo, and which Yāqūt formerly described as an exportation point of cotton stuffs, is attested by the construction at that time of its great mosque (connected with the erection of the minarets of Buzā'ā and Tādhīf, dated by inscriptions of 756/1355 and 755/1354), and by the number of administrative measures which were engraved on the gates of this building between 775/1374 and 858/1454.

Several epigraphical fragments are preserved as well in the neighbouring village of Tādhīf.

**BUZ-ABEH**, governor of Fārs under the Sāldūks. Buz-Abeh was one of the *amirs* of Mengu-ḡān, the governor of Fārs, for whom he administered the province of Khūzestān. He was also in the army of his superior when the latter, accompanied by other *amirs*, moved against the Sāldūk sultan, Mas'ūd and was made prisoner at the battle of Kurshānha (other sources call the scene of the encounter Panjī Anguhtī), later being put to death, in 532/1137-38. Since, after their victory, the sultan's troops began to plunder the enemy camp, Buz-Abeh's ataraid and dispersed them. Several prominent *amirs* of the sultan's retinue were captured, and the sultan himself escaped only with great difficulty, in the company of the *atabeg* Kara Sankor. Enraged at the death of his superior, Buz-Abeh had all of the prisoners executed, among whom was the son of Kara Sankor. In order to avenge his son, the *atabeg* undertook in the following year an expedition against Fārs, where he installed the Sāldūk prince Sāldūkhāh. But scarcely had Kara Sankor retired with his troops when Buz-Abeh, who had in the interim withdrawn to the fortress of Saffidz (Safat al-bayda'), reappeared and conquered the defenceless Sāldūkhāh (534/1139-40). Sultān Mas'ūd was forced then to abandon to him the province of Fārs. Buz-Abeh found an opportunity to confirm his

situation by allying himself with two other *amirs*, 'Abbas, ruler of Rayy, and 'Abd al-Rahmān Tuganyarak. The sultan tolerated for some time the tutelage of these men, but succeeded in freeing himself by having assassinated the two latter *amirs*. Buz-Abeh marched against the sultan, but was captured and killed at the battle of Marj Karastāh, a day's march from Hamādhān, in 541/1147. Buz-Abeh appears to have left a good administrative record at Shīrāz. Conforming with the tendency of all of the generals engaged in the Sāldūk tradition, he had erected a *madrasa*, richly endowed and at first Hanafī, though it became later Shāfi'.

**AL-BUZĀDĀNĪ** [see ABU 'I-WARĀḲ].

**BUZĀKHA**, a well in Naḡd in the territory of Asad or their neighbours Tayyī? (cf. *Mufaḍḍalīyāt*, 361, n. 3). The forces of the Hanū Asad, who, led by the false prophet Tūlayha, had relapsed from Islam on Muhammad's death, were defeated at Buzkha in 11/632 by 'Abū Bakr's general Khālid b. al-Walīd. Khālid's army was reinforced for the battle by 700 men of Tayyī?, detached from Tūlayha's side; Tūlayha had the help of 'Uyayna b. Hān and 700 men from Fazāra of Ghatafan, old allies of Asad's. After fierce fighting, 'Uyayna saw that Tūlayha's alleged prophetic powers were in practice proving useless against the Muslims, and fled the field. Tūlayha had to flee to Syria; Asad submitted to Khālid; and neighbouring tribes like 'Amir, who had been awaiting the outcome, now rallied to Islam.

**Bibliography:** Yāqūt, I, 601-2; Ibn Sa'd, III, ii, 36-7; Tabarī, I, 1879, 1886-91; Ibn al-Aḳbī, ii, 259-64; al-Baladhūrī, 95-97; Wellhausen, *Skizzen*, vi, 9-12; Caetani, *Annali*, ii, 604 ff.; Muir, *Caliphate*, Edinburgh 1915, 19-23. (C. E. BOSWORTH)

**BUZUR G. SHAHRYĀR**, a Persian ship's captain (*nāḡhān*) of Rām-Hormuz of the first half of the 4th/10th century and author of the *Kāsh al-Aghār al-Hind* (Marvels of India). This is a collection in Arabic of 134 stories and anecdotes gathered by the author from ship's captains, pilots, traders and other seafaring men who used to sail the Indian Ocean and liked to spin a yarn about their adventures in East Africa, the Indian Archipelago and China. Incidentally they also give some information about these countries and the customs of their inhabitants. Sometimes the year of the event referred to is given, the latest being 342/953. The language of the book shows some Middle-Arabic traits (see *Faravayra*, above, 570b).

**Bibliography:** The Arabic text, extant only in the Istanbul MS. Aya Sofya 3306, was edited by P. A. van der Lijth together with a French translation by M. Devic, Leiden 1885-6. A new translation in French by J. Sauvaget is given in his *Mémoires*, I, Damascus 1954, 188-300; Russian translation by R. I. Erlich, Moscow 1959. See also Brockelmann S I, 409. (J. W. FRICK)

**BUZURGMİHR**, Iranian personal name (arabised form Buzurgmīhr) which according to a tradition transmitted by Iranian and Arab writers, was given to a man endowed with every ability and virtue who was the minister of Khuraw I. Anāghis-

rawān (6th century A.D.). The earliest authorities who were acquainted with the Pahlavī *Šāh-nāma* (*Book of Sovereigns*), written towards the end of the Sāsānid period (7th century), the source of the oldest accounts of pre-Islamic Iranian history penned by Arab writers (al-Tabarī, Ibn Kutayba), have no reference to Buzurgmīhr. It is only in later works that he becomes the hero of anecdotes deriving from popular tradition. In Buzā'ā's "History of the Persian Kings", a section of the *Ġharar al-Siyar* — vide ET, iv, 770 col. a, and, more freely than one would expect, in Firdawsī's "Book of Kings", the *Shāh-nāma*, and sometimes the originator of numerous wise precepts, survivals from the collections (*andars*) of the Sāsānid period, preserved in some minor post-Sāsānid Pahlavī works (notably the *Pandnāmag* — *Favargūnīr* — *Dāghastān*, "the Book of precepts of Buzurgmīhr son of Dāghastān"). These precepts were translated into Arabic and Persian by several authors: al-Mas'ūdī, Firdawsī (in whose poem Buzurgmīhr presents the king with a book of wisdom, the fruit of their conversations, which is really derived from the *Pandnāmag*), Nizām al-Mulk, and others. There are three anecdotes concerning Buzurgmīhr which are significant because of their elements of popular origin: I—the King of Persia dreams that, as he is drinking, a pig puts his snout in the cup. No one can interpret this until the young Buzurgmīhr informs the king that one of his wives is bestowing her favours on another and that, in order to be certain, the women must be summoned to appear asked; among them is discovered a youth disguised as a woman (in addition to the popular theme of the oneromancy practised by an adolescent, one recalls a similar review of women in a tale from ancient Egypt). II—Buzurgmīhr discovers the secret of the game of chess, sent as a challenge by the King of India to the King of Persia; he then invents the game of tri-trac, the secret of which the latter and his counsellors do not succeed in discovering (the source of this is a small Pahlavī work of a popular type, the "Story of the Game of Chess", *Mādhaghān-e Gāstān*). III—Buzurgmīhr, in disgrace and in prison, is recalled when the Byzantine Emperor refuses to pay tribute to the Persian sovereign unless he guesses the contents of a sealed coffer which he has sent him; the king summons Buzurgmīhr, who reads the enigma and is reinstated in royal favour (to the preceding theme is joined that of the sage liberated and recompensed for his wisdom: Nöldeke recognised the similarity of this episode with another in the history of the sage Ahikar). These anecdotes put Buzurgmīhr in direct contact with popular tradition, but he is a historical or a legendary figure? A. Christensen, in a noteworthy article, has rightly noted that, apart from the references to Buzurgmīhr, there are others relating to the sentence of death passed by Hormizd, the son and successor of Anāgharawān, on three of the latter's counsellors, one of whom bore the name of Buzurgmīhr (in *Shā'ālīb*), Buzurgmīhr, then Sīnāwī Buzurgmīhr—a hypocritical Buzurgmīhr (in Firdawsī). In the name of Buzurgmīhr, the famous physician, the supposed author of the Pahlavī adaptation of the *Order of Asarinas*, The Hague 1935, index.

(M. G. S. HODGSON)

**BUZURGMİHR**, Justī (*Iran Nāmenāsh*, 74) and Christensen see the same root *buzr* ("high") and a hypocoristic ending (as in Buzrūn): as names with the root *buzr*, peculiar to the Sāsānid period, are very rare, Buzurgmīhr ("protected by") the High Mithra") is semantically related to Buzurgmīhr ("protected by") the Great Mithra"); further it is enough to write both words in the Arabic script in order to see how easily they can be confused. Finally, certain passages in the preface to the *Kāsh*, traditionally attributed to Buzurgmīhr and known through the Arabic translation of Ibn al-Mukallaf, give biographical details which the authors also attribute to Buzurgmīhr or divide them between both personalities. To sum up, Iran in the reign of Anāgharawān was influenced by Indian civilisation, thanks to certain intellectuals, of whom Buzurgmīhr was one, and who was made famous by his Pahlavī adaptation of the *Pandāntarā*; the introduction of chess in Iran was attributed to him, a number of precepts and maxims, and later certain characteristics of sagacity and divination which already existed in popular tradition; then a false reading of his name as transcribed in Arabic led to the creation of a double personality.

**Bibliography:** A. Christensen, *La légende du sage Buzurgmīhr*, in *Acta Orientalia*, 1939, III/1, 81-128 (a basic and detailed study, with an analysis of and extracts from the sources); idem, *Iran sous les Sassanides* (particularly 37-8, and index, s.vv. *Buzurgmīhr*, *Buzurg*); on the *Zar*, s.vv. *vide* the text in Ch. Schuler, *Chrest. Persica*, I, 1-7 and Christensen's trans. in *La légende...*, 121; *Grundriss der Iran. Philologie*, II, 346-7. (H. MASSÉ)

**BUZURGMİHR**, KIYA, second *dā'ī* (1124-1138) at Alamūt [s.v.] of the Nizārī Ismā'īlīs. He was evidently related by marriage to the ruling families of Māzandarān. From 1095-1108-1124 he was Ismā'īlī governor of Lānuḡsar, a stronghold in the Rūdāra of Alamūt. He with three other chiefs had captured it for Hasan-i Šabbāh when its holders had broken their agreement with the Ismā'īlīs and had planned to call in the Sāldūk *amir*, Nūstāḡin Shīrīz. Using local forced labour, he rebuilt it, equipping it with water and fine gardens. There he successfully resisted the last and gravest attack on the Ismā'īlīs by Muhammad Tapaq's troops under Shīrīz in 517/1117. In 518/1124 Hasan-i Šabbāh on his deathbed appointed him his successor as head *dā'ī* of the sect, with three associates. Under his rule the Ismā'īlī state retained its independence against renewed attacks [see ALAMŪT (II) *The Dynasty*]. Several new strongholds were established, including Maymūdīn in 520/1126. In 525/1131 he defeated and killed a Zaydī *imām*, Abū Hāshim, who had arisen in Daylāmān and had followers as far as Khūzestān. Buzurgmīhr died in 532/1138, leaving the position of *dā'ī* to his son Muhammad. He was buried next to Hasan-i Šabbāh, where his tomb was piously visited. His descendants formed the leading family in Alamūt.

**Bibliography:** Rashīd al-Dīn, *Qutb al-Tawārīkh*, section on Nizārīs; Djuyaynī, ii, 206 ff.; and further in M. G. S. Hodgson, *The Order of Assassins*, The Hague 1935, index.
